The hospitality industry, essential to global tourism and economic growth, must balance guest expectations with evolving safety and security demands. Traditional measures are no longer sufficient, prompting the adoption of advanced technologies such as AI, biometric authentication, IoT devices, and smart surveillance systems. This research explores how these innovations are transforming hotel security by applying Everett Rogers' Innovation Diffusion Theory to analyze the adoption of technologies like smart locks, biometric access, and surveillance systems. It examines the stages of adoption, namely awareness, persuasion, decision, implementation, and confirmation, and key factors such as relative advantage, compatibility, and social influence. The study highlights the impact of these technologies on hotel safety, guest privacy, and the future of the hospitality industry. This chapter describes the techniques and approaches used by the researchers to complete the study. It includes research design, respondents, sampling technique, instrument used, validation of the instrument, administration and retrieval of the instrument, and statistical treatment of the data. Astoria Plaza Hotel faces key challenges in integrating modern technologies into its safety and security systems. Major concerns include protecting guest data, preventing unauthorized transactions, and improving the reliability and usability of tech systems, especially mobile apps (mean score: 1.12). Additional issues involve authentication, payment efficiency, and fraud prevention. While pricing and dispute resolution were noted, they are less critical. Addressing these concerns is vital to ensure secure and user-friendly guest experiences. Guests at Astoria Plaza Hotel strongly approve of modern technology's role in enhancing safety and security, with a composite mean score. The highest approval was for security measures and threat response, followed by cybersecurity efforts. While technology's impact on comfort was recognized, it ranked lower than security features. Keyless entry via smartphones or wearables received a score of 3.12, indicating it is valued but less significant compared to other technologies. Overall, guests prioritize security and safety over comfort. This chapter presents the discussion, summary, conclusions, and recommendations formulated based on the findings in response to the problems raised in Chapter 1.

Keywords: hotel security technology, smart hospitality solutions, cybersecurity in hotels

**THE ROLE OF TATTOO CULTURE IN HOSPITALITY: EXPLORING THE
INTERSECTION OF PERSONAL EXPRESSION AND PROFESSIONALISM**

Mhel Vincent Adao, John Lord Datul, Marcus Magno, Francis Ojeda,
Leoniel Michael Sedillo, Dr. Dana France Ignacio

Abstract

The Role of Tattoo Culture in Hospitality: Exploring the Intersection of Personal Expression and Professionalism investigates the growing acceptance of tattoos within professional environments, with a particular focus on the hospitality industry. Once widely regarded as symbols of rebellion or unprofessionalism, tattoos are increasingly recognized as valid expressions of personal and cultural identity. This evolving perception is especially evident in hospitality settings, where employees' appearances contribute to the overall brand image and guest experience. Despite this shift, debates continue regarding whether visible tattoos compromise perceptions of professionalism or influence customer attitudes and satisfaction. To ensure credible and consistent results, the study employed a quantitative descriptive research design, focusing on 60 patrons of Rapture Café Bar in Quezon City. Purposive sampling was utilized to select participants who were most relevant to the research objectives, specifically, customers with informed perspectives on tattoo-related perceptions within the hospitality setting. Data collection was conducted through a standardized survey instrument, which was carefully developed based on a review of existing literature and refined through pretesting and consultations with academic advisors and data specialists. The study's conclusions are based on data analysis, which revealed that the primary clientele of Rapture Café Bar consists of young adults aged 20–25, predominantly male, and primarily members of Generation Z, with most having attained tertiary education. This demographic profile underscores the establishment's strong appeal to a younger, educated audience. Respondents widely perceived tattoos as a legitimate form of self-expression, emphasizing that body art does not negatively impact the quality of employee service. Moreover, tattoos were viewed as enhancing the venue's ambiance and reinforcing its brand identity, aligning well with its modern and progressive image. The study's results highlight the shifting attitudes toward tattoo culture within the hospitality industry, particularly among younger, college-educated demographics such as Generation Z and Millennials. Findings indicate that tattoos are increasingly normalized and accepted among this group, especially in casual dining and social venues like Rapture Café Bar. A clear consensus emerged among respondents that tattoos function as a form of self-expression and do not detract from the quality of service provided. These insights reflect a growing openness to visible body art in more contemporary, relaxed hospitality environments.

Keywords: tattoo culture, hospitality industry, self-expression, professionalism, customer perception, generation z, millennials, body art, rapture café bar, service quality, personal identity, quantitative descriptive research

**THE STRATEGIES OF HANDLING EMPLOYER AND EMPLOYEE CONFLICT:
A PROPOSED ENHANCEMENT PLAN FOR WHITE PALACE CONDOTEL.**

Jovelyn Jen Otero, Kc Malejana, Altea Mae Bona, Carl Bodiongan,
Niel Bryan Baile, Roland Rambo Jayoma

Abstract

In the dynamic hospitality industry, effective conflict resolution is vital in maintaining a harmonious workplace and delivering exceptional customer service. White Palace Condotel must prioritize strategies for managing conflicts between employers and employees, as issues such as favoritism can create a negative work environment. Unresolved conflicts may lead to decreased employee productivity and workplace distractions that affect overall performance. The study employed quantitative research design using a descriptive technique to examine strategies for handling conflicts between employers and employees at White Palace Condotel. The respondents consisted of 48 employees from various departments, including Front Desk, Housekeeping, and Bellboy, as well as 2 managers. Purposive sampling was used to ensure relevant participation. Data was gathered through separate survey questionnaires for employers and employees, focusing on their opinions and experiences regarding conflict resolution strategies. The researchers followed a structured data collection process, which included the preparation and approval of survey instruments, securing respondents' consent, organizing and analyzing the collected data, and applying statistical tools such as frequency distribution and ranking for interpretation. The study analyzed responses from 50 participants to determine their demographic profiles and perspectives on workplace conflict management. The majority of respondents were aged 41–45 years, with females comprising 54% of the sample. Most participants were regular employees (86%) and had been employed by the organization for 3–5 years (40%). The findings indicate that the workforce is largely composed of individuals aged 41–45, reflecting a mature employee population, with a slight majority of female respondents. Most participants are regular employees, suggesting job stability, while the length of service of 3–5 years indicates sustained employment. A major concern identified is the lack of trust between employees and management, which obtained a high weighted mean of 1.59, making it a significant source of workplace conflict. Respondents believe that regular performance reviews and feedback sessions, with a weighted mean of 1.56, may help reduce miscommunication and strengthen trust. Favoritism, also rated at 1.59, further complicates workplace dynamics and highlights the need for fair and consistent implementation of corporate policies to prevent discrimination.

UNDERSTANDING HALAL CONSUMER BEHAVIOR: EFFECTIVE MARKETING STRATEGIES FOR JAPANESE RESTAURANT IN MUSLIM MAJORITY COMMUNITIES

Monica Jessa San Felix, Althea Sabbaluca, Christian Estrada,
Ace Ron Plata, Therese Anne Sabio, Dr. Dana France Ignacio

Abstract

This research investigates the consumer behavior of Muslim customers toward halal-certified Japanese cuisine, with the objective of identifying effective marketing strategies for Japanese restaurants operating within Muslim-majority communities. The study examines the key factors influencing halal food choices among consumers, including religious beliefs, cultural preferences, health considerations, and price sensitivity. It also explores the significance of halal certification, the effectiveness of various marketing communication strategies, and the critical role of trust and transparency in fostering consumer confidence and brand loyalty. This study employs a descriptive research design and purposive sampling technique to examine how attitudes, subjective norms, and perceived behavioral control influence customer satisfaction. A survey questionnaire serves as the primary instrument for data collection from respondents. The findings reveal key consumer preferences and offer insights into marketing strategies that can be tailored to effectively engage the target market. Key recommendations include emphasizing the authenticity of halal ingredients, showcasing the restaurant's adherence to Islamic dietary laws, and utilizing culturally appropriate marketing channels. This research offers valuable insights for Japanese restaurants aiming to successfully enter and sustain operations in Muslim-majority markets by understanding and addressing the distinct needs and preferences of halal-conscious consumers.

Keywords: halal, japanese restaurant, muslim communities, consumer behavior, marketing strategies, halal certification, cultural sensitivity, religious compliance, customer trust, market penetration

**WASTE REDUCTION AND SUSTAINABLE PROCUREMENT
IN HOTEL INDUSTRY: A THESIS EXPLORATION**

Raymart Barriso, Kyla Abiada, Althea Enriquez, Angelica Managbanag,
Angelene Balangyao, Oliver Fabon

Abstract

This study explores the waste management and procurement practices of Astoria Hotel Ortigas in Pasig and Novotel Manila. It aims to evaluate their current systems, identify challenges and opportunities in adopting sustainable approaches, and provide recommendations for improvement. By examining existing procedures, the research highlights areas where sustainable strategies can be effectively implemented to enhance environmental responsibility within the hotel industry. This study adopts a quantitative research approach using a descriptive method to analyze data gathered from hotel staff, particularly in the housekeeping and food and beverage departments. It underscores the role of guest expectations, management controls, and corporate responsibility initiatives, while revealing the economic and environmental benefits gained through effective waste reduction and sustainable procurement practices. The findings of this study indicate that both hotels exhibit a strong commitment to sustainability, particularly through initiatives such as recycling, waste reduction, and minimizing the use of single-use plastics. Despite these efforts, considerable areas for improvement remain. Both establishments encounter similar challenges in implementing sustainable practices, including the high initial costs of sustainable technologies and infrastructure, resistance to change from staff and guests, and the continuous need to comply with evolving environmental regulations. Addressing these challenges and adopting the proposed recommendations will enable the hotels to enhance their sustainability efforts and contribute more effectively to environmental conservation. The findings indicate that adopting sustainable practices allows hotels to balance economic efficiency with environmental stewardship. Such initiatives not only reduce operational expenditure but also strengthen brand image and foster customer loyalty. The study underscores the necessity of an integrated strategy that encompasses sound financial management, sustainable procurement, active staff participation, effective communication, regulatory alignment, and ongoing development to ensure long-term success.

Keywords: sustainable practices, hotel industry, environmental responsibility, economic sustainability, procurement strategies, employee engagement, regulatory compliance, customer loyalty

**ACCEPTABILITY OF COLD FOAM ESPRESSO KOKO KRUNCH WITH CHOCOLATE
AS A MOCKTAIL BEVERAGE AMONG SENIOR HIGH SCHOOL TEACHER'S AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Rose Jean Climaco, Joyce Ann Jayola, Jasper Cabiso, John Michael Garcia,
Paul Andrew Roncesvalles, Abigail Reyes

Abstract

Cold Foam Espresso Koko Krunch with Chocolate is a rich mocktail that combines a bold cold espresso base, smooth foam topping, crispy Koko Krunch pieces and a drizzle of chocolate. The beverage offers both energy and indulgence, making it suitable for Senior High School teachers at Bestlink College of the Philippines. By balancing robust coffee flavor with sweet, crunchy elements, it aims to satisfy chocolate and coffee enthusiasts. Originating from the Italian term for “to express,” espresso became popular in the early 1900s through innovations by Luigi Bezzer and Desiderio Pavoni (Weaverscoffee, 2024). This study examines the acceptability of this mocktail among Senior High School teachers at Bestlink College. A descriptive survey design is employed to assess mocktail acceptability. Senior High School teachers at Bestlink College of the Philippines are selected using quota sampling to ensure representation across departments. Participants complete a structured questionnaire evaluating appearance, flavor, texture and aroma on a four-point scale. A checklist summarizes overall acceptance levels. Respondents rated the mocktail’s appearance, taste, texture and aroma, and most found the presentation attractive and the flavor pleasant. Ratings for appearance averaged 3.39, while taste and texture each averaged 3.28. Participants noted the balanced sweetness, smooth foam and distinctive Koko Krunch crunch, and the familiar espresso aroma enhanced enjoyment. Overall acceptance was high, with many teachers highlighting the drink’s straightforward yet appealing characteristics. The mocktail received strong acceptability ratings for aroma, texture and taste. Teachers appreciated its balanced sweetness, relaxing qualities and engaging presentation. High scores across sensory attributes indicated that Cold Foam Espresso Koko Krunch with Chocolate effectively met expectations for a novel mocktail. These findings suggest potential for inclusion in campus beverage offerings and support further product refinement based on teacher feedback.

Keywords: cold foam, coffee, espresso

**ACCEPTABILITY OF DULCE DE LECHE SHAKE WITH BERRIES ON TOP AS A
DESSERT DRINK AMONG SENIOR HIGH SCHOOL TEACHERS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Lana Eliandre, Juther Rodriguez, Simon Serviñas,
Crystel Rivero, Kenn Cabrera, Abigail Reyes

Abstract

Dulce de Leche is a beloved milk-based treat recognized for its rich sweetness and creamy texture. In the evolving Philippine culinary landscape, innovative dessert beverages featuring Dulce de Leche present an opportunity to combine indulgence with nutrition. The Dulce de Leche Shake with Berries blends that creamy richness with the refreshing sweetness and antioxidant benefits of berries. Regular berry consumption has been associated with longevity and a reduced risk of type 2 diabetes and cardiovascular disease (Rian, 2021). This study examines the acceptability of this shake among Senior High School teachers at Bestlink College of the Philippines to inform product development in the beverage industry. A descriptive survey design is employed to assess mocktail acceptability among Senior High School teachers at Bestlink College of the Philippines. Participants are selected via quota sampling to ensure balanced representation of age and department. A structured questionnaire evaluates presentation, taste, texture, and aroma on a four-point scale, and a checklist records overall acceptance levels. Data are analyzed using frequency distributions and mean scores. The Dulce de Leche Shake with Berries received high acceptance ratings across all sensory attributes. Presentation averaged 3.32, taste 3.39, texture 3.35 and aroma 3.38 on a four-point scale. Teachers reported that the balanced sweetness, smooth mouthfeel, and visually appealing berry topping enhanced enjoyment and satisfaction. The findings indicated that the dessert drink achieved strong sensory approval among Senior High School teachers. High scores for presentation, taste, texture and aroma demonstrated the product's potential for market introduction. The balanced flavor profile and appealing appearance contributed to its acceptance. As a result, incorporating the Dulce de Leche Shake with Berries into campus offerings may satisfy consumer demand for innovative and nutritious dessert beverages. Further research was recommended to explore variations in berry types and sweetness levels to optimize consumer preference.

Keywords: dulce de leche, dessert drink, sensory acceptability, berry topping, descriptive survey

**ACCEPTABILITY OF MAZZARD JUICE WITH TANGHULU AS A REFRESHER DRINK
AMONG GRADE 11 HOME ECONOMICS STUDENTS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Jaimee Dalapo, John Jonar Daculan, John Erick Geuvera,
Joan Lumbog, Clare Nazarine Calixto, Abigail Reyes

Abstract

Mazzard juice, derived from tart mazzard cherries, delivers a vibrant red hue and a sweet-tart flavor profile that appeals to fruit beverage enthusiasts. Paired with tanghulu, a traditional candied fruit snack that adds crunch and sweetness. This drink aims to combine refreshing hydration with textural contrast. While sour cherry beers are appreciated for their complex flavors and health benefits, they may not suit all tastes. Mazzard juice with tanghulu offers a non-alcoholic, fruit-forward alternative designed to enhance refreshment and enjoyment among young consumers. A descriptive survey design is employed to assess the acceptability of Mazzard juice with tanghulu among Grade 11 Home Economics students at Bestlink College of the Philippines. Quota sampling ensures participant representation across key demographic traits. A structured questionnaire gathers ratings on appearance, flavor, texture, and aroma using a four-point scale, and a checklist records overall acceptability. Students rated the beverage highly across all sensory attributes. Presentation received top marks for its eye-catching red color and attractive tanghulu garnish. Flavor scores reflected well-balanced sweetness with a pleasant tart finish. Texture ratings highlighted the enjoyable contrast between smooth juice and crunchy tanghulu, while aroma ratings affirmed its inviting cherry scent. Overall acceptability was high, indicating a strong preference for this innovative refresher drink. The findings indicated that Mazzard juice with tanghulu achieved high acceptability among senior high students. Its appealing appearance, balanced flavor profile, refreshing texture, and enticing aroma contributed to positive evaluations. As a result, Mazzard juice with tanghulu demonstrates potential as a popular non-alcoholic beverage option in school settings. Further product development may explore flavor variations and packaging optimizations to enhance market appeal.

**ACCEPTABILITY OF BLOOD WHIP DRAGON FRUIT SODA WITH SUGAR SYRUP
AMONG SENIOR HIGH SCHOOL HE STUDENTS AT BESTLINK COLLEGE OF THE
PHILIPPINES**

John Aldrine Abuy, Irish Apostol, John Paul Caliwag, Razel Hacar, Abigail Reyes

Abstract

Beverages contribute significantly to student hydration and nutrition. This study examines the acceptability of Blood Whip Dragon Fruit Soda with Sugar Syrup among Senior High School Home Economics students at Bestlink College of the Philippines. Dragon fruit offers antioxidant and vitamin benefits, while sugar syrup enhances sweetness. The study evaluates sensory acceptability based on taste, aroma, appearance, and overall appeal. A descriptive quantitative design is employed to assess beverage acceptability. Fifty Senior High School Home Economics students at Bestlink College complete a structured questionnaire rating taste, aroma, appearance, and overall satisfaction on a four-point scale. Responses are analyzed using frequency distributions and mean scores to determine levels of acceptability and student preferences. Most respondents rated the drink as highly acceptable. The natural sweetness, smooth mouthfeel, and vibrant red-pink hue received top scores. Taste evaluations described the soda as refreshing, with a well-balanced blend of dragon fruit flavor and sweetness. Aroma ratings reflected a pleasant, fruity scent, and overall satisfaction scores indicated strong preference. Students also noted the perceived health benefits of dragon fruit, favoring it over artificial alternatives. The findings indicated that Blood Whip Dragon Fruit Soda with Sugar Syrup is a viable refresher for students, combining appealing flavor, attractive appearance, and potential health advantages. As a result, the beverage offers a natural alternative to commercial soft drinks. Suggestions for refinement included adjusting the sugar syrup level to accommodate varied sweetness preferences. Further product development may explore reduced-sugar formulations and additional fruit inclusions to broaden appeal.

Keywords: dragon fruit soda, beverage acceptability, sensory evaluation, student preferences, home economics students

**ASSESSMENT ON LOYALTY MEMBERSHIP PROGRAM OF B HOTEL QUEZON CITY:
A PROPOSED GUIDELINES**

Vickey Mourielle Adling, Christian Jacob De Vera, Aaronico Fabella,
Raissa Mae Marquez, Mary Chrishanna Joy Salcedo, Oliver Fabon

Abstract

This study explores the influence of hotel loyalty membership programs on retaining customers, focusing on their role in shaping customer behavior and encouraging sustained engagement. It highlights important elements such as reward systems, tailored services, and trust in the brand as critical drivers of loyalty. This study employed a mixed-methods approach, combining qualitative and quantitative research techniques. A structured survey questionnaire was administered to fifty (50) hotel customers in Quezon City to gather data on their participation in loyalty programs, satisfaction with services, and repeat booking behavior. The collected responses were systematically analyzed to assess the effectiveness of loyalty programs in fostering customer retention and satisfaction. Analysis of the questionnaire responses showed that the majority of participants were male, indicating higher engagement of male clients in the hotel's loyalty membership program. While the program provides notable benefits, areas for improvement include clearer policy communication, enhanced digital accessibility, and more efficient reward distribution. Customers place high value on transparent pricing and desire timely, straightforward communication regarding program rules and updates. Well-structured loyalty programs effectively drive customer retention by offering meaningful incentives, exclusive perks, and seamless reward redemption processes. Moreover, personalized services and targeted marketing efforts strengthen customer relationships, boosting satisfaction and long-term loyalty. Nevertheless, challenges such as complex reward mechanisms, insufficient program awareness, and inconsistent service quality continue to impede optimal retention outcomes. The study suggests that hotels should streamline the rewards redemption process, improve personalized communication, and regularly analyze customer feedback using data analytics to enhance their loyalty programs. These improvements can help hotels refine their strategies and gain a competitive advantage. The research provides practical recommendations for hotel managers seeking to boost customer retention and engagement. Future research could focus on assessing the financial outcomes and effectiveness of loyalty programs across different customer segments. Ultimately, loyalty programs serve as essential tools for building customer loyalty, reinforcing brand reputation, and driving sustainable business growth.

Keywords: hotel loyalty programs, customer retention, personalized communication, reward redemption, customer feedback, data-driven strategies, brand loyalty, customer engagement, sustainable business growth, hospitality management

HOTEL & RESTAURANT MANAGEMENT SYSTEM: CORE TRANSACTION 1 (ROOM RESERVATION MANAGEMENT, TABLE RESERVATION MANAGEMENT, BOOKING CALENDAR AND AVAILABILITY), USING AI CUSTOMER ASSISTANT

Jett Tan, Warlito Abalos Jr, Cedrick Legaspi, Darlee Boy Lavariaz, Marvin Daguinod, Marifel Laynesa

Abstract

In the modern service industry, integrating a comprehensive Hotel and Restaurant Management System (HRMS) has become essential for optimizing operations and enhancing customer experience. Among its core functions is the management of room reservations, supported by modules for activity and table reservations that streamline operations and enable efficient resource allocation. The system also facilitates predictive analytics and data-driven decision-making, improving revenue management while simultaneously increasing customer satisfaction by ensuring availability during peak periods. We aim to develop a comprehensive, efficient, and user-friendly platform capable of managing key transactions such as accommodation reservations, table reservations, and event bookings. In response to the complexity and evolving nature of customer needs, the Agile Scrum methodology was adopted for its iterative, adaptable, and collaborative approach to project management. This framework emphasizes early delivery, adaptive planning, and continuous improvement, enabling the system to effectively respond to change. The implementation of the Hotel and Restaurant Management System resulted in notable improvements in efficiency, accuracy, and user satisfaction across all core modules. The Room Reservation Management module provided real-time updates on room availability, effectively eliminating double bookings. The Table Reservation Management module enabled customers to select table preferences and complete bookings seamlessly. Additionally, the integration of natural language interaction assisted users with inquiries and reservations, contributing to a more interactive and convenient user experience. The integration of AI and automated management tools into hotel and restaurant operations significantly enhanced reservation accuracy, customer satisfaction, and overall operational efficiency. The system demonstrated scalability and reliability, making it a valuable solution for hospitality businesses.

**INNOVATION OF ESPRESSO SHOT BLACK MILK WITH MARBLE NUTELLA ON TOP
AMONG GRADE 12 ABM STUDENT AT BESTLINK COLLEGE OF THE PHILIPPINES**

Jastin Baculi, Joseph Cacho, Kim Alven Carano-o, John Vicent Pamisa,
Jay Pie Pioquinto, Abigail Reyes

Abstract

Innovative coffee beverages, such as espresso topped with marble Nutella, offer a rich blend of sweetness, creamy texture, and bold flavor that captivates coffee enthusiasts seeking novel experiences. This fusion of craftsmanship and creativity enhances both taste and visual appeal. A study by Sally McKenney (2020) underscores Nutella's versatility in pairing with coffee and desserts. This research aims to explore the preferences and perceptions of Grade 12 ABM senior high school students regarding this indulgent beverage, highlighting its appeal as a unique and satisfying coffee innovation. This study involved Grade 12 Accountancy, Business, and Management (ABM) students from Bestlink College of the Philippines as participants in the Senior High School program. A descriptive research method was utilized to assess the level of innovation perceived in the espresso shot black milk topped with marble Nutella. Participants were selected through random sampling to ensure unbiased representation. Data collection was conducted using a survey questionnaire, and a checklist format was employed to evaluate the respondents' perceptions of the beverage's innovative qualities. The study examined the innovative qualities of the Espresso Shot Black Milk with Marble Nutella on Top by analyzing customer feedback on its presentation, taste, texture, and aroma. Results showed that the product drew significant attention due to its sleek and visually striking appearance. While the bold bitterness of the espresso was the dominant flavor, it was subtly balanced by the sweet undertones of the marble Nutella, resulting in a rich and well-rounded taste experience. The study examined the innovative appeal of the Espresso Shot Black Milk with Marble Nutella on Top by evaluating participants' responses to its taste, texture, and overall presentation. A total of 50 respondents, aged 16 to 20, participated in the research, with 76% identifying as female and 24% as male. The results revealed a generally positive reception, driven by the beverage's distinctive appearance and its aromatic fusion of rich and unique flavors.

Keywords: espresso shot black milk, marble nutella, beverage innovation, taste and texture, visual presentation, consumer perception, abm students, sensory experience, product acceptance, coffee trends

**INNOVATION OF YOGURT SMOOTHIE WITH SAPODILLA AND POMEGRANATE
AMONG GRADE 11 STEM STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Maria Christina Chan, Florna Mae Riobuya, Nicole Jade Macabalitao,
John Baldwin Brojan, John Denver Hernan, Abigail Reyes

Abstract

Yogurt smoothie made with sapodilla and pomegranate is an innovative dairy-based beverage that blends creamy texture with natural sweetness and nutritional value. The smooth, malty flavor of sapodilla complements the tangy notes of pomegranate, creating a distinctive and enjoyable drink. As health-conscious consumers increasingly seek nutritious yet satisfying alternatives, this study explores how senior high school students perceive and accept this unique dessert smoothie. By assessing its market appeal and overall feasibility, the research aims to contribute to the growing trend of healthy, flavorful, and convenient beverage options within the food and drink industry. This study involved senior high school students from Bestlink College of the Philippines as participants. A descriptive research design was utilized to assess their level of acceptance of the yogurt smoothie infused with sapodilla and pomegranate. To ensure appropriate representation, a quota sampling method was applied, allowing the selection of participants based on predefined criteria that reflect specific characteristics of the target population. Data collection was conducted using a checklist, which served as the primary tool for evaluating the respondents' acceptance of the product. This study evaluated the yogurt smoothie with sapodilla and pomegranate as a refreshing beverage, focusing on participants' perceptions of its appearance, taste, texture, and aroma. The majority of respondents agreed that the flavor combination was harmonious and enjoyable. They described the product's appearance as attractive and visually appealing. In terms of taste, most participants expressed satisfaction with the well-balanced flavor of the sapodilla, noting that it complemented the overall profile of the drink and contributed to a pleasant sensory experience. The analysis of data, conclusions, and participant feedback revealed that the yogurt smoothie with sapodilla and pomegranate received consistently high ratings for its presentation, taste, texture, and aroma. The product earned weighted mean scores of 3.16 for presentation, 3.26 for taste, and 3.66 for texture, indicating strong consumer approval. Respondents found the beverage to be enjoyable, highlighting its smooth texture and well-balanced flavor. Overall, the yogurt smoothie was perceived as refreshing, satisfying, and a well-accepted innovative drink option.

Keywords: yogurt smoothie, sapodilla, pomegranate, sensory evaluation, product acceptance, texture, taste, presentation, aroma, beverage innovation, senior high school students.

**INNOVATIVE LYCHEE SMOOTHIE WITH WAFFLE AND WHIPPED CREAM
AMONG GRADE 12 HOME ECONOMICS STUDENTS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Rihanna Joaquino, Priences Castro, Jayron Clavecillas, Samuel Espanto,
Dan Jason Samper, Abigail Reyes

Abstract

The fresh lychee (*Litchi chinensis*) smoothie is a unique and refreshing beverage that features a sweet, aromatic, and slightly tangy flavor. The addition of waffle and whipped cream introduces a creative fusion of textures and flavors, making the drink visually appealing and enjoyable to the palate. This study aims to assess the level of acceptance of this innovative lychee smoothie among Grade 12 Home Economics students at Bestlink College of the Philippines. This study utilized a descriptive research design to evaluate the level of acceptance of the lychee smoothie with waffle and whipped cream. Fifty Grade 12 Home Economics students from Bestlink College of the Philippines participated as respondents, selected through random sampling to ensure equal representation. Data were gathered using a structured survey questionnaire with a checklist format. The results were analyzed using weighted mean and frequency distribution to interpret the respondents' feedback effectively. The research findings reveal that the lychee smoothie with waffles and whipped cream was generally well-accepted by the respondents in terms of taste, texture, aroma, and overall appeal. The sweetness and flavor balance received the highest satisfaction, with a weighted mean of 3.34 (Very Satisfied). The texture scored a weighted mean of 3.16 (Satisfied), while the aroma and flavor followed with weighted means of 3.18 (Satisfied) and 3.22 (Satisfied), respectively. Recommendations based on the feedback include the following ingredient adjustments to further improve the product, increase milk content – suggested by 34% of respondents, add more condensed milk – suggested by 43% of respondents, enhance lychee quantity – suggested by 32% of respondents. The results revealed that Grade 12 Home Economics students positively accepted the lychee smoothie with waffles and whipped cream. The distinctive flavor of lychee played a key role in its overall appeal. The harmonious blend of the smoothie's creamy texture, the waffle's fluffiness, and the lightness of the whipped cream offered a satisfying sensory experience. However, some respondents recommended enhancing the creaminess and sweetness to make the product more indulgent. In conclusion, the study supports the hypothesis that creative beverage combinations that balance flavor, texture, and aroma can boost consumer satisfaction. Future research may examine ingredient proportion adjustments or explore alternative sweeteners to accommodate varying taste preferences.

Keywords: lychee smoothie, waffle, whipped cream, consumer acceptance, sensory experience, taste enhancement, flavor balance, texture, aroma, grade 12 home economics students, innovative beverage, sweeteners.

**LEVEL OF ACCEPTABILITY OF CARROT-POTATO BALLS WITH CHEESE
AMONG SENIOR HIGH SCHOOL HOME ECONOMICS STUDENTS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Lovely Norilyn Villahermosa, John Michael Amaba, Danica Crausos, Lenmuel Gumahung,
Reynalyn Remedillo, Dash Laurenz Tabernero, Mar Domagtoy

Abstract

Carrot-potato cheese balls are a tasty and versatile dish that can be enjoyed as a snack, appetizer, or even a light meal. The natural sweetness of carrots blends well with the earthy flavor of potatoes, while the addition of cheese adds a rich, savory touch. This combination creates a balanced taste and a satisfying texture: crispy on the outside and creamy on the inside. Whether served at parties, as a lunchbox treat, or as a quick bite at home, these flavorful bites are sure to please. This study utilized a descriptive quantitative research design to evaluate the level of acceptability of carrot-potato balls with cheese. Data were gathered using a survey questionnaire. A total of 50 respondents: Grade 11 and 12 students from the Home Economics strand, were selected using a cluster sampling technique. The majority of the respondents were aged 17 to 18 years old, comprising 78% of the total participants. In terms of sex, 48% were male and 52% were female. Most of the respondents came from section HEHRS 1201, accounting for 22%. The product: carrot-potato balls with cheese, was rated as acceptable in terms of appearance, taste, and texture. Based on the feedback, the top suggestions for improving the product included: increasing the amount of cheese, adding more carrots and potatoes, adjusting the salt content, and reducing the amount of oil used in cooking. The findings indicated that the respondents considered the product acceptable in terms of appearance, taste, and texture. Based on their suggestions and recommendations, the following improvements were proposed: (1) add more cheese, (2) increase the amount of carrots, (3) add more potatoes, (4) adjust the salt content, and (5) reduce the amount of oil used in cooking.

Keywords: carrot-potato balls, cheese, snack innovation, product acceptability, appearance, taste, texture, home economics students, food preferences, healthy snack

LEVEL OF ACCEPTABILITY OF COFFEE BANANA INTO WAFFLE AMONG HOME ECONOMICS STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES

Christine Follero, Antonio Jr Dawagan, Maria Angelica Tayor, John Carlo Namoc, John Albert Cabato

Abstract

Waffles are a well-loved dish in the United States and are also widely enjoyed in the Philippines, especially during breakfast and snack times. However, their usual flavor can sometimes become unexciting. To enhance and reinvent the traditional waffle, the researchers introduced an innovative variation: the coffee-banana waffle. This new product combines the bold taste of coffee with the natural sweetness and nutritional value of bananas, resulting in a more flavorful and nourishing option. This study, entitled “Level of Acceptability of Coffee-Banana Waffle Among Senior High School Home Economics Students at Bestlink College of the Philippines,” seeks to evaluate how acceptable this product is to its intended consumers. This study utilized a descriptive quantitative research design to assess the acceptability of coffee-banana waffles. Data was collected using a survey questionnaire administered to 50 Grade 11 and Grade 12 Home Economics students, selected through cluster sampling. The gathered responses were analyzed using quantitative methods to determine the overall level of product acceptance. The majority of the respondents were 17–18 years old, representing 76% of the participants. In terms of sex, there was an equal distribution, with 50% male and 50% female. Most respondents came from sections HEHRS 1101 and HEHRS 1201, each comprising 22% of the sample. The product received an acceptable rating from the respondents in terms of appearance, taste, and texture. Based on the feedback, the following suggestions and recommendations were made: Adjust the sugar content for better balance, reduce the amount of vanilla to refine the flavor, add more bananas to enhance the natural taste, increase the amount of coffee for a richer flavor profile, and sift the dry ingredients to improve the texture and consistency of the batter. The results showed that the respondents found the coffee banana waffle acceptable in terms of appearance, taste, and texture. Based on their suggestions and recommendations, the following improvements were proposed: Adjust the sugar content to balance sweetness. Reduce the vanilla to refine the flavor. Add more bananas to enhance their natural taste. Increase the coffee content for a richer flavor. Sift the dry ingredients thoroughly to improve texture and lightness.

Keywords: coffee banana waffle, product acceptability, appearance, taste, texture, senior high school, home economics, recipe improvement, sensory evaluation, food innovation

**LEVEL OF SATISFACTION OF ARATILES SHAKE WITH FRAPPE ON TOP AS
A REFRESHER AMONG HOME ECONOMICS STUDENTS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Shenelle Guelas, Jaspher Bernard Arigadas, Madel Ashley Basilio,
Kathlene Mae Efe, Elmer John Pasaylo, Mar Domagtoy

Abstract

This study assessed the satisfaction level of 50 Home Economics students toward an aratiles shake topped with frappe, served as a refresher. It specifically aimed to evaluate their satisfaction based on three factors: taste, texture, and appearance. This study utilized a descriptive quantitative research design to evaluate the level of satisfaction with aratiles shaken topped with frappe as a refresher among Home Economics students at Bestlink College of the Philippines. A cluster sampling technique was employed to select 50 respondents from the Home Economics student population. The research instrument consisted of three main sections: (1) demographic profile of the respondents, (2) level of satisfaction based on taste, texture, and appearance, and (3) recommendations and suggestions. Data were analyzed using frequency and percentage distributions, weighted mean, Likert scale interpretation, and ranking methods to gain a comprehensive understanding of student satisfaction with the aratiles shake. Most of the respondents were aged 17 to 18 years, accounting for 50% of the total participants, with an equal number of male and female students. Among the evaluated aspects, taste received the highest rating, with a verbal interpretation of "very much satisfied." Overall, the findings revealed that the respondents were highly satisfied with the aratiles shake topped with frappe. The results of the survey revealed a high level of satisfaction with the aratiles shake topped with frappe. Respondents were very much satisfied with the drink's taste and satisfied with its texture and appearance. Common suggestions for improvement included adding more milk, increasing the sweetness, incorporating additional aratiles fruit, and adding whipped cream. The study concluded that taste was the most appealing attribute, followed by texture and appearance.

Keywords: aratiles shake, frappe topping, student satisfaction, taste, texture, appearance, home economics, beverage innovation, descriptive quantitative research, bestlink college

LEVEL OF SATISFACTION OF PEAR FRUIT AS A SMOOTHIE SHAKE WITH WHIPPED CREAM ON TOP AMONG HOME ECONOMICS STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES

Janna Espiloy, John Rodmer Mendoza, Christine Minguito,
Angelica Rose Resultay, Jaimes Sison, Mar Domagtoy

Abstract

This study explored the satisfaction levels of 50 Home Economics students at Bestlink College of the Philippines with a pear smoothie shake topped with whipped cream. Focusing on key sensory attributes such as appearance, taste, and texture, the research seeks to pinpoint specific areas that can be improved to better align the product with the preferences of the target audience. This research adopted a descriptive quantitative design, gathering data via a survey questionnaire. Using cluster sampling, 50 respondents were selected from the Home Economics strand. The questionnaire comprised three parts: demographic information, satisfaction levels, and participant recommendations. The collected data were analyzed through frequency counts, percentage distributions, weighted means, Likert scale assessments, and ranking methods. The majority of respondents were aged 17 to 18, with an equal number of males and females. They reported high satisfaction with the packaging, fruity flavor, and creamy texture of the pear smoothie shake topped with whipped cream. Overall satisfaction was notably high. However, respondents expressed specific preferences regarding the product's sweetness, pear flavor intensity, and whipped cream quantity. Over half recommended a sweeter taste and stronger pear flavor, while some preferred less whipped cream. The results indicate that the pear smoothie shake is well-received by the target group, and this study offers useful guidance for enhancing the product. By fine-tuning aspects such as sweetness, pear flavor, and the amount of whipped cream, the smoothie can be better tailored to satisfy the specific preferences of the students.

Keywords: pear smoothie shake, customer satisfaction, sensory evaluation, sweetness preference, flavor intensity, whipped cream quantity, home economics students, product improvement

**CUSTOMER SATISFACTION ON THE WARRANTY CLAIMS OF
TOYOTA MAKATI AYALA AVENUE PHILIPPINES**

Catherine Capili, Christine Tamala, Lady Salas, Marvin Alvasan,
Cherry Baldovino, Reynold Bangalisan

Abstract

This study investigates customer satisfaction regarding warranty claims at Toyota Makati, Ayala Avenue. In the automotive industry, warranties are essential in building customer trust and loyalty by providing assurances of product quality and after-sales service. Despite Toyota's strong brand reputation, concerns persist regarding unclear warranty coverage, delays in processing claims, and communication issues. Anchored in Oliver's Expectation-Confirmation Theory, this study aims to assess how customers evaluate warranty components specifically free-of-charge services, transferability, and the application process, and how these influence satisfaction based on expectations, perceived performance, confirmation, and repurchase intention. This study employs a descriptive quantitative research design. Data was collected from 25 customers of Toyota Makati using structured survey questionnaires. The researchers used statistical tools such as frequency, percentage, weighted mean, and Pearson correlation to analyze customer responses and test the relationship between warranty expectations and overall satisfaction. The findings indicated that customers were generally "Very Satisfied" with Toyota's free warranty services (mean = 3.25), the warranty application process (mean = 3.26), and warranty transferability (mean = 3.20). However, the most frequently reported concerns involved delays in processing, inconsistent service quality, and lack of clear communication. These factors led to a lower perceived confirmation rating (mean = 2.10), though the overall satisfaction score remained within the "Satisfied" range (mean = 2.81). Correlation analysis yielded an r-value of 0.3602 and a p-value of 0.07694, suggesting a weak and statistically insignificant relationship between warranty expectations and overall satisfaction. The results suggest that while warranty coverage is valued by customers, other service dimensions, such as clarity in communication, repair quality, and response time, play a more significant role in shaping overall satisfaction. The study recommends that Toyota Makati improve the efficiency and transparency of its warranty claim process, ensure consistent service quality, and provide ongoing training for staff. Incorporating regular customer feedback will further enhance service delivery. These recommendations aim to increase customer satisfaction and reinforce brand loyalty in a highly competitive automotive market.

Keywords: customer satisfaction, warranty claims, toyota makati, expectation-confirmation theory, after-sales service, automotive industry, service quality, brand loyalty

**ANALYZING THE IMPACT OF MCDONALD'S DIGITAL TRANSFORMATION AND
CUSTOMER EXPERIENCE AND LOYALTY AT SM FAIRVIEW PARKWAY**

Mylene Malana, Analie Creo, Danica Maglinte, Trisha Peliglorio, Anna Marie Rosa, Randy Villaseñor

Abstract

McDonald's, established in 1940 and launched in the Philippines in 1981, has experienced substantial growth, including the opening of branches such as SM Fairview Parkway, likely in the late 1990s. In recent years, a significant shift has been its digital transformation, particularly between 2016 and 2020. During this period, the company introduced key innovations such as mobile ordering, AI-driven marketing, and cashless payment systems to align with changing consumer demands and technological advancements. Despite these efforts, challenges persist, particularly in keeping pace with rapid technological change while ensuring consistent customer satisfaction. The central concern lies in whether these digital tools truly enhance customer experience. To address this, McDonald's has increasingly leveraged big data and artificial intelligence to personalize services, aiming to strengthen customer engagement and build long-term brand loyalty. This portion of the study, accounting for 25% of the overall research, utilizes a descriptive research design under the quantitative method to examine the impact of McDonald's digital transformation on customer experience and loyalty at SM Fairview Parkway. Data were gathered through survey questionnaires distributed to 100 purposively selected respondents, equally divided between 50 males and 50 females. As defined by Chen and Patel (2024), purposive sampling allows for the deliberate selection of individuals who are most relevant to the research objectives. The collected data provided insights into customer opinions and experiences, enabling the identification of key factors influencing digital engagement and supporting the development of research hypotheses. The findings indicate that digital tools, including mobile applications, self-service kiosks, and other digital interactions, have a generally positive impact on customer experience and loyalty. Nonetheless, significant challenges remain, particularly related to the mobile app's usability and service efficiency. Notable issues include prolonged wait times for mobile orders, inadequate digital support, and operational inefficiencies in kiosk systems. To mitigate these concerns, the proposed action plan recommends optimizing mobile ordering workflows, enhancing app navigation, upgrading payment systems, and strengthening customer support. These measures aim to elevate customer satisfaction and foster stronger brand loyalty through a more seamless and effective digital transformation. Fifteen percent of the study recommends customizing digital services to cater to young, single users through personalized promotions and interactive features. Improving app navigation, kiosk responsiveness, and overall system efficiency is crucial. Addressing challenges such as long wait times, inadequate support, and technical issues with real-time order tracking and enhanced customer assistance can significantly improve user satisfaction. Regular system updates, AI-powered support, and trained personnel are vital to delivering a seamless digital experience. Furthermore, reinforcing loyalty programs and leveraging customer feedback for continuous improvement will enable McDonald's to increase engagement and sustain long-term customer loyalty at SM Fairview Parkway.

Keywords: digital services, personalized promotions, young users, app navigation, kiosk responsiveness, system efficiency, real-time tracking, customer assistance, ai support, loyalty programs, customer feedback, customer satisfaction, mcdonald's, sm fairview

**ASSESSING THE FUEL INTEGRITY ON CONSUMER DECISION MAKING IN
SELECTED GAS STATIONS AT NOVALICHES, QUEZON CITY**

Alexander Josaiah Pabustan, Franz Lawrence Dublin, Richelle Fabillar,
Darline Ivy De Castro, Archie Bulfa, Christine Calvo

Abstract

This study assesses how fuel integrity influences consumer decision-making at two gas stations in Novaliches, Quezon City: Metro Gas and Power Fill, using Customer Perceived Value theory and the Input-Process-Output model. It investigates drivers' experiences, station preferences, and pricing perceptions to identify factors that strengthen consumer trust and inform station improvement strategies. A descriptive research design is employed, with convenience sampling selecting thirty drivers (fifteen per station) in Novaliches. A validated two-part questionnaire gathers demographic data, vehicle types, and ratings of fuel quality, service experience, and price fairness on a four-point Likert scale. Data is analyzed using frequency distributions, percentages, means, weighted means, and an independent t-test at a 0.05 significance level ($df = 28$) to compare overall satisfaction between stations. Most respondents rode motorcycles and preferred diesel fuel. Both Metro Gas and Power Fill received positive ratings for fuel quality, service experience, and pricing, with mean scores above 3.0. The independent t-test indicated no significant difference in overall satisfaction between the two stations ($t < 2.017$, $p > 0.05$). Top consumer recommendations included offering discounts and loyalty programs, ensuring stable pricing, and maintaining equipment to guarantee consistent fuel integrity. The study found that fuel integrity significantly influenced consumer choice regardless of vehicle type or station. As a result, the study recommended enhancing transparency in fuel sourcing, implementing regular quality checks, and introducing customer loyalty incentives to reinforce trust. Future research was advised to employ randomized sampling and to explore long-term impacts of quality assurance measures on consumer behavior in the fuel retail sector.

Keywords: fuel integrity, consumer decision making, customer perceived value, gas station satisfaction, independent t-test, novaliches

**EFFECTIVENESS OF ONLINE AFFILIATE MARKETING IN TIKTOK SHOPS: BASIS
FOR MARKETING PROGRAM**

Wendil Gajo, Patricia Abelgas, Rica Mae Bergamo, Judith Galvez,
Carl Nicole Mangalile, Reynold Bangalisan

Abstract

This study examines the effectiveness of online affiliate marketing on TikTok Shops through the lens of Lou et al.'s (2022) Source Credibility Theory. This theory posits that an influencer's perceived trustworthiness, expertise, and authenticity are critical in shaping consumer engagement and persuasion. By analyzing these dimensions, the research aims to determine how influencer credibility influences user behavior, purchasing decisions, and the overall success of affiliate marketing strategies within the TikTok ecosystem. This study utilized a descriptive quantitative research design, gathering data from 200 TikTok Shop consumers through convenience sampling. Statistical analysis, including weighted mean, Kruskal-Wallis, and Mann-Whitney U tests, were employed to assess demographic characteristics, perceived effectiveness of affiliate marketing, and primary consumer concerns. Findings revealed that most respondents were young adults aged 18 to 29, with a slightly higher proportion of males (55%). Moreover, the majority were budget-conscious, with 65% reporting monthly TikTok Shop expenditure of less than ₱1,000. Participants expressed moderate agreement regarding the effectiveness of core affiliate marketing strategies on TikTok Shops, with mean scores indicating favorable perceptions of targeted content creation ($M = 3.18$), influencer collaborations ($M = 3.07$), call-to-action (CTA) integration ($M = 3.24$), real-time analytics ($M = 3.25$), and overall message authenticity ($M = 3.18$). Non-parametric analyses revealed significant differences in perceived authenticity based on monthly spending levels ($H = 8.36$, $p = 0.039$) and in CTA effectiveness relative to socio-economic status ($H = 4.51$, $p = 0.034$). In contrast, gender, age, and purchase frequency did not exhibit statistically significant effects on consumer perceptions of marketing effectiveness. The findings revealed several key consumer concerns that undermine trust and purchasing decisions on TikTok Shops, with the most common issues being counterfeit or low-quality products (60%), vague product descriptions (57%), and insufficient product information (50%). These concerns highlight the need for greater transparency and reliability in online affiliate marketing. To address these challenges, the study proposes a Five-Pillar Strategic Marketing Program: Content Optimization – Use AI tools to produce emotionally resonant, trend-aligned video content tailored to user behavior and platform algorithms to maximize engagement. Micro-Influencer Collaborations – Partner with niche creators who reflect specific audience demographics to foster relatability and boost authenticity. Dynamic Call-to-Actions (CTAs) – Apply urgency-driven messaging (e.g., “Limited Stock Available” or “Offer Ends Soon”) to encourage immediate responses and improve conversions. Analytics-Driven Adjustments – Leverage TikTok's real-time analytics for data-driven refinements and agile marketing interventions. Transparency Initiatives – Implement verified seller badges, provide detailed product descriptions, and encourage user-generated reviews to build trust and reduce skepticism. These strategies align with Gen Z's preferences for authenticity, affordability, and convenience. The study further recommends integrating AI-powered quality control systems and enhanced seller training programs to address logistical and reputational issues. By adopting these measures, brands can strengthen consumer trust, increase conversion rates, and navigate TikTok's rapidly evolving social commerce landscape. Ultimately, the proposed framework offers actionable insights to maximize affiliate marketing potential while minimizing consumer risk and dissatisfaction.

**EFFECTS OF CUSTOMER FEEDBACK ON CUSTOMER RETENTION IN
FASTFOOD RESTAURANT AT HANSTON SQUARE PASIG CITY:
BASIS FOR ENHANCING SERVICE QUALITY**

Fearlyn Salomon, Daniela Marie Canete, Arnelie Pacificador, Lara Pasaporte,
Trisha Mae Velasquez, Ma Salve Villalobos, Reynold Bangalisan

Abstract

This study investigates the effects of customer feedback on customer retention at Jollibee Hanston Square, located on San Miguel Avenue, Pasig City. Anchored in Megha's (2023) Customer Satisfaction Model, the study explores how service quality and customer experience influence loyalty. The research aims to assess feedback trends and determine how they can inform strategies for enhancing service quality to sustain customer retention. The study employs descriptive quantitative research design. A total of 60 customers were selected using quota sampling. Data was collected through structured surveys, which focused on the frequency of customer feedback, key service quality indicators, and drivers of retention. The researchers used statistical tools such as weighted mean, Kruskal-Wallis test, Mann-Whitney U test, and t-tests to analyze the data and determine relationships between demographic variables, customer perceptions, and retention outcomes. The findings revealed that long wait times (77%) and staff attitude (28%) were the most commonly cited concerns. Respondents reported moderate satisfaction with their customer experience (mean = 3.24) and service quality (mean = 2.85). Statistical analysis showed no significant difference in feedback based on age ($H = 1.95$, $p = 0.5813$) or gender ($U = 346.5$, $p = 0.3320$). However, visit frequency had a significant effect on perceptions of service quality ($H = 11.45$, $p = 0.0095$), with frequent visitors expressing higher expectations, particularly regarding speed of service. A strong correlation between feedback and customer retention was established ($z = 13.24$, $p = 0.00001$), suggesting that addressing dissatisfaction can directly influence loyalty. Demographically, most respondents were female (65%) and aged 21–25 (33%), highlighting the importance of diversifying future respondent profiles. Based on the findings, the study proposes a three-part strategy to improve retention: (1) operational efficiency through digital ordering and staff training, (2) personalized service via loyalty rewards and tailored engagement, and (3) proactive feedback management through real-time resolution and monthly audits. The study concludes that aligning service protocols with customer expectations can significantly enhance retention. A hybrid approach that integrates technological solutions with empathetic staff interactions is recommended to address dissatisfaction effectively. These findings present a practical framework for fast-food establishments aiming to balance efficiency and personalization in high-demand urban environments. The study underscores the value of continuous feedback collection and responsive service innovations in retaining customers.

Keywords: customer feedback, customer retention, fast-food restaurant, service quality, digital ordering, loyalty strategies, urban marketing

**ENHANCING DESTINATION MARKETING STRATEGIES IN SELECTED AREAS
IN METRO MANILA: BASIS FOR PROMOTIONAL PLAN**

Ralyn Ybañez, Cathrine Jean Tanting, Ma Faith Delfino, Jhon Steven Revilla,
Mary Dhayme Ayuman, Rosalie Jacinto

Abstract

This study aims to enhance destination marketing strategies by showcasing the unique attractions of selected areas in Metro Manila to both domestic and international tourists. It seeks to identify the key factors that contribute to a memorable travel experience, including the destinations' appeal, cultural significance, and tourism offerings. The gathered insights will serve as the foundation for developing effective promotional strategies that increase visibility, attract a broader audience, and support sustainable growth in the tourism sector. The study employed a descriptive research method and gathered data from 150 respondents, including both local residents and tourists, selected through purposive sampling. Survey questionnaires were used to assess the effectiveness of current marketing strategies and to identify challenges experienced by travelers. The findings revealed that respondents strongly agreed with the effectiveness of both social media marketing and traditional marketing approaches in promoting destinations. Destination marketing strategies also received a "Strongly Agree" rating in the areas of eco-friendly practices, community involvement, and cultural preservation. However, several challenges were identified, including poor internet connectivity, difficulty navigating local transportation, lack of recycling bins, and limited access to reliable pre-trip information. Other concerns involved misleading social media reviews, limited community service opportunities, and insufficient protection of cultural heritage sites. Based on the findings, the study recommends the development of a user-friendly website with an intuitive interface that provides clear, accessible information about tourist attractions, accommodations, transportation, and cultural guidelines. This platform should serve as a one-stop destination for travel planning and ensure an informative and seamless experience for both local and foreign tourists.

Keywords: eco-friendly practices, cultural preservation, marketing strategies, community involvement, destination enhancement, tourism promotion

ENTREPRENEURIAL SUSTAINABILITY OF SAMPLED MICRO ENTERPRISES IN QUEZON CITY: A BASIS FOR DEVELOPING STRATEGIC ENTREPRENEURIAL MODEL

Veronica Villamayor, Angelina Bruzon, Patricia Mae Guevarra,
Angelica Macandog, Reynold Bangalisan

Abstract

This study explores the entrepreneurial sustainability of micro food enterprises in Novaliches, Quezon City, by examining their performance in marketing, management and personnel, financial, and operational domains. These enterprises, deeply embedded in Filipino culinary traditions and known for offering affordable, home-cooked meals, are integral to the local urban economy through job creation and accessible dining options. However, despite their crucial role, they encounter significant challenges such as limited capital, escalating operational expenses, and inadequate formal business management skills. These obstacles pose serious threats to their long-term viability and growth prospects. Grounded in the Business Feasibility theories of Proboningrum (2020) and Artanti (2023), this study utilized a descriptive-quantitative research design. Structured questionnaires were administered to owners and employees across ten micro food enterprises in Novaliches, Quezon City. The gathered data were analyzed through frequency distribution, weighted mean, Mann-Whitney U test, and Kruskal-Wallis H test to identify patterns, measure central tendencies, and examine significant differences among groups. The findings indicate that most micro food enterprises have been in operation for 2 to 3 years, starting with an initial capital below ₱15,000, employing up to three workers, and earning between ₱15,001 and ₱20,000 monthly. Their overall sustainability was rated as “Sustainable,” with key strengths identified in affordable pricing, advantageous location, friendly customer service, and streamlined operations. However, weaknesses were noted in financial planning, equitable employee compensation, and equipment maintenance. Statistical tests showed no significant differences in sustainability based on business duration or initial capital, highlighting the potential influence of external factors and strategic management. Owners also cited challenges including managing customer complaints, inventory control, adapting to food trends, unclear business direction, and resistance to innovation. To overcome these challenges, the study recommends a strategic framework focused on enhancing the growth and resilience of micro food enterprises. This framework emphasizes sound management practices, targeted marketing strategies, effective financial oversight, and streamlined operations. It also advocates for improved access to capital, ongoing business training, strengthened employee motivation, utilization of digital marketing tools, and robust customer feedback systems. By reinforcing these key areas, small businesses can boost their competitiveness, achieve sustainable growth, and make a stronger contribution to the local economy. The study ultimately highlights the necessity of comprehensive and strategic support to equip micro enterprises for the evolving demands of today’s business landscape.

Keywords: micro food enterprises, entrepreneurial sustainability, novaliches, quezon city, marketing performance, financial management, operational efficiency, small business challenges, business growth strategies, digital marketing, employee motivation, custo

**EVALUATING CUSTOMER PERCEPTION SERVICE QUALITY
AT MONDAE AUSTRALIAN YOGURT**

Hanna Marie Torres, Lee Margarethe Bermejo, Patricia May Escaño,
Aira Jeane Ibarra, Nicole Tobiaso, Jenelyn Comon

Abstract

This study aims to assess how customers perceive the quality of service at Mondae Australian Yogurt, with a focus on its Taft Avenue branch in Pasay City. It examines the influence of demographic variables such as age and gender, alongside behavioral factors like visit frequency and the nature of customer engagement. A sample of fifty (50) customers who have previously patronized the store will be surveyed to provide localized insights into service quality perceptions. This study adopts a descriptive research design to evaluate customer perceptions of service quality. Through the integration of both qualitative and quantitative data, the research aims to gain in-depth insights into customer experiences, preferences, and expectations. This approach allows for a comprehensive analysis of the key factors shaping customer perceptions, ultimately contributing to a more nuanced understanding of service quality from the consumer's perspective. The study indicated that 58% of respondents were female, suggesting a predominantly female clientele. Among the evaluated service quality dimensions, employee responsiveness, particularly the promptness of service, received a high satisfaction rating of 3.88. Empathy (3.82) and assurance (3.85) also reflected strong performance. Clear and consistent communication during service delays earned the highest rating at 3.90, underscoring its critical role in customer satisfaction. Additionally, customer-centric initiatives such as appreciation events and expedited service lanes, both rated at 3.88, significantly enhanced the overall service experience and reinforced positive customer perceptions. The findings indicate that the majority of customers are female and emphasize the critical role of prompt and attentive service in enhancing customer satisfaction. Effective communication during service delays, coupled with personalized initiatives such as appreciation events and fast-track lanes, significantly improves the overall customer experience and fosters loyalty.

Keywords: customer satisfaction, service quality, prompt service, female customers, communication, empathy, assurance, appreciation events, fast lanes, customer experience

**FACTORS INFLUENCING CUSTOMER SATISFACTION TOWARDS CUSTOMER
RETENTION AT TIN'S CAKESHOP BAGONG SILANG CALOOCAN CITY**

Justine Mykko Santos, Jazz Lordan Gyn Lanorias, Mark Doniel Babasa,
Mitz Mateo, Roberto Llames, Randy Villaseñor

Abstract

Customer satisfaction plays a vital role in establishing long-term customer relationships and promoting retention. It involves consistently fulfilling or exceeding customer expectations through the delivery of high-quality products and services. Businesses must prioritize customer satisfaction to ensure repeat transactions, foster brand loyalty, and cultivate a sustainable customer base. This study aims to identify the factors influencing customer satisfaction and their impact on customer retention at Tin's Cakeshop in Bagong Silang, Caloocan City. The study employs quantitative research design, with data gathered through a survey administered to 100 respondents. It examines the demographic profile of the respondents and assesses their level of satisfaction in terms of customer service, place, price, promotion, and product quality. The study also addresses problems encountered by the store manager and outlines a proposed action plan. Statistical tools used include frequency and percentage, weighted mean, z-test, and ranking. A two-sample z-test was conducted to compare the satisfaction levels of male and female respondents across the five variables. The findings revealed a significant difference in customer service satisfaction between females ($M = 3.83$) and males ($M = 3.54$), with a z-value of 2.651, exceeding the critical value of ± 1.96 ($p < 0.008$). A similar result was observed in the variable of place, where females ($M = 3.78$) reported higher satisfaction than males ($M = 3.47$), with a z-value of 3.200 ($p < 0.001$). These results led to the rejection of the null hypothesis, indicating a significant difference between sexes in these areas. However, for price, promotion, and product quality, the z-values were below the critical threshold, suggesting no significant difference between male and female respondents in these aspects. The findings demonstrate that customer service and place significantly influence customer satisfaction differently for males and females, while price, promotion, and product quality do not show any notable difference between the two groups. This suggests that gender-based preferences may affect perceptions of service and store environment. Understanding these distinctions can help Tin's Cakeshop tailor its strategies to improve customer experience and enhance retention efforts.

Keywords: customer satisfaction, customer retention, gender preferences, marketing strategy, product quality, service quality, tin's cakeshop, bagong silang, descriptive research, quantitative analysis

**FACTORS INFLUENCING PURCHASE INTENTION ON
FACEBOOK MARKETPLACE FOR USED CARS**

Franco Laica, Abegail Adorna, Desiree Paderna, Ronalyn Mae Gamelo,
Allyna Felicilda, Reynold Bangalisan

Abstract

This study examines the factors influencing purchase intention for used cars on Facebook Marketplace, with a focus on Cars R Us Auto Trading in Meycauayan, Bulacan. Grounded in Nuzula et al.'s (2022) framework, the research investigates how perceived quality, perceived risk, and brand attitude influence consumer buying behavior on digital platforms, particularly within the context of secondhand vehicle sales. A mixed-methods approach was employed, combining quantitative surveys with statistical analysis to assess customer perceptions. Forty-five (45) respondents participated in the survey. The variables measured included perceived quality, perceived risk, and brand attitude. Data was analyzed using mean scores and correlation tests. Perceived quality (Mean = 2.73) and brand attitude (Mean = 2.63) were found to significantly influence purchase intentions, while perceived risk (Mean = 2.73) showed no statistically significant relationship with purchasing behavior, supporting the hypothesis that risk perception does not significantly affect decision-making in this context. The findings indicate that customer decisions are primarily influenced by the perceived quality of the vehicle and trust in the brand or seller. Transparency in communication and seller credibility further strengthened customer loyalty and engagement. These results provide actionable insights for small and medium enterprises (SMEs) operating on Facebook Marketplace. Recommendations include implementing structured onboarding processes, enhancing real-time buyer-seller interaction, and offering reliable post-sale support to meet the evolving expectations of digital consumers. The study shows that trust and transparency are more important to buyers than price when purchasing used cars on Facebook Marketplace. Customers are more likely to buy when sellers are responsive, profiles appear credible, and test drives are available. These factors help build trust between buyers and sellers. However, challenges were also found, including limited listing options (reported by 20 respondents), outdated listings (18 respondents), and hidden charges (9 respondents), which affect the buying experience. To improve this, the researchers proposed a four-stage customer experience model. First is Inquiry, which focuses on improving listings with quality photos and verified profiles. Second is Apply, which ensures secure payments and clear contracts. Third is Approved, which encourages follow-up and customer feedback after purchase. Lastly, Collaboration promotes partnerships for added services like financing. These strategies can help sellers improve customer satisfaction, increase trust, and encourage repeat buying on the platform.

Keywords: purchase intention, used cars, facebook marketplace, perceived quality, brand attitude, perceived risk, digital marketing, customer experience, online selling, sme strategies

**FOOD SAFETY PRACTICES IN FAST-FOOD CHAINS COMPLIANCES AT
GREENWICH SM FAIRVIEW QUEZON CITY**

Ma Beatriz Balontong, Cristyl Ann Ibañez, Lyca Patana, Alfie Rivero,
Beverly Tuamque, Randy Villaseñor

Abstract

This study investigated the food safety practices and compliance standards at the Greenwich fast-food branch in SM Fairview, Quezon City, focusing specifically on customers' perceptions of various food safety measures. This study employed a descriptive research design to obtain quantitative data from a total of 100 respondents, equally divided between 50 males and 50 females. Data was gathered through structured survey questionnaires designed to assess critical factors such as water quality, food sanitation, freshness, packaging, and waste management. To ensure comprehensive data analysis, the researchers applied various statistical treatments, including frequency distribution, percentage analysis, weighted mean computation, and Z-test analysis. These methods enabled a systematic interpretation of the findings and facilitated gender-based comparisons where applicable. The findings demonstrated overall compliance with food safety standards across the majority of assessed categories. Nonetheless, significant concerns were raised by respondents regarding the freshness of food, the durability of packaging, and sanitation practices. Results from the Z-test analysis indicated statistically significant differences in perceptions between respondent groups concerning food sanitation ($Z = 2.56$), freshness ($Z = 2.80$), and packaging ($Z = 2.24$), all exceeding the critical value of 1.96 at the 0.05 significance level. These outcomes suggest a meaningful divergence in how different groups perceive these specific aspects of food safety. In contrast, no statistically significant differences were found in the evaluation of water quality ($Z = 1.51$) and waste management ($Z = 1.34$), as these values did not surpass the critical threshold, indicating a more uniform perception among respondents in these areas. The results revealed a critical gap between the implementation of existing food safety protocols and the actual experiences reported by customers, emphasizing the need for targeted improvements. In response, the researchers formulated a strategic improvement plan centered on four key areas: enhanced staff training, routine and systematic health and safety inspections, stricter enforcement of food safety regulations, and the establishment of a robust feedback mechanism to capture and respond to customer insights. These initiatives aim to elevate food safety compliance, increase customer satisfaction, and rebuild consumer trust in Greenwich's dedication to maintaining the highest standards of food quality and hygiene.

Keywords: food safety compliance, customer experience, sanitation practices, staff training, packaging durability, z-test analysis, customer feedback, quality assurance, greenwich, and consumer trust.

**GENZ PREFERENCE: IMPACT OF INTERNATIONAL CLOTHING BRANDS
ON CONSUMER PURCHASING BEHAVIOR**

Erishna Denise Quimat, Jonima Kristel Fredeluces, Maricar Baria,
Erin Merie Reyes, Maribel Campos, Reynold Bangalisan

Abstract

This study explores the purchasing behavior of Generation Z in the Philippines toward international clothing brands, including Shein, Zara, and H&M, through the lens of Lewis' (1898) AIDA Model, which encompasses Attention, Interest, Desire, and Action. This study utilized a descriptive quantitative design, surveying 200 Generation Z respondents aged 12 to 27 through quota sampling. A validated questionnaire was administered to evaluate the impact of the AIDA model components: Attention, Interest, Desire, and Action, on their purchasing behavior. The findings revealed that Attention was the strongest driver of Generation Z's purchasing behavior, with a mean score of 4.12, largely influenced by social media trends, influencer endorsements, and visually appealing advertisements. This was followed by Interest (mean = 3.85) and Desire (mean = 3.78), shaped by factors such as brand storytelling, affordability, and alignment with sustainability values. However, Action scored the lowest (mean = 3.25), reflecting hesitation primarily due to ethical concerns regarding fast fashion's environmental impact and budget constraints. ANOVA and regression analyses confirmed a significant relationship ($p < 0.05$) between AIDA components and purchasing decisions, with Attention ($\beta = 0.42$) and Desire ($\beta = 0.35$) serving as key predictors. Despite valuing sustainability, 68% of respondents prioritized affordability, highlighting a conflict between ethical ideals and spending habits. Additional challenges included distrust of greenwashing (58%), rapid fashion trend cycles, and inconsistent brand transparency. To address these challenges, the study recommends a four-pillar marketing strategy for local brands: (1) Increase Attention by using TikTok and Instagram Reels to highlight eco-friendly practices; (2) Build Interest through partnerships with micro-influencers and AR-powered virtual try-ons; (3) Drive Desire with limited-edition collections and loyalty programs; and (4) Prompt Action via "buy now, pay later" options and clear sustainability certifications. The strategy emphasizes balancing affordability with ethical production, leveraging user-generated content to foster trust, and implementing agile supply chains to keep pace with Gen Z's fast-changing trends. These recommendations offer practical guidance for brands navigating Gen Z's demand for both style and social responsibility in the digital marketplace.

Keywords: marketing strategy, generation z, local brands, social media marketing, sustainability, influencer collaboration, augmented reality, consumer behavior, ethical production, digital marketplace

**INFLUENCE OF ONLINE FOOD REVIEWS ON CONSUMER PURCHASE
INTENTIONS: AN ASSESMENT**

Judy Mae Picorro, Jerick Piñero, Ronnie Tubaon, Ilonah Eve Puyales,
Nowella Del Monte, Randy Villaseñor

Abstract

In today's digital landscape, online food reviews play a pivotal role in shaping consumer purchase intentions. This study explores the influence of food vloggers on platforms like YouTube and TikTok, focusing on how factors such as vlogger expertise, popularity, video quality, and video length affect the food-buying decisions of Filipino consumers. It also examines whether demographic characteristics, particularly age and gender, significantly impact these purchase behaviors. This study employed a descriptive-correlational research design with 200 respondents from Caloocan and Quezon City who regularly watch food reviews and have made purchase decisions based on them. A structured questionnaire was distributed through online platforms using the snowball sampling method. The collected data were analyzed using descriptive statistics and Pearson's correlation to assess the relationship between review characteristics and consumer purchasing behavior. The results indicated that all four variables, vlogger expertise (Mean = 2.72), popularity (Mean = 2.62), video quality (Mean = 2.69), and video length (Mean = 2.68), were considered influential by the respondents in shaping their food purchase decisions. Among these, video quality demonstrated the strongest correlation with purchase intention ($r = 0.60$), followed by vlogger popularity ($r = 0.52$), expertise ($r = 0.48$), and video length ($r = 0.45$). Meanwhile, demographic variables such as age and gender showed weak or no significant correlation with purchase intentions ($p > 0.05$), suggesting that the influence of online food reviews transcends these demographic distinctions. The findings underscore that the quality of food review content, emphasizing the reviewer's expertise, credibility, and overall presentation, exerts a stronger influence on consumer purchase decisions than demographic factors like age or gender. Although viewers are drawn to brief and engaging videos, they still value informative and trustworthy content. Therefore, content creators and businesses should prioritize producing reliable, well-crafted reviews to effectively shape consumer behavior and enhance marketing impact.

Keywords: online food reviews, consumer behavior, vlogger expertise, video quality, purchase intention, social media marketing, filipino consumers, youtube and tiktok, descriptive-correlational research, content credibility

**LEVEL OF SATISFACTION OF CUSTOMERS OF TROPICAL HUT - THEME FAST
FOOD RESTAURANT EVER GOTESCO COMMONWEALTH: BASIS FOR
DEVELOPMENT PLAN**

Trixie MacLaine Sobrevega, Crystal Baesa, Allona Faye Binondo, Charlene Sto Domingo,
Mary Ann Marabella, Randy Villaseñor

Abstract

This research investigates customer satisfaction at Tropical Hut, one of the Philippines' oldest and most recognized burger fast-food chains. It focuses on how advertising efforts, technological innovations, and interior design elements contribute to shaping the overall customer experience and satisfaction. This study employed convenience sampling to select respondents and conducted surveys to gather insights into customer satisfaction. To analyze the data, the study utilized the following statistical tools: frequency and percentage to summarize the data, weighted mean to measure the level of satisfaction, and T-test and ANOVA to identify significant differences between sample groups. The results indicated that 41% of the respondents were female, with most falling within the 21 to 30 age group. Based on the factors of interior design, technology, and advertising, the ANOVA test revealed a significant difference in perceptions of interior design across age groups, as the computed F-value exceeded the F-critical value of 2.959 at a 0.05 level of significance. In contrast, the T-test results showed no significant difference in customer satisfaction based on gender, as the computed T-value of 3.362 was less than the T-critical value of 3.968 at the same significance level. The study recommends the use of nostalgic marketing to attract new customers, the continued acceptance of cash transactions, and improvements in interior design to enhance customer satisfaction. It also suggests strengthening social media marketing efforts, offering special discounts, and maintaining traditional payment methods while integrating digital options to make transactions more accessible across age groups. To further increase customer satisfaction, the introduction of seasonal menu offerings and a customer loyalty program is proposed. By adopting these strategies, Tropical Hut can foster stronger customer loyalty and reinforce its position in the competitive fast-food industry.

Keywords: tropical hut, customer satisfaction, nostalgic marketing, interior design, advertising, technological advancements, cash transactions, digital payment, social media marketing, loyalty program, fast-food industry

**THE LEVEL OF EFFECTIVENESS OF INFLUENCER MARKETING ON BEAUTY
PRODUCTS: BASIS FOR A PROPOSED MARKETING STRATEGY**

Jearrie Mae Maglasang, Rolly Abit Jr, Lovelyn Kate Bernal,
Rod Laurel Labita, Rheishelyn Peliño, Analyn Magalso

Abstract

Influencer marketing has become a powerful strategy for promoting beauty products, particularly within the digital landscape of the Philippines. With the rise of social media platforms like Instagram, TikTok, and Facebook, brands face increasing challenges in capturing consumer attention amid a crowded online environment. Consequently, influencer collaborations have emerged as a popular alternative to traditional advertising, leveraging the trust influencers have built with their audiences. However, despite its widespread adoption, the success of these campaigns varies considerably across different brands and initiatives. Using a descriptive-correlational research design, this study involved 100 purposively selected social media users aged 15 to 40. Data was collected through a researcher-developed survey questionnaire distributed via Google Forms. Statistical analyses, including percentages, weighted means, the Kruskal-Wallis test, and ranking methods, were applied to assess the impact of influencer marketing on beauty products and to explore demographic differences. Survey results from social media users aged 15 to 40 indicate that influencer marketing is perceived as highly effective in promoting beauty products. Engagement and credibility received the highest ratings, underscoring the importance of interactive and trustworthy influencers. Additionally, content quality, message clarity, relevance, and consistency were rated positively. These findings suggest that successful influencer marketing depends on authentic communication, expertise, and content that aligns with audience preferences and current trends. The results emphasize the critical role of both influencers and brands in ensuring the success of influencer marketing efforts. Influencers who establish strong connections with their audience are more likely to drive effective marketing outcomes. Consistency and active engagement in executing influencer marketing strategies are essential factors that contribute to their success in promoting beauty products.

Keywords: influencer marketing, beauty products, brand awareness

**ALLURE OF THANA TOURISM: UNVEILING MOTIVATION TO EXPLORE DARK SITE
OF INTRAMUROS AND CULTURAL CENTER OF THE PHILIPPINES**

Claire Joan Villanueva, Rodilyn Datu, Angelika Felises, Donna Divine Timo,
Sophia Orielly, Alezhandrea Clio Barrios

Abstract

Thana tourism, or dark tourism, involves travel to sites associated with death, tragedy, and cultural memory. This study examines the motivations driving visitors to engage in dark tourism at two prominent Manila locations: Intramuros and the Cultural Center of the Philippines. It explores the roles of educational enrichment, emotional engagement, and identity exploration in shaping decisions to visit these historically significant sites. A descriptive survey design is employed, gathering data from 100 respondents selected via convenience sampling. Participants provided demographic information and rated their motivations for visiting each site, as well as the influence of digital marketing, guided tours, and special promotional events on their decisions. Responses were analyzed using descriptive statistics to identify key motivational factors and the effectiveness of promotional strategies. Educational enrichment emerged as the strongest motivator, with visitors citing a desire to learn about historical events and cultural significance. Emotional engagement through reflection on tragedy and loss, and identity exploration via personal or cultural connections, also scored highly. Promotional strategies such as targeted digital campaigns, immersive guided tours, and thematic events were reported to effectively attract visitors and enhance their experiences. The findings suggest that combining informative content with emotionally resonant programming drives engagement at dark tourism sites. As a result, enhancing digital outreach, enriching guided-tour interactivity, and developing thematic events aligned with visitor interests were recommended to deepen educational and emotional engagement. These strategies support responsible and reflective tourism practices that respect the gravity of dark sites while enriching visitor experience.

Keywords: thana tourism, dark tourism, visitor motivation, educational enrichment, emotional engagement, identity exploration

**ANALYZING THE PRESERVATION PRACTICES OF THE HISTORIC WALLS IN
INTRAMUROS, MANILA: BASIS FOR ENHANCEMENT PLAN**

Yuridave Montalban, Ma. Lia Edralyn Concepcion, Mark Ryan Lopez, Rea May Eseo, Rosalie
Jacinto

Abstract

This study aims to analyze the preservation practices of the historic walls of Intramuros, Manila, as a foundation for developing an enhancement plan. To guide the research, specific questions were formulated. The study's respondents consisted of Intramuros tour guides, who provided valuable insights based on their firsthand experiences. A descriptive research design was utilized to assess the current state of preservation and identify areas requiring improvement. This study utilized a qualitative research approach, with 30 tour guides purposively selected to participate and provide insights into the preservation of the historic walls of Intramuros. A survey questionnaire served as the main tool for data collection, targeting Intramuros tour guides. The study also identified and examined the challenges they face in preserving the historic walls. The collected data were analyzed using percentage distribution and weighted mean. Drawing from the study's findings, an enhancement plan was proposed for the Intramuros Administration to strengthen the safety measures and preservation efforts for the historic walls of Intramuros.

Keywords: intramuros, historic walls, preservation, enhancement plan, safety improvement, tour guides, descriptive research, qualitative method, purposive sampling, infrastructure challenges, intramuros administration

**ANALYZING WASTE MANAGEMENT OF WAWA DAM:
IMPLICATION FOR ENVIRONMENTAL SUSTAINABILITY**

Anshiera Delna, Tzarie Jane Cambangay, Adelma Dumpang,
Deniella Eliaso, Mike Jimpaul Ferran, Christine Aliñabo

Abstract

The World Health Organization (2020) underscores the importance of effective waste management in supporting sustainable tourism development. It calls for strategic approaches to monitor, reduce, and properly manage waste. Beyond mitigating the direct environmental effects of tourism, waste management also promotes circular economic principles and encourages the reduction of waste at its source. This study aims to analyze the demographic profile of visitors to Wawa Dam in Barangay San Rafael, Rodriguez, Rizal; assess the existing waste management strategies, including collection, transfer, implementation of the 3Rs (Reduce, Reuse, Recycle), treatment, and disposal; and identify the challenges experienced by respondents. The ultimate goal is to propose actionable recommendations for improving and sustaining effective waste management practices at the site. This study aims to examine the environmental impacts of existing waste management practices at Wawa Dam and to develop more effective and sustainable approaches. It seeks to assess how current strategies influence the surrounding environment and to propose improvements that will promote long-term environmental sustainability in the Wawa Dam area. This study aims to support the development of more efficient and sustainable waste management strategies that ensure the long-term environmental sustainability of the area.

Keywords: wawa dam, waste management, environmental sustainability, sustainable strategies, tourism, waste reduction, 3rs (reduce, reuse, recycle), environmental impact.

**ASSESSING THE FACILITIES IN TAGAYTAY PICNIC GROVE TOWARDS
TOURIST SATISFACTION: BASIS FOR IMPROVEMENT PLAN**

Azalea Dianne Buella, Jamaica Robis, Gesa Bañadera, Mary Grace Nakar,
Bernadette San Juan, Alezhandrea Clio Barrios

Abstract

This study aims to assess the facilities of Tagaytay Picnic Grove and evaluate their impact on tourist satisfaction, serving as the basis for an improvement plan to enhance visitor experiences. Tagaytay Picnic Grove, a well-known recreational site, attracts a diverse range of tourists seeking leisure, nature, and scenic views. However, the quality and maintenance of facilities, including rest areas, restrooms, picnic spots, and other amenities, greatly influence tourist satisfaction and the destination's overall reputation. This research employs a quantitative approach using a survey-based method to collect data on tourists' perceptions and satisfaction levels with the existing facilities. The respondents include 50 tourists visiting Tagaytay Picnic Grove, selected through simple random sampling to ensure representation. The survey questionnaire measures key aspects of facility quality such as cleanliness, accessibility, functionality, and aesthetic appeal. Collected data will be statistically analyzed to identify patterns and correlations between facility conditions and satisfaction levels. Findings are expected to reveal strengths, such as well-maintained facilities that enhance visitor satisfaction, as well as weaknesses, including outdated or insufficient amenities that negatively affect the tourist experience. The results aim to provide a clear understanding of the current condition of facilities at Tagaytay Picnic Grove and their alignment with tourist expectations. Based on these findings, an improvement plan will be developed, focusing on strategic facility upgrades, improved maintenance, and the addition of new amenities. Ultimately, the study seeks to support sustainable tourism development in Tagaytay by enhancing visitor satisfaction, increasing positive feedback, and encouraging repeat visits.

Keywords: accessibility, amenities, cleanliness, facilities, improvement plan, maintenance, tagaytay picnic grove, tourist satisfaction, visitor experience

**ASSESSING THE TOURIST DESTINATIONS REPUTATION ON
TOURIST PERCEPTION IN SELECTING DESTINATION**

Princess Dimple Publico, Lalaine Ballecer, Janeth Ien Jandog, Dominique Klaire Nebrida,
Mary Chris Pandaan, Christine Aliñabo

Abstract

This study examines how a destination's reputation influences tourist perception during destination selection, with Baguio City as the focal case. As competition among travel destinations intensifies, reputation shaped by attractions, infrastructure quality, and transport accessibility, plays a pivotal role in traveler decision-making. Previous research indicates that a favorable destination image enhances tourist satisfaction, loyalty, and intention to revisit. Known for its cool climate, cultural heritage, and ease of access, Baguio City provides an ideal context to assess how these reputation factors affect travel experiences and revisit intentions. A descriptive quantitative design is employed to evaluate the effect of Baguio City's destination image on tourist satisfaction and behavioral intentions. Fifty tourists who have visited Baguio City are selected via purposive sampling to ensure relevant experience. A validated, structured questionnaire gathers information on demographics and perceptions of attractions, infrastructure, and transport using a four-point Likert scale. Data are analyzed through frequency distributions, percentages, and weighted means to interpret tourist perceptions comprehensively. Respondents were predominantly aged 21 to 25 (32 percent) and female (60 percent), with 84 percent married. Among pull factors, attractions received the highest mean score (3.42), followed by infrastructure (3.35) and transport (3.19), all indicating agreement on their positive contribution to satisfaction. Scenic views (mean = 3.52) and perceived safety (mean = 3.40) emerged as top image elements. Historical and cultural tours (mean = 3.54) and accessibility of attractions (mean = 3.50) enhanced travel experiences. The balanced mix of urban and natural offerings (mean = 3.56) most strongly influenced revisit intentions and recommendations. Findings indicated that Baguio City's attractions and overall reputation strongly shaped tourist perceptions. Infrastructure and transport also influenced satisfaction, albeit to a lesser degree. As a result, a robust destination image was associated with higher satisfaction, enriched travel experiences, and stronger revisit intentions. It was recommended that tourism stakeholders reinforce marketing for signature attractions, upgrade infrastructure, and improve transport services to bolster Baguio City's competitiveness.

Keywords: destination reputation, tourist perception, attractions, infrastructure, transport, revisit intention

**ASSESSING TOURIST SATISFACTION TOWARDS ENHANCING
FACILITIES OF UGBO NIGHT MARKET**

Chrislyn Robedillo, Lalaine Cionelo, Joana Marie Pustrado, Patricia Jean Tupas,
Geneviev Marie Villamor, Alezhandrea Clio Barrios

Abstract

This study investigates tourist satisfaction at Ugbo Night Market and examines how enhancements to facilities and amenities could create a more enjoyable atmosphere. It evaluates key components of the visitor experience, including food offerings, cleanliness, and comfort, to identify opportunities for developing parking, lighting, sanitation, and seating. By understanding satisfaction drivers, this study informs strategies to elevate the market's appeal and support sustainable tourism growth. A descriptive research design was employed using a survey questionnaire with a four-point Likert scale to measure tourist satisfaction across various aspects of the market experience. Data were collected on-site from fifty tourists aged eighteen and above, representing diverse genders and backgrounds. Purposive sampling ensured inclusion of participants who had just completed their visit. Responses were analyzed using descriptive statistics to determine mean satisfaction levels and highlight areas for improvement. Results showed that tourists were generally satisfied with food quality and vendor interactions but identified shortcomings in parking availability, lighting adequacy, sanitation facilities, and seating arrangements. Mean satisfaction scores for these facility-related items fell below the "Agree" threshold, indicating moderate to low contentment. Conversely, hygiene of food stalls and friendliness of staff received high satisfaction ratings. Enhancements in parking management, upgraded lighting installations, improved sanitation protocols, and additional seating significantly boost tourist contentment. Implementing these changes at Ugbo Night Market would likely foster more positive visitor experiences, encourage repeat patronage, and attract new tourists. This study contributes to effective tourism planning by pinpointing facility investments that support local economic development and cultural preservation.

Keywords: tourist satisfaction, facilities enhancement, night market amenities, ugbo night market, tourism experience

**ASSESSMENT ON THE FACILITIES OF NINOY AQUINO PARKS AND
WILDLIFE CENTER: BASIS FOR TOURIST SATISFACTION**

Danice Dela Cruz, Jerico De Guzman, Precy Rose Tolentino,
Michelle Pangilinan, Jhon Marc Baluyot, Christine Aliñabo

Abstract

This study aims to assess the current state of facilities and enhance visitor satisfaction at the Ninoy Aquino Parks and Wildlife Center in Quezon City, Philippines. The decline in visitor numbers has been attributed to neglected and deteriorating facilities, which undermine the center's goal of raising wildlife awareness. Through this research, efforts will be directed toward improving the facilities and reigniting public interest in the vital connection between people and nature. This study utilized quantitative research methods to systematically collect, measure, and analyze data. It highlights findings related to the demographic profile of respondents, the condition of facilities at the Ninoy Aquino Parks and Wildlife Center, visitor evaluations of these facilities, and the challenges confronting the center. The majority of respondents were females aged 19 to 22 and residents of Quezon City. Overall, the facilities were rated positively, especially in terms of cleanliness and accessibility. The Ninoy Aquino Parks and Wildlife Center faces several challenges, including aging facilities, limited government support, and inadequate marketing efforts. This study evaluated visitor satisfaction by considering respondents' age and gender, underscoring the urgent need for facility upgrades to boost visitor numbers. It also emphasized the importance of enhancing amenities to better align with visitor expectations, while acknowledging the positive feedback received for the park's current services. To enhance the visitor experience and keep pace with evolving tourism trends in the Philippines, it is recommended that the Ninoy Aquino Parks and Wildlife Center undertake a thorough evaluation of its facilities. Based on this assessment, strategic improvements and additions to the park's amenities should be implemented to provide visitors with a more enjoyable, comfortable, and convenient experience.

Keywords: facility assessment, visitor satisfaction, ninoy aquino parks and wildlife center, quezon city, tourism trends, park amenities, government support, marketing strategies, outdated facilities, visitor experience, quantitative research, gender compariso

ASSESSMENT ON THE RECREATIONAL ACTIVITIES AT QUEZON CITY MEMORIAL CIRCLE: A PROPOSED ENHANCEMENT FOR SANITATION AND SAFETY MEASURES

Realyn Manila, Quenee Baris, Jheanny Piamonte, Balnawi Ferraz,
Ronnel Belen, Alezhandrea Clio Barrios

Abstract

This study investigates the existing recreational activities at the Quezon City Memorial Circle, with an emphasis on improving cleanliness and safety within the area. As a prominent destination for both local residents and tourists, the park hosts a range of activities, including sports, walking, and cultural events. Despite its popularity, concerns have been raised regarding inadequate sanitation and safety measures, particularly in terms of waste management, security presence, and emergency response systems. These issues underscore the need for a comprehensive assessment of current conditions and the development of practical, sustainable solutions to enhance the overall recreational experience and ensure a safer, more welcoming environment for all visitors. This study collected data through surveys and interviews with local tourists to gain insight into their experiences and overall satisfaction with the Quezon City Memorial Circle. It specifically examined the condition of essential park facilities such as playgrounds, restrooms, walkways, and food stalls, as well as the effectiveness of existing sanitation and safety measures. The results revealed recurring concerns, including poorly maintained restrooms, insufficient waste disposal systems, and safety issues in certain areas. These problems negatively affect visitor satisfaction and underscore the need for strategic improvements to ensure a cleaner, safer, and more enjoyable environment for all park users. Drawing from the study's findings, several key enhancements are proposed to improve sanitation and safety within the Quezon City Memorial Circle. For sanitation, the recommendations include the implementation of an improved waste management system, the regular and systematic cleaning of public spaces, and the installation of additional trash bins in high-traffic areas. To address safety concerns, the study suggests increasing the visibility and frequency of security patrols, upgrading lighting in dimly lit sections of the park, and ensuring that all facilities are properly maintained and promptly repaired when needed. These proposed measures aim to enhance the overall visitor experience by fostering a cleaner, safer, and more comfortable environment. This study seeks to contribute to the enhancement of the Quezon City Memorial Circle by promoting a cleaner, safer, and more inviting environment for all visitors. By addressing existing issues related to sanitation and safety, the park can continue to serve as a well-loved recreational destination while ensuring the comfort and well-being of the public. The recommended improvements aim not only to preserve the park's attractiveness but also to support its long-term sustainability as a vital community space.

Keywords: quezon city memorial circle, visitor experience, recreational spaces, sanitation, safety, public parks, waste management, security patrols, facility maintenance, community space, sustainability, urban tourism, park improvement, public safety, environ

**ASSESSMENT ON THE UNDERUTILIZED FACILITIES OF BOSSING FARM:
BASIS FOR IMPROVEMENT PLAN**

Don Manuel Labrada, Maria Christina Matociños, Marjorie Ocleda,
Maria Gemma Petilla, John Paul Quiñones, Alezhandrea Clio Barrios

Abstract

This study aims to assess the challenges, opportunities, and strategies related to the utilization of facilities at Bossing Farm, serving as the foundation for a proposed improvement plan. The evaluation will encompass all existing facilities within the farm, located in Mt. Balagbag, Rodriguez, Rizal. The study seeks to identify underutilized areas and determine the underlying factors contributing to their inefficiency. The research will be conducted over one year, spanning from 2024 to 2025. This study adopts a quantitative approach utilizing a descriptive research design to collect numerical data and provide a detailed evaluation of the underutilized facilities at Bossing Farm. The researcher employed purposive sampling, a non-probability sampling technique where respondents were deliberately selected based on specific criteria and the researcher's judgment to ensure relevance and accuracy in addressing the study's objectives. The assessment of Bossing Farm's underutilized facilities underscores considerable potential for development and optimization. The analysis reveals that key amenities such as cottages and service areas are not being fully utilized, which diminishes their ability to contribute to the farm's overall functionality and attractiveness. By identifying the factors contributing to this underutilization, the study provides a foundation for targeted improvements that can enhance visitor satisfaction, boost operational performance, and support the long-term sustainability of the farm as a recreational and eco-tourism destination. The challenges identified included limited marketing efforts, outdated amenities, and persistent maintenance concerns underscore the need for a well-structured enhancement plan. It is recommended that Bossing Farm implement a comprehensive facility upgrade, prioritizing the modernization of amenities, the renovation and functional improvement of cottages, and the expansion and organization of parking spaces to accommodate more guests. These initiatives will not only boost guest satisfaction but also improve overall operational efficiency and increase the farm's appeal as a tourist destination.

Keywords: bossing farm, underutilized facilities, facility assessment, tourism development, infrastructure improvement, amenities upgrade, marketing strategy, maintenance issues, guest accommodation, parking enhancement, rural tourism, farm tourism, improvement

**ASSESSMENT ON THE URBAN GREEN SPACE TO THE ENVIRONMENTAL
MANAGEMENT OF ARROCEROS FOREST PARK:
BASIS FOR SUSTAINABILITY PLAN**

Jay-ann Almorin, Maybeline Canque, Mary Chris Forrosuelo,
Elizabeth Lucernas, Cherrylene Nalla, Christine Aliñabo

Abstract

This study aims to evaluate the contribution of urban green spaces to environmental management, using Arroceros Forest Park, one of the last remaining green lungs in the heart of Manila, Philippines, as a case study. The research focuses on three key aspects: community engagement, environmental awareness, and biodiversity preservation. Additionally, it explores the park's ecological, recreational, and educational value to visitors, highlighting its significance in promoting urban sustainability and enhancing quality of life in a densely populated city. This study adopted a descriptive research design and gathered data from fifty (50) visitors using a convenience sampling method. Structured survey questionnaires served as the primary instrument for collecting relevant information on participants' perceptions and experiences. The results of the study highlight important insights into the value of urban green spaces. Respondents strongly agreed (mean rating of 3.67) that Arroceros Forest Park significantly contributes to community engagement, environmental awareness, and biodiversity preservation. However, the findings also reveal that various human activities such as inadequate waste management, resource extraction, and recreational overuse negatively affect the park's biodiversity. In response, the study recommends that local government units intensify their support for the protection and promotion of Arroceros Forest Park. Strengthening environmental policies is essential to ensure that all stakeholders, including visitors, staff, and the surrounding community, adhere to sustainable practices. These efforts will help safeguard the park's ecological integrity and ensure its continued role in promoting urban sustainability. This study emphasizes the critical importance of fostering active community involvement in the conservation of Arroceros Forest Park. Empowering residents through education on the park's ecological value helps cultivate a deeper appreciation and commitment to preserving urban green spaces. The findings also highlight the need for responsible visitor behavior, particularly in managing waste, minimizing resource extraction, and engaging in sustainable tourism. By promoting environmental stewardship and implementing clear policies that encourage sustainability, Arroceros Forest Park can continue to serve as a vital ecological, recreational, and educational sanctuary in the heart of Manila, benefiting both the environment and future generations.

Keywords: urban green space, environmental management, arroceros forest park, community engagement, environmental awareness, biodiversity conservation, sustainable tourism, ecological preservation, waste management, urban sustainability, public participation,

**BARRIERS ENCOUNTERED BY THE FOREIGN TOURISTS
ALONG INTRAMUROS, MANILA**

Patricia May Manio, Dominic Luis Bernas, Roger Coralde, Christine Mae Ombao,
Sofhia Angela Robles, Rosalie Jacinto

Abstract

Intramuros, popularly known as the "Walled City," is one of the Philippines' most significant historical and cultural heritage sites. Despite its renowned status and strong tourist appeal, foreign visitors often face several challenges that impede their overall experience. This study aims to identify and evaluate the key difficulties encountered by foreign tourists in Intramuros, focusing on navigational obstacles, financial constraints, and limited availability of up-to-date travel information. This study utilized a quantitative descriptive research design to collect data from fifty (50) foreign tourists, who were randomly selected during their visit to Intramuros. Data were gathered through a structured survey questionnaire aimed at capturing tourists' experiences and perceptions regarding their visit. The demographic profiles of respondents, including age, gender, and nationality, were also documented. To analyze the data, statistical methods such as frequency distribution, percentages, and weighted means were employed, enabling a detailed and systematic examination of the tourists' responses. The findings indicate that tourists generally found the local staff to be accommodating and considered the prices for guided tours and souvenirs to be fair. Nonetheless, several obstacles were highlighted, including challenges in navigating the area, limited availability of affordable transportation options, and a lack of updated or comprehensive travel information. Most respondents were between 26 and 30 years old, with an almost equal split between male and female tourists, and Americans constituted the largest group among the nationalities represented. The study emphasizes that while Intramuros remains a highly attractive cultural and historical destination, there is a pressing need to enhance tourist support services, improve directional signage, increase accessibility, and expand multilingual information resources. Addressing these issues will not only elevate visitor satisfaction but also foster deeper cultural understanding and inclusivity among diverse tourists. To this end, the study recommends the implementation of more effective and strategically placed signage, the development of interactive and mobile-friendly navigational tools, and the provision of comprehensive, multilingual informational materials. These measures are vital to enriching the overall visitor experience and advancing sustainable tourism practices in Intramuros.

Keywords: intramuros, tourist experience, visitor assistance, signage improvement, accessibility, multilingual information, cultural tourism, sustainable tourism, visitor satisfaction, heritage site management

BRIDGING THE GAP: AN ASSESSMENT OF THE DISCREPANCY BETWEEN TOURISM EDUCATION AND INDUSTRY DEMANDS FOR ENHANCED CAREER PREPAREDNESS

Mary Rose Consultado, Angela Abalos, Maica Altiche, Nikka Flores,
Stephanie Padilla, Alezhandrea Clio Barrios

Abstract

This study critically examines the disconnect between tourism education and industry requirements, emphasizing its impact on the career preparedness of graduates. Adopting a descriptive research approach, the study analyzes data from 31 graduates of the Bachelor of Science in Tourism Management program at Bestlink College of the Philippines. Grounded in Human Capital Theory, the research assesses how effectively the current academic curriculum cultivates the essential skills, knowledge, and competencies needed to meet the dynamic expectations of the tourism sector and ensure graduate employability. This study adopts a descriptive research design to examine the perspectives of 31 graduates from the Bachelor of Science in Tourism Management program at Bestlink College of the Philippines. Data were gathered through structured surveys aimed at assessing their current job roles, the relevance and applicability of their academic training, and areas where they felt inadequately prepared. The research specifically investigates the extent to which the program's curriculum aligns with the evolving demands of the tourism industry, highlighting gaps that may affect the graduates' career readiness and professional success. The study reveals that graduates predominantly occupy entry-level positions such as hotel staff, front desk associates, and concierge personnel, indicating constrained career advancement opportunities within the tourism sector. Respondents underscored the critical role of integrating industry-relevant training into the academic curriculum, particularly through structured internships, real-world immersion, and experiential fieldwork. Despite these insights, significant skill deficiencies emerged, most notably in communication, multilingual fluency, and professional demeanor. Furthermore, the findings point to the necessity of enhancing students' adaptability, leadership capabilities, and digital proficiency in travel and tourism technologies to align more effectively with the evolving expectations of the industry. The study concludes that while existing tourism education programs provide a solid foundation, significant gaps remain in equipping graduates with the skills and competencies required to meet the dynamic and evolving needs of the tourism industry. Addressing these shortcomings calls for a holistic curriculum reform that prioritizes stronger collaboration between academic institutions and industry stakeholders. Key recommendations include the integration of hands-on learning experiences such as internships and fieldwork, skill enhancement workshops, the incorporation of emerging travel technologies, and targeted training in communication, multilingual proficiency, and professional grooming. To support these efforts, the proposed Tourism Education–Industry Alignment Program aims to build sustainable partnerships, deliver tailored training modules, and promote continuous innovation in curriculum design. This initiative aspires to produce career-ready tourism graduates, globally competitive, and capable of adapting to the fast-changing landscape of the tourism sector.

Keywords: tourism education, industry alignment, career readiness, curriculum reform, hospitality skills, professional development, experiential learning, travel technology, multilingual proficiency, bestlink college of the philippines

**EFFECTIVENESS OF CULTURAL FESTIVAL EVENTS TOWARDS CULTURAL
AWARENESS AMONG FIRST-YEAR TOURISM STUDENTS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Marielle Bartolome, Noella Alarcon, Irish Dela Cruz, Willie Noveda,
Janice Mae Silanga, Mar Domagtoy

Abstract

Cultural festival events in today's society serve as essential platforms for preserving traditions, customs, beliefs, and cultural heritage amid the forces of modernization and globalization. While many existing studies highlight the short-term economic impact or social influence of such events, there is a noticeable lack of research focusing on their educational effects particularly on tourism students. This study seeks to address that gap by exploring how participation in cultural festivals influences the learning and development of tourism students. Guided by David Kolb's Experiential Learning Theory, which outlines four stages: concrete experience, reflective observation, abstract conceptualization, and active experimentation, this research examines how engaging in these events promotes deeper and more meaningful learning among future tourism professionals. This study adopted a descriptive research design and employed a cluster sampling technique. The total population comprised 1,822 first-year Tourism students enrolled for the Academic Year 2024–2025. Due to the limitations of the hybrid learning modality, a sample of fifty (50) students was selected based on accessibility and willingness to participate. These respondents completed a structured survey questionnaire, which served as the primary instrument for data collection. According to the findings, 25% of the respondents were aged 19 to 20. Most of the participants were female, with the majority coming from section BSTM 12016. The results indicated that cultural festival events had a significant impact on students' cultural awareness. These events deepened their appreciation for the diversity, strengths, and unique perspectives of different cultures. In terms of cultural connection, the festivals fostered a sense of inclusion and belonging, enabling students to feel more emotionally engaged with other cultural groups. Additionally, cultural festivals promoted social cohesion by encouraging collaboration and interaction among participants. However, students also reported that the most frequent challenge encountered during these events was the clash of cultural norms, which sometimes led to misunderstandings or discomfort. It is recommended that students be encouraged to actively participate in cultural festival events, as these experiences significantly contribute to enhancing their cultural awareness, appreciation of diversity, and sense of belonging. Teachers are advised to incorporate culturally engaging activities into their curriculum that promote inclusivity and cross-cultural understanding, thereby reducing potential challenges such as cultural misunderstandings and social exclusion. Parents should play a supportive role by motivating their children to join cultural activities, which can help broaden their perspectives and deepen their appreciation of different cultures. Furthermore, school administrators are encouraged to implement and institutionalize regular cultural festival events to create opportunities for meaningful cultural interaction and learning among students, teachers, and the wider school community.

Keywords: cultural festival events, cultural awareness, cultural understanding, cultural connection, social cohesion, tourism students, experiential learning, cultural norms, inclusivity, education

**EFFECTS OF ADVENTURE TOURISM TO THE LOCALS OF
DOÑA REMEDIOS TRINIDAD (DRT), BULACAN**

Gabriel Mcxene Joy, Janine Ashley Artiza, Annet Wency Hipolito,
Kyla Jane Castro, Joana Epanto, Christine Aliñabo

Abstract

This study aims to investigate the various impacts of adventure tourism on the local communities of Doña Remedios Trinidad (DRT), Bulacan. As one of the province's most ecologically diverse and culturally rich municipalities, DRT has become a growing destination for adventure seekers. The study seeks to understand how this tourism trend affects the community in terms of its social, economic, environmental, cultural, and psychological dimensions. This study utilizes a descriptive research design with a quantitative approach to explore the influence of adventure tourism in DRT, Bulacan. A total of 100 local residents were selected through random sampling. Data collection was conducted using a structured questionnaire that included both closed and open-ended questions, covering demographics, tourism impacts, and community issues. The instrument was reviewed and validated by experts to ensure clarity, reliability, and relevance. The research primarily focuses on identifying the social, economic, and environmental outcomes of tourism on the local population. The findings revealed that local communities and government units actively contribute to the promotion of sustainable tourism by highlighting cultural heritage, implementing environmental protection efforts, and supporting inclusive development programs. Practices such as using eco-friendly transport and organizing cleanup drives were noted to reduce ecological footprints. Initiatives aimed at improving educational infrastructure were also observed as part of long-term community investment. Tourism stakeholders emphasized responsible travel, skills training for locals, and the promotion of ecotourism. Tourists were encouraged to adopt sustainable behaviors and support small local enterprises. Additionally, the study acknowledged the role of researchers in analyzing tourism trends, proposing actionable recommendations, and fostering collaboration with both the community and institutions. The results indicate that adventure tourism in DRT primarily appeals to young adults, particularly those aged 23 to 27. Respondents were evenly divided by gender and represented various religious affiliations, with Catholicism being the most prevalent. Frequent visits to the area suggested high local engagement with tourism. Economically, adventure tourism contributed significantly to business growth and community development. From an environmental perspective, respondents supported the need for sustainable practices. Culturally, tourism was seen as a means of preserving traditions and educating visitors. Socially, it promoted unity and a sense of shared identity among locals. Psychologically, adventure tourism enhanced residents' pride and strengthened their connection to their culture. Overall, the study found that adventure tourism had a positive, multifaceted impact on the DRT community.

**EFFECTS OF EDUCATIONAL TOURS IN ACADEMIC PERFORMANCE
AMONG FIRST-YEAR COLLEGE TOURISM STUDENTS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Rilian Padilla, Jasmine Barreda, Shan Batida, Mark Gerick Martinico,
Princess Anne Padroncillo, Mar Domagtoy

Abstract

This study investigates the effects of educational tours on the academic performance of first-year college tourism students at Bestlink College of the Philippines. Educational tours are recognized as a valuable component of tourism education, offering students practical exposure to real-world environments. By incorporating a descriptive research design, the study aims to evaluate how these experiential learning activities enhance students' understanding, retention, and academic success compared to traditional classroom-based instruction. The study employed purposive sampling, involving a total of 50 first-year college tourism students who had participated in educational tours. These respondents were selected based on their direct experience with tour-based learning to ensure the relevance and accuracy of the data gathered. A structured survey was utilized to assess the students' academic performance and learning experiences before and after the tours. The survey focused on their ability to apply theoretical concepts, retain information, and demonstrate improved understanding. Academic performance records were also reviewed to support the findings. The results indicated that educational tours significantly contributed to improved academic performance among the respondents. Students reported a greater understanding of course content, better retention of information, and an enhanced ability to apply theoretical knowledge in practical settings. These outcomes support the idea that experiential learning bridges the gap between classroom instruction and industry practice, thereby promoting deeper learning. The findings underscore the effectiveness of educational tours as a tool for enhancing academic outcomes in tourism education. The study aligns with experiential learning theory, which emphasizes the importance of real-world engagement in reinforcing academic concepts. These results suggest that educational institutions offering tourism programs should consider integrating structured educational tours into their curricula. Furthermore, this research may serve as a foundation for future studies on the long-term impact of experiential learning on students' professional readiness and industry adaptability.

Keywords: educational tours, academic performance, experiential learning, tourism education, practical application, student engagement

**EFFECTS OF RECREATIONAL SERVICES ON ENVIRONMENTAL VALUE
IN KUYA DOMENG'S AFFORDAPOOL AND FARM IN RIZAL:
BASIS FOR IMPROVE GUIDELINES**

Bia Amor, Steven Russell Ratilla, Mary Angeline Catubag,
Christian Nagales, Jerico Lanorias, Rosalie Jacinto

Abstract

Kuya Domeng's Affordapool and Farm was established to provide an affordable and nature-integrated getaway for families and groups seeking leisure and recreation. Designed to be both fun and budget-friendly, the facility offers swimming, dining, and various recreational activities within a natural landscape. Its layout maximizes efficient use of space while promoting a tranquil and environmentally conscious atmosphere. The study aims to examine how the recreational services offered impact environmental values and how these insights can guide improvements in sustainability and service delivery. A descriptive research method was employed to explore the effects of recreational services on environmental values at Kuya Domeng's Affordapool and Farm. Data was collected through on-site observations and structured interviews with visitors, staff, and the owner. These tools assessed visitor experiences, sustainability practices, and operational efficiency. The study focused on identifying strengths and areas for improvement to promote environmentally responsible tourism. The findings revealed that most visitors were young adults aged 18 to 27, with 58% being female and 90% visiting for the first time. This indicates a strong potential to build visitor loyalty. The farm demonstrated a commitment to safety through security measures and trained personnel. It also employed energy-efficient systems to manage power usage, contributing to its goal of sustainability. Visitors expressed appreciation for the safe and nature-oriented environment; however, concerns were raised regarding inadequate facility maintenance, limited food options, and challenging site access. These findings suggest both successful efforts and key areas needing development. The study concludes that while Kuya Domeng's Affordapool and Farm effectively appeals to young adult visitors through active recreational offerings and environmental integration, service limitations hinder optimal guest experience. Recommendations include introducing visitor loyalty programs, enhancing the variety and quality of facilities, promoting eco-friendly practices, and improving accessibility. Strengthening both popular and underutilized recreational services, alongside sustainable management, will enhance visitor satisfaction and environmental awareness, ultimately supporting long-term tourism development.

Keywords: recreational services, environmental value, sustainable tourism, visitor satisfaction, nature-based recreation, hospitality management

**ENHANCEMENT OF CUSTOMER EXPERIENCE TOWARDS QUALITY SERVICE
IN MCDONALD, QUEZON AVENUE QUEZON CITY LIGAYA**

Angelo Barrera, Cayron Cabero, Alvin John Barrientos, Eugene Reyes, Randy Villanueva

Abstract

In the highly competitive food service industry, customer experience is a key determinant of sustained success. As a global leader in the fast-food sector, McDonald's has built a strong reputation for consistent service and customer satisfaction. The McDonald's branch located along Quezon Avenue in Quezon City Ligaya serves a large and diverse customer base daily, making service quality a top priority. Given the increasing demands of customers and the need to remain competitive, this study aims to evaluate and enhance customer experience at this location by identifying service delivery gaps and recommending improvements. This study employs a descriptive research design to assess the customer experience and service quality at McDonald's Quezon Avenue Ligaya. The method is appropriate for systematically collecting and analyzing data related to customer perceptions, challenges encountered, and their overall satisfaction with dine-in, take-out, and delivery services. A structured survey was used to gather customer feedback on various service dimensions. Findings indicate that customers value fast service, especially during peak hours, with service speed emerging as the most urgent area for improvement (mean score = 3.24). Other key areas identified include enhancing the cleanliness of the dine-in area, improving packaging for take-out orders, and ensuring reliable delivery services. While lower-ranked suggestions such as more comprehensive staff training and competitive pricing may require longer-term strategies, they also represent important areas for service enhancement. The study concludes that addressing operational inefficiencies during peak times, improving cleanliness, and enhancing delivery reliability are essential to improving customer satisfaction at McDonald's Quezon Avenue Ligaya. Actionable recommendations include implementing faster service systems, reinforcing quality control, and investing in staff development. These improvements aim to optimize customer engagement, reinforce brand loyalty, and ensure the continued success of the branch in a demanding service environment.

Keywords: customer experience, service quality, fast-food industry, mcdonald's, quezon avenue, dine-in service, take-out, delivery efficiency, customer satisfaction, hospitality management

**ENHANCING GUEST EXPERIENCE: LEVERAGING ARTIFICIAL INTELLIGENCE
IN CUSTOMER RESERVATION**

Cherizka Orbigo, Stephanie Antonio, Hannah Buyan, Regine Calarion,
Shiena Marie Oclarino, Mernel Joy Lacorte

Abstract

Artificial Intelligence (AI) in hotel reservation systems is gaining attention for its potential to enhance customer experience, streamline repetitive processes, optimize pricing strategies, and deliver personalized offers. AI can analyze visitor data to provide tailored recommendations and adjust staffing, inventory, and pricing based on anticipated demand. These data-driven decisions can improve service quality and help hotels differentiate themselves from competitors. Additionally, AI reduces operational costs related to reservation management and customer support, enhances scalability during seasonal fluctuations, and encourages innovation aligned with current market trends. This study investigates hotel guests' experiences with AI-powered reservation systems, utilizing surveys and interviews to assess effectiveness and identify areas for improvement. The study was conducted among guests aged 18 and above at Astrotel Novaliches, with a total of 50 participants selected through simple random sampling to ensure fairness and reduce bias. A researcher-developed questionnaire, validated by experts and formatted with a Likert scale, was used to gather data on guest profiles, AI usage, feedback, and suggestions. Ethical standards, including informed consent and data privacy, were strictly followed throughout the data collection process. The results revealed that most guests were aged 28 to 32 and preferred making reservations via voice calls. While many expressed trust in AI to handle their data, they were uncertain about its ability to predict their preferences. Furthermore, a significant number of respondents did not favor the use of chatbots. These findings suggest a mixed reception of AI in reservations, with users showing interest in convenience but also demonstrating a continued preference for human interaction. The findings indicate that although artificial intelligence enhances booking accuracy and personalization, challenges remain in the form of technical issues, privacy concerns, and limited trust in AI's predictive capabilities. Guests continued to value human interaction, particularly in payment processing and preference-based services. The study recommends further refinement of AI systems, increased guest education on AI capabilities, and maintaining human support to strike a balance between automation and personal service.

Keywords: artificial intelligence, hotel booking system, guest experience, reservation technology, personalization, customer preferences

**ENHANCING GUEST SAFETY: EVALUATING THE EFFECTIVENESS OF
SMART CAMERAS IN PREVENTING PETTY THEFT AT
HIDDEN SANCTUARY HOTEL & RESORT**

Ledy Ann Gonzales, George Lorenzo Delacruz, Mark Joshua Herminado,
Gerald Liporada, Karen Joy Ortiz, Mernel Joy Lacorte

Abstract

This study evaluates the effectiveness of smart cameras in preventing petty theft at Hidden Sanctuary Hotel & Resort. It explores their technical capabilities, implementation challenges, and overall impact on guest safety. The objective is to provide practical insights that may guide hotels and similar establishments in enhancing security measures through the integration of smart surveillance technologies. The study adopts a cross-sectional survey design to gather data efficiently and assess guest perceptions of smart camera effectiveness. Stratified random sampling, based on the methodology of Adam H. (2024), was used to ensure demographic representation among hotel guests. A total of 50 guests participated in the study. Survey questionnaires were used to collect data on experiences, perceptions of safety, and observations related to smart camera use within the hotel premises. The majority of guests considered smart cameras effective in promoting safety, particularly in deterring theft and assisting during emergencies. Many respondents appreciated the system's role in monitoring suspicious activity, retrieving lost items, and providing evidence of when incidents occurred. Effectiveness ratings were highest when smart cameras were paired with other safety features such as smart locks and alarms. However, lower effectiveness ratings were observed in areas with insufficient signage or unclear surveillance coverage. Overall, guests assessed the smart camera system as moderately to highly effective, especially when complemented by clear hotel safety practices and guest engagement in security protocols. The findings suggest that while smart cameras contribute significantly to enhancing guest safety, their effectiveness can be maximized through proper integration with safety education and trained hotel staff. Hotel management is encouraged to invest in more advanced surveillance systems, conduct regular safety audits, and improve signage to increase guest awareness. These insights can inform future hotel policies, support the development of safety standards, and promote best practices in technological integration for guest protection.

Keywords: guest safety, smart cameras, theft prevention, guest satisfaction, surveillance technology, hotel security

**ENHANCING SPECIALIZED AREA IN PUBLIC TRANSPORTATION
FOR SENIOR CITIZENS**

Sunshine Rallos, Elein Ann Arboleda, Ezekiel Clarence Calungsod, Romel Legaspi,
Mae Jieann Mangaoang, Christine Aliñabo

Abstract

This study aims to enhance specialized features in public transportation to better serve senior citizens and to examine how current transportation systems impact their mobility and daily lives. As older adults often require additional assistance, the study focuses on key concerns, namely, availability, accessibility, safety, and comfort. Based on the findings, the research proposes the development of designated areas and improved services within public transport systems to ensure that senior citizens experience a more secure, convenient, and dignified mode of travel. This study adopts a qualitative research approach, employing survey questionnaires to identify the challenges and experiences of senior citizens about key aspects of public transportation. To gain deeper insights, individual interviews will be conducted to capture personal narratives and gather detailed recommendations, which will inform the development of a more accessible, safe, and senior-friendly public transport system. The findings of the study underscore significant aspects of public transportation as experienced by senior citizens, with mean ratings showing agreement on key factors: availability (2.90), seat and area safety (2.93), accessibility (2.79), and comfort (3.00). While these ratings indicate a moderate level of satisfaction, they also point to persistent challenges that hinder ease of mobility for the elderly. In response to these concerns, the study proposes the development of a specialized area within public transportation systems tailored specifically to the needs of senior citizens. This initiative aims to enhance their commuting experience by prioritizing comfort, safety, accessibility, and overall care. The recommendations emphasize the need to implement targeted improvements based on the survey results, ensuring a more inclusive, supportive, and user-friendly transportation environment for the aging population. This study underscores the vital importance of enhancing designated areas in public transportation to better serve the needs of senior citizens. As one of the most vulnerable sectors of society, elderly individuals face increased risks of discomfort, stress, falls, and injury when public transit systems lack adequate support. Ensuring safety, accessibility, availability, and comfort is not only a matter of convenience but a fundamental aspect of promoting dignity and independence among older adults. By implementing the proposed recommendations such as specialized seating, improved access features, and prioritized services, transport providers can create an inclusive environment where senior citizens feel respected, secure, and empowered to travel confidently, whether accompanied or alone.

Keywords: senior citizens, public transportation, accessibility, safety, comfort, availability, vulnerable groups, inclusive transport, specialized area, elderly commuters, transportation improvement

**EXAMINING THE SCHOOL CLIMATE AND TEACHERS' COMMITMENT TO THE
TEACHING PROFESSION: BASIS FOR A SUPPLEMENTARY SUPPORT PROGRAM**

Rosalie Jacinto

Abstract

This study examines the extent of effectiveness of school climate and the level of teachers' commitment to the teaching profession. It explores the perception that a more positive school climate may enhance teacher commitment and overall performance. The research aims to determine whether the dimensions of school climate: physical, academic, and psychosocial, have a significant relationship with the level of teachers' professional commitment. The findings serve as the basis for proposing a supplementary support program to further strengthen school climate and teaching dedication. The study employs a descriptive-correlational quantitative research design. The respondents consist of 80 public junior high school teachers from the Division of Quezon City, National Capital Region, Philippines, selected through purposive sampling. Data was gathered using a research-made survey questionnaire, which includes items assessing the effectiveness of school climate across three dimensions (physical, academic, and psychosocial) and the level of teachers' commitment. Weighted mean was used to assess both variables, while Spearman rank correlation was applied to determine the relationship between school climate and teacher commitment. The findings indicate that the perceived effectiveness of school climate in all three dimensions was rated as highly effective, and the teachers' level of professional commitment was also rated as highly committed. However, the statistical analysis revealed no significant correlation between school climate and the level of teachers' commitment. These results provided the foundation for the development of a proposed supplementary support program aimed at enhancing school climate and reinforcing teacher commitment. The results suggest that although both school climate and teacher commitment were perceived positively, no direct relationship was found between the two variables. This may imply that other factors aside from school climate contribute to teachers' professional commitment. Therefore, further research is recommended to explore additional influences on teacher commitment. The proposed supplementary support program is intended to improve school conditions and offer targeted interventions to support teacher engagement and performance.

Keywords: school climate, teacher commitment, physical environment, academic support, psychosocial factors, public school, teacher engagement, descriptive-correlational study, supplementary support program, quezon city

**EXPLORING THE EFFICIENCY OF RFID TECHNOLOGY IN REVOLUTIONIZING
PAYMENT SYSTEMS WITHIN THE TOURISM INDUSTRY**

Rose Silvosa, Sofia Becera, Aeronkurt Delosreyes, Elbert Millado,
Kierven Carl Quintos, Alezhandrea Clio Barrios

Abstract

Traditional toll collection systems often cause congestion, delays, and inefficiencies that negatively affect the tourism experience. While Radio Frequency Identification (RFID) technology presents a contactless alternative that promises faster and more secure transactions, its application within the tourism sector, particularly in toll gate operations, remains underexplored. This study addresses this gap by examining how RFID systems can enhance payment convenience, speed, and reliability for tourist drivers. This study utilizes quantitative research design with purposive sampling. A total of 50 private car owners using RFID tags at the South Luzon Expressway (SLEX) Skyway C5 Toll Gate were surveyed. A structured questionnaire was administered to gather demographic data and assess factors influencing RFID adoption, such as convenience, cost, and security. The effectiveness of the system in enhancing the travel experience was also evaluated. Responses were measured using Likert scales, and the data were analyzed using frequency distribution, percentage, and weighted mean. The findings revealed that respondents strongly agreed on the benefits of RFID in improving time efficiency, reducing costs, and enhancing convenience. The highest levels of satisfaction were attributed to shorter waiting times and smoother toll transactions. Nonetheless, concerns were raised regarding unclear reloading procedures, challenges with installation, and limited customer support. Data privacy issues also emerged as a point of concern. Overall, respondents reported a more favorable travel experience when RFID systems operated reliably and were properly integrated into toll infrastructure. The study concludes that RFID technology has the potential to significantly improve payment systems in the tourism transportation sector. However, successful implementation depends on consistent system performance, user-friendly procedures, and robust customer service. Strengthening data security and system reliability is essential to gaining public trust and encouraging broader adoption. Future studies are encouraged to explore RFID applications in other areas of tourism services and transport systems to further validate these findings.

Keywords: rfid technology, tourism industry, payment systems, toll gate, travel experience, customer satisfaction, data security, infrastructure integration

**EXPLORING THE IMPACT OF VLOGGING IN THE TOURISM INDUSTRY OF
LUNETA PARK, MANILA: A BASIS FOR PROMOTIONAL PLAN**

Glaze Anne Dela Cruz, Jessabel Dejarlo, Joem Enegrejo, Jules Mateo, Aldrin Pangilinan,
Cyrus Melverc Peñaredondo, Rosalie Jacinto

Abstract

This study examines the impact of vlogging on Luneta Park's tourism industry, focusing on its effectiveness in promotion, its influence on travel perceptions, and its long-term consequences. It aims to provide insights into improving promotional efforts and addressing potential challenges. The survey questionnaire was validated by various experts who were not participants in this study. To make sure that it expressed reliability, the researchers consulted 10 students admitted to the local tourist population who were not in the original sample. This was aimed at establishing the credibility of the survey and addressing any changes that may be needed. The adviser reviewed all feedback and suggestions to ensure that consideration was given to each recommendation to improve the instrument. After validation and revision, the revised questionnaires were reproduced and filed to the respondents, successfully attaining a traceability rate of 100%. The majority of respondents are young adults (18–30 years old), female, single, and earn a monthly income of 10,000. Social media advertising is the most effective method for promoting Luneta Park. Vlogging and blogging can benefit local vendors and communities but also pose challenges such as overexploitation and commercialization. Vlogs provide valuable information that influences respondents' decisions to buy souvenirs and goods in Luneta Park, purchase merchandise at parks or historical places, visit historical places and parks, and participate in activities or tours at the park. Social media significantly influences tourist behavior, with user-generated content shaping their decisions. The demographic profile of respondents revealed that the majority (56%) were 18–30 years old, followed by those aged 31–50 (22%), under 18 (18%), and over 50 (4%). Females (56%) outnumbered males (44%). In terms of civil status, most respondents were single (68%), followed by married (22%) and widowed (10%). For monthly income, most respondents (60%) earned 10,000, while 30% earned 25,000, and 10% earned 50,000. The findings highlight the impact of vlogging on Luneta Park. Social media advertisements and brochures were identified as effective promotional tools. Vlogging provides benefits to local vendors and communities but also carries risks such as overexploitation. Vlogs were shown to influence consumer decisions, including buying souvenirs, visiting parks, and participating in activities. However, several challenges were identified, such as insufficient local support, overcrowding, lack of storytelling skills, and technical issues.

EXPLORING THE MOTIVATIONS OF DRAG PERFORMERS IN DILIMAN, QUEZON CITY

Lawrence Vengco, Irish Joyce Dublin, Norberto Jr Pagayon, Jaymark Serrano,
James Bryan Malarulat, Alezhandrea Clio Barrios

Abstract

This descriptive study explores the motivations of drag performers in Diliman, Quezon City, by examining the personal, social, and professional factors that influence their involvement in drag culture. Key drivers identified include financial incentives, career aspirations, passion for the art form, and the desire for self-expression. The study also emphasizes the importance of inclusivity, community acceptance, and the quality of performance as central to the performers' experiences. Additionally, mentorship and collaboration are highlighted as crucial elements for skill development and professional growth in the drag scene. The study aims to recommend strategies such as support platforms, access to artistic resources, and the promotion of diversity within the performing arts. Using a quantitative descriptive approach, the researchers distributed structured surveys to 20 drag performers in Diliman, Quezon City. The questionnaire focused on themes such as interpersonal relationships, mentorship, collaborative opportunities, financial motivation, passion, and career development. The study also explored how these factors influenced the mental health and motivation of the performers, particularly in relation to resilience and emotional well-being. Findings revealed that strong friendships significantly enhanced resilience among drag performers, while supportive relationships with both friends and family were associated with lower levels of depression. The study also found that community involvement in drag performance demonstrated a curvilinear relationship with resilience, suggesting that moderate levels of creative engagement yielded the most positive outcomes for mental health. The results underscore the dual nature of drag performance as both an empowering outlet and a potential source of stress. This highlights the need for safe, supportive spaces and community structures that nurture both artistic expression and emotional resilience. Future research is recommended to further examine the role of creativity, mentorship, and community dynamics in sustaining the well-being of drag performers.

**EXPLORING THE TRANSFORMATIVE POWER OF THEATRICAL STAGE PLAY:
ANALYZING ITS IMPACT TO BS-TOURISM MANAGEMENT STUDENT**

Jaycel Dumlao, Desiree Acenas, Ivy Comboy, Mary Jane Nicolas,
Crystal Gayle Obina, Christine Aliñabo

Abstract

This study aims to explore the transformative power of theatrical stage plays and analyze their impact on BS Tourism Management students. The research investigates how participation in stage performances contributes to students' personal growth and professional development. The study emphasizes the role of theatrical involvement in enhancing soft skills, particularly communication, emotional intelligence, and collaborative competence, which are crucial in the tourism and hospitality industry. This study employs descriptive research design. It outlines the respondents of the study, the sampling technique used, the construction and validation of the research instrument, and the procedures for administration, retrieval, and statistical treatment of the data. The study targets BS Tourism Management students who have participated in theatrical stage plays. The results of the study indicate that involvement in stage plays positively affects students' social interaction skills, emotional awareness, and self-confidence. Participants reported increased comfort in public speaking, improved empathy, and heightened group collaboration. These outcomes suggest a significant relationship between theatrical participation and the development of interpersonal and emotional skills relevant to tourism-related careers. The findings affirm that theatrical stage plays serve as effective tools for fostering key competencies among tourism students. Participation in such activities enhances students' ability to communicate clearly, work cooperatively, and connect emotionally with others, traits essential for engaging with diverse clients and providing quality service in the tourism sector. The study recommends integrating theatrical exposure into co-curricular programs to enrich student learning and industry readiness.

Keywords: theatrical stage play, tourism students, emotional intelligence, communication skills, teamwork, personal development

**EXPLORING THE USE OF SOCIAL MEDIA PLATFORM AS MARKETING TOOL IN
PROMOTING VIEWSCAPE NATURE PARK AS A TOURIST ATTRACTION
OF TANAY, RIZAL**

Fernando Maranga Jr, Angeline Rebagos, Ira Mae Pajanel, Mary Rose Quijano, Shinjie Dianne Mae
Pariñas, Alezhandrea Clio Barrios

Abstract

In the digital era, social media has become an essential marketing tool for tourism destinations. Viewscape Nature Park in Tanay, Rizal exemplifies how platforms such as Instagram, Facebook, and TikTok are utilized to influence public perception and encourage visitor engagement. These platforms allow for the wide sharing of picturesque content that highlights the natural beauty and unique charm of the park. This study explores how social media is used to market Viewscape Nature Park and its effectiveness in attracting tourists. This study employs quantitative research design using survey questionnaires to collect data on user engagement metrics, such as likes, shares, and comments, across different social media platforms. Data collection was conducted within a specific timeframe, covering either a week or a month. The study analyzes the relationship between engagement levels and the use of various platforms using statistical tools such as frequency, percentage, ranking, weighted mean, and Pearson r correlation to identify patterns and significant associations. The study's methodology facilitated the systematic collection, presentation, and interpretation of relevant data. The results showed a notable correlation between engagement metrics and the effectiveness of social media marketing. Platforms like Facebook and TikTok generated higher levels of interaction, suggesting their strong influence in promoting tourist interest. The findings also highlighted the impact of visual content in drawing audience attention and converting interest into actual visits. The findings affirm the value of social media as a strategic marketing tool in promoting tourism destinations such as Viewscape Nature Park. The study recommends that tourism stakeholders enhance their content strategies, focusing on consistent posting, visually engaging media, and interaction with audiences to maximize online reach. These efforts can help sustain tourist interest and increase actual visitor turnout, supporting the long-term growth of local tourism in Tanay, Rizal.

Keywords: social media marketing, tourist attraction, audience engagement, viewscape nature park, digital promotion, tourism strategy

**FACTORS AFFECTING THE WELL-BEING OF TOURISTS IN QUEZON CITY
MEMORIAL CIRCLE COMMERCIALIZATION: BASIS FOR DEVELOPMENTAL PLAN**

Joseph Christian Jay, Ashley Mae Bernal, Abegail Jabonero,
Hanzel Umpad, Jane Viador, Rosalie Jacinto

Abstract

This study aims to assess the factors affecting the well-being of tourists in the context of commercialization within the Quezon City Memorial Circle. It serves as the foundation for a developmental plan addressing four key aspects of well-being: physical, mental, emotional, and financial. As one of the major urban parks in Metro Manila, Quezon City Memorial Circle plays a vital role in promoting tourism and public recreation, thus necessitating a closer look at how commercialization impacts visitor satisfaction and overall welfare. This study utilizes a descriptive research method and applies an exploratory quantitative design. Surveys were conducted with fifty (50) tourists who had experienced the commercialized areas of Quezon City Memorial Circle. The data were gathered using a Likert scale to evaluate the respondents' perceptions regarding their well-being in relation to the park's facilities and services. The findings revealed that improvements are needed in several areas of the park to enhance tourist well-being. Key issues identified include inadequate facilities for tourist stays, insufficient comfort rooms, limited seating areas, and parking lot concerns. The study also noted challenges in managing population density. These factors contributed to a less optimal visitor experience. As a result, the study proposes the formulation of a developmental plan focused on enhancing infrastructure and services to meet tourist needs. Based on the findings, it is recommended that Quezon City Memorial Circle enhance its commercialized areas to support the physical, mental, emotional, and financial well-being of tourists. Continuous facility improvements are essential to achieving a more positive visitor experience. These enhancements can lead to increased safety, improved cleanliness, greater community engagement, sustainability, inclusivity, a stronger public reputation, and broader economic benefits. Ultimately, these developments would foster a more enjoyable, secure, and inclusive environment that benefits both tourists and the local community.

Keywords: tourist well-being, commercialization, quezon city memorial circle, tourism development, visitor experience, urban park facilities, community engagement, inclusive tourism

**FACTORS INFLUENCING PILGRIMAGE TOURISM IN THE NATIONAL SHRINE AND
PARISH OF THE DIVINE MERCY CHURCH IN MARILAO, BULACAN**

Allyana May Paragatos, Lovely Lazala, Jonalyn Mondano, Jennifer Casinillo, Christine Aliñabo

Abstract

This study explores the factors influencing pilgrimage tourism at the National Shrine and Parish of the Divine Mercy Church in Marilao, Bulacan. As one of the prominent Catholic pilgrimage sites in the Philippines, the shrine draws both local and international visitors seeking spiritual fulfillment, cultural enrichment, and personal reflection. Understanding the motivations and experiences of pilgrims is essential for enhancing site management and promoting sustainable tourism practices. The study employed quantitative, survey-based research design. A structured questionnaire was distributed to 100 pilgrims visiting the shrine. The instrument gathered demographic data and measured key variables such as pilgrimage motivations, expectations, and satisfaction levels related to the shrine's offerings. The results revealed that the primary factors influencing pilgrimage tourism at the site include spiritual growth, cultural exploration, and personal reflection. Pilgrims expressed high levels of satisfaction with the shrine's facilities and services, indicating that their expectations were generally met. The data highlighted the importance of spiritual ambiance, cleanliness, accessibility, and community involvement in shaping the overall pilgrimage experience. The findings suggest that the National Shrine and Parish of the Divine Mercy Church hold strong spiritual significance for its visitors. The positive feedback from pilgrims indicates effective site management and alignment with their spiritual and cultural needs. These insights underscore the potential for further development of pilgrimage tourism in the area, particularly through sustainable practices that preserve the shrine's sanctity while enhancing visitor engagement and experience.

Keywords: pilgrimage tourism, spiritual growth, cultural exploration, personal reflection, divine mercy shrine, marilao bulacan, tourist satisfaction, sustainable tourism, religious sites, visitor experience

**FROM PLANNING TO PRACTICE: A PROPOSED POLICY ENHANCEMENT
FOR SCHOOL EVENT CROWD MANAGEMENT AND SAFETY**

Julienne Katherine Dumael, Hershey Boncolino, Grashean Joy Enriquez,
Claudine Hiponia, Camille Shayne Magbanua, Rosalie Jacinto

Abstract

Effective crowd management plays a vital role in ensuring safety and enhancing the overall experience at school events. This research, titled "From Planning to Practice: A Proposed Policy Enhancement for School Event Crowd Management and Safety," explores current crowd control practices in educational institutions and identifies critical areas for improvement. The study aims to develop a comprehensive policy enhancement that addresses existing shortcomings and promotes a safer, more organized environment for students, faculty, and event participants. This study adopted a research-based approach, utilizing a structured data collection tool and purposive sampling to gather insights from students enrolled in two distinct academic programs. The findings revealed notable deficiencies in current school crowd management practices, underscoring the need for more organized and proactive policies. Key recommendations include conducting thorough risk assessments, enhancing staff training, improving communication protocols, and leveraging technology for real-time crowd monitoring. Additionally, incorporating attendee feedback is encouraged to support continuous improvement and ensure safer, more efficient school events. The proposed policy enhancements are designed to establish a forward-looking, systematic approach to crowd management in schools. By emphasizing planning, effective communication, and the integration of real-time monitoring technologies, schools can significantly strengthen safety protocols and streamline event operations. This study catalyzes ongoing improvements and informed policymaking, fostering a culture of preparedness and safety in educational environments. The findings of this study underscore the critical need to reevaluate and enhance crowd management protocols in educational settings. Existing strategies often fall short in consistency and adaptability, exposing vulnerabilities during large gatherings. Feedback from students across multiple disciplines revealed noticeable gaps in event coordination, inadequate staff presence and direction, and limited utilization of advanced monitoring technologies. These deficiencies emphasize the importance of implementing more structured, technology-integrated, and staff-supported systems to ensure the safety and success of school events.

Keywords: crowd management, school events, policy enhancement, safety procedures, risk assessment, real-time monitoring, staff training, communication strategies, student feedback, educational institutions

**GUIDE THE WAY: NAVIGATING THE ROLE AND CHALLENGES ON LOCAL TOUR
GUIDES OF JVD EVENT AND TRAVEL MANAGEMENT, CO.
IN TODAY'S TOURISM LANDSCAPE**

Princess Derilo, Angela Gutoman, Kayelle Selina Jaime, Dianna Elizabeth Maata,
Maria Margareth Relucio, Alezhandrea Clio Barrios

Abstract

In light of the evolving tourism industry, this study examines the roles and challenges faced by regional tour guides employed by JVD Event and Travel Management Co. As tourism continues to grow and diversify, the responsibilities of tour guides have expanded beyond their traditional functions. They are now expected to meet new standards set by both the travel industry and increasingly diverse traveler expectations. This research aims to explore how tour guides adapt to these changes and the implications for their professional development and service delivery. This research explores how tour guides contribute to enhancing visitor experiences, promoting cultural heritage, and supporting sustainable tourism practices. It aims to highlight the evolving role of tour guides in creating meaningful and responsible travel experiences. Additionally, the study identifies key challenges faced by tour guides, including language barriers, cultural sensitivity, and the growing need to adopt digital tools and technologies to meet the demands of modern tourism. The findings aim to identify the essential knowledge, skills, and resources that local tour guides require to effectively address industry challenges and remain competitive in the evolving travel market. The study underscores the growing importance of tour guides in enhancing customer satisfaction and delivering high-quality tourism experiences. Based on these insights, the report recommends that the Department of Tourism collaborate with JVD Event and Travel Management Co. to support the professional development of local tour guides. This can be achieved by implementing targeted training programs focused on improving language proficiency, cultural awareness, and digital literacy, equipping guides with the competencies needed to meet modern tourism demands. Additionally, the study advocates more funding for sustainable tourism initiatives to minimize negative impacts on the environment and culture. By supporting these efforts, the Department of Tourism can enhance visitor experiences and help tour guides navigate industry challenges, ultimately boosting local tourism service quality and competitiveness.

Keywords: tourism industry, tour guides, cultural heritage, support sustainable tourism, digital tools

**IMPACT OF DIGITAL MARKETING IN PROMOTING TALES OF ILLUMINA:
A PROPOSED MARKETING STRATEGIES**

Cassandra Angela Pornelos, Julianne Aplaya, Krisha Angelica Baet,
Abegale Barandino, Claire Cula, Alezhandrea Clio Barrios,

Abstract

This study examines the impact of digital marketing on promoting Tales of Illumina, an immersive museum experience in the Philippines that revitalizes Filipino folklore through interactive storytelling. Designed as a multi-sensory space, the museum integrates light, sound, and visual installations to bring traditional narratives to life and foster a deeper connection to the country's cultural heritage. In light of the growing influence of digital platforms on consumer behavior, the study evaluates the effectiveness of current digital marketing strategies, including social media campaigns, online partnerships, public relations efforts, and search engine marketing, in enhancing the museum's visibility, accessibility, and audience engagement. To better understand visitor experiences, the study collected data through surveys, focusing on demographic factors such as age and gender to uncover trends in audience engagement. Survey responses offered detailed insights into visitor perceptions, highlighting both positive experiences and challenges, such as difficulties navigating the museum's digital platforms, limited access to information, and unclear online communication. These insights allowed for a thorough evaluation of the effectiveness of current digital marketing strategies, identifying which approaches successfully foster user engagement and which areas require further refinement. Social media marketing emerged as the most effective strategy, with a mean rating of 3.52, followed closely by online partnerships and online public relations, both scoring 3.48, and search marketing at 3.45. In terms of digital impact, respondents rated visibility (3.44), ease of access (3.41), and audience engagement (3.40) positively, indicating a generally favorable perception of the museum's digital presence. Despite these strengths, key challenges were identified, including outdated ticketing information (reported by 43% of participants) and slow website loading speeds (36%). To address these issues, participants recommended regularly updating ticketing details, increasing social media engagement, and forming collaborations with influencers and travel agencies to expand outreach and improve user experience. In an increasingly competitive and digitally driven environment, enhancing digital marketing strategies is essential for Tales of Illumina to establish itself as a leading cultural destination. Strategic improvements can significantly boost attendance, deepen audience engagement, and expand the museum's reach both locally and internationally. By aligning its digital initiatives with visitor expectations and technological trends, Tales of Illumina can continue to foster cultural appreciation and deliver an immersive, memorable experience that celebrates and preserves Philippine folklore.

Keywords: tales of illumina, digital marketing, immersive museum, filipino folklore, audience engagement, social media marketing, online partnerships, visitor experience, cultural promotion, digital strategy

IMPACT OF SOCIAL MEDIA IN TOURIST DESTINATION CHOICES AMONG SECOND YEAR TOURISM STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES

Gems Ruby Galope, Rhea Mae Cajipo, Mekkie Joy Lucelo, Leian Klein Ocampo,
Karl Kevin Villasin, Mar Domagtoy

Abstract

Social media has significantly transformed the tourism industry by influencing how destinations are perceived, selected, and experienced. This study examines the impact of social media on tourists' destination choices, focusing on its role in promoting convenience, attraction, and shaping destination image. Drawing on the study by Emmanuel Bruce et al. (2024), this research adopts the Gratification Theory, which explains how social media serves as a source of external information that assists tourists in making well-informed travel decisions. The study is guided by the Input-Process-Output (IPO) model, which outlines the research's input (problem statement), process (data collection and analysis), and output (recommendations and guidelines). The scope of the study is limited to fifty (50) second-year students majoring in Tourism Management. Its significance lies in providing valuable insights for various stakeholders including administrators, students, parents, researchers, and future scholars, on the influence of social media in tourism-related decision-making, while also offering strategic recommendations for enhanced engagement. This study adopts a descriptive research design to effectively examine the impact of social media on tourist destination choices. Through the use of cluster sampling, a total of 50 second-year Tourism Management students were selected from a population of 781. Data collection was conducted using a structured survey questionnaire, which gathered demographic information and measured the influence of social media on key factors affecting destination selection, such as convenience, attractiveness, and destination image. The study employed comprehensive questionnaires aimed at gathering in-depth information on the impact of social media on tourist destination choices. A total of fifty (50) second-year Tourism Management students from Bestlink College of the Philippines were surveyed. The majority of the respondents were aged 19 to 20 years old, with females accounting for sixty-six percent (66%) of the participants. The findings of the study indicate that social media plays a significant role in influencing tourist destination choices in terms of convenience, attraction, and destination image. In terms of convenience, social media simplifies the process of navigating and accessing essential information about destinations. For attraction, it enables interactive engagement between prospective tourists and previous visitors, allowing for the exchange of experiences and recommendations. Regarding destination image, social media enhances the visual and emotional appeal of destinations through dynamic content formats such as stories, reels, and live videos, which provide authentic and relatable insights directly from travelers themselves.

Keywords: social media, tourist destination, travel convenience, destination attraction, destination image, online engagement, travel decision-making, digital content, tourism students, user-generated content

IMPACT OF SOCIAL MEDIA INFLUENCERS ON THE TRAVEL DECISION OF 2ND-YEAR TOURISM STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES

Shaina Piano, Dave Francisco, Jazmine Kimberly Moldez, Rhian Joyce Vermug,
Judge Andrei Roque, Mar Domagtoy

Abstract

In today's digital age, social media has become a vital part of individuals' daily lives, serving as a platform for communication, entertainment, and business. Its widespread use has given rise to social media influencers (SMIs), individuals who create and share content across various platforms and shape public perceptions and behaviors. These influencers have gained credibility among followers, with their content significantly influencing consumers' purchasing decisions. As a result, Destination Management Organizations (DMOs) have begun collaborating with SMIs to attract potential tourists, recognizing their growing influence in the travel and tourism industry. While previous studies have largely focused on the role of social media in disseminating tourism-related content, this study aims to explore the specific impact of SMIs on destination promotion and tourist decision-making. This study applies Hovland's Source Credibility Theory, which asserts that individuals are more likely to be influenced by sources they perceive as credible. To assess the impact of social media influencers on travel decisions, the researchers conducted a survey involving 50 second-year Tourism Management students at Bestlink College of the Philippines. The results show that 64% of the respondents were aged 19 to 20 years old. A majority of the participants were female, accounting for 36 out of 50 respondents, and most belonged to section BSTM 22003. The results indicate that social media influencers play a significant role in shaping students' travel decisions by offering more informed and appealing destination choices. In terms of travel intentions, influencers inspire students to try new experiences through engaging content. Regarding trustworthiness, influencers build audience confidence by sharing personal travel experiences, making their recommendations more relatable and believable. In terms of credibility, respondents viewed influencers as reliable sources when their content was supported by factual information, which further strengthened consumer trust and influenced travel-related choices. The findings of this study reveal that social media influencers (SMIs) have a positive influence on the travel decisions of Tourism Management students. SMIs contribute to making destination selection more accessible and efficient by offering relevant and engaging content. They also help students make well-informed choices by showcasing various travel options and experiences. Moreover, influencers inspire students to discover the deeper purpose of travel and motivate them to explore beyond their comfort zones, promoting both personal and professional growth in the field of tourism.

Keywords: social media influencers, travel decisions, tourism students, destination selection, travel motivation, source credibility, trustworthiness, travel intentions, digital influence, student behavior

**IMPLEMENTATION OF COMPANION JOINER SERVICES AS PART OF
TOURISM SERVICE: BASIS FOR IMPROVEMENT PLAN**

Orbon Dollente, Nicole Banzuela, Rian Mark Dela Peña, Leo James Hisu-an,
Charlie Duero, Alezhandrea Clio Barrios

Abstract

The study entitled "Implementation of Companion Joiner Services as Part of Tourism Service: Basis for Improvement Plan" aims to evaluate the impact of companion joiner services in the tourism sector and provide recommendations for improvement. Companion joiner services involve travelers joining group tours and sharing their experiences with other participants, often strangers, enhancing social interaction and travel enjoyment. The study adopts a descriptive research design and uses survey questionnaires to collect data from 20 Bachelor of Science in Tourism Management (BSTM) faculty members at Bestlink College of the Philippines. Its main objective is to analyze the impact of key factors: safety, satisfaction, price, and accessibility, on the demand for companion joiner services. Based on the findings, the study recommends implementing training programs to enhance communication and customer service skills among providers. It also advises establishing standardized pricing and safety measures to ensure consistent and reliable service. Moreover, marketing initiatives should be strengthened to increase the visibility and appeal of companion joiner services on social media and other platforms. Overall, the study highlights the potential of companion joiner services to enhance tourism experience by promoting social interaction, ensuring traveler safety, and offering cost-effective travel options, while stressing the importance of continuous service improvement and customer satisfaction. This study investigates the demand for companion joiner services, the travel motivations influencing visitor preferences, and the challenges faced during their implementation. The findings will serve as a foundation for developing an improvement plan to enhance the effectiveness and success of these services.

Keywords: companion joiner services, tourism demand, travel motivations, service implementation, customer satisfaction, tourism improvement plan, bestlink college, philippines

**INFLUENCING FACTORS IN VISITORS EXPERIENCE THROUGH TOURIST
SATISFACTION IN CHINATOWN BINONDO MANILA**

Karen Cervantes, Angeluz Dynaque, Chinchin Metante, Cherry Mae Lipata,
Mira Rosabel Olaivar, Alezhandrea Clio Barrios

Abstract

This study examines the factors that influence tourist experiences and overall satisfaction in Binondo, Manila's Chinatown. Adopting a descriptive research approach, the study focuses on key variables such as service quality, accessibility, cultural authenticity, and the diversity of food offerings. Surveys were conducted with both local and international tourists to gather insights into their perceptions, preferences, and overall experiences in the area. The study surveyed 100 visitors who had previously been to Chinatown. Respondents were selected based on their travel history, ability to articulate their experiences, and factors influencing their loyalty to the destination. The research aimed to assess their levels of satisfaction, identify loyalty-driving variables, and understand their overall tourist experience. Convenience sampling was utilized, focusing on individuals at historical sites in the area. Although this sampling method may introduce some bias, the researchers believe that the diverse backgrounds of participants across different age groups, genders, and demographics, combined with efficient data collection, contribute valuable insights into the tourist experience in Chinatown. The survey indicated that visitors generally have a positive dining experience in Chinatown, with cultural authenticity and ambiance emerging as the most valued factors. Conversely, food pricing ranked lowest among the variables assessed. Tourists also expressed high appreciation for the cultural richness of Binondo, particularly its historical landmarks, architectural heritage, and traditional customs. However, challenges such as overcrowding and traffic congestion were identified as major concerns, negatively affecting safety and the overall economic environment. Addressing these issues is essential to improving the visitor experience and enhancing Binondo Chinatown's appeal as a premier cultural and culinary destination. The findings reveal that although logistical challenges and inconsistent service diminish tourist satisfaction, cultural immersion and a lively atmosphere significantly enhance it. This study highlights the importance of addressing these key factors to improve the overall visitor experience, support sustainable tourism, and elevate Chinatown's status as a vibrant cultural destination.

Keywords: chinatown binondo, tourist satisfaction, cultural immersion, environmental vibrancy, logistical challenges, inconsistent service, sustainable tourism, visitor experience, cultural destination

**LEVEL OF CONFIDENCE AND PERCEIVED EMPLOYABILITY
AMONG FOURTH YEAR BSTM STUDENTS**

Zyrus Espenocilla, John Roey Alimocon, Kyla Baltazar, Angelyn Francisco,
Richelle Rangel, Alezhandrea Clio Barrios

Abstract

This study examines the level of confidence and perceived employability of fourth-year Bachelor of Science in Tourism Management (BSTM) students at Bestlink College of the Philippines. It aims to fill a critical gap in understanding the extent to which these students are prepared for the professional demands of the tourism industry. The research focuses on the correlation between students' self-perceived competence in key industry-related skills such as customer service, communication, problem-solving, and technological proficiency, and their perceived readiness to enter the workforce. This study adopts a mixed-methods approach, combining quantitative surveys and qualitative focus group discussions. Quantitative data will be analyzed using descriptive statistics and correlation analysis, while qualitative responses will undergo thematic analysis. The results aim to guide curriculum enhancement, career support services, and strategies to boost employability among graduates of Bestlink College of the Philippines. The study also contributes to the broader discourse on tourism education and workforce readiness in the Philippine context. This study provides critical insights into the confidence levels and perceived employability of fourth-year BSTM students at Bestlink College of the Philippines. The results identify key strengths and areas for improvement in the existing curriculum and career support services. To enhance student readiness for the tourism industry, the study recommends targeted curriculum revisions, expanded internship opportunities, and strengthened career guidance programs. Overall, the research contributes to the growing body of literature on tourism education and graduate employability, offering practical strategies for Bestlink College and other institutions aiming to better prepare students for competitive roles in the tourism sector. Future studies are encouraged to investigate the long-term effects of these interventions and to gain deeper insights into the employment experiences of graduates in the tourism industry.

Keywords: tourism education, employability, confidence level, bstm students, career preparedness, curriculum development, graduate readiness, internship opportunities, bestlink college

**MARKETING STRATEGIES UTILIZED BY BEHIND THE BAR TOMAS MORATO,
QUEZON CITY, TOWARDS GUEST SATISFACTION:
UTILIZATION OF MARKETING STRATEGIES**

Jerick Joseph De Vera, Jovelyn Ursal, Janice Conel, Sian David Joseph,
James Gier, Sherwin Sanchez, Dana Rae Boatis

Abstract

This study investigates the marketing strategies employed by bars in Tomas Morato, Quezon City, with a focus on their impact on guest satisfaction and loyalty. The research highlights the significance of personalized service, digital marketing, and innovative promotional efforts in maintaining competitiveness in the hospitality industry. The aim is to provide insights that can improve guest experience and promote repeat patronage. The study utilized quantitative research design. The respondents included 32 guests from Holic Bar, selected through purposive sampling. A structured survey instrument was employed to collect data, which was then subjected to validation and reliability testing. The researchers administered and retrieved the questionnaires directly, and data were analyzed using appropriate statistical methods to evaluate the influence of marketing strategies on guest satisfaction. Findings revealed that the majority of respondents were young, male, and single. Key determinants of guest satisfaction included product quality, ambiance, promotional activities, and staff engagement. Although promotions were generally appreciated, respondents identified the need for improvements in pricing fairness, comfort, and customer interaction. The results emphasize that young adult males value creative offerings, product quality, and a vibrant ambiance. Staff engagement and personalized service also contributed positively to guest satisfaction. However, areas such as safety, comfort, and pricing require attention. To strengthen guest loyalty, it is recommended that the establishment enhance promotion transparency, invest in ongoing staff training, and refine pricing strategies. A targeted marketing approach focused on improving the overall guest experience can contribute to sustained business success.

Keywords: marketing strategies, guest satisfaction, hospitality marketing, bar promotion, staff engagement, customer loyalty, ambiance, pricing strategy, tomas morato, personalized service

**NANAY ANING’S KAINAN IN TAGALAG FISHING VILLAGE:
A PROPOSED ENHANCED ERGONOMICS DESIGN**

Jemalyn Overio, Christian Dave Mangali, Eunice Bulanadi,
Charity Lao, Niel John Panerio, Christine Aliñabo

Abstract

This study proposes an enhanced ergonomic design for Nanay Aning’s Kainan, a local dining establishment located in the Tagalag Fishing Village, with the goal of improving customer experience and satisfaction. The research focuses on evaluating the restaurant’s facilities, ambiance, location, and service to identify areas that would benefit from ergonomic improvements and, in turn, enhance tourism appeal and guest comfort. A descriptive research design was employed, using a structured survey questionnaire distributed to 100 randomly selected respondents between the ages of 16 and 60. Among the respondents, 36% were aged 16–25, and 56% were male. Additionally, 49% reported a monthly income of ₱5,000 or higher, indicating their capacity and interest in spending on dining and recreational activities. The survey assessed perceptions of the restaurant’s physical and service attributes. Survey results revealed a composite mean of 2.69 for facilities, with seating comfort rated highest at 3.35. Ambiance received a mean score of 2.56, with live entertainment (3.55) and scenic surroundings (3.49) highlighted as key strengths. The location scored 2.60, pointing to concerns about accessibility and insufficient signage. Service quality emerged as a notable strength, with a mean score of 3.44, emphasizing customer appreciation for employee friendliness and efficient service. The findings suggest that enhancements in seating, flooring, restrooms, and overall accessibility are necessary to meet customer expectations. Additional improvements in visual design and decor are also recommended to elevate the dining atmosphere. These ergonomic upgrades are expected to increase customer comfort, safety, and satisfaction, while also contributing to the promotion of local tourism. The study underscores the value of ongoing ergonomic development in food service establishments to maintain competitiveness and enhance the visitor experience.

Keywords: ergonomic design, customer satisfaction, tagalag fishing village, hospitality management, restaurant facilities, ambiance, accessibility, local tourism, service quality, dining experience

**NATURAL HAZARDS AND THE AIRLINE INDUSTRY: AN EMPIRICAL STUDY ON
ECONOMIC IMPACT AND ITS UTILIZATION FOR THE LEARNING AND WORK
READINESS OF TOURISM MANAGEMENT STUDENTS**

Ruby Odulio

Abstract

This study examines the economic impact of natural hazards on the airline industry, emphasizing the growing shift from hazard-centered responses to approaches rooted in vulnerability and resilience. As natural disasters increase in frequency and intensity, the airline sector is increasingly affected by flight cancellations, delays, and substantial financial losses, often resulting in layoffs or even bankruptcy. The research evaluates trends, identifies critical issues, and presents potential solutions to these disruptions. It further underscores the importance of sustainable risk management practices, such as disaster response plans, comprehensive insurance coverage, emergency funds, and investments in advanced forecasting technologies. The findings aim to guide policymakers in enhancing the industry's preparedness and resilience. A mixed-methods research design was employed to assess the economic impact of natural hazards on the airline industry. Quantitative data were gathered through surveys measuring financial losses, while qualitative data were collected via interviews focused on risk reduction strategies. Participants were selected using purposive sampling, and the research instruments were validated prior to distribution. Data were analyzed using both statistical and thematic techniques to ensure comprehensive insights. Findings indicated a paradigm shift in how natural hazards are perceived, moving from inevitability to a focus on vulnerability and resilience. Natural disasters were shown to significantly disrupt airline operations, leading to direct financial losses and broader economic instability. Respondents highlighted the urgent need for strategic risk management practices. Key recommendations included the implementation of disaster response protocols, appropriate insurance mechanisms, emergency reserves, and advanced forecasting tools to enhance disaster preparedness and industry recovery. The study emphasizes both the direct and indirect economic impacts of natural hazards on the airline industry. These include increased operational expenses, revenue loss, and diminished tourism activity, all of which negatively affect regional and global economies. Insights from various stakeholders such as airline operators, passengers, airport management, and government entities, were integrated to propose a range of mitigation strategies. These include establishing comprehensive disaster response systems, securing insurance coverage, maintaining emergency funds, and developing risk reduction frameworks that promote sustainable operations and improve the learning and work readiness of tourism management students.

Keywords: natural hazards, airline industry, economic impact, risk management, disaster response, forecasting technology, tourism management, resilience, work readiness, vulnerability reduction

**NATURE-BASED TOURISM: ASSESSING THE POTENTIALS OF
MT. BALAGBAG, SAN JOSE DEL MONTE BULACAN**

Dina Laurente, Dina Laurente, Cristine Mae Cabana, Glenly Lebios,
Criselda Nifulda, Aivy Joy Pongao, Christine Aliñabo

Abstract

This study, titled Nature-Based Tourism: Assessing the Potentials of Mt. Balagbag, San Jose del Monte, Bulacan, explores the site's capacity to develop into a prominent nature-based tourism destination. Renowned for its scenic landscapes and outdoor activities, Mt. Balagbag has the potential to attract a wide range of visitors. Nature-based tourism contributes not only to local economic growth but also to environmental awareness and conservation. Despite its potential, limited research exists on the current tourism offerings and areas for development at the site. This study aims to assess Mt. Balagbag's tourism potential and identify key areas for improvement. The research utilized a combination of surveys and field observations to gather data. Visitor surveys collected information on demographics, travel frequency, and group dynamics (solo, family, or group travel). On-site observations were conducted to assess the condition and accessibility of existing facilities and infrastructure. The collected data were analyzed to identify the site's tourism strengths and limitations. Findings revealed that Mt. Balagbag appeals to a diverse group of visitors interested in outdoor recreation. While some facilities were found to be functional and well-maintained, notable issues emerged regarding accessibility and the upkeep of infrastructure. Visitors consistently pointed out these weaknesses, indicating a need for targeted improvements to enhance their overall experience. Enhancing site accessibility and ensuring regular maintenance of tourism facilities are crucial steps in unlocking Mt. Balagbag's full tourism potential. Addressing these concerns can lead to increased visitor satisfaction, greater tourist arrivals, and the promotion of environmentally responsible tourism. Sustainable development of the area can position Mt. Balagbag as a model for nature-based tourism in Bulacan and beyond.

Keywords: nature-based tourism, mt. balagbag, ecotourism, tourist accessibility, outdoor recreation, environmental conservation, sustainable tourism, bulacan attractions, tourism development, visitor satisfaction

**NAVIGATING CHANGES: THE IMPACT OF JEEPNEY MODERNIZATION
ON COMMUTERS' MOBILITY IN QUEZON CITY**

Trisha Lynne Palaruan, Jhonpaul Abellano, Jan Daniel Francisco,
Jenny Rose Galve, Dayzen Urias, Rosalie Jacinto

Abstract

This study investigates the impact of the Public Utility Vehicle Modernization Program (PUVMP) on commuter mobility in Quezon City. The program aims to replace traditional jeepneys with environmentally friendly, safer, and more efficient alternatives, in line with global trends toward sustainable urban transportation. In areas like Quezon City, where jeepneys remain a vital and affordable mode of transport, modernization presents both opportunities and challenges. This research focuses on commuter perceptions and experiences during this transition. A mixed-methods research approach was employed to assess the impact of jeepney modernization on commuter mobility. The study combined both quantitative and qualitative data to provide a comprehensive understanding of commuter behavior and societal implications. Respondents were selected from various age groups and educational levels in Quezon City. Surveys captured statistical trends, while interviews explored deeper insights into commuter experiences. The integration of both methods allowed for a balanced analysis of the transition's practical and emotional effects. The majority of respondents were female students aged 15–25, predominantly first-year college students. Findings revealed that respondents were generally satisfied with the shift to modernized jeepneys under the PUVMP, citing improvements in comfort, safety, and service features such as air conditioning, CCTV, and handrails. However, respondents also reported challenges during the transition period, with overcrowding being the most common issue. Additionally, the modernization program influenced public perception, encouraging commuters to recognize the long-term benefits of upgraded transport services. Many respondents recommended embracing the changes to improve urban mobility. The study highlights the positive reception of modernized jeepneys among young commuters in Quezon City, particularly in terms of accessibility, affordability, and comfort. Technological upgrades were appreciated, but logistical issues such as overcrowding need to be addressed. The findings suggest that while the PUVMP offers significant improvements, continued efforts in commuter education, infrastructure support, and service optimization are essential to ensure smooth adaptation and sustained public approval.

Keywords: jeepney modernization, puvmp, commuter mobility, quezon city, public transport, urban mobility, sustainable transportation, mixed-methods research, passenger perception, transport policy

**PERCEIVED IMAGE OF TATTOOED AND PIERCED WORKERS IN TOURISM:
BASIS FOR PROPOSED GUIDELINES**

Marika Crislyn Hisu-an, John Lloyd Castro, Harvy Baroro, Marielle Joy Del Rosario,
Laurence Hermoso, Mernel Joy Lacorte

Abstract

This study examines how tattooed and pierced employees are perceived within travel agencies in Quezon City, focusing on the influence of these perceptions on hiring decisions and workplace dynamics in the tourism sector. It aims to uncover existing biases related to body modifications and assess their impact on efforts to foster diversity and inclusion in recruitment and workplace culture. This study utilized a structured survey method to assess the perceptions, attitudes, and hiring practices of travel agency employees in Quezon City toward individuals with tattoos and piercings. The approach enabled consistent data collection and comparative analysis, enhancing both the reliability and validity of the findings. To strengthen the quantitative design, the survey incorporated Likert-scale items and demographic questions. The study focused on JVD Event and Travel Management Co., aiming to explore the acceptance of body-modified individuals within the tourism workforce. The findings indicate a general reluctance to accept body modifications in the workplace, with respondents expressing concerns about their perceived impact on professionalism and job performance. However, there was strong agreement that greater education and awareness could foster a more accepting attitude toward tattooed and pierced individuals. The study also identified challenges such as stricter employment standards and the potential for discriminatory practices in recruitment and workplace treatment. The study reveals that tattooed and pierced workers in Quezon City travel agencies continue to face challenges regarding acceptance and recognition in the workplace. Most respondents, particularly younger individuals, expressed reservations about visible body modifications, perceiving them as misaligned with industry standards of professionalism. While respondents emphasized that professional conduct should take precedence over appearance, many agencies still enforce strict appearance policies. The findings also indicate a lack of senior-level experience among participants, with few having more than 10 years in the industry. Although educational and awareness efforts show promise, substantial barriers remain, highlighting the need for policies that promote greater inclusivity and equal opportunity in the tourism sector.

Keywords: body modifications, tattoos, piercings, tourism industry, travel agencies, quezon city, professionalism, workplace discrimination, inclusivity, hiring practices, employee perception, appearance standards.

**PERCEPTION OF PASSENGERS ON ONLINE MOTORCYCLE TAXI SERVICES:
AN ALTERNATIVE MODE OF TRANSPORTATION**

Carmella Beatriz Battad, Amor Arendela, Rhosa Camila Gonzales, Jasmin Pascua,
Marian Antonette Umali, Alezhandrea Clio Barrios

Abstract

This study investigates the perceptions of passengers regarding online motorcycle taxi services in the Philippines, with a particular emphasis on the experiences of students from Bestlink College of the Philippines. It aims to understand the factors that influence passenger satisfaction and to identify the common challenges faced by users. The research contributes to the growing literature on the role of online motorcycle taxi services in shaping public transportation dynamics. Furthermore, it offers useful insights for future researchers, policymakers, and service providers to enhance service delivery and commuter experience. This study adopts a descriptive research design and utilizes a survey questionnaire to collect data from 340 Tourism students at Bestlink College of the Philippines. Purposive sampling was employed to select respondents with prior experience using online motorcycle taxi services. The collected data were analyzed using frequency and percentage distribution, weighted mean, ranking, and a four-point Likert scale to interpret the results effectively. The results indicated that most respondents were between 18 and 25 years old and were predominantly female. Among the online motorcycle taxi providers, Move It was identified as the most commonly used, followed by Joyride and Angkas. Respondents generally viewed these services as affordable and convenient, and there was strong agreement that drivers complied with safety measures, such as wearing helmets. Despite these positive perceptions, the study also uncovered several issues, including booking errors, delays in arrival, and inaccurate estimated times of arrival. The study concludes that online motorcycle taxi services are becoming a practical and accessible mode of transportation in the Philippines, especially among young adults. To ensure their long-term success, it is crucial to address key passenger concerns such as service delays, booking issues, and safety-related matters. By applying the study's recommendations, service providers can improve overall user satisfaction, foster public trust, and strengthen their position as a dependable commuting option. Furthermore, the findings can guide efforts to enhance safety protocols, improve service delivery, and support the sustainable development of this growing transportation sector.

Keywords: online motorcycle taxi services, passenger perception, transportation, safety, service quality, student commuters, move it, joyride, angkas, philippines

**PROMOTING CULTURAL TOURISM OF NINOY AQUINO PARK AND WILDLIFE
CENTER IN DILIMAN QUEZON CITY: A BASIS FOR DEVELOPING PROMOTIONAL
VIDEOS**

Hashley Pagula, Christine Ann Magana, Trixie Bilono, Leiann Phoebe Baguisi,
Emjay Villaruz, Mernel Joy Lacorte

Abstract

This study aims to formulate a strategy for promoting cultural tourism at the Ninoy Aquino Park and Wildlife Center in Diliman, Quezon City, serving as the basis for developing promotional videos. It specifically focuses on leveraging social media platforms to market and highlight the park's cultural significance and natural attractions through visually engaging video content. The study utilized a quantitative approach supported by group discussions to assess the available resources of the park and its potential to attract tourists, both crucial elements in crafting an effective cultural tourism marketing strategy. Insights from park visitors played a significant role in evaluating the effectiveness of the park's current management and promotional strategies. Findings reveal that recreational activities such as picnicking, nature walks, and photography play a key role in increasing public awareness of the park and attracting a broad demographic of visitors. These insights serve as a basis for developing more targeted and effective promotional strategies to further enhance the park's visibility and visitor engagement. The study emphasizes the role of cultural tourism in attracting visitors while preserving the natural and cultural heritage of the Ninoy Aquino Park and Wildlife Center. It also aims to foster greater public awareness and appreciation of urban green spaces, highlighting their environmental and community significance. This strategy promotes sustainable tourism while ensuring the long-term protection and preservation of the park.

Keywords: cultural tourism, sustainable tourism, urban green spaces, environmental preservation, community engagement, ninoy aquino park and wildlife center, visitor attraction, heritage conservation, eco-tourism, and park promotion.

**STRENGTHENING TOURISM SUSTAINABILITY THROUGH SAFETY
AND SECURITY MEASURES IN DOÑA REMEDIOS TRINIDAD**

Aliñabo Christine

Abstract

Tourism development often faces various challenges that require persistence and strategic solutions. Among these challenges, safety and security remain vital in determining the success of a destination. A tourist's decision to visit a place is significantly influenced by perceptions of its safety. This study focuses on strengthening tourism sustainability through the implementation of safety and security measures in Doña Remedios Trinidad, Bulacan. The findings aim to serve as a basis for improving and enhancing local tourist destinations. Additionally, the results may assist local government units and tourism departments in developing effective destination marketing strategies to attract more visitors to the area. This study employed a quantitative approach using descriptive research design. A total of 100 tourists visited Brgy. Camachile in Doña Remedios Trinidad served as respondents. Convenience sampling was utilized to facilitate data collection. A self-made questionnaire was used to gather relevant and sufficient information regarding tourists' experiences and perceptions of safety and comfort within the destination. Results revealed that tourism in Brgy. Camachile is predominantly driven by younger visitors, who have greater flexibility and availability to travel. Respondents placed high importance on safety features such as the presence of fire exits, security checkpoints, and accessible evacuation centers, particularly crucial due to the area's natural terrain. Additionally, tourists highly valued comfort and convenience, especially in accommodations that offered a relaxing atmosphere, accessible transport options, and nearby food establishments. These preferences underscore the need to balance safety with comfort in order to sustain positive visitor experiences. The findings emphasize the need to integrate safety and convenience to promote sustainable tourism. Accessible transportation, visible amenities, and secure accommodation contribute significantly to visitor satisfaction. By addressing the preferences of young tourists and enhancing local facilities, Doña Remedios Trinidad can position itself as a safer and more attractive destination. These efforts support sustainable tourism growth while also contributing to community development and improved local services.

Keywords: tourism sustainability, safety and security, doña remedios trinidad, visitor experience, destination marketing, hospitality, tourist preferences, sustainable development

**THE EFFECTIVENESS OF FACEBOOK PROMOTION OF SPORTS COMPLEX IN
SAN JOSE DEL MONTE BULACAN: A PROPOSED PROMOTIONAL PLAN**

Jennifer Dumagil, Cherry Mae Tesoro, Joaquin Ubatan, Paulyne Joy Belvez,
Ronn Andrei Aguiton, Christine Aliñabo

Abstract

In the digital age, social media platforms have become essential tools for marketing and promotion. Among these, Facebook stands out as one of the most widely used platforms, offering businesses and attractions unique opportunities to reach a vast audience. With over a billion active users, Facebook is particularly effective for promoting tourist attractions. According to Camille Zess (2021), Facebook serves as a cornerstone in promoting tourism through social media. This study employed a quantitative research design to gather and analyze statistical data that can identify patterns, test relationships, and generalize findings to larger populations. Specifically, a descriptive research approach was used. As McCombes (2019) explains, descriptive research systematically investigates one or more variables to accurately describe a population, situation, or phenomenon. The study found that most respondents were aged 18–29, with a majority being male, and reported visiting the sports complex “sometimes.” Unresponsive customer service was identified as a key barrier to increased visitor engagement, with a frequency of 53 respondents highlighting this issue. In terms of Facebook content, the highest-ranked responses were as follows: uploaded pictures, with a weighted mean of 3.36, “image attracts attention and encourages user interaction” (Strongly Agree); videos, 3.44, “teaser videos showcasing clips from previous games excite local fans” (Strongly Agree); reels, 3.39, “reels are high-quality, clear, and visually engaging” (Strongly Agree); stories, 3.41, “stories are highly shareable and make viewers feel connected” (Strongly Agree); and live sessions, 3.45, “live sessions are highly engaging, keeping viewers hooked throughout” (Strongly Agree). The study revealed that the majority of respondents are young adults aged 18–29, predominantly male, and visit the sports complex occasionally. Facebook content, including images, videos, reels, stories, and live sessions, is highly engaging and effective in promoting the sports complex, although unresponsive customer service may limit overall visitor growth.

Keywords: facebook promotion, effectiveness, social media, engagement, information

**THE EFFECTIVENESS OF PRACTICAL INTERNSHIP AMONG
FOURTH YEAR STUDENTS BSTM AT MAIN CAMPUS
TOWARDS EMPLOYABILITY: AN ASSESSMENT**

Sheila Mae Corpuz, Kayle Hennielle Medillo, John Patrick Ramos,
Joshua Sedenio, Jahshe Mae Sorio, Christine Aliñabo

Abstract

This study assesses the effectiveness of practical internships among fourth-year Bachelor of Science in Tourism Management (BSTM) students at the main campus, focusing on their employability. The research aims to evaluate how internship experiences contribute to the development of skills, competencies, and industry readiness among students. The study used quantitative research design. A questionnaire was distributed to gather data on the effectiveness of practical internships among BSTM students at the main campus. The respondents were 2024 BSTM graduates employed in the tourism field. Convenience sampling, also known as accidental sampling, was employed, selecting participants based on availability, geographical proximity, or willingness to participate. A total of 83 respondents completed the questionnaire. The study found that reflective observation received the highest composite mean of 3.80 (Strongly Agree). The statement “enhance observation on how to approach when it comes to problem solving in real situations” ranked first with a weighted mean of 3.80. The second-ranked statement, “reflected on mistakes made during internship and used them as learning opportunities to avoid repeating them,” had a weighted mean of 3.45. Third was “had opportunities to reflect on performance and identify areas for improvement” with 3.36, followed by “identify strengths during internship” at 3.34, and lastly, “gained deeper understanding of complex systems in operations” with 3.25. The respondents’ assessment of the practical internship effectiveness for BSTM graduates at the main campus was overwhelmingly positive. High levels of agreement in Concrete Experience, Reflective Observation, Abstract Conceptualization, and Active Experimentation indicate that internships effectively support skill development, practical learning, and industry readiness.

Keywords: internship, reflective observation, active experimentation, abstract conceptualization, concrete experience

**THE ROLE OF COMMUNITY INVOLVEMENT IN PRESERVATION OF
PADRE PIO IN SAN JOSE DEL MONTE, BULACAN:
A PROPOSED SUSTAINABILITY PLAN**

Regine Mae Vivero, Jeanelle Gutierrez, John Morgan Lualhati,
Jhocel Anne Manlangit, Rose Martinez, Christine Aliñabo

Abstract

The study investigated the preservation of Padre Pio in San Jose Del Monte, Bulacan, a site of deep religious and cultural value. It emphasized the importance of community involvement in safeguarding heritage and proposed a sustainability plan to empower residents. Triggered by issues such as insufficient funding and lack of structured preservation efforts, the research highlighted the need for community-driven strategies to ensure the long-term protection and legacy of the site. This study used a quantitative descriptive research design to assess community views on the preservation of Padre Pio in San Jose Del Monte. A purposive sample of 50 local residents responded to a validated survey questionnaire. Data was analyzed using frequency, percentages, weighted means, and ranking methods, allowing for a detailed interpretation of community involvement and attitudes toward heritage conservation. The study found strong community engagement in preserving Padre Pio, with participants recognizing its positive influence on their personal growth and empowerment. However, the research also uncovered key challenges such as limited awareness of Padre Pio's historical value, resource shortages, and inadequate infrastructure. These findings emphasize the need for sustainable preservation efforts and increased community education to protect the site's legacy. The research emphasized the crucial role of community involvement in preserving cultural heritage, aligning with global trends that prioritize local engagement. It identified pressing challenges such as low public awareness, lack of funding, and the need for empowered, collaborative efforts. The study recommends that future research expand in scope and develop innovative, actionable strategies while examining the cultural dynamics that shape community participation in heritage preservation.

**TOURING THROUGH LEARNING: ASSESSING INTRAMUROS ROLLING
TOUR EXPERIENCE FOR 1ST YEAR BSTM STUDENTS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Jessa Mae Asuan, Brigittelyn Azcarrate, Jobelyn Ballares, Klea Gabriel Soronio,
Jessica Tolledo, Alezhandrea Clio Barrios

Abstract

This study evaluates the effectiveness of the Intramuros Rolling Tour as an experiential learning tool for first-year Bachelor of Science in Tourism Management students at Bestlink College of the Philippines. Intramuros, a historic district in Manila, provides a culturally immersive environment ideal for enhancing the academic and practical knowledge of aspiring tourism professionals. Employing a descriptive research design, the study collected data from 50 first-year students who participated in the tour. The research focused on assessing students' perceptions of the tour's educational value, level of engagement, and overall satisfaction. The research design for assessing the Intramuros Rolling Tour among first-year Bachelor of Science in Tourism Management students at Bestlink College of the Philippines utilizes a descriptive approach. The study aims to evaluate students' comprehension, engagement, and ability to connect theoretical knowledge with real-world experiences. A multifaceted assessment strategy is employed, beginning with pre-tour activities such as quizzes and research assignments to ensure that students understand the historical and cultural significance of Intramuros. This foundational preparation supports deeper learning during the tour experience. Findings indicate that the Intramuros Rolling Tour significantly enhanced students' understanding of historical contexts, architectural heritage, and cultural significance, fostering a deeper appreciation for Philippine tourism. Additionally, students expressed increased enthusiasm for pursuing further studies and careers in the tourism industry. However, challenges such as logistical issues and time constraints were identified. These insights led to recommendations aimed at improving the planning, pacing, and overall experience of future tour implementations. This research underscores the vital role of experiential learning in tourism education, demonstrating that practical exposure to cultural heritage sites significantly enriches academic understanding and better prepares students for real-world industry challenges. By integrating hands-on experiences with classroom instruction, educational institutions can more effectively equip future tourism professionals with the necessary skills, cultural sensitivity, and industry insights. The findings contribute meaningful perspectives to the ongoing discourse on effective tourism education practices and encourage further exploration of experiential learning methodologies within the tourism curriculum.

Keywords: intramuros rolling tour, experiential learning, tourism education, cultural heritage, student engagement, academic enrichment, real-world application, tourism curriculum, historical understanding, career readiness, hands-on learning, education strate

**TOURISM SAFETY AND SECURITY PRACTICES IN
SITIO KANYAKAN, NORZAGARAY BULACAN**

Jessica Marilao, Rechelle Herrera, Argie Llosa, Maica Ablanque,
Joshua Trabajo, Christine Aliñabo

Abstract

This study explores the factors influencing pilgrimage and tourism at the National Shrine and Parish of the Divine Mercy in Marilao, Bulacan, one of the most prominent Catholic pilgrimage sites in the Philippines. Known for its spiritual significance and religious events, the shrine attracts a wide range of pilgrims and tourists from various cultural and demographic backgrounds. The research aims to identify and analyze the motivations, experiences, and sociocultural factors that drive visitation to the site, contributing to a deeper understanding of faith-based tourism in the local context. This study employed a survey-based approach involving 100 pilgrims who visited the National Shrine and Parish of the Divine Mercy in Marilao, Bulacan, for both pilgrimage and tourism purposes. Data was collected through a structured questionnaire designed to gather information on respondents' demographic profiles, motivations for visiting, expectations before the visit, and levels of satisfaction with their pilgrimage and tourism experiences. The data provided insights into the factors influencing visitor behavior and perceptions at the site. The study reveals that the primary factors influencing pilgrimage tourism at the National Shrine and Parish of the Divine Mercy are spiritual growth, cultural exploration, and personal reflection. Survey responses indicate a high level of satisfaction among visitors regarding the shrine's facilities, services, and overall pilgrimage experience. These findings underscore the shrine's dual role as both a spiritual sanctuary and a significant cultural tourism destination. The findings suggest that the National Shrine and Parish of the Divine Mercy possess a strong spiritual and cultural appeal that effectively supports both pilgrimage and tourism activities. Pilgrims' expectations are largely fulfilled by the shrine's facilities, services, and overall atmosphere, reinforcing its reputation as a meaningful religious destination. These insights highlight opportunities for sustainable tourism development that can further enrich the pilgrim experience, foster deeper community involvement, and promote responsible management of faith-based tourism in the region.

Keywords: divine mercy shrine, pilgrimage tourism, spiritual appeal, visitor satisfaction, sustainable tourism, community engagement, religious tourism, cultural heritage, faith-based travel, tourism development

**TRAINING AND DEVELOPMENT PROGRAM IN MINISTRY OF WORKS
IN THE KINGDOM OF BAHRAIN**

Rose Brew

Abstract

Private and public companies today face intense challenges brought about by globalization and economic uncertainty. To remain competitive and thrive in a knowledge-driven economy, organizations must adapt by transforming their internal culture, an essential step for both business survival and growth. It is widely recognized that many organizations place significant emphasis on training and developing their human resources, as a well-trained and skilled workforce constitutes a critical component of an organization's competitive advantage. In the current global landscape, emerging technologies are rapidly reshaping economic cycles, significantly increasing both the number and the capabilities of new and existing business competitors. The study employed various statistical tools to analyze the data. The Wilcoxon Rank Sum Test was used to compare two independent populations, particularly in assessing differences in perceptions or responses. The weighted mean was applied to determine the general tendency or central opinion of the population. Additionally, ranking was used to establish the priority or order of identified factors, while percentage was utilized to represent the proportion or distribution of responses within the dataset. The findings indicate that the Training and Development (T&D) program activities of the Ministry of Works (MOW) in the Kingdom of Bahrain are moderately implemented, with varying degrees of effectiveness across key components. These components include Training Needs Assessment (TNA), Training Design (TD), Training Implementation (TI), Support Staff and Facilities (SSF), and Training Evaluation (TE). Survey results show that administrators generally perceived the T&D activities as more effective than did employees, particularly in the areas of training implementation and training evaluation. This discrepancy highlights the need to align perceptions and enhance communication between management and staff to improve overall training effectiveness. The research highlights the current status and effectiveness of the Training and Development (T&D) program activities implemented by the Ministry of Works (MOW) in the Kingdom of Bahrain. The findings underscore the need for a comprehensive strategic and operational plan to address existing gaps and ensure that training initiatives are better aligned with both organizational objectives and employee development needs. To enhance the impact of the T&D program, the study recommends implementing more systematic training needs assessments, improving the allocation and management of resources, upgrading training facilities, and establishing continuous evaluation mechanisms to monitor and sustain program effectiveness over time.

Keywords: training and development (t&d), ministry of works, kingdom of bahrain, training needs assessment (tna), training effectiveness, training design; program evaluation, human resource development; employee perception, strategic planning

TRANVIA RIDE EXPERIENCES IN INTRAMUROS, MANILA: AN ASSESSMENT

Dein Christian Estrada, Chaira Mae Barbon, Frenzhy Ciervo,
Mariecris Moncida, Mernel Joy Lacorte

Abstract

Transportation holds a central place in Filipino culture, with the iconic jeepney long regarded as a symbol of national identity and ingenuity. However, the ongoing phaseout of traditional jeepneys poses a significant threat to the preservation of this cultural heritage. In response to these changes, this study evaluates the Tranvia Ride experience in Intramuros, Manila, a modern form of transportation that functions both as a tourist attraction and a medium for promoting and preserving Filipino cultural heritage. Through a cross-sectional survey of 100 tourists who experienced the Tranvia Ride, this study examines their demographic profiles and perceptions regarding the ride's comfort, visual appeal, and accessibility. It also explores Tranvia's role in promoting cultural preservation. The findings highlight both the strengths of the tourist experience and areas in need of improvement, offering valuable insights into enhancing the ride's overall impact and effectiveness. Results indicate that young adults comprise the majority of Tranvia riders. While concerns were raised regarding comfort, seating arrangements, and accessibility, Tranvia's historical significance and authenticity were highly valued. These elements resonate strongly with tourists, enhancing their cultural experience and fostering a deeper appreciation of Filipino history and heritage. The study also identifies key areas for improvement, including the provision of priority seating for elderly passengers and the enhancement of safety features, which could significantly improve the overall ride experience and increase visitor satisfaction. Based on the findings, the research proposes a new jeepney model that integrates design elements from both the traditional jeepney and Tranvia, aiming to enrich the tourist experience while preserving Filipino cultural heritage. These insights contribute to the broader discourse on sustainable transportation and cultural tourism, offering valuable implications for future developments in Manila.

Keywords: tranvia ride, intramuros, cultural heritage, filipino transportation, jeepney phaseout, tourist experience, comfort, accessibility, historical preservation, sustainable tourism, manila

**UNVEILING THE POTENTIALS OF DARK TOURISM AT FORT SANTIAGO:
BASIS FOR PROPOSED MARKETING STRATEGIES TO
ENHANCE TOURIST EXPERIENCE**

Genevive Jane Cuanico, Jenny Babe Bastida, Crexia Mae Dejucas,
Alyka Ann Maquirang, Vicky Mae Vaay

Abstract

This study investigates the potential of Fort Santiago as a dark tourism destination, with the goal of enhancing tourist experiences through improved site management and curated activities. While tourism is often associated with leisure and entertainment, this research underscores the role of dark tourism in shaping Philippine history and cultural identity. It explores tourist motivations, identifying the desire for historical knowledge as a key push factor and the site's authenticity as a significant pull factor. Although fascination with death is not a primary motivator, social influences contribute to visitation decisions. The study aims to gather tourist feedback to improve visitor satisfaction and promote Fort Santiago as a compelling destination for both local and international travelers. A descriptive research design and survey method were employed to examine the experiences of visitors to Fort Santiago. A total of 100 participants comprising both domestic and international tourists were selected through purposive sampling to ensure alignment with the study's objectives. Data were collected using a structured questionnaire, and responses were analyzed using statistical tools such as the Likert scale, weighted mean, ranking, and percentage to accurately interpret and quantify visitor feedback. The study revealed that all visitors surveyed at Fort Santiago were Filipino, underscoring the site's strong appeal to local tourists. Key factors contributing to its attractiveness as a dark tourism destination include its cultural richness, historical significance, and strategic location within Intramuros. Visitors expressed a deep appreciation for the site's heritage, with its dark tourism elements enhancing the emotional impact and memorability of the experience. While tourists valued the presence of clear signage and maps, some noted that guided tours felt rushed, limiting opportunities for reflection and deeper historical engagement. The study underscores the substantial potential of Fort Santiago as a prominent dark tourism destination. By addressing the identified limitations and implementing the recommended improvements, the site can offer a more immersive and meaningful visitor experience. These enhancements would not only enrich cultural appreciation and historical reflection but also support cultural preservation efforts and stimulate local economic growth.

Keywords: fort santiago, dark tourism, cultural preservation, local economic development, visitor experience, historical reflection, site enhancement, tourism potential

**UNVEILING THE POTENTIALS OF SLUM TOURISM IN PORT AREA, MANILA:
A PROPOSED ENHANCEMENT TO VISITING GUIDELINES FOR
THE SAFETY AND SECURITY OF TOURISTS AND LOCALS**

Cindy Rotulo, John Crismer Biana, Genelle Cenen, Mary May Montoya,
Joshua Isaac Pingol, Christine Aliñabo

Abstract

This study explores slum tourism in the Baseco Port Area, Manila, highlighting its potential to drive social change and stimulate economic development while addressing the ethical concerns it raises. Slum tourism provides travelers with unique opportunities to engage with marginalized communities, fostering cultural exchange and raising awareness of local socio-economic challenges. However, the practice has drawn criticism for potentially exploitative elements, such as commodifying poverty and reinforcing stereotypes. Utilizing a descriptive research design, the study surveyed 50 residents and 50 non-residents of the Baseco Port Area through purposive sampling. Data were collected using a researcher-made questionnaire to capture participants' perceptions and experiences related to slum tourism. The findings indicate that slum tourism offers benefits to both tourists and residents. For older residents, it contributes to a sense of life satisfaction, while younger tourists gain authentic cultural experiences and deeper insights into marginalized communities. Although concerns about safety and security were commonly expressed by both groups, there was a shared recognition of the unique value inherent in the residents' narratives. Many residents showed a willingness to engage with visitors, viewing tourism as a way to challenge negative stereotypes and foster community pride. Despite ethical concerns, particularly around voyeurism, the study suggests that slum tourism has the potential to support local economic growth, create employment opportunities, and generate revenue for community-based initiatives. The study underscores the need to improve visiting guidelines to ensure that slum tourism remains respectful, ethical, and mutually beneficial. By prioritizing safety measures and fostering meaningful, culturally sensitive interactions between tourists and residents, slum tourism can catalyze positive social transformation. When responsibly managed, it has the potential to enhance community well-being, challenge harmful stereotypes, and promote deeper cultural understanding.

Keywords: slum tourism, baseco port area, cultural understanding, social change, economic development, ethical tourism, community engagement, tourism guidelines, safety concerns, poverty tourism

**UTILIZATION OF EDUCATIONAL TOURS AS LEARNING TOOL AMONG TOURISM
MANAGEMENT STUDENTS: A PROPOSED ACTION PLAN**

Regine Gumopas, Anntonet Flores, Edelyn Suralta, Reynalyn Tena, Summy Zamora, Rosalie Jacinto

Abstract

Educational tours, often referred to as field trips, have long been recognized as valuable learning experiences that enhance student engagement and understanding. These tours offer students the opportunity to engage with real-world environments and apply theoretical knowledge to practical situations. In the context of tourism management education, educational tours are particularly significant, as they expose students to the complexities of the tourism industry and help prepare them for future careers in the field. The primary aim of this study is to evaluate the effectiveness of the educational tour undertaken by BSTM students and to propose an action plan based on Kolb's Experiential Learning Cycle, which includes the four stages: concrete experience, reflective observation, abstract conceptualization, and active experimentation. This study employed a descriptive research method using an exploratory quantitative research design. Data was collected through surveys administered to fifty (50) students who had participated in educational tours, utilizing a Likert scale to measure their responses. The study's findings reveal that respondents strongly agree that educational tours serve as an effective learning tool for tourism management students. Among the four indicators based on Kolb's Experiential Learning Cycle, "Active Experimentation" emerged as the leading component, with a weighted mean of 3.36. This was followed closely by "Reflective Observation" with a weighted mean of 3.34. "Concrete Experience" ranked third with a weighted mean of 3.29, while "Abstract Conceptualization" placed fourth, obtaining a weighted mean of 3.28. By adopting a solution-oriented approach that prioritizes financial support, engaging itineraries, adequate accommodation, and a strong emphasis on quality experiential learning, institutions can significantly enhance the educational value of tours. These strategic actions will not only enrich students' learning experiences but also better equip them to succeed in the dynamic and competitive field of tourism management.

Keywords: educational tours, tourism management, experiential learning, kolb's learning cycle, active experimentation, reflective observation, concrete experience, abstract conceptualization, student engagement, descriptive research

**UTILIZATION OF PROMOTIONAL MATERIALS IN BS TOURISM MANAGEMENT
AT BESTLINK COLLEGE OF THE PHILIPPINES**

Janny Diango, Gerard Ga, Darmaen Sederio, Hanfel Jane Cabaluna, Mernel Joy Lacorte

Abstract

This study aims to assess the effectiveness of promotional materials in boosting enrollment in the BS Tourism Management program at Bestlink College of the Philippines (BCP). It also seeks to explore strategies for improving these materials to better highlight the benefits of studying tourism management at BCP, with the ultimate goal of increasing student enrollment. This chapter outlines the research design, participants, sampling method, survey instrument, and statistical approach. The study employed Cochran's (1977) simple random sampling method to select 50 local tourists visiting the Tandang Sora Shrine in Quezon City, ensuring fairness through the use of a random number generator. Researchers personally distributed a custom-designed survey to collect accurate responses and assess visitors' motivations and experiences. To enhance clarity and reliability, the survey was reviewed by experts, including a research adviser, grammarian, and statistician. The study received formal approval from Bestlink College of the Philippines, and participants were provided with clear instructions, with researchers available on-site to address any questions. Most respondents were aged 18–23, predominantly female, single, and visited the Tandang Sora Shrine only occasionally. Public transportation received a higher rating (3.18) compared to parking facilities (2.78), indicating a need for parking improvements. The shrine's historical significance, particularly its connection to Filipino identity (3.60) and historical events (3.58), was highly valued by visitors. Tourists also expressed preferences for guided tours (3.40), cleanliness (3.38), and friendly staff (3.36). The majority of respondents were college students, with an even distribution of females across all academic years. For promoting the BS Tourism Management program at Bestlink College of the Philippines, social media advertisements were considered the most effective, followed by print and display ads. Challenges were also noted in the online enrollment process. The college should leverage social media platforms such as Facebook, Instagram, and TikTok to reach potential students by sharing student success stories, program highlights, and unique features of the BS Tourism Management program. The study identified issues in the online enrollment process, including technical glitches and limited support. To address these concerns, the college should enhance its payment systems, provide clearer enrollment guidelines, and offer stronger technical assistance. Establishing support channels, such as chatbots or a dedicated helpdesk, would ensure that students receive timely assistance. Additionally, to address poor internet access, the college could collaborate with local internet service providers to improve connectivity or provide resources that enable students to access more reliable services.

Keywords: promotional materials, social media platforms, tourism

**UTILIZATION OF SOCIAL MEDIA AS A TOOL IN SELECTING
TOURIST DESTINATION: FOR RECOMMENDATION**

Jayven Macapia, Qutie Artacho, Arljane Loto, Alyssa Ashley Nacario,
Ronaldyn Reyes, Christine Aliñabo

Abstract

In today's digital age, the internet has become a vital tool that significantly influences how people choose tourism destinations. This study aims to examine how factors such as online comments and reviews, content quality, website design, and connectivity affect tourists' decision-making. A total of 80 randomly selected tourists who use social media in choosing their destinations participated in the survey. The respondents' profile shows that most tourists were aged 19–25, with a majority being female. Facebook emerged as the most frequently used social media platform for selecting destinations. Detailed reviews were identified as one of the most influential factors, with respondents expressing strong agreement regarding the importance of comments and reviews. In addition, high-quality images and videos showcasing real-life experiences at tourist destinations were considered essential components of content quality, also receiving strong agreement from participants. Design also plays an important role, with clear icons and images enhancing users' ability to interpret the information presented. Connectivity features, such as details about internet access points, were likewise considered crucial for ensuring a seamless travel experience. However, the researchers identified misinformation about destinations as the most significant challenge, as it can cause confusion and undermine trust. The study concludes that when social media content is well-organized, with detailed reviews, high-quality visuals, accessible design, and reliable connectivity information, it becomes a powerful tool that attracts tourists and supports informed decision-making. Overall, the study recommends that tourism stakeholders and social media managers prioritize creating visually appealing and factually accurate content. Active monitoring of social media accounts is essential for addressing misinformation and building trust with potential tourists. The study also advises tourists to consult multiple sources of information to ensure their decisions are based on verified facts. Implementing these recommendations can enhance credibility and strengthen the appeal of tourism destinations.

Keywords: social media, tourist decision-making, travel experience

**UTILIZATION OF SOCIAL MEDIA MARKETING STRATEGIES IN
PROMOTING CLOUD 9, ANTIPOLLO RIZAL**

Kyla Lombo, Marienella Agliday, Vianca Camelle Almine, Kate Janette Francisco,
Ma Chaelene Lizada, Rosalie Jacinto

Abstract

This research examines the use of social media marketing strategies in promoting Cloud 9 Antipollo, a leisure destination in Rizal, Philippines. It highlights the transformative impact of technology and social media on the hospitality and leisure industry, emphasizing how these platforms facilitate effective marketing and strengthen customer engagement. The study employs descriptive research design, collecting data from 100 respondents through surveys to assess their demographic profiles, identify the social media platforms used by Cloud 9, and evaluate their perceptions of the marketing strategies implemented. Key findings indicate that the majority of respondents are young adults aged 18–23, predominantly female, with most having visited Cloud 9 only once. Vlogs emerged as the most effective promotional medium, followed closely by official Facebook posts and reels. Respondents strongly agreed that targeted advertising, influencer collaborations, and content promotion strategies significantly enhance brand visibility and customer engagement. Challenges identified include accessibility issues, limited amenities, and transportation difficulties, all of which detract from the overall visitor experience. To address these, the study recommends diversifying promotional content, strengthening targeted advertising efforts, and fostering community engagement through interactive posts and collaborations with local influencers. The findings conclude that effectively leveraging social media marketing strategies can significantly boost Cloud 9's visibility and visitor engagement, ultimately supporting its growth and long-term sustainability as a premier tourist destination.

Keywords: social media marketing, customer engagement, targeted advertising, influencer collaborations, content promotion strategies

**UTILIZING VIRTUAL REALITY AS TOURISM MARKETING STRATEGY
IN SELECTING DESTINATION: BASIS FOR MARKETING STRATEGY**

Krista Camille Balbuena, Marcwin Batallon, Mark Clarence Cristobal,
Lhea Mae Impreso, Sharmaine Lee Rico, Christine Aliñabo

Abstract

This paper explores the primary applications of virtual reality (VR) in tourism, including its potential to offer substitute tourism experiences. It examines key challenges related to integrating VR into the tourism industry and proposes several directions for future research. The study illustrates various tourism-related uses of VR by describing current and emerging VR technologies, followed by an analysis of these technologies' impact on visual appeal, entertainment, and user satisfaction. Additionally, it discusses challenges faced by users when employing VR for destination selection. This study employed a quantitative approach with a descriptive research design to investigate the impact of virtual reality (VR) on destination selection. Its purpose is to identify the benefits of VR in tourism marketing, explore how VR can be used as an effective marketing strategy, and examine the challenges that arise when choosing travel destinations through VR. Based on the results, the study concludes that Virtual Reality (VR) assists tourists in selecting travel destinations by providing realistic visual representations. VR offers the convenience of exploring places without physically visiting them, allowing users to feel present in the destination. However, challenges such as technical issues and navigation difficulties were identified. To address these, travel agencies and VR providers should invest in higher storage capacity and improved graphics technology. Based on the findings, the study concludes that virtual reality effectively aids travelers in selecting destinations by providing realistic visual depictions. While users report high levels of entertainment and satisfaction, improvements are needed in navigation, control, and interactive features. The results also highlight how VR enables travelers to experience a sense of presence at a location without physically visiting it, simplifying the decision-making process.

Keywords: vr in tourism, virtual reality, substitute tourism experiences

**A BUSINESS PLAN ON THE ESTABLISHMENT OF KAKANOOKIE AT 166 GENERAL
LUIS, BRGY. CAYBIGA, CALOOCAN CITY**

Cristy Cabalquinto, Kenneth Letada, Gleian Manalansan, Jayson Arañez, Vicmille Ortega, Aira Jane Apurto, Mitch Kyla Mobilla, Divine Palmera, Jenny Joy Remitar, Rjay Letada, Kyla Lapez, Reynold Bangalisan

Abstract

The business plan for Kakanookie outlines the launch of a cookie brand rooted in Filipino culinary traditions, located at 166 General Luis Street, Brgy. Caybiga, Caloocan City. Formed as a general partnership among 11 student entrepreneurs, the enterprise blends innovative flavors such as ube halaya and leche flan with glutinous rice-based cookies to appeal to a wide demographic. By combining affordability, quality, and cultural authenticity, Kakanookie aims to become a local market leader while celebrating and preserving Filipino heritage. This plan was developed through comprehensive market research, financial modeling, and strategic planning. Key methodologies included demographic analysis to identify the target market, geographic segmentation for site selection, and psychographic profiling to tailor product offerings. A cost-plus pricing strategy was adopted to balance affordability with profitability. Operational workflows covering ingredient sourcing and production were outlined in detail, along with promotional strategies such as social media engagement and grand opening events to enhance brand visibility. The financial analysis demonstrates the business's viability, projecting a 402.15% return on investment within the first three months of operation. The pricing strategy supports competitive positioning, while the marketing plan underscores the effectiveness of both digital and local outreach efforts. Kakanookie's strategic location near schools and marketplaces maximizes foot traffic, and its unique product offerings distinguish it from both direct competitors (e.g., Mo' Cookies) and indirect ones (e.g., Goldilocks). Kakanookie's success lies in its ability to blend tradition with modern appeal, meeting consumer demand for nostalgic yet innovative flavors. The partnership model offers financial and operational support, though its unincorporated structure may present challenges for long-term scalability. Opportunities include leveraging digital platforms for broader reach and offering event-based customization services. Future plans should explore expansion to additional locations and the implementation of sustainability initiatives to strengthen brand value.

Keywords: tradition and modern fusion, kakanookie, cookie business, food innovation

**CONSUMER PREFERENCES ON AIR-CONDITION STORAGE BUSINESSES IN
NOVALICHES, QUEZON CITY**

Jenikyla Rose Morales, Phea Alfaro, John Lenhard Almazar, Regine Barnuevo,
Kyla Duron, Cristian Jhay Sulit, Christine Calvo

Abstract

This study evaluates how storage practices affect air-conditioner performance and operating costs among consumers in Novaliches, Quezon City. It focuses on off-season storage, dry storage methods, and routine cleaning to determine their impact on efficiency and total cost of ownership. By examining these factors, this study aims to identify best practices that maximize unit longevity and minimize energy expenses. This study employs a descriptive survey design targeting 30 air-conditioner owners in Novaliches, Quezon City, Metro Manila. Participants completed a structured questionnaire that addressed storage methods, perceived impacts on cooling efficiency, and operating cost challenges. Responses were scored on a four-point Likert scale, and composite weighted means were calculated for three variables: Efficiency, Quality, and Operation, to assess the prevalence of storage-related problems. Analysis showed that all three variables were regarded as “sometimes a problem.” Quality issues such as corrosion or mold growth ranked highest, with a composite weighted mean of 3.33. Operational challenges, including compressor startup and airflow inconsistencies, ranked second (mean = 3.31). Efficiency losses reflected in longer run times and higher energy consumption ranked third (mean = 3.30). The overall weighted mean across all variables was 3.31, indicating moderate concern among respondents. These findings indicated that improper storage practices contributed to reduced performance and increased costs. Quality degradation during storage led to higher maintenance expenses, while operational and efficiency issues elevated energy bills and repair frequency. It was recommended that consumers employ dry, climate-controlled storage environments, perform thorough pre-storage cleaning, and schedule professional maintenance before and after off-season periods. Implementing these measures was expected to preserve unit condition, improve year-round efficiency, and lower long-term operating costs.

Keywords: air-conditioner storage, performance efficiency, operating costs, off-season maintenance, hvac quality, descriptive survey, novaliches, quezon city

**IMPACT OF BRAND AWARENESS ON MASS PRODUCTION
AND CONSUMER DECISION- MAKING**

Jhiellean Salvador, Patricia Gregorio, Jonalyn Ferando, Kristine Rafales,
Joshua Leyte, Christine Calvo

Abstract

This study explores brand awareness as a critical component of brand equity that strongly affects consumer preferences. It also highlights customer satisfaction as a major factor influencing consumer loyalty. The research aims to investigate the relationship between brand awareness and customer satisfaction, focusing on mass production and its impact on consumer decision-making. This study emphasizes the critical role of brand awareness in shaping consumer preferences and decision-making, providing valuable guidance for businesses striving to develop strong brands, cultivate loyal customers, and attain long-term success in the marketplace. This study utilizes a quantitative, non-experimental design with a correlational approach, surveying 30 respondents to collect data on brand awareness, customer satisfaction, and consumer decision-making. The findings reveal that brand awareness significantly and positively affects customer satisfaction, which in turn drives consumer loyalty and repurchase intention. This study's findings enhance the existing understanding of brand awareness and customer satisfaction, providing important insights for marketing strategies, consumer behavior analysis, and improving business performance.

Keywords: brand awareness, customer satisfaction, consumer behavior, marketing strategies, business performance, consumer loyalty, repurchase intention, quantitative research

LEVEL OF SATISFACTION ON FOOD DELIVERY: AN ASSESSMENT

Jamaica Espiña, Nicaella Barnuevo, Nicole Ann Barrientos, Erica Remigio,
Joey Mae Orongan, Christine Calvo

Abstract

The food delivery industry is rapidly evolving, with technology playing a vital role in its growth and efficiency. In today's fast-paced lifestyle, food delivery services offer convenience for individuals seeking quick access to their favorite meals. This study aims to evaluate the impact of technology on food delivery services, focusing on its potential to improve efficiency and productivity. With the rise of delivery apps and digital platforms, the industry is undergoing major transformations in how food is ordered, managed, and delivered. This chapter presents the methodology of the study, detailing the research design, respondents, sampling method, research instruments, instrument validation, data gathering procedures, statistical treatment, materials used, and experimental procedures. The researchers drew the following conclusions: A majority of the respondents were female, comprising 64% (16 out of 25) of the participants. Additionally, 68% (17 respondents) were within the age range of 21 to 30 years old. The results indicated that customers were generally satisfied with the food delivery services. The study also found that food delivery services are perceived as convenient and easy to use by most customers. This chapter summarizes the research results and key findings, followed by recommendations. Based on the data collected, it proposes improvements to enhance the current development program.

Keywords: food delivery services, customer satisfaction, technological efficiency, convenience, user experience, research design, data collection, statistical analysis, development program

**OPTIMIZING MARKETING STRATEGIES FOR MORE EFFECTIVE
TARGETED ADVERTISING CAMPAIGNS.**

Renil Adnah Gail Madera, Nisha Annbher Guatato, Viana Jamero,
Genilee Flores, Edwin Anota, Christine Calvo

Abstract

This study aims to optimize marketing strategies to improve the effectiveness of targeted advertising campaigns. As digital marketing continues to evolve, businesses increasingly depend on targeted approaches to efficiently reach specific audiences. The focus is on refining strategic efforts to enhance reach, engagement, and return on investment, especially in competitive environments. This research investigates the experiences and perceptions of sellers and business owners in Novaliches, Quezon City, concerning digital advertising and its influence on customer engagement. A descriptive-quantitative research design was employed, with data gathered through an online survey using Google Forms. A purposive sampling technique was used to select 30 participants actively involved in digital marketing. The survey collected demographic information, identified marketing challenges, and gathered insights on potential improvements and recommendations for better-targeted advertising. The findings showed that the current marketing strategies were consistently rated as highly effective, efficient, and credible, each aspect receiving a total weighted mean of 3.7. This uniformity indicates a well-balanced marketing approach that addresses campaign goals while efficiently utilizing resources and maintaining brand trust. The alignment across effectiveness, efficiency, and credibility demonstrates the strategy's robustness in achieving marketing objectives. Overall, the study affirms that the applied marketing strategies have positively affected the target audience and market reach. The consistency in evaluation results supports the continued application and enhancement of these strategies. The findings underscore the importance of adapting to technological changes and shifting consumer preferences to maintain the success of advertising campaigns in a highly dynamic and competitive digital landscape.

Keywords: targeted advertising, digital marketing, marketing strategy optimization, advertising effectiveness, customer engagement, novaliches business, descriptive quantitative research, strategic communication

**OPTIMIZING PET SHOP OPERATIONS: A STUDY ON THE INTEGRATION OF
CUSTOMER RELATIONSHIP MANAGEMENT TACTICS**

Tasha Pauline Hongria, Mariel Jane Bernardino, Maria Michaela Cortez,
Kate Maren Jacob, Ella Joy Liza, Christine Calvo

Abstract

Optimizing operations and enhancing customer loyalty are essential for the sustained success of pet shop businesses. In recent years, there has been a significant shift from traditional mass marketing to customer-specific targeting, emphasizing the importance of customer-oriented strategies. This study evaluates the strategies employed by pet shop owners to improve operational efficiency and build stronger customer loyalty. This research investigates the effects of customer segmentation, operational efficiency, and customer loyalty on overall business performance. A survey questionnaire was distributed to 25 pet shop owners. The demographic distribution of respondents was analyzed based on sex and length of service. The study utilized tabular data presentation, statistical analysis, and weighted mean interpretation to assess the key variables. The study found that the respondents were unevenly distributed in terms of sex and length of service. The overall weighted mean for the assessment of pet shop operations and customer loyalty was 3.67, interpreted as Strongly Agree. Among the variables, customer loyalty received the highest weighted mean of 3.79 (Rank 1, Strongly Agree), followed by customer segmentation with 3.63 (Rank 2, Strongly Agree), and operational efficiency with 3.60 (Rank 3, Strongly Agree). The findings indicate that prioritizing customer loyalty strategies and operational optimization enhances business performance and profitability. The results affirm that customer segmentation, operational streamlining, and trust-building are crucial for long-term sustainability. Pet shop owners are encouraged to implement customer-centric approaches to strengthen loyalty and ensure operational success.

Keywords: customer relationship management, pet shop operations, customer segmentation, operational efficiency, customer loyalty, business performance, sustainability

**REDISCOVERING THE TOURIST PATRONAGE OF TANDANG SORA SHRINE:
STRENGTHENING THE HISTORICAL TOURISM INDUSTRY**

Christine Aira Hermosa, Jenedin Galecia, Pearly Joy Ojel, Angelyka Joy Salazar,
Jhonell Vallente, Alezhandrea Clio Barrios

Abstract

This study examines the key factors influencing renewed interest and ongoing support for the Tandang Sora Shrine in Quezon City. Emphasis is placed on its cultural and historical significance, the profile of its visitors, available infrastructure, and online visibility. Despite its importance as a heritage site, the shrine continues to face challenges such as poor sanitation, the absence of souvenir shops, limited seating, safety issues, and inadequate amenities, all of which negatively affect the overall visitor experience. This research adopts a descriptive design to gather comprehensive data on the Tandang Sora Shrine, aiming to accurately portray visitor experiences and site conditions without determining cause-and-effect relationships. Data was collected through surveys, case studies, and direct observations. A total of 50 visitors participated in the survey, selected through simple random sampling using Cochran's (1977) formula to ensure representativeness. The study emphasizes the importance of addressing existing issues to improve visitor experience and deepen public appreciation of the shrine's historical significance. Key recommendations include improving infrastructure, enhancing safety and security, creating a dedicated souvenir shop, and expanding the shrine's digital reach through social media engagement and virtual tour offerings. These initiatives aim to bridge the gap between heritage conservation and contemporary visitor expectations, ensuring the site's long-term viability and establishing it as a benchmark for managing other historical landmarks in the city.

Keywords: tandang sora shrine, cultural heritage, visitor experience, infrastructure improvement, digital presence, historical preservation, tourism development, quezon city, descriptive research, sustainability

**TRANSPORTATION NETWORK VEHICLE SERVICE: HUMAN RESOURCES
1(EMPLOYEE MANAGEMENT, PAYROLL MANAGEMENT, COMPENSATION AND
BENEFITS WITH VIRTUAL ASSISTANT)**

Torres Jeremy, Anton Carl Reyes, John Ezra Luterte,
Joben Marqueses, Sheryl Adovas

Abstract

This study examines the TNVS HR1 System, an integrated platform designed to unify key HR functions such as employee management, payroll processing, and compensation benefits. By automating payroll workflows and maintaining precise employee records, the system reduces errors related to attendance, overtime, and deductions, ensuring accurate and timely salary payments in compliance with regulations. HR1 not only enhances administrative efficiency but also fosters improved employee satisfaction, positioning it as a critical tool for organizations striving to remain competitive in today's dynamic business environment. The integrated enterprise system centralizes operations across transportation, HR, finance, logistics, and administration. It features a virtual assistant to enhance user interaction and supports system-wide tasks like initialization, authentication, and reporting. The transportation module includes vehicle assignment, real-time tracking, maintenance scheduling, and driver logging. The HR module handles onboarding, role management, terminations, and payroll functions such as batch processing and deduction tracking. This comprehensive system improves operational efficiency and decision-making across multiple organizational domains. The unified system integrates transportation services with HR management, payroll, and benefits, creating a streamlined operational framework. By managing vehicle assignments, route tracking, and maintenance alongside employee data and schedules, the system enhances logistics coordination and workforce planning, leading to greater efficiency and productivity. Transport Network Vehicle Service (TNVS) represents modern ride-sharing facilitated by digital platforms, distinct from traditional taxi services. Mobile applications have become the dominant method for connecting passengers with transport providers, playing a key role in meeting the demands of urban mobility.

Keywords: tnvs, ride-sharing, digital platforms, mobile applications, transport providers, passengers, urban mobility, traditional taxis, technology.

**ACCEPTABILITY OF CHICKEN PASTIL SHAWARMA WITH CREPE
AS WRAPPER AMONG HOME ECONOMICS STUDENTS AT
BESTLINK COLLEGE THE PHILIPPINES**

Denmark Adlawan, Carl Justin Dacanay, Kenjay Harvy Francisco, Emmanuel Rodriguez,
Rosemarie Orongan, Justin Joy Soliveres, Mar Dumagtoy

Abstract

Shawarma, traditionally made with spiced meat, vegetables, and sauces wrapped in pita, has gained popularity in the Philippines. To create a uniquely Filipino variation, this study evaluates the acceptability of chicken pastil: a rice and shredded chicken dish, as a shawarma filling and crepe as an alternative wrapper. The aim is to determine whether this novel combination appeals to Home Economics students at Bestlink College of the Philippines. A descriptive qualitative design is employed using a structured questionnaire to assess sensory attributes and overall acceptability. Cluster sampling identifies 50 Grade 11 and 12 Home Economics students as respondents. Demographic information and ratings of appearance, flavor, and packaging are collected and analyzed using frequency distributions. Most respondents (74 percent) were aged 17 to 18, with equal representation of males and females. The sections HECF 1202, HECF 1201 and HEHRS 1201 each contributed 20 percent of the sample. Chicken pastil shawarma wrapped in crepe was rated “eye-catching” for appearance, “acceptable” for flavor, and “complimentary” for packaging. The most frequent recommendation (72 percent) was to adjust spiciness. Additional suggestions included promoting the product among students, enhancing fillings with complementary ingredients, consulting written resources on product development, and encouraging further innovation. The findings indicated high acceptability of chicken pastil shawarma with a crepe wrapper among Home Economics students. Positive ratings for visual appeal, flavor, and packaging support its potential as a novel snack. Recommendations for spiciness adjustment and ingredient refinement will guide product optimization. Integrating promotional activities and gathering additional consumer feedback are suggested to enhance market readiness and inform future culinary research.

Keywords: chicken pastil, shawarma, crepe wrapper, sensory acceptability, home economics students

**DEVELOPMENT OF A NUTRITIOUS SQUASH CHICHARON FOR THE STUDENTS IN
BESTLINK COLLEGE OF THE PHILIPPINES BULACAN CAMPUS**

Marjorie Tioson, Aeres Gallo, Marisol Garin, Ma Michelle Matillano,
Kyla Mae Samarro, Romeoul Karl Flores

Abstract

This study focuses on the development of a nutritious alternative snack using squash, aimed at addressing hunger and promoting nourishment among students. With increasing awareness of health and wellness, particularly in academic environments, the demand for convenient yet healthy food options continues to grow. The researchers selected chicharon, a popular and culturally accepted snack among Filipinos, as the base concept and explored squash as a healthier substitute to create a more nutritious version for student consumption. An experimental research design was employed to develop and evaluate various formulations of squash chicharon. Sensory evaluation was conducted among selected student respondents to assess the product's acceptability. Consistent with the findings of Nguyen et al. (2023), the study considered taste, texture, and appearance as critical factors in determining the success of new food products. The research aimed to enhance the appeal and nutritional value of the product to benefit not only students but also teachers and other school consumers. The product was tested among 30 student respondents at Bestlink College of the Philippines Bulacan Campus. The majority of participants were aged 15–19 (93.33%) and gender distribution was equal. In terms of flavor preference, cheese received the highest mean rating of 3.66 ("Strongly Agree"), followed by barbecue (3.58) and sweet and sour (3.56). For sensory evaluation, taste (3.68), texture (3.65), aroma (3.60), and nutritional value (3.58) were all rated as "Strongly Agree" in terms of acceptability. However, suggestions for improvement included enhancing texture, ensuring affordability, increasing availability, and improving packaging, which had a lower mean score of 2.56. Overall, the product was found to be highly acceptable. The development of squash chicharon as a nutritious alternative snack was well-received by student respondents. The positive outcomes from sensory evaluations suggest that the product has strong potential for acceptability and marketability within the school setting. The study indicates that this innovative snack can offer health benefits and be a viable option for students, teachers, parents, and other consumers seeking nutritious yet enjoyable food choices.

Keywords: squash chicharon, nutritious snack, sensory evaluation, student health, food innovation, alternative flour, healthy snack, food science, bestlink college, experimental research

**THE PERCEPTION OF CUSTOMER BEHAVIOR AND SATISFACTION IN CASINO AT
SOLAIRE NORTH, QUEZON CITY**

Jasrelle Romaine Cacho, Janna Krissa Baguino, Mary Fe Binggan, Aliyah Ferrera,
Ma Elenita Macario, Benjamin Rebamonte III, Roland Rambo Jayoma

Abstract

Casinos such as Solaire North operate as multifaceted entertainment hubs that merge gambling, hospitality, and behavioral psychology to boost customer satisfaction and loyalty. A deep understanding of customer behavior is crucial to remain competitive in this industry. Studies indicate that sensory elements, such as lighting, sound, and layout significantly influence customer engagement and decision-making. Meanwhile, technological innovations like online gambling platforms and blockchain offer new opportunities but also introduce challenges, particularly concerning gambling addiction and mental health. High-profile incidents, such as the case of Jessie Javier Carlos, underscore the potential social risks associated with gambling. Moreover, regulatory issues including the Philippines' placement on the FATF gray list, emphasize the need for stricter compliance and the promotion of responsible gambling practices. To ensure long-term sustainability, the casino industry must adopt a balanced approach that embraces innovation while upholding social responsibility. This quantitative descriptive study investigated customer behavior and satisfaction at Solaire North Casino, utilizing data from 50 randomly selected respondents with an equal gender distribution. The gender balance aligns with current trends in casino patronage, enhancing the representativeness of the sample. Data was gathered through a customized questionnaire grounded in Parasuraman's customer satisfaction model, ensuring the reliability and validity of the findings through a structured and measurable framework. The study revealed that the majority of Solaire North Casino patrons are over 40 years old, with a slight female majority and a high proportion of single, employed individuals. While most respondents reported feeling safe within the casino, signs of compulsive gambling linked to emotional and financial stress were observed, although suicidal ideation was rare. Customer satisfaction is primarily driven by high-quality service, a welcoming ambiance, and engaging, personalized promotions. Patrons showed a preference for innovative table games over slot machines and expressed strong appreciation for responsible gambling measures, sustainability efforts, and technological upgrades such as cashless payment systems. Areas identified for improvement include entertainment options, signage clarity, dining experiences, and queue management. Conversely, non-gaming amenities and emerging technologies like virtual or augmented reality were considered less important by most respondents. The study underscores the need for robust responsible gambling programs at Solaire North, particularly to address issues such as emotional escapism and financial irresponsibility among patrons. It also emphasizes the importance of integrating sustainability initiatives and enhancing key service areas including entertainment, customer service, and dining, to improve overall customer satisfaction and support the casino's long-term success.

Keywords: solaire north casino, customer satisfaction, responsible gambling, emotional escapism, financial irresponsibility, sustainability, entertainment, service quality, dining experience, casino management

**LEVEL OF ACCEPTABILITY OF MALUNGgay CHIPS AMONG HOME ECONOMICS
GRADE 12 STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

John Mark Adorna, Aldrin Mark Amaba, Jerelyn Bellen, Leonardo Librado, Jedrick Franz Taguam,
Angel Joy Tagupa, Mar Dumagtoy

Abstract

Moringa oleifera, commonly known as malunggay, is a climate-resilient and high-yielding plant known for its remarkable nutritional and medicinal properties. Its various parts, leaves, seeds, flowers, pods, and roots, are rich in essential nutrients and bioactive compounds, making the plant valuable in both food and pharmaceutical industries. However, excessive use of *Moringa* can lead to undesirable effects, such as a greenish coloration and a noticeable change in taste. This chapter delves into descriptive-quantitative methods for analyzing travel behavior, emphasizing model specification, estimation, evaluation, aggregation, and forecasting. It discusses recent innovations such as multinomial-probit models, choice-based sampling, and Clark method aggregation, based on the work of Daniel McFadden (2021). Furthermore, this study addresses the acceptability of malunggay chips and explores the nutritional properties and characteristics of malunggay. The survey, which included 78% of respondents aged 17–18, showed that most participants found the malunggay chips' flavor, appearance, and texture to be acceptable. The group was evenly balanced between male and female respondents, with 30% coming from the HEHRS 1201 course. Taste was identified as the key factor affecting overall satisfaction, followed by the product's perceived health benefits. When considering external factors, price affordability was rated as more important than packaging. Suggestions for improvement focused on enhancing the flavor by adding more spices, increasing salt levels, and incorporating a greater amount of malunggay. The findings suggest that malunggay chips are favorably received, particularly among young consumers, owing to their well-balanced flavor and nutritional value. The product's attractive packaging and associated health benefits further enhance its appeal. This study recommends continued refinement of the product's taste and marketing strategies to improve marketability and encourage broader consumer adoption. Moreover, increasing public awareness of *Moringa oleifera*'s health benefits could further elevate its acceptance and consumption.

Keywords: malunggay chips, consumer acceptability, *moringa oleifera*, nutritional benefits, flavor profile, product packaging, health awareness, youth consumers, marketability, taste enhancement

Engineering, Information, and Communication Technology

**INNOVATIVE ARCHITECTURAL SOLUTIONS FOR MENTAL HEALTH:
THE TRANSFORMATION OF THE NATIONAL CENTRE FOR
MENTAL HEALTH IN MANDALUYONG CITY**

Alliyah Kyla Ramirez, Fiona Eunice Santos, Apple Faith Bunjan, John Rey Hungria,
Harbie Temporal, Anjelene Villanueva, Marlon Bahana

Abstract

Imagine entering a place meant to provide care and healing, only to be greeted by a cramped, cold room with an unsettling atmosphere. Facilities such as the National Centre for Mental Health offer essential support to individuals with mental illness, yet the impact of outdated architectural design is often neglected. The physical environment plays a critical role in the healing process. This study aims to improve the safety, comfort, and overall experience of patients by proposing innovative architectural solutions for mental health care facilities. The goal is to support recovery by creating therapeutic spaces that promote dignity, well-being, and a sense of security. The study adopted a quantitative descriptive research approach to evaluate the proposed architectural design for the National Centre for Mental Health in Mandaluyong City. Data was collected using a structured survey questionnaire designed to measure the acceptability of the design in five areas: construction materials, structural design, architectural features, floor plan, and overall presentation. Respondents were selected through purposive sampling and included three professional groups: 5 civil engineers, 5 architects, and 5 psychiatrists, whose expertise provided a comprehensive evaluation from both technical and healthcare perspectives. The civil engineers reported an overall weighted mean of 3.19 with a variance of 0.14. The architects gave an overall mean of 2.86 with a variance of 0.11, while the psychiatrists recorded a mean of 2.88, also with a variance of 0.11. Using an alpha level of 0.05 and degrees of freedom (df) between groups = 2 and within groups = 12, the computed F-statistic was 0.02, lower than the F-critical value of 3.885. Since the F-computed is less than the F-critical, the null hypothesis is accepted. This indicates that there is no statistically significant difference among the assessments of the three professional groups, civil engineers, architects, and psychiatrists, regarding the acceptability of the proposed architectural design for the National Centre for Mental Health in Mandaluyong City. Their evaluations across the categories of construction materials, structural design, architectural features, floor plan, and overall presentation were found to be consistently aligned. To improve the study further, respondents suggested using precisely scaled construction materials to ensure that the miniature model faithfully represents the intended architectural design.

Keywords: innovative architecture, mental health facility, national centre for mental health, patient well-being, structural design, scaled model, acceptability study, professional assessment, quantitative research, design improvement

**INTEGRATING ECO BRUTALISM IN HOSPITAL DESIGN: MODEL FOR
SUSTAINABLE HEALTH CARE IN SAPANG PALAY BULACAN**

Donbenedict Mejico, Ashley Dalumbar, Dennis Fernando,
John Cyrus Fuller, Denmark Velunta, Carlito Gabriel

Abstract

A hospital is one of the most vital infrastructures in any community. The absence of a nearby hospital can lead to significant challenges, as seen in Sapang Palay, San Jose del Monte, Bulacan, where residents lack immediate access to healthcare services. To address this issue, the researchers proposed the construction of a healthcare facility in Sapang Palay that is accessible to all members of the community, aiming to improve public health outcomes and meet the growing medical needs of the area. This research utilized a quantitative descriptive method and employed purposive sampling. A survey questionnaire served as the primary instrument to measure the level of acceptability of the proposed model in terms of architectural features, structural integrity, structural design, floor plan, and overall presentation. Percentage and frequency were used as statistical tools to summarize the responses from a total of ten participants, five civil engineers and five architects. The weighted mean was calculated to determine the average value, considering varying weights for each data point. A t-test was conducted to compare the responses between the civil engineers and architects. The following steps were followed in creating the model of the Eco-Brutalism hospital design: preparing materials; sketching and planning the design; cutting materials to appropriate sizes; constructing the structure; adding design details; painting the walls; allowing the paint to dry; and presenting the finished product. The results of the analysis indicate that the proposed model is considered "acceptable" in terms of architectural features, structural integrity, structural design, floor plan, and overall presentation. The architects reported an overall mean of 3.13 with a variance of 0.174, while the civil engineers reported a slightly higher overall mean of 3.23 with a variance of 0.158. For both groups, the significance level (α) was set at 0.05, with a t-critical value of 2.145 and a computed t-value of 0.404. Since the computed t-value is less than the t-critical value, the findings show that there is no significant difference between the assessments of the two groups of respondents. To enhance and improve the proposed model, the respondents suggested adding more detailed features to better align the design with its intended purpose. They also recommended using more durable materials to increase the model's longevity and structural reliability. Additional suggestions included refinements aimed at improving accuracy, realism, and overall presentation.

Keywords: hospital, eco-brutalism, architecture, structural integrity

**NATURE-INSPIRED ARCHITECTURE: DEVELOPING A BIOMIMETIC
SUPER MALL IN MUZON CENTRAL, BULACAN**

Gilbert Diong, Zandy Faye Alim, John Vincent Canong, Prince Charrel Arboleda,
Cristoper Esporlaz, Marc Andrei Arcenal, Carlito Gabriel

Abstract

Malls contribute significantly to economic growth and urban convenience; however, some areas remain underserved due to issues such as traffic congestion and limited accessibility. Muzon Central in Bulacan is one such area, with the nearest mall located over 7.1 kilometers away, resulting in long and inconvenient travel for residents. This research proposes the development of a biomimetic super mall in Muzon Central to address the lack of accessible commercial infrastructure. By applying principles of nature-inspired architecture, the study aims to promote sustainability, improve access, and support local economic activity. The study employed a quantitative-descriptive research design using purposive sampling. Data was collected through a survey questionnaire designed to assess the level of acceptability of the proposed mall model in terms of construction materials, floor plan, architectural features, structural integrity, and overall presentation. Respondents included five civil engineers and five architects. Statistical tools such as percentage, frequency, weighted mean, and t-test were used to analyze the data and compare the responses of the two professional groups. The proposed biomimetic mall design was rated as “acceptable” across all evaluated criteria. Civil engineers provided an overall mean score of 3.16 with a variance of 0.272, while architects gave an overall mean of 2.94 with a variance of 0.221. Both groups shared the same alpha level (0.05), t-critical value (2.160), and t-computed result (0.713), indicating no statistically significant difference in their assessments. These findings suggest that the model is considered viable by both engineering and architectural professionals. To improve the proposed design further, respondents recommended enhancing specific architectural details and utilizing more durable construction materials to ensure structural longevity and functional accuracy. These suggestions reflect a shared emphasis on sustainability, durability, and performance in the final design. The study demonstrates that nature-inspired architectural principles can be effectively applied to urban infrastructure projects and highlights the feasibility of constructing a biomimetic mall in underserved regions like Muzon Central.

Keywords: biomimetic architecture, nature-inspired design, muzon central, super mall development, structural integrity, sustainable design, architectural features, civil engineering, urban infrastructure, mall accessibility

**RENOVATION AND ADAPTIVE REUSE OF ALEJANDRO COLLEGE INCORPORATED
INTO BESTLINK COLLEGE OF THE PHILIPPINES STUDENT'S DORMITORY**

Lawrence Jerios, Chokie Ano, Rio Novenario, Leonard Negapatan, Zaijan Marcus Podrido,
Gerald Serdeña, Vincent Julian Autor, Roldan Bamondi

Abstract

Alejandro College Inc., founded in 2009 in Novaliches, Quezon City, is a private institution formerly offering programs in business, computer science, and nursing. Located on a one-hectare lot, the five-story structure comprises 35 rooms. Now under the ownership of the San Agustin councilor and managed by Mr. Joseph “Joe” Visaya, the building is currently being repurposed as a dormitory for students of Bestlink College of the Philippines. An initial structural assessment indicates that the building remains in satisfactory condition, with no apparent damage. This study aims to evaluate the renovation needs of the facility to ensure it meets updated safety and sustainability standards. As defined by Rob P. (2024), renovation refers to the process of upgrading a property to conform to current functional and regulatory requirements. The study examines the building's present condition and offers targeted recommendations to convert it into a safe, sustainable, and student-friendly residential space. This study adopted a quantitative-descriptive research design using purposive sampling. To analyze the data, F-tests and T-tests were employed. The F-test determined the variance differences between responses, while the T-test identified significant differences in the mean ratings provided by two respondent groups: five architects and five civil engineers. The assessment focused on key areas such as material selection, structural design, floor plan efficiency, structural stability, and overall presentation. A structured questionnaire served as the primary data-gathering instrument to evaluate the acceptability of the building's renovation and its proposed adaptive reuse as a dormitory. Findings reveal that both architects and civil engineers rated the building's material usage, structural design, floor plan efficiency, structural integrity, and overall presentation as highly acceptable. The mean rating from architects was 3.53, while civil engineers gave a mean score of 3.56. The variances were calculated at 0.062 for architects and 0.026 for civil engineers. Based on the computed t-value of 0.241, which is lower than the critical value of 2.306 at a 0.05 significance level ($df = 8$), the null hypothesis is retained. This indicates that there is no significant difference between the evaluations of the two respondent groups. To improve the project, respondents recommended providing greater access to materials such as cardboard and templates to enhance model accuracy. They also proposed organizing training workshops to develop participants' skills in model construction. Additional suggestions included the installation of solar panels for improved energy efficiency, an external fire exit to enhance building safety, and a rooftop water tank to ensure a better water supply to upper levels.

Keywords: alejandro college inc., building renovation, adaptive reuse, dormitory conversion, structural assessment, sustainability, civil engineers, architects, solar panels, fire safety, water tank, material access, model-building training

**STRUCTURAL ENHANCEMENT ARCHITECTURE: IMPROVING MACAIBAN BRIDGE
TO WITHSTAND SEVERE FLASH FLOOD FOR ROAD CONVENIENCE**

Hanna Beatrice Termulo, Rein Alyson Alcover, Arsielle Rio Bernardo, Carmela Casimero,
Nasty Iverson Dela Corta, Kurt Rowie Layso, Marlon Bahana

Abstract

Bridges play a vital role in connecting communities by providing safe passage over natural obstacles. Macaiban Bridge, located in Sta. Maria, Bulacan, is one such structure that becomes impassable during flash floods, compromising both accessibility and structural integrity. This study aims to propose structural enhancements to elevate, reinforce, and improve the durability of the Macaiban Bridge to ensure its resilience against severe flooding and improve road convenience and safety for the community. The study employed quantitative-descriptive research design and utilized purposive sampling. Data was collected through a survey questionnaire distributed via Google Forms to five civil engineers and five structural engineers. The assessment focused on five key criteria: materials, procedural methodology, durability, structural integrity, and presentation. A t-test was applied to determine if there were significant differences in the evaluations between the two respondent groups. The results indicated that the proposed enhancements to the Macaiban Bridge were rated as “Highly Acceptable” in all five assessment criteria. The civil engineers reported an overall mean of 3.30 with a variance of 0.174, while the structural engineers gave a mean of 3.25 with a variance of 0.158. Both groups shared the same t-computed value of 0.217, which was lower than the t-critical value of 2.145 at a 0.05 significance level ($df = 326$). Therefore, there was no significant difference between the assessments of the two groups, and the hypothesis was accepted. Based on the results, the proposed structural improvements to Macaiban Bridge were well-received by both civil and structural engineers. Respondents recommended enhancements such as incorporating reinforcement materials to ensure durability, inserting a column pier at the mid-span for added stability, and involving a registered architect for model development and visualization of structural stress points. A current physical or digital model of the bridge is also advised to showcase the proposed upgrades effectively. These enhancements aim to strengthen the bridge’s capacity to withstand flash floods while ensuring the safety and convenience of commuters.

Keywords: bridge enhancement, structural integrity, flood resilience, civil engineering, structural design, road safety, macaiban bridge, sta. maria bulacan

**THE PROPOSED MODEL OF EVACUATION CENTER LOCATED IN
MAPANIQUE SAN PASCUAL MASBATE, BURIAS ISLAND**

Clarish Jane Ellarte, Erica Aguandan, Rexiehana Amoyo, Michaela Eve Bacudo,
Maria Carmela Caunca, Marlon Bahana

Abstract

The project aims to provide temporary living spaces for displaced individuals during emergencies. It details the selection of materials, structural design, and stability considerations, offering a comprehensive overview of the center's development. The model serves as a visual and conceptual representation to enhance understanding of the proposed evacuation facility. This study proposes and presents a model for an evacuation center located in Mapanique, San Pascual, Masbate, Burias Island. This study employed a descriptive research method to highlight and articulate the importance of establishing a dedicated evacuation center. A non-random, purposive sampling technique was used to select respondents who possess relevant expertise. The sample consisted of two groups: five (5) architects and five (5) civil engineers, whose insights were essential in evaluating the proposed design in terms of functionality, structural integrity, and suitability for the intended location. The study utilized a Likert scale and a checklist to gather survey responses. From the civil engineers, the overall weighted mean was 2.99, with a variance of 0.255. The computed t-value (t-computed) was 0.2658, with a degree of freedom (df) of 5 and a t-critical value of 2.571. Since the t-computed is less than the t-critical value, the remarks provided by the civil engineers are considered statistically acceptable. Similarly, the architects yielded an overall weighted mean of 3.15, with a variance of 0.041. The t-computed was 0.658, also with a degree of freedom of 5 and a t-critical value of 2.571. As the t-computed is less than the t-critical value, the remarks from the architects are likewise considered statistically acceptable. To enhance the study, the respondents recommended refining design details, strengthening the supporting structure, ensuring accurate scaling, and utilizing high-quality materials to improve the overall quality and integrity of the proposed evacuation center.

Keywords: evacuation center, structural design, civil engineers, architects, descriptive research, purposive sampling, likert scale, t-test, structural stability, material quality, scaling accuracy

**ASSESSMENT OF ADVANTAGES AND DISADVANTAGES OF NON-VERBAL
COMMUNICATION AS PERCEIVED BY SELECTED GRADE 12 HUMANITIES AND
SOCIAL SCIENCES AT BESTLINK COLLEGE OF THE PHILIPPINES**

Shaene Segarra, Raquel Banila, Glaizan Crisostomo, John David Hernandez,
Chris Vincent Vidal, Christopher Azares

Abstract

This study investigates the perceived advantages and disadvantages of non-verbal communication, encompassing body language, facial expressions, gestures, and eye contact, among Grade 12 Humanities and Social Sciences students at Bestlink College of the Philippines. Drawing on Dual Coding Theory, which posits that human information processing involves both verbal and non-verbal systems, this assessment focuses on three forms of non-verbal communication: physical touch, eye contact, and sign language. The study evaluates how these modes contribute to emotional expression, clarity of message, and relationship building, while also considering potential drawbacks such as misinterpretation and cultural variability. A comparative-quantitative research design is employed to measure students' perceptions of non-verbal communication. The sample comprises 200 Grade 12 Humanities and Social Sciences students selected through cluster sampling to ensure representation across class sections. Data is gathered using a structured survey questionnaire, which asks respondents to rate the benefits and limitations of physical touch, eye contact, and sign language in facilitating communication and social interaction. Results showed that students rated non-verbal communication highly for emotional expression, improved clarity, and enhanced interpersonal relationships. Eye contact received the highest scores for conveying sincerity, while physical touch and sign language were valued for reinforcing empathy and inclusion. Conversely, participants identified misinterpretation of gestures and facial expressions as significant disadvantages, with many noting that cultural differences sometimes led to confusion. A sizeable minority expressed concern that reliance on non-verbal cues could obscure the intended meaning when used without verbal support. Findings highlighted a balanced view: non-verbal communication was recognized as a powerful tool for enriching interactions, yet its effectiveness was tempered by the risk of misunderstanding and cultural misalignment. As a result, it was recommended that educational programs incorporate awareness training on non-verbal cues and promote cultural sensitivity to mitigate potential misinterpretations. Emphasizing combined use of verbal and non-verbal strategies was proposed to strengthen overall communication competence among students.

Keywords: non-verbal communication, emotional expression, relationship building, communication clarity, misinterpretation

**ENHANCING ACCESSIBILITY OF COMPUTER LABORATORY SERVICES
FOR STUDENTS OF GENERAL ACADEMIC STRAND AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Gabriel Lois Gale, Alexis Nicole Adan, Carlos Joaquin Frias,
Nicky Layma, Elissa Marie Quilon, Rica Mae Berja

Abstract

Computer laboratories provide students with essential access to up-to-date hardware and software, fostering creativity, critical thinking, and hands-on learning. These spaces support academic development, particularly in research and digital literacy. This study is grounded in Jan A.G.M. van Dijk's Digital Divide Theory (2013), which highlights disparities in computer and internet access as well as differences in digital skills among individuals. The study aims to evaluate the accessibility of computer laboratory services for General Academic Strand (GAS) students at Bestlink College of the Philippines and identify issues that hinder effective use of these facilities in supporting research and learning in a digital environment. A descriptive-exploratory research design is used, with quota sampling employed to ensure representative data. A total of 77 Grade 12 GAS students participated in the study by responding to a researcher-made survey questionnaire. The instrument measured students' perceptions of computer accessibility and the laboratory's role in enhancing their academic experience and digital skills. The findings reveal that students generally agree on the importance of accessibility factors such as computer availability, functionality, and user-friendliness. Respondents also strongly agree that computer laboratories support their adaptability, cognitive development, and technological literacy. However, a significant concern is the limited number of available computers, with 70.13% of students reporting inadequate access due to insufficient equipment. The study concludes that while computer laboratories are valuable in promoting digital skills and academic growth, limited access due to equipment shortages hinders their full effectiveness. Recommendations include increasing the number of computers and implementing a time-slot system to ensure equitable usage among students. An action plan is proposed to enhance the accessibility and efficiency of computer laboratory services, ultimately supporting a more inclusive and technology-enabled learning environment for GAS students.

Keywords: computer laboratory, accessibility, digital divide, technological literacy, general academic strand, bestlink college, digital skills, computer availability, educational technology, built environment

**DEVELOPMENT OF ALTERNATIVE WHITEBOARD MARKER INK
USING CHARCOAL AND USED ENGINE OIL**

Rye Lou Punzal, Carylle Maye Retutal, Karl Gideon Medalla,
Aaron James Abrasado, Marl Spancer Llosa, Reymundo Javier

Abstract

This study evaluates the potential of producing an alternative whiteboard marker ink using used engine oil and charcoal, two materials that are both sustainable and readily available. The research explores whether this combination can provide a viable substitute for commercial marker inks. Specifically, the study focuses on the ink's writing performance, erasability, and durability on whiteboard surfaces. The primary objective is to assess the acceptability of the developed ink in terms of its color, quality, and usefulness, while also identifying its unique features. An experimental research design was employed, with six participants serving as respondents and evaluators. Charcoal powder and used engine oil were mixed to achieve the desired ink viscosity and a smooth writing texture. The developed ink was evaluated using a structured survey questionnaire rated on a 4-point Likert scale. The responses were analyzed using weighted mean to assess the ink's unique features and to determine its acceptability in terms of color, quality, and usefulness. The findings indicated that the developed ink exhibited favorable characteristics in terms of writing performance and functionality. The average rating for the unique features was 3.78, suggesting that the materials contributed to the ink's distinctive qualities. The ink's color received an average rating of 3.77, while quality and usefulness each received 3.78 and 3.77 respectively. All values were interpreted as "Strongly Agree," confirming the high acceptability of the ink among respondents. The study concludes that charcoal and used engine oil are acceptable components for developing alternative whiteboard marker ink. However, the environmental impact of charcoal, particularly with excessive use, raises concerns. As a result, future research is encouraged to focus primarily on using used engine oil as the main component to improve sustainability and minimize ecological impact. The study demonstrates the potential for creating cost-effective and functional ink alternatives through innovative material repurposing.

Keywords: alternative ink, whiteboard marker, used engine oil, charcoal ink, sustainable materials, experimental research, ink acceptability, chemical engineering, waste repurposing, eco-friendly innovation

**CURVED ARCHITECTURE IN GARDEN CAFE SETTING AT
BLOCK 1 LOT 1 SARANAY ROAD, CALOOCAN**

Analyn Aguillon, Jean Occeno, Rose Ann Suarez, Aiman Gerafusco, Arianh Repe

Abstract

In today's era, loud noises, pollution, and thermal discomfort are prevalent concerns in urban environments. Incorporating curved architecture within a garden café offers potential environmental benefits, including ecosystem support and improved acoustic conditions. The proposed curved architectural design at Block 1 Lot 1, Saranay Road, Caloocan City, is intended to diffuse sound waves, reduce echoes, and enhance overall ambiance and comfort within the space. This study employs a quantitative-descriptive research design, using purposive sampling to assess the acceptability of a curved architecture concept for a garden café at the specified location. A structured survey questionnaire was used to evaluate the design in terms of materials used, floor plan and layout, architectural features and design, aesthetic appeal, and presentation. A t-test was conducted to compare the responses between two groups of professionals: civil engineers and landscape architects. The findings indicated that the curved architecture concept was rated as "Acceptable" by both respondent groups across all evaluated categories. Civil engineers gave an overall mean rating of 3.12 with a variance of 0.006, while landscape architects rated it 2.86 with a variance of 0.035. Both groups had a significance level (alpha) of 0.05, a t-critical value of 1.971, and a t-computed value of 2.845. Since the t-computed exceeded the t-critical, the hypothesis was rejected. Therefore, there was no significant difference between the assessments of the two groups. To further improve the proposed design, respondents recommended careful selection of materials, ensuring they are suitable for curved structures while remaining cost-effective and practical. Additionally, emphasis was placed on finalizing the floor plan prior to implementation, with particular attention to accurate measurements and the proper placement of sections and units. These suggestions aim to enhance both the functionality and aesthetic value of the proposed architectural concept.

Keywords: curved architecture, garden café, acoustic design, sustainable materials, architectural acceptability, floor plan layout, civil engineering, landscape architecture

**RECONSTRUCTED MODEL OF UNELEVATED AND UNPASSABLE BRIDGE FOR
VEHICLES IN PHASE 3B, BAGONG SILANG, CALOOCAN CITY**

Shan Tumapon, Mark Banda, Aslima Birial, Kate Bolena, Kate Lastrilla,
Michael Mahomoc, Roldan Bamondi

Abstract

The newly reconstructed bridge in Phase 3B, Bagong Silang is designed with improved functionality, accessibility, and purpose. Unlike the previous structure, the new bridge accommodates light vehicles such as motorcycles and e-jeeps. It also prioritizes inclusivity by removing the staircase, allowing persons with disabilities and senior citizens to cross safely and comfortably without physical strain, thus providing a more efficient and user-friendly passage for all. The study adopted a quantitative-descriptive research design and used purposive sampling. A survey questionnaire served as the primary instrument to evaluate the acceptability of the proposed bridge reconstruction based on materials used, durability, structural integrity, bridge design and foundation, and overall presentation. Statistical tools, including frequency, percentage, weighted mean, rating scale, F-test, and T-test, were employed to analyze the data and identify significant differences in responses between the two groups of participants. The results showed that the proposed bridge model was rated “Highly Acceptable” across categories, including materials, durability, structural integrity, design, foundation, and presentation. Civil Engineers assigned an overall weighted mean of 3.36 (variance = 0.029), while Structural Engineers gave a mean of 3.34 (variance = 0.174). The calculated t-value of 0.079 with 198 degrees of freedom was below the critical value of 1.972 at the 0.05 significance level, indicating no significant difference between the two groups’ assessments and supporting the model’s acceptability. To enhance the success of the proposed project, the researchers recommend seeking guidance from professionals with relevant experience. Additionally, respondents suggested practical improvements, such as placing a sign on the bridge stating, “For light vehicles and pedestrians only,” installing streetlights to improve nighttime visibility, and reevaluating the thickness of the support columns to ensure greater structural stability and safety.

Keywords: unelevated bridge, unpassable bridge, phase 3b, bagong silang, caloocan city, infrastructure issue, vehicular access, community safety, reconstruction model, transportation barrier, public recommendation

**AUTOMATED RETRACTABLE BLEACHER IN GYMNASIUM OF
BESTLINK COLLEGE OF THE PHILLIPINES**

Jowald Rebudal, Allyson Dequiros, Jaime Madelo, Michelle Ann Horcajo,
Azalea Krisa Porras, Rainelyn Obligar, Carlito Gabriel

Abstract

This study investigates the implementation of an Automated Retractable Bleacher System within the gymnasium of Bestlink College of the Philippines, focusing on addressing existing issues related to limited seating capacity and inefficient spatial utilization. The research aims to provide a comprehensive evaluation of the system by examining its functional benefits, economic feasibility, and the potential challenges associated with its installation and long-term use. By integrating automation into the seating infrastructure, the study seeks to determine the effectiveness of the system in enhancing operational efficiency, flexibility, and overall user experience within the gymnasium environment. The findings of this research are intended to support informed decision-making regarding infrastructure improvements that promote space optimization and modernized facility management. The study utilized a quantitative-descriptive research approach, employing purposive sampling to select appropriate respondents. To gather data, the researchers used a structured survey questionnaire designed to assess the acceptability of the Automated Retractable Bleacher in the gymnasium of Bestlink College of the Philippines. The evaluation focused on several key aspects: materials used, mechanical design, functionality, durability, and overall presentation. To analyze differences in perception between the two groups of respondents, a t-test for independent samples was applied, providing insight into potential variations in their assessments. The findings of the study indicate that the Automated Retractable Bleacher installed in the gymnasium of Bestlink College of the Philippines was rated as “Acceptable” across all evaluated criteria: materials used, mechanism, functionality, durability, and presentation. The Computer Engineering respondents gave an overall weighted mean of 2.75 with a variance of 0.675, while the Civil Engineering respondents recorded an overall weighted mean of 2.60 and a variance of 0.075. To determine whether there was a significant difference between the two groups’ assessments, a t-test for independent samples was conducted. Using a significance level of $\alpha = 0.05$ and degrees of freedom ($df = 326$), the t-critical value was found to be 2.306, while the t-computed value was 0.346. Since the t-computed value is less than the t-critical value, the null hypothesis is accepted. This result confirms that there is no statistically significant difference between the evaluations of Computer Engineering and Civil Engineering respondents. Therefore, both groups share a consistent perception of the system's acceptability, supporting the conclusion that the Automated Retractable Bleacher is functionally and structurally suitable for implementation. The study demonstrated the feasibility and acceptability of the Automated Retractable Bleacher prototype developed for the gymnasium of Bestlink College of the Philippines. Based on the analysis of respondent feedback, several important recommendations were identified to further enhance the system’s design, safety, and overall presentation. First, it is recommended to use lightweight and durable materials, such as aluminum composite panels, to improve both structural efficiency and visual appeal. This would contribute to a sleeker, more modern design while also enhancing functionality. Additionally, the overall presentation of the prototype should be refined to achieve a more organized and professional appearance, including designated compartments or enclosures for wiring and control systems to reduce clutter and improve user access. Respondents also suggested integrating a comprehensive safety mechanism, such as proximity or occupancy sensors, to prevent accidental activation or retraction of the bleachers while they are in use. This feature would ensure user safety and minimize potential operational hazards. Furthermore, it was recommended that the mechanical operation and system functionality be more clearly explained, possibly through visual

labels, diagrams, or a user manual, to enhance user comprehension, especially for non-technical audiences. These suggestions highlight areas for further development and refinement, ensuring the system is not only technically sound but also safe, user-friendly, and visually presentable for practical deployment in institutional settings.

Keywords: automated retractable bleacher, mechatronics system, raspberry pi, arduino uno, safety sensors, gymnasium seating, prototype development, space optimization, user acceptability, engineering design, smart infrastructure, material selection, functional

**AUTOMATED SOLAR-BASED GREENHOUSE VEGETABLE FARMING AND
AQUAPONIC DEVICE USING ARDUINO R4 WITH MONITORING INTERFACE**

Theresa Lejas, Bea Orcine, Nikki Benitez, David Allan Balili Jr,
Ralph Emanuel Dela Guardia, Reynante Ponay

Abstract

The researchers designed and implemented a solar-powered automated greenhouse system integrated with aquaponics to optimize the growth of vegetables and support fish farming. The system utilized various sensors, such as temperature, humidity, soil moisture, non-contact capacitive liquid level, and pH sensors, to monitor and maintain optimal environmental conditions. Powered by an Arduino R4 Wi-Fi module, the system efficiently collected and processed real-time data while distributing energy harvested from solar panels. This innovation significantly improved crop yields, minimized manual labor, and enhanced overall resource efficiency. Compared to traditional farming methods, the system demonstrated superior performance in sustainability, productivity, and automation. The researchers adopted an experimental prototyping methodology, integrating 2D and 3D design simulations through Tinkercad and system programming using the Arduino IDE. To assess the prototype's performance and user acceptance, a descriptive survey was conducted employing purposive sampling. Fifty residents of Barangay San Agustin, Quezon City, Philippines, served as respondents. Data were collected using a structured Likert scale questionnaire, designed to measure the prototype's functionality, efficiency, usability, and overall acceptability based on end-user feedback. The system delivered notable improvements in regulating environmental conditions, optimizing resource use, and enhancing productivity in both vegetable farming and aquaculture. It performed effectively, meeting all established design goals. Based on the evaluation, the automated setup featuring a monitoring interface proved to be highly efficient for greenhouse and aquaponics operations. Feedback from respondents indicated that the system maintained consistent functionality, incorporated durable and high-quality components, operated safely across varying conditions, included a reliable backup power system, and complied with engineering and safety standards. The incorporation of a solar-powered system provided a sustainable and eco-friendly energy source for greenhouse operations, effectively reducing carbon emissions across the entire farming cycle. The system featured an intuitive user interface that enabled farmers to access real-time environmental data, facilitating informed and timely interventions. This proactive management approach ensured optimal growth conditions and minimized the risk of crop loss due to environmental fluctuations. With its proven efficiency and low reliance on manual labor, the system presents a scalable solution for larger farm applications, offering reliable, automated support powered by renewable energy.

Keywords: solar energy, automated greenhouse, aquaponics, arduino r4 wi-fi, environmental monitoring, renewable energy, sustainable farming, sensor-based system, real-time data, smart agriculture, eco-friendly technology, precision farming

DESIGN OF A MULTI-SENSOR LORA-CONNECTED ROBOT FOR HUMAN DETECTION AND NAVIGATION USING ARDUINO AND ESP32-CAM

John Brando Manangan

Abstract

The growing demand for smart home technologies has increased interest in multifunctional robotic systems that support health monitoring, navigation, and cleaning. This study presents the design and development of a semi-autonomous, LoRa-connected robot capable of human detection, environmental monitoring, and vacuum-assisted cleaning. By integrating multiple sensors and enabling wireless control, the system offers a practical solution for home assistance and remote health tracking. The robot was developed using the Experimental Prototyping Methodology. Key components include the YDLIDAR X3 for 360-degree obstacle detection, the MLX90614 infrared sensor for non-contact temperature measurement, the MAX30102 for heart rate and pulse monitoring, and the BME280 for sensing ambient temperature, humidity, and pressure. Real-time video streaming and facial recognition are provided by the ESP32-CAM module. A mini vacuum motor enables cleaning, while two gear motors control movement via a DBH-12 H-Bridge. The system is managed by an Arduino Mega 2560 integrated with an ESP8266 Wi-Fi module. User control is facilitated through a Nextion 3.5-inch touchscreen and the Blynk mobile application. LoRa technology enhances data transmission range and reliability. Testing demonstrated that all sensors performed reliably and produced accurate readings. The LiDAR enabled smooth and effective obstacle avoidance, while the ESP32-CAM delivered stable video streams and successful human detection. Health monitoring sensors recorded consistent pulse and temperature data. The cleaning system functioned as intended, collecting light debris during operation. LoRa connectivity ensured the successful transmission of sensor data over long distances, and user inputs through the touchscreen and Blynk app were responsive and accurate. The robot successfully integrates core functions: navigation, health monitoring, and cleaning, into a cohesive, semi-autonomous platform. The environmental and physiological data collected support practical applications in smart homes, particularly for elderly care, safety, and comfort optimization. With its modular structure and wireless capabilities, the prototype lays the groundwork for the development of more advanced domestic robotics systems in future implementations.

Keywords: lora communication, smart home robotics, human detection, health monitoring, environmental sensing, arduino mega, esp32-cam, obstacle avoidance, vacuum cleaning robot, wireless control

**DEVELOPMENT OF AIR QUALITY CONTROL SYSTEM FOR MODERN
LIVESTOCK FARMING USING ESP32 WITH KOTLIN
ANDROID FIREBASE INTERCONNECTIVITY**

Leonardo Ubana, Keny Brian Amigable, Marjorie Valdez, Ma Teresa Torrechiva,
Mark Ronald Baluyot, Reynante Ponay

Abstract

This study addresses the urgent need for a reliable and cost-effective air quality control system in modern livestock farming. Existing monitoring devices often face issues with calibration and validation, leading to compromised accuracy and limited effectiveness. To address this gap, a prototype system was developed to continuously monitor environmental parameters such as temperature, humidity, and harmful gases using an ESP32 microcontroller. The system is integrated with a Kotlin-based Android application and Firebase for real-time data synchronization, providing a user-friendly interface that allows for immediate responses to fluctuating air quality conditions. The goal is to improve livestock health and productivity through enhanced environmental control and timely interventions. The study used an Experimental Prototyping Method to design, build, and refine the system. Iterative testing cycles were conducted to evaluate usability, reliability, and performance. Feedback was collected through purposive sampling using online surveys from 50 targeted respondents involved in livestock or agricultural technology. This allowed for systematic evaluation of user satisfaction, functional performance, and design practicality. The system received strong positive feedback from users, with General Weighted Mean scores ranging from 3.4 to 3.72 on a 4-point Likert scale. Respondents “Strongly Agreed” that the system effectively monitored air quality, maintained consistent data synchronization with Firebase, and demonstrated high levels of system maintainability and modernity. Additionally, the system performed well in terms of sustainability, safety, cost-efficiency, and compliance with engineering standards, affirming its feasibility and value in livestock applications. The developed air quality control system meets the operational needs of modern livestock farming while offering improvements over traditional systems. Its design includes essential safety components such as voltage regulators, fuses, and insulation to ensure secure and long-term operation. The results support the potential for broader adoption of the system across livestock farms, contributing to enhanced animal welfare, increased productivity, and better environmental management. This research highlights the role of integrated technology in advancing smart agriculture practices.

Keywords: air quality monitoring, esp32, kotlin android, firebase integration, livestock farming, smart agriculture, environmental control, sensor system, agricultural engineering, iot-based farming

**DEVELOPMENT OF AIR QUALITY MONITORING SYSTEM WITH
TOUCHSCREEN INTERFACE USING RASPBERRY PI 4B**

Ma Angel Mangaya, Melvin Buizon, Juhn Clive Estrabela, Ronlester Fenis,
John Carlo Virtudazo, Reynante Ponay

Abstract

This study aims to enhance air quality monitoring through the integration of modern technologies using a Raspberry Pi 4B. The proposed system features a camera-based graphical user interface (GUI), an LCD touchscreen for real-time interaction, and an automatic transfer switch (ATS) backup mechanism to ensure continuous operation. Additionally, the system is powered by solar energy, promoting sustainability and enabling uninterrupted monitoring. The objective is to develop a robust and eco-friendly air quality monitoring system that offers accurate data collection, user-friendly visualization, and consistent functionality even during power outages. The system utilizes a Raspberry Pi 4B as the central processing unit, interfacing with various air quality sensors, a touchscreen display, and a camera module. The Raspberry Pi processes sensor data and facilitates interaction through a GUI displayed on the LCD touchscreen. The camera provides visual support for assessing air quality conditions. Users can view real-time readings, analyze historical data trends, and monitor live environmental visuals. An ATS backup mechanism ensures that the system remains operational during power interruptions, while the use of solar energy supports long-term deployment in remote or energy-constrained environments. The Raspberry Pi 4B proved to be a powerful and flexible platform for building an air quality monitoring system with a touchscreen interface. Its ability to manage multiple processes simultaneously makes it suitable for Internet of Things (IoT)-based applications. However, for low-power, real-time applications, a standard microcontroller may still be preferable depending on the project's scale and requirements. Overall, the system met the intended objectives for responsiveness, user interaction, and uninterrupted monitoring. The study concludes that the Raspberry Pi 4B is an effective choice for developing an air quality monitoring system with a touchscreen interface. Its processing power, versatility, and ability to integrate with multiple sensors and user interfaces make it ideal for modern monitoring needs. The incorporation of solar power and ATS backup enhances system reliability, while the intuitive interface supports user engagement. This system offers a viable solution for improving environmental monitoring efforts in both urban and rural settings.

Keywords: air quality monitoring, raspberry pi 4b, touchscreen interface, graphical user interface, environmental monitoring, iot, solar power, ats backup, sensor integration, data visualization

DEVELOPMENT OF ALEXA BASED SMART LIBRARY WITH RFID DOOR LOCK AND BOOK FINDER SYSTEM USING ESP 32 AND ARDUINO UNO

Amemiya Ryuh Domenica, Charie Jerztine Espineda, Sofia Evangelista, Guia Marie Fernandez,
Lian Danise Gendrano, Justine Rio Nidoy, Marlon Bahana

Abstract

This study focuses on the development of an Alexa-based smart library system designed to enhance library operations through automation and artificial intelligence. The system integrates smart technologies such as voice command capabilities for book-finding assistance and an RFID door lock mechanism for improved security. By incorporating AI-driven features and IoT components, the study aims to modernize traditional library services, ensuring a more efficient and secure environment for both users and staff. A mixed-method research design was employed to evaluate the system's acceptability across multiple dimensions. Structured survey questionnaires were distributed to two expert groups, five librarians and five computer engineers, selected through purposive sampling. The study compared their assessments on various factors, including accuracy and reliability, user interface, search functionality, security features, and cost-effectiveness. Quantitative analysis, including t-tests, was used to determine if there were significant differences between the two groups' evaluations. The results showed an overall mean score of 3.54 from librarians and 3.42 from computer engineers. The computed t-value of 0.615 was lower than the t-critical value of 2.110, indicating no significant difference in the assessments of both groups. Therefore, the hypothesis was accepted, suggesting that both librarians and computer engineers found the system equally acceptable in terms of accuracy, reliability, user interface, search functionality, security, and cost-effectiveness. The findings indicate a high level of acceptability of the Alexa-based smart library system among experts. Despite this, some limitations were noted, including unreliable internet connectivity, command misinterpretation, delayed responses, system malfunctions, and challenges in managing voice commands. Respondents recommended improvements in voice recognition accuracy, accessibility, search functionality, and security. Suggestions included the use of refurbished components for cost-efficiency and enhancements such as RFID reset functions and biometric verification to strengthen security. The study demonstrates the system's potential to improve library services and highlights areas for further development.

Keywords: smart library, alexa integration, rfid door lock, book finder system, esp32, arduino uno, voice recognition, library automation, user interface, library security

**DEVELOPMENT OF ALEXA BASED SMART MIRROR MONITORING INTERFACE
SYSTEM USING RASPBERRY PI WITH CLOUD LINKAGE TECHNOLOGY**

Yvonne Erika Sevilla, Bernadeth Tan, Justine Santiago,
Nica Decerez, Kenneth Ramacula, Reynante Ponay

Abstract

The Alexa-based smart mirror is a hybrid of traditional mirrors and digital display technology, designed to provide real-time information such as time, weather forecasts, news updates, calendar events, music playback, alarms, and reminders. Additional features include a global clock, word of the day, breathing exercises, hydration reminders, a selfie application, and an interactive weather map. The device offers multiple navigation options, including touch interface, remote control, and Alexa voice commands. Engineered for convenience and durability, the waterproof design ensures safe operation in humid environments, particularly in bathrooms. The researchers employed the Experimental Prototyping Method to design and develop the smart mirror system. This method involves iterative development and refinement of a functional prototype. Data was collected using purposive sampling through interviews and structured survey questionnaires utilizing a five-point Likert scale. The Raspberry Pi served as the system's processing unit, enabling cloud integration and seamless user interaction. The developed smart mirror system successfully integrated voice-controlled interaction, cloud synchronization, and real-time information display through the Raspberry Pi platform. Essential features such as weather updates, calendar reminders, and smart home control were fully functional. The system demonstrated accurate voice command recognition and rapid data syncing with minimal latency. User evaluations reflected high levels of satisfaction in terms of functionality, usability, and practicality, confirming the system's efficiency and user-friendliness. The study demonstrates the potential of integrating smart technology into conventional household items. The smart mirror combines a reflective surface with a digital interface to deliver a multifunctional personal assistant experience. Voice control via Alexa, combined with touch and remote navigation, offers accessibility to a broad range of users. Features such as daily reminders, wellness prompts, and interactive tools contribute to improved lifestyle and user engagement. Its waterproof design supports use in high-moisture areas, extending its application to bathrooms and similar environments. Overall, the system reflects a significant advancement in smart home technology, providing convenience, interactivity, and functional design in a single device.

Keywords: smart mirror, alexa integration, raspberry pi, cloud linkage, voice control, iot, smart home technology, digital display, wellness technology, touchscreen interface

**DEVELOPMENT OF AN INTEGRATED ROBOTIC VACUUM CLEANER
AND AIR PURIFIER WITH WIFI CONNECTIVITY AND
MULTI-MODE CONTROL USING ARDUINO UNO**

Jean Lester Cachola

Abstract

This study focuses on the development of an autonomous Internet of Things (IoT)-based robotic vacuum cleaner that integrates an air purifier and features Wi-Fi connectivity with multi-mode control. The system is designed to navigate autonomously, avoid obstacles, and optimize its cleaning path. To enhance power efficiency, an optical dust sensor was incorporated, enabling the vacuum to operate only when dust is detected. This project addresses the growing demand for affordable and automated cleaning solutions that reduce human labor while maintaining high cleaning efficiency, positioning itself as a practical alternative to commercially available robotic cleaning systems. The study utilized Experimental Prototyping Methodology, emphasizing design thinking and iterative development. The prototype was conceptualized using 2D and 3D designs in Blender and electrical schematics were created in Proteus. The software source code was implemented using Arduino IDE in C++, while a dedicated control application was developed via MIT App Inventor. Data collection was conducted through purposive sampling involving 50 homeowners in Barangay Poblacion, San Jose del Monte, Bulacan. A 4-point Likert scale survey was used, and the data were analyzed using descriptive statistics. The functional testing of sensors and components confirmed the effectiveness of the integrated design. The robotic system successfully performed autonomous cleaning tasks, demonstrated reliable obstacle detection, and executed air purification functions. Test results and survey responses indicated that the system was efficient in dust collection and operational performance. Respondents rated the system positively in terms of functionality, efficiency, and ease of use. The study concludes that the integrated robotic vacuum cleaner and air purifier met its objectives, with the optical dust sensor contributing to enhanced power efficiency. The successful use of Arduino Uno and ESP32 microcontrollers validated their effectiveness in powering a multifunctional cleaning system. The findings suggest that the prototype offers a promising and innovative solution for dust and waste management, particularly in residential environments. Future improvements may focus on scaling features, refining sensor accuracy, and enhancing application interfaces for broader usability.

Keywords: robotic vacuum cleaner, air purifier, iot, arduino uno, esp32, optical dust sensor, smart home device, autonomous cleaning, wi-fi control, mit app inventor

**DEVELOPMENT OF AUTOMATED HOME MANAGEMENT SYSTEM
USING ARDUINO UNO WITH MOTION TRACKER CAMERA**

Mar John Buquel, Nicole Alanis, Mark Jayson Barbadillo, Wendel Rodly Banzuelo,
John James Monares, Jayson Dave Nucos, Reynante Ponay

Abstract

The rapid advancement of technology continues to transform daily life, accelerating the shift toward smart home environments that combine artificial intelligence (AI) and the Internet of Things (IoT). This study focuses on developing an innovative smart home management system that prioritizes security, automation, and energy efficiency. The system integrates advanced components including Amazon Alexa for natural language processing, RFID technology for secure access, motion-tracking cameras, smoke sensors, and regulated exhaust fans. These devices are interconnected through microcontrollers and relay modules to ensure seamless operation and intelligent control of home automation features. The research utilizes a functionality-driven design approach focused on optimizing home security, automation, and energy management. Core components include Amazon Alexa, RFID access, motion and smoke detectors, and Arduino Uno microcontrollers. The system underwent rigorous testing for operational performance, security reliability, and energy efficiency. Additionally, a user evaluation survey was conducted to assess satisfaction, ease of use, and system responsiveness in real-world scenarios. The developed prototype successfully integrated all targeted components, demonstrating high performance across key metrics. RFID access achieved 98% accuracy, while Alexa voice command recognition reached 95%. Smoke detection proved to be 100% reliable. The motion sensor responded within 1.3 seconds, and system uptime over 48 hours averaged 99.1%. User feedback indicated strong approval, with 92% expressing satisfaction, 94% noting ease of use, and 90% reporting improved home security. The smart home system effectively met its goals of improving security, automation, and energy management. The integration of voice control, RFID access, and responsive sensors contributed to a reliable and user-friendly experience. However, minor latency issues were observed due to the system's dependence on Wi-Fi connectivity. The study was also limited by its sample size and testing environment. Future development should include broader testing with diverse user groups and explore added features such as biometric authentication and mobile app integration to enhance scalability and usability. Overall, the findings underscore the system's potential as a viable solution for modern home automation.

Keywords: smart home, home automation, arduino uno, rfid access, alexa integration, motion detection, smoke sensors, energy efficiency, iot, home security

**DEVELOPMENT OF AUTOMATED MOUSE TRAP WITH REAL-TIME VIDEO
SURVEILLANCE USING ARDUINO UNO R4 AND ESP32**

Mark Jhun Francisco, Tomnel Viñas, Jannoel Jamili, Caizer III Laya,
Al-huzaifa Biro, Reynante Ponay

Abstract

This study focuses on the development of an automated mouse trap system integrated with real-time video surveillance, using Arduino Uno R4 and ESP32 microcontrollers. The system aims to provide an innovative approach to pest control by combining traditional trapping mechanisms with modern sensor and surveillance technologies. The trap incorporates proximity sensors, a servo motor, and an SMS module to ensure real-time response and remote monitoring. This solution seeks to enhance property protection and pest management efficiency in both residential and commercial environments. The research explores the design, implementation, and evaluation of the system, assessing its potential as a viable tool for rodent control. The study employs an experimental prototype development approach to assess the effectiveness and reliability of the proposed mouse trap. The process involves identifying material requirements, assembling the initial prototype, conducting evaluations, and implementing necessary adjustments based on testing feedback. The prototype features core components such as the Arduino Uno R4, ESP32 for video surveillance, a GSM900 module for SMS notifications, and a PWM-controlled servo motor. Trial-and-error iterations were conducted to enhance system performance and ensure all modules operated as intended. The researchers successfully developed the mouse trap prototype using designated sensors, microcontrollers, power supply components, and an SMS module. Proper wiring and configuration were ensured based on a detailed schematic diagram. Functional testing confirmed that each component performed according to design specifications. The system effectively detected rodent presence, activated the trapping mechanism, and sent real-time SMS alerts. The integration with ESP32 enabled real-time video monitoring, which added an additional layer of functionality to the system. The study demonstrated that the combination of traditional pest control methods with modern automation and surveillance technology offers a reliable and efficient rodent management solution. The prototype's core mechanisms, including its real-time video monitoring, automated trapping, and SMS alert system, functioned effectively based on testing results. Although the system showed high potential, minor constraints related to connectivity and power supply were observed. Future improvements may focus on enhancing wireless stability and energy efficiency and expanding the trap's coverage area to further improve usability and scalability.

Keywords: automated mouse trap, arduino uno r4, esp32, real-time surveillance, pest control, gsm module, proximity sensor, servo motor, iot-based solution, sms notification system

**DEVELOPMENT OF AUTOMATED TOUCHSCREEN MONITOR INTERFACE
FOR BEVERAGE DISPENSERS USING RASPBERRY PI 4**

Jhermie Soriano, Mark Gabriel Olleres, Andrae Joseph Robles,
Ulysis Vicedor, Angela Cabrereros, Reynante Ponay

Abstract

Traditional beverage dispensing systems often depend on manual operations, resulting in inefficiencies and long queues for consumers. To address these issues, modern innovations demand beverage dispensers with user-friendly interfaces and efficient mechanisms powered by environmentally sustainable technologies. This study centers on developing an automated touchscreen interface for a beverage dispenser utilizing Raspberry Pi 4. Furthermore, in light of current environmental concerns, the integration of green energy and mechatronics technology aims to enhance energy efficiency, enable precise control, and promote an eco-friendlier dispensing process. The researchers will utilize the Experimental Prototyping Method, enabling them to develop, test, and refine the prototype to ensure its quality and functionality. Various hardware and software components will be integrated in building the prototype. It will undergo continuous and rigorous testing to assess its efficiency, reliability, and sustainability. Furthermore, surveys will be conducted among buffet and unlimited restaurants in Quezon City to gather relevant data. The responses will be evaluated using weighted mean analysis and a 4-point Likert scale. Through the Experimental Prototyping Method, the researchers successfully developed an Automated Touchscreen Monitor Interface for Beverage Dispensers using Raspberry Pi 4. Survey feedback from buffet and unlimited restaurants in Quezon City shows that most respondents strongly agree on the prototype's effectiveness in terms of functionality, efficiency, sustainability, reliability, and safety. The researchers assert that the development of an Automated Touchscreen Monitor Interface using Raspberry Pi 4, integrated with a mechatronics system and solar power backup, offers an innovative and efficient solution for beverage dispensing systems.

Keywords: automated touchscreen interface, raspberry pi 4, beverage dispensing system, mechatronics integration, solar power backup, energy efficiency, prototype development, user-friendly technology, sustainable innovation

**DEVELOPMENT OF GREEN TECH OFF-GRID COOLING AND HEATING PORTABLE
TABLE USING ARDUINO UNO WITH SOLAR BACK-UP POWER SOURCE**

Osmeña Marc Lous, Marvin Alba, Jim Samuel Quimque,
James Vincent De Vera, Ivan Lopido, Reynante Ponay

Abstract

Addressing environmental issues and promoting energy conservation requires the development of sustainable technological solutions. This study focuses on a portable table that uses an Arduino Uno with a solar backup power source to provide off-grid heating and cooling. By combining these technologies, the system offers a versatile and environmentally friendly method of controlling temperature in various environments. The process includes system design, prototyping, and testing to determine effectiveness. The prototype integrates Peltier modules, resistive heating components, and Arduino Uno-based automated control. Performance tests verified its ability to reach the target temperature, ensuring both operation and energy efficiency under different conditions. The successful application of this portable table demonstrates its potential as an environmentally friendly heating and cooling option. To perform this study, the researchers used the Experimental Prototyping Method. Building the concept and prototype as an experiment that can be approved or rejected is known as experimental prototyping. According to Smith (2021), when building a new product, someone builds a prototype to provide answers to specific questions. Prototype experiments ensure that the questions are precise and testable with the prototype and that the prototype is tested consistently across all users. The system was connected to a relay and composed of an Arduino Uno microcontroller. The Arduino Uno microcontroller was powered by a 12-volt supply, with an adapter used to connect it to the solar charge controller. The prototype's power supply, with an input of 220V AC, was rectified into an output of 48V DC, which then passed through the buck-boost converter to step down to 12V. The power supply was connected to the buck-boost converter, which was connected to the battery. The battery, in turn, was connected to both the solar charge controller and the solar panel. The system underwent extensive testing to determine its efficiency, reliability, and functionality. Results from the survey and performance assessments were also analyzed to validate the effectiveness of the prototype.

Keywords: portable, green tech, table

**DEVELOPMENT OF GREEN TECH SMART BUILDING USING ARDUINO
MICROCONTROLLERS AND ESP 8266 WITH ESCALATOR MECHATRONICS SYSTEM**

John Kenneth Lazaro, Paolo Balesa, Kenneth Dela Cruz, John Vilmer Reymundo,
John Chirstian Saranza, Reynante Ponay

Abstract

This study presents the development of a Green Tech Smart Building designed to promote secure, sustainable, and automated infrastructure. The system integrates Arduino microcontrollers and ESP8266 modules to operate various Internet of Things (IoT)-based features, including an automated lighting system, biometric door lock, escalator with infrared (IR) sensor logic for persons with disabilities (PWD) access, revolving door, and a roofing mechatronics system. These components aim to enhance safety, energy efficiency, accessibility, and environmental adaptability across four designated floors: the lower ground (biometric door), lower to upper ground (escalator), rooftop (roofing system), and main entrance (revolving door). The researchers employed the Experimental Prototyping Method to construct a working miniature of the proposed smart building. The roofing system incorporates a rain sensor and two touch panel sensors for automatic and manual operation. The escalator features true and false IR sensors, with the false sensor triggering a servo motor to block unauthorized upward access, ensuring one-way safety for PWDs. The biometric door system requires both RFID and fingerprint verification, with a touch panel override for internal exit. The revolving door operates based on RFID activation, enabling the passive infrared (PIR) sensor to detect presence. IoT lighting is managed through the Cadio app and relay modules, while a humidity sensor activates a cooling mechanism in response to thermal stress. The prototype successfully demonstrated its intended functions. The roofing system closed automatically in response to rainfall and accepted manual input via touch sensors. The escalator enabled safe one-way movement, with servo motors effectively blocking access from restricted directions. The biometric door ensured dual authentication with minimal delay. The revolving door was operational only when RFID activation enabled the PIR sensor. The IoT lighting system responded promptly to app controls, and the humidity sensor reliably activated the cooling system during high-temperature conditions. All microcontroller-based subsystems performed stably and provided real-time responses. The findings validated the functionality, reliability, and efficiency of the Green Tech Smart Building system. Sensor-based automation enhanced both user safety and environmental responsiveness. The escalator's closed-loop logic and rain-responsive roofing system provided proactive mechanical control. IoT integration contributed to improved user convenience and energy conservation. Although minor sensor response delays occurred during extended operation, the prototype offers a promising model for scalable and eco-friendly smart building solutions.

Keywords: smart building, arduino, esp8266, mechatronics, biometric access, iot lighting, escalator logic, rain sensor, automation, green technology

DEVELOPMENT OF GREEN TECHNOLOGY SMART BUILDING USING ESP32 AND ARDUINO MCU WITH AUTOMATED MECHATRONICS PARKING

Rhinehart Dejucos, Nesel John Almeniana, Aira Cruz, Rafaela Enriquez,
Jamie Anne Faye Portillo, Reynante Ponay

Abstract

The rapid advancement of technology presents significant opportunities for transforming traditional buildings into sustainable, efficient structures. While smart building technologies are already in use, many systems lack seamless integration and user-friendly automation. This study explores the development of a green technology smart building using accessible microcontrollers, specifically ESP32 and Arduino, integrated with an automated mechatronics parking system. The aim is to enhance building efficiency, energy sustainability, and technological responsiveness by combining renewable energy sources with modern automation. This project employs the Experimental Prototyping Methodology. The system architecture was designed using 2D and 3D modeling in SketchUp. Microcontrollers, including ESP32 and Arduino Mega, were programmed using Arduino IDE with C++ to manage sensors and actuators such as DC motors, stepper motors, and IR sensors. Automation features were integrated with a MySQL database using HTTP protocols via Wi-Fi. A solar power system was incorporated for energy sustainability, with automatic switching to the main grid during solar power outages. User feedback was collected using purposive sampling and analyzed through a 4-point Likert scale. The ESP32 microcontroller effectively established communication between the actuators and the database. Functional modules such as room security, QR-based attendance and access, and the automated mechatronics parking system successfully operated with real-time database integration. The Arduino Mega managed the elevator system with high precision, utilizing IR sensors and limit switches. A web server interface enabled QR code generation and system control. The solar power setup successfully powered the system, with seamless transition to the main grid during power loss. The results confirmed the feasibility of implementing a smart building using ESP32 and Arduino microcontrollers. The system demonstrated reliable performance in automation, energy efficiency, and database communication. The integration of a solar power system enhanced environmental sustainability. For future development, enhancements in graphical user interfaces, AI integration, predictive maintenance, improved QR code management, and broader real-world deployment are recommended. This study offers a promising model for future green and intelligent infrastructure.

Keywords: smart building, green technology, esp32, arduino mega, iot automation, mechatronics parking, solar power, qr code system, building efficiency, renewable energy

DEVELOPMENT OF INTEGRATED INDUSTRIAL GREENHOUSE PLANT PRODUCTION USING ESP32 MCU WITH MULTIPLE SENSOR MONITORING

Cherry Joy Pagios, Vincell Daban, Mark Justin Madara, Rochelle Ruth Marcelo,
Shirotani Sandoval, Reynante Ponay

Abstract

Agriculture is a critical sector for global economic stability and food security, making technological innovations vital for sustainable development. This study focuses on the development of an Integrated Industrial Greenhouse Plant Production system using the ESP32 microcontroller with multiple sensor monitoring. The system is designed for reliability, automation, and energy efficiency, incorporating solar panels as a renewable energy source to ensure continuous operation. Additional features include a HuskyLens AI camera for plant health monitoring, Blynk IoT for cloud interfacing, and an uninterrupted power supply for consistent performance in diverse conditions. The researchers adopted the Experimental Prototyping Method to design, build, and refine the functional prototype. This iterative process allowed for continuous feedback and modification to meet user needs. A purposive sampling technique was used to select 50 respondents from Quezon City for system evaluation. Data were collected through a structured survey rated on a 4-point Likert scale to assess the prototype's usability, functionality, and performance. The developed prototype was fully operational and successfully met the study's objectives. The system functioned as intended in terms of automation, remote control, and multi-sensor monitoring. Respondent feedback indicated that the system performed efficiently and provided substantial improvements compared to traditional greenhouse setups. The integration of smart technologies enhanced overall productivity and environmental control. The implementation of the Experimental Prototyping Method enabled the successful development of a miniature industrial greenhouse, including a designated plant production zone and a control room. Key components included the Main Control System, multiple environmental sensors (e.g., CO₂ and soil moisture), a mist distribution mechanism, and a drip irrigation system. A 100-watt solar panel provided sustainable energy, ensuring uninterrupted operation. The HuskyLens AI camera enabled real-time plant health classification, distinguishing between healthy and unhealthy specimens. Findings confirmed that the system achieved reduced energy consumption and environmental impact while maintaining optimal growing conditions. This study demonstrates a viable model for integrating smart, energy-efficient technologies into greenhouse plant production.

Keywords: greenhouse automation, esp32, sensor monitoring, renewable energy, smart agriculture, ai camera, iot, drip irrigation, environmental sensors, plant health detection

**DEVELOPMENT OF IOT BASED SMART COUNTRY HOME USING ARDUINO UNO
AND ESP32 WITH DBMS INTERFACE MONITORING**

Mark John Romo, Racyl John Asombrado, Veenz Star Ray Dela Rama,
Ramel Lomoloy, Rachie Buiza, Reynante Ponay

Abstract

The project titled Development of IoT-Based Smart Country Home Using Arduino Uno and ESP32 with DBMS Interface Monitoring was conceptualized in response to increasing concerns about indoor air pollution and the need for smart, sustainable technologies in rural environments. This study utilizes the Internet of Things (IoT) to implement real-time air quality monitoring and home automation. The primary goal is to track and manage environmental parameters, particularly air quality, through sensors such as MQ2, MQ5, and MQ135 (for gas detection), PMS7003 (for particulate matter), and SHT30 (for temperature and humidity). These components are integrated with Arduino Uno and ESP32 microcontrollers, with the ESP32's built-in Wi-Fi and Bluetooth features enabling remote access and data transmission via any internet-connected device. This study employed the Experimental Prototyping Method to assess the feasibility of the proposed system. The method facilitated continuous refinement of both hardware and software components, ensuring system integration and operational reliability prior to full deployment. A 3D model of the smart home was created using Blender to visually represent the layout of key components such as sensors, solar panels, and microcontrollers. A corresponding schematic diagram illustrated how each sensor interacted with the microcontrollers and external modules. Individual sensors were tested for accuracy and real-time responsiveness. Hardware testing verified component functionality, while software testing focused on data communication reliability between the ESP32 and Firebase. The IoT-based smart country home system effectively demonstrates how low-cost microcontrollers and sensors can be utilized for air quality monitoring and automation in rural households. Integration of multiple air quality sensors with ESP32 and Arduino Uno enabled accurate and real-time environmental monitoring. The use of Firebase and MIT App Inventor improved accessibility, and the inclusion of an Automatic Transfer Switch (ATS) ensured an uninterrupted power supply. Real-time data readings supported immediate user intervention when gas levels exceeded safety thresholds. Additionally, the integration of the SIM900 module allowed SMS notifications for alerts, increasing the system's utility in areas with limited internet connectivity.

Keywords: *iot, arduino uno, esp32, smart home, air quality monitoring, rural automation, real-time sensors, firebase, sim900, dbms interface, environmental sustainability*

DEVELOPMENT OF MECHATRONICS INVENTORY SYSTEM USING ARDUINO MCU, ESP32 AND GOOGLE SHEET APPLICATION WITH SMS MODULE

Mary Grace Alapide, Rhealyn Abao, Mary Rose Catulay, Oliver Gorion,
Angelicka Mahinay, Reynante Ponay

Abstract

This study presents the development of a Mechatronics Inventory System designed to offer an innovative solution for real-time inventory tracking in canned item production. The system categorizes canned items based on their weights (100g, 150g, and 210g) and displays real-time item status through an LCD interface. Pilot lamps indicate whether a bin is full or ready, while an ultrasonic sensor monitors bin levels. An SMS module alerts operators when bins reach capacity, and Google Sheets integration allows centralized inventory management. Additionally, an RFID module resets the bin status, authorizing users to clear the "full" indicator and mark the bin as "ready" for the next cycle. Powered by Arduino MCU and ESP32 microcontrollers and supplemented by solar energy, this system addresses issues such as manual sorting errors, inventory mismanagement, and inefficient communication in the canned goods industry. The researchers applied Experimental Prototyping Methodology to develop the system. Hardware designs were created using 2D and 3D modeling in SketchUp. Software implementation was carried out using Arduino IDE and C++ for microcontroller functionality, while Google Script was utilized for integrating inventory data with Google Sheets. The GSM module was programmed to send SMS notifications when bins reached full capacity. A Purposive Sampling Technique was used to collect feedback from 50 respondents, and responses were analyzed using a descriptive-type questionnaire based on a 4-point Likert scale. Functional testing demonstrated a high level of accuracy in sorting canned items by weight. The SMS module and Google Sheets integration worked seamlessly, providing real-time updates and reliable communication. The LCD display and pilot lamp indicators effectively conveyed bin status, offering immediate feedback when a bin was full. The entire system operated as intended, showcasing dependable performance in both item classification and inventory tracking. The prototype successfully achieved its objectives by automating canned item classification, enabling real-time monitoring, and improving inventory accuracy. The integration of Arduino MCU, ESP32, and Google Sheets, along with SMS notification and RFID-based control, contributed to enhanced efficiency and operational convenience. This system demonstrates strong potential as a scalable and sustainable inventory solution for the canned production industry, particularly through its use of renewable energy and streamlined automation features.

Keywords: mechatronics, inventory system, arduino mcu, esp32, google sheets, sms module, rfid, real-time monitoring, canned item classification, ultrasonic sensor, smart automation

DEVELOPMENT OF MULTI-FUNCTIONAL COMPUTER TABLE USING ESP-32 AND ARDUINO MCU WITH LINEAR ACTUATOR AND VOICE COMMAND

Ronald Saraga, Princess Venus Tanuan, Jessa Bueno, John Mark Merabueno,
Audrey Rose Vitalicio, Reynante Ponay

Abstract

The increasing demand for adaptable, efficient, and sustainable workspaces has generated interest in the development of smart furniture. Traditional computer tables often lack automation, integrated control systems, and energy-saving features, creating a gap between user needs and available designs. This study addresses that gap through the development of a Multi-Functional Computer Table using ESP-32 and Arduino microcontrollers. The prototype incorporates linear actuators and voice command systems to automate routine functions and enhance user convenience. Key features include a voice-controlled lifting mechanism, RFID and keypad-secured storage compartments, RGB lighting, and a solar-powered Automatic Transfer Switch (ATS) to maintain operation during power outages. The goal is to improve productivity, accessibility, and energy efficiency while ensuring safety and security. This study utilizes Experimental Prototype Methodology, which involves system visualization through 2D/3D CAD modeling and schematic diagrams. Hardware and software integration was performed using the Arduino IDE and MIT App Inventor. Components underwent extensive testing to verify performance and reliability. A survey involving 50 respondents was conducted to evaluate the system's usefulness, sustainability, reliability, economy, and safety, using a 4-point Likert scale for analysis. Findings revealed a high level of user acceptance and satisfaction. Respondents agreed that the prototype was user-friendly, innovative, secure, and well-suited for modern work environments. The system met both local and international engineering standards while remaining cost-effective and portable. The integration of IoT, automation, and renewable energy into furniture design significantly enhanced the functionality and sustainability of the prototype. The results indicate that the developed Multi-Functional Computer Table offers a scalable solution for improving workspace efficiency in various settings such as homes, offices, and educational institutions. This research contributes to the advancement of smart furniture technologies by offering a practical and energy-efficient model for future applications.

**DEVELOPMENT OF OFF-GRID SMART CABIN WITH SINRIC PRO BASED AND
IOT MECHATRONICS CONTROLLER USING ARDUINO AND ESP32**

Jhemmuel Entredicho, Raven Edelyn Landicho, Lienel Lacaba,
Carlo James Bernaldez, Aaron Angel Granali, Reynante Ponay

Abstract

Smart home devices have transformed modern living by offering convenience through automation. However, these technologies often depend on consistent electricity and internet access, making them less effective in rural or disaster-prone areas. To address this gap, this study presents the development of an Off-Grid Smart Cabin designed for sustainability, reliability, and security. The system integrates smart automation with renewable energy sources, functioning entirely on solar power supported by a Multi-Battery Storage Switching System to ensure operation during power interruptions or periods of low sunlight. Smart automation is managed through Google Home Assistant for controlling devices such as blinds, lighting, and ventilation. Space-saving features, such as convertible beds and smart roof extensions, are also included, along with physical switches to ensure continuous functionality even without internet connectivity. This study employs the Experimental Prototyping Methodology. The cabin design was first conceptualized using detailed 2D and 3D layouts via AutoCAD. Programming was conducted using Arduino IDE in C++, where the ESP32 microcontroller handled internet-dependent features while the Arduino Uno controlled sensor-based automation. All system components were subjected to functional testing. Voice command responses ranged from 2 to 6 seconds under stable internet conditions, with delays of up to 10 seconds when connectivity was weak. Manual switches were incorporated to maintain functionality regardless of internet availability. A user survey was conducted using purposive sampling and evaluated through a 4-point Likert scale. Respondents rated the system positively, highlighting its ease of use, off-grid independence, and smart automation features. The integrated power system and automation functions were particularly noted as beneficial for emergency applications and rural environments. The findings of this study support the viability of combining IoT automation with sustainable energy solutions for developing reliable smart living spaces. The integration of Arduino and ESP32 microcontrollers enabled a scalable, eco-friendly, and secure system. This research demonstrates a promising direction for creating future-ready, off-grid homes that prioritize energy efficiency, user convenience, and resilience in various living conditions.

DEVELOPMENT OF QUALITY CONTROL COBOTICS AND MECHATRONICS SYSTEM USING ARDUINO UNO AND RASPBERRY PI 5 WITH DBMS

John Michael Consolacion, Jericho Dimacutac, Rovick Nagutom,
Emmanuel Humantoc, Benedict John Lejos, Reynante Ponay

Abstract

Technological innovations have significantly influenced industries, particularly manufacturing. With increasing consumer demand for high-quality products, businesses continually seek methods to improve production processes and efficiency. Traditionally, quality control in manufacturing has been conducted manually, a process that is time-consuming and prone to human error. However, the emergence of technologies such as database management systems (DBMS), Arduino, Raspberry Pi, and collaborative robots (cobots) has enabled the creation of automated quality control systems that are more accurate and efficient. This study focuses on the development of a Quality Control System using Arduino Uno and Raspberry Pi 5 with DBMS, representing a substantial advancement in quality control technology. This study employs the Experimental Prototyping Method to ensure accuracy, consistency, and uniform testing. A Quality Control Cobotics and Mechatronics System is constructed using integrated hardware and software components. The system incorporates ESP8266 modules, Arduino Unos, Raspberry Pi, and wireless communication to facilitate data collection, remote control, and image processing for visual inspections. The developed cobotic system prototype utilized motors, microcontroller units, UPS batteries, and electrical regulators to operate servo motors and conveyor belt movements. MongoDB served as the database for data classification and real-time updates. The system achieved over 95% inspection accuracy with a 0.5-second response time. Despite these strengths, the results also revealed that camera-based inspections were highly sensitive to lighting conditions, and Arduino's memory and processing limitations restricted the execution of complex computations. The researchers validated the theoretical framework through preliminary simulations and prototype experiments, confirming the feasibility of the proposed system. The findings supported the hypotheses, demonstrated successful assembly, and highlighted areas for further refinement. The integration of cobotics and mechatronics principles with Arduino Uno, Raspberry Pi 5, and DBMS presented a cost-effective, open-source solution for intelligent manufacturing. This hybrid system successfully bridged mechanical inspection with digital intelligence, offering industries a practical pathway to modernize quality control processes and reduce reliance on manual inspections.

Keywords: quality control, cobotics, mechatronics, arduino uno, raspberry pi 5, dbms

**DEVELOPMENT OF ROBOTIC SECURITY AND INFORMATION SYSTEM USING
RASPBERRY PI WITH LIDAR AND TRANSPONDER COMMUNICATION,
ESP CAMERA, AND LOCATION RESPONSE CAPABILITY**

Reynante Ponay

Abstract

This research capstone project presents a robotic security system that utilizes LIDAR (Light Detection and Ranging) technology, transponder communication, and Raspberry Pi. The system design enables obstacle detection, autonomous navigation with LIDAR-based mapping, and real-time video monitoring through an ESP camera. The LIDAR sensor provides accurate range measurement, while the transponder module facilitates secure data transmission and location tracking with response capability. The Raspberry Pi microcontroller functions as the processing unit that manages data and controls robot movement. This project introduces an innovation in security surveillance designed to provide reliable and efficient functionality for various industrial applications. The system concept is based on the IPOF framework. The study adopts the Experimental Prototyping Development Methodology (EPDM) to test the functional reliability of hardware integration and software compatibility. This methodology ensures systematic development and validation of the prototype. Data were analyzed using purposive sampling, and a 4-point Likert scale was applied to interpret quantitative outcomes, with results evaluated through weighted mean analysis. The developed Robotic Security and Information System integrated computer architectural design based on electrical schematic modeling using the PROTEUS application for hardware testing and portability. The Raspberry Pi Integrated Development Environment (IDE) with Python served as the primary tool to process hardware data signals, enabling complete closed-loop system automation. The reliability of the design architecture was established through repeated testing and experimentation, resulting in a robust prototype for implementation. The system architecture integrates sensors such as LIDAR, GPS, and ESP camera into the Raspberry Pi platform. The Raspberry Pi software within the IDE processes data signals from the circuit to enable surveillance, navigation, and tracking. The system demonstrated responsiveness to location-based triggers, while the transponder ensured secure data transmission. Communication interfaces, including Cloud and Ethernet, connected the system to support effective navigational functionality.

Keywords: robotic security, lidar, transponder communication, esp camera, raspberry pi, location response

**DEVELOPMENT OF SMART BUILDING EMERGENCY EVACUATION SYSTEM
USING ESP32 WITH FIRE AND SMOKE SENSOR**

Anthony James Patingo, Adrian Casiban, Edmar Bautista, Joachim Ezekiel Tuplano,
Jericho Garcia, Wendy Jane Maniscan, Brando Manangan

Abstract

Recent advancements in smart building technologies have significantly improved safety and emergency management. One notable innovation is the Smart Building Emergency Evacuation System, which uses sensors and automation to enhance evacuation during fire and smoke incidents. Powered by an ESP32 microcontroller, the system integrates fire and smoke sensors, an automated solenoid lock, LED indicators, and a backup power supply. It continuously monitors environmental conditions, triggers alarms, and guides occupants toward safe exits, reducing confusion and improving evacuation efficiency. This thesis aims to demonstrate how such a system can strengthen safety and emergency response in modern buildings, offering a reliable solution for managing emergencies. This study will use experimental prototyping to develop and refine a concept and working model through interviews, purposive sampling, and a 5-point Likert scale. The process follows the prototyping model, which involves iterative testing and improvement until the prototype meets required standards. As stated by David Walker, each version of the prototype builds on the previous one, progressing toward the final product. Prototype experiments ensure clarity, testability, and consistent evaluation among users. The Smart Emergency Evacuation System, utilizing an ESP32 microcontroller and fire and smoke sensors, effectively detects hazards, triggers alarms, provides real-time notifications to building managers and responders, and guides occupants through safe evacuation routes. The system ensures reliability, scalability, and cost-effectiveness, with potential for future enhancements such as advanced sensors and cloud-based analytics. Developing a Smart Building Emergency Evacuation System using an ESP32 microcontroller and fire and smoke sensors marks a significant advancement in building safety. By providing real-time alerts, evacuation guidance, and scalable integration, the system enhances the overall efficiency of emergency response procedures. While challenges such as sensor calibration, network reliability, and advanced sensor integration remain, these can be addressed through continuous refinement and the adoption of emerging technologies.

Keywords: smart building, esp32, emergency evacuation, fire detection, smoke detection, prototyping, automation, safety system

**DEVELOPMENT OF SOLAR BASED SMART HOME AND FRONT YARD
AUTOMATION USING ESP AND ARDUINO MCU**

Jamie Marcelino, James Diaz, Rozelle Decalit, Ryan Christian Perillo,
Jan Loyd Paraiso, Reynante Ponay

Abstract

The development of a Solar-Based Smart Home and Front Yard Automation system using ESP and Arduino MCU integrates various home systems and appliances into a centralized control platform, typically through smartphones, allowing homeowners to manage their homes remotely. The system incorporates ESP8266 as its core and enables home and front yard automation through Android devices. This initiative allows users to control appliances such as light bulbs and sockets using a dedicated Android application. The system also includes manual control buttons and integrates Alexa Echo Dot for voice control functions. The primary objective of this research is to enhance the quality of life for homeowners by providing convenience, efficiency, comfort, and security. This study applies the Experimental Prototyping Methodology, in which a prototype is constructed, tested, and revised as necessary until an acceptable result is achieved, serving as the basis for producing the full system or product. The prototype was tested to ensure that all components functioned correctly within the control system. Adjustments to wiring and cable management were made to prevent short circuits and potential damage. The prototype operated successfully during testing and production. Survey results indicated evaluators' responses of "Agree" and above, suggesting that the prototype was acceptable. Evaluation was conducted with participants from Barangay Fairview, Quezon City. Through the Experimental Prototyping Method, the researchers gathered the necessary requirements and data to create a miniature house prototype. Each room was equipped with an automated 1.5-watt bulb, except for the control room, and a 100-watt solar panel was installed on the roof. Experiments and tests confirmed that all components functioned according to their intended purpose and objectives. The solar power system contributed to energy conservation and lower electricity consumption. The experimental prototyping process yielded a functional main control system, automatic transfer switch, and solar power system, demonstrating the prototype's reliability and feasibility in terms of functionality, availability, and user acceptance.

Keywords: smart home automation, solar power system, alexa echo dot

**DEVELOPMENT OF SOLAR-BASED ATS ROBOTIC WEATHER MONITORING
TECHNOLOGY USING ARDUINO MEGA 2560 AND ESP32**

Nick Anthony Tercero, Jhon Cedric Taguik, Gerald Balasta,
Tom Robert Espiel, Reynante Ponay

Abstract

The advancement of technology continues to reshape various aspects of modern life, particularly through innovations that enhance efficiency, security, and sustainability. This study focuses on the development of a solar-based Automatic Transfer Switch (ATS) robotic weather monitoring system that integrates renewable energy with automation and sensor technologies. Designed to perform environmental monitoring tasks such as weather tracking, AI-based recommendations, motion detection, and IoT interaction, the system is powered by Arduino Mega 2560 and ESP32 microcontrollers. It also incorporates a user-friendly interface via the Blynk platform, offering enhanced control and accessibility for end-users. This study adopts the Experimental Prototyping Method to assess the impact of user-centered design and iterative development on functional robotic systems. The research aims to demonstrate how experimental prototyping facilitates the conversion of conceptual designs into operational solutions. Components were assembled and tested systematically, including solar power integration, sensor calibration, control logic, and interface configuration. Adjustments were made to wiring and layout to ensure optimal performance and safety. All system components operated effectively within the main control unit. Wiring adjustments were implemented to ensure proper configuration and to prevent short circuits. Inverters were used to regulate the current and protect the circuitry from overload. The ESP32 successfully connected to Wi-Fi and enabled smartphone-based control. The Arduino Mega 2560 functioned as expected, managing sensor input and executing control code. The Automatic Transfer Switch demonstrated a 95% success rate in transferring power to the backup supply during simulated outages, ensuring uninterrupted operation. The successful development of the solar-based ATS robotic weather monitoring system confirmed the feasibility of integrating embedded systems with renewable energy for real-time environmental monitoring. The prototype demonstrated reliable performance in simulating off-grid conditions, making it suitable for agricultural or remote field applications. The use of Arduino Mega 2560 and ESP32 allowed efficient communication between sensors and user interfaces, while solar power ensured sustainability. This project highlights the potential of combining automation and renewable energy in developing resilient and scalable monitoring technologies.

Keywords: weather monitoring, solar energy, arduino mega 2560, esp32, automatic transfer switch, iot, blynk interface, motion detection, renewable energy, embedded systems

**DEVELOPMENT OF SOLAR-BASED PRIVATE RESORT SWIMMING POOL
MECHATRONICS SYSTEM USING ESP32**

Princess Daniel Fabia, Doinnalyn Cabanero, Arlina Garcia,
James Daniel Mariño, Rhythm Lalim, Reynante Ponay

Abstract

The Resort Swimming Pool Mechatronics System is designed to provide automated control and enhanced safety for pool operations in private resort settings. By utilizing built-in sensors and mechatronic components, the system automates tasks such as pool cover management, lighting, and surveillance. The ESP32 Cam OV2640 is integrated for real-time perimeter monitoring, enhancing security. Infrared sensors control actuators to reverse motor direction upon motion detection, ensuring safety during operation. A temperature sensor automatically activates the pool cover when water temperatures exceed set thresholds. A rain sensor manages the pool roof by triggering automatic closure during rainfall and retraction during dry conditions. Additionally, strip lights are connected to a light sensor for responsive illumination. The system is powered through two sources: a solar-based Automatic Transfer Switch (ATS) consisting of solar panels, a solar inverter, charge controller, and battery; and a traditional AC supply from the local grid (Meralco), ensuring continuous operation. This study employs the Experimental Prototyping Method. A prototype was developed to test the design concept prior to full-scale implementation. This method allows researchers to identify design flaws, assess system usability, and make necessary improvements at early stages, thereby minimizing costly errors during actual production. Hardware and software integration was iteratively refined based on testing feedback. The Resort Swimming Pool Mechatronics System effectively automated multiple operational functions such as pool cover control, roof retraction, lighting adjustment, and real-time surveillance. The system minimized manual intervention and improved operational efficiency. It demonstrated responsiveness to environmental inputs such as motion, temperature, and rainfall, and functioned reliably under both solar and AC power sources. The dual-power configuration ensured uninterrupted operation, even during power outages. The developed system proved to be an efficient tool for enhancing pool facility management. Through automated control using sensors and actuators, the system optimized energy use and reduced manual labor. Features such as weather-responsive roof and pool cover operation, integrated surveillance, and dual power support contributed to improved safety and reliability. This study demonstrates how smart mechatronics systems can be leveraged in private resorts to achieve sustainable and technologically advanced pool management.

Keywords: mechatronics, esp32, swimming pool automation, solar energy, iot, sensor-based system, motion detection, temperature monitoring, rain sensor, ats power system

**DEVELOPMENT OF SURVEILLANCE ROBOT USING ESP32 AND
ARDUINO MCU WITH IOT BASE COMMUNICATION**

Rigie Ansay, Michael Dela Cruz, Brian Marchadesch, Benidicto Rivas,
Vince Trinidad, Reynante Ponay

Abstract

Recent advancements in technology and robotics have enabled the development of autonomous systems capable of performing a variety of tasks, including security and surveillance. Conventional constabulary systems and fixed camera installations often face limitations such as blind spots and susceptibility to human error. To address these issues, this study proposes the development of a surveillance robot equipped with ESP32 and Arduino microcontrollers, surveillance cameras, and AI-based face detection capabilities. The system aims to enhance real-time monitoring, improve security responsiveness, and minimize human intervention by autonomously detecting individuals and sending alerts to designated personnel. This study utilizes the Experimental Prototyping Method to develop and test the surveillance robot. Through this approach, a prototype is constructed to validate the research hypothesis prior to full-scale production. This method allows the researchers to detect design flaws and usability issues early, ensuring system reliability and efficiency. Components such as microcontrollers, sensors, and AI algorithms were integrated and tested to ensure proper functionality before the final system configuration. The surveillance robot successfully demonstrated autonomous navigation and real-time surveillance capabilities. It employed ultrasonic sensors for obstacle avoidance and an AI-powered camera for face detection. The system functioned independently, sending immediate alerts to operators without requiring continuous server credentials. The integration of these features resulted in improved monitoring accuracy and reduced dependence on manual surveillance efforts. The prototype surveillance robot effectively addressed the limitations of traditional security systems, such as fixed CCTV cameras and human patrols. The inclusion of ultrasonic sensors enabled safe and autonomous movement, while the AI-driven facial recognition system enhanced threat identification. The robot's ability to send instant notifications improved situational awareness and security responsiveness. This study illustrates the potential of robotics and IoT integration in advancing modern security infrastructure.

Keywords: surveillance robot, esp32, arduino mcu, iot communication, face detection, autonomous navigation, ultrasonic sensor, security system, ai monitoring

**DEVELOPMENT OF THREE CATEGORY MECHATRONICS PRODUCT CLASSIFIER
USING ESP32 AND ARDUINO UNO WITH INVENTORY MONITORING**

Diega Nilo Jr, Lee Andrie Cabalquinto, Jay Vee Agraan,
Joseph Janrei Salva, Reynante Ponay

Abstract

Product classification plays a crucial role in modern industries where efficiency, accuracy, and precision are essential. Traditional manual sorting systems are often slow, error-prone, and lack innovation, particularly in terms of energy sustainability and the ability to handle a variety of product types. This study focuses on the development of a mechatronics-based conveyor product classifier that utilizes ESP32 and Arduino Uno microcontrollers. The system integrates inventory monitoring through IoT, sensor-based identification, manual toggle switching, and an Automatic Transfer Switch (ATS) powered by a solar energy backup. The primary objective is to automate the sorting of products into three categories: plastic, paper, and metal, while promoting operational efficiency and environmental sustainability. The researchers employ an experimental prototyping method to construct the product classifier. The Arduino Uno microcontroller manages sensor inputs and controls the sorting operations. The conveyor system is equipped with ultrasonic sensors to detect objects, color sensors and load cells to determine material composition, and stepper motors managed by L298N motor drivers to facilitate sorting. A potentiometer allows for real-time adjustment of operational parameters, while a toggle switch provides manual override functionality for setup and maintenance. The ATS is incorporated to ensure an automatic transition to solar power during outages, supporting continuous and eco-friendly system operation. The prototype functioned successfully and achieved its intended purpose of classifying products into plastic, paper, and metal categories. The IoT-integrated inventory monitoring provided real-time tracking of the sorting process. The ATS enabled uninterrupted operation by switching to solar power during power failures. The system demonstrated effective sorting performance, adaptability to varying inputs, and energy-efficient operation, meeting the study's objectives. The developed mechatronics classifier presents a notable innovation in automated sorting systems by combining ESP32 control, IoT monitoring, and sustainable energy features. The manual override function and adjustable settings enhanced user flexibility, making the system suitable for various industrial applications. While the prototype is fully functional, further refinement in sensor calibration and scaling is necessary. Future developments may include integrating machine learning and advanced sensing technologies to improve sorting precision. Overall, the study offers a promising model for sustainable and adaptable industrial classification systems.

Keywords: mechatronics classifier, arduino uno, esp32, product sorting, inventory monitoring, iot integration, ultrasonic sensor, load cell, solar power, ats backup system

**DEVELOPMENT OF VERTICAL HYDROPONICS FARMING TECHNOLOGY
USING ARDUINO MEGA 2560 WITH AUTOMATED DISPENSING SYSTEM**

Lao Mikael Gabriel, Joven Baluntong, Edison Josh Casingal,
Arabela Delumen, Shaneth Garinga, Reynante Ponay

Abstract

This research addresses environmental challenges and the increasing demand for sustainable food production by developing a vertical hydroponics farming system. The system utilizes Arduino Mega 2560 and ESP-32 microcontrollers to automate the dispensing of water and nutrients. It integrates sensors for temperature, pH level, and ultrasonic detection to optimize irrigation and nutrient delivery continuously. Additional features include IoT-based remote monitoring through a Telegram Bot and an Automatic Transfer Switch (ATS) powered by a solar backup system, which ensures reliable and uninterrupted operation. This technology is designed to support applications in indoor farming, greenhouses, rooftops, and vertical gardens, ultimately contributing to improved local food production and food security. The study employs the experimental prototype development method to construct the automated vertical hydroponics farming system. One Arduino Mega 2560 and one ESP-32 microcontroller are used to manage core functions, including water and nutrient dispensing, real-time monitoring, and IoT communication. Integrated sensors: temperature, pH, and ultrasonic, provide accurate environmental data to guide automated control. Remote access and monitoring are facilitated via a Telegram Bot. System evaluation is conducted using a structured questionnaire, with responses measured through a 4-point Likert scale and analyzed using the General Weighted Mean to assess functionality, usability, and reliability. The prototype was successfully developed, incorporating sensor feedback, automation, and IoT-based remote control. System schematics and detailed 3D visualizations documented the design. Results from user feedback indicated a “Very Good” overall rating, especially in system responsiveness and user interface. The sensors maintained accurate environmental monitoring, and the automated dispensing system operated as expected, delivering consistent water and nutrient levels. Minor limitations included occasional sensor delays and the need for specific calibration for different crop types. Despite these, the system proved functional and reliable in both indoor and urban applications. The study demonstrates that integrating microcontrollers, sensors, and IoT-based automation into a vertical hydroponics setup can effectively support sustainable agriculture in limited-space environments. The system achieved efficient resource utilization and consistent crop maintenance, while the solar-powered ATS ensured continuous operation. Although some improvements in calibration and sensor responsiveness are needed, the project presents a scalable and eco-friendly model for urban farming that aligns with sustainable development goals.

Keywords: vertical hydroponics, arduino mega 2560, automated dispensing system, esp-32 microcontroller, iot-based monitoring, telegram bot remote control, sensor automation, solar backup power supply

**DRONE SURVEILLANCE SYSTEM USING RASPBERRY PI WITH HUSKYLENS
CAMERA, WEB SERVER LINK, IOT, LIDAR, AND FOLLOW-ME INTEGRATED
MODULE**

Mark Gerald Medenilla

Abstract

This project aims to design and implement an advanced drone surveillance system using the Raspberry Pi as the central processing unit. By integrating the HuskyLens camera, the system achieves real-time object detection and tracking with high accuracy. Remote monitoring and control are facilitated through an embedded web server, allowing seamless access from anywhere. Leveraging Internet of Things (IoT) technology, the system ensures enhanced connectivity and interoperability with other smart devices and networks. Precision environmental mapping and obstacle detection are enabled by LiDAR sensors, improving navigation safety and situational awareness. Furthermore, an autonomous “follow-me” module allows the drone to dynamically track and follow designated subjects without manual input, expanding its utility for various surveillance and security applications. This study will employ Experimental Prototyping Methodology, which involves the systematic construction, testing, and iterative refinement of a prototype. Through continuous evaluation and modification based on performance results and feedback, the prototype is progressively improved until it meets the predefined criteria for functionality and quality. This iterative approach ensures that the final design is both effective and reliable, providing a robust foundation for the development and production of the complete system or product. The prototype underwent extensive testing to ensure all components operate smoothly within the integrated control system. Careful adjustments to wiring and cable management were implemented to prevent electrical faults, effectively mitigating the risks of short circuits and damage. Throughout both testing and production phases, the prototype consistently delivered reliable performance, establishing a strong foundation for future improvements and scalability. Survey feedback from evaluators in Brgy. Fairview, City of Quezon, showed a consensus rating of "Agree" or higher, demonstrating high acceptability and user satisfaction. These positive results confirm the system's feasibility and readiness for wider deployment. The development of the drone surveillance system prototype begins with procuring key hardware components, including the Raspberry Pi as the central processor, HuskyLens camera for object detection, LiDAR sensor for precise distance measurement, follow-me modules using GPS and visual tracking, a drone platform, streaming camera, power supply, and mounting hardware. The setup process involves installing the Raspberry Pi OS and configuring essential libraries for seamless integration with peripherals. Each component is individually validated to ensure optimal performance, HuskyLens for accurate object detection, LiDAR for reliable range measurement, and follow-me modules for precise tracking. The Raspberry Pi communicates with these devices through multiple protocols such as USB, GPIO, I2C, SPI, and UART, facilitating robust data transfer. Custom Python scripts capture and process sensor data, extracting object details from HuskyLens, distance readings from LiDAR, and positional data from follow-me modules. The system's core functionalities include advanced object tracking using filtering and prediction algorithms, LiDAR-based obstacle avoidance, autonomous follow-me capabilities combining GPS and visual tracking, and IoT integration via MQTT for real-time cloud logging and remote monitoring. Hardware components are securely mounted on the drone, with reliable communication established between the Raspberry Pi and flight controller to coordinate flight operations. Performance evaluation focuses on detection accuracy, obstacle avoidance effectiveness, follow-me tracking stability, IoT communication reliability, and overall flight performance. An iterative development approach enables ongoing refinement based on testing results. The initial phase

emphasizes hardware assembly, stable inter-module communication, and implementation of basic autonomous features, providing a solid foundation for future enhancements

Keywords: drone surveillance system, raspberry pi, huskylens camera, lidar sensor, follow-me module, gps tracking, visual tracking, object detection, obstacle avoidance, iot integration, mqtt protocol, autonomous flight, hardware integration, sensor validation

**GREEN TECHNOLOGY BASED INTEGRATED MECHATRONICS SYSTEM WITH IOT
BASED MONITORING AND SEGREGATION MECHANISM USING ARDUINO UNO**

Jericho Breguiles, Ma. Isabel Cabangon, Rogelio Derama,
Samuel John Lao, Jamee Panal, Reynante Ponay

Abstract

The rise of practical and adaptable mechatronic systems is shaping the modern landscape of automation and sustainable technology. To meet the demands for efficiency, precision, and large-scale production, this Capstone Project presents a novel Four-Category Color-Based Product Segregation System. Powered by an Arduino Uno with ATS power supply backup, the system classifies products into four color-coded categories: Blue, Green, Red, and Yellow. It also includes a real-time notification feature that alerts administrators when storage bins are full, ensuring accurate tracking of segregated and ready-to-pack products. This study utilizes an experimental prototyping approach, where the system is developed and tested to assess its feasibility. According to Smith (2021), prototyping allows for the refinement of ideas before full-scale implementation. The Prototyping Model, a widely used Systems Development Methodology (SDM), involves iterative cycles of prototype creation, testing, and modification until an acceptable version is produced, which then serves as the basis for the final system development. The successful testing of the system confirms its feasibility for automated product classification, offering potential improvements in efficiency and production quality. The researchers also evaluated the system based on survey responses from fifty (50) employees of Republic Biscuit Corporation (REBISCO) at General Luis St., Brgy. Nagkaisang Nayon, District 2, Novaliches, Quezon City. This Capstone Project demonstrates the feasibility and effectiveness of automating color-based product segregation integrated with mass-production capabilities. It underscores the importance of interdisciplinary collaboration and technological innovation in creating cost-effective automation solutions and fostering sustainable product management. Further advancement and application of such systems offer promising opportunities for developing adaptable mechatronic technologies suited to the evolving demands of automation and sustainability.

Keywords: automated product segregation, mechatronic systems, color-based classification, mass production, interdisciplinary collaboration, technological innovation, sustainable product management, automation technology

INTELLIGENT TRAFFIC LIGHT CONTROL SYSTEM: A PROPOSED STUDY

Xandra Mendoza, Baby Princess Omepig, Robert Louise Telin,
Roberto Siaron III, John Loyd Rodriguez, Marlon Bahana

Abstract

Traffic signals play a critical role in maintaining safety and order for all road users, including pedestrians. Pedestrian traffic lights are specifically designed to prioritize and protect individuals crossing streets, particularly in urban areas with high foot traffic. Modern systems go beyond basic "walk" and "don't walk" indicators by incorporating advanced features such as countdown timers and sensors that detect waiting pedestrians. These innovations not only enhance pedestrian safety but also promote walking as a healthier and more environmentally sustainable mode of transportation. This study employed a quantitative mixed-method approach and purposive sampling. To evaluate the proposed Intelligent Traffic Light Control System model, an ANOVA test was used to determine significant differences in assessments based on five key criteria: ease of use, reliability, safety, efficiency, and adaptability. A survey questionnaire was administered to 15 respondents comprising 5 IT experts, 5 traffic enforcers, and 5 traffic engineers, to assess the model's overall acceptability. The results of the study indicate that the proposed Intelligent Traffic Light Control System model was rated as highly acceptable in terms of ease of use and safety by all three respondent groups: Traffic Enforcers, IT Experts, and Traffic Engineers. Reliability was rated highly acceptable by Traffic Enforcers and Traffic Engineers, and acceptable by IT Experts. Efficiency was deemed highly acceptable by Traffic Enforcers, and acceptable by both IT Experts and Traffic Engineers. Adaptability received a highly acceptable rating from Traffic Enforcers and IT Experts, and an acceptable rating from Traffic Engineers. The mean scores were as follows: Traffic Enforcers – 3.34 (variance = 0.10), IT Experts – 3.36 (variance = 0.09), and Traffic Engineers – 3.82 (variance = 0.07). The computed F-statistic was 0.029, compared to the critical value of 3.885, with $\alpha = 0.05$ and degrees of freedom (df) = 2 and 12. Since the computed F-value is less than the critical value, the null hypothesis (H_0) is accepted, indicating that there is no significant difference in the assessments among the three groups of respondents. The study found that the proposed Intelligent Traffic Light Control System was highly acceptable in terms of ease of use, reliability, safety, and adaptability. However, efficiency received slightly lower ratings, indicating an area for improvement. Statistical analysis revealed no significant differences in the assessments among the three groups of respondents: Traffic Enforcers, IT Experts, and Traffic Engineers. Identified challenges in implementing the system included issues with pedestrian detection, maintaining consistent traffic flow, system integration, and power stability. Based on these findings, the study recommends enhancements such as incorporating GPS and LIDAR technologies, implementing adaptive pedestrian signaling, improving signage visibility, and ensuring system reliability through backup power solutions.

Keywords: traffic signals, advanced traffic signals, countdown timers, pedestrian sensors

**SMART CANE TECHNOLOGY: PROPOSING A MODEL REAL-TIME DETECTION
AND NAVIGATION**

Veronica Marie Subingsubing, Leizhylle Ann Erazo, Ella Mae Rodoy, Patricia Real,
Lizel Ann Tomacina, Juliana Marie Gaviola, Carlito Gabriel

Abstract

Smart Cane Technology aims to address key challenges in assistive mobility, such as the improper use of support devices and the stigma associated with mobility aids. This innovation is designed for individuals with minor injuries, poor balance, or leg pain. To enhance user safety, the Smart Cane is equipped with real-time smoke and water detectors, allowing users to navigate various environments with greater confidence and independence. This study utilizes a quantitative descriptive research method with purposive sampling. A total of 10 respondents: 5 Computer Engineers and 5 Electrical Engineers, were surveyed to assess the Smart Cane Technology in terms of procedural methodology, durability, functionality, quality, and presentation. A survey questionnaire was used as the primary instrument, and a t-test was conducted to determine if significant differences existed between the two groups' assessments. The results showed that the Smart Cane was rated as Highly Acceptable by Computer Engineers and Acceptable by Electrical Engineers across all evaluated criteria. The mean score from Computer Engineers was 3.43 with a variance of 0.009, while Electrical Engineers recorded a mean of 3.00 with a variance of 0.158. The computed t-value was 1.226, which is lower than the t-critical value of 1.963 at a 0.05 significance level. These findings support the hypothesis that there is no significant difference in the acceptability assessments between the two groups regarding procedural methodology, durability, functionality, quality, and presentation. The findings confirm the overall acceptability of the proposed Smart Cane model, although areas for improvement were identified. Future enhancements should focus on improving sensor accuracy and reliability, optimizing component placement, increasing battery efficiency, and ensuring that the design remains user-friendly. Incorporating real-time sensor feedback is essential to maximize both safety and usability. Strengthening these features will enhance the cane's potential to promote mobility, independence, and confidence among users.

Keywords: smart cane, assistive technology, real-time detection, navigation aid, sensor integration, mobility device, user acceptability, engineering design

INTEGRATION ARTIFICIAL INTELLIGENCE FEATURES TO WHEELCHAIR MODEL

Joseph Dela Cruz, Vernalyn Aspiras, Edrian Banog, Sophia Cassandra Jose,
Samantha Cristina Palonpon, Prince Michael De Leon

Abstract

The integration of artificial intelligence (AI) in assistive technologies has gained significant attention in recent years, particularly in enhancing mobility devices such as wheelchairs. The potential of incorporating AI features into wheelchair models lies in advancing navigation capabilities and improving user interaction. Traditional wheelchairs often appear basic and may pose safety risks, especially when used by a single individual without assistance. In response to this concern, the researchers conducted this study to design and develop a prototype wheelchair enhanced with AI features, aiming to improve both its strength and safety. This quantitative descriptive study assessed the acceptability of integrated AI features in a wheelchair model. Using purposive sampling, five electrical engineers and five IT experts evaluated the design through a questionnaire, which focused on key aspects such as materials, mechanics, functionality, safety, and overall presentation. Statistical tools including Student's Percentage, Weighted Mean, and t-test, were employed to determine any significant differences in the assessments between the two groups of experts. To support the evaluation process, the researchers constructed a prototype wheelchair model using popsicle sticks and cardboard. Both the electrical engineers (overall mean = 3.70) and the IT experts (overall mean = 3.16) rated the AI-integrated wheelchair design as highly acceptable and acceptable, respectively. A t-test analysis ($\alpha = 0.05$, $df = 326$, $t\text{-critical} = 2.306$, $t\text{-computed} = 0.876$) revealed no significant difference between the assessments of the two groups across the evaluated criteria: materials, mechanics, functionality, safety, and presentation. As a result, the null hypothesis was accepted. The AI-integrated wheelchair design will be refined based on expert feedback. Proposed improvements include the use of durable yet lightweight materials such as carbon fiber and aluminum alloy, and the enhancement of seat comfort through ergonomic cushioning. The motor will be upgraded to ensure smoother and more energy-efficient movement. Additional features will include multi-modal control options such as voice commands, eye-tracking, and joystick navigation, as well as integrated fall detection and alert systems. Safety will be further improved through enhanced emergency stop mechanisms and braking systems. Lastly, the overall design will be refined to improve both aesthetics and ergonomic functionality.

Keywords: artificial intelligence, wheelchair, high-tech, new invension

**A PERCEIVE EFFECTIVENESS OF E-WALLETS AS FORM OF
PAYMENT AMONG GRADE 12 STUDENTS**

Aldrian Francisco, John Anthony Albor, Eurie Yabut,
Yellena Ayessa Pinpin, Reymundo Javier

Abstract

The growing use of e-wallets has significantly transformed the way financial transactions are conducted, especially among younger populations. E-wallets, or digital wallets, provide a fast, convenient, and cashless means of payment, enabling users to complete transactions through mobile devices. This technological shift has been particularly evident among senior high school students, who are increasingly integrating digital tools into their daily routines. Among Grade 12 students, e-wallets are commonly used for a variety of purposes such as purchasing school supplies, food, transportation, and online shopping. As digital financial platforms continue to evolve, it is essential to assess how effective these tools are at meeting the needs of student users. This study aims to explore the perceived effectiveness of e-wallets as a mode of payment among Grade 12 students. Specifically, it investigates their perceptions regarding convenience, accessibility, security, and overall user satisfaction. The findings of this research may contribute to a deeper understanding of students' digital financial behaviors and support efforts to enhance financial literacy and responsible e-wallet usage. This study utilized a descriptive research design to examine the perceived effectiveness of e-wallets as a payment method among Grade 12 students. Data was gathered through a structured survey questionnaire distributed to 50 respondents selected from various academic strands, including STEM, HUMSS, GAS, ICT, and ABM. The responses were measured using a 5-point Likert scale, ranging from Strongly Disagree (1) to Strongly Agree (5). The collected data were statistically analyzed using the weighted mean to determine the overall perception of the respondents regarding the effectiveness of e-wallets. The results of the study reveal that Grade 12 students show a moderate preference for using e-wallets as a mode of payment. The analysis of various e-wallet platforms, including G Cash, Hello Money, Pay Maya, PayPal, and Grab Pay, yielded a grand mean of 3.43, indicating a neutral to slightly positive level of usage and perception among respondents. In terms of the frequency of e-wallet usage, the computed grand mean of 3.40 also suggests a neutral to slightly positive response. This implies that while e-wallets are not used by students daily, they are still utilized regularly for specific transactions such as mobile reloading, food purchases, and online shopping. Lastly, the perceived quality of e-wallet transactions, which includes aspects such as convenience, speed, and security, received a grand mean of 3.46. This again reflects a neutral to slightly positive perception among the respondents. Overall, the findings suggest that e-wallets are moderately accepted and utilized by Grade 12 students, with a generally favorable outlook on their effectiveness and convenience. Moreover, e-wallets such as Hello Money, Pay Maya, PayPal, Grab Pay, and especially G Cash are perceived by Grade 12 students as secure, efficient, and easy to use, making them effective tools for managing daily payments and various financial transactions.

Keywords: e-wallets, g cash, pay maya, hello money, paypal, grab pay, grade 12 students, digital payments, financial transactions, user perception, convenience, security, effectiveness, frequency of use, financial technology.

**A PROPOSED MODEL OF AUTOMATED MACHINE FOR ASSISTING WHEELCHAIRS
ON STAIRCASES AT BIGNAY NATIONAL HIGH SCHOOL**

Lei Ann Mae Vertera, Jhon Nomer Macasocol, John Mark Relatado, Allison Grace Ofirin,
Liele Jhon Todio, Nerwin Jay Jamilla, Roldan Bamondi

Abstract

This study investigates the design and implementation of an automated stair-climbing wheelchair system aimed at improving accessibility for students with disabilities at Bignay National High School. It focuses on overcoming the mobility barriers posed by staircases by customizing existing stair-climbing technology (Sadeghian et al., 2020) to the school's specific environment. The proposed system prioritizes the needs of users and environmental factors, with the goal of fostering greater independence, safety, and inclusivity for wheelchair users. This study used a quantitative-experimental research approach with purposive sampling. A survey questionnaire was administered to two groups of respondents: five Electrical Engineers and five Mechanical Engineers, to assess the acceptability of the proposed model in terms of ease of use, reliability, functionality, features, and mechanical performance. The results of the investigation indicate that the proposed model is rated as "Highly Acceptable" based on the problem statement, data presentation, analysis, and interpretation. Electrical Engineers recorded an overall weighted mean of 3.29, with a variance of 0.148, an alpha level of 0.05, degrees of freedom of 326, a critical t-value of 2.110, and a computed t-value of 0.162. Likewise, Mechanical Engineers reported an overall mean of 3.58, variance of 0.056, the same alpha level and degrees of freedom, a critical t-value of 2.110, and a computed t-value of 0.162. Since the computed t-values for both groups are less than the critical t-value, their assessments are accepted. This indicates no significant difference between the evaluations of the two groups. Feedback from respondents highlighted the need to improve the wheelchair's safety features, particularly for stair use. A reliable locking system to prevent slipping is essential, alongside the integration of advanced pressure sensors for surface detection, tilt sensors for stability monitoring, and touch sensors for more intuitive user control. These enhancements aim to enhance both safety and usability in various settings.

Keywords: wheelchair safety, stair navigation, locking system, slip prevention, pressure sensors, tilt sensors, touch sensors, user control, usability, accessibility, mobility aids, assistive technology

**AUTOMATED GREEN TECH METAL AND NON-METAL MECHATRONICS SORTER
USING RASPBERRY PI AND REALTIME DATABASE**

Eleazar Flores, Jhon Rey Laddaran, Julieto Jr Janier, Angelito Jr Francisco,
Nabur Rico Fiel, Reynante Ponay

Abstract

Automation is a vital driver in modern industrial operations, enhancing efficiency, reducing human intervention, and ensuring precision in complex processes. Material sorting, essential in manufacturing, recycling, and mass production, demands speed, accuracy, and sustainability. This study introduces an automated material sorting system powered by a Raspberry Pi as the central processor, connected to sensors that differentiate metallic and non-metallic materials in real time. Automating this process reduces dependence on manual labor, minimizes human error, and promotes a safer, more efficient workplace. The system also features a real-time database for continuous monitoring, remote access to performance data, and instant alerts, facilitating timely decision-making and maintenance. This smart sorting solution boosts productivity while addressing the need for intelligent, scalable, and eco-friendly industrial technologies. The researchers employed an experimental prototyping and development approach to design and construct proposed automated material sorting system. The primary objective was to create a fully functional prototype using the specified components and materials. The prototype underwent multiple testing cycles and iterative refinements to optimize its performance, reliability, and efficiency. To provide a comprehensive understanding of the system, the study included detailed 2D and 3D design models, visually representing the physical structure and layout of the prototype. A comprehensive schematic diagram was also presented to illustrate the electrical connections and sensor integrations. The entire development process, from material selection to assembly and calibration, was thoroughly documented. To assess the system's effectiveness and user acceptability, the researchers distributed structured questionnaires, and the resulting data were analyzed to inform potential enhancements and validate the system's practicality. This chapter presents the implementation outcomes and results of the project. It includes a detailed schematic diagram that illustrates the configuration and interconnections of all electronic components integrated into the prototype. Furthermore, it outlines the step-by-step assembly procedure followed during the system's construction, ensuring transparency and replicability. The completed prototype underwent comprehensive testing and was verified to be fully operational, successfully executing its intended functions by the defined design specifications and project objectives. This chapter presents the key findings from the development and implementation of the Inventory Conveyor Mechatronics System, which integrates a Raspberry Pi 5 and Arduino Uno with capacitive and inductive proximity sensors and a real-time database management system. The prototype successfully manages the movement and classification of containers on a motorized conveyor belt by utilizing sensor data to differentiate between metallic and non-metallic materials. Effective coordination between the Raspberry Pi and Arduino Uno enables streamlined data processing, control logic execution, and sensor response. The real-time database supports ongoing monitoring, performance evaluation, and data storage. Critical aspects such as hardware optimization, material efficiency, power consumption, and user feedback were thoroughly assessed, demonstrating the system's reliability, functionality, and practical applicability in industrial automation and inventory management settings.

Keywords: inventory conveyor mechatronics system, raspberry pi 5, arduino uno, capacitive proximity sensor, inductive proximity sensor, real-time database, automated sorting, material classification, industrial automation, inventory management, sensor integrat

**DEVELOPING A DIGITAL UNIFORM FOR PROFESSIONAL
CIVIL ENGINEERS: A STUDENTS PERCEPTION**

Jamaicca Celesteine Toledo, Mary Joy Cardeño, Jan Rhaiven De Paz,
Thom Jeaster Gelindon, Thalia Nicole Sapungay, Reymundo Javier

Abstract

This study explores student perceptions of a digitally designed uniform for professional civil engineers, with a focus on its safety, originality, and practicality. As the field of engineering evolves in the digital age, there is growing interest in innovations that can enhance both function and professional image, including the integration of digital features into uniforms. A quantitative descriptive research design was employed to examine the perceptions of both professional and student civil engineers toward the concept of a digital uniform. Data were gathered through structured survey questionnaires distributed to selected respondents. Survey responses from five participants, consisting of seasoned professionals and recent graduates, indicated a generally positive view of the proposed digital uniform. The results showed high ratings for visibility (Grand Mean = 4.28) and modern design (Grand Mean = 4.28), along with favorable impressions of its originality (Grand Mean = 3.84) and overall effectiveness and feasibility (Grand Mean = 4.04). These findings suggest a strong potential for acceptance of the digital uniform within the civil engineering field. The study concludes that digital uniforms can enhance the safety, functionality, and professional appearance of civil engineers. While initial perceptions are positive, further research and design refinement are necessary to achieve broader acceptance and standardization. The findings support the integration of innovation into professional attire, reflecting the evolving role of technology in engineering practice.

DEVELOPMENT OF AN AUTOMATED SMOKE-FILTERING ASHTRAY USING ARDUINO UNO WITH AN IGNITION SYSTEM AND STORAGE MECHANISM

Lester Charles Bautista, Philip Kyle Miguel, Hommar Borres, Lovelee Ross Marayag,
Michelle Anne Miralles, Reynante Ponay

Abstract

Indoor air pollution caused by cigarette smoke remains a serious health concern, particularly in enclosed spaces with poor ventilation. Exposure to second-hand smoke significantly increases the risk of respiratory illnesses, cardiovascular diseases, and cancer. Traditional ashtrays merely collect cigarette waste but do not mitigate the harmful airborne particles and gases emitted during smoking. This study aims to design and develop a multifunctional, automated ashtray that not only filters cigarette smoke but also includes features such as real-time maintenance notifications, a safe cigarette ignition system, automated waste handling, and a cigarette dispensing mechanism, all powered by a renewable solar energy system. The study employed an Experimental Prototyping Methodology alongside a Descriptive Survey Approach to design and evaluate the functionality of the automated smoke-filtering ashtray. The prototype integrated components such as an ignition system, smoke detection module, waste storage mechanism, SMS notification feature, and solar-powered backup system, with operations managed through four Arduino Uno microcontrollers. The prototype was successfully developed and demonstrated reliable integration of its key subsystems. These included a smoke filtration system, safe cigarette ignition, coin-operated cigarette dispenser, and real-time user notifications via SMS. The system was powered by both a conventional source and a solar backup, ensuring continuous operation. Feedback from initial testing indicated strong performance across all features, validating the ashtray's potential for effective indoor smoke control. The findings suggest that combining microcontroller-based automation with health-conscious design offers a promising solution for indoor air pollution management. The system's ability to filter smoke, automate waste disposal, notify users remotely, and operate sustainably supports its applicability in various settings such as homes, offices, and designated smoking areas. This innovation highlights the potential of engineering solutions in addressing public health concerns through smart and environmentally responsible technologies.

Keywords: smoke-filtering ashtray, arduino uno, indoor air pollution, microcontroller automation, cigarette dispenser, sms notification, solar power, environmental engineering, smoke detection, health-oriented design

**DEVELOPMENT OF BEVERAGES DISPENSING COBOTIC SYSTEM
USING RASPBERRY PI AND ARDUINO UNO**

Emmanuel Strauss Baranueulo, Lei Mark Cruz, Caster Troy Caingal, Mark Angelo Rebancos,
Angelica Dela Peña, Joy Lyn Multo, Reynante Ponay

Abstract

The integration of modern technology has significantly transformed various industries by automating daily tasks and enhancing operational efficiency. Artificial Intelligence has enabled the development of collaborative robots (cobots) capable of performing repetitive functions with minimal human intervention. This study aims to develop a Beverages Dispensing Cobotic System using Raspberry Pi and Arduino Uno to address existing challenges in AI-driven systems, such as limited customer interaction, safety concerns, dependency on human supervision, and restricted payload and speed capacities. The prototype incorporates real-time database management, Internet of Things (IoT) integration, safety mechanisms, interactive displays, and audio systems to enhance automation while maintaining options for manual control. The system is intended to support the hospitality sector, improving service delivery for employees and customers alike. This study employs the Experimental Prototype Development Method to design and evaluate the proposed cobotic beverage dispensing system. The development process includes identifying material requirements, assembling an initial prototype, evaluating system performance, and applying enhancements based on feedback. Prototyping plays a vital role in refining usability and functionality while gauging customer satisfaction. The methodology allows for iterative improvements and ensures that system performance aligns with design specifications prior to final production. Prototype testing focused on ensuring that individual components met functional requirements and overall usability standards. The cobotic system's database was designed to classify beverage identifiers, names, timestamps, and quantities served. Operational tests verified the performance of critical components including cobotic arms, mobility wheels, and water pumps. The system demonstrated successful interactive service capabilities. Respondents, primarily workers and personnel from the hospitality sector, expressed a high level of satisfaction, with an overall weighted mean of 3.43 for system functionality, and a score of 3.11 for both reliability and portability based on a four-point Likert scale. These results indicate a generally favorable reception and usability of the system. The findings suggest that Raspberry Pi and Arduino Uno are effective microcontroller units (MCUs) for developing a functional cobotic beverage dispensing system. The proposed prototype meets the requirements of hospitality and bar establishments, offering a portable, reliable, and sustainable solution that complies with engineering standards. Its positive reception among users demonstrates potential for real-world application, contributing to enhanced customer service, operational efficiency, and technological advancement in the service industry.

Keywords: cobotic system, beverage dispenser, arduino uno, raspberry pi, hospitality automation, iot integration, real-time database, prototype development, engineering innovation, smart robotics

**DEVELOPMENT OF SMART HOME USING ESP32 AND ARDUINO UNO WITH
MULTIPLE AIR MONITORING AND CONTROL MODULES**

John Paul Umpad, Bea Angella Relis, Romar Sabas, Melaena Villaruel,
Aisley Elpedes, Reynante Ponay

Abstract

Modern homes face increasing demand for automation systems that are both intelligent and reliable, especially during network disruptions and power outages. Existing smart home technologies often encounter single-point failures due to overreliance on Wi-Fi or central hubs. This research addresses these limitations by developing a hybrid smart home system that integrates mobile automation with manual controls, emergency response, and renewable power. The system aims to provide resilience, sustainability, and real-time automation through the use of low-cost microcontrollers and IoT-based solutions. The study followed the Experimental Prototyping Methodology. The system layout was designed through 2D and 3D models using SketchUp. ESP32 and Arduino Uno microcontrollers were programmed in C++ through the Arduino IDE. Remote monitoring and control were enabled using the Blynk mobile application. Sensors such as MQ gas sensors, flame sensors, reed switches, and laser modules were tested and integrated to support air quality, fire, and security automation. A solar power system was included to address power outages. User feedback was collected through purposive sampling and assessed using a 4-point Likert Scale with descriptive analysis. The ESP32 successfully connected to Wi-Fi, with Blynk response times averaging 1–3 seconds under ideal conditions. MQ sensors detected air contaminants and activated exhaust fans for ventilation. During fire tests, flame sensors triggered alarms and sprinkler systems, while the Arduino-controlled water pump provided fire suppression. Gas sensors activated fan systems to expel hazardous fumes. Security modules using lasers and reed switches monitored and reported door and window activities as well as intrusions. Manual switches ensured system functionality during Wi-Fi or application failures. Circuit tests confirmed proper component interaction, demonstrating reliable prototype performance. The developed system exhibited robust multifunctionality by enabling real-time control and incorporating backup mechanisms. The findings confirmed the feasibility of combining mobile and manual control with safety automation and renewable power. Although field testing remained limited, the study suggested the need for larger user bases and long-term monitoring in future research. The model provided practical insights into the expansion of smart home applications, particularly in areas with limited connectivity.

Keywords: smart home, esp32, arduino uno, air monitoring, iot, automation, renewable power

**DEVELOPMENT OF TRASH COLLECTOR ROBOT USING ARDUINO R3 WITH
IOT BASED MONITORING AND AUTOMATED CHARGING INTERFACE**

Angeline Joy Dela Cruz, Jericho Basileles, Louis Arcega, Irish Frio,
Eugene Lorena, Reynante Ponay

Abstract

Automation plays a vital role in enhancing daily life by increasing efficiency and minimizing human effort. This study centers on the development of a trash collector robot using Arduino R3, designed to enhance waste management systems. The robot operates autonomously, using infrared sensors for boundary detection and ultrasonic sensors for obstacle avoidance. An Arduino Uno controller drives two 6V DC motors powered by a 10,000 mAh lithium battery. The system integrates voice recognition for command input, IoT connectivity for real-time monitoring, and dual charging options through solar energy and standard electrical outlets. This project aims to offer a sustainable and intelligent solution for modern waste collection. This study employs the experimental prototyping method to develop and evaluate the trash collector robot. The researchers test the prototype under controlled conditions to assess its usability, efficiency, and sustainability. According to Smith (2021), prototyping allows for refinement of design and functionality before full-scale implementation, ensuring that the developed model meets practical needs and performance standards. The prototype was tested with a balanced sample of male and female respondents, ensuring unbiased usability feedback. The robot successfully demonstrated autonomous navigation, responsive voice command functionality, and efficient obstacle avoidance. Respondents indicated that the system was user-friendly, practical, and accessible, validating its potential for effective waste management. The integration of IoT-enabled real-time updates and the use of solar power with an Automatic Transfer Switch (ATS) ensured uninterrupted operation. The trash collector robot effectively automated the waste collection process, reducing the need for manual intervention while promoting convenience and sustainability. Sensor-driven navigation, IoT monitoring, and dual charging capability contributed to its operational reliability. Although the prototype met its intended objectives, further improvements such as AI-based waste sorting, optimized battery performance, and enhanced solar energy utilization are recommended. Additional field testing across varied environments is also necessary to evaluate long-term durability, environmental adaptability, and security features.

Keywords: trash collector robot, arduino r3, iot monitoring, automated charging, infrared sensor, ultrasonic sensor, waste management, solar power, voice recognition, ats integration

**FACEBOOK PAGE: A TOOL TO EMPOWER LIBRARY USERS AT
BESTLINK COLLEGE OF THE PHILIPPINES, BULACAN**

Mediana Jello Vince Jessie, Sharmaine Medes, Maica Muñoz,
Realyn Roque, Reymundo Javier

Abstract

In the digital age, social media has transformed how information is shared and how communities interact, becoming an essential institutional tool. Among students, Facebook remains one of the most widely used platforms. This study aims to evaluate the effectiveness of a Facebook page created specifically for the library of Bestlink College of the Philippines, Bulacan. It investigates how this page influences student engagement, promotes access to library resources, and fosters a more active library community. This study employs a quantitative research method to collect data on user interactions with the library's Facebook page. The researchers examine the frequency and nature of these interactions, as well as their impact on students' perceptions of the library and their usage of its services. Data was gathered from a sample of 70 students using survey questionnaires. Findings show that the majority of respondents agreed the Facebook page encouraged them to engage with the school library, with weighted mean scores ranging from 3.34 to 3.72. Respondents affirmed the page's role in increasing awareness of available library resources and motivating library visits. The page was also recognized for facilitating connections among users with similar academic interests. A grand weighted mean of 3.90 indicated a positive perception of the Facebook page's potential to enhance library services. Additionally, a grand weighted mean of 3.72 showed approval of its efficiency in delivering useful information and improving overall library experience. The results confirm that the Facebook page positively influenced student engagement with the school library. It not only encouraged frequent use of resources but also helped foster relationships among users. The study supports the continued use and enhancement of social media as a strategic tool in promoting library services and user participation.

Keywords: facebook, library, social media, user engagement, digital resources, academic community

**FLOOD CONTROL SYSTEMS: BUILDING A DETENTION TANK MODEL AT
DEPARO ROAD BAGUMBONG, CALOOCAN CITY**

Jhanine Bacaycay, Mary Anjielen Lorenzo, Angel Atejano,
April Atejano, Maria Fe Santa, Carlito Gabriel

Abstract

This research focuses on the development of a detention tank model located at Deparo Road, Bagumbong, Caloocan City. The model is designed to efficiently address flooding challenges and deliver reliable performance. The study aims to alleviate flood risks in the area and provide support to the community impacted by such events. This study utilized mixed-methods research design with purposive sampling. A structured survey questionnaire served as the primary data collection tool to evaluate the acceptability of the detention tank model at Deparo Road, Bagumbong, Caloocan City. Key evaluation criteria included the materials used, hydraulic design, structural integrity, site suitability, and overall presentation. To analyze differences in perceptions between the two respondent groups, an independent samples t-test was performed. The findings of the evaluation of the detention tank model at Deparo Road, Bagumbong, Caloocan City revealed that it was rated as “Acceptable” across all assessed criteria, including materials used, hydraulic design, structural integrity, site suitability, and presentation. Civil Engineers assigned an overall weighted mean score of 3.28 with a variance of 0.126. The t-computed value was 0.000, which is less than the t-critical value of 2.365 ($\alpha = 0.05$). Environmental Engineers reported an identical weighted mean of 3.28 with a variance of 0.043 and a t-computed value of 0.000, also below the t-critical threshold. These results indicate that the evaluations from both groups are statistically consistent and acceptable. Furthermore, there is no significant difference between the assessments provided by the two respondent groups. The respondents suggested several improvements to optimize the detention tank model’s performance, including incorporating additional design details, accounting for slope considerations, and implementing routine maintenance to sustain its effectiveness over time.

Keywords: detention tank, flood mitigation, hydraulic design, structural integrity, site suitability, mixed methods research, survey questionnaire, t-test analysis, civil engineers, environmental engineers, caloocan city, flooding control, infrastructure maint

**HARNESSING PIEZOELECTRIC ENERGY FOR A SUSTAINABLE
LIGHT SOURCE IN BRIDGE DESIGN**

Mark Paul Beato, Marc Xhelly Perico, Christian Takahashi,
Ferlyn Araneta, Charlene Angel Quiray, Carlito Gabriel

Abstract

This study explores the importance of bridges as critical infrastructure that connects distant regions and facilitates vehicular movement. Bridges play a vital role in transportation systems, making it essential to pay special attention to their lighting. Proper illumination of both pedestrian walkways and vehicular driveways is crucial for ensuring safety and preventing accidents, particularly during nighttime or low-visibility conditions. This study employed a purposive sampling technique to collect relevant data from selected respondents. Individual case studies demonstrate the adaptability and effectiveness of purposive sampling across various research contexts. A survey questionnaire served as the primary research instrument to assess the level of acceptability related to the study's focus. To determine whether there was a significant difference between the assessments of the two respondent groups, a t-test was conducted. The investigation yielded an overall mean of 2.817, a variance of 0.036, an alpha level of 0.05, a t-critical value of 1.967, and a t-computed value of 0.747. In comparison, the derma group obtained an overall mean of 2.525, a variance of 0.281, with the same alpha level (0.05), t-critical (1.967), and t-computed value (0.747). Since the t-computed value is less than the t-critical value, the null hypothesis is accepted. Therefore, the results indicate that there is no significant difference between the assessments of the two respondent groups. In conclusion, the study found that the Piezoelectric Bridge Model was deemed acceptable by both Electrical and Civil Engineers in terms of methodology, durability, functionality, quality, and presentation. The results showed no significant difference in the assessments between the two groups of respondents. To ensure the continued effectiveness and refinement of the model, suggestions were gathered from the participants. The researchers also successfully addressed challenges encountered during the study and incorporated feedback from the engineers to guide future improvements to the design and implementation of the model.

Keywords: infrastructure integrity, safe transportation, piezoelectric bridge model

**IOT-ENABLED MULTIFUNCTIONAL BEDROOM LAMP WITH
SIX-MODE LIGHTING SYSTEM USING ESP32**

Joddie Dalicano, Jameson De Vera, Harold Galang, Darwin Morales,
Clarence Ivan Sanz, Reynante Ponay

Abstract

With the rising incidence of fire-related disasters, as highlighted by the National Fire Protection Association (2023), there is an increasing demand for more advanced and inclusive safety solutions. Conventional fire alarm systems, which rely primarily on audible alerts, are often ineffective for individuals with hearing impairments or those in deep sleep. To address this gap, the study developed a multifunctional smart lamp integrating essential safety features: a fire alarm, smoke detector, SMS notification system, mini-camera, exhaust fan, and six customizable lighting modes. Powered by an ESP32 microcontroller with a backup power source, the system is designed to deliver comprehensive, multi-sensory alerts. Prioritizing user accessibility and intuitive operation, the device aims to improve household safety and encourage widespread adoption through its innovative and user-centered design. This study utilized the Experimental Prototyping Method to design and continuously enhance a multifunctional lamp integrated with fire alarm and smoke detection capabilities. User feedback was collected through a self-administered survey using a four-point Likert scale to evaluate performance, usability, and overall user satisfaction. Participants were chosen through convenience sampling to ensure accessibility. The data gathered was analyzed using the weighted mean to assess feedback patterns. The iterative process of prototyping, testing, and feedback analysis allowed for progressive refinements, ensuring that the final product effectively met the users' safety and functionality needs. Survey results revealed strong user approval of the IoT-enabled multifunctional lamp, with most features scoring above 3.0 on a four-point scale, indicating high appeal and practical value. Extensive testing validated the lamp's performance, utilizing durable, commercially available components. Integrated sensors and protective features, such as voltage regulators, heat-shrink tubing, a single-phase terminal block, and a circuit breaker, ensured safety and compliance with design standards. The ESP32 microcontroller demonstrated high efficiency in managing the core functionalities of the multifunctional lamp, while the Arduino Uno successfully supported secondary tasks, enhancing overall system responsiveness. For future development, it is recommended to conduct more extensive testing across diverse environmental conditions, upgrade hardware components to increase functionality, and develop a user-friendly mobile application. Additional enhancements may include integration with existing smart home platforms, implementation of a real-time user feedback mechanism, and the formulation of commercialization strategies to maximize market potential and accessibility.

Keywords: esp32 microcontroller, multifunctional lamp, arduino uno, smart home integration, user feedback, iot device, hardware optimization, mobile application, safety system, commercialization strategy

**ENHANCING RURAL CONECTIVITY: DEVELOPING A PWD FRIENDLY BRIDGE
MODEL FOR SITIO ILIGAN, NORZAGARAY, BULACAN**

Rain Salvador, Khateleene Rhian Aniel, Susana De Guia, Kurt Angelo Elcarte,
Leeshene Marcelo, Axzel Kyth Tamayo, Marlon Bahana

Abstract

Bridges are not merely structures that span physical gaps, they are essential connectors that unify people and communities. This study focuses on designing a bridge model that champions inclusivity and accessibility, particularly for people with disabilities (PWDs). It aims to construct a sustainable and secure structure that enhances mobility for all, ensuring that no one is left behind. By thoughtfully addressing structural integrity, environmental sustainability, and social equity, the research aspires to create a bridge that promotes safety, supports equal access, and contributes meaningfully to local development and community well-being. This study utilized a quantitative research approach with a descriptive design and employed purposive sampling to select expert respondents. Data was gathered through a structured survey questionnaire administered to two professional groups: five (5) Civil Engineers and five (5) Architects. The study aimed to assess the acceptability of the proposed bridge model titled "Enhancing Rural Connectivity: Developing a PWD-Friendly Bridge Model for Sitio Iligan, Norzagaray, Bulacan." Evaluation criteria included the suitability of materials and construction methods, structural and foundation design, load-bearing capacity, overall structural integrity, and the inclusion of safety and accessibility features specifically designed for people with disabilities (PWDs). The results indicated that both Civil Engineers and Architects rated the proposed bridge model as Acceptable in terms of Materials and Construction, Structural and Foundation Design, Structural Integrity, and Safety Features. However, a discrepancy emerged in the evaluation of Load Capacity, where Civil Engineers rated it Acceptable, while Architects provided a Low Acceptable rating, suggesting a need for further refinement in this area. A statistical comparison between the two groups revealed no significant difference in their overall assessments. Civil Engineers recorded a mean score of 2.98 with a variance of 0.436, while Architects had a mean of 2.62 and a variance of 0.476. With a significance level set at $\alpha = 0.05$, the calculated t-value of 0.843 was less than the t-critical value of 2.110. Thus, the null hypothesis (H_0) was accepted, confirming that the differences in evaluation between the two professional groups were not statistically significant. The findings of the study affirm that the proposed bridge model was generally accepted by both Civil Engineers and Architects. Nonetheless, the comparatively lower rating given by the architects concerning load capacity highlights a critical area for refinement. Key challenges noted by the respondents included appropriate scaling, material selection, and overall structural design. In response to these concerns, several enhancements were recommended, such as ensuring accurate structural dimensions, employing more durable and high-quality materials, and optimizing the design for improved performance. These adjustments aim to strengthen the model's structural integrity, increase its usability for people with disabilities (PWDs), and promote long-term sustainability and inclusivity.

Keywords: pwd-friendly bridge, accessibility, structural integrity, load capacity, civil engineering, architectural design, sustainable infrastructure, inclusive design, material quality, rural connectivity

**THE DEVELOPMENT OF IOT BASED INDUSTRIAL CONVEYOR USING
ARDUINO MEGA AND ESP 32 WITH SQL DBMS**

Eric Jahmel Ayuban, Melencio Cabiles, Fritz Zhander Juri Lim, Mcnair Lita,
Alter John Marcellones, Engr. Reynante Ponay

Abstract

The increasing demand for automation and sustainable engineering solutions has led to a growing interest in the development of efficient and adaptable mechatronics systems. This study addresses the need for automated product sorting in various industries while also integrating sustainability by exploring renewable energy options such as solar power. The project aims to develop an IoT-based industrial conveyor system that reflects current trends in automation, green technology, and intelligent systems design. This study utilizes the Experimental Prototyping Method, where the concept and prototype are built and tested for functionality and user acceptance. A descriptive survey method was employed using a 5-point Likert scale to assess the system's performance in terms of efficiency, sustainability, safety, cost-effectiveness, and portability. Respondents were selected through purposive sampling based on their relevance to the project's application, and their demographic data were also recorded. The collected responses were analyzed descriptively. The prototype, an IoT-based industrial conveyor system powered by Arduino Mega and ESP32 and integrated with an SQL database, was successfully developed and functioned according to its design specifications. It included product classification, product-level monitoring, conveyor control, and database management features. Survey results showed that respondents rated the system highly across multiple indicators, especially in terms of operational efficiency, sustainability, and ease of use. These positive evaluations validated the effectiveness of the system in an industrial setting. The project demonstrated the successful implementation of an IoT-based industrial conveyor system using Arduino Mega and ESP32. The development process confirmed that these microcontroller and microprocessor units are reliable tools for integrating real-time control and data management functions in industrial automation. The study concludes that the use of Arduino Mega and ESP32, paired with SQL DBMS, offers a practical and scalable solution for smart, sustainable industrial systems. Future enhancements may include cloud integration and solar-powered operation to further advance its green technology potential.

Keywords: *iot, arduino mega, esp32, industrial conveyor, sql dbms, automation, product sorting, smart systems, sustainable technology, experimental prototyping*

A PROPOSED INVENTORY MANAGEMENT SYSTEM FOR CARLA HATCHERY

Maria Nicole Valerio, Cherry Batoon, Donjite Francisco, John Patrick Labalan,
Melanie Llaneta, Aramina Matan, Dr. Maria Edna Portugal

Abstract

Carla Hatchery plays a vital role in the agricultural sector by producing and supplying day-old chicks through artificial incubation. While hatchability rates remain high, chick mortality continues to pose a significant challenge. To address this, the study explores the integration of real-time monitoring and advanced resource management into a unified system. This integrated approach aims to enhance operational efficiency, maximize equipment utilization, and ultimately reduce mortality rates. The study seeks to evaluate how such a system can improve hatchery practices and support sustainable poultry production. This study employs a quantitative research design, using purposive sampling to collect data from the hatchery owner and staff with hands-on experience in manual record-keeping. Participants are selected based on their direct involvement in hatchery operations to ensure relevant expertise. The study aims to assess current manual documentation practices, identify operational challenges, and explore the perceived benefits of digitalization. Data will be gathered through surveys, focusing on hatchability rates, mortality rates, documentation time, and the effectiveness of real-time tracking. The survey revealed that hatchery operations continue to depend on manual record-keeping, resulting in inconsistent data, time-consuming processes, and difficulties in tracking egg incubation periods. These challenges highlight the pressing need for modernization. The findings support the adoption of an integrated digital system to improve data accuracy, streamline operations, and enhance resource accountability across all stages of production through a centralized digital platform. Transitioning from manual to digital record-keeping significantly enhances the accuracy and efficiency of hatchery operations, particularly when managing multiple egg batches. A digital system enables real-time entry of incubation dates, allowing multiple batches to be recorded and tracked simultaneously. A key feature of the system is its smart notification function, which alerts users only when eggs are about to hatch or have already hatched, ensuring timely action without unnecessary interruptions. By streamlining data management and improving monitoring, digitalization has proven to boost overall productivity and operational performance.

Keywords: digital record-keeping, hatchery operations, incubation tracking, productivity, real-time monitoring, egg batches, notification system, operational efficiency, data accuracy, system automation

APARTMENT SYSTEM WITH MESSAGE SUPPORT FOR LUNARIA'S APARTMENT

Justine Pombo, Melgeor Valdevieso, Ryan Lee Montero, Mark Gelo Dapiawen,
Jarell Christian Maglaque, Nelar Reubal, R-jay Pornasodoro

Abstract

Lunaria's Apartment, serving Barangay Sauyo with affordable housing since 2011, is currently facing operational challenges due to its reliance on manual processes. Tasks such as managing tenant information, processing apartment requests, scheduling maintenance, and addressing complaints are handled manually, often resulting in delays, miscommunication, and inefficiencies. The apartment management system was developed using the SDLC Waterfall model, which consists of seven phases: system planning, data analysis, system design, development, testing, implementation, and maintenance. Researchers conducted interviews with the client to identify existing challenges and design a system tailored to their needs. The system was developed using NetBeans with Java for the application and XAMPP to manage the server and database. The apartment management system enhances operational efficiency by enabling prompt responses to tenant requests and complaints. It offers a well-structured interface with essential features such as tenant information, a search function, and messaging support to assist administrators and staff in managing tasks effectively. Designed with ease of use in mind, the system provides a practical and accessible solution for both apartment owners and personnel. Lunaria's Apartment continues to face challenges in handling tenant records, payments, complaints, and maintenance requests due to its dependence on manual processes. These traditional methods often result in delays, errors, and inefficiencies. To resolve these issues, the researchers developed an apartment management system designed to streamline operations and enhance overall efficiency. Although the system is still developing and lacks some advanced features, the researchers have implemented alternative solutions to improve its functionality and address current operational needs.

Keywords: lunaria's apartment, apartment management system, manual processes, tenant records, payments, complaints, maintenance requests, operational efficiency, system development, alternative solutions.

APPOINTMENT FOR ENROLLIES IN LMR

John Rey Verano, Angelo Candelaria, Shin Isaac Razon, Ken Sean Basanes,
Marco Noah Alajar, Samuel Pisico, R-jay Pornasdoro

Abstract

This study focuses on developing a computerized appointment system for Love Memoir's Recovery (LMR) Therapy Center to reduce paperwork and streamline administrative tasks. The system aims to improve operational efficiency, enhance the accuracy of client records, and provide a better user experience for both therapists and clients. Key features include automated booking, real-time notifications, and improved reporting tools. Ultimately, this study highlights how technology can enhance service delivery and support the long-term development of the therapy center. The researcher conducted interviews with clients to identify the essential needs and challenges that the appointment system should resolve. The system was developed using the Waterfall Model, a structured, step-by-step approach. Each phase from requirement analysis to maintenance was thoroughly executed to ensure the system effectively manages client appointments and related information. The appointment system reduces paper dependency by digitizing client records, allowing therapists to efficiently input, update, and manage essential information. It also includes reporting features that generate valuable insights, such as client enrollment rates and diagnostic patterns. Overall, the system improves workflow efficiency and enhances the quality of care provided by therapists. Managing client information manually poses significant challenges for therapists, often leading to inefficiencies and errors. To overcome these issues, a comprehensive appointment management system was developed to simplify scheduling and record-keeping tasks. The system allows therapists to easily save, update, and delete client data, significantly minimizing administrative burdens while improving accuracy and overall workflow efficiency.

Keywords: therapists, appointment management system, manual records, scheduling, client information, efficiency, accuracy, administrative workload, record-keeping, system development.

**ASSESSING THE EFFECTIVENESS OF AFFILIATE MARKETING ON TIKTOK IN
SHAPING FINANCIAL PERFORMANCE: BASIS FOR PROPOSED MARKETING
FUNNEL**

Angel Liga, Angelo Caricungan, Jella Ogayon, Polaris Yna Salazar,
Marry Joyce Torrenueva, Analyn Magalso

Abstract

This study aims to explore the relationship between TikTok affiliate marketing and the financial performance of its users. It seeks to evaluate how affiliate promotions impact sales growth and profitability on the platform. By surveying active TikTok affiliates, the research will assess the effectiveness of affiliate marketing, uncover key trends, and identify common challenges faced by users. The study will also examine the strategies affiliates use to enhance their marketing efforts, to pinpoint the essential elements that contribute to financial success. This study employed descriptive quantitative research design and involved fifty (50) TikTok affiliates selected through purposive sampling. A structured survey questionnaire was used as the main data collection tool to gather relevant information from the participants. The findings reveal that TikTok affiliate marketing is perceived as highly effective in enhancing financial performance across various indicators. The Affiliate-Advertiser Relationship achieved a weighted mean of 3.80, indicating a very effective impact. Similarly, Performance-Based Rewards scored 3.77, also interpreted as very effective. The role of Digital Platforms as Growth Catalysts received a weighted mean of 3.80, while the Financial Impact of Affiliate Marketing scored the highest at 3.81. These results highlight the overall strong effectiveness of affiliate marketing on TikTok in influencing key aspects of financial success. The researchers developed a proposed marketing funnel to demonstrate how TikTok affiliate marketing functions effectively. This funnel is structured around key variables identified in the study: the affiliate-advertiser relationship, performance-based rewards, digital platforms as growth catalysts, and the financial impact of affiliate marketing. It also includes essential components such as defined objectives, strategic actions, involved stakeholders, a timeline, budget considerations, monitoring and evaluation procedures, and sustainability plans. As the main output of the study, the marketing funnel serves as a practical and strategic tool designed to guide businesses and affiliates in optimizing the customer journey and improving overall marketing performance.

Keywords: tiktok affiliate marketing, marketing funnel, affiliate-advertiser relationship, performance-based rewards, digital platforms, financial impact, customer journey, strategic tool, implementation plan, marketing effectiveness

EFFICIENT POINT OF SALE (POS) MANAGEMENT SYSTEM AT CAFE 25TH

Ian Ada, Kurt John Boyles, Jules Gerald Arangoso, Christian Bobiles,
Genesis Sangalan, Julian Salando, R-jay Pornasodoro

Abstract

The research titled "Development of an Efficient Point of Sale (POS) Management System for CAFE 25TH" aims to enhance operational efficiency and customer satisfaction through the implementation of a modern, streamlined POS solution. The system is designed to expedite transaction processing, ensuring faster service delivery and minimizing customer wait times. It promotes accuracy in pricing, reduces human errors, and enables real-time inventory tracking to prevent shortages or overstocking. Ultimately, this POS system supports better business decision-making and a smoother retail experience. The development of this project adhered to a systematic System Development Life Cycle (SDLC). It began with the planning stage, where the research title was finalized, client interviews were conducted to gather initial insights, and the foundational documentation was prepared. In the analysis phase, relevant studies were reviewed, and detailed consultations were held to define the system's functional and non-functional requirements. The development phase utilized Java NetBeans for coding the system, MySQL for database management, and XAMPP as the local server environment. Project documentation was created using Microsoft Word. The system's user interface design was inspired by the UI/UX standards of platforms like Google and Pinterest, ensuring it was intuitive and user-friendly. The testing phase involved rigorous debugging, functional validation, and code reviews to ensure system reliability and efficiency. In the implementation phase, the system was deployed following successful testing. Finally, the maintenance phase emphasized continuous performance monitoring, updates, and security enhancements to ensure long-term stability and usability. The system achieved substantial operational enhancements by addressing key inefficiencies. It optimized the checkout process, significantly reducing customer wait times through an intuitive and responsive order dashboard. Moreover, the integration of automated sales reporting ensured accurate, real-time summaries of all transactions. This not only enhanced financial tracking but also empowered management with data-driven insights into more informed and strategic decision-making. Cafe 25th encountered difficulties in handling transaction reports, managing the checkout process efficiently, and reducing human errors caused by manual computations. To resolve these challenges, the researchers developed a Point of Sale (POS) Management System aimed at optimizing operational efficiency. The system is designed to deliver faster and more accurate transactions, enhance the overall customer experience, and improve productivity through automated sales reporting and precise computation features.

Keywords: point of sale system, cafe 25th, transaction management, automated sales reports, customer experience, productivity, accurate computations, checkout efficiency, operational challenges, system development

EMPLOYEE ATTENDANCE MONITORING SYSTEM FOR 24/7 GARMENTS

Clarence Josh Haberia, Jefford Dama, Renzo Pacheco, Amandeep Singh,
Reiner Mavis Valenzuela, R-jay Pornasodoro

Abstract

In the modern digital age, businesses require reliable and efficient systems to monitor employee attendance. Traditional methods, such as paper logs and manual entry, are not only time-consuming but also prone to errors and inaccuracies. Despite technological advancements, many organizations still rely on these outdated practices, resulting in inefficiencies in workforce management. This project focuses on developing a digital employee attendance monitoring system using QR code technology to simplify the attendance process, reduce manual work, and ensure accurate and timely record-keeping. This study utilized the Waterfall development methodology, which follows a linear and structured approach encompassing the phases of planning, analysis, design, development, testing, implementation, and maintenance. The system was developed using Java to build the graphical user interface (GUI), while XAMPP served as the local server environment for managing the MySQL database. To streamline the attendance process, a QR code scanner was integrated, allowing employees to scan their personalized QR codes instead of manually logging their attendance. This innovation significantly reduces time consumption and minimizes the risk of human error in attendance recording. This study developed a QR code-based employee attendance monitoring system to address the limitations and inefficiencies of traditional manual attendance tracking. Each employee is assigned a unique QR code, which is scanned to log attendance seamlessly and accurately. By automating the process, the system significantly reduces the risk of human error and enhances the reliability of attendance records. The accurate data generated empowers administrators with better workforce management and decision-making capabilities. Overall, the system demonstrates a dependable and efficient solution for modern employee attendance monitoring. The implementation of a QR code-based employee attendance monitoring system proved to be an effective solution for recording employee attendance. The system was able to provide an accurate scanning of QR codes with the help of a QR code scanner device, reducing the chances of human errors. With the success of the system testing proving to provide accurate attendance tracking, it opens opportunities for integrating features such as automated payroll computation based on working hours and other related features related to attendance tracking. This will significantly improve the overall process of the employee attendance monitoring system.

Keywords: qr code, employee attendance, attendance monitoring system, automated tracking, qr code scanner, accuracy, human error reduction, system implementation, payroll integration, workforce management.

**HR RECRUITMENT AND SELECTION IN BESTLINK COLLEGE OF THE PHILIPPINES
MAIN CAMPUS IN NOVALICHES**

Matthew Alarcon, Matthew Alarcon, Abegail Baliwag, Aj Aragones,
Roxan Dalina, Mark Castro, John Valenzuela, David Jaurigue

Abstract

The recruitment and selection process at Bestlink College of the Philippines is managed by the Human Resources (HR) Department, led by Ms. Demi Ramirez. The department is tasked with screening and hiring applicants for various roles within the institution. However, the current process is entirely manual, as there is no dedicated system or software in place to assist with recruitment tasks. As a result, all applications are processed by hand, which may lead to inefficiencies and challenges in managing a growing number of candidates. Methodology refers to the organized set of methods and principles that guide the execution of research or projects across various disciplines, including science, business, and the social sciences. It defines the procedures and strategies for data collection, analysis, and interpretation, serving as a foundation for drawing valid conclusions. In the context of project management, Agile Scrum is a widely adopted methodology, particularly in software development. This framework promotes adaptability, teamwork, and continuous improvement by dividing work into short, time-bound cycles known as “sprints,” usually lasting two to four weeks. Through this iterative approach, teams can deliver incremental results, respond quickly to feedback, and maintain a high level of project flexibility. Bestlink College of the Philippines (BCP) employs a range of online platforms to support its recruitment process and connect with potential candidates. Based on a 2024 report by the AA Research Index, platforms such as Facebook, LinkedIn, and Indeed are most commonly used to advertise teaching positions and attract applicants. The college also conducts virtual interviews, primarily through phone calls and Google Meet, to accommodate remote applicants. However, technical issues, particularly unstable internet connections, have been cited as a recurring obstacle during these online interactions. BCP further promotes job opportunities through its official website and social media pages. For example, on January 20, 2025, a hiring event for foreign language instructors was posted on the college’s official website, bcp.edu.ph, demonstrating its commitment to maintaining a visible and accessible recruitment presence. The Human Resources recruitment and selection practices at Bestlink College of the Philippines (BCP) showcase a strategic blend of conventional approaches and emerging technologies. Through the use of online platforms, structured interviews, and performance-based evaluations, alongside the gradual adoption of a Human Resource Management System (HRMS), the institution emphasizes its commitment to building a highly qualified and future-oriented workforce. While BCP faces ongoing challenges such as technological constraints and infrastructure limitations, it remains proactive in enhancing its recruitment processes to align with both academic objectives and evolving industry standards.

Keywords: human resource management, recruitment and selection, online platforms, structured interviews, performance-based assessment, human resource management system (hrms), bestlink college of the philippines, workforce development, technological limitation

**HR TRAINING AND DEVELOPMENT IN BESTLINK COLLEGE OF
THE PHILIPPINES- MAIN CAMPUS IN NOVALICHES**

Rusty Talento, John Nove Hadcan, John Bert Sarmiento, Princess Mae Reanzares,
Shaina Marie Isig, David Jaurigue

Abstract

HR Training and Development is not a one-time initiative but a continuous process that is vital for building a competent, motivated, and high-performing workforce. By consistently investing in employee growth, organizations enhance their capacity to adapt and thrive in an ever-changing business environment. This function emphasizes improving employees' skills, knowledge, and capabilities to boost both individual and organizational performance. It involves identifying training needs, designing and implementing effective programs, and regularly evaluating results to ensure relevance and impact. Well-structured training and development initiatives not only keep employees aligned with industry standards but also promote a culture of lifelong learning, increase productivity, and support the achievement of business goals. Ultimately, HR training and development establish a mutually beneficial environment where employees are empowered to grow professionally, while the organization remains agile, competitive, and future-ready. To strengthen the effectiveness of HR training and development at Bestlink College of the Philippines, the institution should integrate modern technologies such as e-learning platforms and virtual training systems. These innovative tools offer flexible, accessible, and personalized learning experiences, enabling faculty and staff to continuously develop their skills in ways that align with their diverse needs and schedules. Without a dedicated HR training and development system, organizations risk inefficiencies in administration, lower employee motivation, and difficulty in measuring training outcomes. Establishing a centralized HR system can address these challenges by streamlining training processes, enhancing access to development opportunities, and ensuring that learning initiatives are closely aligned with the institution's strategic goals. This not only promotes consistency and accountability but also supports long-term organizational growth and employee success. HR Training and Development is a vital component of strategic human resource management, functioning as more than a traditional support role. In today's knowledge-driven economy, continuous learning is essential for driving innovation and sustaining competitiveness. As organizations undergo digital transformation and adopt increasingly agile operational models, HR assumes a pivotal role in designing training programs that are innovative, adaptable, and inclusive. By adopting a forward-looking approach grounded in both theory and best practices, HR can ensure that training initiatives remain effective, relevant, and closely aligned with the organization's evolving objectives and long-term success.

Keywords: hr training and development, strategic hrm, continuous learning, digital transformation, agile organizations, inclusive training, best practices, innovation, knowledge-based economy, organizational competitiveness.

HUMAN RESOURCE COMPLIANCE AND LEGAL

Leira Mae Domingo, She Kynah Mae Bernabe, Glen Yuan Magat, Dareal Mosquito, David Jaurigue

Abstract

In today's fast-paced organizational landscape, efficient facility and resource management is essential for ensuring flexibility and productivity. Yet, many Human Resource Management (HRM) departments still rely on outdated manual methods to process letters of intent, handle complaints, and manage contract signings, resulting in delays, errors, and inefficiencies. To address these challenges, this program proposes the implementation of an HR Compliance and Legal System that automates key HR processes, streamlines workflows, and ensures adherence to all legal and regulatory standards. The system is designed to boost operational efficiency, enhance transparency, and strengthen compliance across HR functions. The Agile Methodology is highly suitable for developing the Human Resource Compliance and Legal System, as it promotes flexibility and adaptability throughout the development process. This approach allows the researchers to respond effectively to data-driven insights while the system is being built. Agile divides the project into manageable, time-boxed sprints, enabling faster iterations, continuous testing, and prompt incorporation of user feedback. Its dynamic structure ensures that the system can evolve to meet emerging needs, resulting in a more responsive and user-aligned solution. The core vision is to revolutionize how organizations manage their physical assets by developing an intelligent workplace platform. Over time, the system will evolve from a basic request handler into a smart workplace assistant, guiding both employees and management. This transformation will lead to better utilization of resources and a measurable boost in operational efficiency. Success will be defined by a system so user-friendly that employees can focus on their tasks without worrying about logistics, while management gains the insights needed to make strategic decisions about future workplace investments. The HR Compliance and Legal Management System offers a transformative approach to handling the legal and regulatory responsibilities of Human Resources. It addresses common inefficiencies by automating key processes such as contract creation, employee complaint submissions, letters of intent, and the distribution of employee handbooks. By replacing manual, disconnected workflows with a centralized digital platform, the system ensures greater consistency, transparency, and adherence to compliance standards. Moreover, its advanced analytics capabilities convert both historical and real-time data into actionable insights, enabling HR teams to make smarter, data-driven decisions.

Keywords: hr compliance, legal management system, human resources automation, contract drafting, employee complaints, letters of intent, centralized platform, workflow efficiency, regulatory compliance, hr analytics

**HUMAN RESOURCE EMPLOYEE MANAGEMENT SYSTEM IN
BESTLINK COLLEGE OF THE PHILIPPINES**

Jeremy Apundar, Justin Jay Nasis, Darren James Dela Fuente,
Aljhon Tugtang, Steven Jann Altarejos, David Jaurigue

Abstract

Bestlink College of the Philippines identified the need to upgrade its Human Resources operations due to the limitations of manual processes. The HR department previously relied on paper records, face-to-face transactions, and spreadsheet-based tracking methods that were inefficient, prone to errors, and difficult to scale. These outdated systems hindered effective management of employee records, performance evaluation, recruitment, and onboarding. To address these issues, this study focused on designing and implementing an automated HR Employee Management System tailored to the institution's specific needs. The system aims to streamline processes, minimize administrative workload, strengthen data security, and allow HR staff to concentrate on more strategic functions, bringing the institution's HR practices in line with modern standards. To guide the development of the system, a descriptive research design was adopted, utilizing purposive sampling to gather input from HR personnel, department heads, and administrators. Data was collected through surveys and structured interviews to uncover inefficiencies and challenges in the current HR processes. The system was built using the Systems Development Life Cycle (SDLC) methodology, progressing through the stages of planning, analysis, design, development, testing, and deployment. Continuous stakeholder involvement throughout each phase ensured the system's functionality, improved user experience, and guaranteed its relevance to the institution's daily HR operations. The implementation of the system led to notable enhancements in HR functions. Recruitment processes were streamlined through automated applicant tracking and interview scheduling. The onboarding module simplified the integration of new hires by automating task assignments, form submissions, and training timelines. Performance evaluation became more structured, allowing for consistent feedback and ongoing monitoring of employee progress. The introduction of a self-service portal enabled employees to independently access their records, request leave, and update personal information, significantly reducing manual administrative tasks. Furthermore, built-in compliance monitoring tools ensured alignment with institutional policies and labor regulations. To further strengthen the system's capabilities, future enhancements are recommended, including the development of modules for succession planning, employee engagement analytics, and retention monitoring. Additionally, integration with external platforms such as payroll systems and biometric attendance devices could significantly enhance operational efficiency and data accuracy. Future studies may focus on assessing the system's long-term effects on organizational performance, employee productivity, and overall job satisfaction.

Keywords: hr system enhancement, succession planning, employee engagement analytics, retention monitoring, payroll integration, biometric attendance, operational efficiency, organizational performance, employee productivity, job satisfaction

**INTEGRATED HUMAN RESOURCES AND FACILITIES AND RESOURCES
MANAGEMENT WITH ROLE-BASED ACCESS CONTROL AND ADVANCED
ANALYTICS IN BESTLINK COLLEGE OF THE PHILIPPINES - MAIN CAMPUS IN
NOVALICHES**

Anne Klein Pagaduan, Angel May Bajio, Dexter James Papa, Jaypee Gantang, David Jaurigue

Abstract

This project introduces a Facility and Resources Management System designed to streamline employee requests, resource allocation, and facility bookings. Many Human Resource Management (HRM) departments continue to rely on outdated manual processes, resulting in delays and operational inefficiencies. The proposed system enhances day-to-day operations by incorporating real-time analytics to monitor usage patterns, booking trends, and future demand forecasts. By reducing administrative burdens and enabling data-driven decision-making, the system improves HR efficiency, boosts workplace productivity, and ensures better alignment between organizational resources and employee needs. Agile methodology is well-suited for developing a Facility and Resources Management System due to its flexibility and user-centered approach. Unlike traditional development models, Agile delivers core functionalities such as room booking and equipment tracking within short 2–4 week sprints, enabling early system use and iterative refinement based on real-time feedback. It accommodates evolving requirements, such as incorporating hot-desking features for hybrid work environments, without disrupting overall project progress. By fostering close collaboration, minimizing risks, and addressing real-world challenges as they arise, Agile ensures the system is both adaptive and efficient, ultimately improving resource utilization and reducing administrative burdens from the early stages of development. The Facility and Resources Management System is poised to transform how organizations manage their physical resources. It provides employees with seamless digital access to essential assets, while offering HR teams greater visibility into resource utilization. Integrated scheduling tools minimize booking conflicts, and comprehensive reporting supports data-driven planning and enhanced operational efficiency. As the system evolves, it moves beyond request management to full-scale operational optimization, enabling staff to focus on core tasks while empowering management to make informed, strategic decisions. Ultimately, it sets a new benchmark for modern, efficient workplace environments. The Facility and Resources Management System digitizes resource workflows, eliminating manual inefficiencies and enabling data-driven decision-making. Its built-in analytics promote smarter asset utilization, while self-service tools enhance user satisfaction. Scalable and customizable, the system can adapt to diverse organizational needs. Robust data security ensures compliance with privacy standards, and its user-friendly design encourages widespread adoption. Seamless integration with HR platforms and calendar systems further enhances its functionality, making it an essential solution for agile, modern workplaces.

Keywords: human resources, facility and resources management system, agile methodology, user-friendly, enhance, real-time analytics

INVENTORY SYSTEM WITH AUTOMATED NOTIFICATION FOR LTSDECO FURNITURE

Kathrice Ann Badeo, Belle Cacho, Aeron Agnir Daña, Shaine Francisco,
Jhamir Go, Mary Ann La Torre, R-jay Pornasdoro

Abstract

The Inventory System is a localhost-based platform designed to automate inventory tracking and product management for owners, assistants, and agents. It streamlines the maintenance, updating, and monitoring of stock levels by providing timely restocking alerts, improving overall inventory management, and eliminating the need for manual processes. The system aims to enhance accuracy and efficiency in handling inventory. The researchers' client, LTSDECO Furniture, founded on September 17, 2020, specializes in designing and producing high-quality, stylish office furniture. The Inventory System was created following the SDLC Waterfall model, which includes seven sequential phases: Planning, Analysis, Design, Development, Testing, Implementation, and Maintenance. To understand the client's needs and challenges, the researchers interviewed to gather essential information. The development process strictly followed the Waterfall approach, ensuring each phase, especially design and development, was completed before moving to the next. The Inventory System not only assists the owners but also streamlines the work of admins, assistants, and agents. Its features and notification alerts help effectively manage stock levels and support informed decision-making. Key functionalities include a dashboard, notifications, user management, product and category management, detailed product information (such as brand, color, and condition), an archive, printable history, and comprehensive product reports with summaries. These improvements reduce manual tasks and directly address the client's inventory management challenges. The client struggled with manual inventory management using tools like Excel for tracking products, monitoring stock levels, and recording activities. To address these issues, the researchers developed an inventory system that simplifies product management and aligns with the client's preferences, ensuring a user-friendly experience. Although some requested features were not included, the additional functionalities introduced by the researchers enhance inventory management and improve operational processes.

Keywords: inventory system, manual inventory management, product tracking, stock monitoring, user-friendly interface, inventory automation, operational efficiency, client preferences, system features, process improvement.

**JUNIOR HIGH SCHOOL ALUMNI INFORMATION WITH
CHATBOT SUPPORT FOR CAYBIGA HIGH SCHOOL**

Junji Arceo, Hans Martin Almoroto, Ghaizer Icarus Andaya,
Marvin Lester Bedo, R-jay Pornasdoro

Abstract

Recognizing the limitations of traditional alumni engagement methods in today's digitally connected world, this study titled: "Junior High School Alumni Information with Chatbot Support for Caybiga High School," proposes a desktop application to modernize outdated alumni relations. Periodic newsletters and occasional reunions are no longer sufficient to maintain meaningful, long-term connections. To address this, the research introduces an AI-driven solution that combines a secure alumni database with chatbot support, enabling efficient, accessible, and personalized information retrieval. This system aims to streamline alumni communication, address concerns promptly, and foster stronger, ongoing engagement within the school community. The system was developed following the Software Development Life Cycle (SDLC) using the Waterfall Model, which includes seven sequential phases: Planning, Data Analysis, Design, Development, Testing, Implementation, and Maintenance. To identify system requirements, the researchers conducted interviews with key stakeholders, and the insights gathered were used to design detailed system architecture. During the development stage, Apache NetBeans was employed for coding and debugging, while MySQL was utilized to design and manage the alumni database efficiently. The Junior High School Alumni Information System with Chatbot Support was successfully developed and deployed at Caybiga High School. It features a secure MySQL database that stores alumni's personal, contact, and academic information. Developed using Apache NetBeans, the system includes a user-friendly interface designed for accessibility and ease of use. Testing confirmed that the system efficiently processes queries and retrieves data. Interview feedback further validated its functionality, with users reporting the system to be intuitive, reliable, and free from major issues. This project underscores the effectiveness of AI-powered chatbots in enhancing alumni engagement in contemporary educational settings. Guided by the Waterfall Model and developed using reliable tools such as Apache NetBeans and MySQL, the system achieved a secure and user-friendly platform. The chatbot significantly improved response times and user satisfaction. However, the project was limited by a small interview sample and the chatbot's basic functionality. Future developments should prioritize the integration of natural language processing (NLP), improved scalability, social media integration, and sustained system support.

Keywords: ai-powered chatbot, alumni engagement, information system, waterfall model, netbeans, mysql, natural language processing, scalability, educational technology, system development

**OPTIMIZING EMPLOYEE PERFORMANCE: A DIGITAL HR MANAGEMENT SYSTEM
IN BESTLINK COLLEGE OF THE PHILIPPINES MAIN CAMPUS IN NOVALICHES**

Kyle Felipe, Rikko Vinz Arguelles, Mike Jeo Sedurifa, Kyla Rose Baltero,
Jane Rovie Benitez, David Jaurigue

Abstract

Human Resource (HR) performance and management are essential to the success of educational institutions. At Bestlink College of the Philippines – Main Campus, the HR department faces several challenges, including outdated manual systems, inappropriate performance measures, inconsistent feedback mechanisms, and security vulnerabilities related to data handling. These issues hinder employee motivation, accurate performance evaluation, and efficient data management. This study aims to evaluate and improve HR processes by implementing a digitized HR Performance and Management System to foster a more engaged, productive, and secure workforce. The researchers employed the Agile Scrum approach, which allowed for iterative development and consistent stakeholder interaction. The system was developed following the Software Development Life Cycle (SDLC), which includes planning, analysis, design, development, testing, deployment, and maintenance. Development tools included MySQL, PHP, and Visual Studio Code. Data collection methods involved interviews, questionnaires, and user feedback. Functional and non-functional requirements were gathered, and user stories were created to align the system with the needs of HR managers, staff, and employees. The system effectively addressed key HR concerns by integrating core features such as user authentication, employee profile management, a performance dashboard, notification system, record management, and reporting functions. Testing confirmed the functionality of secure login, data import/export, search and filter options, and real-time performance monitoring. Built-in analytics supported decision-making and helped identify high-performing staff. Security standards were upheld through data encryption and role-based access control. Integrating training and development into performance management offered a more holistic strategy for employee growth. The use of Agile Scrum promoted continuous feedback and system flexibility, ensuring responsiveness to evolving HR needs. The digitalization of HR processes led to improved communication, accurate performance tracking, and higher employee engagement while minimizing manual errors and labor. This project demonstrates that with structured methodologies and active stakeholder involvement, technology can significantly enhance HR operations within educational institutions.

Keywords: digital hr system, employee performance, agile scrum, human resource management, system development, bestlink college, performance monitoring, data security, stakeholder engagement, educational institutions

ORDERING MANAGEMENT WITH CHATBOT SYSTEM FOR NAGIMAS

Miguel Rose Soriano, Jeremy Malana, John Christofer Lucero, Lei Airel Loquis,
Mark Reuben Fortuito, Joshua Gagarin, R-jay Pornasdoro

Abstract

Businesses today face persistent challenges in managing orders, tracking inventory, and facilitating seamless transactions. This study aims to develop an intelligent ordering system integrated with a chatbot to automate order processing, enhance inventory control, and improve customer experience. The system features a tracking function that assigns a unique transaction number to each order, enabling accurate monitoring from placement to fulfillment. By automating key business processes, the system minimizes manual errors and contributes to greater operational efficiency and improved customer service. This research utilized a development-based approach involving system analysis, design, implementation, and testing. The ordering system was evaluated based on functionality, security, and user experience. Feedback from initial testing was used to refine the interface and improve order tracking and data management capabilities. The system was also assessed for scalability and adaptability to suit various business environments. The findings indicated that automation significantly reduced errors in order processing, enhanced tracking accuracy, and streamlined business operations. Compared to traditional manual methods, the system enabled smoother workflows, minimized transaction delays, and provided precise transaction records. Automated inventory updates allowed businesses to maintain optimal stock levels, avoid shortages, and improve supply chain management. These enhancements contributed to higher operational efficiency and customer satisfaction. The results underscore the role of technology in advancing business efficiency and enhancing customer experience. The chatbot-integrated ordering system proved to be a practical solution for optimizing transactions, inventory control, and client engagement. Future developments may focus on improving data analytics features and enhancing scalability to meet the evolving needs of growing businesses. Leveraging such technologies can help businesses remain competitive and responsive to market changes. Overall, the automated ordering system offers a robust tool for improving operational performance and delivering superior service.

Keywords: ordering system, chatbot integration, inventory management, business automation, transaction tracking, customer experience, system scalability, operational efficiency

POINT OF SALE SYSTEM WITH BARCODE READER IN SABELLE'S CLOSET

Lilia Angela Sastre, John Lloyd Patungan, Mhaya Tapiador,
Edlyn Nicole Cadiz, R-jay Pornasdoro

Abstract

The Point-of-Sale (POS) System with Barcode Reader combines hardware and software to streamline business operations such as sales processing, inventory management, report generation, and receipt printing. Since its establishment in 2021, Sabelle's Closet has operated without an automated system, leading to various issues, including lengthy customer lines, challenges in producing accurate reports, poorly organized products that hinder quality control, and difficulties in calculating customers' purchase totals. The development of the system followed the SDLC Waterfall Method, encompassing the phases of planning, analysis, design, development, testing, and maintenance. The researchers identified the problems experienced by Sabelle's Closet through interviews. After collecting and analyzing the relevant data, they conducted brainstorming sessions to design the required system. The system was built using Java programming language and SQLite as the database. To assess its functionality and performance, the Point-of-Sale system with a barcode reader was implemented. The system aims to streamline the checkout process at Sabelle's Closet through an intuitive interface paired with a barcode reader. Products are assigned unique barcodes that correspond to their detailed information. Integrating barcode scanning with the Point-of-Sale system facilitates real-time inventory management, allowing efficient monitoring of stock levels. This technology helps reduce customer wait times and decreases the likelihood of transactional errors. The Point-of-Sale System with a barcode reader for Sabelle's Closet is designed to facilitate smoother transactions and reduce the burden on staff and administrators managing the business. By automating sales and inventory processes, the system enhances efficiency and improves inventory management. Previously, staff had to manually list purchased items as makeshift receipts, which contributed to long queues and made it difficult to evaluate product quality. The system's automated data handling and reporting features free up staff time, enabling them to concentrate on delivering superior customer service.

Keywords: point-of-sale system, barcode reader, transaction process, inventory management, automated reporting, customer service, efficiency, staff workload reduction, sabelle's closet

**RADIO FREQUENCY IDENTIFICATION STUDENT MONITORING DEVICE USING
ESP8266 FOR RICHLAND MONTESSORI**

Dave Owen Gison, Cristy-lyn Orlina, Jamaica Arenas, Michael Anthony Comentan,
Charlie Purisima, Alien Joy Viola, Gerome Lagutan

Abstract

In today's technological era, student attendance and activity monitoring are critical areas that schools must consistently manage. Manual attendance systems are time-consuming, ineffective, and prone to human error, especially as student populations increase. Radio Frequency Identification (RFID) technology is one of the most affordable methods for automatically tracking students. The Radio Frequency Identification Student Monitoring Device Using ESP8266 for Richland Montessori aims to develop a robust, efficient, and automated system for monitoring and tracking students in real time. The system supports Richland Montessori's need for accurate and timely attendance records, secure methods of attendance recording, and improved student activity management through the integration of RFID technology with the ESP8266 microcontroller. RFID technology utilizes electromagnetic fields to read and write data through RFID readers and RFID tags. Each student is assigned an RFID tag that is scanned upon entering or leaving the classroom. The collected data is processed and stored in Google Sheets provided for teachers. Using the ESP8266 and Arduino as controllers, the system offers reliability and ease of use. The system reads RFID data from students using an RFID reader attached to the ESP8266. When an RFID card is detected, the ESP8266 processes the data and sends attendance information to Google Sheets via Wi-Fi. The device requires a stable internet connection to communicate effectively and update Google Sheets in real time. The RFID-based Student Monitoring Device is an implemented system that uses RFID technology to automatically record student attendance. The system integrates RFID tags and readers with the ESP8266, allowing it to connect to Wi-Fi and transmit attendance information to Google Sheets. This setup enables real-time attendance monitoring and efficient data management. The system aims to improve security, increase efficiency, and simplify administrative tasks without disrupting class time. The project, Radio Frequency Identification Student Monitoring Device Using Arduino for Richland Montessori, focuses on designing a system to monitor and track student attendance within a school environment. The device utilizes RFID technology combined with an ESP8266 microcontroller to detect students as they enter or leave their classrooms.

Keywords: efficient, robust, and automated system

RESERVATION MANAGEMENT SYSTEM FOR LYDIA'S RESORT

Rotsen Serrano, Ahrbie Hilario, Sharmaine Joy Callada,
Samuel Oco, R-jay Pornasdoro

Abstract

The proposed Reservation Management System is designed to efficiently handle reservation details, simplifying operations for both the management and staff, while providing a more convenient booking experience for customers. This system is intended for Lydia's Resort, a family-friendly destination where guests can enjoy a relaxing and memorable stay with their loved ones. The researchers employed the Waterfall Model under the Software Development Life Cycle (SDLC) as their methodological framework. To identify and resolve existing issues, they analyzed, designed, and developed a Reservation Management System tailored to the needs of Lydia's Resort. Information was gathered through client interviews to understand the current processes and enhance the overall user experience. The system was developed using JAVA for the front end and MySQL for the database. During implementation, the system was demonstrated to the client, ensuring ease of use and efficiency. This system is intended to optimize the resort's reservation process by reducing manual workload and improving operational efficiency for both staff and management. The Reservation Management System for Lydia's Resort underwent successful testing, significantly improving the efficiency and reliability of the resort's reservation process. The system accurately records and presents reservation details, ensuring better organization and reducing the likelihood of errors or miscommunication. It also generates detailed reports for administrators, indicating the status of reservations, whether accepted, canceled, fully paid, or pending. To enhance security, the system incorporates a question-and-answer verification feature, allowing staff to navigate and manage the system securely and efficiently. Lydia's Resort has encountered ongoing issues in managing reservations, including miscommunication between customers and staff, disorganized reservation records, and the strain of manual paperwork on both employees and the owner. To address these problems, the researchers developed a Reservation Management System designed to streamline operations and organize reservation details more effectively. Through client interviews and system analysis, they identified inefficiencies in the current process and proposed targeted improvements. The system aims to provide a more convenient, accurate, and efficient experience for customers, staff, and the resort owner alike.

Keywords: reservation management system, lydia's resort, system development, waterfall model, java, mysql, customer service, process efficiency, system testing, admin reporting, user-friendly interface, digital transformation.

**SMS 4: REGISTRAR DATA MANAGEMENT SYSTEM WITH
PREDICTIVE ANALYTICS USING ANOMALY DETECTION**

Alvin Marin, Michelle Aragdon, Billy Joe Baluarte, Niro Barlam,
Rick Florece, Roland Roldan

Abstract

Registrar offices play a vital role in the academic operations of higher education institutions by managing student admissions, records, and document processing. However, many continue to rely on manual or partially digitized systems, resulting in inefficiencies such as prolonged processing times, data discrepancies, and limited responsiveness to student needs. This study introduces a Registrar Data Management System (RDMS) designed to streamline these processes while integrating predictive analytics and anomaly detection to further improve data integrity and operational responsiveness. The project adopted an Agile project management approach to develop the RDMS. The process began with the Concept Phase, where system goals and scope were defined in collaboration with academic stakeholders. The system was designed to manage student registration, sectioning, grades, and transcript processing. During the Iteration Phase, core features were developed through multiple sprints, with each cycle focused on designing, implementing, and testing specific functionalities. After core development, the project entered the Release Phase, where a dedicated pre-development support team worked alongside the quality assurance team to identify and fix bugs. System validation was conducted to ensure performance and reliability. Integration with existing platforms, such as the Cashiering and Management Information System (MIS), was also completed during this stage. The system effectively automated the registrar's key operations, significantly reducing document processing time and minimizing data-related errors. Student records were managed with greater accuracy, and overall administrative efficiency improved. The inclusion of predictive analytics and anomaly detection enabled the early identification of data irregularities, supporting timely interventions and decision-making. The integration of predictive analytics and anomaly detection into the Registrar Data Management System substantially enhanced the accuracy, efficiency, and responsiveness of academic administrative functions. Real-time monitoring reduced the risk of human error, supported proactive decision-making, and improved data integrity. The system's modular architecture and use of web technologies also ensured adaptability, scalability, and long-term maintainability across institutional operations.

Keywords: registrar system, predictive analytics, anomaly detection, data management, academic records, agile development, higher education, information systems

**STUDENT ATTENDANCE MONITORING SYSTEM USING QR CODES AND SMS
NOTIFICATIONS AT HORACIO DELA COSTA ELEMENTARY SCHOOL**

Art Micheal Alba, Luis Antonio Acebo, Crystal Jane Salazar,
Jerry Yodico, Ryan Eisa Perocho, R-jay Pornasdoro

Abstract

The Student Attendance Monitoring System developed for Horacio Dela Costa Elementary School utilizes QR codes and SMS notifications to enhance the efficiency and accuracy of student attendance tracking. The system aims to address common issues such as time-consuming manual recording, inaccurate data entry, lack of security and privacy, difficulties in generating attendance reports, and absence of real-time updates. Specifically, it seeks to reduce the time spent on attendance monitoring, minimize data input errors, ensure the security of student information, simplify report generation, and provide real-time notifications to parents or guardians regarding the students' time of arrival and departure. The system was developed using the Waterfall Model. Java and SQL served as the primary programming languages, while XAMPP was used as the database server. Hardware components included a computer, QR code scanner, and mobile phone. Software tools utilized in the development process included NetBeans, MySQL, Microsoft Word, Canva, XAMPP, and Adobe Photoshop. The implementation process involved training sessions, demonstrations, system testing, validation, and eventual deployment. Key features of the system include the generation of unique QR codes for each student, integration with a QR code scanner to automate attendance logging, and automatic generation of attendance reports. The SMS notification feature sends real-time messages to the registered parent or guardian, indicating the exact time the student entered and exited the classroom. The QR code scanning feature achieved a 95% success rate, with scanning errors occurring mostly due to damaged or low-quality QR codes. The SMS feature also showed a 95% success rate, with occasional delays attributed to network issues. The system significantly streamlined the attendance-taking process by automating and accelerating data recording. However, a noted limitation is its current implementation only supports Grade 1 and Grade 2 levels, where a single teacher handles all subjects. For future development, it is recommended to explore alternative technologies such as facial recognition, RFID, or biometric systems to further enhance functionality and scalability across all grade levels.

Keywords: student attendance, qr code, sms notification, automation, information systems, waterfall model, real-time monitoring, elementary education

**TRANSPORTATION NETWORK VEHICLE SERVICE HUMAN RESOURCE 2
(TRAINING DEVELOPMENT, PERFORMANCE MANAGEMENT,
RECRUITMENT AND AUTOMATED ONBOARDING)**

Samantha Felipe, John Christofer Lontoc, Richmon Salarda,
Guia Marie Jaradal, Raisen Vasquez, Sheryl Adovas

Abstract

The capstone project "Transportation Network Vehicle Service Human Resource 2" aimed to improve HR practices in the transportation sector by focusing on recruitment, training, performance management, and automated onboarding. The project identified key HR challenges in TNVS and implemented integrated solutions that enhanced employee satisfaction and operational efficiency, ultimately contributing to organizational growth and improvement. The study employs Agile Scrum methodology to enhance the development of the HR system through iterative and collaborative processes. Each sprint cycle addressed specific HR functions such as training dashboards, applicant portals, and automated tracking. Agile allowed the team to prioritize tasks, gather continuous feedback, and refine system functionality efficiently, ensuring effective HR transformation. The HR transformation framework implemented in TNVS organizations delivers measurable outcomes such as faster hiring, better training, and increased employee engagement and retention. Through automation and analytics, HR departments transition from administrative roles to strategic drivers of organizational success. This capstone illustrates how technology enhances HR efficiency, compliance, and employee experience in the transportation industry. It serves as a model for HR digital transformation in sectors with similar challenges, combining innovative architecture and user-focused design. The project contributes to HR tech literature and provides practical insights for educators, policymakers, and industry leaders aiming to modernize workforce systems.

Keywords: transportation industry, tnvs, hr digital transformation, technology integration, efficiency, compliance, employee experience, future-ready systems, user-centric design, hr tech, policymakers, educators, industry stakeholders.

VOICE CONTROL AIR HUMIDIFIER USING HC-06 FOR BARANGAY NOVA PROPER

John Christopher Cañada, Bilino Bimmolog, Dave Justin Dimasuhid,
Eman Lacorda, Jimmel Ponsica, Sir R-jay Pornasdoro

Abstract

In recent years, the demand for smart household appliances has skyrocketed due to increasing health consciousness, the pursuit of convenience, and the availability of innovative technology at affordable prices. Among these appliances, the air humidifier stands out for its ability to improve indoor air conditions, particularly in environments affected by dryness or pollution. In Barangay Nova Proper, where residents regularly face shifting weather conditions and inconsistent air quality, introducing a smart and easy-to-operate humidifier can provide significant benefits in terms of health protection and daily comfort. The Voice-Controlled Air Humidifier using the HC-06 Bluetooth module was developed through a structured process involving hardware integration, programming, and communication testing. The project commenced with meticulous planning and system design, followed by the acquisition of key components, including an Arduino Uno microcontroller, an HC-06 Bluetooth module, a relay module, a humidifier unit, a power supply, and a smartphone with voice command capabilities. The hardware setup involved connecting the HC-06 module to the Arduino Uno to enable wireless communication with the smartphone. A relay module was integrated to control the humidifier's power supply based on received commands. All components were securely mounted on a board to ensure indoor safety and operational stability. Programming was carried out using the Arduino IDE. The code was designed to read serial data from the Bluetooth module and execute the appropriate command to turn the humidifier on or off. A mobile application was used to capture voice input, convert it into text, and transmit the command via Bluetooth. The Bluetooth connection was optimized for a stable and uninterrupted link between the smartphone and the HC-06 module. Proper baud rate settings and successful pairing ensured smooth data transmission. The voice command system was tailored to recognize simple instructions such as "turn on humidifier" and "turn off humidifier," enabling hands-free control. The Voice-Controlled Air Humidifier, developed using the HC-06 Bluetooth module, was successfully tested in Barangay Nova Proper. It enables users to turn the humidifier on or off through voice commands from a distance of up to 15 meters via Arduino-powered Bluetooth connectivity. The Voice-Controlled Air Humidifier using the HC-06 Bluetooth module was designed for residents of Barangay Nova Proper, specifically to assist individuals with limited mobility by allowing hands-free operation.

Keywords: voice control, hc-06 bluetooth module, arduino uno, air humidifier, smart appliance, wireless control, assistive technology, hands-free device, barangay nova proper, home automation, mobility aid

**A WEB-BASED AND MOBILE APPLICATION VOTING SYSTEM WITH
STUDENT EVALUATION FOR SUPREME STUDENT COUNCIL OF
BESTLINK COLLEGE OF THE PHILIPPINES**

Hazel Lapso, Lesly Jan Cosares, Khadafi Rimbang, Nor-haima Satar,
Naizah Mariquit, Ronald Roldan Jr.

Abstract

The School Management System: A Web-Based and Mobile Voting System with Student Evaluation was designed to modernize the voting process and improve the collection of student feedback at Bestlink College of the Philippines. Existing manual methods were often inefficient, error-prone, and lacked adequate security, underscoring the need for a more dependable and accessible solution. This project introduces an integrated digital platform that enables both web-based and mobile voting, along with a student evaluation feature, streamlining participation, enhancing data accuracy, and supporting more informed decision-making for the institution. The system was developed using the Agile Scrum Methodology, allowing for iterative development and continuous user feedback throughout the project lifecycle. Flutter (Dart) was used for the mobile frontend, while PHP handled the backend API development, with MySQL serving as the database. Integration with the Registrar System API ensured seamless synchronization of user data across platforms. To safeguard user credentials, session-based authentication was implemented. Version control and team collaboration were managed through GitHub. The system was designed to be scalable, responsive, and capable of efficiently handling high traffic volumes. The system's implementation greatly improved voting efficiency, reduced manual errors, and increased student participation. The mobile application offered a convenient, user-friendly interface, allowing students to vote anytime and anywhere. Meanwhile, the web-based platform provided administrators with real-time monitoring and control. The student evaluation feature enabled the structured collection of feedback, supporting more informed academic and administrative decisions. Performance testing confirmed the system's ability to manage high traffic, ensuring accurate, real-time vote tallying and maintaining data integrity. The system enhanced the efficiency of the voting process, minimized human error, and increased student participation. The mobile application offered a convenient way for students to vote anytime and anywhere, while the web interface provided administrators with comprehensive control and real-time monitoring. The student evaluation feature enabled the collection of structured feedback, aiding faculty and staff in making data-driven decisions. Performance testing confirmed the system's capacity to manage high traffic volumes without compromising real-time vote tallying or data integrity.

Keywords: voting system, mobile application, web interface, student participation, real-time monitoring, student evaluation, feedback collection, performance testing, data integrity, system efficiency

**BTMS: ADMIN (WEB-BASED MANAGEMENT SYSTEM WITH DOCUMENTATION
WORKFLOW AUTOMATION AND OPERATIONAL STANDARDIZATION USING AI)**

Michael Angelo Pagadora, Mark Benedict Fuentes, Benzar Espinosa,
Raymond Lodronio, John Kenneth Boseo, Emerson Gelera

Abstract

The Bus Transport Management System: ADMIN (BTMS: ADMIN) is a web-based platform designed to tackle the increasing administrative complexities in bus transport operations. Traditional approaches such as manual documentation, paper visitor logs, and unintegrated scheduling, often lead to inefficiencies, delays, non-compliance with regulations, and human errors. BTMS: ADMIN leverages artificial intelligence to automate workflows, optimize scheduling, and ensure consistency across operational modules. By digitizing and standardizing key processes, the system enhances efficiency, accuracy, and transparency, enabling a more agile and future-ready transport administration. The development and evaluation of BTMS: ADMIN employed a mixed-methods research design, combining qualitative insights with quantitative performance data to create a robust, user-centered system. Following the Agile Scrum framework, the process prioritized flexibility, iterative development, and active stakeholder engagement. This approach enabled rapid prototyping, continuous feedback incorporation, and incremental improvements across development sprints. Each sprint targeted a specific functional module such as user role management, automated document workflows, reservation and scheduling, and legal case monitoring. After each sprint, functional demonstrations and structured usability tests were conducted to evaluate system performance and user experience, guiding further refinements. This iterative methodology ensured the system's evolution remained closely aligned with real-world operational needs, enhancing responsiveness, reliability, and scalability throughout the development lifecycle. The implementation of BTMS: ADMIN yielded broadly positive results, with success influenced by factors such as adoption rates, leadership engagement, and departmental infrastructure readiness. Departments demonstrating high implementation fidelity, marked by consistent system use, strong leadership support, and sufficient technical capacity, experienced the greatest improvements in administrative efficiency. In these units, processing times decreased by 40–50%, reflecting significant workflow optimization. A key contributor was the AI-driven document routing and approval system, which cut average document turnover from 36 hours to 18 hours, effectively doubling processing speed. Additionally, departments utilizing the AI-powered scheduling feature saw a 68% reduction in facility reservation conflicts, underscoring the system's effectiveness in optimizing resource allocation and reducing operational bottlenecks. These outcomes highlight that while BTMS: ADMIN offers substantial performance benefits, its success depends heavily on institutional readiness and ongoing stakeholder commitment. The BTMS: ADMIN initiative offers valuable insights into the convergence of technology, organizational behavior, and administrative management in the transportation sector. Although the system features advanced capabilities such as AI-driven automation and secure, role-based data access, technical sophistication alone did not ensure successful implementation. The most impactful outcomes occurred in departments where leadership actively championed the system, designated internal advocates to promote adoption, and implemented mechanisms for ongoing usage evaluation. This highlights a key lesson: the success of digital transformation relies not only on robust technology but also on proactive leadership, sustained user engagement, and an organizational culture that emphasizes accountability and continuous improvement.

Keywords: btms: admin, bus transport management, ai automation, administrative efficiency, scheduling optimization, agile scrum, mixed-methods research, user-centered design, document routing, role-based access, leadership engagement, digital transformation, o

**BUS TRANSPORTATION MANAGEMENT SYSTEM CORE II WITH
AI TICKETING SALES MANAGEMENT ANALYTICS**

John Michael Mandar, Ralph Miguel Vinluan, Runnen Joy Nierras,
Lyka Dumangas, April Ongonion, Emerson Gelera

Abstract

The public transportation sector faces ongoing challenges such as manual ticketing, fragmented passenger management, and a lack of real-time analytics, leading to delays and reduced customer satisfaction. To address these issues, the Bus Transportation Management System (BTMS) Core II was developed as an AI-driven platform integrating three key modules: Booking and Reservation, Passenger Information Management, and Ticketing Sales Analytics. By leveraging intelligent automation and data analytics, BTMS Core II improves operational accuracy, streamlines administrative workflows, enhances passenger experience, and enables data-driven strategic decisions in bus transport operations. The development of BTMS Core II followed an Agile Scrum methodology, progressing through four sprints focusing on UI/UX design, booking automation, passenger data processing, and sales analytics integration. Built on a microservices architecture with RESTful APIs, the platform supports independent management of modules such as ticketing, route planning, payment processing, and notifications. Embedded AI algorithms enable real-time travel pattern analysis, demand-based pricing, and seat occupancy forecasting. Stakeholder interviews, business process analyses, and rigorous requirements engineering ensure alignment with operational and regulatory needs. Comprehensive security measures including encrypted data protocols, role-based access controls, and incident response mechanisms, were implemented to safeguard data and maintain system resilience and compliance. The implementation of BTMS Core II significantly enhanced operational efficiency and customer satisfaction in public bus transport. Booking and reservation processes were accelerated, reducing wait times and manual effort. Centralized passenger data management enabled personalized, data-driven engagement, improving responsiveness. AI-powered analytics provided insights into ticketing trends, rider behavior, and route efficiency, supporting targeted marketing and resource optimization. Features such as real-time service updates, secure digital payments, intelligent routing streamlined operations, and minimized friction. Rigorous testing confirmed the system's scalability, robustness, and compliance with data privacy standards, positioning BTMS Core II as a reliable and future-ready solution for modernizing bus transport operations. BTMS Core II addresses persistent inefficiencies in bus transport operations by seamlessly integrating booking systems, passenger information management, and AI-driven analytics within a unified, intelligent architecture. The platform enables real-time, data-driven decision-making, enhances revenue tracking accuracy, and provides the scalability to meet changing urban mobility needs. Built on a microservices architecture and supported by automated DevOps pipelines, BTMS Core II ensures continuous integration, efficient deployment, and maintainability. This comprehensive integration marks a significant advancement toward smart, connected public transportation systems, delivering improved operational efficiency for providers and a faster, more reliable, and personalized experience for passengers.

Keywords: btms core ii, integrated booking system, passenger information management, ai analytics, unified architecture, real-time decision-making, revenue tracking, scalability, microservices, automated devops, continuous integration, smart public transportat

**BUS TRANSPORTATION MANAGEMENT SYSTEM HUMAN RESOURCES IV:
PAYROLL, PERFORMANCE MANAGEMENT, AND EMPLOYEE BENEFITS
WITH PREDICTIVE ANALYTICS USING AI**

Joshua Ifurung, Nikkie Jr. Cabarrubias, Elaine Celestino,
John Emer Madrid, Nicol Luzares, Emer Gelera

Abstract

BTMS HR IV introduces a pioneering framework for optimizing payroll management, employee performance evaluation, and benefits administration, specifically tailored for the transportation sector. In an era characterized by rapid change and increasing operational demands, many transport businesses continue to grapple with outdated, manual procedures marked by paper-based payroll processing, inconsistent performance appraisals, and ineffective benefits administration. These traditional approaches are not only resource-intensive but also prone to errors and delays, which can lead to employee dissatisfaction, decreased morale, and financial imbalances that jeopardize the organization's overall operational health and sustainability. The methodology employed in the development and deployment of BTMS HR IV follows a structured, iterative framework centered on the seamless integration of AI-powered predictive analytics within conventional human resource functions. The primary aim was to engineer a holistic system capable of automating payroll processing while concurrently managing employee benefits and conducting performance evaluations with greater accuracy and efficiency. This approach combined both qualitative and quantitative research methods to comprehensively capture the nuanced needs and challenges faced by the transportation sector, ensuring that the resulting system is both adaptable and responsive to industry dynamics. Through continuous feedback loops and iterative refinement, the methodology emphasized a user-centric, data-driven design philosophy that supports sustainable HR operational excellence. The deployment of BTMS HR IV yielded compelling results, highlighting the transformative effect of embedding AI-powered predictive analytics into human resource workflows. The project's initial phase focused on the comprehensive integration of three pivotal modules: payroll processing, performance management, and benefits administration. Rigorous testing revealed a significant enhancement in payroll accuracy, coupled with a notable reduction in processing times. Compared to legacy manual systems, the automated platform decreased payroll errors by more than 40%, fostering heightened employee confidence and satisfaction. These improvements underscore the system's potential to streamline HR operations while reinforcing workforce engagement and organizational trust. The outcomes of the BTMS HR IV project underscore the profound impact of integrating AI-driven predictive analytics into human resource management. The marked enhancements in payroll accuracy, performance appraisal, and benefits administration highlight the imperative for digital innovation within traditional manual HR frameworks. By automating complex payroll calculations and optimizing benefits tracking, the system significantly reduces processing time and administrative overhead, ultimately fostering greater employee satisfaction and reinforcing organizational effectiveness. This project exemplifies how technological advancement can drive meaningful transformation in HR operations within the transport sector.

Keywords: ai-driven predictive analytics, human resource management, payroll automation, performance evaluation, benefits administration, digital transformation, btms hr iv, transport sector, employee satisfaction, and administrative efficiency.

**BUS TRANSPORTATION MANAGEMENT SYSTEM LOGISTIC I: DEVELOPING
EFFICIENT INVENTORY AND WAREHOUSE MANAGEMENT,
AUDIT MANAGEMENT, AND INFRASTRUCTURE
MAINTENANCE USING REVERSE LOGISTICS**

Ricardo Aron III, John Vincent Dizon, Kent Mark Tejada,
Kristel Casinillo, Andy Barrantes, Emerson Gelera

Abstract

Provincial bus transportation companies often rely on outdated legacy systems that are inadequate for managing inventory, conducting warehouse audits, and addressing location-specific material demands. These limitations lead to stock inconsistencies, delayed resource allocation, and operational inefficiencies that hinder overall productivity. This study introduces the Bus Transportation Management System (BTMS) Logistic I, a web-based logistics platform developed to address these challenges. The system includes robust modules for inventory management, audit tracking, infrastructure maintenance, and AI-powered demand forecasting and analytics. Developed using Agile methodologies and continuous deployment pipelines, and built on microservices architecture, BTMS Logistic I ensures modularity, scalability, and enhanced operational efficiency, catering specifically to the complex logistics requirements of provincial bus transport operations. The system was developed using the Agile Scrum methodology, which emphasizes iterative planning, continuous stakeholder feedback, and frequent incremental releases to ensure that the solution aligns with user needs and project objectives. The development process began with an in-depth analysis of the logistical challenges faced by provincial bus transport companies, particularly those related to inventory management and audit procedures. A multidisciplinary team composed of software developers, logistics experts, and operational stakeholders collaborated to define and design the system's core functionalities. Key modules such as Inventory Management, Inventory Audit, and Infrastructure Maintenance for material requisitions were developed as independent microservices, interconnected through standardized RESTful APIs. This modular architecture enhances the system's scalability, flexibility, and integration capabilities within complex logistical environments. The Inventory Management module provides real-time, granular visibility and precise control over stock levels across multiple facilities, significantly improving inventory accuracy and operational responsiveness. The Audit Management module implements strict stock verification protocols to ensure adherence to regulatory standards and internal control policies. Acting as a centralized interface, the Infrastructure Maintenance module streamlines material requisition workflows, enabling depots and terminals to efficiently submit, track, and manage requests. Additionally, the system integrates reverse logistics functionality, optimizing the management of returned and recyclable materials, and reinforcing the organization's commitment to environmental sustainability. Collectively, these interconnected modules enhance inventory precision, accelerate material distribution, and minimize manual processes, resulting in substantial gains in overall logistics efficiency. By addressing the limitations of traditional workflows, BTMS Logistic I significantly improves data accuracy, streamlines resource allocation, and promotes sustainable operational practices. Its modular architecture enables independent maintenance and effortless scalability of each system component, ensuring adaptability to the dynamic needs of the organization. The findings demonstrate that a well-designed logistics platform can substantially enhance operational efficiency, increase transparency, and improve responsiveness, empowering transportation enterprises to effectively manage and overcome complex logistical challenges.

Keywords: btms logistic i, logistics system, inventory management, audit management, infrastructure maintenance, reverse logistics, modular design, microservices architecture, agile scrum, data accuracy, resource allocation, sustainability, operational efficie

**BUS TRANSPORTATION MANAGEMENT SYSTEM LOGISTIC II: PROCUREMENT
MANAGEMENT WITH AI DRIVEN VENDOR TRANSIT**

Maikiru Baclason, Joshua Belza, Alexandria Valenzuela,
Monica Pornelos, Quinly Kaye Eralino, Emerson Gelera

Abstract

In the dynamic public transportation sector, persistent procurement inefficiencies such as fragmented vendor coordination, sourcing delays, and lack of transparency continue to undermine operational effectiveness. Farinas Transit Inc., a leading bus operator in the Philippines, regularly confronts these challenges. This study proposes an AI-driven Bus Transportation Management System designed to streamline procurement by implementing a centralized Vendor Transit Portal. This solution aims to enhance vendor collaboration, accelerate sourcing processes, and improve transparency, ultimately driving greater efficiency and reliability in operations. The system was developed using the Agile Scrum methodology, employing iterative sprints, comprehensive sprint planning, and regular sprint reviews. Continuous collaboration between stakeholders and development teams enabled adaptive planning and seamless integration of microservices architecture, DevOps pipelines, and TOGAF enterprise architecture principles. This approach resulted in a system that automates procurement workflows, facilitates real-time tracking, optimizes vendor selection, and delivers insightful performance analytics to support data-driven decision-making. The AI-integrated portal successfully automated critical procurement functions, including order generation, bidding, inventory alerts, and supplier evaluation. It features real-time dashboards for comprehensive vendor performance monitoring and up-to-date order status visibility. Integration with existing systems ensured seamless synchronization of inventory and procurement data. This solution markedly reduced manual errors, shortened procurement cycles, and enhanced communication and collaboration between procurement teams and vendors, thereby driving overall operational efficiency. The project demonstrated that integrating AI into procurement processes can significantly minimize operational delays, strengthen vendor accountability, and facilitate predictive analytics for enhanced strategic planning. The centralized platform fostered greater transparency, ensured regulatory compliance, and improved overall service quality. Key insights underscored the vital importance of continuous stakeholder engagement throughout agile development cycles and revealed the portal's strong potential for scalability across diverse transportation networks and logistics industries.

Keywords: bus transportation management system, ai-driven procurement, vendor coordination, centralized vendor portal, procurement optimization, public transportation efficiency, operational improvement, farinas transit inc., sourcing delays, transparency in p

**BUS TRANSPORTATION MANAGEMENT SYSTEM: HUMAN RESOURCE 1:
(CANDIDATE SCREENING, RECRUITMENT, APPLICANT MANAGEMENT AND NEW
HIRE ONBOARDING) WITH INTELLIGENT RESUME PARSING TOOL**

John Julius Lucaban, Mark Kian Ancheta, Vejay Sam Cayanan,
Russel Lacandula, Jhon Lloyd Tao, Emerson Gelera

Abstract

In today's highly competitive transportation industry, human resource departments face the daunting task of efficiently managing large volumes of job applicants while ensuring timely, compliant, and high-quality hiring decisions. Conventional recruitment processes often lack the efficiency and precision needed to accurately identify the best candidates. To overcome these challenges, we recommend implementing the Bus Transportation Management System: Human Resource 1 (BTMS-HR1), which integrates candidate screening, recruitment, applicant management, and new hire onboarding with an advanced Intelligent Resume Parsing Tool. By harnessing AI capabilities, this system automates and streamlines the hiring workflow, effectively scanning resumes for relevant keywords, skills, and qualifications, thereby enabling HR teams to expedite candidate evaluation with greater accuracy and consistency. The development of BTMS-HR1 followed an Agile methodology, structured into distinct phases to ensure efficient project execution. It commenced with the concept phase, where the product owner defined the project scope and objectives. Subsequently, the product owner and project manager evaluated the development team's capacity and resource readiness to guarantee that the appropriate personnel and tools were allocated. The project then progressed to the construction phase, encompassing the core development activities. During this phase, the team maintained continuous collaboration and promptly resolved any issues to ensure uninterrupted progress. Finally, the system entered the release phase, undergoing comprehensive testing to validate its functionality and performance prior to deployment. BTMS-HR1 transformed HR operations in the transportation sector by leveraging AI-driven resume parsing to drastically reduce manual screening time and enhance candidate shortlisting accuracy. The system streamlined applicant tracking and onboarding workflows, resulting in faster, more organized, and responsive processes. By enabling HR teams to efficiently handle high volumes of applications, BTMS-HR1 significantly increased productivity, minimized errors, and ensured strict adherence to compliance standards. BTMS-HR1 revolutionizes HR operations in bus transportation organizations by harnessing intelligent data extraction and centralized processing to streamline recruitment processes. This system significantly accelerates hiring while improving precision and scalability. Through AI-powered candidate screening, HR teams are empowered to efficiently manage high-volume hiring demands, ensuring consistent quality and strict adherence to compliance standards.

Keywords: bus transportation management system (btms), human resource management, candidate screening, recruitment process, applicant tracking system (ats), new hire onboarding, intelligent resume parsing, automated resume analysis, keyword extraction

**BUS TRANSPORTATION MANAGEMENT SYSTEM: HUMAN RESOURCES II
COMPETENCY, LEARNING, AND TRAINING MANAGEMENT WITH
AUTOMATED FEEDBACK ANALYSIS USING
NATURAL LANGUAGE PROCESSING**

Christian Loberiano, EJ Delos Reyes, Aaron Gabriel Cañete,
Via Geslani, Jhona Buenaventura

Abstract

As the transportation industry expands, there is a growing demand for solutions that improve operational efficiency, reliability, and adaptability in a dynamic market. This study investigates the integration of Natural Language Processing (NLP) into the HR II module, focusing on competency assessment, learning, and training management. Traditional approaches often face challenges in analyzing vast amounts of qualitative data derived from training sessions and performance evaluations. To overcome these limitations, this research proposes an automated NLP-driven method to extract actionable insights from textual data, enabling more accurate, efficient, and data-informed decision-making in employee development and performance management. This research adopts a mixed-methods approach, combining quantitative analysis of HR metrics with qualitative insights extracted through automated Natural Language Processing (NLP) techniques applied to textual feedback. Textual data are gathered from multiple HR processes, including open-ended responses from post-training surveys and performance review comments provided by supervisors and employees. Sentiment analysis is conducted to determine the emotional tone, positive, negative, or neutral, expressed in feedback related to employee performance, competencies, and training effectiveness. Additionally, topic modeling is utilized to identify key themes and topics embedded within the qualitative data. A subset of the collected data serves as training and validation sets for the selected NLP models, with evaluation metrics tailored to the specific analytical tasks to ensure model effectiveness and accuracy. The deployment of an automated feedback analysis system powered by Natural Language Processing (NLP) within the HR II competency, learning, and training management framework is projected to significantly enhance operational efficiency and effectiveness. Beyond measurable quantitative improvements, the system will provide profound qualitative insights by interpreting complex employee feedback, thereby empowering HR professionals to formulate more precise, data-driven strategies that drive meaningful improvements in workforce development and organizational performance. The integration of automated feedback analysis powered by Natural Language Processing (NLP) offers a profound opportunity to revolutionize HR II competency, learning, and training management. While challenges such as data quality, contextual nuances, and system implementation demand careful mitigation, the potential to significantly enhance operational efficiency, extract deeper actionable insights, and foster more informed, data-driven decision-making is substantial. Realizing these benefits requires a deliberate and strategic approach that seamlessly blends cutting-edge technological innovation with the critical judgment and expertise of HR professionals, ensuring the solution is both effective and contextually relevant.

Keywords: automated feedback analysis, natural language processing (nlp), hr competency management, learning and training management, data quality, contextual understanding, implementation challenges, operational efficiency, insight generation, data-d

**BUS TRANSPORTATION MANAGEMENT SYSTEM: IMPROVING TRANSPORTATION
ACCURACY USING AI WITH AUTOMATION OF GENERAL LEDGER.**

Marvel Dulcero, Ronnie Crinan, Ryan Edaña, George Mckentosh Soriano,
Emerson Gelera

Abstract

Our capstone project introduces the Bus Transportation Management System, a cutting-edge solution designed to transform financial management in the bus transportation industry. By seamlessly integrating artificial intelligence (AI) and automation technologies, the system enhances transaction accuracy, automates comprehensive record-keeping, and delivers real-time data analytics to support strategic decision-making. This innovative platform aims to significantly reduce operational costs, eliminate human errors, and boost financial transparency, ultimately driving higher efficiency, profitability, and sustainable growth for transportation businesses. The development process embraced an agile, sprint-based methodology to enable rapid iterations and continuous refinement. Each sprint focused on targeted deliverables, including the integration of automated reporting and advanced anomaly detection tools that meticulously analyze financial transactions to uncover inconsistencies and enhance data integrity. By automating critical ledger functions such as transaction recording, adjustment, and reconciliation, the system leverages AI-powered validation to significantly reduce errors and discrepancies. Additionally, it seamlessly integrates with existing transportation platforms, providing a cohesive and streamlined financial tracking framework that enhances operational efficiency. The deployment of the AI-powered Bus Transportation Management System has profoundly elevated financial accuracy and operational efficiency across transportation firms. Leveraging sophisticated machine learning algorithms, the system continuously monitors and detects anomalies within transactions, safeguarding the integrity and consistency of financial records. By automating routine and complex financial tasks, it significantly reduces manual intervention, streamlines workflows, and mitigates human error. Furthermore, AI-driven predictive analytics equip decision-makers with actionable financial forecasts, enabling proactive identification of growth opportunities and strategic planning. Enhanced interdepartmental collaboration is facilitated through secure, transparent workflows, minimizing risks related to unauthorized access and fraud. Collectively, these capabilities drive substantial cost reductions and strengthen financial governance, positioning transportation companies for sustainable success. AI and automation have markedly improved the precision and efficiency of financial transactions within the system. By automating ledger management and transaction verification, the platform minimizes errors and elevates operational productivity, empowering operators to focus on strategic financial insights and data-driven decision-making. However, challenges such as seamless data integration, initial deployment costs, and evolving cybersecurity threats must be proactively addressed to maximize system effectiveness. Future enhancements are expected to include the deployment of advanced AI models, increased system flexibility, and fortified security protocols to counter emerging risks. Overall, this system establishes a resilient framework that promotes sustainable financial management and growth in the transportation sector.

Keywords: ai in transportation finance, automated ledger management, financial transaction accuracy, operational efficiency, transaction verification automation, data integration challenges, cybersecurity risks, predictive financial analytics, system scalability

**BUS TRANSPORTATION MANAGEMENT SYSTEM: CORE TRANSACTION 1
(INTEGRATED OPERATIONAL MANAGEMENT SYSTEM FOR PROVINCIAL
BUSES THROUGH ROUTE SCHEDULING, FLEET MONITORING,
AND REAL-TIME-DATA INTEGRATION)**

Robert Zimon De Jesus, Janssen Cloyd Pidlaoan, Dianne Dorol,
Maria Cristina Intero, Mariel Fadrogane, Emerson Gelera

Abstract

The escalating demand for efficient and dependable public transportation in provincial areas has emphasized the necessity for a modernized, streamlined approach to bus operation management. To meet these challenges, we propose an Integrated Operational Management System specifically engineered for provincial bus services. This system aims to optimize route scheduling, bolster fleet monitoring capabilities, and facilitate seamless real-time data integration, thereby enhancing overall operational efficiency and service reliability. The system was engineered using modular and scalable web-based architecture, leveraging PHP (Laravel), MySQL, and JavaScript alongside Tailwind CSS to provide a responsive and user-friendly interface. At its core, a centralized database efficiently manages critical data, including routes, buses, drivers, and trip schedules. Real-time bus tracking is achieved through GPS integration with mobile devices, delivering continuous location updates. The route scheduling module enables administrators to seamlessly create, update, and assign routes with precise time slots and bus allocations. Additionally, fleet monitoring is supported by a dynamic live dashboard that presents real-time statuses, active, idle, or off-duty, of all buses, with automatic data synchronization occurring every few seconds to ensure timely and accurate operational insights. The deployment of the system yielded significant improvements in operational efficiency across all facets of bus management. The route scheduling module optimized daily dispatch operations by eliminating route overlaps and maximizing fleet utilization. Real-time data integration empowered decision-makers with critical insights, including average trip durations, bus utilization metrics, and comprehensive driver performance evaluations. Additionally, the fleet monitoring feature provided instant visibility into delays and service disruptions, enabling rapid administrative responses that minimized downtime and enhanced overall service reliability. The system clearly demonstrates that the seamless integration of route scheduling, fleet monitoring, and real-time data analytics not only enhances operational efficiency but also lays a solid groundwork for advanced future capabilities such as predictive maintenance and passenger experience tracking. As a scalable and adaptable platform, this solution equips provincial transport companies with the tools necessary to modernize their operations, optimize service delivery, and stay competitive in an evolving transportation landscape.

Keywords: integrated operational management, route scheduling optimization, fleet monitoring systems, real-time data analytics, predictive maintenance, passenger tracking, scalable transportation solutions, provincial bus services, transportation modernization

**CHEM-BOT; A CHEMISTRY SIMULATION AND LEARNING
APPLICATION FOR INTERMEDIATE LEARNERS**

Jayson Doza, Monica Jhenna Rimando, Jontric Velasco, Jossa Ensipido,
Jossa Ensipido, Ronelyn Prias, Carlito Gabriel

Abstract

This study addresses challenges faced by intermediate learners in chemistry, where access to laboratory reagents can be limited by cost, regulation, or availability. It presents Chem-Bot, a simulation and learning application designed to enhance understanding of chemical reactions without the need for physical equipment or chemicals. Chem-Bot allows users to combine virtual reagents and observe reaction outcomes, while providing step-by-step explanations of underlying principles to support conceptual mastery. This study employs a quantitative descriptive design with purposive sampling to evaluate Chem-Bot's acceptability among target users. Two respondent groups, information technology experts and chemistry teachers, completed a structured survey questionnaire that assessed game interface, user experience, learning-progress tracking, reliability, and presentation. Independent t-tests were used to compare mean acceptability scores between groups and determine the presence of any significant differences. Both respondent groups rated Chem-Bot as highly acceptable across all evaluation criteria. IT experts yielded an overall weighted mean of 3.75 (variance = 0.027), and chemistry teachers yielded 3.50 (variance = 0.096). Independent t-tests produced computed t-values of 1.631, which were below the critical value of 1.988 at $\alpha = 0.05$, indicating no significant difference between the two groups' assessments. The findings indicated strong endorsement of Chem-Bot's design and educational value by both technical and subject-matter experts. Recommended enhancements included improving graphics and equipment visibility, expanding the library of virtual experiments, optimizing performance for mobile devices, and simplifying explanations to support student comprehension. These refinements were expected to further increase user engagement and learning effectiveness.

Keywords: chemistry simulation, learning application, intermediate learners, user acceptability, educational technology, chem-bot

**COMPREHENSIVE TALENT ACQUISITION OF SERVICE MANAGEMENT SYSTEM
(RECRUITMENT, APPLICANT MANAGEMENT, NEW HIRE ONBOARD,
PERFORMANCE MANAGEMENT, RECOGNITION)**

Mark Loyd Manibale, Evan Joshua Boneo, Remark Jay Penequito,
John Lloyd Hinagpisan, Jeffrey Escalante, Enrico Pineda

Abstract

This study develops a comprehensive talent acquisition system to address modern recruitment challenges in service management. The system is designed to streamline job posting, applicant tracking, new-hire onboarding, performance management, and employee recognition. By offering a fast, efficient, and user-friendly interface, this system aims to expand candidate reach and improve HR workflow. This project employs Agile Scrum methodology to guide system development. Work is organized into sprints lasting one to two weeks, each targeting specific modules such as job posting features, applicant management, onboarding workflows, performance tracking, or recognition tools. Sprint planning meetings determine objectives, and daily stand-up meetings monitor progress, outline upcoming tasks, and resolve emerging issues. Sprint reviews and retrospectives ensure continual refinement based on stakeholder feedback. Each sprint produced a functional component that was rigorously reviewed, tested, and refined. The Agile Scrum process facilitated regular updates and rapid adjustments in response to feedback, resulting in incremental improvements across all system modules. Key deliverables: job posting interface, applicant tracking dashboard, onboarding workflows, performance metrics module, and recognition features, were successfully implemented and validated. The Agile Scrum approach proved effective in maintaining flexibility and responsiveness throughout development. Regular sprint ceremonies enabled real-time enhancements to design and functionality based on mentor and test-user input. Coordination challenges emerged during module integration, but clear communication and collaborative sprint sessions addressed these issues efficiently. Overall, the methodology supported iterative progress and ensured that the final system met user requirements.

Keywords: talent acquisition, agile scrum, recruitment system, applicant tracking, onboarding, performance management, employee recognition.

**COMPUTER SKILL ASSESSMENT OF GRADE 12 STUDENTS IN BESTLINK COLLEGE
OF THE PHILIPPINES - BULACAN CAMPUS IN ONLINE CREATION TOOLS:
A COMPARATIVE ANALYSIS**

Lhance Owen Borje, John Raven De Castro, John Lloid Del Rio,
Daliah Del Rio, Rica Resus, Ahlen Lamida

Abstract

In the 21st century, digital literacy is a foundational skill necessary not just to achieve academic success but also to navigate the challenges of a fast-changing global work environment. The ability to efficiently use computer technology and web-based creation tools is no longer an added value but a basic prerequisite for those wanting to engage fully with contemporary society. This is especially true for students intending to pursue further education or professional careers. This study focuses on evaluating the computer skills of Grade 12 students, specifically in using online creation tools such as Google Docs, Google Forms, and Google Spreadsheets. In response to the growing importance of digital competencies in academic and professional settings, the research assessed students' strengths, weaknesses, and skill gaps through structured quantitative methods, including surveys and comparative analysis across various demographic and academic groups. The findings aim to inform educators about current proficiency levels, identify influencing factors such as access and prior experience, and suggest strategies for integrating digital tools effectively into the curriculum. By enhancing students' digital literacy and creativity, the study contributes to preparing learners for the demands of a technology-driven society and supports the development of equitable, evidence-based educational interventions.

Keywords: digital literacy; computer skills

**CRANE AND TRUCKING RENTAL MANAGEMENT SYSTEM: DISPATCH
MANAGEMENT, INVENTORY MANAGEMENT, REPORTING AND ANALYTICS WITH
MOBILE ACCESS**

Andrei Lauren Gumahad, Isaac Chustine Briñas, John Cleford Concan,
MJ Bhoy Eugenio, Jobert Jason, Khristian Hoseña

Abstract

The crane and trucking rental industry play a vital role in construction and logistics. However, many companies rely on manual processes for dispatching, inventory tracking, and reporting, which leads to inefficiencies, delays, and poor resource visibility. The absence of integrated digital systems tailored for heavy equipment rental operations has created operational bottlenecks, including a lack of real-time scheduling tools, inaccurate inventory updates, and limited mobile access. This study aims to develop a Crane and Trucking Rental Management System that improves dispatch efficiency, ensures accurate inventory monitoring, and provides real-time reporting via web and mobile interfaces. The system is developed using Agile methodology, incorporating iterative sprints and stakeholder feedback. It is built with modern web technologies for the desktop version and Flutter for the mobile application. Development focuses on four core modules: Dispatch Management, Inventory Management, Reporting and Analytics, and Mobile Access. Functional testing and user acceptance testing are conducted with actual rental operations to ensure real-world applicability. Each module is tested against user stories and backlog items outlined in the product documentation. The system demonstrated significant improvements in operational efficiency. Dispatch scheduling was automated with real-time availability checks, reducing scheduling conflicts by 85 percent. Inventory status updates were synced across platforms, minimizing errors caused by double booking or outdated information. The Reporting and Analytics module provided management with data-driven insights, improving decision-making speed and accuracy. Mobile access enabled on-site personnel to update records directly, reducing delays in information flow. The study highlighted how digital transformation can enhance the performance of traditional rental businesses. By automating key workflows and ensuring access to real-time information, the system bridged the gap between administrative offices and field operations. While the system performed well during initial testing, future research may explore integration with GPS tracking, financial management systems, and predictive maintenance analytics. Additionally, scaling the system to support multiple branches or franchises could further increase its commercial viability. This project presented a scalable and practical solution for modernizing cranes and trucking rental operations.

Keywords: dispatch management, inventory management, reporting and analytics, mobile access, rental management system, digital transformation in logistics

**CRANE AND TRUCKING RENTAL MANAGEMENT SYSTEM: HUMAN RESOURCES II:
(PERFORMANCE MANAGEMENT, INTEGRATION, AND AUTOMATION, BENEFITS
MANAGEMENT, PAYROLL AND COMPENSATION, COMPLIANCE AND REPORTING)
COMPENSATION EQUITY ANALYTICS USING H2O.AI**

Aldrin Arabia, Kenneth Engayas, Alfaro Bangon, Francis Paloma,
Keneth Tillerba, Khristian Hoseña

Abstract

Guzent Inc., a crane and trucking rental company, faces growing challenges in human resource management as operations expand. Manual HR processes, inconsistent performance evaluations, and lack of compensation equity create inefficiencies and risk employee dissatisfaction. This study aims to address these issues by developing and implementing an integrated Human Resource Management System called Crane and Trucking Rental Management System: Human Resources II that focuses on automation, fairness, and scalability. This study employs Agile Scrum methodology, enabling iterative development through sprint cycles with roles such as Scrum Master and Product Owner. Requirements are gathered through consultations with HR personnel and industry stakeholders. The system is developed using PHP and MySQL for backend processing and database management and HTML, CSS, and JavaScript for interface design and interactivity. Deployment is on a secure Indefinite Webhosting server. Key features include automated payroll computation, employee performance tracking, benefits management, compliance monitoring, and compensation equity analytics using H2O.AI. Role-based access control and a user-friendly dashboard ensure ease of use for managers and employees. The implemented system automated major HR processes, significantly reducing manual workload, errors, and delays. Payroll, benefits processing, and compliance reporting were streamlined, improving accuracy and operational speed. The integration of H2O.AI enabled real-time compensation equity analysis, supporting fairer and more transparent salary decisions. The system's interface and access controls facilitated secure, efficient use across departments, while its web-based deployment ensured centralized reporting and 24/7 availability. This study contributed to Guzent Inc.'s digital transformation by providing a scalable and intelligent HR solution. It improved overall HR efficiency, promoted data-driven decision-making, and enhanced employee engagement through performance transparency and compensation fairness. The system demonstrated the value of integrating machine learning into HR information systems, offering practical solutions to industry challenges. Future research may explore integration with GPS tracking, financial management systems, and predictive maintenance analytics. Scaling the system to support multiple branches or franchises could further increase commercial viability.

Keywords: hris, h2o.ai, payroll automation, compensation equity, agile scrum, trucking rental, crane operations, hr automation, compliance reporting, digital transformation, hr dashboard

DATA RECORD INVENTORY SYSTEM FOR TOP G WATCH

Jake Aldred Sevilla, Roi Apolinario, Jasmin Bernadeth Barcenas, Shanlee Bautista,
Jheovix Dianmar Ahmad Valdeavilla, John Christopher Velarde, R-jay Pornasodoro

Abstract

This study presents the development of an inventory system specifically designed to manage product information for Top G Watch, a small business established on January 15, 2025, located at 28 Katipunan Avenue, San Bartolome, Novaliches, Quezon City. The system aims to assist the shop in organizing and monitoring product data more efficiently by transitioning from traditional manual methods to a digital inventory system. The main challenge addressed in this study is the business's reliance on paper-based processes for recording product details, which often leads to inefficiencies and errors. The researchers adopted the Systems Development Life Cycle (SDLC) Waterfall model to guide the creation of the inventory system. This model consists of seven sequential phases: Planning, Analysis, Design, Development, Testing, Implementation, and Maintenance. Each stage was followed systematically to ensure that the system was built according to structured and organized development practices. The developed system successfully supported the shop owners in managing their product inventory. It features product management tools, record tracking, archiving functions, and a search field to streamline the tracking and updating of inventory items. The implementation of the system significantly reduced the need for manual recording and enhanced operational efficiency. Manual inventory recording posed several challenges for Top G Watch, including disorganization and delayed updates. In response, the researchers developed a user-friendly system tailored to the needs of the business. The system's functionality addresses operational inefficiencies by providing a reliable and efficient way to manage inventory data. Its ease of use ensures that the shop can maintain accurate records while minimizing confusion and improving daily processes.

Keywords: inventory system, data management, small business, sdlc waterfall model, product tracking, manual to digital transition, top g watch, business efficiency

DEVELOPMENT OF AN INFORMATION SYSTEM FOR DOcVAPE

Arcel Zamora, Shaira May Lagamson, Rexes Lusanta Jr, Marc Lester Maglalang,
Jake Kent Romanca, R-jay Pornasdoro

Abstract

This study focuses on the development of an information system for DocVape, a vape store established in 2016, to enhance the management of product information, sales, inventory, and transaction reports. The system aims to address the operational challenges currently faced by the business by offering a centralized platform for automating and streamlining customer records, inventory tracking, and report generation. The project followed the Waterfall Model, a structured development methodology consisting of requirements gathering, system design, development, testing, deployment, and maintenance. The system was developed using Java (NetBeans) for application logic, MySQL for database management, and XAMPP as the server environment. This combination ensured system reliability and efficient data handling. Upon completion and deployment, the DocVape information system significantly improved workflow efficiency and accuracy. Key features include automated inventory and sales management, real-time product stock monitoring, and graphical representation of best-selling products. The system also supports CRUD operations, email notifications, and PDF export capabilities for receipts and reports. A built-in print setup facilitated seamless report generation and distribution. A password reset feature with OTP verification via email was also integrated to enhance security. The implementation of the DocVape information system resulted in enhanced data accuracy and operational productivity. The systematic development process and use of robust technologies contributed to a reliable and efficient platform. Automation of tasks such as inventory tracking, report generation, and receipt handling minimized manual data entry and improved overall workflow. Additionally, features like user account management and password recovery improved system accessibility and security. Future enhancements may include integration with external business platforms, advanced data analytics, and interactive dashboard features to support informed decision-making and scalable growth.

Keywords: information system, inventory management, sales automation, java, mysql, xampp, report generation, business efficiency, waterfall model, vape store system

**E-COMMERCE CORE TRANSACTION 3: CONTENT MANAGEMENT
WITH CUSTOMER BEHAVIOR AND TRENDS ANALYTICS**

Ken Jayson Delantar, Joemarc Barcia, Jude Barbero, Stephen Mark Junior Aquino, Alejandro Adovas

Abstract

This capstone project will develop an adaptive e-commerce platform using the Agile Scrum methodology. Scrum is a flexible, iterative approach that divides the development process into two-week sprints, allowing the team to focus on delivering specific features within each cycle. Key components, such as the product catalog, user interface, and recommendation system, will be developed incrementally. At the end of each sprint, a working and testable version of the platform will be presented, encouraging regular feedback and continuous enhancement. This method fosters collaboration, responsiveness to change, and ensures that the final product effectively meets user needs. Each sprint is structured around well-defined tasks, enabling the team to make steady progress through focused development cycles. Daily stand-up meetings support ongoing communication, allowing members to provide updates, address challenges, and align on next steps. This encourages a collaborative and transparent work environment that fosters quick issue resolution. At the end of every sprint, the team conducts a review and retrospective to evaluate progress, gather insights, and refine plans for upcoming sprints. The Scrum framework is ideal for developing our adaptive e-commerce platform, as it offers the flexibility to accommodate shifting user needs and market conditions. By prioritizing high-value features and integrating continuous stakeholder feedback, we ensure the platform remains aligned with user expectations and project objectives. This iterative, user-centered approach enables us to deliver reliable, high-quality outcomes while remaining responsive and agile throughout the development lifecycle. The implementation of the Scrum methodology allowed the team to systematically build a robust, user-centric e-commerce platform by integrating key features such as secure user authentication, intuitive product browsing, real-time inventory management, and a seamless checkout process. Regular sprint reviews were instrumental in identifying and addressing issues early in the development cycle, leading to improved platform stability, performance, and user experience. The incremental delivery model ensured that each module was thoroughly tested, validated, and optimized before being integrated into the broader system. This approach reduced the need for rework, sustained development momentum, and supported continuous adaptation in response to feedback and evolving project requirements. Adopting the Scrum framework allowed the team to remain agile and responsive to ongoing feedback from mentors and end users. This iterative methodology strengthened collaboration, reinforced individual accountability, and deepened the team's understanding of practical project management principles. Complex challenges such as integrating independently developed modules were effectively managed through structured sprint planning, collaborative problem-solving, and regular review sessions. These practices ensured team alignment and enabled timely adjustments throughout the development process. Overall, the project demonstrated the effectiveness of Agile Scrum not only in professional software environments but also in academic capstone settings. Its flexibility, transparency, and focus on continuous improvement proved especially valuable in addressing the evolving demands of e-commerce platform development.

Keywords: agile scrum, e-commerce platform, iterative development, project management, team collaboration, sprint planning, feedback integration, modular integration, continuous improvement, capstone project

**E-COMMERCE FINANCE MANAGEMENT SYSTEM: BUDGET
MANAGEMENT, ACCOUNTS PAYABLE AND ACCOUNTS RECEIVABLE,
COLLECTION, GENERAL LEDGER WITH AUTOMATED PAYMENT REMINDER
SYSTEM**

Ruzzel Serafica, Ninio Melendres, Ira Rafael Gabayeron, Axcel Clarence Calvez,
Jevenry Montilla, Alejandro Adovas

Abstract

With the rapid growth of digital commerce, businesses are facing increasing complexity in managing financial operations effectively. Traditional financial management practices, which often depend on manual processes, are susceptible to errors, processing delays, and elevated operational costs. In today's fast-paced and data-driven environment, the need for automation in financial workflows has become imperative to ensure accuracy, security, and operational efficiency. This research presents the design and development of an automated financial management system aimed at streamlining core financial activities, including budgeting, payment processing, accounts payable and receivable, and collection management. The system integrates features such as automated payment reminders to facilitate timely transactions and maintain a healthy cash flow, ultimately improving financial oversight and organizational performance. The development and implementation of the system were guided by the Agile methodology, encompassing all key phases: planning, design, development, testing, and deployment. The workflow was structured into time-boxed sprints, enabling the Scrum team to manage tasks efficiently and iteratively enhance system functionality. This approach facilitated continuous feedback integration, faster issue resolution, and incremental progress toward a stable final product. The system features real-time monitoring capabilities, allowing users to track cash flow, schedule payments, and manage financial records seamlessly. Additionally, a user-centric design approach was adopted to ensure the platform is intuitive and accessible to both financial professionals and business owners, promoting ease of use and broad adoption across varying levels of technical expertise. The implementation of the financial management system yielded significant enhancements in operational efficiency and accuracy. Automated workflows effectively eliminated the need for manual data entry, reducing the risk of human error and improving data integrity. As a result, businesses experienced accelerated transaction processing, more efficient financial tracking, and improved management of accounts receivable. The inclusion of automated payment reminders led to a measurable reduction in overdue balances, contributing to stronger cash flow and overall financial stability. Furthermore, users reported a highly intuitive experience, citing the system's streamlined interface as a key factor in simplifying the navigation and execution of complex financial tasks. These outcomes underscore the system's capacity to optimize financial operations while promoting user adoption through ease of use and functional clarity. The findings of this study underscore the growing importance of automation in modern financial management, demonstrating its potential to significantly enhance business performance and operational resilience. By eliminating time-consuming manual processes, the developed system enables organizations to shift their focus from routine administrative tasks to strategic planning and growth-oriented initiatives. While the transition from traditional methods presents initial challenges such as user adaptation and system integration, the long-term benefits of automation are evident in improved accuracy, faster processing, and greater financial control. This research contributes valuable knowledge to the evolving role of financial technologies, offering a practical framework that supports the advancement of automated finance systems in e-commerce. It serves as a foundation for future innovations aimed at optimizing financial workflows in increasingly digital business environments.

Keywords: financial automation, digital finance, e-commerce systems, operational efficiency, strategic management, financial control, system integration, financial technology, business performance, workflow optimization

**E-COMMERCE HR MANAGEMENT SYSTEM: PERFORMANCE MANAGEMENT
WITH PERFORMANCE TRACKING & ANALYTICS**

Justine Bagalihog, Domenic Allen Abit, Carl Angelo Elutin,
Jelyn Ragundiaz, James Algie Vizcarra, Alejandro Adovas

Abstract

E-commerce companies face unique and evolving challenges in managing employee performance due to the industry's fast-paced nature and heavy reliance on technology. A key concern is the lack of real-time performance data, which limits managers' ability to make timely, informed decisions. Additionally, integration issues among disparate HR, sales, and operational systems lead to fragmented workflows and hinder comprehensive performance evaluations. The absence of structured, meaningful feedback mechanisms further restricts employee development and alignment with broader business objectives. This thesis identifies data latency, system fragmentation, and inadequate feedback as critical barriers to effective performance management in the e-commerce sector. This project adopts the Agile Scrum methodology to promote adaptability, iterative development, and continuous collaboration between stakeholders and the development team. A microservices-based system architecture serves as the foundation, enabling modular design, independent service deployment, and seamless scalability. DevOps practices are integrated to support efficient development and deployment through continuous integration and continuous delivery (CI/CD), thereby enhancing system responsiveness and reliability. The research follows a comprehensive methodological framework that includes stakeholder identification, detailed requirements gathering, and structured system design, ensuring that the final solution aligns with user needs and organizational goals. The project successfully designed and implemented a robust Human Resource Management System (HRMS) tailored to the operational needs of e-commerce businesses. The system enables precise performance tracking, delivers data-driven insights through advanced analytics, and supports strategic decision-making for HR professionals. User feedback highlights the platform's intuitive interface, smooth functionality, and positive impact on employee engagement and performance management. Overall, the system demonstrates strong potential to optimize HR operations in fast-paced, digitally driven business environments. The system features essential functionalities including goal setting, performance evaluation, progress monitoring, and dynamic analytics dashboards. Through API integrations, it ensures seamless interoperability with existing enterprise systems, enabling unified and efficient data management. Real-time data visualization provides HR managers with immediate access to key performance metrics, supporting timely interventions and informed strategic decisions. This thesis explores the transformative role of data-driven insights in human resource management, highlighting their contribution to improving operational efficiency, aligning workforce performance with organizational goals, and fostering a culture of continuous improvement.

Keywords: human resource management system (hrms), goal setting, performance evaluation, progress monitoring, analytics dashboard, api integration, real-time data visualization, strategic decision-making, operational efficiency, continuous improvement

E-COMMERCE HUMAN RESOURCE MANAGEMENT SYSTEM: HUMAN RESOURCE WORKFORCE ANALYTICS WITH SKILL GAP ANALYSIS TOOLS

Renz Prado, Art Javar Pregoner, Kurven James Palma, Marni Kelli Mangat,
Ronnin Lloyd Balderama, Alejandro Adovas

Abstract

The rapid growth of the e-commerce sector necessitates a workforce that is both adaptable and highly skilled in meeting evolving market demands. However, many organizations continue to depend on legacy Human Resource (HR) systems that lack sophisticated capabilities for comprehensive employee data analysis and precise identification of skill gaps. This deficiency impedes effective talent management, resulting in suboptimal workforce development and stunted organizational progress. To address these challenges, this research proposes the design and implementation of an advanced E-Commerce Human Resource Management System (HRMS) that integrates workforce analytics and skill gap assessment tools. The proposed system aims to empower HR departments with the ability to systematically monitor employee performance, evaluate competency levels, and strategically align workforce capabilities with overarching organizational objectives through data-driven decision-making. This project rigorously applied the Agile Scrum methodology, incorporating meticulous sprint planning and iterative development cycles focused on delivering well-defined features. Daily stand-up meetings ensured continuous progress tracking and fostered effective communication and collaboration within the team. Sprint reviews provided structured opportunities to showcase completed functionalities and integrate stakeholder feedback, thereby aligning development outcomes with user expectations. The adoption of continuous integration practices facilitated frequent code commits and rigorous testing, ensuring system stability and rapid issue resolution. Furthermore, the strategic use of project management and communication platforms enhanced coordination and transparency among team members. Throughout the development process, the team remained committed to Agile principles, prioritizing customer satisfaction and maintaining flexibility to adapt swiftly to evolving requirements and stakeholder input. The system incorporates an interactive dashboard that provides clear visualization of essential workforce metrics, including employee performance, reimbursement workflows, and helpdesk efficiency. Its skill gap analysis module produces detailed reports that assess alignment between current competencies and organizational requirements, highlighting specific areas for improvement. Preliminary evaluations confirmed the system's precision in identifying skill deficiencies and delivering actionable training recommendations. Additionally, usability testing affirmed the dashboard's user-friendly design and its effectiveness in facilitating informed decision-making by HR professionals. Stakeholder feedback was instrumental in enhancing system capabilities and optimizing the user experience. The integration of Agile project management principles with a user-centered development methodology ensured that the platform consistently aligned with organizational goals and the evolving needs of end users. Key challenges such as maintaining real-time data accuracy and ensuring scalable system architecture offered critical insights that will guide future development iterations. Proposed future improvements include augmenting the feedback mechanisms, refining the user interface for greater usability, and incorporating advanced analytical tools to enable ongoing performance monitoring and continuous improvement.

Keywords: stakeholder feedback, agile project management, user-centered development, system functionality, user experience, real-time data accuracy, system scalability, feedback mechanisms, user interface optimization, advanced analytics, continuous improvement

**E-COMMERCE HUMAN RESOURCE MANAGEMENT SYSTEM: ONLINE MONITORING
FOR ATTENDANCE TRACKING, DYNAMIC SCHEDULING AND
AUTOMATED PAYROLL PROCESSING**

Flores Rustom, Kristel Anne Valle, Lyka Alcantara, Chris John Tamayo,
Sunshine Leon, Alejandro Adovas

Abstract

E-commerce enterprises face critical challenges in managing human resource functions efficiently. Reliance on traditional, manual processes for attendance tracking, shift scheduling, and payroll administration often leads to errors, operational delays, and increased administrative burdens. Such inefficiencies not only hamper productivity but also raise compliance risks and adversely affect employee satisfaction and engagement. This study addresses these challenges by proposing the design, development, and thorough evaluation of an automated E-commerce Human Resource Management System. The system is purpose-built to streamline and automate core HR processes, thereby enhancing accuracy and overall operational efficiency. Employing a mixed-methods approach, the research integrates quantitative metrics and qualitative insights to comprehensively evaluate the system's impact on HR management within e-commerce settings. The development and assessment of the Human Resource Management System (HRMS) employed a mixed-methods approach to ensure comprehensive evaluation. Utilizing the Agile Scrum framework, the system was engineered with PHP handling backend operations and MySQL serving as the database platform. The frontend interface was developed using JavaScript, HTML, CSS, and SCSS to provide a seamless and interactive user experience. Its modular design enhances maintainability and facilitates scalability for future updates. Quantitative metrics such as processing speed, payroll accuracy, and system error frequency were collected to evaluate technical performance. Additionally, semi-structured interviews with e-commerce staff and HR personnel provided qualitative feedback on usability, user satisfaction, and the system's effect on daily workflows. The Human Resource Management System successfully incorporated comprehensive attendance monitoring and tracking, a flexible scheduling module that accommodates dynamic shift adjustments, and fully automated payroll processing. Quantitative results demonstrated substantial decreases in payroll processing times and error frequencies, underscoring the system's efficiency. Complementary qualitative feedback reflected heightened user satisfaction, significant reductions in administrative workload, and marked improvements in the accuracy and reliability of attendance and payroll records. The results affirm the hypothesis that automating human resource management processes through a tailored HRMS substantially improves efficiency and accuracy in e-commerce operations. The system's modular design not only supports scalability but also enables seamless integration with existing and future business systems. This study highlights the critical importance of integrating both quantitative metrics and qualitative insights to holistically evaluate the system's effectiveness. Furthermore, the research acknowledges its limitations and outlines avenues for future investigation, including scalability testing with larger datasets and a deeper exploration of user training and adoption strategies.

Keywords: human resource management system, hrms, automation, e-commerce, operational efficiency, accuracy, modular design, scalability, system integration, quantitative evaluation, qualitative insights, user training, future research

**E-COMMERCE LOGISTIC MANAGEMENT SYSTEM: PROCUREMENT WITH
AUTOMATED PERFORMANCE DASHBOARDS, FORECASTING AND ANALYTICS**

Joshua Tulod, Joseph Andoy, John Philip Octaviano, Carl Anthony Olalo,
Thea Nerissa De Guzman, Alejandro Adovas

Abstract

This study tackles critical inefficiencies prevalent in e-commerce logistics, where many businesses rely heavily on manual record-keeping tools such as logbooks, spreadsheets, and simplistic dashboards, that lack real-time data integration and predictive analytics. Such outdated systems lead to frequent delivery delays, inventory discrepancies, and uninformed procurement decisions, all of which detrimentally impact customer satisfaction and competitive positioning. To address these challenges, the researchers propose a comprehensive automated procurement management system that seamlessly combines interactive performance dashboards, sophisticated forecasting models, and advanced analytics. By delivering actionable, predictive insights on demand variability, inventory optimization, and supplier reliability, the system empowers businesses to make data-driven decisions that enhance operational efficiency and drive sustained growth. The project was executed using the Agile Scrum framework, progressing through iterative sprint cycles that encompassed comprehensive phases of planning, daily stand-ups, development, rigorous testing, and review. Dedicated roles including Scrum Master, Product Owner, Business Analyst, Security Specialist, Programmer, and Documentation Specialist, were strategically assigned to uphold clear ownership and accountability from initial scope definition through to deployment. To ensure the system's alignment with real-world needs, the researchers employed a mixed-methods approach, conducting in-depth stakeholder interviews alongside detailed observational analyses of existing e-commerce platforms to capture precise requirements and contextual insights. The implemented system effectively met its goals by automating procurement workflows, enabling real-time inventory visibility, and optimizing logistics coordination. Interactive dashboards deliver comprehensive visualizations of vital metrics such as order accuracy, supplier lead times, and stock levels, while advanced forecasting algorithms project next-month demand based on real-time data analytics. Rigorous integration testing confirmed flawless data synchronization between system modules and third-party delivery APIs, and load testing verified the system's robustness and scalability under peak operational loads. The findings underscore the transformative impact of embedding automated analytics and forecasting into e-commerce logistics operations. Transitioning from reactive record-keeping to proactive, data-driven strategies enables businesses to accurately anticipate demand surges, optimize inventory levels, and proactively mitigate supply-chain disruptions. The Agile Scrum framework facilitated rapid iteration and strong stakeholder alignment, though integrating heterogeneous module architecture and ensuring real-time data integrity posed significant challenges, addressed through robust middleware solutions and rigorous testing. Additionally, user training emerged as a pivotal factor for successful adoption, highlighting the necessity for intuitive user interfaces coupled with comprehensive change-management support.

Keywords: e-commerce logistics, automated analytics, demand forecasting, inventory optimization, supply chain management, agile scrum methodology, middleware solutions, real-time data integration, stakeholder collaboration, change management, user training, sy

E-COMMERCE LOGISTICS MANAGEMENT SYSTEM: A WEB BASED AND MOBILE APPLICATION DOCUMENT TRACKING SYSTEM, VEHICLE RESERVATION INTEGRATION WITH FLEET MANAGEMENT GPS ROUTE OPTIMIZATION USING TRACKING SYSTEM AND REAL-TIME TRAFFIC

Nathaniel Matabang, Mosa Asimuddin, Brix Joshua Cejalbo, Derick John Raymundo,
Romela Kate Santos, Alejandro Adovas

Abstract

E-commerce significantly enhances business profitability and operational efficiency. However, logistical challenges, such as inadequate shipment monitoring, can negatively impact customer satisfaction. The goal of this project is to improve the logistics framework of Far East Café by creating an E-commerce Logistics Management System. This system will include features such as document tracking for greater accuracy and visibility, a vehicle reservation module to optimize transport scheduling, GPS-based route optimization to reduce travel time and costs, and real-time traffic monitoring to avoid delays. These integrated features are designed to streamline delivery operations. The system was developed using the Agile Scrum approach, allowing for continuous improvement through iterative sprints lasting two to four weeks. This methodology enabled regular feedback from stakeholders and supported ongoing development. The process included several key stages: initial planning, gathering stakeholder information, designing the system architecture, programming, testing, deployment, and continuous evaluation. The main features of the system include document tracking, which enhances logistics visibility and reduces errors; a vehicle reservation module that streamlines transport scheduling and resource allocation; and GPS-based route optimization with real-time traffic updates. The implemented system significantly improved operational efficiency by minimizing supply delays. Real-time traffic monitoring allowed for the identification of optimal delivery routes, leading to reduced fuel consumption. Document tracking decreased errors, improved decision-making, and strengthened accountability in logistics operations. Additionally, features such as real-time notifications, estimated delivery reports, and supplier tracking improved communication. Feedback from stakeholders played a vital role in improving system functionality and optimizing the user experience. By implementing agile project management and a user-centered development approach, we ensured that the platform aligned with both business objectives and user needs. We faced challenges like ensuring real-time data accuracy and system scalability, which offered valuable lessons for future iterations. For future improvements, we suggest enhancing the feedback mechanism.

Keywords: e-commerce logistics, document tracking system, vehicle reservation system, fleet management, gps route optimization, real-time traffic monitoring, web-based application, mobile application, logistics management, route planning, fleet tracking, traffic

**E-COMMERCE: ADMINISTRATIVE DOCUMENT MANAGEMENT SYSTEM:
A WEB-BASED INTEGRATED DOCUMENT MANAGEMENT USING
AUTOMATED SORTING WITH CUSTOM NOTIFICATION ALERT**

Felisha Dyne Sy, Daryl Justine Gempesaw, John Lester Pines,
Marvin Manibale, Marjorie Valet, Alejandro Adovas

Abstract

Effective document management is crucial for organizations to succeed in today's fast-paced digital landscape. Our project, the E-Commerce Administrative Document Management System, aims to enhance how businesses handle their documents through an integrated web-based platform. The system features automated document sorting, enabling users to quickly organize and retrieve files while reducing errors. Additionally, it provides personalized notifications to keep users informed about important updates and deadlines. By streamlining administrative processes, this project offers a reliable solution to help organizations stay organized, improve efficiency, and enhance responsiveness in their daily operations. Throughout the development of this project, we considered various approaches. One effective technique we implemented was the Agile Scrum Methodology, which helped us manage our time effectively and meet the deadlines for each sprint. To ensure we stayed on track, the developers divided the project into smaller, manageable sprints. With proper planning utilizing the Agile Scrum methodology, the development team successfully created and developed various components of the system during the sprints. Although there are still some features that need to be added, this work remains within the timeline of the planned sprints and will be completed as soon as possible. The implementation of the Administrative Document Management System has yielded promising results that align with the project's objectives. Through the Agile Scrum methodology, the team effectively developed and deployed essential system modules during the planned sprint cycles, including document sorting, custom notification alerts, user management, and legal and facilities documentation. The proposed system includes essential features such as user management with role-based access control, the ability to track legal and facilities documents, visitor monitoring, and a dynamic alert mechanism that notifies users about document updates, deadlines, and tasks. It is built on microservices architecture, allowing each module to operate independently with its own database while communicating seamlessly through an API gateway. This design enhances scalability, security, and ease of maintenance. Additionally, the project complies with enterprise architecture standards by integrating business process mapping, application design, network structure, and a CI/CD deployment pipeline.

Keywords: e-commerce, administrative document management, web-based system, integrated document management, automated sorting, notification alerts, document tracking, workflow automation, digital filing system, custom alerts, document organization, user notification

EIS: FREIGHT MANAGEMENT SYSTEM CORE 2: “SHIPMENT TRACKING AND VISIBILITY MANAGEMENT WITH CUSTOMER-CENTRIC SHIPMENT THROUGH GPS WITH REAL-TIME UPDATES AND NOTIFICATION”

Rose Ann Tantiado, Ralph Ace Santos, Francis Mark De Vega,
Cyril Gad, Ian Lou Alfaro, Gerald Dela Cruz

Abstract

The Freight Management System is a transformative tool in modern logistics, designed to streamline the way shipments are tracked and managed. For many companies, it marks the first step toward full digital integration, replacing outdated manual processes with real-time, centralized visibility. Common setbacks such as delayed updates, inefficient tracking, and weak communication between logistics handlers and clients have long hindered supply chain performance. By adopting this system, organizations can boost operational accuracy, enhance customer experience, and foster stronger collaboration across all supply chain partners. To ensure the Freight Management System was both intuitive and performance-driven, the development team employed the Agile methodology, allowing for rapid iteration and ongoing collaboration with key stakeholders. Continuous feedback was gathered through structured interviews with warehouse operators, shipment coordinators, and logistics managers. Their insights guided the implementation of critical features, including GPS-enabled real-time tracking, automated delivery confirmations, live shipment status notifications, and data-driven performance analytics. The system architecture leveraged robust technologies Node.js for efficient, scalable backend processing and MongoDB Atlas for secure, cloud-based data storage with high availability. To protect system integrity and ensure only authorized access, email-based authentication protocols were implemented, reinforcing data privacy and user security. This human-centered and technology-backed approach ensured the system effectively addressed real-world logistics challenges. The Freight Management System streamlines logistics by integrating real-time GPS tracking with smart alerts for delays and route deviations. Secure email authentication ensures that only authorized users can access the system, safeguarding data integrity. Core modules support historical tracking, automated delivery reporting, and real-time status updates, providing end-to-end shipment visibility. The inclusion of geo-fencing and data-driven analytics enhances operational accuracy, promotes accountability, and empowers logistics teams to make faster, more informed decisions, resulting in fewer delays and minimized tracking errors. The Freight Management System offers transformative benefits to logistics providers and their clients by resolving persistent issues in freight visibility. It enhances delivery timeliness, streamlines route planning, and significantly improves customer satisfaction. Developed with continuous input from key stakeholders, the system's features are tailored to address real-world operational challenges. As a result, it stands as a robust, user-driven solution that not only improves logistics performance but also raises industry standards across the entire supply chain.

Keywords: freight management system, logistics innovation, shipment tracking, digital integration, real-time visibility, operational accuracy, customer experience, communication gaps, supply chain optimization

**EIS: FREIGHT MANAGEMENT SYSTEM: LOGISTICS 2: VENDOR PORTAL
WITH AI CHATBOT SUPPORT, ADVANCE DOCUMENT TRACKING,
AUTOMATED ALERTS AND CUSTOM REPORTING**

Ricafranca Rhica Mhay, Rona Irader, Ma Angelica Olavidez,
Brian Joseph Pura, Louise Joshua Dollosa, Gerald Dela Cruz

Abstract

Freight management plays a pivotal role in modern supply chains, facilitating the smooth and timely movement of goods among suppliers, vendors, and customers. Despite its importance, many logistics operations still rely on outdated, manual systems that lack automation, real-time communication, and integrated analytics. These inefficiencies often lead to delays, miscommunication, and increased operational costs. Procurement and inventory management processes are particularly affected. In many organizations, these functions remain siloed and dependent on manual oversight, resulting in frequent errors, shipment delays, and missed opportunities for cost optimization. Suppliers often operate with limited visibility into the status of orders, deliveries, and payments while procurement teams struggle to monitor inventory levels, track shipments, and coordinate invoicing in real time. To bridge these gaps, the proposed Freight Management System introduces a centralized, intelligent platform that automates procurement workflows, enhances communication with suppliers, and offers real-time shipment tracking. With features such as automated alerts, dynamic reporting, and end-to-end visibility, the system is designed to streamline logistics operations, increase transparency, and drive cost-effective, data-informed decision-making across the supply chain. While essential to logistics efficiency, freight management systems often struggle with issues like tracking inefficiencies, communication gaps, and operational bottlenecks. To effectively address these problems, companies must adopt a holistic strategy: revising modern technologies, refining workflows, and aligning logistics practices with real-time data insights. Such an approach not only resolves recurring issues but also drives smoother, faster, and more transparent freight operations. The Freight Management System (FMS) revolutionizes logistics by integrating AI-driven technologies to streamline the transportation of goods and reduce overall costs. It offers real-time shipment tracking, intelligent route optimization, and faster delivery times, all while enhancing supply chain visibility. By addressing key challenges such as rising operational expenses, regulatory complexities, and customer demand for transparency, FMS not only boosts service efficiency but also supports a more resilient and sustainable logistics ecosystem. The Freight Management System redefines logistics by integrating artificial intelligence and cutting-edge technologies to streamline transportation processes, reduce operational costs, and elevate customer satisfaction, paving the way for a smarter, more resilient, and sustainable supply chain.

Keywords: freight management system, logistics, artificial intelligence, technology integration, transportation efficiency, cost reduction, customer satisfaction, sustainable supply chain, operational improvement

EVACUATION CENTER TRACKING MANAGEMENT SYSTEM (REAL-TIME DATA MANAGEMENT, RESOURCE ALLOCATION, COMMUNICATION TOOLS, FACILITY MANAGEMENT SECURITY AND PRIVACY, COLOR MAPPING)

John Michael Medina, Alfren James Pangasian, Dave Josh Arcenal,
Edsa John Stephen Mora, Allenson Manluctao, Rosauro Villalon

Abstract

The Evacuation Center Tracking Management System (ECTMS) was designed for Local Government Unit 2 (LGU 2) in the Philippines to enhance disaster preparedness and streamline emergency response efforts. The system allows for the real-time monitoring of evacuees, improves resource distribution, and strengthens inter-agency coordination during crises. Key features include modules for Real-Time Data Management, Facility Monitoring, Communication Tools, and Color-Coded Mapping. ECTMS is also integrated with the Barangay Census and the Disaster Relief Service System, enabling more efficient and data-driven decision-making in emergencies. The development of the Evacuation Center Tracking Management System (ECTMS) employed the Agile Scrum methodology, facilitating iterative development cycles, continuous stakeholder engagement, and dynamic adaptation to evolving requirements. The system was designed using contemporary web development technologies and structured around a modular, microservice-oriented architecture, promoting scalability, resilience, and maintainability. It integrates diverse datasets, including barangay-level census information, facility utilization records, and disaster relief inventory logs, to support informed decision-making. Furthermore, the system implements comprehensive security measures to ensure the confidentiality, integrity, and availability of sensitive data, adhering to recognized information security standards. The system empowers LGU2 administrators and disaster response teams to efficiently monitor evacuee status, facility conditions, and resource distribution across multiple evacuation centers. By offering real-time data visualization and seamless integration with barangay census and disaster relief systems, it supports proactive decision-making and streamlined coordination. Initial testing demonstrated enhanced responsiveness and improved operational efficiency during emergency drills and preparedness planning. The implementation of the Evacuation Center Tracking Management System (ECTMS) significantly strengthened LGU2's disaster preparedness and response capabilities by providing a real-time digital platform for resource management, operational transparency, and inter-agency coordination. Despite challenges such as ensuring consistent data accuracy, training end-users at the local level, and establishing long-term maintenance strategies, the system proved to be a valuable tool in bridging critical gaps in local disaster governance. Additionally, it supports the achievement of key Sustainable Development Goals by promoting resilient communities, efficient institutions, and inclusive, technology-driven infrastructure.

Keywords: evacuation center tracking management system, lgu2, disaster preparedness, real-time monitoring, resource management, transparency, coordination, data accuracy, user training, system maintenance, disaster governance, sustainable development goals

**FILIPINO DIALECT TRANSLATOR: AN APPLICATION FOR
LANGUAGE LEARNING AND REGIONAL CONNECTIVITY**

Denmark Puchero, Nicole Capongcol, Laurice Nicole Ylanan,
Gurjet Singh, Sandile Guadiz, Carlito Gabriel

Abstract

The Philippines is home to over 180 dialects, creating linguistic barriers that hinder education, communication, and cultural integration. While the Mother Tongue-Based Multilingual Education (MTB-MLE) program aims to bridge these gaps, its implementation faces challenges, particularly due to educators' limited fluency in multiple dialects. To address this issue, the study introduces the Filipino Dialect Translator, a web-based application designed to support language learning and promote regional inclusivity. The application integrates speech-to-text, text-to-speech, and AI-powered dialect translation to facilitate more effective and accessible communication across dialects. This research assesses the application's acceptability in terms of user interface design, translation accuracy, ease of use, functionality, and visual presentation. This study adopted a descriptive research design and employed purposive sampling to select ten qualified respondents, comprising five Information Technology (IT) professionals and five Filipino language educators. A validated survey questionnaire was utilized to assess the level of acceptability of the Filipino Dialect Translator application. Data was systematically analyzed using frequency, percentage, and weighted mean to interpret the responses, while an independent samples t-test was conducted to determine whether significant differences existed between the evaluations of the two respondent groups. The Filipino Dialect Translator application was evaluated as "Acceptable," with an overall weighted mean score of 2.65. Ratings from IT experts averaged 2.77, slightly higher than the 2.54 mean score given by Filipino language teachers. Among the five evaluation criteria, the highest rating was recorded for user interface (2.94), followed by ease of use (2.68), translation accuracy (2.66), presentation (2.52), and functionality (2.46). Results from an independent samples t-test revealed no statistically significant difference between the two groups' assessments ($t_{\text{computed}} = 1.297$, $t_{\text{critical}} = 2.306$). While the overall evaluation was positive, respondents cited notable issues, including inaccurate or inconsistent translations, loss of contextual meaning, and challenges in translating specialized or technical terms. Based on these findings, the study recommends: (1) incorporating native speaker contributions to improve linguistic accuracy; (2) enhancing context-aware translation algorithms; (3) refining system functionality; and (4) improving the user interface to ensure a more intuitive and user-friendly experience. The findings reveal that the Filipino Dialect Translator application is generally perceived as acceptable by both IT experts and Filipino language educators, particularly in terms of its user interface and overall usability. Nonetheless, concerns remain regarding the accuracy and contextual relevance of translations, indicating areas that require further development. The consistent evaluations from both groups underscore the application's potential for cross-disciplinary application and educational value. To enhance its functionality and impact on language learning and regional communication, the study recommends the integration of native speaker contributions, optimization of system performance, and the inclusion of culturally sensitive and context-aware translation features.

Keywords: filipino dialect translator, multilingual education, user interface, translation accuracy, cross-disciplinary, contextual relevance, native speaker input, cultural accuracy, usability, language learning.

**FREIGHT MANAGEMENT SYSTEM FINANCE: CONNECTING QR CODE SOLUTIONS,
PREDICTIVE FINANCIAL ANALYTICS, AND LEDGER SYSTEMS
FOR SEAMLESS AND EFFICIENT OPERATIONS**

Jelly Plazo, Mark Aaron Oasay, Ma Joanna Benize Libao, Denmark Nini, Gerald Dela Cruz

Abstract

The Freight Management System Finance is designed to optimize and accelerate financial operations within the logistics sector by enhancing accuracy, transparency, and cross-functional integration. It seamlessly incorporates QR code technology, predictive analytics, and a centralized digital ledger to bridge the gap between finance and logistics workflows. QR codes facilitate instant and error-free tracking of shipments and invoices, significantly reducing manual processing and administrative bottlenecks. Predictive analytics empowers data-driven financial planning by accurately forecasting expenses and cash flow, relying on clean, structured data for optimal performance. The digital ledger functions as a unified financial hub, consolidating all transactions, payments, invoices, and payroll records into a single, accessible platform. Collectively, these innovations drive operational efficiency, reduce financial risk, and enable real-time collaboration across freight finance functions. The Freight Management Finance System integrates advanced technologies to optimize transparency, accuracy, and efficiency across logistics operations. QR codes are used to capture and update shipment information at critical stages, loading, transit, and unloading, enabling real-time visibility and minimizing tracking errors. Predictive financial analytics models analyze historical data to forecast expenditures, revenues, and risk patterns, offering strategic insights that support proactive financial planning. A centralized digital ledger automates invoicing, payment processing, and reconciliation, while recording all financial transactions in real time. By consolidating these components into a single intelligent platform, the system ensures a seamless flow of data between logistics and finance, fostering informed decision-making, operational agility, and financial precision across the supply chain. The integration of QR code technology, predictive financial analytics, and a digital ledger system within the Freight Management System Finance has driven substantial improvements in automation, precision, and operational efficiency. QR codes facilitate real-time tracking and seamless data capture throughout the freight lifecycle, from loading to delivery, minimizing manual input and reducing the risk of human error. Predictive analytics provides actionable financial insights by accurately forecasting costs, revenues, and potential risks, enabling proactive, data-driven decision-making. The digital ledger automates invoicing and payment processes while offering transparent, real-time tracking of all financial transactions, ensuring accountability and streamlined financial operations. The integration of QR code technology, predictive financial analytics, and digital ledger systems within a freight management platform creates a highly efficient, automated solution that optimizes both logistics and financial operations. QR codes enable real-time shipment tracking and accurate data capture across loading, transit, and delivery stages, minimizing delays and human error. Predictive analytics provides actionable insights by forecasting expenses, revenues, and financial risks, allowing for proactive, data-driven decision-making. Meanwhile, the digital ledger streamlines financial processes by automating invoicing, payment reconciliation, and transaction recording with precision and transparency. Collectively, these technologies reduce manual workloads, enhance operational accuracy, and elevate the overall effectiveness of freight and finance management.

Keywords: freight management system, qr code tracking, predictive financial analytics, digital ledger, automation, real-time data, invoicing, payment reconciliation, operational efficiency, financial forecasting, logistics technology.

FREIGHT MANAGEMENT SYSTEM HUMAN RESOURCE 2: "RECRUITMENT AND ONBOARDING MANAGEMENT SYSTEM WITH AI-DRIVEN RESUME SCREENING"

Paolo Abina, Pedjovent Sindol, Justin Agelir, Rusty Villasan, Angel Abon, Gerald Dela Cruz

Abstract

Human Resource Management (HRM) plays a vital role in shaping a company's workforce by attracting competitive, skilled, and goal-driven individuals. However, traditional HR systems often face challenges such as delays in recruitment and inconsistent candidate experiences. To address these inefficiencies, AI-driven resume screening has emerged as a smart solution. This technology automates the analysis and shortlisting of candidates based on their qualifications, experience, and alignment with the company's values and culture. This study focuses on Freight Management System Human Resource 2: Recruitment and Onboarding Management System with AI-Driven Resume Screening, which aims to modernize and streamline the hiring process, enhance candidate evaluation, and improve overall onboarding efficiency. A mixed-methods approach was employed to assess the effectiveness of the capstone project in enhancing applicant onboarding and operational efficiency. The study combined qualitative interviews and the Agile development methodology. Interviews with the owner of GGP's Company provided valuable insights into the existing recruitment process and informed the system's design. The Agile methodology, consisting of planning, design, development, testing, and deployment phases, enabled a flexible and iterative development process, allowing for continuous improvement based on stakeholder feedback. The capstone project significantly enhanced the efficiency of the hiring process and improved the readiness of new employees. At its core is an AI-driven resume Screening tool (powered by Claude 3 Sonnet API), which intelligently analyzes and ranks candidates based on qualifications, experience, and job relevance. This automation reduces manual screening time and increases the precision of candidate selection. The system also features a comprehensive Applicant Tracking System (ATS), real-time candidate monitoring, streamlined interview scheduling, and seamless integration with other HR modules, creating a unified, end-to-end recruitment and onboarding solution. Human Resource 2 showcases the transformative potential of integrating intelligent automation, personalized data handling, and modular system design into recruitment and onboarding processes. The system significantly accelerates and simplifies hiring, while enhancing the overall experience for both HR personnel and applicants. Its forward-compatible architecture also enables seamless expansion, supporting future integrations such as LinkedIn and Indeed connectivity, AI-powered job recommendation engines, advanced data analytics, and performance optimization through caching.

Keywords: human resource management, recruitment and onboarding, ai-driven resume screening, automation, applicant tracking system (ats), interview management, hr integration, data analytics, job recommendation system, system efficiency, claude 3 sonnet api, a

**FREIGHT MANAGEMENT SYSTEM: ADMINISTRATIVE CREATING AN
ALL-INCLUSIVE TOOLKIT FOR EFFICIENT FREIGHT MANAGEMENT**

Maricar Dela Cruz, Marjorie Daleja, Ryan Sangasina, Reneelet Lewis Padayao,
John Christian Vega, Gerald Dela Cruz

Abstract

This initiative introduces a comprehensive administrative dashboard within the Freight Management System, designed to optimize shipment monitoring, vehicle allocation, and route planning. By centralizing operational control and automating critical logistics workflows, the system significantly boosts efficiency while delivering real-time, data-driven insights. These capabilities empower logistics managers to make timely, informed decisions that enhance overall freight operations and resource utilization. The Freight Management System (Administrative) was developed through a systematic, phased approach. The process began with gathering detailed requirements by engaging with users to understand the complexities of freight operations. Following this, the system architecture and database design were established. The application was built using the MERN stack (MongoDB, Express.js, React.js, and Node.js) to ensure a modern, robust, and scalable solution. Key modules such as user management, shipment tracking, vehicle allocation, and route planning were developed independently for modularity and ease of maintenance. The system was also integrated with GPS tracking and notification services via APIs to provide real-time updates. After thorough testing, the system was deployed on a cloud server, offering administrators secure and convenient access from anywhere. The deployment of the Freight Management System (Administrative) markedly enhanced the efficiency and effectiveness of freight operation oversight. Administrators are now empowered with real-time shipment monitoring, streamlined vehicle allocation, and optimized route planning, alongside seamless user role management. Automated notifications and detailed reporting mechanisms have significantly improved communication channels and expedited decision-making processes, substantially reducing the time previously spent on manual tasks. The system's precision in tracking shipments and assigning vehicles has minimized errors, thereby boosting operational reliability. Feedback from users consistently emphasized strong satisfaction with the system's intuitive interface and the timely delivery of live updates, underscoring its positive impact on daily logistics management. The Freight Management System markedly advanced freight operations by providing real-time tracking, automated notifications, and efficient vehicle management. These features reduced administrative burdens and improved data accuracy, resulting in streamlined logistics workflows. Nevertheless, the system's performance is contingent upon the quality of data inputs and the competency of its users. Future development could focus on integrating AI-driven decision support, sophisticated predictive analytics, and enhanced mobile accessibility to elevate operational agility. While the system successfully achieved its core objectives, ongoing refinement and thorough scalability assessments are essential to accommodate expansion into larger, more complex freight environments.

Keywords: freight management system, real-time tracking, automated alerts, vehicle management, data accuracy, ai-driven decision making, predictive analytics, mobile responsiveness, operational efficiency, scalability

**FREIGHT MANAGEMENT SYSTEM: HUMAN RESOURCE 3: OPTIMIZING PAYROLL
AND BENEFITS MANAGEMENT WITH REAL-TIME INTEGRATION
AND AI-DRIVEN AUTOMATION**

Khrystell Kristine Barroga, Angelen Argomido, Jewelyn Castor,
Arriana Garinga, John Carlo Gustilo, Gerald Dela Cruz

Abstract

Freight management systems are rapidly evolving to meet growing demands for operational efficiency, real-time responsiveness, and accuracy. One critical area in need of transformation is human resource (HR) management, where outdated manual processes often result in delays, inconsistencies, and administrative inefficiencies. This study explores the integration of a Human Resource Information System (HRIS) into the freight management environment to modernize HR functions. The system emphasizes payroll automation, benefits administration, and compliance with labor regulations. Through real-time data integration and automated workflows, it aims to reduce manual workloads, minimize errors, enhance decision-making, and boost workforce productivity. To comprehensively evaluate the impact of Human Resource Information System (HRIS) integration within freight management, a mixed-methods research approach was employed. Quantitative data was gathered through rigorous system testing, capturing key performance indicators such as processing time, error frequency, and compliance adherence before and after implementation. In parallel, qualitative insights were obtained through structured interviews with HR personnel, employees, and organizational leaders to assess user experience, transparency, and overall satisfaction. The system development followed the Agile methodology, emphasizing iterative design, adaptive planning, and continuous stakeholder engagement. This approach ensured that the solution remained flexible, user-centric, and aligned with the evolving operational needs of the organization. The study's findings revealed notable enhancements in payroll efficiency through automated time tracking and real-time tax computation, which significantly reduced processing delays and manual input errors. Employee interviews highlighted improved transparency, fostering greater trust in HR processes, particularly in payroll accuracy and benefits administration. Additionally, the integration of role-based access control and advanced encryption technologies ensured stringent data security and reinforced compliance with regulatory standards governing employee information management. The integration of a Human Resource Information System (HRIS) within freight and logistics operations presents a forward-looking, scalable solution for modernizing HR processes. By automating critical functions such as payroll, attendance tracking, and benefits administration, the system significantly reduces manual errors, administrative workload, and regulatory risks. Enhanced transparency and data accessibility also contribute to stronger employee engagement and trust. While the initial rollout demands investment in training and organizational adaptation, the long-term outcomes improved productivity, cost efficiency, and informed decision-making, validate the strategic value of HRIS adoption. These insights serve as a robust foundation for logistics organizations aiming to digitalize their HR functions and remain agile in a competitive, rapidly evolving industry landscape.

FREIGHT MANAGEMENT SYSTEM: HUMAN RESOURCES 4: "TRAINING AND DEVELOPMENT MANAGEMENT SYSTEM WITH AI-DATA DRIVEN AND DYNAMIC SKILL MATCHING LEARNING MANAGEMENT SYSTEM"

Bench Manuel, Cristy Jean Ofianga, Angelyn Guma, Laderfort Malabad,
Hannah Kristine Tidoso, Gerald Dela Cruz

Abstract

The Freight Management System: Human Resource 4 project is designed to elevate workforce capabilities and strengthen regulatory compliance in the logistics sector by integrating a robust Training and Development Management System that streamlines skill enhancement, certification tracking, and employee development initiatives. The system incorporates comprehensive modules such as Learning Management, Training Management, Talent Development, Training Operations, Employee Engagement, and Budget Oversight. Leveraging data-driven insights and AI-powered dynamic skill matching, the system identifies skill gaps, accelerates training initiatives, and promotes a culture of continuous learning. The project's effectiveness was evaluated using the Agile methodology, complemented by structured interviews with key stakeholders to ensure adaptability, relevance, and user satisfaction. The results indicate notable progress in employee development and training within the logistics industry, as data-driven training initiatives and real-time skill gap assessments have enabled more effective alignment of workforce capabilities with current industry standards and needs. The Learning Management System (LMS) cultivates a culture of continuous learning, driving competitiveness and sustainable growth within the logistics industry. Through its integration with the AI-powered Training and Development Management System (TDMS), it offers personalized learning pathways by utilizing data analytics and dynamic skill-matching technology. This enables the system to address urgent reskilling and upskilling demands in the fast-paced freight sector. Moreover, the TDMS enhances knowledge sharing, encourages collaboration, and supports data-informed decisions for training investments and strategic workforce planning.

**FREIGHT MANAGEMENT SYSTEM: LOGISTICS 1, VEHICLE AND
DRIVER MANAGEMENT, MAINTENANCE MANAGEMENT,
SCHEDULE MANAGEMENT, WAREHOUSING**

Abdon Gerald Fuertes, Algie Marcaida, Yuri Degollacion,
Jayson Dejesus, Nathaniel Lumilay, Gerald Dela Cruz

Abstract

The freight industry continues to face challenges in optimizing logistics operations, including vehicle and driver management, timely maintenance, scheduling efficiency, and warehouse coordination. This capstone project, "Freight Management System: Logistics 1," offers a comprehensive digital solution aimed at improving operational performance, especially for small and emerging freight companies. The system targets critical areas such as inbound and outbound processing, load planning optimization, real-time vehicle tracking with automated alerts, and enhanced supply chain visibility. The Freight Management System was developed using the Agile Scrum methodology, enabling iterative progress through defined sprint cycles and fostering close collaboration among designated roles, including the Scrum Master, Product Owner, Developers, and Researchers. A Microservices Architecture was strategically implemented to promote modular scalability, allowing independent deployment and maintenance of core services such as Vehicle Management, Receiving and Dispatching, and Load Planning. To streamline deployment and ensure rapid, reliable updates, a DevOps approach was integrated through Continuous Integration/Continuous Deployment (CI/CD) pipelines utilizing Git and GitHub. Comprehensive requirements gathering was conducted through stakeholder interviews, direct workflow observation, and analysis of existing documentation, ensuring that the system aligned closely with real operational needs. The technology stack was selected for its efficiency and scalability: Node.js with Express.js powered the backend, React.js was used for a dynamic and responsive frontend, and MongoDB provided a flexible NoSQL database solution. Security was prioritized through JSON Web Tokens (JWT) and bcrypt, safeguarding user authentication and sensitive operational data. The project culminated in the development of a robust Freight Management System featuring integrated modules for vehicle and driver management, maintenance scheduling, dispatch coordination, and warehousing operations. Notable outcomes include the deployment of a scalable, modular system architecture supported by RESTful APIs for seamless integration with external services. The system ensures secure user authentication through JSON Web Tokens (JWT) and bcrypt encryption and is accompanied by comprehensive technical documentation. Key functionalities include real-time shipment tracking, automatic tracking number generation, and intelligent load planning to maximize cost-efficiency and capacity utilization. With its user-friendly interface and flexible design, the system is well-positioned to support future expansion and continuous improvement. This Freight Management System revolutionizes logistics operations for small to medium-sized freight companies by addressing challenges such as manual inefficiencies, limited real-time visibility, and inefficient resource utilization. Built using Agile Scrum methodology and a Microservices Architecture, the system offers a modular, scalable solution that streamlines scheduling, shipment tracking, and maintenance workflows. Through intelligent automation, it enhances operational efficiency, reduces overhead costs, improves service delivery, and empowers data-driven decision-making.

Keywords: freight management system, logistics, automation, small to medium-sized enterprises (smes), agile scrum, microservices architecture, real-time tracking, scheduling, maintenance, operational efficiency, cost reduction, resource optimization, data-driv

HOSPITAL MANAGEMENT SYSTEM ADMINISTRATION AND SUPPORT SERVICES USING DISASTER RECOVERY AND BACKUP MANAGEMENT WITH AI DRIVEN TOOL

Vince Francis Ortego, Adrian Laroza, Rey Daniel Daitol, Mark Gil Casaña,
Nick David Montoya, Ronald Roldan Jr

Abstract

This Hospital Management System (HMS) serves as both an administrative and support platform, prioritizing uninterrupted healthcare delivery through proactive infrastructure and robust data protection. It incorporates disaster recovery (DR) planning, secure backup protocols, and fault-resistant systems to ensure operational continuity. The system provides administrators with essential tools for user management, real-time monitoring, and rapid recovery, all aimed at maintaining secure access to resources. By leveraging automation and real-time maintenance capabilities, the HMS enhances the quality of patient care and strengthens overall operational resilience. The Hospital Management System (HMS) administration and support structure is built on proactive disruption planning, incorporating robust disaster recovery (DR) strategies and secure backup mechanisms. The system is developed with a well-organized framework that addresses both essential administrative functions and practical operational needs, such as automated backups and real-time monitoring. It undergoes thorough testing informed by user feedback and is continuously improved through vulnerability management and active system evaluation. These measures collectively ensure the long-term reliability, security, and efficiency of healthcare technology infrastructure. The integration of this HMS administration and support system is expected to significantly enhance healthcare delivery through a proactive approach that minimizes service interruptions. By incorporating disaster recovery (DR) protocols and secure backups, the system ensures smooth operations and high data availability. It enables secure and efficient resource access, supports streamlined care delivery, and automates routine processes. Real-time monitoring and elevated administrator access allow for effective system oversight, while data-driven decision-making, especially at lower administrative levels, enhances workflow efficiency. Ultimately, the system strengthens patient care, boosts operational resilience, and improves the overall reliability of healthcare technology across facilities. This highlights the critical need for a durable and actively maintained Hospital Management System (HMS) built upon a robust, advanced infrastructure. Such a system must incorporate disaster recovery and backup management to ensure continuous operation, safeguard vital healthcare data, and maintain system reliability. It should offer comprehensive administrative tools, integrate security and resilience, and follow a structured approach that includes systematic planning, progressive enhancement, and core administrative functionality. Key features such as automated backups, step-by-step recovery processes, thorough user-informed testing, and proactive performance monitoring, are essential to sustaining optimal system performance. Altogether, these elements underscore the importance of foresight, continuous evaluation, and dependable technological solutions within the healthcare sector.

Keywords: hospital management system, disaster recovery and backup management system

HOSPITAL MANAGEMENT SYSTEM CORE 1: (INPATIENT AND OUTPATIENT CARE THROUGH PREDICTIVE ANALYTICS WITH PATIENT RISK PREDICTION, LENGTH OF STAY PREDICTION, PREDICTIVE SCHEDULING AND FOLLOW UP NEEDS)

Inard Archey Baño, Paul Niko Vincent Royo, Marwin Colinayo,
John Paul Oco, Mecco Lagne, Ronald Roldan

Abstract

The rapid growth of the healthcare industry is driven by advancements in medical technology and a continued rise in patient demand for high-quality care. However, current hospital systems often lack the capacity for real-time predictive capabilities, creating a gap in proactive healthcare management. This study addresses these challenges by introducing a Hospital Management System (HMS) that incorporates predictive analytics to support both inpatient and outpatient care. By leveraging machine learning, the system aims to detect potential health issues early, optimize scheduling accuracy, and recommend effective treatment strategies. This research provides a timely and innovative solution to enhance patient outcomes and improve operational efficiency in modern healthcare settings. Our project adopts the Agile methodology, which is highly effective for managing complex software development due to its adaptability and iterative structure. The process begins with the planning phase, where client data is gathered to establish a strong foundation and ensure the system aligns with specific requirements. Development then moves forward by translating these needs into functional components, allowing for continuous integration, testing, and refinement throughout the project lifecycle. The primary objective of this project is to optimize both inpatient and outpatient care services by integrating advanced predictive analytics and automated workflows. The system is designed to enhance hospital efficiency, elevate the quality of patient care, and streamline administrative operations through data-driven insights and real-time monitoring. Key focus areas include patient risk prediction, length of stay forecasting, predictive scheduling, and follow-up care management, each contributing to more informed decision-making and improved healthcare outcomes. Integrating predictive analytics into hospital care has the potential to revolutionize patient treatment by shifting from a reactive to a proactive approach. Hospitals can anticipate potential patient risks, more accurately estimate length of stay, and optimize appointment scheduling, ensuring continuity of care even after discharge. This data-driven approach supports healthcare professionals in making faster, more informed decisions, ultimately enhancing operational efficiency and improving the overall patient experience.

HOSPITAL MANAGEMENT SYSTEM FINANCE: BUDGET PREPARATION, CAPITAL PLANNING & INSURANCE CLAIMS WITH AI DECISION SUPPORT

Prince Joshmyr Viray, Klarence Bilaro, Hannah Jay Quiamco,
Renie Faith Diama, Arron King Pontay, Ronald Roldan

Abstract

As hospital financial tasks become increasingly complex, the demand for reliable, accurate, and adaptable systems has grown essential for managing resources and supporting informed decision-making. During interviews with several finance officers, we noted a common concern: the rising capabilities of AI have sparked fears about job displacement, particularly among hospital leadership recognizing AI's potential. In response, the Hospital Finance Management System was designed not to replace, but to empower financial teams. It offers robust solutions for budget planning, capital allocation, and insurance claim processing, all tailored to the modern healthcare landscape. By integrating AI-powered decision support tools, the system enhances financial oversight and operational efficiency while still valuing and preserving the critical role of human expertise in financial management. The system was developed on the foundation of proven financial management principles, enhanced by advanced machine learning techniques. Its AI capabilities analyze historical financial data to forecast future budget needs, optimize fund allocation, and assess risks associated with insurance claims. Throughout development, stakeholder feedback, iterative prototyping, and rigorous testing were used to ensure the platform remains user-friendly, accurate, and dependable in processing sensitive financial information. Following the system's implementation, there was a marked improvement in budget forecasting accuracy, accompanied by a 35% reduction in the time typically needed for capital planning. Additionally, the efficiency of insurance claim processing increased by 45%. The AI-powered decision support feature delivered timely recommendations and predictive insights, enabling hospital administrators to make well-informed, data-driven financial decisions. This project showcases how merging conventional financial management tools with AI can meet the rising challenges faced by healthcare finance departments. Beyond automating everyday financial processes, the system also delivers intelligent support to aid in long-term planning and the efficient distribution of resources. Looking ahead, the platform has the potential to evolve by incorporating real-time medical data and built-in compliance checks, offering even greater stability and adaptability for hospital financial operations.

HOSPITAL MANAGEMENT SYSTEM: HUMAN RESOURCE 3 (EMPLOYEE ENGAGEMENT, EMPLOYEE ASSISTANT PROGRAM, TIME AND ATTENDANCE AND PAYROLL SYSTEM) WITH AI-DRIVEN BIOMETRIC AUTHENTICATION AND FRAUD PREVENTION

Jayvee Abat, Melvin Bardon, Rose Villa Cabigayan, Harvey Ronolo,
Mark Kenneth Cadena, Ronald Roldan

Abstract

The Hospital Management System: Human Resource Module is designed to automate and enhance human capital functions within the healthcare industry. It focuses on key areas such as employee engagement, Employee Assistance Programs (EAPs), time and attendance tracking, and payroll management. By integrating AI-based biometric authentication and fraud prevention technologies, the system introduces a new level of security, efficiency, and intelligence to hospital workforce management. During the development of the NODADO Hospital Management System Core II, we employed an Agile project management approach to ensure the system remained flexible, adaptable, and capable of delivering valuable features through frequent, incremental cycles. This methodology is essential for addressing the complexities of the healthcare industry, where requirements are continually evolving. As an integral part of the hospital's daily operations, the system requires ongoing enhancements and updates to effectively support healthcare professionals, hospital administrators, and patients. During the development of the NODADO Hospital Management System Core II, we adopted an Agile project management approach to ensure the system remains flexible, adaptable, and capable of delivering valuable features in frequent, incremental cycles. Agile methodology is essential for managing the complexities of the healthcare sector, where requirements are often dynamic and subject to change. As a core component of the hospital's daily operations, the system requires continuous improvement and regular updates to effectively meet the evolving needs of healthcare professionals, hospital administrators, and patients. The creation and implementation of the Hospital Management System: Human Resource³ represent a significant shift in how healthcare organizations manage and support their workforce. By integrating AI-powered biometric identification and anti-fraud measures, the system streamlines administrative processes while addressing critical issues such as staff engagement, employee wellbeing, attendance accuracy, and payroll precision. This paper explores the system's impact, the challenges encountered during its development, and the broader implications of adopting advanced technologies in hospital human resource management.

Keywords: hospital management system: human resource, healthcare organizations, ai-powered biometric identification, anti-fraud measures, administrative processes, staff engagement, employee we

HOSPITAL MANAGEMENT SYSTEM: HUMAN RESOURCES 1: FOR RECRUITMENT STRATEGY, JOB ROLE DEFINITION, HIRING PROCESS MANAGEMENT, STAFFING NEEDS ASSESSMENT, SUCCESSION PLANNING, AND CONTRACT MANAGEMENT WITH PREDICT AND PREVENT EMPLOYEE BURNOUT.

Armel Esteves, Marvin Tariman, Jhongoten Paul Castilla, Ma Xena Osabel,
Chester Kim Alviola, Ronald Roldan Jr.

Abstract

In the healthcare industry, the efficiency of Human Resource (HR) operations plays a crucial role in the overall quality of service delivery. This study presents a hospital management system specifically designed to optimize HR functions, including recruitment strategies, job role definition, hiring processes, staffing assessments, succession planning, and contract management. Furthermore, the system incorporates predictive features aimed at preventing employee burnout, an increasingly pressing concern in high-stress environments such as hospitals. An Agile project management strategy was employed, dividing the process into five distinct phases: Planning Phase: The product owner defined the system's goals, scope, and key features, setting the overall direction for development. Team Setup Phase: Team members were selected based on their skills and availability and were provided with the necessary tools and resources. Development Phase: During this build stage, the team worked in sprints to implement and refine core features through continuous development and testing. Stabilization Phase: The system was polished, bugs were resolved, and performance was monitored to ensure operational stability. Support mechanisms were also put in place to maintain smooth functionality. Finalization Phase: The QA team conducted final testing to confirm the system's full functionality before release. This phase also included preparations for future updates and scalability. The resulting system successfully centralized and automated key HR operations. It delivered real-time analytics to support more informed staffing decisions, streamlined the recruitment workflow, and incorporated early warning mechanisms to detect potential employee burnout. User testing with sample data demonstrated improved efficiency and accuracy in managing HR tasks compared to traditional manual methods. The implementation of this system demonstrates how digital tools can effectively address common HR challenges in hospital settings. It not only improved the efficiency of HR tasks but also supported employee well-being by helping to prevent burnout. Future enhancements could include AI-driven decision support and mobile access, making the system more intelligent and accessible anytime, anywhere.

Keywords: hr management, recruitment strategy, workforce planning, burnout prevention, ai candidate matching.

**HOSPITAL MANAGEMENT SYSTEM: HUMAN RESOURCES 2 (LEARNING
MANAGEMENT AND TRAINING MANAGEMENT, SUCCESS PLANNING)
WITH RECOMMENDATION SYSTEMS USING TENSORFLOW**

Aaron Kier Palarca, Justin Paul Bautista, Vincent Victore,
Kenneth Soriano, Jerwin Ray Veloso, Ronald Roldan Jr.

Abstract

In the dynamic landscape of hospital operations, human resource management plays a crucial role in ensuring that healthcare professionals are not only well-trained but also aligned with institutional goals. Traditional systems often lack intelligent recommendations and actionable insights, resulting in inefficiencies in training pathways and succession planning. To address this gap, this study proposes an advanced Hospital Management System: Human Resources 2, which integrates learning management, training management, and succession planning enhanced by TensorFlow-based recommendation systems. The goal is to develop a data-driven, AI-powered HR system that personalizes employee learning paths, aligns training with organizational objectives, and supports long-term success planning within the healthcare environment. The system was developed using a microservices architecture with a modular PHP-based backend integrated with a MySQL database. Front-end components were built using HTML5, CSS3, and JavaScript. TensorFlow was utilized to develop a collaborative filtering recommendation engine that analyzes user interactions, training history, and performance evaluations to deliver personalized learning content and career development plans. The Agile Scrum methodology guided the system's iterative development, incorporating stakeholder feedback and enabling continuous refinement. Key HR processes mapped in the system include training analysis, workshop planning, performance and leadership tracking. The result was a functional and scalable hospital HR system that delivered customized training recommendations, predicted employee growth trajectories, and optimized the use of training resources. Powered by TensorFlow, the recommendation engine achieved an accuracy rate of over 87% during internal testing and showed strong relevance in recommended courses and career development opportunities. Additionally, the implementation reduced manual time spent on training assignments by 40%, improved employee satisfaction scores related to professional growth by 32% and increased overall utilization of hospital-wide training modules by 58%. These outcomes support the adoption of AI as a transformative technology for HR functions in the healthcare sector. Compared to existing HRIS platforms, this system distinguishes itself by leveraging machine learning to deliver skill-based training recommendations, effectively reducing HR workload and boosting employee participation. Built-in scalability and security features ensure the system is well-prepared for real-world deployment in hospital environments.

**HOSPITAL MANAGEMENT SYSTEM: HUMAN RESOURCES 4 (COMPENSATION
MANAGEMENT AND BENEFITS ADMINISTRATION) WITH AI PREDICTIVE
ANALYTICS AND MACHINE LEARNING FOR INTEGRATED OVERTIME,
INCENTIVES AND BENEFITS FORECASTING**

Ralph Lawrenze Apil, Emar Jhon Andaya, Jhoncent Trunks Castilla,
Emjhay Dela Cruz, Edmund Domingo, Ronald Roldan Jr.

Abstract

Effective human resource management is essential for healthcare operational efficiency and employee well-being. However, compensation management and benefits administration remain highly resource-intensive for HR departments. This often results in inefficiencies, miscalculations in compensation, and delays in administering benefits. The objective of this project is to develop an AI-driven HR system that automates compensation and benefits administration, forecasts overtime hours and incentives, reduces administrative workload, and supports better decision-making for HR personnel. The HMS is developed using the Agile Scrum methodology, which involves recurring cycles of planning, development, testing, and feedback. Each sprint focuses on features such as real-time compensation tracking, overtime and incentives forecasting, and benefits and leave administration. The system is built on the MERN tech stack, using JavaScript for coding and MongoDB for database management. Its core feature leverages historical HR data, drawing on employee records to forecast overtime hours and benefits eligibility. By applying statistical and computational techniques to this data, the system generates predictions that help HR departments make better decisions and allocate resources more effectively. The system significantly enhanced HR management in compensation and benefits. The overtime forecasting model accurately predicted overtime requirements, enabling HR practitioners to plan resources more effectively. It also simplified tracking and ensured the timely delivery of employee benefits. Furthermore, the system's predictive functions and efficient data management minimized the need for manual effort, allowing HR personnel to focus on more strategic functions. The project successfully developed an AI-driven HMS that automates core HR functions, improving overtime forecast accuracy, reducing administrative burdens, and increasing HR personnel productivity. Its seamless integration with existing hospital infrastructure ensures minimal disruption during implementation. Although the outcomes are positive, regular updates to the system and AI models are necessary to address evolving healthcare needs. In conclusion, the system represents a significant step forward in the redesign of HR functions, contributing to improved patient care, greater employee satisfaction, and enhanced operational performance.

**HOSPITAL MANAGEMENT SYSTEM: LOGISTICS 2 MEDICINE DISPATCH AND
VENDOR SELECTION FOR HOSPITAL SUPPLY CHAINS WITH REAL-TIME
TRACKING, EMERGENCY EXPRESS DELIVERIES, MULTI-VENDOR
COORDINATION USING MICROSERVICES**

Rhuzel Guazon, John Neover Cabuntas, Michael Camino, Eriel Clifford Cudanes,
John Carlos Tivar, Ronald Roldan Jr.

Abstract

This capstone project presents a hospital supply logistics management system designed to enhance drug dispensing, vendor management, and supply coordination. Its primary objective is to minimize delays and increase transparency in hospital supply chains through real-time tracking, express emergency delivery, and the use of microservices. Many hospitals still rely on traditional methods, which often result in stockouts, overstocking, and inefficient vendor coordination. To address these challenges, the system incorporates modules for vendor evaluation, emergency dispatch management, and stock tracking with expiry-date reminders. Developed through iterative sprint cycles, each module was designed and tested to ensure system functionality and reliability. The project adopted the Agile Scrum framework, dividing development into sprint cycles that addressed tasks such as database configuration, vendor selection, and order tracking. Key roles in the process included a system analyst, quality assurance staff, and a Scrum Master. The system was built using the MERN stack (MongoDB, Express.js, React.js, and Node.js) and employed microservices to support modular and scalable development. Cloud databases were used to manage vendor and inventory information, complemented by security features such as role-based access control and encryption. Simulations and real-time testing were carried out to evaluate the system's performance in handling emergency deliveries. Following multiple development cycles and rigorous testing, stock discrepancies were reduced by more than half, with system reports showing over 90% improvement in inventory management accuracy. Simulated emergency dispatch scenarios demonstrated a nearly 60% reduction in response times. Furthermore, stress testing confirmed that the microservices architecture could sustain very high levels of concurrent transactions, maintaining system stability with nearly 100% uptime in test environments. This project highlighted key challenges in hospital supply chains, particularly in medicine dispatch. To address these, we implemented real-time tracking to notify staff and prioritize emergency express delivery to reduce delays in patient treatment. The use of microservices facilitated system organization, making it easier to test and update, while the Agile Scrum approach enabled efficient workload management. Although issues such as microservices integration and internet reliability posed challenges, the system performed effectively during testing and demonstrates strong potential to streamline hospital logistics and medicine delivery, with further refinements still required.

Keywords: hospital management system, medicine dispatch, vendor selection, mern stack, real-time tracking, emergency express deliveries, multi-vendor coordination

**HOSPITAL MANAGEMENT: LOGISTICS MANAGEMENT SYSTEM, STOCK LEVEL
MANAGEMENT, ABC ANALYSIS WITH DEMAND FORECASTING
USING MACHINE LEARNING**

Marinel Gupit, Jennifer Aleman, Cristopher Gerald Buncag,
Joshua Afable, Ralph Laplana, Ronald Roldan Jr.

Abstract

Inventory management involves purchasing, storing, utilizing, and selling a company's stock, including components, raw materials, and finished goods. This capstone project applies technology-driven inventory management to improve hospital logistics. The system incorporates cloud-based databases for storing critical documents to optimize space, artificial intelligence (AI) for demand forecasting, and a user-friendly website to enhance accessibility. By adopting modular, scalable, and secure architecture, the system improves efficiency, reduces human error, and enables real-time decision-making. To support the development and continuous improvement of hospital logistics, this study employed the Agile Scrum methodology. Each component of the system, including inventory management, listings, bidding and awarding, and demand forecasting, operates independently but is interconnected through RESTful APIs. The system was developed using microservices architecture. MongoDB was selected for listings and inventory management due to its schema flexibility and strong performance with large data and user volumes, while Mongoose was used to facilitate database communication, reduce redundancy, and improve data retrieval speed. The predictive analytics module applies time series models to forecast demand, with a TensorFlow-based model trained on historical inventory data. This approach helps reduce shortages and overstocking while ensuring optimal stock levels. The deployment of the Hospital Logistics System led to significant improvements in tracking, efficiency audits, and inventory infrastructure management. Real-time inventory updates were integrated to maintain consistent stock levels, while the system also monitored items nearing expiration and facilitated their location within the warehouse. The AI-powered demand forecasting algorithm generated highly accurate predictions, enabling staff to make real-time replenishment decisions based on forecasted demand. The findings demonstrate that automating inventory processes significantly improve productivity while reducing human error. Integrating AI for demand forecasting provides a proactive approach to inventory management, ensuring that stock levels align effectively with demand patterns.

**HOTEL AND RESTAURANT MANAGEMENT SYSTEM: CORE 3 – ROOM CLEANING
& SERVICE MANAGEMENT, MAINTENANCE MANAGEMENT,
AND AI-POWERED TASK ALLOCATION**

Reorio Mirandilla, Rhena Shekka Labog, Mark Glean Billanes,
Angelica Sabalza, John Paul Saguban, Marifel Laynesa

Abstract

In today's fast-paced hospitality industry, the speed and quality of service delivery directly impact guest satisfaction. Traditional manual systems often result in delays, inefficient task distribution, and limited oversight. To address these challenges, we developed a Hotel and Restaurant Management System (HRMS) focused on three key areas: Room Cleaning and Service Management, Maintenance, and AI-powered Task Allocation. The system streamlines operations by automating routine processes while providing staff and administrators with real-time access to tasks and updates. Guests can connect to the system via QR codes, enabling them to submit service requests, step-out notifications, and food orders directly from their own devices. The system was developed using an agile approach, with PHP as the core technology, and was structured into modular components to ensure scalability and maintainability. The Room Cleaning and Services module features a dashboard for monitoring room cleanliness status, task progress, and lost-and-found items. Task allocation is managed by an AI engine that assigns duties based on employee availability, urgency, and location. Through their portal, housekeepers can view and complete tasks, report maintenance issues, and update room status. A UUID tracking system ensures that only authorized company devices are used by staff. Maintenance operations are supported by an admin portal for scheduling tasks and a staff portal for execution, where employees can access their schedules and request assistance when needed. The Inventory Module tracks supplies and can automatically generate restocking requests through a warehouse API. Guests interact seamlessly with hotel services through the QR-based Guest Portal, which enables direct access to service requests and other amenities. The system minimized delays and manual coordination by automating task assignments. Administrators were able to monitor service progress in real time and reroute tasks when necessary, while housekeepers benefited from clearer task assignments and streamlined reporting. Maintenance staff valued the structured scheduling system and the built-in assistance feature for complex tasks. Guest satisfaction also increased, driven by faster response times and the convenience of mobile service access. HRMS – Core 3 demonstrates how the integration of automation, smart scheduling, and centralized task monitoring can transform hotel operations. By providing real-time insights and automated workflows, the system enhances operational efficiency while maintaining flexibility for future upgrades and expansions.

Keywords: hotel system, qr guest portal, smart task assignment, housekeeping tools, maintenance tracker, inventory sync, staff device logging, workflow automation

**HOTEL AND RESTAURANT MANAGEMENT SYSTEM: HUMAN RESOURCE 3 – TIME
AND ATTENDANCE MANAGEMENT, SHIFT SCHEDULING AND ROSTER
MANAGEMENT, LEAVE MANAGEMENT WITH PREDICTIVE ANALYTICS USING
TENSORFLOW,
AND COMPLIANCE AND LABOR LAW ADHERENCE**

Ariane Jane Corpuz, Cherry Lyn Torre Franca, Rheniel Marzan,
Grace Lipit, Angelo Eva, Marifel Laynesa

Abstract

Managing shift work in the hospitality sector is challenging due to variable staff availability, leave requests, and the need to comply with labor laws. Seasonal trends, special events, and economic fluctuations further demand a flexible yet structured HR responses, something conventional systems often fail to provide due to limited adaptability and forecasting capabilities. This study proposes the development of an integrated Hotel and Restaurant Management System (HRMS) with core HR modules for Time and Attendance, Shift Scheduling, Leave Management, and Labor Compliance. By incorporating predictive analytics through TensorFlow, the system supports data-driven decision-making to forecast staffing requirements, anticipate absenteeism, and optimize workforce planning. Ultimately, this solution addresses inefficiency, compliance risks, and the lack of workforce insights, equipping HR managers with intelligent tools for proactive, goal-oriented decision-making. This study employs the Agile Scrum methodology to develop a Human Resource Management System (HRMS) for hotels and restaurants. The system includes modules for time tracking, shift scheduling, leave management, and labor law compliance, along with features such as biometric sign-ins and real-time notifications. It also integrates TensorFlow-based predictive analytics to forecast staffing requirements and anticipate absenteeism. Development was guided by daily stand-ups, reviews, and retrospectives to ensure continuous progress. Upon completion, the system was thoroughly tested, documented, and deployed to maximize functionality. The system effectively addressed key HR challenges in hotel and restaurant operations. It automated time tracking, optimized shift scheduling, and streamlined leave management. Compliance features ensured adherence to labor laws through real-time alerts. With TensorFlow integration, the system accurately forecasted staffing requirements and absenteeism, enabling managers to plan proactively. Overall, it improved efficiency, reduced manual workload, and supported smarter, data-driven HR decision-making. This project represents a significant improvement in workforce automation and HR management. By integrating TensorFlow-based predictive analytics with robust biometric authentication, the system streamlines timekeeping, scheduling, and leave management. It provides data-driven insights that enable management to anticipate challenges, optimize staff deployment, ensure compliance, and enhance overall efficiency and operational continuity.

HOTEL AND RESTAURANT MANAGEMENT SYSTEM: HUMAN RESOURCES 1 (JOB POSTING AND RECRUITMENT, APPLICATION MANAGEMENT, APPLICANT TRACKING SYSTEM, ONBOARDING) AUTOMATED PARSING WITH AI DRIVEN TOOL HIRETUAL

Jenelyn Corpuz, Buenaventura Abejay, Mia Joy Napile,
Marc Allen Papa, Cristine Versoza, Marifel Laynesa

Abstract

The hospitality industry is inherently dynamic, with human capital serving as a vital component of both service quality and operational excellence. Nearly all areas of the sector from hotels to restaurants, depend heavily on human talent, yet face persistent challenges such as high employee turnover, lengthy hiring processes, inefficient applicant tracking, and fragmented onboarding systems. These issues contribute to reduced productivity, increased costs, and lower customer satisfaction. While large corporations often struggle with the transition to new HR technologies, small and medium enterprises (SMEs) face additional constraints, as access to advanced HR solutions is limited rather than standard. To address these challenges, this study proposes the Human Resource Management System 1 (HRMS-HR1), an AI-driven platform specifically designed to automate HR processes in the hotel and restaurant industry. During the development of HRMS-HR1, the Agile Scrum methodology was employed to enable iterative progress and incorporate real-time feedback throughout the process. The application was built on microservices-based architecture to ensure scalability and modularity, allowing for seamless future upgrades and expansions. Core functionalities include automated job postings across multiple platforms, a centralized Applicant Tracking System (ATS) for employment marketing and application management, AI-driven resume filtering, and a structured onboarding module designed to streamline and standardize the induction of new hires. The implementation of HRMS-HR1 significantly improved HR operations. The AI-powered resume parser reduced manual screening time by more than 50%, enabling recruiters to quickly identify top candidates based on skills, qualifications, and relevance. The ATS provided a centralized dashboard for tracking applicants throughout the hiring process, while automated job postings streamlined recruitment by distributing vacancies across multiple platforms. The onboarding module further enhanced efficiency by automating document collection, task assignments, milestone tracking, and progress monitoring, ensuring the smooth integration of new hires. The study introduces HRMS-HR1, an AI-powered tool using Hiretual to streamline recruitment and onboarding in hospitality, cutting screening time by 50% and boosting hiring accuracy, speed, and efficiency.

**HOTEL AND RESTAURANT MANAGEMENT SYSTEM: HUMAN RESOURCES 4 –
(PAYROLL PROCESSING, BENEFITS & COMPENSATION MANAGEMENT,
AND EMPLOYEE SELF SERVICE PORTAL) UPGRADED WITH
SMART PAYROLL HELPDESK**

Jimmy Saquez Jr, Renz Joshua Rosales, Reed Ashley Motol,
Mark Angelo Calayag, Francisco Jr Turing, Marifel Laynesa

Abstract

The hospitality industry faces growing challenges in human resource management, including high employee turnover, irregular work schedules, and evolving compliance requirements. Traditional HR systems frequently contribute to payroll errors, delayed benefits, and administrative inefficiencies. To address these issues, this study introduces the Hotel and Restaurant Management System: Human Resources 4 (HRMS 4), developed for Paradise Hotel. HRMS 4 integrates Payroll Processing, Benefits and Compensation Management, and an AI-powered Payroll Helpdesk within an Employee Self-Service Portal. By automating key HR functions, the system reduces errors, enhances efficiency, and ensures regulatory compliance. This study employed a mixed-methods approach within the Agile Scrum framework, with system development carried out through iterative sprints. Requirements were collected from Paradise Hotel staff using interviews and surveys to ensure user-centered design. The system was built on a microservices architecture to guarantee modularity and scalability, supported by security features such as encryption and role-based access control. DevOps practices and continuous integration/continuous deployment (CI/CD) facilitated ongoing development and deployment. Testing included unit, integration, and user acceptance tests to validate functionality and reliability. The implementation of HRMS 4 at Paradise Hotel substantially improved the efficiency and accuracy of HR operations. Automated salary computation and deductions reduced payroll errors by nearly 80%. Employee satisfaction rose, with 90% of staff reporting enhanced access to payslips, leave requests, and benefits through the Employee Self-Service Portal. The AI-powered Smart Payroll Helpdesk accelerated inquiry response times while easing HR workload. In addition, real-time validation, audit trails, and secure data processing strengthened compliance with labor and tax regulations. Benefits and compensation processes were streamlined, reducing manual administrative tasks by 60%. The findings confirm that integrating automation and AI into HR systems enhances both operational efficiency and employee engagement. HRMS 4's modular architecture enables seamless integration of payroll, benefits, and employee services, significantly reducing manual processes. The AI-powered Smart Payroll Helpdesk further improved transparency and reduced HR workload by supporting self-service inquiries. Although initial training was required to facilitate adoption, the system's scalability allows for future enhancements, such as biometric attendance tracking. Overall, HRMS 4 sets a benchmark for digital transformation in hospitality workforce management.

Keywords: hotel management system, payroll automation, human resources, employee self-service portal, ai helpdesk, benefits management, agile scrum, hospitality industry, microservices, compliance

**HOTEL AND RESTAURANT MANAGEMENT SYSTEM: LOGISTIC 1 (WAREHOUSE
AND VEHICLE RESERVATION) WITH SYSTEMATIZED INVENTORY
REPLENISHMENT,
AND ITEM TRACKING CAPABILITIES.**

Mark Anthony Fuentes, Alan Jules Bongon, Randolph Gutierrez,
John Robert Oclo, Kenneth Panlilio, Marifel Laynesa

Abstract

Our system addresses the critical need for efficient supply chain coordination within the hotel industry. Existing logistical systems often lack the structure and agility required to meet the demands of modern hotel and restaurant operations. To overcome these limitations and enhance efficiency, we propose the Hotel and Restaurant Management System: Logistics 1, which integrates warehouse management, vehicle reservation, and ordering modules. The system supports systematic inventory replenishment and advanced item tracking, consolidating logistics processes to minimize resource waste, ensure timely restocking, and provide real-time visibility of assets and inventories. This approach enhances delivery performance and operational agility. An agile project management methodology was employed, dividing development into multiple iterative phases. Concept Phase: The product owner outlined the overall project scope, emphasizing the integration of warehouse operations, vehicle reservations, and ordering into a unified logistics framework. Inception Phase: The development team was formed to initiate system planning and design. During this stage, key requirements were established, including item tracking capabilities and systematic inventory replenishment. The deployment of the Hotel and Restaurant Management System: Logistics 1 has markedly enhanced operational efficiency and resource management. By automating warehouse monitoring, truck dispatching, and order processing, the system minimizes human error and reduces reliance on manual labor. Systematic inventory replenishment ensures optimal stock levels, preventing both shortages and overstocking. Real-time item tracking and unified data administration provide greater transparency and responsiveness in logistics operations. Collectively, these improvements enable businesses to deliver services more effectively, avoid operational delays, and streamline logistics processes through data-driven decision-making. The integration of ordering procedures, inventory replenishment, warehouse administration, vehicle reservations, and item tracking into a unified platform represents a paradigm shift in hospitality logistics. The Hotel and Restaurant Management System: Logistics 1 delivers a comprehensive solution to the complex supply chain challenges faced by modern hotels and restaurants. By consolidating these critical logistical activities, the system enhances coordination, reduces inefficiencies, and equips organizations with the agility required to meet evolving operational demands.

Keywords: hotel and restaurant management system, integrated logistics platform, warehouse operations, vehicle reservation module, smart ordering system, systematized inventory replenishment, real-time

HOTEL AND RESTAURANT MANAGEMENT SYSTEM: LOGISTICS 2 (PROCUREMENT, VENDOR PORTAL, AUDIT MANAGEMENT) WITH PREDICTIVE ANALYTICS

Mheera Ann Valerie Conwi, Asmin Boga, Kier Salise,
Sheila Velasco, Elaisa Grace Arca, Marifel Laynesa

Abstract

The hospitality industry, like many others, is undergoing digital transformation, requiring advanced systems to manage complex operations. In hotel and restaurant management, logistics is vital for efficient procurement, vendor communication, and audit organization. Common challenges include inefficiencies, data silos, and difficulties in demand forecasting and anomaly detection. This study proposes two logistics modules to be integrated into a Hotel and Restaurant Management System (HRMS) to enhance vendor collaboration and audit transparency by leveraging predictive analytics. The HRMS Logistics 2 system was developed using Agile methodology, with feedback incorporated at each iteration. It includes three main modules: Procurement Management, automating purchase requests, inventory-based reordering, and supplier selection; Vendor Portal, offering role-based access for vendors to view orders, manage profiles, delivery schedules, and KPIs; and Audit Management, providing automated audit trails and compliance checks. Predictive analytics supports forecasting inventory needs, anomaly detection, and vendor optimization. The Logistics 2 modules were seamlessly integrated into the HRMS and tested with simulated data from a medium-sized hotel chain. Key results included automated procurement and predictive restocking, improved vendor satisfaction, and enhanced transparency through real-time performance dashboards. The system also achieved high audit accuracy and reliable monthly demand forecasting, significantly reducing stockouts and overstocking. Predictive analytics in procurement and audit processes greatly enhances decision-making for hotel and restaurant management. The system empowers managers to act proactively by providing real-time insights and forecasts. Enhanced transparency strengthens vendor relationships, while automated tracking improves audit compliance. Future developments may incorporate machine learning-based vendor scoring, natural language processing interfaces, and blockchain technology to secure audit trails.

Keywords: predictive analytics, procurement, audit compliance, hotel management, restaurant management, real-time insights, vendor relationships, machine learning, natural language processing, blockchain

HOTEL FEEDBACK DEVICE FOR IMPROVING HOTEL RATINGS USING RASPBERRY PI

Quemuel Jhoram Aviñante, Shaira Mae Arellano, Tyron Oliva, John Carlo Tenedero,
Angel Joey Ferrer, Oliver Talamisan, R-jay Pornasodoro

Abstract

Guest feedback is vital in the hospitality industry for enhancing service quality and maintaining hotel ratings. Traditional methods, however, often yield low participation and delayed responses. This study introduces a Hotel Feedback Device that enables real-time, efficient, and engaging collection of guest feedback. The device features a Raspberry Pi Zero 2 W with a touchscreen interface, enabling guests to easily provide feedback. Submitted responses are instantly sent via Bluetooth to hotel management, allowing quick access without the need for internet or complex storage solutions. Testing demonstrated that the device increased guest feedback participation and enabled staff to receive responses immediately. This led to faster issue resolution and enhanced the hotel's overall service quality. Implementing the feedback device allowed hotel management to efficiently track guest satisfaction. Real-time Bluetooth feedback proved practical and effective, serving as a valuable tool for ongoing operational improvement.

Keywords: hotel feedback system, guest satisfaction, real-time feedback, raspberry pi zero 2 w, touchscreen interface, bluetooth data transfer, hospitality management, service quality improvement.

**IMPACT OF EXCESSIVE USE OF TECHNOLOGY THAT INCREASE
THE STRESS AND ANXIETY LEVEL FOR TEENAGERS**

Heaven Operio, Wenzo David, Jennilyn Gado, Empress Kim Flores,
Ryza Sofia Payno, Ahlen Lamida

Abstract

Stress is a form of mental or physical tension triggered by factors that cause frustration or keep individuals in a state of heightened alertness. Anxiety manifests as feelings of fear, worry, or discomfort, which can occur even without an identifiable cause. Among Grade 12 students, excessive technology use has been linked to increased anxiety and depression, particularly when they encounter hate messages online. Overexposure to technology negatively impacts teenagers' physical and mental well-being, impairing concentration and weakening their overall health, potentially leading to illness and depression. These effects are intensified by experiences of cyberbullying and exposure to harmful online content. To address these challenges, students must learn effective strategies to limit their screen time and manage their use of technology responsibly. This study adopts a qualitative approach to examine the complex relationship between excessive technology use and increased stress and anxiety among Grade 11 and 12 students at Bestlink College – Bulacan Campus. Data will be collected through a survey employing a Likert scale to gather students' perceptions and attitudes toward technology-related stress and anxiety. The responses will be analyzed using thematic analysis to uncover the underlying causes of stress and anxiety linked to technology use. This capstone research examines the impact of excessive technology use on the stress and anxiety levels of Grade 11 and 12 students at Bestlink College of the Philippines. The study aims to identify effective strategies to reduce technology use and mitigate stress and anxiety among teenagers. Employing a qualitative approach, data was collected through surveys and interviews involving 40 respondents from Grades 11 and 12. The research sheds light on the underlying factors contributing to heightened stress and anxiety associated with technology use among students. This study explores the adverse effects of excessive technology use on the psychological well-being of adolescents, with particular emphasis on its contribution to heightened stress and anxiety levels. It investigates the relationship between excessive technology use and increased stress and anxiety, identifying possible contributing factors and consequences. The study aims to provide insights that can guide efforts to reduce excessive technology use and improve the physical and mental health of adolescents.

Keywords: excessive technology use, adolescents, psychological health, stress, anxiety, mental health, physical health, technology impact, youth well-being

INFORMATION SYSTEM FOR CHRIST THE POWER AND WISDOM OF GOD CHURCH

Ruzzel Dumalag, Jedrick Charles Gacelo, John Denver Genson,
Clark Ayalin, Jonathan Crispino, R-jay Pornasdoro

Abstract

An information system is a set of interconnected components that collect, process, store, and share information to support decision-making and operations within organizations. The Christ the Power and Wisdom of God Church, established to spread the word of God, utilizes an information system to effectively manage data and help achieve the Church's goals. This study focused on a single-case organization, Christ the Power and Wisdom of God Church, Inc. The researchers employed the Waterfall methodology and used Java, Apache NetBeans IDE 25, MySQL, and SQL Yog to develop the information system. To identify the church's problems and requirements, the researchers conducted interviews with the church administrator. Throughout the development and implementation process, the researchers collaborated closely with the church administrators and staff. The developed information system effectively resolved issues related to unclear membership records, paper-based documentation, disorganized information, and unsecured church data. Testing results demonstrated that the system is efficient, user-friendly, and reliable. It offers a secure and organized approach to storing and retrieving church information, while also supporting decision-making processes for managing reports and events. The findings indicate that the system can be adopted by other churches and organizations to enhance their information management capabilities. Its user-friendly interface and ease of use make it accessible to users with diverse levels of technical expertise. Overall, this study highlights the potential of information systems to increase the efficiency and effectiveness of church operations.

Keywords: information system, church management, waterfall methodology, java, mysql, data security, user-friendly interface, organizational efficiency, report management, event management

**INVENTORY MANAGEMENT SYSTEM FOR RHEA MERCADO HAIR AND
MAKE-UP SALON FOR MEN & WOMEN**

Allizon Boton, Mia Faith Dequito, Helena Cecilio, Mark Glein Madera,
Gian Rhay Pardillo, Renelyn Joy Mata, R-jay Pornasodoro

Abstract

Effective inventory management is vital for service-based businesses like Rhea Mercado Hair and Make-up Salon for Men & Women. Manual product tracking often results in errors, inefficiencies, and poor decision-making, which can disrupt salon operations. Since the timely availability of hair and make-up products is essential, delays in stock monitoring can negatively impact service delivery. Although digital inventory systems have been proven to improve accuracy, reduce waste, and streamline stock management, many small salons still rely on manual methods. This highlights a gap in adopting modern solutions. Implementing a digital inventory system would enable the salon to enhance inventory control, improve operational efficiency, and make better-informed decisions. Data was gathered through interviews and surveys conducted with the salon owner and staff involved in inventory management. Using their input, the researchers defined the system requirements and developed the inventory management system with NetBeans for the user interface, Java for programming, and MySQL for the database. The development process comprised requirement analysis, system design, coding, testing, and incorporating user feedback. The system was subsequently tested by the salon staff to ensure it met their inventory tracking and stock management needs. The inventory management system developed for Rhea Mercado Hair and Make-up Salon for Men & Women successfully achieved its objectives. It provided real-time inventory tracking, generated comprehensive reports, and optimized the overall inventory process. System testing confirmed smooth operation, significantly reducing manual errors and the time needed for stock monitoring. All intended features were effectively implemented, and the system performed efficiently during practical use. The inventory management system developed for Rhea Mercado Hair and Make-up Salon for Men & Women effectively resolved the salon's inventory challenges by improving real-time tracking, reducing manual tasks, and facilitating easier report generation. These results are consistent with prior studies emphasizing the benefits of digital systems in enhancing efficiency and reducing errors. However, the study was limited to a single salon and a brief testing period. Future research should consider involving more users and extending the evaluation timeframe. Overall, the system proved to be a practical solution for small business inventory management and can serve as a model for similar enterprises.

Keywords: inventory management system, real-time tracking, digital inventory, report generation, small business, efficiency, error reduction, hair and make-up salon, system evaluation

**LGU: HEALTH AND SANITATION MANAGEMENT SYSTEM (ENHANCE A
DIGITAL SOLUTION FOR STREAMLINING BARANGAY BUSINESS
PERMITS AND HEALTHCARE CENTER RECORDS)**

Jaypee Docot, Crisjon Mironos, Jomari Casuyon, Andrei John Embelino,
Vince Jerald Quiobe, Rosauo Villalol

Abstract

There is an increasing demand for more efficient and transparent public services at the barangay level. The limitations of manual system such as delays, data loss, and restricted accessibility, have significantly hindered the effectiveness of service delivery and decision-making. In response, this study introduces the Health and Sanitation Management System, a digital initiative aimed at improving the management of barangay business permits and healthcare records. The system seeks to address operational inefficiencies by leveraging digital transformation to streamline administrative and health-related services. The system development followed agile practices, incorporating product and sprint backlogs to prioritize and manage user stories, particularly in areas of records management, permit processing, and data analytics. The platform was built using microservices architecture, allowing individual modules such as business permit applications, health record management, and complaint tracking, to operate independently and scale efficiently. Continuous Integration and Continuous Deployment (CI/CD) pipelines were implemented using DevOps methodologies to ensure seamless updates and system reliability. The implementation of the Health and Sanitation Management System resulted in a functional digital platform that addressed key challenges associated with manual processes. Users were able to submit business permit applications online and receive automated renewal reminders, significantly reducing processing time and improving accessibility. In the healthcare domain, the system provided a secure environment for managing electronic health records, alongside analytics dashboards that assisted barangay officials and health personnel in data-driven decision-making. The digital platform demonstrated a significant improvement in the management of barangay business permits and healthcare records. By enabling real-time tracking, automatic notifications, and online submissions, the system enhanced service efficiency and transparency. The healthcare module facilitated the secure handling of electronic medical information, promoting better patient record management and continuity of care. This initiative highlights the potential of digital solutions to modernize local government processes and improve public service delivery at the grassroots level.

Keywords: digital transformation, health and sanitation, business permit processing, electronic health records, microservices architecture, barangay information system, local government digitization, ci/cd deployment

**LGU 1: BARANGAY CENSUS AND DEMOGRAPHIC MANAGEMENT SYSTEM
(POPULATION STATISTICS, RESIDENT PROFILE MANAGMENT
WITH BIOMETRICS USING AI-DRIVEN TOOL)**

Byron Jose San Jose, Mia Barrientos, Paul Alexis Caliwatan,
John Pol Socias, Tejie Ubos, Richelyn Villasor

Abstract

Accurate and up-to-date demographic data at the barangay level is vital for effective governance, planning, and service delivery. Traditional methods such as spreadsheets and paper forms have proven inefficient and prone to data loss or inaccuracy. To address these challenges, this study introduces the Barangay Census and Demographic Management System, which integrates population statistics and resident profile management using biometric authentication and AI-driven tools. This system aims to enhance data confidentiality, accessibility, and integrity, enabling barangay officials to make informed and data-driven decisions. The study follows the System Development Life Cycle (SDLC), encompassing planning, analysis, design, development, testing, and deployment phases. The system is built using the MERN stack: React.js for the frontend, Express.js and Node.js with TypeScript for the backend, and MongoDB for the database. Core features include facial recognition for resident registration, household tracking, automated census data management, and generation of demographic reports. The system supports multi-user role-based access, with secure logins for residents (via facial recognition), staff, and administrators. The implementation of the system led to notable improvements in data accuracy and operational efficiency. Barangay officials reported a 60% reduction in manual encoding time and a significant increase in the reliability of data used for census and health-related monitoring. The successful integration of biometric verification and AI-driven analytics contributed to streamlined processes and improved decision-making at the barangay level. The findings demonstrate the feasibility of automating demographic and census data collection at the local government level. The use of AI-powered facial recognition ensures accurate and secure resident profiling. Potential future enhancements include the addition of alternative biometric options and offline synchronization features. This system can serve as a scalable model for other barangays seeking to digitize their records, improve disaster response coordination, and support data-informed governance.

Keywords: barangay census, demographic management, resident profile, web-based system, facial recognition, ai-driven tools, population statistics, local governance

LGU 1: BARANGAY TANOD PATROL MANAGEMENT SYSTEM: (PATROL SCHEDULING AND ASSIGNMENT, PATROL ROUTE MAPPING, INCIDENT REPORTING AND RESPONSE, PERFORMANCE TRACKING, RESOURCE MANAGEMENT)

Reymond Medica, Mc. Angelo Abbatuan, Kim Rovil Garcia,
Tristan Cyrus Mallari, Noeven Omnes, Richelyn Villazor

Abstract

Barangay tanods serve a vital role in upholding peace and order at the community level. However, traditional patrol operations typically rely on manual scheduling, paper-based reporting, and verbal communication, which lead to inefficiencies such as delayed incident responses, disorganized patrol coverage, and challenges in monitoring performance. To address these issues, the Barangay Tanod Patrol Management System was developed. This system aims to streamline patrol operations, automate reporting processes, and enhance resource management through the use of modern technologies. It is designed to improve patrol scheduling, real-time incident tracking, and data-driven decision-making in barangay security operations. The system was developed using MongoDB to manage data efficiently, offering scalable and structured storage for patrol schedules, incident records, and user profiles. Visual Studio served as the primary development environment, enabling seamless integration of essential modules such as patrol scheduling, route mapping, incident reporting, and performance tracking. The agile development methodology guided the process, allowing iterative development, stakeholder feedback incorporation, and continuous testing. Each module underwent individual testing before integration to ensure accuracy and a cohesive system workflow. The implementation of the system led to faster and more organized patrol coordination, significantly reduced incident response times, and enhanced accuracy in reporting. Patrol assignments became systematic, resulting in more consistent coverage of barangay areas. The automated incident reporting feature reduced reliance on manual documentation, improving case tracking and resolution efficiency. Additionally, built-in analytics tools provided valuable insights into incident trends and patrol performance, aiding in strategic resource allocation and planning. The integration of real-time data processing and automated workflows successfully addressed inefficiencies in barangay patrol operations. MongoDB supported reliable data management, while Visual Studio facilitated stable system development. Technical challenges such as module interoperability and data synchronization were resolved through structured debugging and optimization. Future improvements may include enhanced data security features, user interface enhancements, and expanded storage optimization to support system scalability and broader implementation across barangays.

Keywords: patrol management system, barangay tanod, incident reporting, route mapping, performance tracking, resource management, mongodb, agile development, real-time monitoring

**LGU: AI-ENABLED QUEUE MANAGEMENT FOR
ENHANCED PUBLIC HEALTH SERVICES**

Cristel Ann Lapinosa, John Erick Bustillo, John Ray Gangat, Jheryl Marie Mance,
Rey Vincent Melo, Rosauro Villalon Jr.

Abstract

Technology plays a vital role in improving healthcare services, particularly in enhancing patient flow within healthcare systems. Efficient queue management is essential in delivering timely and effective care. At Holy Spirit Health Center, traditional manual systems have resulted in numerous operational inefficiencies, including disorganized appointment booking, prolonged waiting times, low patient volume, and poor resource allocation. This study introduces an AI-enabled Queue Management System aimed at streamlining patient flow, improving cost-effectiveness, enhancing patient satisfaction, and reducing overall wait times in public health facilities. The study follows a system development process that includes defining the system architecture, selecting appropriate technologies, and planning the system's implementation at Holy Spirit Health Center. The system utilizes AI capabilities to manage appointment scheduling, monitor real-time queue status, and allocate resources effectively. An Agile Scrum methodology guides the development process, allowing iterative feedback and continuous system refinement. Evaluation metrics focus on patient waiting time, user satisfaction, staff workload, and resource utilization to assess system effectiveness after deployment. Preliminary expectations indicate that the implementation of the Public Health Center Management System (PHCMS) will lead to a significant reduction in patient wait times and improved scheduling efficiency. The system's real-time monitoring and appointment features are anticipated to enhance patient satisfaction and allow healthcare providers to allocate more focused time to care delivery. Additionally, the data gathered from system usage may serve as a foundation for future enhancements involving AI-based decision-making and predictive analytics in healthcare operations. The deployment of the AI-enabled queue management system demonstrates the potential of digital innovation in addressing persistent inefficiencies in public health services. By integrating Agile development practices with AI technologies, the system not only optimized patient flow but also laid the groundwork for future scalable improvements. Literature on existing queue management frameworks and agile methodologies supports the system's design and implementation strategy. The study emphasizes the importance of modern queue management tools in improving both patient experience and healthcare service delivery in local government units.

Keywords: public health services, queue management system, ai-enabled queue management, patient flow, healthcare efficiency, agile development, health technology integration

**LGU2: CITIZEN REQUEST AND FEEDBACK MANAGEMENT SYSTEM FAQ CHATBOT,
REAL-TIME TRACKING AND FEEDBACK ANALYSIS**

John Michael Isidro, John Patrick Capitle, Aaron Kyle Salvador,
Aris Christian Ursal, Jay-ar Ygot, Sir Jhun Villalon

Abstract

The Citizen Request and Feedback Management System is a digital communication channel for citizens with local governments or public service agencies like the barangays. This facilitates easy filing of service requests and feedback on public service by the citizens. It enhances transparency, accountability, and responsiveness, thereby allowing residents to take part in the developmental processes of their community and help authorities in public service provisioning and resource management. Accessible interfaces of the system are like a very public application, an almost easily usable web and mobile app where the citizens could log in to ask for something or give feedback. Submissions have categories (for example, barangay clearance, barangay ID), and each has been assigned a special tracking number. Afterward, it engages the routing function of the request department concerned about that particular routing. Status changes are always up to date, and citizens can see where their requests/audiences are and even give feedback regarding responses. The implementation of the Citizen Request and Feedback Management System brought the enormous change that was required for public service delivery. Citizens benefited from speedier response time, transparency, and improved communication with local authorities. The system enables tracking and prioritizing of requests from citizens, and in some instances, it even provides document handling. At the same time, it collects relevant data for the analysis of performance and future planning. Therefore, the platform has built trust among citizens and promotes active citizenship. Evidently, the CRFMS serves as a platform for removing gaps in communication between citizens and various government agencies. This system allows transparency, accountability, and faster service delivery in digitizing the request and feedback process. It provides opportunities for citizens to participate in governance actively, while the authority is empowered to take data-driven decisions.

Keywords: citizen request management, feedback management system, community engagement

LIBRARY BOOK BORROWING AND RETURNING SYSTEM IN SAUYO HIGH SCHOOL

Sam Lawrence Decano, Eriann Johnryll Ayuban, Earl Vincent Abejuela,
Christian Delos Santos, Princess Angel Manlangit, R-jay Pornasodoro

Abstract

This study focuses on developing a Library System for Sauyo High School to streamline library operations through automation. The system aims to reduce manual work, improve accuracy, and simplify the borrowing and returning process. It automates record-keeping, minimizing human error and improving efficiency. The system provides real-time access to book inventories and borrower records, allowing easier tracking of availability and overdue returns. Additionally, centralized data storage enables faster and more secure audits. The user-friendly interface enhances the library experience and promotes responsible borrowing. Overall, the system modernizes library management, making it more organized, systematic, and reliable for both librarians and borrowers. The researchers adapted the Waterfall Model (SDLC), which includes planning, design, development, testing, implementation, and maintenance phases. System requirements were gathered through interviews and market research to identify the library's needs and challenges. A detailed system design was created to outline functionalities and features. During development, Java was used for coding and debugging, while MySQL handled database management. The Library System significantly improved records management. It allowed administrators to update, retrieve, and organize records quickly, eliminating inefficiencies caused by manual documentation. The system effectively addresses Sauyo High School's challenges in manually recording borrowing transactions. It enhances accuracy, reduces workload, and increases overall efficiency in managing library records.

Keywords: library system, waterfall model (sdlc), records management, information records

LOCAL GOVERNMENT UNIT 2: SOCIAL SERVICE AND WELFARE MANAGEMENT SYSTEM (CANCELLATION AND RESCHEDULING, SOCIAL WORKER AND CASE PORTAL, APPOINTMENT AND SCHEDULING, REPORTING AND ANALYTICS, BENEFICIARY MANAGEMENT, AI DECISION SUPPORT)

Henryco Buena, Jayboy Colo, Angeline Basas, Genny Annrich Biscocho,
John Lloyd Lagman, Rosauro Villalon Jr.

Abstract

The Social Service and Welfare Management System is a modern digital platform designed to streamline and enhance the delivery of social services within local government units (LGUs). By replacing inefficient manual processes with a centralized and user-friendly system, it simplifies appointment scheduling, beneficiary management, case tracking, and reporting. Built using Agile Scrum, Microservices Architecture, and DevOps best practices, the platform ensures secure, efficient, and accessible service delivery, promoting transparency, accountability, and responsive governance. The system was built in a methodical, iterative manner using Agile Scrum methodology, which was supplemented with Microservices Architecture, DevOps methods, and the Enterprise Architecture Framework. This integrated strategy aided in the development of a scalable, flexible, and high-performing solution that ensured alignment between technology and organizational goals. By enabling short development cycles and continuous delivery, these techniques improved the efficiency and accuracy of the appointment process. The Social Service and Welfare Management System has streamlined local government operations by enhancing client experiences, optimizing workflows, and enabling data-driven decision-making. It provides social workers with real-time case access, easy appointment scheduling, and timely alerts, improving service delivery efficiency. The platform's powerful analytics and reporting capabilities promote transparency and boost stakeholder satisfaction. Built on a secure, scalable architecture, the system enhances service delivery while fostering greater community trust in local government. The system has considerably improved social service delivery by centralizing data, increasing access to important information, and enabling real-time analytics. These advances have effectively decreased errors, increased transparency, and strengthened compliance, all while enabling rapid, evidence-based decision-making. The integration of centralized data and real-time analytics has increased operational efficiency while also encouraging continual development through data-driven insights. This holistic strategy has streamlined workflows, reduced inefficiencies, and ensured that decision-making processes are timely and well-informed, thereby enabling the system's further development and evolution.

Keywords: microservices architecture, centralized data, real-time analytics, local government operations, data-driven decision making, operational efficiency, community trust, stakeholder satisfaction

**LOCAL GOVERNMENT UNIT 1: EMERGENCY RESPONSE AND DISASTER
MANAGEMENT SYSTEM (AI CHAT ASSISTANT, REAL-TIME EMERGENCY ALERTS,
COMMUNITY PORTAL, AND GIS-INTEGRATED EMERGENCY SUPPORT
OPERATIONS)**

Daryl Hans Ocao, Mark Daniel Edillor, Julian Jules Pardi, Vhie Jay Alcantara,
Reyvi John Tagatac, Richelyn Villasor

Abstract

The frequent natural disasters in the Philippines highlight the urgent need for effective disaster management systems. These events also expose the limitations of traditional emergency response mechanisms, which are often characterized by slow reaction times, poor communication, and outdated manual processes that fail to efficiently allocate the necessary human and physical resources during large-scale emergencies. This study introduces the Local Government Unit: Emergency Response and Disaster Management System, designed to address these problems. The system is technology-driven, integrates real-time communication, and utilizes the situational awareness provided by mapping software to enhance response operations. The effectiveness of the Emergency Response and Disaster Management System is evaluated using a mixed-methods research design that combines qualitative and quantitative approaches. This method allows for the collection of a wide range of data related to user experience and system performance. The study focuses on barangays within local government units that are vulnerable to natural disasters such as floods and typhoons. The participants include local government officials, residents, and emergency response personnel selected as the intended sample. A total of fifty-three residents, LGU officials, and emergency responders assessed the Emergency Response and Disaster Management System during real-life emergencies. With 95% confidence, real-time alerts, incident reporting, and disaster response efficiency received 100% positive feedback. The AI Chat Assistant scored 86.8% for timely responses and 90.5% for reliability. Usability and interface were rated 94.3% positive, GIS mapping accuracy 94.3%, and feasibility in emergencies 98.1%, with 90.6% of respondents recommending adoption by LGUs. These results demonstrate strong user approval and highlight the system's potential to enhance disaster response operations. The study confirmed the system's effectiveness, showing a 95% confidence level in key features such as real-time reporting, emergency alerts, GIS mapping, and the AI Chat Assistant. These features received overwhelmingly positive feedback, with 100% of respondents finding the alert system helpful and more than 90% recommending adoption by local government units. However, the findings also indicated that for improved scalability and reliability, enhancements to the system's AI and connectivity components are necessary.

Keywords: disaster management system, emergency response, real-time alerts, gis mapping, ai chat assistant

**LOCAL GOVERNMENT UNIT 1: LIBRARY MANAGEMENT SYSTEM (CATALOG
MANAGEMENT, BORROWING AND RESERVATION MANAGEMENT,
REAL-TIME BOOK TRACKING AND MONITORING) AI
AUTOMATIC FINE CALCULATION.**

Leizel Banaria, Emil John Alberto, John Jeric Alinsuag, James Christian Laag,
Longos Christian, Ms. Richelyn Villasor

Abstract

The Library Management System developed for the Quezon City Public Library at Barangay Hall Masambong is designed to enhance library operations through the integration of real-time book tracking and monitoring, borrowing and reservation management, and AI-powered automatic fine calculation. The system allows students to log in using their QCID or School ID, improving accessibility and user experience. It facilitates quick catalog searches, efficient book reservations, and accurate tracking of borrowed items. The system also assists librarians in managing circulation records, issuing materials, and ensuring timely responses to user queries. Despite its efficiency, performance slowdowns were observed during high concurrent usage, indicating areas for system optimization. The development of the Library Management System followed the Agile methodology, allowing for iterative testing and user-centered design. Specific problems addressed include delayed book tracking, inaccurate fine computations, and prolonged wait times for book issuance. Through real-time tracking, automated borrowing and reservation features, and AI integration, the system was designed to resolve these challenges and provide a responsive and efficient service platform. The implementation of the system at the QC Public Library resulted in significant operational improvements. Approximately 90% of students successfully logged into the system. Real-time book tracking reduced search time by 96%, while the borrowing and reservation module enabled students to request books independently. The AI-powered fine calculation ensured accurate computation of penalties, and the automated FAQ chatbot reduced staff workload by 45%. However, performance issues were noted when more than 50 users accessed the system simultaneously. The Library Management System modernized public library operations by automating traditional processes and improving user interaction. The real-time book tracking and reservation modules supported efficient access to library materials, while the AI-based fine calculation feature eliminated manual fee processing and allowed for instant online payments. Although performance optimization is required for high-traffic periods, the system has proven effective in enhancing library services, ensuring streamlined operations, and improving overall user satisfaction.

Keywords: library management system, real-time tracking, borrowing and reservation, ai fine calculation, catalog management, public library automation, user-centered design

LOCAL GOVERNMENT UNIT 1: LOGISTICS (STOCK TRACKING, AUDITING, FLEET MANAGEMENT PROCUREMENT, AND VENDOR PORTAL) WITH AI DETECTOR.

Mary Ann Gumiran, Lester Joe Ebias, Steffane Bertanico, Tiffany Joy Bacan,
Byron John Sanchez, Richelyn Villasor

Abstract

The Local Government Unit 1: Logistics is a web-based system developed to automate logistics and asset management processes at the barangay level. It addresses the challenges of inefficient record-keeping, manual inventory tracking, delayed procurement processing, and stock shortages that impede service delivery. By integrating modules for stock tracking, fleet management, auditing, procurement, and vendor management, the system consolidates previously paper-based operations into a unified digital platform. Operating in real time, the system supports timely decision-making and enhances service reliability across barangay departments. The system was developed using the Agile-Scrum methodology with CodeIgniter (PHP) for backend development, HTML/CSS/JavaScript for the frontend, and MySQL as the database. The user interface was designed using Figma, and the system was deployed through Visual Studio 2019. Core modules include Inventory Management, Procurement, Fleet Management, Auditing, and Analytics. The system underwent unit testing, integration testing, and user acceptance testing to ensure functional stability and readiness for deployment. The implementation of the LGU Logistics System resulted in notable improvements in operational efficiency. Automated inventory monitoring reduced stock-related errors by over 45%, while procurement automation shortened processing cycles by 30%. Fleet monitoring and preventive maintenance features contributed to better vehicle utilization and reduced repair costs. The audit module reinforced transparency through detailed log tracking and accountability measures. Overall, the system optimized resource management and enhanced coordination among barangay departments. The study confirmed the system's effectiveness in resolving key logistical issues such as manual inventory recording, procurement delays, and inefficient fleet operations. The integration of real-time analytics and automated workflows allowed local government units to make data-driven decisions, promote transparency, and enhance service delivery. Future system improvements may include mobile responsiveness and AI-powered predictive analytics to further improve efficiency, accuracy, and responsiveness in barangay logistics management.

Keywords: logistics management system, inventory tracking, procurement automation, fleet monitoring, audit module, vendor portal, real-time analytics, ai integration, local government digitization

**LOCAL GOVERNMENT UNIT 1: PUBLIC CONSULTATION MANAGEMENT
(CONSULTATION SCHEDULING, CONSULTATION TRACKING
AND MANAGEMENT, ROLE MANAGEMENT)
WITH AI CONSULTANT SUPPORT**

Hera Combo, Jhian Marie Antonio, Clarissa Joy Hapa, Ronnel Sanchez,
Nicole Tolog, Richelyn Villasor

Abstract

Empowering public engagement is a vital component of inclusive and participatory governance. However, many barangays continue to rely on traditional and manual methods of consultation, resulting in inefficiencies and limited citizen involvement. To address this gap, the Public Consultation Management System was developed as a web-based platform that streamlines the scheduling, tracking, and management of public consultations. It aims to improve citizen engagement by enabling individuals to book consultation appointments and stay informed about local developments, while assisting barangay officials in identifying concerns and making collaborative decisions that benefit the community. The system was developed using the Agile methodology to ensure flexibility and continuous improvement throughout the project lifecycle. Formal development sprints were carried out, covering planning, system design, development, testing, and deployment. Stakeholder engagement, including barangay officials, administrative staff, and selected community members, was incorporated through feedback sessions, prototype evaluations, and user acceptance testing. This iterative process enabled early identification of usability issues and optimization of features such as consultation scheduling, user notifications, and data security. Continuous integration of user feedback ensured that the system met both operational requirements and end-user expectations. Upon deployment, the system allowed citizens to raise concerns and schedule consultations without the need to visit the barangay office physically. Barangay officials reported improvements in tracking community concerns and responding more efficiently. The platform facilitated secure and organized record-keeping, increasing trust among residents who valued transparency and accountability in how their feedback was handled. The system effectively replaced manual processes, resulting in streamlined workflows and improved engagement. The Public Consultation Management System demonstrated effectiveness in enhancing community participation and communication between citizens and local authorities. By providing a digital platform for expressing concerns and scheduling consultations, the system fostered a more inclusive and responsive governance process. Continued updates, regular communication, and responsiveness to user feedback are recommended to sustain engagement and ensure that barangay-level decision-making remains transparent, efficient, and collaborative.

Keywords: public consultation, citizen engagement, barangay governance, consultation scheduling, ai consultant support, community participation, local government system, feedback management

**LOCAL GOVERNMENT UNIT 1: SOLID WASTE MANAGEMENT SYSTEM
(COMPLAINT SUBMISSION, WASTE COLLECTION MANAGEMENT, REPORTING AND
ANALYTICS)**

Benedicto Gacilan Jr, Davejan Quinagon, Nathaniel Alde, Gymcarl Omaguing,
Julius Martin Francisco, Richelyn Villasor

Abstract

Solid waste management remains a growing concern for local government units due to the inefficiencies of traditional multi-channel systems and manual operations. The Solid Waste Management System (SWMS) was developed to address these challenges by providing an integrated digital solution. The system includes modules for complaint submission, waste collection management, reporting, and analytics. It aims to improve responsiveness to community concerns, optimize waste collection routes, and enable data-driven decision-making for sustainable waste management. The system was developed using the Agile Scrum methodology, allowing the project to be divided into manageable phases that focused on specific modules, including complaint management, collection tracking, and analytics. Laravel was used for backend development, Vue.js was implemented for the frontend, and third-party APIs were integrated to provide deeper insights into waste disposal trends and practices. Stakeholder input was incorporated throughout the development to ensure that the system addressed real-world needs. The implementation of the SWMS significantly improved the speed and efficiency of waste collection services and complaint resolution. Residents benefited from a more transparent and accessible reporting system. Data collected from the platform enabled local officials and sanitation teams to better understand community needs and preferences, leading to improved coordination and higher levels of public satisfaction. By integrating complaint submission, waste collection management, and analytics into a unified digital platform, the SWMS offers a modern alternative to outdated waste management methods. The system promotes visibility, accountability, and data-informed planning among local authorities and waste management teams. Its implementation contributes to the creation of cleaner, healthier, and more efficiently managed communities and provides a model for other LGUs aiming to modernize their waste management systems.

Keywords: solid waste management, complaint submission, waste collection, data analytics, local government system, environmental sustainability, agile development, public service digitization

LOCAL GOVERNMENT UNIT 2: PERMIT MANAGEMENT SYSTEM (PERMIT APPLICATION, PERMIT ISSUANCE, AI EMAIL NOTIFICATION SYSTEM, USER AND SECURITY MANAGEMENT

Bensor Bataller, Aaron Jerusalem, Aldrin Suela, Wilfredo Sison Jr,
John Lester Liwag, Jhun Paredes Villalon

Abstract

The Permit Management System (PMS) is a digital platform designed to streamline the application, issuance, and renewal of permits within local government units. This system addresses the inefficiencies of traditional manual methods by centralizing permit-related activities, automating workflows, and enhancing transparency. The PMS minimizes administrative workload, ensures regulatory compliance, and improves operational efficiency for both applicants and regulatory bodies. The inclusion of features such as an AI-driven email notification system and secure user management further supports timely communication and data integrity. The system was developed using the Agile Scrum methodology, allowing for incremental development and continuous feedback. The project followed a series of sprints covering requirements gathering, system design, development, testing, and deployment. Agile Scrum enabled rapid iteration and refinement of system features based on stakeholder input. Key modules developed included permit application, approval tracking, automated notifications, and user and security management. User interface design emphasized simplicity and usability, while backend processes were built for reliability and scalability. The implementation of the Permit Management System led to significant improvements in permit processing. Application and approval procedures became faster and more efficient, supported by automated workflows and real-time tracking. The AI email notification system provided instant updates to users regarding their application status. The system delivered key outputs including a comprehensive requirements document, user-centric interface, automated permit tracking features, testing reports, and training materials for end-users. Compliance and transparency were notably enhanced, contributing to higher stakeholder satisfaction. The digitization of permit processing through the Permit Management System demonstrated clear benefits in terms of speed, accuracy, and accountability. Automating permit workflows reduced redundancy and administrative burden while providing applicants with real-time updates and secure access. The use of Agile Scrum facilitated a flexible and responsive development cycle, ensuring that the system aligned with the evolving needs of both users and administrators. Overall, the PMS represents a scalable and adaptive solution for modernizing local government permitting processes.

Keywords: permit management system, digital governance, application tracking, ai email notifications, agile scrum, workflow automation, user management, local government system

**LOCAL GOVERNMENT UNIT 2: PUBLIC SAFETY INCIDENT REPORTING SYSTEM:
SYSTEMATIC REPORTING, REAL-TIME NOTIFICATION, ANALYTICS,
AND AI-DRIVEN FIRST AID ASSISTANCE**

Joel Sulit III, Iverson Tobias, Jennifer Dionio, Bryan Estrera, John Harold Catoy, Rosauro Villalon Jr.

Abstract

Public safety is a fundamental component of societal stability, yet many local government units continue to rely on outdated and fragmented incident reporting methods. These inefficiencies often result in delayed emergency response and diminished public trust. In response to the need for a more efficient and transparent approach, this study introduces the Public Safety Incident Reporting System digital platform, designed to enhance communication between citizens and authorities, automate incident reporting workflows, and integrate artificial intelligence (AI) for first-aid guidance and data-driven decision-making. The system was developed using modular microservices architecture and built with HTML, CSS, JavaScript, and PHP, employing asynchronous request handling via the Fetch API. Incident reporting includes X and Y coordinate tagging, with future integration of GPS for real-time location mapping. Development followed the Agile Scrum methodology, executed through iterative sprints to incorporate core features such as systematic reporting, real-time notifications, incident validation, analytics dashboards, and AI-powered first-aid assistance. Development tools included Visual Studio Code for coding, GitHub for version control, Postman for API testing, and UptimeRobot for system monitoring. A centralized database was implemented to ensure secure, efficient storage and retrieval of incident data. Initial deployment of the system led to substantial improvements in public safety operations. Incident reporting time was reduced by 60%, and dispatch coordination improved by 40%. The AI-based first-aid module provided real-time guidance to citizens, helping to mitigate injury severity prior to responder arrival. Real-time notifications ensured that reports were routed immediately to the relevant authorities. The inclusion of visual dashboards allowed local government units to monitor trends, prioritize emergencies, and allocate resources effectively. Increased community satisfaction was also observed due to the enhanced speed and accuracy of response. The findings demonstrate the effectiveness of the Public Safety Incident Reporting System in modernizing local emergency response. Key innovations include multimedia reporting for richer incident context and AI-supported first-aid response, which collectively contribute to more responsive and data-informed governance. Planned future enhancements include the integration of predictive analytics using machine learning, expanded GPS functionality, and real-time interoperability with emergency service providers. These improvements aim to further strengthen coordination, safety, and community trust.

Keywords: incident reporting system, public safety, ai first aid, real-time notification, community engagement, analytics dashboard, agile scrum, local governance digitization

**LOCAL GOVERNMENT UNIT 3: ADAPTIVE EMERGENCY COORDINATOR,
E-COMMUNITY SCHOLARSHIP AND EDUCATIONAL OPPORTUNITIES,
CHILD & YOUTH SERVICES CASE USING VIRTUAL - CHAT ASSISTANT**

Jobert Dela Cruz, John Paul Eco, Ruzzel Javate, Elvin John Ubalde,
Marveluz Tanamor, Marifel Laynesa

Abstract

Local Government Unit 3 (LGU 3) has implemented a Virtual Chat Assistant (VCA) to enhance service delivery in three critical areas: adaptive emergency coordination, e-community scholarship and educational opportunities, and child and youth services case management. This initiative aims to digitize public services by providing automated, real-time support to citizens while also improving internal communication and the overall efficiency of LGU operations. The VCA serves as a centralized platform for residents to access essential information and support across multiple service domains. The system was developed using a people-centered approach, involving consultations with LGU officials, IT experts, and community members to determine specific service requirements. The emergency coordination module allows users to report incidents and receive automated guidance during emergencies. The scholarship module automates eligibility verification, application tracking, and status updates, simplifying the process for students, particularly those in remote areas. The child and youth services module enhances communication between social workers and families and improves case tracking. The chatbot, built using natural language processing, was pilot-tested in selected communities and refined based on user feedback. The deployment of the VCA led to measurable improvements in service efficiency. Emergency reports were processed more rapidly, resulting in faster response times. Scholarship applications were handled more conveniently and transparently, especially benefiting students with limited access to government offices. Child and youth service delivery saw improved family engagement and increased case follow-up rates. Users expressed satisfaction with the chatbot's accessibility and ease of use, while LGU staff reported reduced administrative workload and better data organization. The project demonstrates the potential of AI-powered virtual assistants in enhancing local government service delivery. The system provided timely, inclusive, and credible communication, addressing longstanding challenges in administrative coordination and public engagement. For sustained impact, future improvements should prioritize user privacy, system maintenance, and broader implementation across other local government units. This innovation presents a scalable model for digital transformation in community-based public service.

Keywords: virtual chat assistant, emergency coordination, scholarship system, child and youth services, ai in public service, local government innovation, case management, e-governance

**LOCAL GOVERNMENT UNIT 3: BARANGAY MAPPING WITH
INTERACTIVE MODEL USING OPEN STREETMAP**

Charmyn Tolosa, Mary Joyce Bedonia, Kristine Mae Gilla,
Justin Gacho, Karl Christian Panizales, Marifel Laynesa

Abstract

Barangays, the smallest administrative units in the Philippines, often lack accurate, up-to-date maps that are critical for effective governance. This project addresses that gap by developing an interactive barangay mapping system for Local Government Unit 3 (LGU 3), aimed at improving planning, resource allocation, and community engagement. Utilizing Geographic Information System (GIS) technology and open-source tools such as OpenStreetMap, the system promotes data-driven decision-making and participatory governance. The project was developed using the Agile Scrum methodology to ensure continuous iteration and user-centered design. Data was collected through surveys, local government records, and geospatial sources. The system follows a microservices architecture for scalability and modular functionality. Mapping features were implemented using QGIS and OpenStreetMap, allowing real-time interaction, spatial data visualization, and administrative control. DevOps practices and CI/CD pipelines were adopted for efficient deployment and updates. The interactive mapping system enabled barangay officials and residents to access detailed spatial information, including infrastructure, population distribution, and available resources. Users could navigate maps through zooming, layer filtering, and data querying. The system provided better visibility into service delivery gaps, development priorities, and emergency preparedness. Initial stakeholder feedback indicated improved awareness of local issues and stronger community participation in planning activities. The project demonstrated the effectiveness of GIS and open-source mapping tools in enhancing local governance. It improved transparency, planning efficiency, and citizen engagement. However, challenges were noted in data validation, staff training, and long-term system maintenance. Despite these challenges, the system serves as a model for other LGUs seeking to adopt digital governance tools and supports the Sustainable Development Goals (SDGs) related to building sustainable communities and strengthening institutional capacity.

Keywords: barangay mapping, openstreetmap, geographic information system, participatory governance, spatial data, local government, community planning, sustainable development goals

**LOCAL GOVERNMENT UNIT 3: BARANGAY SAFETY AND SECURITY SERVICES
MANAGEMENT SYSTEM WITH SUGGESTIVE AI**

Jhon Christopher Aldea, Laleen Artesano, Airra Hernandez,
Maria Roberto, Carl Angelo Tolentino, Marifel Laynesa

Abstract

Community safety and security are vital to public well-being, yet many barangays face difficulties in managing safety concerns effectively. Delays in complaint handling due to manual, paper-based systems contribute to public dissatisfaction and inefficiency. These outdated processes hinder the tracking of incidents and slow emergency responses due to poor coordination among safety officers. To address these issues, the Barangay Safety and Security Services Management System with Suggestive AI was developed. This online platform automates complaint submission, response tracking, and officer coordination. The integration of suggestive AI enhances the system by categorizing complaints in real time, improving response accuracy and efficiency, and fostering a more responsive safety environment for residents. The project followed the Agile methodology to ensure adaptability, collaboration, and continuous improvement. Development was carried out in iterative sprints, each focused on refining specific modules. Stakeholder interviews and user feedback guided the design of a responsive system tailored to the operational needs of the barangay safety office. The system architecture supports modular feature integration, user-friendly interfaces, and intelligent assistance via suggestive AI to aid in complaint categorization and tracking. The implementation of the system resulted in improved complaint processing times and enhanced accuracy in categorizing resident concerns. Users experienced fewer delays in responses and increased transparency in tracking complaint status. The system also reduced missed appointments and communication gaps between residents and barangay safety personnel. The AI-driven assistance feature streamlined the submission process, making it more accessible and less burdensome for citizens. The Barangay Safety and Security Services Management System with Suggestive AI has demonstrated substantial improvements in local safety service delivery. Automation and AI integration have increased responsiveness, operational efficiency, and citizen engagement. The suggestive AI module played a critical role in simplifying complaint processing and enhancing the user experience. Future system enhancements may include expanding interoperability with other LGU platforms, incorporating advanced data analytics for safety trend analysis, and introducing additional features to strengthen community trust and satisfaction.

Keywords: barangay safety, security services, complaint management, suggestive ai, public safety system, local government, citizen engagement, agile development

**LOCAL GOVERNMENT UNIT 3: BUSINESS REGISTRATION AND RENEWAL SYSTEM
WITH DOCUMENT UPLOAD, APPLICATION TRACKING, EXPORT OPTIONS,
QR CODE FILTERING, AND AI-POWERED EXPIRATION ALERTS &
RENEWAL ANALYTICS**

Edgeniel Buhian, Edyfer Fernandez, Rick Brian Tepase,
John Michael Badilla, Loreminda Sugui, Marifel Laynesa

Abstract

The modernization of local government operations has become increasingly necessary to address the growing demand for efficient, transparent, and accessible public service delivery. This project introduces the Business Registration and Renewal System for Local Government Unit 3 (LGU 3), an online platform designed to digitize and streamline business registration and renewal processes. Key features include document upload, application tracking, export options, QR code filtering, and AI-powered expiration alerts and renewal analytics. The system aims to reduce administrative burden while improving operational accuracy and responsiveness. The system was developed using modular software architecture to ensure scalability and ease of maintenance. It integrates front-end web technologies with a robust back-end framework. Artificial intelligence was utilized to develop predictive models capable of analyzing renewal trends and generating automated expiration notifications. The system also incorporated QR code generation and scanning features for efficient document filtering and verification. Agile methodology guided the development process, allowing for iterative design, testing, and user feedback integration at each stage. The implementation of the system resulted in significant improvements in process efficiency and user satisfaction. Business owners experienced faster registration and renewal procedures, while LGU personnel benefited from reduced paperwork and fewer manual errors. The AI module effectively identified upcoming expirations and prompted timely renewal notifications. Additionally, the QR code feature enabled rapid retrieval and verification of documents, further enhancing workflow speed and accuracy. The project demonstrated the effectiveness of digital transformation in enhancing public service delivery within local government units. By automating filing, tracking, and document processing, the system contributed to reduced administrative workload and improved data management. The integration of AI and automation highlighted the potential for predictive governance and proactive service strategies. Future development may include integration with mobile applications, real-time dashboards, and broader interoperability with other LGU systems to support comprehensive e-governance initiatives.

Keywords: business registration, renewal system, document upload, qr code filtering, expiration alerts, ai analytics, public service automation, local government digitization, predictive governance

**LOCAL GOVERNMENT UNIT 3: DIGITAL BARANGAY OFFICE SCHEDULING SYSTEM
(REAL-TIME AVAILABILITY, RESCHEDULING, REPORTING AND
DEPARTMENT SELECTION WITH AI CHAT ASSISTANCE)**

Ana Rose Abucejo, Julius Vincent Bilangel, Rhea Dantes, Kristine Marbella,
Cassandra Karylle Molina, Marifel Julianda Laynesa

Abstract

This study presents the Digital Barangay Office Scheduling System (DBOSS), a digital platform designed to improve appointment management, real-time availability tracking, rescheduling, reporting, and department selection within Local Government Unit 3 (LGU 3). DBOSS addresses persistent challenges in traditional barangay scheduling systems, including scheduling conflicts, extended waiting periods, and administrative burdens. By integrating AI-powered chat assistance, the system delivers a seamless and user-friendly booking experience. The primary objectives of the study are to enhance operational efficiency, minimize scheduling conflicts, improve service accessibility, and streamline the reporting of barangay services. DBOSS is developed using modular system architecture. The backend utilizes PHP, with MySQL serving as the database management system, while HTML, CSS, and JavaScript power the frontend interface. The microservices architecture ensures efficient communication among essential modules such as appointment scheduling, AI chat support, and service reporting. To ensure the reliability and usability of the system, the researchers conducted unit testing, integration testing, and user acceptance testing (UAT) with both barangay staff and citizens. The system is hosted on the Indevfinite Cloud Infrastructure, providing scalability, secure data handling, and remote access capabilities necessary for effective barangay appointment operations. The findings revealed that DBOSS significantly improved scheduling efficiency by reducing manual scheduling time and eliminating double bookings through real-time availability tracking. The AI-powered chat assistant successfully guided users through the scheduling process without the need for human intervention, thereby increasing accessibility. System performance tests showed quick response times and high reliability, enabling smooth appointment booking and rescheduling. Survey responses from users indicated a preference for DBOSS over traditional scheduling methods due to its convenience and effectiveness. Furthermore, the reporting feature enabled barangay officials to monitor peak service hours, identify trends in service demand, and assess resource requirements for better management decisions. The results suggest that digital transformation in barangay operations, as demonstrated by DBOSS, leads to increased efficiency, reduced administrative workload, and enhanced user satisfaction. Automation of scheduling processes and the integration of AI assistance proved beneficial, especially for individuals with limited digital literacy. However, challenges such as the need for personnel training, internet connectivity issues, and initial resistance from some users were observed. Future system enhancements may include additional AI functionalities, the development of a mobile application, and the integration of predictive analytics. Overall, DBOSS showcases the potential of technology-driven innovations in modernizing local government services.

Keywords: digital scheduling system, barangay services, ai chat assistance, real-time availability, appointment management, local government, system efficiency, reporting tool

**LOCAL GOVERNMENT UNIT 3: PUBLIC FACILITIES RESERVATION SYSTEM
(FACILITY LISTING AND AVAILABILITY, ONLINE RESERVATION MANAGEMENT
WITH INTERACTIVE AI RESERVATION ASSISTANT)**

Harley Tristan Namoro, Cristian Dave Protacio, Angelica Tabado,
Jenny Payumo, John Edmar Lopez, Marifel Julianda Laynesa

Abstract

Digital transformation continues to reshape public service delivery, providing local governments with opportunities to improve efficiency through online solutions. In many barangays, the reservation of public facilities is still managed through manual processes, resulting in inefficiencies, scheduling conflicts, and limited accessibility for residents. These outdated methods not only hinder user experience but also increase administrative workload. To address these challenges, the Public Facilities Reservation System (PFRS) was developed to streamline the reservation process, enhance accessibility, and reduce manual operations. This system enables users to view facility listings, verify real-time availability, and make reservations through a user-friendly platform integrated with an interactive AI reservation assistant. The system was developed using the Agile methodology, which promotes flexibility, iterative development, and continuous feedback. Development was organized into several sprints, each focused on specific system features. Collaborative brainstorming and feedback sessions were conducted regularly to ensure that the evolving design met the needs of the community. This iterative approach allowed the system to remain adaptable and aligned with user expectations throughout its development. The implementation of the PFRS led to a significant improvement in the efficiency of public facility reservations in the participating barangays. The system automated routine tasks, minimized scheduling conflicts, and increased transparency in the reservation process. Residents reported greater convenience and ease of use, while barangay officials experienced a reduction in administrative responsibilities. The integration of the AI assistant also enhanced user interaction, particularly benefiting those with limited experience in digital systems. The development and adoption of the PFRS underscore the growing importance of digital technologies in delivering responsive and citizen-centered public services. By integrating facility listing, real-time availability, online booking, and AI assistance into one platform, the system empowers local governments to manage public resources more effectively. This project serves as a model for future initiatives aimed at promoting accessible, efficient, and technology-driven governance at the barangay level.

Keywords: public facility reservation, barangay management system, ai assistant, online booking, digital governance, agile development, real-time availability, local government services

**LOCAL GOVERNMENT UNIT 3: PUBLIC HEALTHCARE STOCK MANAGEMENT
SYSTEM WITH FORECASTING ANALYTICS USING AI DRIVEN TREND ANALYSIS
AND INSIGHTS**

Matt Franky Boneo, John Ivan Doyola, Jomarie Gersalia, Carl Christian Mercado,
Jeward Tañada, Marifel Julianda Laynesa

Abstract

This study presents the Public Healthcare Stock Management System with Forecasting Analytics using AI-Driven Trend Analysis and Insights, which addresses the recurring issue of supply mismatch in public healthcare stock facilities. The mismatch often results from continued reliance on manual and semi-automated inventory recording and monitoring methods. The proposed system serves as a centralized inventory hub for various public healthcare units, aiming to ensure efficient distribution and timely replenishment of medical supplies through an integrated request and tracking mechanism. The study employs the Agile Scrum methodology, which promotes iterative development and continuous user feedback. Development was carried out in sprint cycles, allowing incremental improvements and timely adjustments to system design. This approach ensured that the final system was user-friendly, robust, scalable, and capable of delivering practical forecasting analytics for informed inventory control. Moreover, the system was designed to integrate with external platforms used for stock requests and consumption, enabling seamless data exchange and enhancing overall visibility in inventory flow. The system implementation significantly reduced delays in stock requests and improved inventory tracking accuracy. The AI-driven forecasting component accurately predicted future demand based on historical data, allowing for proactive stock planning and minimizing the risk of shortages. The system's integrated design also enabled multiple healthcare units to coordinate stock requests more efficiently, reducing redundancy and miscommunication. The findings demonstrate the positive impact of intelligent stock management systems supported by agile development practices on public healthcare efficiency. By resolving supply mismatches and improving supply chain responsiveness, the system contributes to enhanced service delivery and a reduced risk of medical supply shortages. Future improvements may include expanding the forecasting model and incorporating real-time health indicators to further strengthen data-driven decision-making.

Keywords: ai-driven forecasting, public healthcare, stock management, inventory system, agile scrum, supply chain efficiency, inventory tracking, medical supply planning

**LOCAL GOVERNMENT UNIT 4: A WEB-BASED BARANGAY CLEARANCE AND
CERTIFICATE MANAGEMENT SYSTEM (CLEARANCE ISSUANCE, CERTIFICATE
MANAGEMENT, STATUS AND REPORTING AND AI RESIDENT
VERIFICATION USING GOOGLE CLOUD VISION)**

Loren Sotto, Andrei Joseph Abesamis, John Joshua Recto, Russel Adrian Rubante,
Jhanile Ann Ygot II, Marifel Julianda Laynesa

Abstract

The Barangay Old Capitol Site previously relied on a manual, paper-based system for processing barangay clearances and certificates. This traditional method resulted in long waiting times, disorganized documentation, and increased risks of identity-related errors. These inefficiencies caused frustration among residents and posed significant challenges for barangay personnel in managing records securely. To address these issues, the Barangay Clearance and Certificate Management System (BCACMS) was developed. This web-based platform streamlines document processing and integrates Google Cloud Vision for AI-powered identity verification, improving security and reliability. The BCACMS was developed using a microservices architecture, enabling modular and scalable system design. Its primary components include clearance issuance, certificate management, status tracking and reporting, and AI-based resident verification. The Google Cloud Vision API was integrated to scan and validate ID documents submitted by residents, enhancing the verification process. Residents submit online requests, while barangay staff manage approvals and notifications via an administrative dashboard. System development was iterative, incorporating continuous feedback from both residents and personnel. Manual testing and live simulations were conducted to ensure functionality and system security. The implementation of BCACMS effectively replaced the traditional paper-based system with a more efficient, user-friendly online solution. Residents were able to apply for, renew, and monitor the status of their documents digitally. Barangay officials gained access to dashboards for managing applications and generating reports. The integration of AI verification significantly reduced identity-related errors and ensured that only verified individuals were issued documents. Initial user feedback highlighted improved processing time, higher accuracy, and increased satisfaction. The BCACMS offers a digital alternative to the manual procedures previously used in barangay clearance and certificate processing. By providing an accessible and secure platform for both residents and staff, the system enhances transparency and operational efficiency. Challenges such as data migration and user adaptation were addressed through phased implementation and targeted training. This project underscores the potential of digital tools in transforming local government services and improving public service delivery at the barangay level.

Keywords: barangay clearance, certificate management, ai verification, google cloud vision, public service digitalization, microservices architecture, web-based system, local government

LOCAL GOVERNMENT UNIT 4: A WEB-BASED BARANGAY DISASTER RELIEF SERVICE (DONATION MANAGEMENT, VOLUNTEER REGISTRATION, RELIEF INVENTORY, DISASTER REPORT, BARANGAY ANNOUNCEMENT AND COMMUNITY FEEDBACK, RELIEF REQUEST AND TRACKING WITH GIS MAPPING)

Ma Christina Baylon, Jimbo Cruz, Arvin Dionson, Ash Inocencio, Marifel Julianda Laynesa

Abstract

The Barangay Disaster Relief Service (DRS) is a localized system developed to enhance the management and delivery of aid to communities affected by natural or man-made disasters at the barangay level. During such emergencies, local government units (LGUs) often encounter challenges related to coordination, resource allocation, and timely response. Traditional paper-based systems contribute to delays, inefficiencies, and issues of transparency. To address these problems, Local Government Unit 4 implemented a web-based disaster relief service designed to automate disaster response through integrated modules including Donation Management, Volunteer Registration, Relief Inventory, Disaster Reporting, Barangay Announcements, Community Feedback, and Relief Request and Tracking with GIS Mapping. The system was developed using the LAMP stack (Linux, Apache, MySQL, PHP) and followed an Agile methodology through iterative sprints. Each module was built and tested independently to ensure optimal functionality and user experience. Key features emphasized real-time data accessibility, digital form submissions, and visual representation of relief activity through GIS mapping tools. Continuous feedback from residents and barangay officials guided system refinement and ensured its alignment with community needs. The implementation of the DRS system improved the efficiency of disaster relief operations in the barangay. The Donation Management and Relief Inventory modules facilitated real-time tracking and distribution of resources. Volunteer Registration streamlined the mobilization of responders during emergencies. GIS-based mapping enabled residents and officials to visualize disaster locations and relief activities. Furthermore, the Announcement and Community Feedback modules enhanced communication between barangay officials and constituents, promoting transparency and responsiveness. The DRS system demonstrated how digital technology can strengthen disaster preparedness and response at the grassroots level. By addressing issues such as data inaccuracies, slow response times, and limited community engagement, the system promoted accountability and informed decision-making. The integration of GIS mapping and community feedback features further empowered both officials and residents. While challenges such as internet connectivity and digital literacy were observed, these were mitigated through user training and system optimization. This project illustrates the transformative role of digital platforms in modernizing local disaster management.

Keywords: disaster relief system, barangay disaster response, donation management, volunteer registration, gis mapping, community feedback, web-based platform, local government automation

LOCAL GOVERNMENT UNIT 4: BARANGAY CRIME DATA ANALYTICS AND REPORTING (REAL-TIME ANALYTICS MANAGEMENT, DATA INTEGRATION FROM MULTIPLE SOURCES AND CRIME MAPPING MANAGEMENT AND VISUALIZATION USING ARCGIS)

Kyle Jastine Arroyo, Edward Bare, Joshua Rabac, Franch Patrick Villarante,
Akira Franse Ybañez, Marifel Julianda Laynesa

Abstract

The Barangay Crime Data Analytics and Reporting (CDAR) system is a digital platform designed to improve crime monitoring and response at the barangay level. It integrates real-time analytics, multi-source data collection, and geospatial crime mapping through ArcGIS to support informed decision-making among local officials. The system consolidates information from barangay personnel and community reports into a centralized dashboard. Key features include predictive analytics, crime visualization, and automated notifications that enhance the timeliness and effectiveness of local interventions. Scalable, secure, and user-friendly, CDAR aims to replace fragmented manual processes with a unified, data-driven solution for barangay crime prevention and governance. The system was developed using the Agile Scrum methodology, which emphasizes iterative progress and ongoing user feedback. Development was organized into sprint cycles, each targeting critical features such as real-time dashboards and ArcGIS integration. Daily coordination supported cross-functional collaboration, while periodic reviews enabled barangay stakeholders to test, evaluate, and refine system components. This approach ensured that the resulting platform addressed the specific needs of the community and remained both practical and adaptive. CDAR facilitated real-time crime tracking and successfully merged data from various sources into a unified view of local crime activity. The use of ArcGIS allowed barangay officials to visualize hotspots and analyze spatial crime trends. Residents were able to report incidents anonymously, access simplified dashboards, and receive timely alerts. The system also complied with data privacy regulations and was accessible via both web and mobile platforms. The implementation of CDAR addressed longstanding challenges in barangay-level crime management, particularly delayed reporting and fragmented data access. Its real-time analytics and geospatial capabilities empowered local leaders to make faster, evidence-based decisions. The Agile Scrum approach supported continuous user engagement and technical flexibility, resulting in a system that is both community-centered and operationally effective. Overall, CDAR promotes transparency, public participation, and proactive governance, contributing to safer and more responsive barangays.

Keywords: crime data analytics, real-time reporting, barangay governance, arcgis, geospatial mapping, agile scrum, predictive analytics, community engagement, public safety, data integration

**LOCAL GOVERNMENT UNIT 4: BARANGAY FOOD MARKET SAFETY MANAGEMENT
SYSTEM (SAFETY MONITORING, CONCERNS REPORTING WITH AI INSIGHTS)**

Ralph Christian Abina, Jonard Cabildo, Joemel Junio, John Cedric Magsadia,
Nicole Dave Ramos, Marifel Laynesa

Abstract

As urban food markets continue to expand, ensuring food safety and sanitation has become increasingly important. Traditional methods of market monitoring often lack efficiency and transparency. The Barangay Food Market Safety Management System (BFMS) aims to improve barangay-level monitoring through real-time concern reporting, systematic tracking of safety operations, and the use of AI-powered insights via an interactive dashboard. This system promotes community participation and supports responsive, transparent, and sustainable food market governance. The BFMS was developed through structured phases. In the Concept Phase, the project's purpose, scope, and key features were defined. The team was then formed, and members were assigned specific roles. The Development Phase focused on building the system and conducting testing to ensure functionality and eliminate bugs. Finally, in the Release Phase, the system was launched and made accessible for public use. Ongoing support was maintained to address technical concerns and ensure the system's effectiveness in real-world conditions. The implementation of BFMS resulted in several positive outcomes. It enhanced barangay responsiveness by enabling real-time concern reporting, improved transparency through documented resolutions, and delivered data-driven insights via the dashboard. The safety monitoring feature effectively tracked clearing operations and supported enforcement of local ordinances. The system also increased resident participation and automated routine processes, contributing to sustainable food market governance. The BFMS strengthened local governance by promoting transparency, accountability, and responsiveness in market safety management. The public concern reporting feature fostered citizen engagement, while the safety monitoring module ensured the systematic tracking of market-related operations. Through AI-powered analytics, the interactive dashboard allowed barangays to identify violations and prioritize interventions. The automation of administrative tasks further supported long-term sustainability and empowered both officials and citizens in maintaining public health and safety standards.

Keywords: food market safety, real-time monitoring, community reporting, ai insights, dashboard analytics, barangay governance, public health, automation, transparency, ordinance compliance

**LOCAL GOVERNMENT UNIT 4: CHILD DEVELOPMENT CENTER MANAGEMENT
SYSTEM: GUARDIAN PORTAL, CHILD MANAGEMENT
WITH AI-RECOMMENDATION TOOLS**

Tiffany Shane Balase, Joshua Raphael Igaya, Richard Masculino, John Ryan Christian Ocampo,
Freddielyn Villagracia, Marifel Laynesa

Abstract

In recent years, child development centers (CDCs) have experienced growing administrative demands that often divert educators from their core responsibility of teaching. Manual tasks such as attendance tracking, enrollment processing, and record-keeping are prone to inefficiencies and errors. This study aims to address these challenges through the development of the Child Development Center Management System (CDCMS), a web-based platform designed to automate and streamline essential administrative processes in CDCs. The project adopted the Agile Scrum methodology due to its flexibility and adaptability to change. Work was organized into short iterations, or sprints, allowing for continuous development and delivery of functional components. This iterative process enabled the development team to incorporate user feedback and adjust to evolving requirements, ensuring the final system was responsive to the practical needs of CDC operations. The implementation of the CDCMS addressed key administrative issues identified during the project's initial phase. The resulting system provided a fully operational, web-based platform that enhanced the efficiency of child development centers. The Child Development Center Management System (CDCMS) proved to be a valuable technological solution in managing early childhood education centers. It successfully mitigated the limitations of traditional paper-based and semi-digital systems, which often involved time-consuming processes, data inaccuracies, and lack of transparency.

Keywords: child development center, administrative automation, web-based system, ai recommendations, agile scrum, guardian portal, attendance tracking, record management, early childhood education, system efficiency

**LOCAL GOVERNMENT UNIT 4: CHILDREN AND YOUTH MANAGEMENT SYSTEM
WITH AI-DRIVEN EVENT RECOMMENDATION**

Sofia Anna Dacara, Rovick Bench Cruz, Eli Boy Herrera, Jasmine Rosales,
Daisy Reales, Marifel Julianda Laynesa

Abstract

Children and youth represent one of the most vulnerable sectors of society, often facing abuse, disconnection from their communities, and poverty, factors that significantly affect their emotional and social development. At this critical stage, both positive and negative experiences play a formative role in shaping their futures. Many rely on community programs and social services for support. This study examines how Artificial Intelligence (AI) can be utilized to enhance support for children and youth, particularly those in residential care, by providing personalized interventions aimed at reducing behavioral issues and improving their overall well-being. The study centers on the Character-Building Program initiated by a local government unit as a response to these challenges. The project used the Agile Scrum methodology to allow for flexible and iterative system development. The team, composed of developers, social workers, and project managers, worked in 2–4 week sprints to build an AI-powered management system. Data were collected from caregivers, Sangguniang Kabataan members, behavioral assessments, and environmental factors to generate individual profiles for each child or youth. Machine learning algorithms processed this data to recommend personalized events and interventions. Each sprint focused on key system components such as data integration, algorithm accuracy, and user interface design. Continuous feedback through regular reviews ensured the system adapted to the dynamic needs of children in care. The implementation of the AI-driven system resulted in notable improvements in the management and support of vulnerable children and youth. Social workers and caregivers reported a reduction in behavioral concerns and increased participation in community programs. Personalized recommendations enabled better matching of children to therapeutic activities and events, leading to improved developmental outcomes. Additionally, the system enhanced resource allocation by identifying interventions with the highest impact. Users noted that the AI-generated insights supported informed decision-making and elevated the quality of care. The findings highlight the potential of AI in providing data-driven, personalized support for children and youth in care. The system improved engagement, reduced behavioral issues, and optimized program delivery. However, its effectiveness depended heavily on the accuracy and completeness of input data. While AI can augment support services, it cannot replace the critical human relationships that are essential to child development. Sustained collaboration between developers, caregivers, and community stakeholders remains key to the system's long-term success. AI should serve as a support tool that enhances, rather than replaces, human-centered care.

Keywords: children and youth, ai recommendation, vulnerable populations, residential care, behavior intervention, agile scrum, social services, community engagement, data-driven support, personalized programs

**LOCAL GOVERNMENT UNIT 4: EVENT MANAGEMENT AND COMMUNITY
ENGAGEMENT SYSTEM (OPTIMIZED PLANNING, EXECUTION, CITIZEN
PARTICIPATION WITH AI SCHEDULE ASSISTANT)**

Sean Mirco Cati-an, Christian Allen Cabalquinto, Vellie Marie Calaylay,
John Marc Demerin, John Philip Par, Marifel Laynesa

Abstract

Technological advancement and digital transformation across government and private sectors have underscored the importance of effective event management and active citizen participation as key components of societal progress. Manual event planning continues to pose challenges, including delayed schedules, inefficient coordination, and lack of timely information, all of which hinder community involvement. This study proposes the development of a smart, responsive Event Management and Community Engagement System to address these inefficiencies and promote broader civic engagement through digital innovation. The system was developed using an Agile approach to support iterative progress and user-centered design. Core modules included tools for event planning, task assignment, resource tracking, and venue management. Additional features for community engagement, such as polls, feedback forms, and real-time chat channels, were integrated to ensure citizen participation. Data collected from user interactions were processed using machine learning algorithms to improve future event planning. The system was deployed in a cloud-based environment and optimized for mobile use to ensure accessibility and usability for a wide range of end-users. The implementation of the Event Management and Community Engagement System significantly improved event coordination at the barangay level. The AI Schedule Assistant optimized timelines and resource allocation, ensuring smoother planning and execution. Community members received timely notifications and participated through interactive tools such as polls and feedback forms, which increased transparency and engagement. The system's dashboard and modeling features also enabled organizers to evaluate events from planning to post-event analysis, offering actionable insights for continuous improvement. The findings highlight the system's role in enhancing community event management through real-time data analytics, risk management, and cost optimization. The integration of AI and real-time analytics introduced a data-driven approach that supported strategic planning and operational efficiency. In data-intensive and dynamic local environments, such technology provided a competitive edge by fostering sustained community involvement and value-driven governance. The system demonstrates how analytics-enabled platforms can serve as a foundation for scalable, transparent, and participatory local government operations.

Keywords: event management system, community engagement, ai schedule assistant, real-time analytics, agile development, feedback tools, civic participation, resource optimization, dashboard insights, local governance

LOCAL GOVERNMENT UNIT 4: OFFICE OF THE SENIOR CITIZEN HEALTH AND WELLNESS MANAGEMENT, PERSONAL CARE MANAGEMENT, CAREGIVER MANAGEMENT WITH FAMILY COMMUNICATION PORTAL, AUTOMATED NOTIFICATIONS AND IOT INTEGRATION SYSTEM

Chris David Pee, Karl Cedrick Adriatico, Benedict Balce, Billy Calatrava Jr,
Rose Ann Olarte, Marifel Julianda Laynesa

Abstract

Advancements in healthcare technology and digital systems underscore the growing need for effective and responsive senior citizen care in local government units. Traditional methods of managing elderly health, personal care, and caregiver coordination often result in delayed responses, miscommunication, and limited family involvement, factors that diminish the quality of care. This study introduces a system that leverages automated notifications, IoT technology, and real-time communication tools to support a more holistic, efficient, and community-based approach to elderly wellness management. The project adopted Agile Scrum methodology to guide the iterative development of a web-based platform focused on personal care management, caregiver coordination, and health monitoring. Key system features include real-time vital sign tracking through IoT devices, automated alerts, a secure family communication portal, and role-based access for authorized barangay health personnel. Regular sprint cycles and feedback sessions ensured alignment with end-user needs and community health objectives. The development of the Senior Citizen Health and Wellness Management System has significantly improved elderly care operations at the barangay level. The system introduced modules for senior registration, caregiver task scheduling, health monitoring through IoT integration, and family communication. Barangay health workers were able to retrieve and update records more efficiently, while caregivers received timely notifications regarding the condition and needs of their assigned seniors. The platform is currently in active use and continues to be refined for broader implementation. The integration of health monitoring, personal care management, caregiver coordination, and family communication augmented by IoT and automation resulted in a digitally driven model that enhances senior citizen care. The system improved service delivery, real-time communication, and engagement from both healthcare workers and family members. Although the implementation was localized, the system demonstrates potential for adoption across other regions. It offers local government units a scalable and practical solution for modernizing senior care services and fostering inclusive, technology-enabled wellness programs for the elderly.

Keywords: senior citizen care, health monitoring, personal care management, caregiver coordination, iot integration, family communication, automated notifications, agile scrum, barangay health services, digital health system

LOCAL GOVERNMENT UNIT 4: BARANGAY PET REGISTRATION FOR ANIMAL WELFARE AND PROTECTION SYSTEM (PET PROFILING, ANIMAL ADOPTION PORTAL, ANIMAL CRUELTY REPORTING, IOT BASED QR-GENERATED TAG, ANIMAL IMAGE RECOGNITION)

Mark Dominique Baril, Russel Derramas, Wendhil Himarangan, Ismael Nick Longcop,
Ace Felixerp Manganaan, Marifel Laynesa

Abstract

The growing number of animal welfare concerns in local communities highlights the urgent need for an integrated digital solution that promotes responsible pet ownership. Incidents of animal abuse, neglect, and the increasing population of stray or lost animals underscore the necessity for a centralized system. This study introduces the Barangay Pet Registration for Animal Welfare and Protection System, a digital platform designed to address these issues through pet profiling, adoption facilitation, animal cruelty reporting, and smart identification technologies. The system was developed using the Agile Scrum methodology, applying an iterative approach divided into multiple phases. During the Planning Phase, the team identified core system requirements and prioritized community-specific needs. The Design Phase focused on creating intuitive and user-friendly interfaces for ease of access. The Testing Phase involved functionality checks, bug resolution, and revisions based on initial user feedback. Finally, the Evaluation Phase included system deployment, performance assessment, and collection of feedback from barangay officials and target users for future refinement. Post-deployment evaluations by barangay officials confirmed the system's potential for improving animal welfare efforts. The platform fostered community collaboration and helped reduce incidents of animal abuse and neglect. It also supported efficient tracking and recovery of lost pets, encouraging responsible pet ownership. The AI-powered image recognition feature successfully identified common pet breeds with an average confidence rate exceeding 85%. However, the system showed lower accuracy when recognizing native mixed breeds such as Aspins, indicating the need for further dataset expansion. The integration of pet profiling, IoT-enabled tagging, image recognition, and reporting features significantly enhanced the barangay's capacity to manage animal welfare. While certain limitations exist particularly in recognizing mixed breeds, the system remains scalable and impactful. It serves as a foundational model for promoting responsible pet ownership, reducing abuse cases, and empowering communities to actively participate in protecting animal rights.

Keywords: animal welfare, pet registration, responsible pet ownership, ai image recognition, iot tagging, animal adoption, community reporting, agile scrum, barangay system, stray animal management

**LOCAL GOVERNMENT UNIT: COMPLIANCE AND REGULATORY MANAGEMENT
SYSTEM (SELF-ENROLL COURSES, POINTS-BASED SYSTEM, COMPLIANCE
MONITORING) WITH AI GAMIFIED EVALUATION SYSTEM**

Ercylie Cordero, Lemuel James Leonora, Joshua Nazareno,
Eugene Aureus, Marifel Julianda Laynesa

Abstract

The increasing complexity of compliance and regulatory requirements within local government units (LGUs) highlights the need for innovative and efficient systems to streamline processes and improve engagement. This study introduces the LGU Compliance and Regulatory Management System, a digital platform that integrates self-enrollment courses, a points-based progression system, and comprehensive compliance monitoring. To further enhance participation and learning outcomes, the system incorporates an AI-driven gamified evaluation framework that encourages continuous learning and active compliance among users. The system was developed using a modular architecture that combines intuitive front-end design with a robust back-end infrastructure. The AI component was designed to deliver adaptive learning paths and gamified features that personalize the user experience and boost motivation. An Agile development methodology guided the process, enabling iterative improvements based on consistent feedback from end-users. This approach ensured that system functionalities evolved in alignment with the needs of LGU personnel and stakeholders. System implementation and testing revealed notable improvements in both compliance tracking and user engagement. Participants responded positively to the self-enrollment courses, citing clarity and accessibility as key strengths. The points-based structure provided a clear roadmap for users to achieve compliance goals. The AI-enhanced gamification features successfully motivated users to complete training modules, leading to higher completion rates and more proactive participation. LGU staff also benefited from streamlined monitoring tools, reducing administrative burden and enabling a focus on strategic compliance oversight. The project demonstrates how digital transformation, through the integration of AI and gamification, can improve compliance and regulatory management within local government units. By fostering engagement and reducing inefficiencies, the system contributes to a more informed and compliant workforce. Future developments may include mobile app integration and the addition of real-time analytics dashboards to further support monitoring and decision-making. Overall, the system offers a scalable and adaptable solution for modern governance and public sector learning.

Keywords: compliance monitoring, regulatory management, ai gamification, self-enroll courses, points-based system, adaptive learning, local government, digital transformation, agile development, public sector innovation

**LOCAL GOVERNMENT UNIT: E-LOCAL CIVIL REGISTRAR SYSTEM: REAL-TIME
REGISTRATION, VERIFICATION, AND ISSUANCE OF CERTIFICATES
(AUTOMATED CERTIFICATE AND VOICE-ACTIVATED CONTROLS)**

Angelo Vitug, Cristine Joy Aggalut, Jorenz Danzel Allacaden,
Arnel Dela Peña, Lando Sanchez, Rosauro Villalon

Abstract

As public service increasingly shifts toward digital transformation, the demand for efficient and accessible systems has grown significantly. Civil registration, which documents vital events such as birth, marriage, and death, plays a fundamental role in upholding individual rights and identity. However, many local civil registrar offices still rely on manual processes that lead to inefficiencies, delays, and data entry errors. This study introduces the E-Local Civil Registrar System (E-LCRS), a digital platform designed to enhance registration services through real-time data processing, automated certificate generation, and voice-activated controls. The system integrates various technological innovations to improve civil registry functions. Real-time registration allows immediate entry of birth, marriage, and death records by linking healthcare facilities, solemnizing officers, and local government units. The verification process utilizes digital databases with cross-referencing capabilities to ensure accuracy. An automated issuance feature generates authenticated certificates embedded with security measures, reducing manual labor and processing time. Additionally, voice-activated controls were implemented to improve accessibility, enabling system navigation and certificate formatting through spoken commands, benefiting users with physical or cognitive impairments. The implementation of E-LCRS led to significant improvements in the efficiency, accuracy, and accessibility of civil registration services. Users reported high levels of satisfaction, particularly with the voice-activated features that supported individuals of varying age groups and physical abilities. Local government personnel observed reduced workloads and minimized paperwork, which allowed them to focus more on client service rather than manual data handling. The adoption of the E-Local Civil Registrar System marks a substantial leap in the automation of vital records management. The system successfully streamlined the registration and issuance of civil documents, addressing key inefficiencies in traditional processes. Through digital transformation, E-LCRS has laid the groundwork for a more responsive, inclusive, and data-secure approach to civil registry operations in local government units.

Keywords: civil registration, real-time processing, automated certificate, voice-activated controls, e-government, digital transformation, public service efficiency, accessibility, data accuracy, local governance

**LOCAL GOVERNMENT UNIT: EDUCATION AND SCHOLARSHIP MANAGEMENT
SYSTEM WITH AUTOMATED APPLICATION SCREENING AND FRAUD DETECTION**

Jefferson Delaminez, Jesrael Astorga, Angelico Antonio, John Carlo Baluyo,
Genecris Caballero, Rosauro Villalon Jr.

Abstract

The Education and Scholarship Management System (ESMS) for Local Government Units is a digital platform developed to address the inefficiencies of traditional, manual scholarship application processes. The system enhances transparency, prevents fraud, and increases accessibility for applicants. This initiative reflects the government's objective of promoting equitable access to education by streamlining educational funding for deserving students. ESMS aims to improve operational efficiency, reduce administrative burdens, optimize resource allocation, and enable effective management of scholarship programs. To meet its objectives, the ESMS incorporates a secure online application portal, an automated assessment tool, and a fraud detection mechanism. These components work together to ensure a fair, transparent, and accountable scholarship selection process. The system uses cloud computing for secure data storage, reducing the risk of data loss and ensuring data protection. Additionally, data modeling and analytics are employed to support evidence-based decision-making and policy formulation, with automated reporting tools that aid in monitoring and evaluation. The implementation of ESMS allowed for more efficient management and real-time tracking of scholarship applications. The system reduced manual workload and enhanced the reliability of applicant selection. Applicants benefited from improved transparency and engagement by being able to monitor their application status online. As a result, access to educational support was facilitated, helping more students progress in their academic pursuits. The Education and Scholarship Management System significantly transformed the scholarship application and administration process within local government units. By automating application screening, evaluation, and fraud detection, the system improved transparency, accountability, and accessibility. The integration of cloud storage, analytics, and real-time tracking provided a data-driven foundation for more informed decisions and equitable scholarship distribution. ESMS offers a scalable solution for efficient educational funding management and aligns with broader goals of inclusive and effective governance in the education sector.

Keywords: scholarship management, automated screening, fraud detection, education access, online application portal, data analytics, cloud computing, local government, transparency, equity in education

**LOCAL GOVERNMENT UNITS 3: BARANGAY DEVELOPMENT MANAGEMENT
SYSTEM FOR ZONING AND PERMIT PROCESSING WITH AI-DRIVEN DECISION
SUPPORT TOOLS**

Dexter Lucero, Jhon Anthony Bagaforo, John Lloyd Jampolina,
Robinson Lacdang, James Sean Mayores, Marifel Laynesa

Abstract

Barangays serve as the foundational administrative units in the Philippines, responsible for public service delivery, regulatory enforcement, and land-use management through zoning and permit processing. However, many barangays continue to rely on manual workflows, which often result in inefficiencies such as misplaced documents, delayed processing times, and a lack of transparency. These issues are exacerbated in rapidly urbanizing areas where demand for zoning and permit approvals is rising. This study presents the Barangay Development Management System (BDMS), a digital platform designed to modernize and streamline these essential processes. The BDMS was developed using the Agile Scrum methodology, enabling iterative development and continuous feedback. Core technologies used include PHP, HTML, CSS, JavaScript, and MySQL, with Visual Studio Code as the main development environment. The system integrates various modules for zoning applications and permit processing, along with a basic AI-driven decision support tool that provides data-informed suggestions to assist barangay officials. Before deployment, user acceptance testing was planned to validate system functionality and usability. The BDMS successfully digitized key administrative functions, enhancing the efficiency of zoning and permit workflows. The system facilitated faster processing of applications, improved document and user record management, and ensured stable performance under multi-user conditions. The inclusion of an AI-driven tool supported more informed decision-making. Barangay officials reported improved service delivery, better internal coordination, and enhanced transparency in local governance operations. The system demonstrated strong potential in addressing the inefficiencies of manual zoning and permit processing within barangay operations. Its responsive administrative dashboard and automated reporting capabilities contributed to more effective decision-making and reduced administrative workload. While the system performed reliably, ongoing refinements are recommended to accommodate increasing data volumes and evolving user needs. The BDMS offers a scalable and practical solution for modernizing barangay governance through digital transformation.

Keywords: barangay management, zoning system, permit processing, ai decision support, digital governance, agile scrum, local government, workflow automation, public service efficiency, urban planning

**MANUFACTURING MANAGEMENT SYSTEM: ADMINISTRATIVE, AUTOMATED
QUALITY CONTROL AND INTEGRATED COMMUNICATION TOOLS**

Chriselda Dalanan, Joshua Andrei Redondo, Kent Russel Olanda,
Rennix Alonzo, Abdulwahid Abdul, Rommel Constantino

Abstract

The manufacturing industry continues to face challenges in managing administrative tasks, maintaining consistent quality control, and ensuring clear interdepartmental communication. This study introduces the Manufacturing Management System, a comprehensive platform developed using the MERN stack, designed to streamline administrative processes, automate quality assurance, and enhance internal collaboration. The system aims to improve operational efficiency, ensure data accuracy, and support real-time decision-making within manufacturing enterprises. The development of the Manufacturing Management System followed the Agile Scrum methodology, which enabled a flexible, iterative, and user-centered approach. The project was divided into multiple sprints, each dedicated to the design, implementation, and testing of specific system functionalities. Regular sprint planning sessions, daily stand-up meetings, and sprint reviews facilitated ongoing collaboration between the development team and stakeholders, allowing for continuous feedback and system refinement. The system was structured into modular components to support incremental delivery. These modules included Account Management, which handled user registration, authentication, and role-based access; Document Management, which allowed for the uploading, storing, and retrieval of essential records; Legal Management, which managed compliance documentation and internal audit tracking; and Initiating Workflow, which automated internal processes such as approvals and task routing. The system's implementation resulted in significant improvements in operational workflows. Automated quality control reduced manual inspection time by 40%, while centralized documentation and task routing minimized redundancy. User testing revealed high satisfaction levels among administrative personnel and improved coordination between departments. Real-time data visibility and integrated communication tools contributed to more efficient decision-making and overall system usability. The study demonstrates that an integrated management platform tailored for manufacturing operations can enhance productivity, ensure compliance, and improve administrative oversight. Future developments may include integration with machine-generated data and mobile compatibility to support real-time monitoring and greater flexibility. These enhancements are expected to further optimize manufacturing operations and promote data-driven management.

Keywords: manufacturing management system, quality control automation, administrative efficiency, agile scrum, mern stack, workflow automation, document management, role-based access, internal communication, real-time data

**MANUFACTURING MANAGEMENT SYSTEM: CORE 2: (PRODUCT EXECUTION AND
AUDIT MANAGEMENT) WITH PREDICTIVE ANALYTICS USING TENSORFLOW**

Harp Clarence Navarro, Eris Hally Pena, Jayrome Unay, John Andrei Lanuza,
Jesson Bardon, Rommel Constantino

Abstract

As the manufacturing industry continues to evolve, companies face increased pressure to ensure product quality, maintain operational transparency, and minimize production downtime. Traditional systems often operate reactively, resulting in inefficiencies and delayed responses. This study introduces CORE 2, a Manufacturing Management System that enhances product execution and audit management through predictive analytics powered by TensorFlow. CORE 2 is designed to deliver real-time data visibility, proactive monitoring, and audit readiness, enabling improved decision-making and quality assurance. By utilizing AI-driven predictions, the system identifies potential issues before they escalate, optimizing workflow efficiency and regulatory compliance. CORE 2 was developed using the MERN stack, MongoDB, Express.js, React.js, and Node.js, offering responsive and scalable architecture. Predictive models were built using TensorFlow to analyze patterns in production metrics, audit logs, and performance data. These models detect risks such as production delays, quality defects, and audit inconsistencies. The Agile Scrum methodology guided the development, promoting iterative improvements through continuous feedback. The system includes modular components such as Production Tracking, Quality Control, Customer Order Information, Audit Planning, and Corrective Action Management, each deployed as a microservice. Real-time dashboards were implemented to provide intuitive insights and visualization. The integration of TensorFlow-based predictive analytics significantly improved manufacturing performance. CORE 2 enabled a proactive approach to risk detection, helping to prevent disruptions before they occur. In audit functions, the system enhanced traceability and readiness by automating documentation and scheduling. Results also showed improved alignment with compliance requirements and more efficient corrective action management. For long-term success, the models require standardized data input and continuous training, supported by effective data governance practices. CORE 2 demonstrates that predictive analytics can shift manufacturing systems from reactive to proactive management. By leveraging AI to anticipate operational risks and audit concerns, the system enhances both quality control and compliance readiness. Future enhancements may include real-time IoT integration and expansion into other production domains. The study affirms that integrating predictive intelligence into manufacturing systems supports the transition to smarter, data-driven operations and fosters sustainable performance improvements.

Keywords: predictive analytics, tensorflow, product execution, audit management, manufacturing system, mern stack, quality control, compliance, real-time monitoring, data-driven operations

**MANUFACTURING MANAGEMENT SYSTEM: FINANCIAL MANAGEMENT SYSTEM
(FINANCIAL SECURITY, ADAPTIVE OPTIMIZATION AND ANOMALY
DETECTION USING MACHINE LEARNING AI)**

Raffy Uanan, Alvin Montemor, Mark Masangya, Angelo Oquiniano,
Jonesben Fanoga, Rommel Constantino

Abstract

JJM Soap and Detergents Manufacturing faced persistent challenges in manual financial practices, including inefficiencies, data inconsistencies, and lack of real-time visibility. To address these concerns, this study developed a cloud-based Financial Management System (FMS) tailored to JJM's operational needs. The system emphasizes three core pillars: financial security, adaptive financial optimization, and anomaly detection using machine learning. Features such as multi-factor authentication, encryption, and role-based access control ensure secure transactions. Meanwhile, AI-driven models optimize capital management and detect fraudulent activities, integrating financial intelligence into broader departmental operations like HR and logistics for enhanced transparency and strategic decision-making. The FMS was developed using the Agile Scrum framework and microservices architecture. Key modules including Cash Management, Accounts, Ledger, and Admin Control, were built using the MERN stack (MongoDB, Express.js, React.js, Node.js). Continuous integration and deployment were implemented using GitHub and Render. Security features included HTTPS, multi-factor authentication (MFA), role-based access control (RBAC), and audit logs. Machine learning algorithms supported real-time fraud detection and budgeting recommendations. RESTful APIs ensured seamless integration across departments. User acceptance testing (UAT) was conducted to validate system performance and security compliance. The implementation of the FMS successfully resolved major financial management issues at JJM. All modules operated in real time and maintained a 99.5% system uptime. Security mechanisms effectively protected sensitive financial data, while AI-driven tools improved decision-making and reduced errors. The anomaly detection module achieved 93% accuracy in identifying potential fraud. Users reported improved transparency, more rational financial management, and enhanced reporting accuracy. UAT confirmed the system's functionality and compliance with security protocols. The FMS demonstrated the effectiveness of digital transformation in modernizing financial processes within manufacturing. Automation reduced delays and errors, while AI technologies facilitated intelligent budgeting, anomaly detection, and financial forecasting. Although initial challenges included user adaptation and data migration, the Agile approach ensured system success. The scalable and cloud-ready architecture not only addressed JJM's current financial needs but also positioned the company for future advancements such as predictive analytics. This study highlights the value of integrating AI-powered financial systems into manufacturing management to drive efficiency, security, and data-driven decisions.

Keywords: financial management system, ai optimization, anomaly detection, machine learning, manufacturing finance, mern stack, agile scrum, digital transformation, financial security, budget automation

MANUFACTURING MANAGEMENT SYSTEM: HUMAN RESOURCES 1 (EMPLOYEE RECORDS MANAGEMENT, ATTENDANCE AND TIME TRACKING MANAGEMENT, HR COMPLIANCE, ONBOARDING/OFFBOARDING) WITH PREDICTIVE ANALYTICS USING TENSORFLOWJS

Mike Franz Aspa, Nimrod Alvarez, Edu Araojo, Maxine Baccay,
Cris Michael Angelo Mortes, Rommel Constantino

Abstract

This capstone project explores an innovative approach to human resource management in the manufacturing sector. The system integrates advanced technology to create an environment where employees can perform optimally and feel valued. Using TensorFlow's machine learning capabilities, it personalizes learning paths for workers such as John in assembly and Maria in quality control to enhance their skills based on individual strengths and goals. A system was developed using the MERN stack to build a unified platform with four main modules: Employee Records, Attendance and Time Tracking, HR Compliance, and Onboarding/Offboarding. Predictive analytics were incorporated through TensorFlow.js to forecast employee attrition, while facial recognition ensured secure attendance management. Testing showed that the system effectively streamlined HR operations, improved employee retention by identifying at-risk individuals, and simplified key HR processes. Managers reported better decision-making capabilities without relying on extensive spreadsheets. The findings demonstrate how advanced technology can reduce bureaucratic barriers in HR management. By personalizing learning paths and enabling data-driven decision-making, the system supports employee development and enhances overall workforce management in manufacturing settings.

Keywords: human resource management system, manufacturing, employee attrition, predictive analytics, tensorflow.js, employee records, attendance tracking, onboarding and offboarding, hr compliance

MANUFACTURING MANAGEMENT SYSTEM: HUMAN RESOURCES 2(RECRUITMENT AND APPLICANT TRACKING, PERFORMANCE MANAGEMENT, LEARNING AND DEVELOPMENT, SUCCESSION PLANNING) WITH PREDICTIVE PROMOTION MODELING USING TENSORFLOW

John Renz Legaspi, John Kenneth Nuñez, Jovan Nicolas, Jade Mark Cadutdut,
Crisvel Estuesta, Rommel Constantino

Abstract

In the dynamic environment of the manufacturing sector, effective human resource management is essential for maintaining productivity, workforce quality, and leadership continuity. Traditional HR practices such as recruitment, performance evaluation, training, and promotion, often rely on manual processes and subjective judgment, resulting in inefficiencies and limited development opportunities. This study introduces a Human Resource module of the Manufacturing Management System (MMS-HR), specifically developed for JJM Soap and Detergents Manufacturing. The system aims to enhance human capital operations by integrating AI-powered automation and machine learning for predictive promotion modeling. It focuses on four core components: Recruitment and Applicant Tracking, Performance Management, Learning and Development, and Succession Planning. The MMS-HR system was developed using the Agile Development Framework, enabling iterative progress, stakeholder feedback, and incremental refinement. It was implemented as a web-based platform using modern technologies for both front-end and back-end development. Each HR module was designed based on the operational workflows and specific needs of the client organization. TensorFlow was integrated to support predictive promotion modeling, allowing the system to evaluate employee performance data and identify high-potential candidates for career advancement. The system successfully automated several HR functions, including applicant tracking, performance evaluations, training module delivery, and promotion assessments. These automations significantly reduced manual workloads and improved process efficiency. The predictive modeling component supported data-driven promotion decisions by identifying performance trends and aligning them with organizational needs. As a result, JJM Soap and Detergents Manufacturing experienced enhanced HR decision-making and reduced administrative overhead. The integration of key HR processes into a centralized MMS-HR platform marks a transformative step in human resource management for manufacturing firms. By unifying recruitment, performance evaluation, employee development, and succession planning under one intelligent system, the platform streamlines the employee lifecycle from entry to promotion. The inclusion of predictive analytics through TensorFlow further supports strategic workforce planning by enabling proactive talent identification and development. Future enhancements may include real-time analytics and expanded AI-driven personalization to further improve human capital outcomes.

Keywords: human resource management, applicant tracking, performance management, learning and development, succession planning, predictive modeling, tensorflow, ai in hr, manufacturing sector, talent development

MANUFACTURING MANAGEMENT SYSTEM: HUMAN RESOURCES 4 (GRIEVANCE MANAGEMENT, EMPLOYEE ENGAGEMENT, EMPLOYEE COMMUNICATION, AND WORKFORCE ANALYTICS) WITH ADAPTIVE LEARNING AND DEVELOPMENT PATHWAY USING TENSORFLOW

Ma Graciella Canales, Aljon Arellano, Jasmin Dela Piedra, James Royce Icaranom,
Joemar Samillano, Dr. Rommel Constantino

Abstract

This project presents a human resource management system designed for manufacturing environments, focusing on four core areas: grievance management, employee engagement, communication, and workforce analytics. The system aims to enhance the overall employee experience and organizational performance through data-driven insights. By leveraging TensorFlow, a machine learning framework, the system generates adaptive learning pathways personalized to each employee's needs, facilitating continuous development informed by performance data and feedback. The system was developed using employee surveys, feedback forms, HR records, and performance metrics as data sources. These inputs were used to train machine learning models that forecast employee concerns, recommend communication improvements, and generate personalized development plans. The platform features an intuitive interface for both HR managers and employees. Managers gain access to workforce trends and predictive insights, while employees can monitor their progress and access tailored learning modules. Pilot testing of the system demonstrated significant improvements in several HR functions. The grievance management module facilitated quicker and more effective resolution of employee issues. Employee engagement increased, with more staff participating in organizational initiatives and feedback loops. Communication tools enhanced team interactions, while predictive analytics identified early signs of dissatisfaction or potential attrition, enabling timely interventions. The adaptive learning recommendations were well received, with employees reporting that the training content aligned with their career goals and skill development needs. The integration of artificial intelligence into HR processes showed strong potential to enhance employee support, organizational responsiveness, and workforce development. While initial results were positive, further refinement and full-scale deployment are necessary to maximize the system's impact. Future enhancements may include voice-based input, advanced visualization tools, and expanded analytics capabilities. Overall, the project underscores the transformative potential of AI-driven HR systems in manufacturing settings.

MANUFACTURING MANAGEMENT SYSTEM: HUMAN RESOURCES III (PAYROLL PROCESSING, BENEFITS, INCENTIVES AND COMPENSATION PLANNING) WITH PREDICT ANALYTIS AND BEHAVIORAL ANALYTICS USING TENSORFLOW

John Lloyd Borlagdatan, Abeguel Canja, Oliver Padit,
Elsie Pagsiat, Renalyn Sajol, Rommel Constantino

Abstract

To remain competitive, manufacturing companies must improve operational efficiency and employee satisfaction. Human Resource (HR) divisions play a key role in achieving these goals, particularly in areas such as payroll processing, benefits administration, incentives, and compensation planning. However, many organizations still rely on outdated manual systems, which result in frequent errors, inefficiencies, and limited workforce insights. This study introduces a modern, integrated Human Resource Management System (HRMS) designed to enhance core HR operations using predictive and behavioral analytics powered by TensorFlow. The system was developed using the Agile Scrum methodology, which breaks the project into short development cycles known as sprints. Each sprint focused on delivering specific modules such as payroll processing, benefits tracking, compensation planning, and incentive management. TensorFlow was integrated to implement predictive and behavioral analytics capable of forecasting payroll trends, identifying anomalies, and supporting strategic compensation planning. Continuous feedback and iteration enabled the team to refine system features according to user needs and organizational objectives. The Manufacturing Management System (HR III) significantly improved HR productivity and operational accuracy. Automated payroll computations and data-driven compensation planning reduced manual errors and processing time. Predictive analytics helped forecast workforce-related financial needs, while behavioral analytics provided insights into employee compensation behavior and satisfaction. These improvements led to cost savings, increased accuracy in payroll and benefits administration, and higher employee morale. The integration of automation, predictive analytics, and behavioral insights into HR operations has shown strong potential to transform workforce management in manufacturing settings. By leveraging TensorFlow, the system can anticipate payroll trends, guide future HR planning, and support personalized compensation strategies. The project also highlights the importance of clearly defined system requirements, continuous collaboration, and secure, user-friendly design. Ultimately, HR III serves as a scalable and intelligent solution for optimizing payroll and compensation processes in modern manufacturing enterprises.

MANUFACTURING MANAGEMENT SYSTEM: LOGISTIC 1 (PROCUREMENT, VENDOR PORTAL, WAREHOUSE MANAGEMENT) WITH DEMAND FORECASTING AND DISCREPANCY DETECTION USING BRAIN.JS

May Angelie Hubahib, Adrey Japheth Locaylocay, Adrian Rey Barrios,
Januah Baldeo, Benjie San Juan, Rommel Constantino

Abstract

With the continuous advancement of digital technologies, the manufacturing sector is increasingly adopting intelligent systems to enhance logistics operations. However, many organizations still depend on manual processes for procurement, vendor communication, and warehouse management. These outdated methods often result in delays, data inconsistencies, and inaccurate demand forecasting, ultimately affecting productivity and increasing operational costs. To address these concerns, this study presents the Manufacturing Management System: Logistic 1, a unified logistics solution integrating Procurement, Vendor Portal, and Warehouse Management with demand forecasting and discrepancy detection capabilities using Brain.js. The system is designed to streamline logistical workflows, improve data accuracy, and support predictive decision-making for better supply chain performance. The system was developed using the Agile methodology, which divided the process into iterative sprints to ensure continuous feedback and alignment with operational requirements. Stakeholder interviews and real-time usability testing were conducted to validate functional effectiveness. Brain.js, a JavaScript-based neural network library, was utilized to implement demand forecasting and discrepancy detection modules. These AI features allow the system to analyze historical data and identify patterns, enabling adaptive and data-driven logistics management. The implementation of the system led to substantial improvements in logistics accuracy and efficiency. The use of Brain.js reduced forecasting errors and improved inventory tracking, which optimized warehouse processes such as receiving, storing, and stock monitoring. The vendor portal enhanced supplier coordination and minimized lead times. Additionally, the system's secure architecture ensured reliability in managing sensitive operational data, making it suitable for deployment in critical manufacturing environments. This study demonstrates the potential of AI-enhanced logistics systems to transform traditional manufacturing practices. By minimizing manual errors, improving warehouse operations, and enabling predictive analytics, the system supports more informed decision-making. The Agile development approach allowed for flexibility and iterative enhancement based on user feedback. Overall, the Manufacturing Management System: Logistic 1 establishes a scalable, intelligent framework that can support future innovations in logistics and supply chain management.

Keywords: logistics management, procurement, vendor portal, warehouse management, demand forecasting, discrepancy detection, brain.js, predictive analytics, agile development, manufacturing system

**MANUFACTURING MANAGEMENT SYSTEM.LOGISTIC 2 WAREHOUSE,
INVENTORY AND TRANSPORTATION FOR FORECASTING**

Reynaldo Sabilo, Bien Guiatao, Sarah Jane Cornelio, Sphencer Once,
Clifford John Villareal, Rommel Costantino

Abstract

This capstone project aims to offer an efficient solution to address logistics-related challenges in manufacturing companies. By applying artificial intelligence and advancing software capabilities, the study seeks to develop a system that manages logistics operations more effectively, reduces costs, and enhances overall business performance. The focus of this research is the integration of AI-based demand forecasting within logistics operations, specifically in warehouse management, inventory control, and transportation planning. The system is designed to optimize the supply chain process in manufacturing environments by predicting future demand and aligning operational strategies accordingly. The development of the Manufacturing Management System focused on improving operational efficiency and reducing resource waste. The system utilized AI-based predictive analytics to enhance inventory accuracy, streamline warehouse operations, and plan transportation activities effectively. Core objectives included optimizing logistics functions, cutting costs, and minimizing material waste. Agile methodology guided the project development to allow for iterative improvements based on user feedback and evolving system requirements. Throughout the project life cycle, the team encountered and successfully addressed several challenges, including changes in project scope due to evolving stakeholder requirements. These were managed through open communication and adaptive planning. Technical hurdles, such as integrating different modules within the system, were resolved through detailed testing and systematic development. The team also learned to balance feature development with technical debt by employing continuous refactoring and thorough code reviews, contributing to the system's overall stability and performance. The interconnection between demand forecasting, inventory management, warehouse operations, and transportation planning was a key insight of the project. Demand predictions directly influenced inventory decisions, which subsequently impacted warehouse capacity and transportation logistics. For example, a forecasted rise in product demand would prompt the inventory system to order more supplies, requiring the warehouse to manage higher stock volumes and the transportation system to coordinate increased distribution. This study underscores the importance of synchronized logistics components and demonstrates how AI-driven forecasting can enhance manufacturing logistics efficiency.

Keywords: logistics management, demand forecasting, warehouse operations, inventory control, transportation planning, artificial intelligence, manufacturing system, predictive analytics, agile development, supply chain optimization

**MERCHANDISING MANAGEMENT SYSTEM (CORE 2): PRODUCT POSITIONING,
MARKETING STRATEGY CUSTOMER RELATIONSHIP MANAGEMENT
PERSONALIZED PRODUCTS SHOWCASE USING AI**

Lee Ivans Gonzaga, Kim Wency Cornejo, Ryme Czeddrick Simbajon,
John Lloyd Acido, John Eric Marmol, Paulo Tolentino

Abstract

This capstone project aims to modernize a local client's outdated and underperforming e-commerce webstore by addressing common challenges encountered by small and medium enterprises (SMEs), including limited technical resources and inadequate security features. The existing platform lacked essential functionalities such as secure login, CAPTCHA, OTP verification, product reviews, customer rewards, and personalized recommendations resulting in diminished user trust and poor sales performance. To address these issues, the project introduced a secure, user-friendly, and intelligent web-based merchandising management system. Key features included OTP authentication via PHP Mailer, CAPTCHA integration, password hashing, a review and rating system, a voucher-based loyalty program, and an AI-powered product recommendation engine. The platform was developed using PHP, MySQL, HTML/CSS, JavaScript, Bootstrap, and TensorFlow.js, aligning technological solutions with business strategy to improve user experience and operational efficiency. To upgrade the platform's security and performance, multiple modules were integrated. OTP verification using PHP Mailer, Google reCAPTCHA, and password hashing was implemented to ensure account protection and prevent unauthorized access. Session timeout protocols were also established to enhance data security. Payment options were expanded through PayPal for international transactions and PayMongo for local payments, supporting GCash, Maya, and bank transfers. These enhancements aimed to create a reliable, secure, and convenient purchasing experience for users. The system achieved its primary goal of transforming the outdated webstore into a secure and intelligent e-commerce platform. Security modules such as OTP, CAPTCHA, and hashed passwords successfully protected user data, while payment integrations streamlined both local and global transactions. Customer engagement increased with the introduction of product reviews, voucher-based rewards, and personalized product suggestions powered by TensorFlow.js. These upgrades contributed to improved platform usability and customer satisfaction. This project demonstrated the effectiveness of integrating robust security features, diverse payment gateways, customer engagement tools, and AI-driven personalization into an e-commerce platform. The use of TensorFlow.js for product recommendation and the incorporation of CRM-related features supported a more strategic approach to merchandising. As a result, the redesigned system not only addressed previous inefficiencies but also provided a scalable model for future digital retail solutions tailored to SMEs.

Keywords: merchandising management system, e-commerce platform, product recommendation, customer relationship management, ai personalization, tensorflow.js, secure webstore

**MERCHANDISING MANAGEMENT SYSTEM (CORE1): (UI/UX), BRANCH
INFORMATION, CUSTOMER BENEFITS, WITH PRODUCT DETAILS, CUSTOMER
LOYALTY TRACKING USING AI**

Argie Tapalla, Pamela Jean Nolasco, Jaylord Villanueva, Blaire Lance Alilam,
John Dhel De Villa, Paulo Tolentino

Abstract

Retailers today often struggle to provide customers with easy access to product lists, branch information, and visible benefits. Without a direct and well-designed interface, customers may find it difficult to navigate and locate the information they need, which can negatively affect their shopping experience. The researchers developed the Merchandising Management System CORE 1 to enhance the user interface and user experience (UI/UX) while offering accessible branch information, comprehensive product descriptions, and clear customer benefits. The goal of this system is to improve customer satisfaction and streamline the purchasing process across various branches. Using the agile methodology, the research team conducted user consultations at different stages of development. Feedback from users influenced the customization of system functionalities and design aspects. To ensure the system could adapt to evolving user needs and retail requirements, agile practices such as sprint planning, sprint execution, and continuous integration were implemented. The study demonstrates how retailers can stand out in a competitive market by consolidating product management and customer interaction into a single system. For the system to remain successful in the long term, issues such as maintaining data consistency and ensuring the security of customer information must be addressed. Future improvements may include additional UI enhancements from the former system of The Great Walls Arts Ph, as well as the integration of advanced analytics to enhance window-shopping experience. The system features a user-friendly interface that centralizes branch information, detailed product descriptions, and customer benefits in a clear and structured format, directly addressing key retail challenges. By providing real-time updates on product availability, promotions, and personalized perks, the system enables customers to make informed purchasing decisions while allowing retailers to manage multi-branch operations more efficiently. This dual improvement enhances customer satisfaction through transparency and ease of use while streamlining back-end processes for retailers.

Keywords: merchandising management system, ui/ux improvement, branch information, product descriptions, customer benefits, agile methodology, user feedback, retail efficiency, data consistency, window shopping

MERCHANDISING MANAGEMENT SYSTEM (HR3): CENTRALIZED EMPLOYEE RECORDS, SUCCESSION PLANNING, AND SECURE DOCUMENT DEPOT WITH AUTOMATED DATA ENTRY

Romeo Stotomas, Jonathan Alarcon, Mark Gil Anora, Justin Shane Luza,
Jayar Dolfo, Paulo Tolentino

Abstract

The growing demand for efficient human resource operations in the merchandising sector highlights the need for intelligent digital solutions. The Merchandising Management System: HR3 was developed to address common challenges such as fragmented employee records, lack of succession readiness, and unsecured document storage. This system integrates a centralized HR information module, succession planning tools, and a secure document depot with automated data entry, aiming to improve data accuracy, accessibility, and security within retail operations. The system was built using the Laravel PHP framework for backend development and Tailwind CSS for frontend responsiveness. Key modules included centralized employee records, succession planning, and encrypted document storage. The automated data entry feature utilizes dynamic form generation and real-time validation logic to ensure input accuracy and reduce manual errors. Usability and performance testing were conducted with HR staff from a merchandising company to evaluate system reliability, user accessibility, and overall effectiveness. The implementation of the system successfully eliminated reliance on spreadsheets and disorganized files, replacing them with structured digital records. HR personnel reported improved accuracy in employee documentation, more efficient access to important files, and enhanced tracking of qualified successors for key positions. Automated data entry significantly reduced manual workload and input errors. The document depot-maintained compliance with data privacy standards, ensuring secure handling of sensitive information. The integration of centralized employee records, succession planning, and secure documentation with automation capabilities greatly improved HR operational workflows. The system enabled faster, more accurate HR processes and supported data-driven decision-making in workforce planning. Additionally, automation and secure digital storage reduced the risk of human error and ensured better compliance with regulatory standards compared to traditional paper-based or spreadsheet-based systems.

Keywords: centralized employee records, succession planning, document management, hr automation, data security, merchandising management system

**MERCHANDISING MANAGEMENT SYSTEM (HR4): ATTENDANCE MONITORING, 201
FILE MANAGEMENT AND INNOVATED PAYROLL SYSTEM WITH AI INTEGRATION**

Mark Edrian Burac, Felipin Calamba, John Lloyd Picson,
Russel Castillo, John Kenneth Estacion, Paulo Tolentino

Abstract

This study presents the development and deployment of an AI-integrated Human Resource Management System, Merchandising Management System: HR4, specifically designed for Great Wall Arts, a company specializing in local handmade products. The system integrates attendance monitoring, 201 file management, and a modernized payroll module into a single digital platform. By automating these key HR processes, HR4 ensures accurate real-time attendance tracking and efficient payroll computation using AI. Furthermore, the digitization of 201 files enhances data security and accessibility, streamlining administrative operations while supporting compliance with labor policies. The study adopted a systems development approach using the Agile Scrum methodology. HR4 was built through modular components focused on attendance monitoring, 201 file handling, and payroll processing. AI was incorporated to facilitate automated decision-making and real-time analysis. PHP was used for backend development, MySQL for database management, and Tailwind CSS for frontend responsiveness. Iterative sprint cycles, regular testing, and client feedback from Great Wall Arts guided the system's continuous refinement and alignment with operational requirements. The implementation of HR4 significantly improved operational efficiency in the HR department of Great Wall Arts. The automation of attendance tracking, payroll calculation, and employee record access reduced manual workload and error incidence. Real-time attendance data synchronized directly with the payroll module, improving accuracy and minimizing salary disputes. The digitized 201 file management system provided secure and quick access to personnel records, thereby enhancing administrative responsiveness and data integrity. The findings demonstrate that integrating AI into core HR functions can transform traditional workforce management approaches. For growing organizations like Great Wall Arts, automation reduces administrative overhead while promoting compliance and data accuracy. The system's modular design supports scalability and future integrations such as biometric attendance and banking APIs. These results emphasize the importance of digital transformation in meeting the evolving demands of human resource operations.

Keywords: ai integration, attendance monitoring, 201 file management, payroll automation, hr digitalization, merchandising management system

**MERCHANDISING MANAGEMENT SYSTEM (HUMAN RESOURCE 1): ONBOARDING
AND OFFBOARDING, TASK MANAGEMENT, AND ONLINE JOB POSTING
WITH AI RESUME EVALUATION**

Roselyn Rosario, Julius Ervin Dela Torre, Jobert Camo, Christian Jay Noora,
Jay Cullo, Paulo Tolentino

Abstract

In the context of digital transformation and business growth, effective human resource management has become essential to organizational productivity. Traditional recruitment and onboarding processes often result in delays, increased errors, and reduced efficiency due to excessive manual paperwork. To address these challenges, this project introduces a Merchandising Management System designed to streamline critical HR functions, including AI-based resume evaluation, online job posting, onboarding, offboarding, and task management. The system provides an end-to-end digital solution that enhances job advertisement, candidate tracking, and employee task supervision, thereby supporting seamless workforce integration and improved engagement. The system was developed using the Agile Scrum methodology, allowing for continuous improvement through stakeholder feedback. Data was collected via surveys and interviews to assess system effectiveness and usability. Modular development was applied to integrate key components such as the Applicant Tracking System, Onboarding and Offboarding Management, and an Employee Portal. Each module was designed to ensure scalability and adaptability based on operational requirements. The implementation of the system significantly enhanced HR operations by reducing manual workload and improving the efficiency of recruitment workflows. AI-driven resume evaluation enabled faster identification of qualified candidates based on preset criteria, expediting the hiring process. The employee portal facilitated task tracking and ensured that new hires completed onboarding procedures effectively. The offboarding module helped standardize exit protocols, supporting professionalism and documentation. Overall, the system improved HR efficiency, minimized processing times, and increased employee engagement. Compared to conventional HR practices, the integration of AI and modular digital tools proved effective in minimizing human error and administrative burden. The inclusion of an interactive onboarding and offboarding framework created a structured and employee-centric process. However, challenges related to user adaptability and data security were identified. Future improvements may include the incorporation of AI-powered learning pathways and advanced cybersecurity features to ensure sustained system reliability and user trust.

Keywords: ai resume evaluation, onboarding, offboarding, hr automation, task management, applicant tracking system, merchandising management system

MERCHANDISING MANAGEMENT SYSTEM: “FINANCE MANAGEMENT AND SALES FORECASTING USING NUMPY, PANDAS, AND THE OLLAMA MODEL”

Miranda Jake Francis, Mark Jomar Marcelo, Rylbert Ganzan,
Karl Angelo Abanes, Aldrin Bulambot, Paulo Tolentino

Abstract

The Finance Management and Sales Forecasting System is designed to support planning, budgeting, and predictive sales analysis through the integration of machine learning with Pandas, NumPy, and the Ollama model. This system aims to enhance financial decision-making by maximizing budget efficiency and improving fiscal resilience. By integrating data processing, forecasting algorithms, and financial computations, the system enables organizations to analyze historical financial records and project future trends. Machine learning facilitates complex analytics and empowers stakeholders with accurate sales forecasts, enabling strategic planning, proactive market response, and resource allocation. The system was developed using the Agile methodology, incorporating frequent user feedback and consultations with financial analysts, business managers, and end users. Built on the Python platform, it utilizes the Pandas and NumPy libraries for efficient data manipulation and real-time prediction. The system is designed to handle large volumes of financial data while delivering reliable forecasts and supporting informed decision-making. The implementation of the system marked a significant improvement in budget forecasting, expense tracking, and revenue prediction. Machine learning algorithms increased the accuracy of trend analysis and facilitated the identification of potential investment opportunities. Automated reporting features reduced manual data entry and minimized human error, supporting more efficient strategic planning and timely financial responses. The system demonstrated how machine learning enhances financial planning by detecting anomalies and adapting to evolving market trends. Organizations that adopt such technologies gain a competitive advantage through improved forecasting accuracy and strategic adaptability. However, challenges remain in areas such as data privacy, scalability, and algorithm transparency. Future developments may include enhanced predictive analytics, multi-channel integration, and strengthened cybersecurity protocols. Despite these challenges, the system presents a powerful solution for navigating the complexities of modern financial management.

Keywords: finance management, sales forecasting, machine learning, numpy, pandas, ollama model, budget planning, strategic decision-making, financial analytics

MERCHANDISING MANAGEMENT SYSTEM: ADMIN FEATURES FOR DESIGN AND IMPLEMENTATION FOR CENTRALIZED MERCHANDISE MANAGEMENT AND AI FOR ADMIN TASK AUTOMATION

Cristel Mae Cabe, Harold Jade Pausal, Heidi Montero, Mark Angelo Perido, Paulo Tolentino

Abstract

The Merchandising Management System is developed to address the inefficiencies in the manual administrative operations of Great Wall Arts Company, which previously relied on Excel sheets, Google Drive, and physical documentation. This system aims to centralize merchandise management and automate administrative tasks through artificial intelligence (AI), particularly in areas such as real-time report generation and data analysis. The project adopted a structured development methodology, starting with stakeholder consultations to gather system requirements and analyze existing workflows. The system was designed with core modules such as document management, secure user authentication with role-based access control, and AI-driven reporting. Web-based technologies and a secure database infrastructure were used to ensure functionality, scalability, and security. AI features were integrated to automate data collection and reporting processes. The system successfully replaced fragmented and manual workflows with a unified and secure digital platform. AI-driven real-time reporting delivered timely and accurate insights, enhancing data-driven decision-making and reducing the margin of human error. Role-based access control improved information security, while centralized document management increased operational efficiency across departments. The implementation of the system streamlined the company's administrative processes, reducing dependency on outdated tools and enhancing productivity. By automating report generation and securing sensitive data, the system positioned the organization for future scalability and innovation. The integration of AI functionality not only improved operational accuracy but also laid the foundation for long-term digital transformation.

Keywords: merchandise management, administrative automation, artificial intelligence, centralized system, ai reporting, operational efficiency, role-based access, digital transformation

MERCHANDISING MANAGEMENT SYSTEM: HR2 (LEARNING AND DEVELOPMENT, PERFORMANCE, AND TRAINING MANAGEMENT) WITH AUTOMATED EMPLOYEE PERFORMANCE EVALUATION

Catherine Saminian, Jorish Catacutan, Geoffrey Ovardo, Jocneam Pacho,
Ralph Leanry Rodulfo, Paulo Tolentino

Abstract

The HR2 Merchandising Management System is designed to address common issues in human resource operations, such as inefficient training management, inadequate performance measurement, and lack of attendance tracking. This system integrates learning and development, performance evaluation, and training management into a centralized, user-friendly solution that supports employee development and organizational growth. The system was developed using the Agile Scrum methodology, allowing for iterative development across structured sprint cycles. Core features, including automated performance evaluation, attendance tracking, and training scheduling, were developed incrementally. A microservices architecture enabled modular integration, while DevOps practices ensured smooth testing, deployment, and continuous delivery throughout the development process. The final system featured real-time dashboards, automated performance evaluation reports, and comprehensive training management tools. The implementation significantly improved the accuracy of performance reviews, streamlined training administration, and enabled HR teams to monitor employee development more effectively. User feedback confirmed the system's effectiveness and ease of use. The HR2 system addressed multiple HR challenges by automating manual processes and integrating essential development tools into a cohesive platform. It enhanced transparency, reduced administrative workload, and facilitated data-driven tracking of employee progress. Overall, the project demonstrated how technology can modernize HR functions and foster higher levels of employee engagement and organizational efficiency.

Keywords: hr management system, performance evaluation, learning and development, training management, employee engagement, agile development, automation, microservices architecture

**MERCHANDISING MANAGEMENT SYSTEM: LOGISTIC 2 (VENDOR PORTAL,
SUPPLIER PERFORMANCE MONITORING, AUTOMATED ORDER PROCESSING)
WITH SUPPLIER PERFORMANCE ANALYTICS AI**

John Albert Villanueva, Shirley Mae Vargas, Aron Mesa, Cherry Palad,
Charles Kevin Calimlim, Paulo Tolentino

Abstract

This capstone project presents the development and implementation of the Merchandising Management System designed for the Great Wall of Arts. The system addresses logistical inefficiencies such as poor delivery coordination, manual tracking, and communication gaps between suppliers and customers. It integrates three major modules: Vendor Portal, Supplier Performance Monitoring, and Automated Order Processing, powered by AI-driven analytics to enhance operational efficiency and data accuracy. The project adopted the Agile Scrum methodology to allow iterative development through sprint cycles, with continuous stakeholder collaboration and refinement. A scalable microservices architecture was implemented using Laravel, PHP, MySQL, and JavaScript to ensure system flexibility and maintainability. DevOps practices, including CI/CD pipelines and automated testing, supported the reliability of deployment. RESTful APIs and middleware facilitated seamless integration and service communication. The final system delivered a secure, modular, and data-driven logistics platform. The Vendor Portal enabled real-time interaction, bidding, and tracking for suppliers. The Supplier Performance Monitoring module provided dashboards for assessing vendor reliability based on metrics such as delivery timeliness, product quality, and compliance. The Automated Order Processing module reduced manual work through rule-based order creation and real-time tracking, enhancing delivery accuracy and workflow efficiency. The system effectively resolved core logistics challenges by integrating automation, real-time communication, and supplier performance transparency. Issues such as infrastructure overhead and service communication complexity were addressed through centralized logging, robust security protocols, and modular design. Future upgrades may involve blockchain integration for supply chain transparency and the use of predictive analytics for demand forecasting.

Keywords: merchandising system, logistics management, vendor portal, supplier monitoring, automated order processing, ai analytics, agile development, microservices architecture

MERCHANDISING MANAGEMENT SYSTEM: LOGISTICS 1 (PROCUREMENT AND WAREHOUSING) WITH WAREHOUSE LAYOUT FOR MONITORING USING GENERATIVE AI AND BARCODE IDENTIFICATION

Jan Eisen Diokno, Ronelio Arañez, Renz Cauba, Noel Serv Orille,
Russel Tolentino, Paulo Tolentino

Abstract

The logistics industry continues to face challenges such as inefficient supply chain management, lack of warehouse monitoring, and poor decision-making. This study aims to develop an AI-powered Logistics Management System (LMS) designed to enable real-time warehouse monitoring and address these operational inefficiencies. The system was created for Great Wall Art, a growing wholesale and retail company specializing in locally produced handmade products. The development process involved business process re-engineering, system analysis and design, and prototyping. The system utilized cloud infrastructure, IoT sensors, and data analytics for real-time inventory monitoring. Integration of real-time data included inventory levels, storage conditions, and sector-specific product tracking. The system also aimed to reduce inventory costs and enhance warehouse decision-making capabilities. The system's user-friendly interface enabled logistics managers to optimize operations and respond quickly to supply and demand changes. Real-time warehouse monitoring enhanced visibility and control, providing a comprehensive solution that significantly improved logistics efficiency and accuracy. The implementation of the LMS demonstrated that a scalable, adaptable, and flexible logistics system can offer a competitive advantage. The integration of generative AI and machine learning enhances predictive analytics and decision-making processes. Future research may explore further applications of AI for automation and intelligent forecasting in warehousing and procurement.

Keywords: logistics management system, warehouse monitoring, procurement, artificial intelligence, barcode identification, real-time inventory, predictive analytics, generative ai

MICROFINANCE MANAGEMENT SYSTEM CORE 1: SAVINGS WITH REGULATORY COMPLIANCE AND CUSTOMER EXPERIENCE USING AI-DRIVEN TOOLS

Melanie Joy Platitas, Christine Pearl Belisario, Sodais Pandagla,
Rolly Ragub, Joharie Anwar, Rommel Constantino,

Abstract

Microfinance Institutions (MFIs) play a crucial role in providing financial services to individuals in rural and underserved areas. However, many MFIs face challenges in effectively managing savings accounts while ensuring compliance with stringent financial regulations. To address these issues, this study proposes an AI-driven Microfinance Management System (MFMS), beginning with Core 1: the Savings Module. This module aims to streamline savings management by enabling real-time deposit tracking, enhancing accuracy, and simplifying monitoring. Unlike traditional manual systems, the proposed solution reduces operational errors and boosts efficiency. It also incorporates AI-powered tools such as chatbots for customer support and automated alerts to help clients make informed decisions. The system was developed through a structured process beginning with the concept phase, where goals were defined by gathering requirements via interviews, surveys, and the analysis of existing microfinance platforms. During the inception phase, a development team was formed based on expertise and availability and equipped with appropriate tools and resources. In the iteration phase, key system components were developed, including savings account management and automated compliance checks. The savings module supported real-time transactions, while the compliance engine addressed Know Your Customer (KYC), Anti-Money Laundering (AML), and transaction monitoring. Artificial intelligence and machine learning were integrated to identify anomalies, automate regulatory updates, and provide predictive insights. The implementation of Core 1 of the MFMS significantly enhanced savings operations, compliance monitoring, and customer interaction. Automation of deposits, withdrawals, and interest calculations reduced both processing time and human error. Real-time transaction tracking and automated system updates ensured data accuracy. Additionally, AI tools successfully identified irregular activities and supported AML compliance. The built-in compliance engine performed automated checks and produced audit-ready reports, reducing the workload of compliance personnel. The integration of savings management, regulatory compliance, and customer engagement within a single system marks a major advancement in microfinance technology. By addressing operational inefficiencies and compliance burdens while improving customer experience, the MFMS offers a holistic solution for the complex needs of microfinance institutions. This unified approach is expected to promote more reliable financial management and higher levels of client trust and satisfaction.

Keywords: microfinance, savings management, regulatory compliance, artificial intelligence, customer experience, real-time monitoring, anti-money laundering, financial technology

**MICROFINANCE MANAGEMENT SYSTEM: ADMINISTRATIVE (USER
MANAGEMENT, LEGAL MANAGEMENT, COMPLIANCE ASSURANCE, RISK
ASSESSMENT)
PREDICTIVE RISK ANALYSIS USING LOGICAL REGRESSION MODEL**

John Mark Rosario, Mark Angelo Alde, Ronie Jr Matutino, Jerome Medes,
April Thenesse Nicolas, Dr. Rommel Constantino

Abstract

A Microfinance Management System (MMS) functions as the administrative core of microfinance institutions (MFIs), which offer financial services to individuals and small businesses without access to conventional banking. This system streamlines key operations such as loan processing, savings account management, and client tracking, thereby enabling MFIs to serve low-income clients more effectively. Through automation of administrative tasks and accurate data management, the MMS contributes to greater transparency and operational efficiency. The system was developed using the Agile Scrum methodology, a project management framework based on incremental and iterative development. Each iteration was carried out in two- to four-week sprints, focusing on building essential features first. At the end of each sprint, a potentially shippable product was delivered. Continuous stakeholder and customer feedback informed us of improvements and guided subsequent development cycles. This flexible and adaptive approach ensured the product evolved to meet business and user needs effectively. The implementation of the MMS with administrative functions, specifically User Management, Legal Management, Compliance Assurance, and Risk Assessment, brought significant benefits to the partner organization. The integration of a logical regression model enabled predictive risk analysis, contributing to more data-driven decision-making. The project demonstrated the value of artificial intelligence in supporting practical applications within the microfinance sector, particularly in enhancing risk evaluation and administrative efficiency. This project is highly relevant, as it addresses a critical shortfall in microfinance operations: the absence of effective risk management systems. Many MFIs face challenges such as high loan default rates, administrative inefficiencies, and limited impact on poverty alleviation. By integrating predictive analytics and structured administrative modules, the system offers a scalable solution that can benefit various stakeholders in the microfinance ecosystem, improving institutional resilience and service delivery.

Keywords: microfinance management system, user management, legal management, compliance assurance, risk assessment, predictive analytics, logistic regression, agile scrum, artificial intelligence, financial technology

**MICROFINANCE MANAGEMENT SYSTEM: CORE 2 LOAN MANAGEMENT
SYSTEM WITH CREDIT REWARD POINTS & AI SUPPORT**

Mark James Salvadora, Jack Harold Caalim, Mjay Del Rosario, Timothy James Peros,
Alex Deniel Rodelas, Rommel Constantino

Abstract

As the digital landscape continues to evolve, the microfinance industry has also advanced to meet the growing demand for faster, more accessible services. This study develops Core 2 of a Microfinance Management System (MFMS), focusing on loan management enhanced by a credit reward mechanism and AI-based real-time risk assessment. The system aims to improve borrower engagement, streamline operations, and strengthen risk management capabilities. With increasing capital demands and rising default risks, MFIs face difficulty in maintaining service scalability. This project addresses those challenges by introducing standardized processes that reduce default risks while supporting scalability and improved service delivery. The development of the system followed the Agile methodology, which divides the project into distinct phases. In the concept phase, the product owner defined the project's scope and objectives, and a development team was formed based on skill and availability. During the iteration or construction phase, most of the system's core functionalities were built and refined through continuous collaboration and feedback. The team also provided real-time support to ensure smooth development and resolve emerging issues. The final phase involved stabilization and preparation for deployment, ensuring that the product met its functional and technical requirements. The implementation of the Core 2 Loan Management System resulted in notable improvements for the partner microfinance institution. The integration of credit reward points encouraged responsible borrowing behavior, while AI support provided actionable insights for resource optimization. These enhancements led to increased operational performance and more effective decision-making within the organization. This project demonstrates the potential of integrating AI and gamified credit incentives into microfinance operations. The credit reward system promotes financial discipline among borrowers, while AI tools contribute to efficient resource use and risk mitigation. These innovations not only strengthen financial stability but also offer a cost-effective approach to expanding financial inclusion. Overall, the study presents valuable contributions to the application of technology in microfinance, particularly in loan servicing and credit behavior management.

Keywords: microfinance, loan management system, credit reward points, artificial intelligence, risk assessment, agile methodology, financial inclusion, operational efficiency, borrower engagement, gamified credit system

MICROFINANCE MANAGEMENT SYSTEM: HUMAN RESOURCE 3 (“SKILL DEVELOPMENT, RECRUITMENT ANALYTICS, HR DATA ANALYTICS WITH PREDICTIVE ANALYTICS USING PYTORCH”)

Kenn Batacandolo, Garth Kor-oyen, Dhaienz Matthew Merca, Judy Ann Gorre,
Niela Potente, Dr. Rommel Constantino

Abstract

While microfinance institutions primarily focus on financial services such as loan distribution and savings management, efficient human resource (HR) management is equally critical to their success. This includes hiring qualified personnel, facilitating employee development, and monitoring performance. Despite the use of digital recruitment platforms by organizations like Ascenders Business Services, challenges remain in expediting recruitment processes and tracking employee progress. This project addresses these issues through the development of a data-driven, AI-enhanced Human Resource Management System that supports recruitment, skill development, and performance analytics. The system was developed using the Agile Scrum methodology, with the team working in iterative sprints to plan, design, and test features incrementally. Web-based tools were used for the user interface, while PyTorch powered the predictive analytics components. The system comprises three main modules: Skill Development, Recruitment Analytics, and HR Data Analytics. Requirements were obtained through interviews with HR representatives from Ascenders Business Services. System functionality was validated through manual and automated testing using sample datasets and predefined test cases. The implementation of the system enabled HR personnel to monitor employee training and skill acquisition, assess applicant suitability based on historical data, and anticipate future skill requirements. It generated insightful reports to assist managers in team evaluation and strategic planning. System testing confirmed its capability to perform accurately in realistic conditions, reducing recruitment time and improving data interpretation. The integrated system collects and analyzes both employee and applicant data across its three modules. The Skill Development module tracks training milestones, while the Recruitment Analytics module uses AI to evaluate candidate qualifications and provide hiring recommendations. The HR Data Analytics module interprets performance metrics to support managerial decisions. Together, these modules enhance efficiency, reduce errors, and promote data-driven HR practices, offering significant value to microfinance institutions seeking to optimize workforce management.

Keywords: microfinance, human resource management, skill development, recruitment analytics, predictive analytics, pytorch, hr data analytics, agile scrum, ai in hr, employee performance tracking

MICROFINANCE MANAGEMENT SYSTEM: HUMAN RESOURCES 1 (EMPLOYEE PERSONAL INFORMATION, JOB INFORMATION, SKILL AND QUALIFICATION USING PREDICTIVE JOB SEARCHING AND AI-BASED TRAINING AND SKILL DEVELOPMENT)

Microne Olete, Microne Olete, Garnet Kevin Marañon, Kathleene Anne Tano,
Christian Amparo, Jhon Rey Bustillo, Dr. Rommel Constantino

Abstract

Effective human resource management (HRM) is essential for the success of microfinance institutions (MFIs), particularly in challenging environments such as Caloocan, Philippines. A comprehensive Microfinance Management System (MMS) with a dedicated HR module is critical in ensuring operational efficiency and workforce development. This module focuses on three core areas: Employee Data for accurate records and insights, Job Data for role clarity and career progression, and Skills Data for tracking competencies and training needs. The integration of predictive job searching and AI-based training mechanisms enhances talent acquisition and employee development, ultimately improving the overall efficiency and impact of MFIs. The implementation of the "Human Resources 1" module includes structured approaches across key functional areas. For Employee Personal Information, the system uses standardized digital forms, automated data capture, secure databases with access controls and audit trails, and privacy-compliant reporting with visual dashboards. Job Information is managed through a centralized catalog of standardized descriptions with version control and hierarchical organization. The module also incorporates Predictive Job Searching, which leverages AI and data analytics to improve candidate sourcing, screening, and engagement. AI-Based Training features include personalized learning paths, intelligent tutoring systems, automated assessments, and support for career development. Implementation was guided by principles of data privacy, ethical AI use, system scalability, integration, and continuous improvement. The integration of the Human Resources 1 module is expected to deliver multiple benefits. These include improved operational efficiency through automation and better data handling; increased employee engagement via self-service portals and personalized learning; optimized talent acquisition with more accurate recruitment processes; and enhanced staff development through AI-driven training and skill gap analysis. The system also supports strategic HR decision-making through data-driven planning and goal alignment. Anticipated challenges such as data migration, user adoption, privacy risks, algorithmic bias, and implementation costs require proactive mitigation strategies. Incorporating a robust Human Resources module into an MMS is essential for advancing human capital management in microfinance institutions. Predictive hiring and AI-based training technologies enable organizations to effectively manage employee data, job roles, and skill development. Such integration contributes to a smarter, more responsive HR system that fosters efficiency, improves employee performance, and aligns workforce capabilities with institutional goals, particularly in underserved and high-need regions.

Keywords: microfinance, human resource management, employee data, job information, skill development, predictive job searching, ai-based training, hr analytics, digital hr systems, caloocan mfs

MICROFINANCE MANAGEMENT SYSTEM: HUMAN RESOURCES II (TIME AND ATTENDANCE, LEAVE MANAGEMENT, PERFORMANCE MANAGEMENT, SOCIAL RECOGNITION WITH FACIAL RECOGNITION AND ANOMALY DETECTION IN PERFORMANCE)

Restituto Murillo, John Lennon Aguilor, Wendel Ureta, Steffano Dizo,
Rhyss Adrian Torres, Dr. Rommel Constantino

Abstract

The Microfinance Management System: Human Resource II is a web-based platform designed to manage key HR functions, including time and attendance, leave management, performance evaluation, and social recognition. Microfinance institutions (MFIs) have long faced challenges due to manual data collection and inefficient HR processes, resulting in decreased productivity and data inaccuracy. To address these concerns, this project aimed to automate evaluations and streamline workflows, enhancing both operational efficiency and organizational decision-making. The system was developed using the Agile Scrum methodology, which emphasizes iterative development and stakeholder collaboration. The web-based platform was designed to support essential HR operations such as real-time tracking of employee attendance through facial recognition, automated leave request processing, performance evaluations with anomaly detection, and social recognition features. This adaptive and accessible approach enabled the delivery of a reliable and user-centered HR solution. The implementation of the Human Resource II module significantly improved HR operations in the partner microfinance institution. The system streamlined attendance tracking using facial recognition, reducing time fraud and manual discrepancies. Leave management became more efficient with automated tracking and requests. Performance data was analyzed in real time to identify both underperformance and high-potential employees, while integrated social recognition tools enhanced morale by publicly acknowledging achievements. The system also generated detailed reports for analyzing attendance trends, absenteeism, and performance patterns, which supported informed HR decisions. The development and deployment of the Human Resource II system contributed valuable enhancements to microfinance HR practices. Facial recognition simplified clock-in/clock-out processes and minimized manual entry errors. Automated report generation enabled HR managers to monitor attendance and evaluate employee performance trends effectively. Social recognition features fostered a positive workplace culture by encouraging transparency and appreciation. These integrated features demonstrate the potential of intelligent HR systems in supporting data-driven workforce management and boosting institutional productivity.

MICROFINANCE MANAGEMENT SYSTEM: LOGISTICS II – VENDOR PORTAL, AUDIT MANAGEMENT, VEHICLE RESERVATION MANAGEMENT, FLEET MANAGEMENT AND DOCUMENTS TRACKING SYSTEM WITH FRAUD DETECTION AND PREVENTION USING AI-POWERED CANDIDATE QUALIFICATIONS TOOLS

John Meddie Munoz, Brayle James Insigne, Cris John Failago,
Vincent Jay Bantor, Ivan Inoferio, Dr. Rommel Constantino

Abstract

As microfinance institutions (MFIs) expand into remote and underserved areas, they encounter increasing logistical challenges in delivering financial services efficiently and securely. While digital systems have been widely adopted for lending and repayments, logistics operations often remain fragmented and vulnerable to inefficiencies and fraud. Many existing tools fail to manage costs effectively, protect sensitive data, or ensure full transparency. As operations scale, so does the risk of fraud, making it imperative to implement fraud prevention mechanisms. This study proposes a digital logistics platform specifically designed for MFIs, incorporating vendor portals, audit and fleet management, document tracking, and AI-powered fraud detection to enhance operational efficiency and build trust with stakeholders. A mixed-methods approach was used to develop and assess the digital logistics platform. Initial data were collected through field surveys and interviews with MFI officers operating in rural areas, uncovering issues such as transaction delays, lack of transparency, and insufficient fraud detection. These findings informed the system's core design. Agile development methodology was applied to enable iterative improvements based on real-time feedback from users. This approach ensured the platform was responsive to operational realities, aligning technology with practical needs in vendor engagement, audit control, vehicle reservations, and data security. The implementation of the platform led to significant improvements in logistics operations. The shift to digital disbursements and repayments reduced reliance on paperwork, accelerated processing times, and decreased overall operational costs. Enhanced transparency through digital records improved vendor trust and minimized opportunities for fraud. AI-powered candidate qualification tools strengthened fraud detection, while document tracking and fleet management modules provided real-time visibility. Though initial adoption required training and incurred setup costs, long-term outcomes included improved field officer productivity, stronger community engagement, and broader financial outreach. The study demonstrates that digital logistics platforms offer practical solutions to the operational and security challenges faced by MFIs, particularly in remote settings. By improving transparency, streamlining workflows, and integrating fraud prevention technologies, these systems significantly enhance institutional efficiency and stakeholder confidence. While the transition to digital platforms requires investment, the resulting improvements in scalability, cost-effectiveness, and service delivery validate their long-term value. The platform's success highlights the importance of user-driven design and continuous feedback in advancing financial inclusion through technology.

Keywords: microfinance, logistics management, vendor portal, audit management, fleet management, document tracking, fraud prevention, artificial intelligence, candidate qualification tools, agile development, financial inclusion

**MICROFINANCE MANAGEMENT SYSTEMS: CASH MANAGEMENT AND
DISTRIBUTION LOAN (SHORT-TERM FINANCING, REVOLVING CREDIT AND CASH
FLOW MANAGEMENT) WITH FRAUD PREVENTION USING AI-POWERED TOOLS**

Shane Relingado, Johary Kudarat, John Paul Buyo, Johnrey Araula,
Jay Mark Esguerra, Dr. Rommel Constantino

Abstract

Microfinance institutions (MFIs) play a critical role in extending financial services to underserved populations, particularly in developing countries. For MFIs to ensure operational continuity, financial sustainability, and customer trust, effective microfinance management systems are essential. These systems address vital functions such as short-term financing, loan distribution, cash management, revolving credit, and overall cash flow management. Loan distribution modules facilitate the issuance and repayment of short-term loans tailored to microentrepreneurs, while cash management modules ensure optimal liquidity and monitor fund flows. Revolving credit features offer flexible financial support to meet ongoing capital needs. The integration of AI-powered fraud prevention tools further enhances the system's security and reliability. To strengthen cash management and distribution, the system employs several key techniques. Real-time cash flow monitoring uses dashboards and integrated financial tools to track fund movement and maintain liquidity. Cash forecasting models apply predictive analytics based on historical data, seasonal trends, and customer behavior to estimate future cash requirements. Automated reconciliation tools compare transaction records with bank statements to detect inconsistencies. Additionally, branchless banking integration enables secure and efficient transactions by reducing reliance on physical cash handling through digital and mobile platforms. The implementation of the enhanced system led to notable improvements in financial operations. Real-time tracking tools significantly reduced both cash shortages and idle funds by optimizing liquidity management. Cash forecasting accuracy improved by up to 30%, enabling MFIs to plan for payment obligations more effectively. These enhancements supported more efficient fund allocation and reduced financial risks in daily operations. The integration of advanced Microfinance Management Systems (MFMS) has transformed the operational capabilities of MFIs, particularly in cash handling, short-term loan distribution, and fraud mitigation. These systems not only increase operational efficiency but also contribute to higher customer satisfaction and broader financial inclusion. The use of AI-powered tools for forecasting, monitoring, and fraud detection demonstrates the potential of technology-driven solutions in addressing the evolving needs of the microfinance sector.

Keywords: microfinance, cash management, loan distribution, short-term financing, revolving credit, cash flow management, fraud prevention, artificial intelligence, predictive analytics, branchless banking

**NODADO HOSPITAL MANAGEMENT SYSTEM CORE II - PHARMACY SERVICES,
LABORATORY SERVICES, AND THERAPEUTIC SERVICES
WITH PHARMACEUTICAL AND MEDICATION**

Gino Abarro, John Andrie Azores, NhIEL Stephen Gardose,
Raven Odtuhan, Marco Ronquillo, Ronald Roldan

Abstract

The Nodado Hospital Management System Core II integrates advanced AI technologies to optimize key healthcare services, specifically in Pharmacy, Laboratory, and Therapeutic functions. The inclusion of QR code functionality streamlines patient record handling, enhances prescription accuracy, and improves overall service delivery. AI-driven tools assist in pharmaceutical and medication management, ensuring precise prescriptions and dosages while minimizing the risk of human error. In laboratory services, AI accelerates diagnostics and provides reliable results more efficiently. This integrated system is designed to enhance patient outcomes, reduce operational costs, and improve overall hospital workflow and efficiency. The system was developed using the Agile project management methodology, which enabled iterative and flexible development cycles tailored to the dynamic needs of the healthcare environment. Agile's adaptability was particularly valuable in addressing the complex and frequently changing requirements of hospital operations. This approach allowed for continuous feedback and enhancement, ensuring the system remained responsive to the needs of healthcare professionals, hospital administrators, and patients. The implementation of the Nodado Hospital Management System Core II using Agile methodology led to a system capable of delivering essential features in regular, incremental releases. The development process demonstrated the system's adaptability to user feedback and evolving healthcare demands. Key modules, Pharmacy, Laboratory, and Therapeutic Services, benefited from AI integration, enabling faster diagnostics, improved medication safety, and more efficient therapeutic workflows. These improvements contributed to operational efficiency and higher quality of care within the hospital setting. The success of the system highlights the applicability of Agile methodology in health technology development. While Agile proved effective in accommodating changes and incorporating feedback, it also presented challenges such as scope management and integration complexity. The study emphasizes the critical importance of collaboration, continuous testing, and responsiveness to user needs. Focused on Pharmacy, Laboratory, and Therapeutic services, the project demonstrates how AI and flexible methodologies can drive meaningful advancements in hospital management systems, ultimately supporting better patient care and organizational efficiency.

Keywords: hospital management system, agile methodology, ai in healthcare, pharmacy services, laboratory services, therapeutic services, medication management, qr code integration, healthcare it, operational efficiency

**OPTIMIZING FINANCIAL OPERATIONS: ENHANCING EFFICIENCY IN
DISBURSEMENT, BUDGET MANAGEMENT, COLLECTION, GENERAL LEDGER, AND
ACCOUNTS PAYABLE/RECEIVABLE THROUGH AI DRIVEN SERVICE
MANAGEMENT SYSTEM**

Clarisse Dalida, Ken Andrei Bacongga, Ronn Matthew Hachero,
John Jefirusy Perez, Aldrich Quiwa, Enrico Pineda

Abstract

In today's dynamic financial environment, organizations are increasingly adopting advanced technologies to streamline operations. The optimization of financial processes such as disbursement, budget management, collection, general ledger, and accounts payable/receivable is essential to maintaining a competitive edge. The implementation of AI-driven service management systems allows companies to achieve greater efficiency, minimize errors, and increase profitability by transforming traditional financial operations into more intelligent and responsive processes. This project aims to develop and implement an AI-powered service management system that enhances critical financial functions. The study focuses on identifying specific AI solutions applicable to disbursement, budgeting, collection, general ledger, and accounts payable/receivable. It also examines the benefits of these technologies in improving accuracy, reducing costs, and enabling data-driven decision-making. The system is designed to replace conventional methods with scalable, predictive, and automated financial processes. The system demonstrated measurable improvements in financial operations, including reduced processing times, lower error rates, and decreased operational costs. Forecasting accuracy improved significantly through predictive analytics, enabling more responsive budget adjustments and resource allocation. Additionally, the system optimized collection and dispute resolution processes, resulting in stronger stakeholder relationships and more stable cash flows. The integration of an AI-based service management system presents a transformative approach to financial operations. By automating repetitive tasks, enhancing data accuracy, and delivering predictive insights, the system supports smarter decision-making across financial functions. While successful implementation requires strategic planning and robust data integration, the potential benefits in terms of operational efficiency and cost reduction reinforce AI's critical role in modern financial management. Future research may further explore implementation challenges and industry-specific customization strategies.

Keywords: ai-driven financial management, disbursement, budget management, collection optimization, general ledger, accounts payable, accounts receivable, predictive analytics, process automation, operational efficiency

**OPTIMIZING JOB AGENCY OPERATIONS (PAYROLL SYSTEMS, CORE HUMAN
CAPITAL STRATEGIES, HR ANALYTICS AND STRATEGIC COMPENSATION
PLANNING)**

Hannah Faye Perez, Gyle Aldrick Cordova, Christian Peji,
Elton Kert Roleda, Daniela Santos, Enrico Pineda

Abstract

Advancements in digital technology have prompted job agencies to transition from traditional manual processes to automated human resource management systems. R-911 Security Force Agency encountered several operational challenges, including delays in payroll processing, inaccurate data storage, and ineffective performance monitoring. In response, the Human Resource Service Management System 4 (HRSMS 4) was developed to address these concerns by incorporating payroll automation, centralized employee data management, HR analytics, and strategic compensation planning to enhance operational efficiency. The development process followed the Agile Scrum methodology, supported by staff interviews to align system features with user requirements. DevOps practices were applied to ensure continuous integration and smooth deployment. System testing included both functional and usability validation, along with data security assessments conducted in real-world scenarios to ensure system reliability and effectiveness. The implementation of HRSMS 4 successfully automated payroll operations and centralized employee data into a secure, unified database. Real-time analytics enabled more accurate performance evaluations, while the strategic compensation module improved pay equity and contributed to enhanced employee satisfaction. These innovations streamlined operational processes and increased the overall efficiency of human resource management within the agency. HRSMS 4 modernized the agency's HR operations by integrating user-centered design and a structured development approach. The system's offline functionality and inclusion of staff training addressed common issues related to internet dependency and employee adaptability. The outcomes of this study demonstrate the potential of HRSMS 4 as a scalable model for digital transformation in human resource operations across similar organizations.

Keywords: hr digital transformation, payroll automation, centralized employee data, hr analytics, strategic compensation planning, agile scrum, human resource management, devops practices, performance evaluation, job satisfaction

OPTIMIZING SUPPLY CHAIN EFFICIENCY LOGISTICS PREDICTIVE ANALYTICS

Marc Daniel Rafael Llorente, John Carlo Bueno, John Michael Gallego,
May Ruiz, Prince Velozo, Sheryl Adovas

Abstract

In the modern era, technology continues to advance rapidly, leading to innovative solutions that simplify human life. One significant development is the integration of predictive analytics into logistics, which enhances supply chain efficiency. According to Bienstock et al. (2008), logistics service quality can be evaluated by metrics such as tracking and tracing accuracy, service speed, location precision, and pricing effectiveness. This study focuses on how transportation and logistics services adapt to these standards by implementing advanced tracking and tracing systems. The goal is to explore the role of predictive analytics in optimizing logistics operations and ensuring high service quality. This study draws insights from the work of Martinez, J. A. & Martinez, E. G. (2021), which emphasizes the use of Agile methodologies, particularly the Scrum framework in developing Transportation Management Systems (TMS). The research examines how Agile approaches can address the dynamic challenges in logistics by allowing flexible, iterative development cycles. Through this framework, the development process adapts efficiently to the evolving needs of the logistics sector. Due to the rapid growth in transportation demands, the proposed system offered an efficient solution for vehicle service logistics within the transportation network. With the application of predictive analytics, the system provided measurable improvements in supply chain performance. The results demonstrated that forecasting capabilities and real-time data analysis enabled better decision-making and resource allocation across logistics operations. The Agile Scrum process was crucial in the system's development and implementation. The cycle began with sprint planning, where the team selected and scheduled specific tasks from the product backlog. Daily stand-up meetings facilitated communication and progress monitoring, while sprint reviews allowed for stakeholder feedback on completed work. Finally, sprint retrospectives provided opportunities for process evaluation and improvement. These iterative phases, as outlined by Asana (2024), enhanced team collaboration and ensured the system's continuous refinement. The study concludes that predictive analytics combined with Agile development contributes significantly to logistics efficiency and supply chain optimization.

Keywords: predictive analytics, supply chain efficiency, transportation management system, agile methodology, scrum framework, logistics tracking, real-time data, vehicle service logistics

**PARKS AND RECREATION MANAGEMENT SYSTEM(REAL-TIME FACILITY
AVAILABILITY, FACILITY RESERVATION, MAINTENANCE AND
SAFETY REPORTING AND AI-POWERED CUSTOMER SUPPORT)**

Vecera John Ralph, Dexter Vinanua, Anthony Pinto, Henderson Jorta, RosauoVillalon

Abstract

The Parks and Recreation Management System with Real-Time Facility Availability, developed for Local Government Unit 2 in Quezon City, was created to solve recurring issues in managing public recreational spaces. Common problems such as overcrowding, inefficient reservation systems, and delayed maintenance reporting highlighted the need for a more efficient and responsive solution. This system modernizes operations, improves accessibility, and enhances the overall experience for both administrators and park users. The development of the system followed the Agile Scrum methodology, emphasizing iterative progress and continuous stakeholder engagement, particularly with the Parks Development and Administration Department (PDAD). The process involved several sprints dedicated to research, system design, coding, and module testing. Core features were gradually implemented and regularly assessed to ensure they satisfied both functional requirements and operational needs. The developed system is composed of several key modules designed to maximize functionality and enhance user engagement. These include: Real-Time Facility Availability and Reservation, which enables users to check availability and make bookings seamlessly; Issue Reporting for Maintenance and Safety, allowing prompt submission and tracking of facility-related concerns; an Automated Notification Feature, which informs users of updates, schedule changes, or maintenance activities; an AI-Based Virtual Assistant, developed to respond to user inquiries and support needs automatically; and User and Administrator Dashboards, offering organized, role-specific access to tools and data management. This project highlights how digital innovation can modernize local government operations. By incorporating real-time updates, user-centric features, and intelligent automation, the system improves administrative processes and enhances user experience and safety. Future upgrades may include advanced data analytics and expanded facility coverage, making it a scalable model for other cities aiming to implement smart governance solutions.

Keywords: local government system, parks and recreation, real-time facility availability, digital transformation, smart city, user-centered design, administrative efficiency, automation, quezon city, agile scrum, system modules, maintenance reporting, facility

PRODUCT INFORMATION SYSTEM FOR ATE DIOSA'S STATION

Marie Buagas, Baldivino Ringo, Alexander Armstrong, Chelsea Umbac,
Krystall Lingad, R-jay Pornasdoro

Abstract

Ate Diosa's Station is an expanding retail business that offers a wide variety of products such as clothing, ID lanyards, chibi figurines, stickers, and exclusive limited-edition items. As customer demand continues to grow, manual handling of inventory, sales, and order processing has proven to be inefficient and error-prone due to the lack of a centralized system. To overcome these issues, a product information system has been implemented to deliver a secure, streamlined, and user-friendly solution for effective product management. The researchers employed the Waterfall Model (SDLC) as their framework, following sequential phases: planning, analysis, design, development, testing, implementation, and maintenance. To gather the system requirements for Ate Diosa's Station, they conducted interviews and market research. With the collected data, a comprehensive system design was created to define the platform's main features and functionalities. Java was utilized for coding and debugging, while XAMPP was used to handle the database management during development. The Product Information System (PIS) greatly enhances the management of products and inventory tracking at Ate Diosa's Station. It allows administrators to efficiently gather, update, and classify product information, removing the delays and inaccuracies caused by manual data handling. With clear product categorization, items are systematically organized, improving ease of access and streamlining the process of locating and coordinating products. The Product Information System (PIS) successfully tackles the issues experienced by Ate Diosa's Station, where manual inventory management was inefficient and error-prone, causing delays. The new system modernizes product search and inventory tracking, delivering greater accuracy and speed, which in turn lowers the workload and boosts operational efficiency.

Keywords: product information system, inventory management, manual processes, operational efficiency, product lookup, accuracy, workload reduction, ate diosa's station, system modernization.

PRODUCT INVENTORY MANAGEMENT SYSTEM IN KNM MINI MART

Mariane Nicole Valera, Jhon Carlo Ramos, Ivan Kurt Salvador,
Christine Ledesma, Jhade Vincent Tamonan, R-jay Pornasodoro

Abstract

This study proposes a product inventory management system specifically developed for KNM MINI MART to enhance stock control and operational efficiency. The system helps prevent stock shortages by accurately monitoring inventory levels and organizing product data for easy access. It also features an expiration tracking function to ensure that outdated products are identified and removed before reaching customers. Development of the system was carried out using Apache NetBeans 2025. The researchers adopted the Waterfall Model of the Software Development Life Cycle (SDLC) to guide the system development process. This method includes the stages of planning, analysis, design, development, testing, implementation, and maintenance. Key activities involved assigning team roles, conducting interviews with the client, defining the research scope, designing the system's interface and structure, building the system, and performing testing before deployment. The process concludes with ongoing system maintenance to ensure long-term performance and reliability. The Product Inventory Management System aims to enhance the overall efficiency of the client's business. It enables better control of stock levels, ensures well-organized product data, and facilitates accurate monitoring of product expiration dates to prevent the sale of expired items. The Product Inventory Management System is designed to resolve the client's operational issues, such as inefficient stock handling, unorganized product information, and the lack of expiration date monitoring. By implementing this system, the business benefits from improved operational efficiency, faster transactions, and simplified employee tasks. System access is restricted to the admin (or owner) and designated users (employees). The admin holds exclusive privileges, including managing employee accounts and assigning specific roles. Employees, based on their roles, can access various system features such as the dashboard, adding new product entries, monitoring stock levels and product expiration dates, reviewing sales data and notifications, and viewing categorized product lists.

Keywords: inventory management system, stock control, product data, expiration tracking, admin access, employee roles, system efficiency, transaction accuracy, user permissions, knm mini mart, operational improvement.

**RAIN PROTECTION MACHINE FOR DRYING FISH THROUGH
SUNLIGHT USING ARDUINO FOR VILMA'S DRIED FISH**

Humphrey Yu, Jhade Arbhe Batiquin, Alfredo Uno, John Robert Nietes,
Raph Gabriel Sendrijas, R-jay Pornasodoro

Abstract

Agriculture is highly affected by rainfall, particularly during post-harvest drying. Traditional forecasting methods are often inadequate due to limited data granularity. This project proposes to improve real-time rain detection. Drying fish using sunlight is a traditional method widely practiced in coastal areas. However, sudden rainfall poses a major threat to the quality and safety of dried fish, especially for small-scale producers like Vilma's Dried Fish business. This project aims to develop a cost-effective, automated rain protection machine using Arduino technology to improve the reliability and efficiency of the fish drying process. The system is built using an Arduino Uno microcontroller integrated with rain sensors, servo motors, and a retractable cover. When rainfall is detected by the sensor, the Arduino triggers the motor to extend the cover over the drying racks. Once the rain stops and weather conditions return to optimal drying levels, or when the rain sensor stops detecting moisture, the system retracts the cover automatically. The machine is powered using a 6V lead-acid battery, which is also used in other industrial machines to provide power during outages, as well as in emergency lighting and alarm systems. Testing showed that the system successfully detected rainfall within 0.5 seconds and deployed the protective cover in under 1 second, making the lid fully closed in under 5 seconds. During trials, fish drying under the system experienced minimal exposure to rain and maintained higher quality compared to fish dried using traditional open-air methods. The automation reduced manual labor and prevented potential spoilage due to unexpected weather changes. Security, efficiency, and simplified administrative work were also improved without interrupting class time. The Rain Protection Machine for Drying Fish through Sunlight Using Arduino for Vilma's Dried Fish is aimed at designing a machine that can protect dried fish from inevitable sudden rain to reduce damage and decay. The device employs the use of a servo motor and rain-detecting module to detect rainfall and provide a signal to close its cover. This product proved to be an effective and affordable solution for small-scale fish drying operations. It enhances the traditional sun drying method by adding weather adaptability without compromising sustainability. Future improvements could include temperature and humidity monitoring for more precise drying control.

Keywords: rain detecting machine, rain protection machine, drying fish, dried fish

**SANGGUNIAN KABATAAN MANAGEMENT SYSTEM (COMMUNITY PORTAL,
PROGRAM SCHEDULING, REAL-TIME DATA AND EVENT
WITH AI ASSISTED EDUCATIONAL PROGRAM)**

Charles Brazal, Fernando Jose Adigue, John Paulo Arrieta, Mohammad Rayyan Tambidan,
Paul William Trinidad, Richelyn Villasor

Abstract

The Sangguniang Kabataan (SK) Management System is a digital platform designed to strengthen the efficiency and effectiveness of youth governance in the Philippines. This system empowers young individuals to actively participate in local governance and advocate for the needs and interests of the youth within their communities. A key feature of the platform is program scheduling, which streamlines the organization and management of youth-related activities, fostering increased engagement and participation. Additionally, the system provides real-time access to data and events, enabling SK officials and youth participants to stay informed about ongoing activities, project updates, and community initiatives. Another core component is the AI-Assisted Educational Program, which delivers personalized learning experiences by tailoring educational content and resources to the unique needs of each learner. This feature is aimed at enhancing academic support and promoting inclusive, adaptive learning within the youth sector. The Sangguniang Kabataan (SK) Management System utilizes a digital platform to efficiently manage the planning, coordination, and execution of youth-related programs and community initiatives. Designed to be user-friendly, the system allows SK officials to oversee event scheduling, monitor budgets, facilitate communication, and maintain project documentation. The integration of automated tools reduces manual workload and enhances both transparency and accountability in SK governance. Additionally, the system promotes data-driven decision-making by tracking project performance, enabling regular assessments and fostering continuous improvement in youth development efforts. Challenges in the registration process include inefficient communication and overly complex procedures, which discourage youth participation. Additionally, overlapping or poorly timed program schedules hinder attendance, as participants often cannot accommodate these activities within their routines. Apathy towards Sangguniang Kabataan (SK) programs is further driven by a lack of perceived relevance, inadequate promotion, and a misalignment between the initiatives and the actual needs and interests of the community. The Sangguniang Kabataan in Barangay Nagkaisang Nayan has taken significant steps to address common issues in its programs. The registration process has been streamlined and made more accessible through clearer communication and the use of an online system. Additionally, SK officers have adopted various social media platforms to improve program promotion and have actively involved the youth in the planning process. These efforts aim to increase the relevance, accessibility, and participation in SK programs within the community.

Keywords: sangguniang kabataan, barangay nagkaisang nayan, youth engagement, program accessibility, online registration, social media promotion, community involvement, sk officers, youth participation, program planning

**SCHOOL (MANAGEMENT SYSTEM: LOGISTICS MANAGEMENT SYSTEM WITH
DEMAND FORECASTING AND DELIVERY SCHEDULING)**

Rio Cupat, Isaiah Allen Falcon, Laurance Mondragon, Eugene Valdenebro,
Hannah Alexandra Bangay, Marifel Laynesa

Abstract

Logistics is a crucial component in the efficient operation of educational institutions, particularly in managing the distribution of textbooks and uniforms. Traditional systems often struggle with issues such as inaccurate demand forecasting, excess inventory, and delayed deliveries. To overcome these inefficiencies, this project proposes an integrated School Management System (SMS) that leverages AI-powered demand forecasting and real-time delivery scheduling. The system aims to optimize resource allocation, minimize waste, and ensure the timely and accurate delivery of educational materials to both students and staff. The project utilized an Agile Scrum methodology, incorporating frequent sprint cycles and continuous stakeholder feedback to ensure alignment with requirements. Its microservices architecture provided modularity and easy scalability throughout development. Demand forecasting was powered by machine learning models that considered enrollment patterns, seasonal fluctuations, and past data trends. The use of DevOps practices, such as continuous integration and deployment (CI/CD), facilitated efficient development and testing workflows. Data synchronization across various system modules was handled in real-time through RESTful APIs within a centralized cloud platform. The approach effectively minimized stockouts and overstock situations by accurately forecasting demand for textbooks and uniforms. Enhanced scheduling algorithms and real-time delivery tracking improved distribution efficiency. The administrator dashboard offered valuable insights through data visualization and detailed reporting, facilitating informed decision-making. Consequently, improved planning and transparency led to greater satisfaction among administrators and logistics managers. Combining demand forecasting with logistics management greatly enhances operational efficiency in educational institutions. This system demonstrates how real-time data synchronization and artificial intelligence enable informed decision-making, mitigate common logistical issues, and improve resource utilization. Development challenges, including system integration and stakeholder training, were addressed through iterative improvements and ongoing feedback. The system's scalable design supports future expansion to cover additional logistics areas such as food services, transportation, and supplier network integration.

Keywords: demand forecasting, logistics management, operational efficiency, educational institutions, real-time data synchronization, artificial intelligence, data-driven decision-making, resource utilization, system integration, stakeholder training, iterativ

**SCHOOL MANAGEMENT SYSTEM 1: ENROLLMENT AND ADMISSION WITH
ACCUMULATING STUDENT MONITORING DATA**

Jay Paclauna, Roberto Gutierrez, Ken Eugene Herbolario,
Eugene Tinio, Ronn Gabriel Julio, Ronald Roldan Jr.

Abstract

The SMS Enrollment & Admissions system at Bestlink College of the Philippines effectively resolves common inefficiencies found in traditional enrollment methods. It delivers timely updates, reduces student queues, and simplifies status tracking. For staff, it minimizes repetitive inquiries, manual verification tasks, and data inconsistencies through centralized information management. Automated SMS notifications and a comprehensive database enable real-time monitoring of student progress, requirements, deadlines, and admission status, thereby increasing transparency and streamlining the enrollment process. The project was developed using the Agile Scrum methodology. The backend was implemented in PHP with a secure MySQL database, while the frontend utilized HTML/CSS and JavaScript for interactivity. Automated real-time SMS notifications are managed via a third-party API. The system follows a modular approach, dividing functions into registration, submission, tracking, and SMS modules, each undergoing unit testing followed by integration testing. Reliability was confirmed through practical testing involving students and staff. Initial development was conducted on local servers, with cloud deployment planned to enhance scalability. The database schema supports the continuous accumulation of student records to enable historical analysis. Real-time SMS notifications significantly enhanced the enrollment process by reducing the volume of in-person inquiries. Students received prompt reminders regarding deadlines, confirmations, and admission statuses, resulting in fewer walk-ins and phone calls. Registrar staff experienced increased efficiency through automated progress tracking and comprehensive data insights such as admissions by department, pending documents, and completion rates, supporting informed decision-making and optimized resource allocation. Performance testing validated the system's stability under high user demand, while validation mechanisms effectively minimized errors and prevented duplicate records. The admissions and enrollment process begins with students submitting their applications, including academic and personal details. The admissions office reviews these applications to assess eligibility. Once accepted, students confirm their admission by submitting a confirmation form, paying the enrollment fee, and providing any additional required documents. The final enrollment steps involve class registration, orientation, and setting up school accounts, preparing students to commence their classes.

Keywords: admissions process, enrollment procedure, student application, eligibility review, confirmation form, enrollment fee, document submission, class registration, orientation, school account setup.

**SCHOOL MANAGEMENT SYSTEM 1: LIBRARY WITH QR CODE INNOVATION
AND BOOK MONITORING: STUDENT INFORMATION IN
BESTLINK COLLEGE OF THE PHILIPPINES**

Jerelyn Gargoles, Nelly Rose Peria, Ivan Obelidor, Carmina Ricablanca,
Misha-el Bamba, Ronald Roldan Jr.

Abstract

The proposed system introduces a modern approach to managing school libraries by streamlining the tracking and access of library resources. This will mark the first time students have experienced a Library Management System, designed to simplify and enhance their interaction with library services. Many schools currently struggle with disorganized collections and outdated methods for checking book availability, often leading to frustration for both students and librarians. By addressing these issues, the system aims to improve the overall educational experience and foster a stronger culture of reading and learning. To develop the SMS Library System, the project team utilized the Agile methodology, which promotes flexibility through the division of the project into manageable, iterative phases. This structured yet adaptive approach ensured steady progress and continuous refinement. Regular stakeholder interviews were conducted to gather insights and feedback, which guided the enhancement of system features and ensured that the final output aligns closely with user requirements. The SMS Library System effectively responds to user needs by integrating key features such as QR code scanning for quick book identification, an AI-powered Fine Tracker for real-time fine computation, and an online book reservation option. These innovations significantly improve the organization and monitoring of library resources, minimize errors in tracking overdue items, and create a smoother, more efficient library process. As a result, users experience greater convenience and satisfaction in borrowing and managing books. The SMS Library System offers promising improvements to the overall library experience for both students and librarians. Resolving common issues in library management; it encourages increased student interaction with available resources. Throughout development, it became clear that continuous user feedback plays a vital role in shaping a system that genuinely meets the needs of its users and supports the library's role in academic success.

Keywords: sms library system, library experience, students, librarians, library management, user feedback, student engagement, academic success, system development, resource access

**SCHOOL MANAGEMENT SYSTEM 2: THE DEVELOPMENT OF A PREFECT
MANAGEMENT SYSTEM WITH STUDENT CASE TRACKING AND AI CASE
ANALYSIS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Arjay Austria, Reymondo Hernaez, Lovely Mae Koolyn Gaela,
Mary Fien Cuabo, Mark Edwin Diesta, Ronald Roldan Jr.

Abstract

The Prefect Management System, integrated with a Student Case Tracking Module, was developed for the Prefect Department of Bestlink College of the Philippines to address existing operational challenges. The system aims to efficiently track student cases, manage prefect duties, and generate accurate reports. It is designed to enhance workflow, simplify administrative processes, and support the effective enforcement of disciplinary policies. To ensure the system could adapt to the evolving needs of the Prefect Department, we employed the Agile Scrum methodology. Scrum's iterative process enabled the team to incrementally develop functional modules such as duty management and case tracking in manageable phases. Given the department's limited experience with digital systems, sprint cycles were extended to three to four weeks to allow ample time for feedback and necessary revisions. Additionally, we incorporated detailed documentation practices to align with the school's standards, modifying the traditional Scrum documentation approach accordingly. By following the Scrum framework, we successfully developed key system features such as student case tracking, prefect duty management, and report generation. The system evolved through continuous collaboration with the Prefect Department, with their feedback playing a vital role in shaping its functionality. Each sprint iteration brought the system closer to meeting the department's operational requirements and user expectations. The use of Agile Scrum proved highly beneficial in accommodating the Prefect Department's evolving requirements. The iterative development model, combined with frequent feedback loops, ensured the system remained adaptable and aligned with the department's needs. Extended sprint cycles provided the team with ample time to incorporate feedback and refine the system effectively. Collaboration among the Scrum Master, Project Manager, developers, and other team members was crucial to the project's success. Ultimately, the system was designed to streamline and enhance the efficiency of the Prefect Department's operations.

Keywords: agile scrum, perfect management system, iterative development, student case tracking, sprint cycles, collaboration, system refinement, feedback loops, operational efficiency, bestlink college

**SCHOOL MANAGEMENT SYSTEM 2: AUTOMATED DEFENSE ROOM SCHEDULING
SYSTEM WITH REAL-TIME AVAILABILITY AND CONFIRMATION
FOR CENTER FOR RESEARCH AND DEVELOPMENT AT BESTLINK
COLLEGE OF THE PHILIPPINES**

Joseph Alfredo Pastores, Mark Joshua Trinidad, Cedrick Del Prado,
Rosever Cunanan, Amina Sanson, Ronald Roldan Jr.

Abstract

The Automated Defense Room Scheduling System was developed to address the challenges faced by the Center for Research and Development (CRAD) at Bestlink College of the Philippines in managing defense room schedules. The current manual scheduling process is inefficient, often leading to scheduling conflicts and difficulties in monitoring reservations. To improve this, the system provides real-time updates on defense room availability, prevents double bookings, and streamlines the scheduling management for the CRAD department. The system was developed using a systematic approach based on the Agile Scrum methodology, enabling iterative development and continuous feedback throughout the process. PHP was used for backend development, MySQL for database management, and HTML and CSS for the frontend interface. The development followed a modular approach, allowing seamless integration of core features such as room scheduling, schedule validation, and data management. Testing included unit testing, integration testing, and real-world usability testing conducted by the Center for Research and Development (CRAD) officers to ensure system reliability and user-friendliness. The solution was deployed on Infinite cloud infrastructure to provide easy access and scalability. The implementation of the system significantly improved the efficiency of the defense room scheduling. It provided real-time room availability, reduced scheduling conflicts, and enhanced record-keeping. The Center for Research and Development (CRAD) officers were able to increase scheduling accuracy and streamline the management of defense schedules. Performance testing demonstrated that the system can handle multiple schedules simultaneously, ensuring smooth operation even during peak periods. The results indicate that automating the defense room scheduling process effectively resolves the inefficiencies associated with manual scheduling. The system improves organization, optimizes resource utilization, and reduces human error. Feedback from the Center for Research and Development (CRAD) officers was instrumental in further refining the system to better meet operational needs. Future enhancements may include features such as report generation and advanced scheduling analysis to support data-driven decision-making.

Keywords: automated defense room scheduling system, center for research and development (crad), scheduling management, real-time room availability, scheduling conflict reduction, agile scrum methodology, php, mysql, html, css, modular development, system testi

**SCHOOL MANAGEMENT SYSTEM 2: AUTOMATED GRADUATION PHOTOGRAPHY
MANAGEMENT SYSTEM: STREAMLINING SOCIAL MEDIA SCHEDULING, STUDIO
VERIFICATION, AND STATUS TRACKING FOR STUDENT DOCUMENTATION**

Joshua Quitariano, Cedrick Paul Gliban, Danny Duran, Mark Lester Agustin, Ronald Roldan Jr.

Abstract

The Automated Graduation Photography Management System was created to solve the difficulties encountered by the Social Media (Socmed) Department in handling student documentation and graduation photography. Previously, the department relied on manual processes including renaming photo files and entering student information by hand, that were both time-consuming and prone to errors. These inefficiencies led to significant challenges, especially as the workload increased. The new system is designed to automate and simplify these tasks, thereby improving accuracy and boosting overall workflow efficiency. The Agile Scrum is employed as a methodology to develop the Automated Graduation Photography Management System for the Social Media (Socmed) project. By organizing work into structured sprints, conducting daily stand-ups, and holding regular sprint reviews, we maintained consistent progress and quickly adapted to evolving requirements. Collaborating closely with department staff as Product Owners, we continuously gathered feedback to ensure the system met actual operational needs. This approach enabled us to efficiently deliver a user-centered solution that streamlined social media scheduling, studio verification, and student status tracking, ultimately enhancing workflow and service delivery. The Automated Graduation Photography Management System successfully resolved the inefficiencies present in the Social Media (Socmed) Department's manual workflow. By automating essential tasks like file renaming, social media scheduling, and student documentation tracking, the system greatly increased operational efficiency. This automation improved accuracy, reduced the manual workload, and streamlined processes, resulting in notable enhancements in overall workflow management. The study suggests that integrating Artificial Intelligence (AI) into the Automated Graduation Photography Management System could greatly enhance photo automation and overall efficiency. Advanced features like facial recognition and intelligent scheduling have the potential to further streamline operations. However, concerns about data privacy and security may pose challenges to implementation. Future development should prioritize strengthening data protection measures while utilizing advanced analytics to optimize system performance.

Keywords: automated graduation photography management system, social media department, workflow automation, artificial intelligence (ai), facial recognition, intelligent scheduling, data privacy, data security, operational efficiency, agile scrum meth

**SCHOOL MANAGEMENT SYSTEM 2: FACULTY LOADING WITH
ONLINE SUBMISSION, DOCUMENTS TRACKING, SCHEDULE
MONITORING REPORT WITH CLASSROOM MANAGEMENT**

John Robert Hernando, John Mark Ferrer, Raynald Carmen, Michael Anthony Casabon,
Ronald Juan, Ronald Roldan Jr.

Abstract

The School Management System (SMS) is designed to enhance the efficiency and effectiveness of educational institutions by integrating various administrative functions into a single platform. The system primarily focuses on faculty loading, online submission tracking, schedule monitoring, and classroom management. By streamlining these processes, the SMS aims to reduce administrative workload, improve faculty scheduling, and optimize resource allocation. With online submission tracking, the system ensures that submissions are timely and successfully recorded. Meanwhile, schedule monitoring facilitates the optimal use of classroom resources and tools by enabling better planning and management of schedules. Agile Scrum is a project management framework designed to handle complex projects through teamwork and adaptability. Work is divided into short, focused periods called sprints, typically lasting 2 to 4 weeks, each delivering usable parts of the product. The Product Owner prioritizes tasks, the Scrum Master facilitates the process and removes obstacles, and the Development Team builds the software. Key tools include the product backlog (a prioritized list of requirements), sprint backlog (tasks for the current sprint), and the increment (the working product delivered after each sprint). Daily stand-up meetings address immediate concerns, sprint planning defines goals, sprint reviews gather stakeholder feedback, and retrospectives focus on continuous process improvement. The system functions efficiently by automatically setting up classrooms and schedules, aligning with instructor preferences while significantly reducing manual work. Online submissions and document tracking securely store every file, allowing quick retrieval whenever needed. The schedule monitoring report provides department heads with clear, up-to-date information about room assignments. Additionally, classroom management prevents double bookings and maximizes the use of available space. The results demonstrate that the system effectively addresses major scheduling and room management challenges. The "Auto Room" tool enhances accuracy and speeds up the process, while online features simplify usage and tracking. However, users must enter accurate information to avoid technical issues. Overall, the system supports faculty and classroom operations efficiently and can be easily expanded to accommodate more complex requirements.

Keywords: school management system, classroom scheduling, faculty loading, online submission tracking, schedule monitoring, classroom management, auto room tool, resource allocation, administrative efficiency, faculty preferences, real-time reporting, conflict

**SCHOOL MANAGEMENT SYSTEM 2: MANAGEMENT INFORMATION SYSTEM,
STUDENT LEDGER WITH GENERAL REPORT BUSINESS INTELLIGENCE
IN BESTLINK COLLEGE OF THE PHILIPPINES**

Jhon Lenard Escolano, Fernan Manaog, Don Alexis Sofio Aco,
Klyden Maceda, Neil Vincent Boral, Ronald Roldan Jr.

Abstract

To meet the demands of modern education, manual record-keeping and paper-based reporting are no longer sufficient. Therefore, implementing a School Management System (SMS) is essential, especially for Bestlink College of the Philippines. This research proposes an advanced SMS that integrates Business Intelligence (BI) and Management Information System (MIS) features, along with a Student Ledger and General Reports. The system aims to improve data accuracy, streamline administrative tasks, and provide valuable insights for strategic decision-making. The goal is to develop a reliable, user-friendly platform that effectively evaluates student performance, manages data, and generates comprehensive reports to support educators and administrators in fulfilling the college's mission of delivering exceptional education. The development of the School Management System (SMS) at Bestlink College followed an Agile project management approach, organized into distinct stages to ensure clarity and efficiency. During the Concept phase, the Product Owner defined the project's scope and objectives. The Inception stage involved assembling a dedicated development team, assessing resource availability, and providing the necessary tools. The Iteration phase, the most extensive, focused on developing features tailored to the college's requirements. In the Release phase, the predevelopment team offered ongoing system support and addressed any issues that arose. Finally, the Retirement stage involved quality assurance testing to verify that the software was fully functional and ready for deployment. The implementation of the Student Management System (SMS) at Bestlink College of the Philippines has automated essential administrative functions such as fee processing and report generation, significantly reducing manual workload. This automation has enhanced the allocation of resources and overall operational efficiency, which in turn supports improved academic outcomes. By centralizing student and financial information, the system increases transparency and accountability, enabling accurate reporting and informed decision-making. Overall, SMS contributes to a more streamlined and effective educational environment. The integration of management information systems, student ledgers, expense monitoring, cost allocation, budgeting, and forecasting into a unified School Management System (SMS) represents a major advancement in the financial management framework at Bestlink College of the Philippines. This centralized system streamlines financial processes and addresses the evolving challenges faced by educational institutions in ensuring accurate, efficient, and transparent financial operations.

Keywords: school management system (sms), financial management, integration, student ledgers, expense monitoring, cost allocation, budgeting, forecasting, transparency, efficiency, bestlink college of the philippines

**SCHOOL MANAGEMENT SYSTEM 2: PRODUCT CATEGORIES WITH SEPARATE
SECTIONS FOR UNIFORMS, BOOKS AND OTHER PRODUCTS IN
BESTLINK COLLEGE OF THE PHILIPPINES**

Karl Aaron Alvendo, Onemig Robenta, Angelo Abaigar, Marc Andrew Licuan,
Cylenn Blezz Centillias, Ronald Roldan Jr.

Abstract

The School Management System 2 (SMS2) was developed to enhance the efficiency of the Bestlink Bookstore by introducing separate sections for uniforms, books, and other school supplies. This organized structure not only improves customer service but also streamlines inventory management. Under the previous walk-in system, students faced long lines, and poor tracking often led to missing items before distribution. To resolve these issues, the project centers on creating a user-friendly online platform that modernizes bookstore operations and makes it easier for students to access the items they need. The system includes an online shopping feature linked to students' school accounts, allowing them to browse categorized sections: uniforms (with size information), books (organized by course), and other school supplies. A standout feature is the real-time inventory tracker, which maintains accurate stock levels, sends low-stock alerts to administrators, and supports timely restocking to prevent shortages. The system allows students to browse products, add items to their cart, and complete purchases online, making the buying process faster and more convenient. It offers multiple secure payment options, such as GCash, school cashier payments, and installment plans. To keep students informed, the platform features an automated notification system that updates them on their order status, from confirmation to scheduled pick-up. For administrators, the platform provides powerful tools for managing product listings, tracking inventory, and generating comprehensive reports on sales, stock status, and user activity to support effective decision-making. SMS2 was developed using the Agile Scrum methodology, allowing for flexible, iterative progress and rapid adaptation to evolving requirements. The system adopts a Microservices architecture to ensure modularity, scalability, and fault tolerance. DevOps practices, particularly Continuous Integration and Continuous Deployment (CI/CD), were integrated to streamline the development pipeline and accelerate delivery. With these modern development strategies, SMS2 is poised to significantly boost operational efficiency and enhance the overall user experience for Bestlink College students.

Keywords: agile scrum, microservices, devops, ci/cd, system architecture, iterative development, modularity, scalability, operational efficiency, user experience, bestlink college

**SCHOOL MANAGEMENT SYSTEM 4: ADMISSION (WITH STATUS PROGRESS
TRACKING USING AI-DRIVEN TOOLS)**

Rheyvin Galang, Joana Rose Orbe, Leslie Nartates, James Robert Sto Domingo,
Sherwin Canellas, Khristian Hoseña

Abstract

The School Management System 4: Admission was developed to replace and enhance traditional manual admission procedures. It streamlines the entire process by leveraging AI tools for efficient document verification, improving application management workflows, and delivering real-time updates to applicants. To ensure data privacy and system integrity, it incorporates advanced security measures such as OTP (One-Time Password) authentication, encrypted data storage, and strict access control protocols. The system was developed on the WAMP stack (Windows, Apache, MySQL, PHP) and built using a microservices architecture to enhance scalability and maintainability. AI-driven file verification ensures the authenticity of submitted documents, while role-based access control safeguards user data by regulating permissions. The development followed the Agile Scrum methodology, enabling continuous iteration, testing, and refinement throughout the project lifecycle. The system streamlined the enrollment process by automating application tracking and document submission, effectively reducing manual workload and accelerating processing time. Administrators utilized the platform to manage student applications, update statuses, and handle records efficiently. AI-powered verification mechanisms ensured document authenticity, significantly decreasing the occurrence of fraudulent submissions. The system maintained high performance and reliability during both dual-user and multi-user sessions, with minimal downtime. The automation capabilities of the system have effectively enhanced admission management procedures. To further improve performance and user experience, future upgrades will focus on integrating mobile responsiveness, reinforcing security protocols, and expanding API connectivity. Additionally, planned enhancements such as automated data backups and load balancing mechanisms will contribute to greater system stability, scalability, and reliability.

Keywords: admission management system, automation, mobile compatibility, security protocols, api integration, automated backups, load balancing, system scalability, system reliability, performance optimization

SCHOOL MANAGEMENT SYSTEM 4: AI CHAT SUPPORT BOT FOR PREFECT OF DISCIPLINE WITH MENU-BASED NAVIGATIONS

Lester Caton, Chrisxander Merilo, Cedric Manlapaz, Clarence Bilono,
Mark Russell Tabadero, Mr. Khristian Hosena

Abstract

The Prefect of Discipline and School Management System enhances disciplinary procedures through intelligent automation. At its core is a machine learning-powered chatbot that provides real-time assistance, facilitates incident reporting, and grants easy access to school policies via a user-friendly menu. By automating routine tasks, the system significantly reduces manual workload and increases operational efficiency. The chatbot follows a structured conversation flow and maintains comprehensive logs, ensuring transparency and accountability. This solution promotes a more student-friendly environment while reinforcing clarity and consistency in school discipline management. The development of the Prefect System followed an Agile methodology, fostering a collaborative and adaptable process. The primary objective was to support the Prefect of Discipline in managing student behavior through a dialogue-based, menu-driven interface. A skilled development team, equipped with the necessary tools, implemented key features such as behavior logging, access to disciplinary records, and automated issuance of warnings. These functionalities were iteratively developed and refined based on feedback. Upon release, the support team actively monitored system performance and promptly addressed any emerging issues. As the system continues to evolve, components will be phased out only after undergoing rigorous quality assurance to ensure long-term stability and reliability. The integration of the AI Chat Support Bot into the Prefect of Discipline system has significantly modernized student behavior management. By automating key tasks such as logging infractions, retrieving disciplinary records, and issuing warnings through a user-friendly, menu-based interface, the system has reduced administrative workload and enhanced response time. Initial results indicate improved consistency and a reduction in errors when handling disciplinary cases. Looking forward, incorporating natural language processing could allow for more dynamic and personalized interactions. Overall, the AI Chat Bot has proven to be a reliable, efficient, and accessible tool for streamlining student discipline management. The integration of the Prefect System marks a transformative step in how schools manage student conduct. This application streamlines disciplinary processes by combining automated dialogue with an intuitive, menu-driven interface, allowing administrators to handle tasks such as recording infractions, retrieving behavior records, and issuing warnings all in one centralized platform. By reducing the time and effort required for administrative duties, the system enhances both efficiency and consistency. Ultimately, it offers a more intelligent and organized approach to behavior monitoring, enabling schools to address disciplinary issues more promptly and effectively.

Keywords: prefect system, student conduct management, disciplinary tasks, automated dialogue, menu-driven interface, behavior monitoring, administrative efficiency, behavior records, school discipline, ai integration

**SCHOOL MANAGEMENT SYSTEM 4: AI-DRIVEN MANAGEMENT INFORMATION
SYSTEM WITH INTELLIGENT STUDENT PAYMENT
TRACKING AND HISTORY ANALYSIS**

Mark Aeron Lerida, Jesel Delabahan, Kyle Mico Lerida, Dean Andrew Revereza,
Kenneth Sumampong, Mr. Khristian Hoseña

Abstract

This study proposes an AI-powered platform designed to automate and streamline administrative and financial operations in schools, with a particular focus on student payment tracking. The system enhances efficiency, accuracy, and transparency by leveraging AI to monitor payments in real time, generate analyzable payment history reports, identify overdue accounts, and forecast potential financial risks. By addressing the limitations of traditional, manual data handling, the platform offers a modern solution to the challenges of school financial management. This study presents the development and implementation of an AI-powered Management Information System (MIS) for schools, following the Agile Scrum methodology. The development process began with gathering stakeholder requirements and analyzing existing systems to identify gaps and opportunities. The system was built using scalable microservices architecture, leveraging technologies such as React.js, Node.js, Laravel, and MySQL. Deployment was streamlined through DevOps practices, while rigorous testing and continuous stakeholder feedback ensured the system aligned with the operational needs of educational institutions. The AI-driven Management Information System (MIS) successfully met its objectives by automating student payment tracking and generating real-time transaction histories. Feedback from stakeholders highlighted significant improvements in administrative efficiency, with users commending the system's intuitive dashboard and timely updates. Manual errors were notably reduced, and the system delivered actionable insights into payment patterns and overdue accounts. Performance testing confirmed stable and secure operations under standard load conditions. Key outcomes included faster reconciliation, improved financial transparency, and streamlined reporting, all of which directly support data-driven financial decision-making in educational institutions. This emphasizes how the AI-powered MIS effectively addressed critical reporting limitations by providing real-time tracking and a consolidated view across all departments, capabilities that were absent in previous systems. The integration of predictive analytics and automation enhanced payment management and improved overall financial transparency. Built on a scalable microservices architecture, the system supports future expansion, while DevOps practices ensured rapid and reliable deployment. Challenges such as AI model integration and data security were resolved through iterative development and close stakeholder collaboration. The study concludes that AI can significantly enhance school operations and recommends future advancements such as mobile app integration and more sophisticated predictive modeling to further strengthen the synergy between educational institutions and artificial intelligence.

Keywords: ai-powered mis, school financial management, real-time tracking, unified system view, predictive analytics, automation, microservices architecture, devops practices, ai model integration, data security, mobile app integration, predictive modeling, st

**SCHOOL MANAGEMENT SYSTEM 4: EVENT MANAGEMENT WITH
AUTOMATED CHECK-IN SYSTEM FOR ATTENDEE ENGAGEMENT**

Maeve Tambiga, Kyla Mae Grampa, John Carlo Delos Santos,
Jasper Kim Aspero, John Dave Del Moro, Khristian Hoseña

Abstract

The Event Management System with Automated Check-In enhances attendee engagement by utilizing mobile and web applications that enable quick and efficient check-ins via QR codes. This approach significantly streamlines the check-in process, reducing wait times and improving accuracy in attendance tracking. A user-friendly interface paired with clear instructions ensures a seamless experience for attendees. Traditional manual check-in methods often lead to issues such as double-checking or missed entries, which compromise data integrity and hinder event flow. By addressing these challenges, the automated system fosters a more organized, engaging, and data-driven environment for school events. The project team adopted Agile Scrum as the development methodology to ensure flexibility and responsiveness throughout the project lifecycle. Agile's iterative and incremental structure enabled the delivery of functional system components in short sprints, allowing the team to incorporate evolving requirements and stakeholder feedback. This approach supported seamless collaboration among developers, researchers, and security analysts, ensuring a balanced focus on both functionality and system security. To meet the project's specific needs, minor adaptations such as extended sprint durations for in-depth security analysis were made while maintaining alignment with core Agile principles. The development of School Management System 4: Event Management with Automated Check-In System for Attendee Engagement has produced significant outcomes that enhance the efficiency of event operations at Bestlink College of the Philippines. Key deliverables include the successful implementation of a QR code-based student attendance system, an automated event check-in process, and a centralized administrative dashboard. The system also strengthened security through user authentication and improved administrative efficiency by automating report generation and sending real-time notifications. This capstone project addresses the inefficiencies of manual attendee check-in processes at school events by developing an automated system that utilizes QR codes and mobile/web applications. Implemented using the Agile Scrum methodology, the project successfully delivered key components, including a QR code-based check-in feature, a centralized event management system, an administrative dashboard, enhanced security measures, and automated reporting functionalities. Designed for Bestlink College of the Philippines, the system aims to improve attendance accuracy, streamline event operations, and enhance overall attendee engagement.

Keywords: capstone project, automated check-in system, qr code, mobile application, web application, agile scrum, administrative dashboard, event management system, attendance tracking, security, bestlink college of the philippines

**SCHOOL MANAGEMENT SYSTEM 4: FINANCIAL ASSISTANCE MANAGEMENT
SYSTEM WITH APPLICATION AND ELIGIBILITY MANAGEMENT
USING AI -POWERED ELIGIBILITY ASSESSMENT**

Jhon Francis Cabizares, Jhon Mark Buhisan, Jhon Patrick Batilaran,
John Mark Cabonegro, Melfred Dula, Khristian Hoseña

Abstract

This project presents the development and implementation of a Financial Assistance Management System (FAMS) integrated with AI-powered eligibility assessment for Bestlink College of the Philippines. The study addresses the limitations of the current manual process of financial aid applications, which is prone to inefficiencies, delays, human errors, and a lack of transparency. With the rising demand for student financial assistance and the absence of standardized evaluation criteria, there is a clear need for a robust technological solution. The proposed system leverages artificial intelligence to automate the eligibility assessment process, ensuring faster, fairer, and more transparent disbursement of financial aid to deserving students. This study adopted the Agile Scrum methodology, emphasizing iterative development and close collaboration with stakeholders. System requirements were gathered through interviews, surveys, and document analysis. The solution was developed using a microservices architecture based on the WAMP stack and integrated with AI components to assess eligibility based on multiple criteria, including financial need and academic performance. Key modules include a student application portal, an AI-driven eligibility assessment engine, administrator dashboards, notification systems, and reporting tools. To streamline the development lifecycle, the team implemented CI/CD (Continuous Integration/Continuous Delivery) pipelines and utilized containerization technologies, enabling efficient testing, deployment, and system scalability. The implementation of the system resulted in significant time savings and a substantial reduction in administrative workload. The integration of AI ensured fair and unbiased eligibility assessments. Students benefited from real-time updates on their application status, while administrators gained centralized oversight and access to prescriptive reporting tools. System testing confirmed that all functional and performance requirements were met, and positive feedback from both users and staff validated the system's effectiveness, reliability, and user-friendly design. The project successfully modernized the financial assistance operations at Bestlink College of the Philippines, promoting greater transparency, fairness, and operational efficiency. Its strong alignment with institutional objectives, combined with the integration of industry best practices in AI and DevOps, positions the system as a scalable model for future enhancements or adoption by other educational institutions. Future developments may include integration with external scholarship databases and the advancement of predictive analytics to further support student success and ensure equitable allocation of resources.

Keywords: financial assistance management system (fams), ai-powered eligibility assessment, agile scrum, microservices architecture, wamp stack, ci/cd, containerization, student portal, real-time updates, transparency, predictive analytics, educational technol

**SCHOOL MANAGEMENT SYSTEM 4: LIBRARY MANAGEMENT SYSTEM
“AUTOMATED CATALOGING AND IMPROVED ONLINE PUBLIC ACCESS
CATALOG SERVICES USING A.I DRIVEN TOOL”**

Augustine Brial Bacalso, Jaspher Achuela, Gerald Christian Brito,
Marialhiz Galagala, Joshua Nalaunan, Khristian M. Hoseña

Abstract

School libraries serve a vital function in academic institutions by providing access to essential learning resources. However, many still rely on outdated systems, characterized by inefficient manual cataloging, disorganized inventories, and limited Online Public Access Catalog (OPAC) capabilities. These challenges hinder accessibility, reduce user satisfaction, and compromise operational effectiveness. This study proposes the development of an AI-driven Library Management System (LMS) that automates cataloging processes and enhances OPAC functionalities, aiming to significantly improve the user experience and overall library efficiency. To ensure adaptive development and active stakeholder involvement, the system was built following the Agile Scrum methodology, which supported iterative progress and regular feedback cycles. A microservices architecture was adopted to promote modularity, scalability, and efficient system maintenance. Key system functionalities include AI-driven automated cataloging, smart classification of books, metadata generation through ISBN lookup, real-time availability tracking, personalized search suggestions, and a user-friendly, responsive OPAC interface. Development and deployment were streamlined through the application of DevOps principles, including Continuous Integration (CI) and Continuous Deployment (CD), enabling rapid, reliable software delivery. The implementation of the system resulted in substantial improvements in both the speed and accuracy of cataloging processes. The integration of AI tools significantly minimized manual data entry and reduced the likelihood of human error. The enhanced OPAC system became more intuitive and responsive, offering features such as real-time book availability, personalized recommendations, and faster, more accurate search functionality. Surveys and user feedback from librarians and students reflected a marked increase in satisfaction and engagement, demonstrating the system's positive impact on overall library service delivery. This project underscores the transformative potential of artificial intelligence in modern library management. The automation of key tasks, intelligent search capabilities, and enhanced user interfaces collectively contributed to a more efficient, accessible, and user-centered library system. The adoption of a microservices framework ensured seamless integration, system scalability, and simplified maintenance. Overall, the developed Library Management System (LMS) presents a forward-thinking solution for academic institutions seeking to modernize and optimize their resource management processes.

Keywords: library management system (lms), artificial intelligence (ai), automated cataloging, opac, isbn metadata, microservices architecture, agile scrum, devops, ci/cd, personalized recommendations, real-time book availability, educational technology, syste

**SCHOOL MANAGEMENT SYSTEM 4: WEB-BASED HEALTH RECORD MANAGEMENT
SYSTEM WITH ASSESSMENT USING ALLSCRIPTS FOR AI TECHNOLOGY**

Jocelyn Braga, Nadine Doña, Rheyka Magnaye, Kube Charles Morano,
John Ronald Relano, Khristian M. Hoseña

Abstract

The evolution of contemporary education and technological advancements has significantly transformed the way individuals acquire knowledge. Traditional classroom-based instruction is increasingly being supplemented or replaced by experiential learning approaches that immerse students in real-world contexts. This shift highlights the importance of providing learners with opportunities to apply theoretical knowledge in environments that are both safe and dynamic, fostering critical thinking, problem-solving, and adaptability. As industries continue to evolve, employers are seeking professionals who can effectively translate academic concepts into practical solutions. This study underscores the value of hands-on experience, reinforcing the idea that practical application enhances both information retention and conceptual understanding. This study employed a comprehensive and structured framework for the design, development, and evaluation of an integrated online health record management system tailored specifically for educational institutions. The development process involved close collaboration among cross-functional teams, including software developers, UI/UX designers, school physicians and nurses, healthcare professionals, and administrative staff. To ensure compliance with health data regulations, the system adhered to established standards such as the Health Insurance Portability and Accountability Act (HIPAA). Key security measures including routine audits, data encryption during storage, and role-based access controls, were implemented to safeguard student health information and uphold confidentiality. This capstone project was initiated in response to the growing demand for a more efficient and reliable method of managing student health records in educational institutions. Recognizing that student health is a critical aspect of school management, the development team aimed not only to digitize health records but also to enhance health assessment quality through the integration of artificial intelligence. The primary objective of the system is to provide a secure, centralized platform that enables school nurses, administrators, and authorized personnel to efficiently record, access, and update students' health information. The rise of digital technology in the healthcare sector has enabled the modernization of medical data management. One of the most significant advancements in this field is the development of web-based health record management systems that integrate artificial intelligence with electronic health record (EHR) platforms. These systems not only enhance the efficiency and accuracy of healthcare delivery but also prioritize data security. To protect sensitive patient information and ensure compliance with privacy regulations, such systems implement robust security measures aligned with standards like the Health Insurance Portability and Accountability Act (HIPAA) and the Philippine Data Privacy Act.

Keywords: digital technology, healthcare, medical data management, web-based system, health record management, artificial intelligence, electronic health records (ehr), data security, hipaa, philippine data privacy act, privacy compliance

**SCHOOL MANAGEMENT SYSTEM; CASHIERING MANAGEMENT SYSTEM WITH
SCAN AND PAY QR CODE USING AN AI-DRIVEN APPROACH**

Raymond Gutierrez Jr, John Mark Mondala, Lorenz Dumandan,
John Cedrick Espino, Jimboy Mascariña, Khristian Hoseña

Abstract

Managing educational institutions has become a critical factor in ensuring their success in today's dynamic environment. Schools, colleges, and universities face persistent challenges in organizing and overseeing daily operations, not only to maintain functionality but also to create an environment conducive to academic excellence and student development. These challenges are often amplified in remote or under-resourced areas. To address such issues, it is essential to leverage data-driven systems that promote equitable and efficient management, thereby enhancing staff performance and student satisfaction. A well-designed management system can significantly contribute to these goals. This study will be conducted at Bestlink College of the Philippines, with a specific focus on the institution's financial operations. It will examine how the implementation of a new system for managing financial transactions may impact the daily activities of the school, influencing faculty, staff, and students alike. The findings are expected to provide valuable insights for developing a more streamlined and effective approach to institutional administration. The research employed the Agile Scrum Methodology in the development of an AI-driven Cashiering Management System with QR code payment integration. This approach facilitated a flexible and iterative development process through sprint cycles, enabling timely feature implementation and ongoing enhancements. Agile Scrum also allowed the development team to adapt effectively to evolving requirements, fostered strong collaboration, and supported rapid identification and resolution of issues throughout the project lifecycle. The implementation of the new AI-powered Cashiering Management System with integrated QR code payments at Bestlink College of the Philippines resulted in a 60% reduction in transaction times. This advancement significantly improved the speed, accuracy, and security of financial processes. Designed based on direct user feedback, the system was tailored to meet essential functional and security requirements. It provided substantial benefits to students, staff, and administrators, ultimately enhancing operational efficiency and overall user satisfaction. The AI-driven Cashiering Management System with QR code payments was developed to optimize the cashiering process while addressing the specific needs of its users. The system features a user-friendly interface, a PHP-based backend, a secure MySQL database, and an AI module powered by OpenAI for real-time fraud detection. It also includes a built-in notification system to keep users informed of transactions and updates. Designed to support multiple user roles and access across various devices, the system was developed using the Agile Scrum methodology to ensure adaptability and continuous integration of user feedback throughout the development process.

Keywords: ai-driven system, cashiering management, qr code payments, php backend, mysql database, openai, fraud detection, user-friendly interface, notification system, multi-user support, cross-device compatibility, agile scrum, user feedback integration

SCHOOL MANAGEMENT SYSTEM; WEB BASED DEVELOPMENT AND MOBILE APPLICATION FOR STUDENT PORTAL WITH PAY BILLS RECEIPT, AI CHAT BOT AND CONCERN TICKETING SYSTEM AT BESTLINK COLLEGE OF THE PHILIPPINES.

Aubrey Gillego, Ailyn Grace Borromeo, John Patrick Tanalgo,
Joseph Montoya, Jonalyn Diala, Ronald Roldan Jr.

Abstract

The purpose of this study was to assess the satisfaction and perspectives of stakeholders regarding the newly implemented School Management System (SMS) at Bestlink College of the Philippines. The system's primary users include students, faculty, administrative staff, and the IT department. Stakeholders anticipated that the SMS would enhance the efficiency of managing key functions such as academic performance tracking, payment processing, announcements, and internal communication. By gathering user feedback, the study aimed to highlight the system's strengths and identify areas in need of improvement. To gather stakeholders' perspectives, the research team employed a mixed-method approach, including interviews and the distribution of survey questionnaires. Respondents included students, teachers, school officials, and other staff members of the institution. The survey focused on key aspects of the School Management System (SMS), such as usability, security, performance, and core functionalities. In-depth interviews were conducted with school officials and IT staff to gain deeper insights into operational efficiency and technical challenges encountered during the system's implementation and use. The results of the survey and interviews revealed that the majority of respondents were satisfied with the functionality and user-friendliness of the School Management System. Students particularly appreciated features that allowed them to check grades, submit payment receipts, and receive timely school announcements. Likewise, school officials and staff commended the system for streamlining administrative processes and enhancing internal communication. Despite the overall positive feedback, some respondents identified areas for improvement, including the need to optimize system performance and strengthen security features. The findings indicate that the School Management System effectively addresses the needs of most users by providing convenience and enhancing efficiency in both academic and administrative processes. Positive feedback from stakeholders suggests that the system successfully facilitates communication among students, faculty, and school officials. Nonetheless, areas for improvement remain, particularly regarding system performance and security. The insights gathered through surveys and interviews will be instrumental in guiding future updates to ensure the system remains secure, scalable, and user-friendly. Ongoing stakeholder engagement will be essential for informed decision-making and for sustaining the long-term success of the system.

Keywords: school management system (sms), user satisfaction, system usability, academic processes, administrative efficiency, communication, system performance, security, stakeholder feedback, bestlink college of the philippines

**SCHOOL MANAGEMENT SYSTEM: A MANAGEMENT INFORMATION SYSTEM
FEATURING ADAPTIVE WORKFLOW AUTOMATION WITH
PREDICTIVE ANALYTICS AND FORECASTING**

Gianfrancis Jayson Delgado, Crystal Jane Omapas, Nicole Kisha Alcaraz,
John Lloyd Claudio, Miralles Ignacio, Marifel Laynesa

Abstract

This study introduces a School Management Information System (MIS) that incorporates adaptive workflow automation alongside predictive analytics and forecasting capabilities. The system is developed to address existing inefficiencies in administrative operations, alleviate staff workloads, and support data-driven decision-making. Prompted by challenges such as the burden of manual tasks and the lack of transparency in payment tracking at Bestlink College of the Philippines, the project seeks to improve operational efficiency, accuracy, and institutional transparency. The development of the system followed the Agile Scrum methodology, incorporating clearly defined roles, structured sprints, and iterative feedback to ensure continuous improvement. The system architecture was based on a microservices approach, promoting modularity and scalability, while enterprise architecture principles were applied to support the seamless integration of multiple functional modules. Key features of the system include real-time dashboards, adaptive workflow automation, predictive analytics models, and a receipt verification mechanism designed to enhance financial transparency. The resulting Management Information System (MIS) streamlined student data management, automated key administrative workflows, and introduced predictive capabilities that enabled proactive decision-making. The integration of AI-driven forecasting tools allowed administrators to anticipate trends and strategically prepare for future scenarios. Additionally, the receipt verification feature enhanced financial transparency by ensuring payment accuracy, thereby reducing concerns among students and parents. The integration of artificial intelligence and Agile development practices proved effective in meeting the dynamic needs of higher education institutions. Adaptive workflow automation increased responsiveness to evolving academic conditions, while predictive analytics supported more informed and strategic planning. The adoption of a microservices architecture, combined with DevOps principles, ensured that the system remained flexible, secure, and maintainable. Continuous feedback from stakeholders played a critical role in guiding iterative enhancements, underscoring the system's adaptability and long-term value.

Keywords: school management information system (mis), agile scrum, microservices, devops, artificial intelligence (ai), predictive analytics, adaptive workflow automation, financial transparency, student data management, higher education, bestlink college of the philippines

**SCHOOL MANAGEMENT SYSTEM: ADMISSION AND ENROLLMENT SYSTEM
(SCHEDULING SELECTION WITH PREDICTIVE ENROLLMENT MODELLING)**

Laurence Capati, John Kevin Limbaro, Rico Cambre, Russel Laboc,
Justine Lance Roque, Marifel Laynesa

Abstract

Educational institutions continually seek to optimize admission and enrollment processes, particularly to accommodate the needs of working students who require flexible scheduling. This research enhances the existing School Management System by integrating predictive enrollment modeling with intelligent scheduling selection. The primary objective is to optimize resource allocation, increase student satisfaction, and improve operational efficiency. While maintaining streamlined enrollment procedures and efficient data management, the enhanced system introduces forecasting capabilities to better predict enrollment trends, thereby supporting more effective resource planning and strategic decision-making. This project utilized a mixed-methods approach, combining qualitative insights from interviews with quantitative analysis within an Agile Scrum framework. The development environment comprised tools and technologies such as Visual Studio, PHP, MySQL, HTML, CSS, JavaScript, and Bootstrap. Agile Scrum was employed to manage the software development lifecycle, emphasizing iterative progress, collaboration, and continuous feedback. Interviews with administrative staff were conducted to gather system requirements, validate design elements, and assess user satisfaction. The data collected was analyzed to identify potential areas for improvement and to evaluate the system's impact on enrollment efficiency and student satisfaction. The enhanced School Management System demonstrated significant improvements across key operational areas. Predictive enrollment modeling effectively forecasted enrollment trends, allowing for optimized resource allocation and strategic planning. The system notably reduced enrollment processing time and enhanced the overall student experience. The introduction of flexible scheduling options minimized scheduling conflicts, benefiting students, particularly working students, by improving their ability to balance academic and work responsibilities. Student feedback reflected high satisfaction with the system's flexibility and ease of use. Additionally, the use of Agile Scrum facilitated rapid, collaborative development and continuous refinement throughout the project lifecycle. The successful implementation of the system underscores the value of integrating advanced technology with effective project management to meet the evolving needs of educational institutions. Enhanced predictive modeling supported more informed and timely decision-making, while the introduction of flexible scheduling significantly improved student satisfaction, especially among working students. The use of Agile Scrum fostered a collaborative development environment, ensuring that user requirements were continuously addressed. Furthermore, the system's ability to analyze data and forecast patterns offers valuable insights for long-term strategic planning and institutional growth.

Keywords: school management system (sms), predictive enrollment modeling, flexible scheduling, agile scrum, student satisfaction, resource optimization, strategic planning, data analytics, system development, higher education

**SCHOOL MANAGEMENT SYSTEM: ALUMNI MANAGEMENT SYSTEM W/
AI-BASED CHATBOT FOR INQUIRIES AND SOLUTIONS**

Rizelle Kyla Pilapil, Inah Balag, Patrick John Doroin, Angelmyca Gonzales,
John Kenneth Nacua, Marifel Laynesa

Abstract

Building and maintaining strong alumni relationships is vital for educational institutions, yet many still rely on outdated manual systems that hinder effective communication, data accuracy, and engagement. Common challenges include fragmented data, outdated records, and slow response times to alumni inquiries. To address these issues, the researchers developed a capstone project titled School Management System: Alumni Management System with AI-Based Chatbot for Inquiries and Solutions. This system provides a centralized platform to manage alumni services efficiently. It also proposes the future integration of an AI-powered chatbot to streamline communication, enhance record accuracy, and strengthen alumni-institution connections. The project was developed using the Agile Scrum methodology to support iterative, collaborative development. Stakeholder requirements were gathered through interviews and observations, then translated into user stories and use cases to guide system design. A microservices architecture was employed to ensure modularity, scalability, and ease of maintenance. Module communication was facilitated through RESTful APIs, while MySQL, managed via phpMyAdmin, served as the database system. Core system features included an alumni ID application, an alumni tracer, a career opportunities portal, secure access controls, and a digital resource library. An AI-powered chatbot was also proposed to handle alumni inquiries and is scheduled for implementation in future iterations. Development sprints followed the standard Agile cycle, including sprint planning, execution, review, and retrospectives, to ensure consistent, incremental progress. The system provides alumni with a centralized dashboard to apply for IDs, track application status, explore career opportunities, and access institutional resources. Administrative users are equipped with tools to manage alumni records, enforce access controls, and monitor engagement through built-in dashboard analytics. Real-time data synchronization and structured data storage contribute to the system's accuracy and reliability. Stakeholder feedback confirmed improvements in both usability and alumni engagement. While the AI-powered chatbot remains a planned feature, it is intended to further enhance communication and support in future system iterations. This project demonstrates how digital systems can modernize alumni engagement by centralizing services and enhancing accessibility. Its modular architecture and secure design support long-term maintainability and scalability. Although the AI-powered chatbot has not yet been implemented, its planned integration is expected to reduce administrative workload and improve support responsiveness. Overall, the system lays a solid foundation for efficient, scalable, and sustainable alumni management.

Keywords: alumni management system, centralized platform, digital transformation, modular architecture, secure design, scalability, maintainability, ai-powered chatbot, administrative efficiency, alumni engagement

**SCHOOL MANAGEMENT SYSTEM: CLINIC (A WEB-BASED SOLUTION FOR CLINIC
DATA MANAGEMENT AND MEDICAL RECORDS TRACKING
INTEGRATED WITH FORECASTING AI)**

Patrick Nobleza, John Nathaniel Bazar, Alexa Dumo, Marichelle Marilao, Mark Jones Baguinon, Ms.
Marifel Laynesa

Abstract

Bestlink College of the Philippines has consistently prioritized student health and welfare by offering quality healthcare services. However, the school clinic faces several challenges, including time-consuming data entry, error-prone record keeping, and inadequate data security. The lack of a dedicated system also prevents effective tracking of students' health histories, limiting the ability to implement preventative care strategies to avoid future health complications. To address these issues, a web-based Clinic Management Information System has been developed. This system includes electronic supplies management and integrates advanced forecasting powered by artificial intelligence, which can predict potential underlying illnesses based on symptom patterns and frequent clinic visits. The system is designed to streamline clinic operations while providing data-driven insights for more effective healthcare delivery. The Clinic Management System project adopts the Agile Scrum methodology to support adaptive, iterative development, ensuring timely delivery and responsiveness to user feedback. A Continuous Integration and Continuous Deployment (CI/CD) pipeline was implemented using tools such as Visual Studio Code, Git, GitHub, GitHub Actions, PHP Unit, and Indevfinite. This pipeline automates the entire development lifecycle from planning and coding to building, testing, deploying, and monitoring. Developers manage both application and infrastructure code through version control, enabling consistent, automated builds and deployments across development, staging, and production environments. The Clinic Management System (CMS) has significantly streamlined clinic operations by reducing manual errors and improving access to accurate and up-to-date medical records. Its AI-powered forecasting capability allows for the early identification of potential health concerns, enabling proactive and preventative care. Overall, the CMS enhances operational efficiency, supports informed decision-making, and strengthens student healthcare services through automation, data analytics, and enhanced data security. The Clinic Management System features secure record management, AI-based health forecasting, one-time password (OTP) authentication, data visualization, and role-based access control (RBAC). Planned future upgrades aim to improve the accuracy of AI forecasts through machine learning, expand communication via SMS notifications and two-way messaging, and transition to cloud infrastructure for greater scalability. Additional enhancements will focus on strengthening security measures and incorporating user feedback to support continuous system improvement and adaptability.

Keywords: clinic management system (cms), ai forecasting, otp authentication, role-based access control (rbac), data visualization, machine learning, cloud migration, sms notifications, two-way communication, system security, continuous improvement

**SCHOOL MANAGEMENT SYSTEM: EMPLOYEE INFORMATION MANAGEMENT
AND RECRUITMENT APPLICANT TRACKING SYSTEM AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Hazel Godalle, Justhine Louise Solomon, Rechel Salvador,
Bonbert Lasco, Derick Duremdes, Ronald Roldan Jr.

Abstract

Capstone projects are a vital component of the Bachelor of Science in Information Technology (BSIT) program, designed to provide students with practical experience in addressing real-world IT challenges. However, students often encounter obstacles such as inadequate planning, poor group collaboration, and unclear client requirements, which can negatively impact learning outcomes and project success. Recognizing the importance of effective execution in Capstone Project 1, this research aims to examine the processes and difficulties experienced by students and to propose recommendations for improving performance, product quality, and overall learning experiences. The researchers employed a qualitative research design to explore the challenges encountered during the implementation of Capstone Project 1. Data will be collected through interviews with selected BSIT students who have completed or are currently enrolled in Capstone Project 1, using purposive sampling to ensure the acquisition of relevant and in-depth insights. Thematic analysis will be used to identify recurring patterns and key factors contributing to project-related difficulties. Ethical considerations, including confidentiality and informed consent, will be strictly observed throughout the research process. The researchers identified several key challenges faced by students during the implementation of Capstone Project 1, including poor project planning, weak group cooperation, unclear client requirements, and deficiencies in technical skills. Despite these obstacles, students also reported valuable learning experiences and developmental outcomes. These included enhanced problem-solving abilities, improved technical proficiency, increased confidence and preparedness, and strengthened teamwork skills. These findings suggest that, although the Capstone Project presents significant challenges, it also offers a rich learning environment that fosters the development of essential academic, technical, and interpersonal competencies. This research identified several key challenges affecting the success of Capstone Project 1, notably the need for structured guidance and alignment of technical skills within IT capstone courses. For future studies, expanding the sample size and incorporating a more diverse participant pool is recommended. Additionally, the impact of formal interventions, such as client communication workshops, Agile project planning sessions, and peer mentoring programs, could be explored. Practical implications suggest that institutions should provide clearer project frameworks, increased access to advisers, and timely technical guidance. These measures can significantly enhance students' learning experiences, enabling them not only to complete their projects but also to grow personally and professionally through the process.

Keywords: capstone project 1, bsit, student challenges, project planning, group collaboration, client requirements, technical skills, qualitative research, thematic analysis, student development, adviser support, guided frameworks, agile planning, communicatio

**SCHOOL MANAGEMENT SYSTEM: EVENT MANAGEMENT SYSTEM WITH
BUSINESS INTELLIGENCE POWERED BY A.I VIDEO GENERATOR**

John Arnel Mansueto, Christopher Reboton, Robert Lourd Cruz,
Zedrick Vincecruz, Demver Mark Poserio, Marifel Laynesa

Abstract

Efficient management of school events and access to insightful data analysis are essential for cultivating a dynamic and well-organized academic environment. This study introduces the development and evaluation of an innovative School Management System (SMS) that integrates an Event Management module with Business Intelligence (BI) features, enhanced by an AI-powered Video Generator. The system is designed to streamline event booking and scheduling processes for teachers while equipping administrators with comprehensive oversight, real-time analytics, and a creative communication tool for promoting school events. By leveraging automation and AI, the system aims to enhance operational efficiency, facilitate data-driven decision-making, and foster stakeholder engagement within the academic community. The system was developed using a user-centered design approach, incorporating iterative feedback from prospective teacher and administrator users throughout the development process. The School Management System and its integrated Event Management module were designed to support key functionalities, including event booking, approval workflows, and the historical tracking of past events. Business Intelligence (BI) capabilities were embedded to generate dynamic reports and data visualizations, enabling administrators to gain insights into event trends and usage patterns. Additionally, an AI Video Generator was integrated to automatically produce promotional or summary videos using event-specific details, enhancing communication and engagement. The system's functionality and usability were assessed through structured user testing sessions with teachers and administrators. Evaluation focused on the efficiency and intuitiveness of the event booking process, the clarity and relevance of BI-generated reports, and the perceived usefulness and quality of the AI-generated videos. User testing revealed a notable improvement in the efficiency of event booking and scheduling when compared to traditional, manual processes. Teachers reported faster and more intuitive workflows, while administrators benefited from enhanced oversight through features such as a centralized event calendar, detailed event history, and comprehensive analytics dashboards. The integrated Business Intelligence tools provided actionable insights into event trends and usage, supporting data-driven decision-making. Additionally, the AI Video Generator was well-received, with users highlighting its value in promoting events and enhancing communication within the school community. Overall, the system effectively delivered on its intended functionalities, successfully meeting the needs of both teacher and administrator users, particularly in streamlining event-related tasks. The integrated School Management System, enhanced with Event Management functionality and AI-powered Business Intelligence, presents a promising advancement in the modernization of school event coordination. By streamlining workflows, simplifying event scheduling, and centralizing information access, the system has significantly improved operational efficiency for both teachers and administrators. The inclusion of data analytics features supports evidence-based decision-making, while the AI Video Generator introduces an innovative method for event promotion and stakeholder engagement. These findings suggest that combining automation, analytics, and AI-enhanced communication can offer substantial improvements in administrative processes within educational institutions. Future developments could focus on deeper integration with existing academic and administrative systems, such as learning management platforms or attendance monitoring tools. Additionally, expanding the customization and creative capabilities of the AI Video Generator could

further enrich its impact. A longitudinal study is also recommended to evaluate the system's sustained effectiveness, user adoption, and long-term contribution to institutional outcomes.

Keywords: school management system, event management, business intelligence, ai video generator, educational technology, user-centered design, automation, data analytics, school administration, event scheduling

**SCHOOL MANAGEMENT SYSTEM: LIBRARY MANAGEMENT SYSTEM WITH
ONLINE RESERVATION AND RENEWAL POWERED BY A.I. BASED
ADAPTIVE LEARNING AND SKILL DEVELOPMENT**

Vermelle James Mendiola, Mariz Stella Panganiban, John Kenneth Vicotorino,
Felipe Santiago III, Gem Delos Reyes, Marifel Laynesa

Abstract

The School Management System: Library Management System with Online Reservation and Renewal Using AI-Based Adaptive Learning and Skill Development is designed to enhance the operational efficiency and accessibility of school libraries. This system offers a range of modern features, including online book reservation and renewal, real-time notifications, access to e-books and academic journals, and a centralized digital library database. Integrating AI-based adaptive learning, the system personalizes recommendations and learning materials to support individual student skill development. By streamlining library transactions and providing tailored educational resources, the system aims to foster a more engaging, efficient, and learner-centered academic environment. The development of the project followed the Agile Scrum methodology, employing iterative sprints to ensure the early and continuous integration of user feedback. Initial consultations with key stakeholders, particularly the head librarian, were conducted to clarify system requirements and define core functionalities. Throughout the sprints, both front-end and back-end components were developed, focusing on critical features such as reservation management, penalty notifications, a book locator tool, eBook integration, and real-time updates. The system was also designed to interface seamlessly with external platforms, including the Student Information System (SIS) for accurate student records and the Logistics System to streamline the procurement and cataloging of new books. To maintain code quality and accelerate deployment, automated Continuous Integration/Continuous Deployment (CI/CD) pipelines were implemented using GitHub Actions, enabling rapid, reliable, and consistent feature delivery across development cycles. A comprehensive Library Management System was implemented, offering essential features such as item reservations, renewals, and access to digital resources, including e-books and journals. The system also automated numerous administrative tasks, significantly enhancing convenience for both students and staff. Real-time notifications for penalties, book availability, and wait-list updates improved user engagement. Additionally, the integration of an AI-powered adaptive learning component enabled personalized resource recommendations, further enriching the user experience and increasing overall system utilization. The integration of artificial intelligence and automated workflows into the Learning Management System (LMS) significantly enhanced operational efficiency and transformed user interaction by delivering personalized, adaptive resources tailored to individual learning needs. However, the implementation process also highlighted several critical challenges, including the need for strong stakeholder engagement, clearly defined requirements, and ongoing responsiveness to user feedback. Future enhancements may focus on expanding AI capabilities and improving mobile integration to further increase accessibility and user convenience.

Keywords: learning management system (lms), artificial intelligence, automated workflows, personalized learning, adaptive resources, stakeholder engagement, user feedback, system implementation, mobile integration, efficiency

**SCHOOL MANAGEMENT SYSTEM: PREFECT OF THE DISCIPLINE
MANAGEMENT SYSTEM WITH AI DECISION MAKING TOOL**

Rey Kenneth Perdigon, Nick Jhoven Zoleta, Rogemar Dañola, Mark Joseph Vallejos,
Kirt Xymon Dela Rosa, Marifel Laynesa

Abstract

In today's rapidly evolving educational landscape, maintaining discipline and a respectful learning environment is essential for academic success. Traditional disciplinary methods often rely on manual processes and subjective judgments, resulting in delays and inconsistencies. This project introduces a School Management System integrated with a Prefect of Discipline Management System, enhanced by an AI-powered decision-making tool. The system automates the tracking, assessment, and resolution of disciplinary cases, promoting greater transparency, efficiency, and fairness through data-driven decision-making in managing student behavior. By adopting an Agile approach to project management, the project is divided into several stages to ensure flexibility and continuous improvement. Concept Phase: In the initial stage, the product owner collaborates with the team to define the project's scope and limitations. Once the concept is clearly established, the development team is assembled. The product owner and project manager evaluate each member's skills and availability to ensure the right individuals are selected, equipped with the necessary tools and resources to carry out their tasks effectively. Construction Phase: This is typically the longest phase, as it involves most of the development work. During this stage, team members provide ongoing support to maintain smooth system development, address any issues, and mitigate potential risks that may arise. Release Phase: As the project nears completion, it enters the release phase. The team performs thorough testing to evaluate the software's quality and ensure all functionalities meet the required standards before the final deployment. The implementation of the Prefect of Discipline Management System has significantly benefited the Prefect department by minimizing manual effort in managing student information, scheduling, and data analysis. It streamlines daily operations, increases the department's capacity to handle disciplinary cases, and enhances the accuracy of data records. Overall, the system improves operational efficiency, supports scalability, and boosts user satisfaction. The system has enhanced discipline management by making processes faster, more consistent, and data driven. The integration of AI assists in interpreting violation records; however, it still depends on accurate data input and requires human oversight to ensure responsible use. Ethical considerations such as privacy, transparency, and fairness, must be addressed in the system's ongoing development. Overall, the tool demonstrates strong potential for enabling smarter and more efficient school discipline management.

Keywords: prefect of discipline management system, ai in education, discipline management, data-driven decisions, automation, ethical concerns, privacy, fairness, human oversight, efficiency, school management system.

**SCHOOL MANAGEMENT SYSTEM: STUDENT AFFAIRS MANAGEMENT SYSTEM
WITH AI ENGAGEMENT ANALYTICAL TOOL**

Sean Carl Manito, Christian Amarille, Jelyn Monte, Kristina Casandra Bayas,
Crystal Mhye Bautista, Marifel Laynesa

Abstract

Effective management of student organizations is essential for fostering student engagement and streamlining administrative processes within academic institutions. However, many schools still rely on manual systems, resulting in inefficiencies such as delayed approvals, inaccurate tracking of participation, and excessive paperwork. To address these issues, this study developed the Student Affairs Management System, a digital platform designed to automate administrative tasks, incorporate an AI-powered Engagement Analytics Tool to monitor student participation, and enhance connectivity across institutional departments. The study adopted the Agile Scrum methodology, dividing the development process into several sprints to allow for continuous iteration and refinement. System requirements were defined through data collected from surveys and interviews with student leaders, faculty members, and administrators. Sprint planning was conducted to prioritize development tasks and ensure timely progress. The resulting Student Affairs Management System features automated notifications, comprehensive tracking of organizational activities, and integration with institutional systems to enhance efficiency and student engagement. The Student Affairs Management System implemented an AI-driven engagement tool to monitor student participation and automate activity tracking. It streamlined key processes such as registration, permit approvals, and communication, leading to greater administrative efficiency. By integrating with existing institutional platforms, the system improved data management and reporting, promoting a more organized and transparent student affairs operation. The study highlights the effectiveness of digital solutions like the Student Affairs Management System in streamlining administrative tasks and enhancing engagement tracking. The Agile methodology ensured responsiveness to user needs, while AI analytics provided valuable insights. Despite challenges in user adaptability, data privacy, and scalability, future improvements such as mobile integration and advanced AI features, can further strengthen system performance and impact.

Keywords: student affairs management system, digital solution, administrative efficiency, ai engagement analytics, agile scrum methodology, student participation tracking, institutional integration, user adaptability, data privacy, scalability, mobile accessibility

**SCHOOL MANAGEMENT SYSTEM: STUDENT INFORMATION SYSTEM WITH DATA
VISUALIZATION AND PREDICTIVE ANALYTICS USING OPENAI.**

James Alano, Gerald Abenoja, Dee Jay Anareta, Anto Mari Deniel Bandiola,
Mark Ryan Liscabo, Marifel Laynesa

Abstract

Traditional Student Information Systems (SIS) often fall short in delivering meaningful insights and predictive analytics, as they primarily focus on basic data storage and retrieval. This capstone project addresses these limitations by developing a comprehensive School Management System (SMS) that integrates an SIS with advanced data visualization and predictive analytics powered by OpenAI. The goal is to modernize and streamline school processes, improve administrative efficiency, and support student success through data-driven decision-making. The system was developed using the Agile Scrum methodology, dividing the project into smaller sprints with clearly defined roles and responsibilities. Scrum artifacts such as the product backlog and sprint backlog were used to manage features and tasks efficiently. The system architecture follows a modular design, incorporating components for user management, student profiles, academic records, and reporting. The technology stack includes HTML, CSS/Bootstrap, PHP/Laravel, MySQL, and JavaScript, with OpenAI integrated for predictive analytics capabilities. Project requirements were gathered through surveys and stakeholder interviews. A comprehensive testing strategy was implemented, comprising integration, end-to-end, usability, and security testing to ensure seamless module interaction and system reliability. The implemented School Management System (SMS) offers a centralized database for student information management, real-time data visualization for enhanced performance tracking, and AI-powered predictive analytics for early identification of at-risk students. It provides comprehensive reporting tools for administrators and educators, streamlining both academic and administrative tasks. User feedback highlighted improved navigation and better overall experience, particularly with the redesigned dashboard and reporting modules. The successful development and implementation of the School Management System (SMS) highlight the significant potential of integrating AI and data visualization into educational management systems. The project achieved its core objectives: optimizing student information management, automating academic performance tracking, and enabling data-driven decision-making. Key lessons learned include the value of user-centered design, effective communication, and comprehensive testing. Future enhancements may focus on expanding AI capabilities, reinforcing security protocols, and improving system scalability.

Keywords: school management system, ai integration, data visualization, student data management, academic tracking, data-driven decisions, user-centered design, communication, testing, scalability, security enhancement.

**SCHOOL MANAGEMENT SYSTEM: THE DEVELOPMENT OF OUTGOING FEES
REPORT AND BALANCE TRACKING FOR MANAGEMENT INFORMATION SYSTEM**

Vincent Daez, Jeffrey Salabao, Charhly Sean Villaralvo, John Jerico Meca,
John Wilcel Mendoza, Ronald Roldan Jr.

Abstract

Educational institutions increasingly struggle with managing student financial data due to the limitations of manual systems. To address this, we developed the Student Management System (SMS) to streamline the tracking of student balances and the generation of outgoing fee reports. The system enables the Management Information System (MIS) department to enhance financial accuracy, reduce human error, and provide greater transparency for both students and administrators. Following the Agile Scrum methodology, the project was divided into multiple sprints to ensure iterative development and continuous improvement. In each sprint, specific modules such as student account tracking, outgoing fee report generation, and payment status monitoring, were incrementally developed and tested. The technology stack included PHP for backend development, JavaScript for interactivity, CSS for front-end styling, and HTML for structuring the website. The implemented system significantly reduced the administrative workload by automating balance tracking and report generation. It improved data consistency, enhanced the accessibility of student financial records, and enabled more accurate and timely reporting within the MIS department. Integrating balance tracking and fee reporting into a centralized system transforms how educational institutions manage student finances. This unified approach enhances operational efficiency, fosters transparency, and supports data-driven decision-making across administrative departments.

Keywords: centralized system, student finance management, balance tracking, fee reporting, administrative efficiency, financial transparency, data-driven decision-making, education system, institutional finance, automation.

**SCHOOL MANAGEMENT SYSTEM: THE DEVELOPMENT OF WEB-BASED
REQUEST DOCUMENT TRACKING FOR REGISTRAR AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Mark Morri Bolando, Ronlloyd Domenden, Ted Gabriel Caindoy, Edrick Paghubasan,
Alyssandra Nicole Singson, Ronald Roldan Jr.

Abstract

Educational institutions are increasingly adopting digital solutions to overcome inefficiencies in administrative processes. At Bestlink College of the Philippines, the registrar's office has traditionally relied on manual methods for handling document requests, such as Transcripts of Records (TOR), diplomas, and enrollment certificates. These manual processes are often time-consuming, error-prone, and lack transparency, resulting in dissatisfaction among students and staff. To address these challenges, we developed the Web-Based Document Request Tracking System (WBDRTS). This system streamlines the document request process by allowing students to submit requests online, track their status in real-time, and receive automated notifications upon completion. For administrative staff, it offers an integrated dashboard that improves request management and significantly reduces manual workload. The development of the Web-Based Document Request Tracking System (WBDRTS) followed a structured approach grounded in the Agile Scrum methodology. The project was divided into multiple sprints, with each sprint focused on the incremental development of specific functionalities, including user authentication, document request submission, payment processing, and real-time status tracking. The implementation of the Web-Based Document Request Tracking System (WBDRTS) at Bestlink College of the Philippines has led to significant improvements in both the registrar's office operations and user experience. By automating the document request process, the system reduced administrative workload by approximately 50%. Registrar staff now manage requests more efficiently through an integrated dashboard, enabling better task prioritization and workflow optimization. Students benefit from real-time visibility into their document requests, including status updates and notifications, enhancing transparency, building trust, and reducing the volume of status-related inquiries. Integrating a web-based document request and tracking system into the registrar's office at Bestlink College of the Philippines represents a significant advancement in how educational institutions manage student records and administrative workflows. This transition from traditional, manual methods to a centralized online system reduces administrative workload, streamlines the document request process, and offers a seamless and convenient experience for students. Real-time visibility into request statuses fosters greater trust and accountability between the registrar's office and the student body.

Keywords: web-based system, document request, tracking system, bestlink college of the philippines, student records, registrar's office, centralized system, administrative efficiency, real-time visibility, transparency, accountability, digital transformation.

SERVICE MANAGEMENT SYSTEM HR2: (LEARNING MANGEMENT, COMPETENCY MANAGEMENT, EMPLOYEE SELFSERVICE, TRAINING MANAGEMENT) WITH AUTOMATED NOTIFICATIONS

Christian Garcia, Christian Garcia, Rogem Lepasana, Justine Steven Dela Cruz,
John Dale Amoyan, Joseph Ivan Casillano, Enrico Pineda

Abstract

A Service Management System comprises software, processes, and activities designed to track, record, and manage service operations, ultimately enhancing the "moments of service" experienced by customers, both now and in the future. The core objective of such a system is to improve the efficiency and response time of service teams, particularly those operating in the field. On the other hand, Human Resource Management involves the systematic process of recruiting, selecting, and inducting employees, as well as providing orientation, training and development, and performance appraisal. It plays a vital role in ensuring that the workforce is equipped, supported, and aligned with organizational goals. A Service Management System can break down Human Resource (HR) functions into smaller, independent services, with each module handling a specific task, such as recruitment, onboarding, training, performance evaluation, or employee records management. This modular approach increases flexibility, simplifies process automation, and allows for more efficient tracking and management of individual HR operations. This modular approach allows for greater flexibility and agility, enabling teams to update, enhance, or troubleshoot individual services without affecting the functionality of the entire system. As organizations expanded, the adoption of technologies such as the Service Management System provided a more streamlined and user-friendly way to navigate operations. It emphasized user experience, operational efficiency, and seamless integration across various functions.

Keywords: service management system, modular hr functions, system integration, user experience, operational efficiency, flexibility, agility, organizational growth, automation, independent services.

SERVICE MANAGEMENT SYSTEM HR3: TIME AND ATTENDANCE, CLAIMS AND REIMBURSEMENT, AND LEAVE MANAGEMENT WITH AUTOMATED AND DATA-DRIVEN SHIFT SCHEDULING AND TIMESHEET RECORDING USING QR CODE

Jay Arr Quimiguing, Joanne Austero, Kim Mcken Paulino, Christian Jay Magbanua, John Kenneth Fundador, Enrico Pineda

Abstract

Employment agencies have been forced to modernize their manual, outdated HRM systems due to the development of digital technologies. Manual personnel attendance monitoring has presented a number of operational challenges for the R-911 Security Force Agency. Consequently, they accepted our recommendation to use QR codes to automate their time in and time out system. The technology also automates shift scheduling, processes staff leave requests, and automates reimbursement claims. The Methods section was based on an iterative development approach that incorporated staff interviews and the Agile Scrum methodology. Deployment was made easier by DevOps techniques. Tests that confirmed application functionality, usability, and security requirements in real world testing scenarios led to the system's complete certification. The Human Resource and Staff Management System HRSMS 3 was implemented to automate time-in and time-out procedures for employees and to create a centralized, secure database to safeguard employee information. Performance reviews were improved by real-time analytics, and the integration of modules, including timesheet management, shift scheduling, leave management, and claims and reimbursement, enhanced productivity and worker satisfaction. As a result of the automated solution we are offering, the HR organization's tasks are no longer as tedious and manual. All HR functions were successfully modernized by the recently installed system. By using a logical strategy that integrated user needs into every step of development, the system development process moved forward effectively. To address issues of employee adaptation and internet dependence, the system includes offline capabilities and staff training. For HR digital transformation in comparable enterprises, HRSMS 3 provides a scalable solution.

Keywords: human resource management system (hrms), data-driven scheduling, claims and reimbursement

**SERVICE MANAGEMENT SYSTEM: LOGISTIC 1 VENDOR PORTAL, VEHICLE
RESERVATION, FLEET MANAGEMENT, AUDIT MANAGEMENT,
(M.R.O.) MAINTENANCE, REPAIR, OVERHAUL**

Junel Rev Orduña, Ryan Macatanto, Marvin Cajés, Emanuel Payong,
Erl Joshua Mones, Enrico Pineda

Abstract

Modern service operations demand efficient workflows, real-time coordination, and scalable systems to manage logistics and maintenance effectively. To address these requirements, we developed LOGISTIC 1, a unified Service Management System designed to streamline key functions such as Vendor Engagement, Vehicle Reservation, Fleet Oversight, Audit Compliance, and Maintenance, Repair, and Overhaul (MRO). By centralizing these operations using modern web technologies, LOGISTIC 1 improves transparency, minimizes administrative burden, and enables continuous optimization of assets and services. The system utilizes a role-based access control (RBAC) model, providing customized interfaces and permissions for staff, administrators, super administrators, and vendors. Through a secure vendor portal, vendors can register, bid on contracts, and manage ongoing engagements. The Vehicle Reservation feature enables internal users to check availability and reserve company-owned vehicles efficiently. Fleet Management offers real-time insights into vehicle usage, maintenance schedules, and key performance metrics. The Audit Management module automates compliance documentation and supports continuous monitoring of regulatory readiness. The Maintenance, Repair, and Overhaul (MRO) module manages work orders, tracks parts inventory, and schedules servicing to extend the operational life of assets. The system was developed using the Agile Scrum methodology, enabling iterative improvements and continuous stakeholder feedback throughout the project lifecycle. The implementation of LOGISTIC 1 significantly enhanced operational control and transparency across service operations. The vendor portal streamlined procurement processes, reducing the need for manual coordination and accelerating vendor engagement. The vehicle reservation system minimized scheduling conflicts and optimized the utilization of company-owned vehicles. Fleet management features reduced vehicle downtime and improved the accuracy of maintenance tracking. The audit automation module minimized documentation errors and strengthened regulatory compliance. Meanwhile, the MRO module enabled proactive maintenance, thereby increasing equipment reliability and extending asset lifespan. LOGISTIC 1 unifies critical logistics and service functions within a modular and scalable system architecture. It enhances daily operations while laying the foundation for future upgrades, including mobile accessibility, GPS integration, and predictive analytics. By offering real-time visibility and advanced decision-making tools, it strengthens operational governance and fosters more sustainable and data-driven service management practices.

Keywords: logistic 1, modular system, scalable architecture, logistics integration, mobile access, gps tracking, predictive analytics, real-time visibility, decision-making tools, operational governance, sustainable service operations.

**SERVICE MANAGEMENT SYSTEM: LOGISTIC 2 (ASSET MANAGEMENT,
PROCUREMENT, WAREHOUSING, PROJECT MANAGEMENT,
DOCUMENT TRACKING) A FRAMEWORK FOR REAL TIME
DATA DRIVEN DECISION MAKING**

Ivan Matthew Cabrera, Erica Mae Quirong, John Rey Nebraska,
Mark Vincent Fernandez, Jewel Mark Manapat, Enrico Pineda

Abstract

Efficient service management is essential for ensuring smooth organizational operations, particularly in key areas such as asset management, procurement, warehousing, project oversight, and document tracking. This study presents Logistic 2, a Service Management System developed to centralize and streamline a wide range of service-related processes within an organization. Designed specifically for the R-911 Security Force, the system aims to reduce manual workloads, enhance response times, and enable real-time, data-driven decision-making. By providing a comprehensive and automated platform, Logistic 2 improves the management of service requests and supports operational efficiency across departments. The development of the Service Management System adhered to the Agile Scrum methodology, which emphasizes iterative progress, stakeholder collaboration, and adaptability to change. By organizing the project into focused sprints, the development team was able to gather regular feedback and implement continuous improvements throughout the development cycle. This approach ensured that the system evolved in direct response to user needs, resulting in a more refined, functional solution that effectively addressed operational inefficiencies in managing service-related workflows. The system significantly improved the management of service requests by automating key processes, providing real-time notifications, and enhancing data integrity and security. As a result, reliance on manual procedures was greatly reduced, and task response times improved notably. Stakeholders and end-users reported increased efficiency and ease of use, highlighting the system's intuitive interface and reliable performance. The ability to track service data in real time enabled faster, more informed decision-making, supporting the organization's objective of achieving operational excellence. The successful implementation of the Service Management System highlights the effectiveness of integrating Agile development practices with real-time data analytics to optimize service operations. Its modular architecture supports scalability and future enhancements, while the centralized platform promotes improved coordination across departments. With advanced automation and reporting capabilities, the system enables proactive management and timely responses to service requests. Overall, the project demonstrates that digital transformation in service management results in measurable gains in efficiency, accountability, and informed decision-making.

Keywords: service management system, agile development, real-time data analytics, modular structure, scalability, centralized platform, automation, reporting, digital transformation, operational efficiency, accountability, decision-making.

SMART HYGIENE VENDING MACHINE FOR PERSONAL ESSENTIAL USING ARDUINO

Cedric Concon, Angelo Cariño, Dean Mark Sereno, Joshua Caromayan,
Ronnel Castillo, Jasmine Rose Cudog, R-jay Pornasodoro

Abstract

In today's fast-paced and health-conscious society, maintaining personal hygiene is essential to preventing the spread of illness and promoting well-being. However, access to essential hygiene items such as hand sanitizers, face masks, tissues, and disinfectant wipes is often limited, particularly in high-traffic areas like transportation hubs, schools, offices, and public restrooms. Traditional retail outlets often involve long queues, which can be inconvenient during urgent situations. During public health emergencies, such as pandemics, the demand for hygiene products increases significantly, making availability and accessibility even more critical. This study introduces a Smart Hygiene Vending Machine designed to address these challenges through automated and contactless dispensing of personal care essentials. This study employed Waterfall Methodology, which is suited for capstone projects due to its structured and sequential approach. Each phase: planning, analysis, design, implementation, and testing, was completed before proceeding to the next, ensuring a systematic and organized development process. Experimental testing showed that the system dispensed hygiene products with 97% accuracy based on user selection. The coin-based payment mechanism functioned reliably, accurately accepting valid coins and rejecting incorrect inputs. The average dispensing time was recorded at 10 seconds per transaction. The system also featured a contactless interface, which minimized physical touchpoints and thereby enhanced user hygiene and safety during operation. The Smart Hygiene Vending Machine integrates an Arduino Uno, servo motors, a 4x3 numeric keypad, an ALLAN coin slot, and an LCD screen to create a user-friendly, self-service system for dispensing hygiene essentials. Upon entering a product code and inserting the correct payment, the corresponding servo motor activates to release the selected item. This design ensures precise, automated dispensing while reducing the need for human interaction. Its deployment in public spaces can significantly enhance hygiene practices and improve the accessibility of essential personal care products, particularly during health emergencies.

Keywords: smart vending machine, hygiene products, arduino uno, contactless dispensing, personal care essentials, automated system, public health, it and management

**SMS : A CASHIER SYSTEM FOR MANAGING PAYMENTS, BILLING, AND REPORTING
AT BESTLINK COLLEGE OF THE PHILIPPINES**

Jazsriel Kyle Ferwelo, Ronel Muega, Keane Gil, Rey Dominic Red,
Steven Jay Yosores, Ronald Roldan Jr.

Abstract

The SMS Cashier System is a digital financial management platform developed to streamline payment transactions at Bestlink College of the Philippines. It addresses key operational challenges in payment processing, billing, and financial reporting by replacing traditional manual methods with automated functions. The system features secure, multi-option payment processing, automated billing and receipt generation, and real-time reporting tools designed to enhance institutional efficiency. The system was developed using the Agile methodology, which supports iterative, collaborative, and user-centered development. Continuous engagement with end-users including students, cashiers, and administrative staff, allowed for the creation of a system tailored to the college's specific financial management requirements. Functional modules were refined across each development sprint based on feedback and testing. The implementation of the SMS Cashier System led to substantial improvements in financial operations. The platform effectively resolved previous challenges in delayed payment processing, manual computation errors, and limited reporting visibility. Real-time tracking of transactions, automated fee calculations, and instant receipt issuance were fully integrated into the system. Users reported high satisfaction with system performance, usability, and reliability. The SMS Cashier System significantly enhanced financial management practices at Bestlink College by automating core processes such as payments, billing, and reporting. The payment module accommodates multiple transaction channels with real-time security validation. The billing feature ensures error-free fee computation and document generation, while the reporting module provides administrators with up-to-date financial data and audit trails for informed decision-making. High user adoption and positive feedback indicate the system's success in improving operational accuracy, speed, and accountability.

Keywords: cashier system, payment automation, billing management, real-time reporting, financial transactions, agile development, it solutions, bestlink college

**SMS 4: FACULTY MANAGEMENT SYSTEM WITH ADAPTIVE SCHEDULING
USING MACHINE LEARNING**

Kyle Dave Reyes, Dennis Estacio, Eva Mae Matilla, Cenn Cleo Directo, Reden Rañola, Khristian Hosena

Abstract

This capstone project presents the development of SMS 4: Faculty Management System with Adaptive Scheduling Using Machine Learning. The system addresses ongoing challenges in academic scheduling and faculty resource allocation at Bestlink College of the Philippines. Traditional manual scheduling methods often result in conflicts, inefficiencies, and limited flexibility in accommodating faculty preferences and institutional requirements. SMS 4 integrates machine learning algorithms to analyze historical data such as faculty availability, course demand, and enrollment trends, to generate conflict-free schedules that adapt to real-time changes. The study adopted the Agile Scrum methodology to guide the iterative development of the system. Its adaptive framework enabled continuous feedback from stakeholders and division of work into multiple development sprints. Each sprint focused on delivering key features, including faculty profile management, adaptive scheduling algorithms, real-time notifications, and system integration. This approach ensured flexibility, responsiveness, and alignment with user needs throughout the development process. The Faculty Management System, powered by machine learning, significantly improved scheduling efficiency by generating conflict-free timetables. It reduced administrative workload, resolved scheduling conflicts, and improved adaptability to shifting academic demands. The inclusion of real-time updates and notifications, along with consideration of faculty preferences, enhanced overall user satisfaction and operational responsiveness. The implementation of SMS 4 addressed longstanding issues in academic scheduling by replacing manual processes with an automated, intelligent system. The integration of machine learning enabled dynamic adaptation to real-time faculty availability, course requirements, and institutional constraints, resulting in fairer and more accurate schedules. This not only optimized resource allocation but also minimized administrative effort. Moreover, the user-friendly interface allowed faculty members to input preferences, which the system actively considered, leading to increased faculty satisfaction and engagement. The system demonstrates the potential of machine learning in educational management and paves the way for broader adoption of intelligent scheduling solutions.

Keywords: faculty management, adaptive scheduling, machine learning, timetable optimization, agile scrum, conflict-free scheduling, higher education, it and management

SMS I: AI-ASSISTED DIAGNOSIS AND QR CODE INTEGRATION FOR STREAMLINED CLINIC MANAGEMENT SYSTEM AT BESTLINK COLLEGE OF THE PHILIPPINES

Joseph Oliver Banac, Angelo Abargos, Lister John Evangelista,
Ariel Forcado, Andiella Mhae Gabad, Roland Roldan

Abstract

Traditional methods of managing patient records and generating reports in school clinics often result in inefficiencies, delays, and suboptimal patient care. This capstone project, titled SMS I: AI-Assisted Diagnosis and QR Code Integration for a Streamlined Clinic Management System at Bestlink College of the Philippines, aims to address these challenges by integrating artificial intelligence (AI) for diagnostic assistance and QR code technology for efficient data access. The system is designed to deliver accurate, fast, and effective healthcare services within the academic setting. The system was developed using the Agile Scrum methodology, which allows for flexible, iterative development and ongoing stakeholder feedback. The project focused on three core objectives: (1) to establish an all-in-one clinic management system, (2) to improve diagnostic accuracy through AI assistance, and (3) to integrate QR code functionality for quick and secure retrieval of patient data. The system successfully combined AI-powered analysis with QR code integration to enhance clinical efficiency. The AI module assisted in analyzing patient data to support healthcare decisions, while the QR code system enabled real-time, accurate access to patient records. Usability and functionality tests confirmed that the system met its intended objectives, resulting in streamlined operations and improved quality of care in the clinic setting. The implementation of SMS I addressed key issues associated with outdated healthcare management systems by adopting advanced digital technologies. AI enhanced the accuracy of clinical diagnoses, and QR codes ensured quick and secure data retrieval. The system's deployment demonstrated how digital transformation can elevate healthcare operations within academic institutions. It also serves as a model for future innovations aimed at improving healthcare management in educational environments.

Keywords: clinic management system, ai-assisted diagnosis, qr code integration, healthcare technology, patient records, agile scrum, educational institutions, digital transformation

**SMS: WEB-BASED SCHOOL PARKING MANAGEMENT SYSTEM WITH QR CODE
PAYMENT MODE AND REAL-TIME TICKETING FOR THE STUDENTS AND
EMPLOYEES OF BESTLINK COLLEGE OF THE PHILIPPINES**

Clarenz Alemani, Bernice Arubio, Koby Bryant De Roxas, Laurence Jhon Fillarca,
Mary Joy Lapso, Ronald Roldan Jr.

Abstract

In recent years, Bestlink College of the Philippines has faced significant challenges in managing campus traffic and parking due to a lack of structured systems. The increasing number of vehicles driven by students and employees has led to congestion, disorganized parking, and delays in entry and exit within campus premises. Vehicles were often parked without order, occupying any available space, which further contributed to traffic inefficiencies. This study introduces a web-based school parking management system designed to streamline campus parking through digital automation, incorporating QR code payment and real-time ticketing features. The project followed the Agile Scrum methodology to allow for iterative development and continuous feedback from stakeholders. This approach supported the flexibility required for refining system functionalities based on user needs. Development focused on key components such as parking space monitoring, QR code payment integration, and real-time ticketing, ensuring adaptability and efficiency in school-wide deployment. The developed system effectively addressed the limitations of traditional parking management practices at Bestlink College. It streamlined record-keeping, reduced queue times, and enabled real-time tracking of parking space availability. The QR code payment system allowed faster, cashless transactions, while the ticketing module ensured accurate and automated vehicle entry and exit logging. Evaluation results showed improvements in user convenience, monitoring accuracy, and operational efficiency, contributing to better resource utilization and revenue tracking. This project successfully developed a web-based parking management system that integrates QR code payment and real-time ticketing. The system mitigated key issues such as manual errors, congestion, and lack of transparency in parking operations. It introduced a reliable, user-friendly platform for both students and employees, enhancing the overall parking experience at the institution. Challenges encountered during development included system security and scalability, which offer opportunities for further enhancement. Future improvements may involve mobile app integration, dynamic space reservation, and advanced analytics for traffic prediction and parking optimization.

Keywords: parking management system, qr code payment, real-time ticketing, campus traffic, agile scrum, web-based system, it solutions, bestlink college

**SMS1: FINANCIAL MANAGEMENT SYSTEM WITH BUDGETING, FINANCIAL
FORECASTING AND PLANNING WITH AI FOR BESTLINK
COLLEGE OF THE PHILIPPINES**

Reynaldo Bisnar, Mecaella Atencio, Ediel Jade Deriquito, Patrick Bueno, Ronald Roldan Jr.

Abstract

Bestlink College of the Philippines faces financial management challenges due to outdated and fragmented systems that hinder budgeting, forecasting, and resource allocation. Common issues include processing delays, data entry errors, and the absence of predictive tools. This study addresses these concerns by developing an AI-powered Financial Management System (FMS) integrated within the institution's School Management System. Key features include automated budgeting, financial forecasting, and disbursement management. Built using Agile Scrum and microservices architecture, the system aims to improve accuracy, transparency, and data-driven decision-making. The Agile Scrum methodology guided the iterative development of the FMS. Data gathering was conducted through interviews and document analysis to identify system requirements. The system was developed using a WAMP stack (Windows, Apache, MySQL, PHP) and microservices to ensure modularity and scalability. Core modules included budgeting, forecasting, general ledger, and disbursement reporting. RESTful APIs enabled smooth integration between system components, while role-based access controls and encryption safeguarded sensitive financial data. The developed FMS successfully automated core financial processes, including budgeting, forecasting, and disbursement tracking. Real-time financial reporting allowed administrators to make informed decisions and manage institutional resources more effectively. AI-driven forecasting tools increased the accuracy of financial predictions by analyzing historical data and trends. The system optimized the budget approval workflow, reduced delays, and facilitated interdepartmental coordination. RESTful API integration ensured seamless module communication and system scalability. Security protocols, including encrypted access and role-based permissions, effectively protected financial information. Overall, the system reduced manual errors, enhanced financial oversight, and contributed to improved operational efficiency and long-term financial sustainability. The findings demonstrated that the AI-integrated Financial Management System significantly enhanced financial planning and control at Bestlink College. These results support existing literature on the effectiveness of technology-driven financial solutions in educational institutions. While the system was only implemented in a single institution, limiting generalizability, the outcomes highlight its potential for broader application. Future research may explore deployment in multiple academic settings and further development of AI capabilities. The study provides a foundation for policy reforms that promote intelligent, data-driven financial systems in schools.

Keywords: financial management system, budgeting, financial forecasting, ai integration, school management system, microservices architecture, restful api, educational finance, it and management, bestlink college

**STOCK INVENTORY MANAGEMENT SYSTEM FOR TOPMED
DIAGNOSTICS AND ANIMAL BITE CENTER**

Lucky Paul Ocampo, Alexander Cedric Biag, Trillanes Patayan, Raffy Ramos,
Ivan Sandoval, Ailyn Tagavilla, R-jay Pornasdoro

Abstract

TopMed Diagnostics and Animal Bite Center, established in August 2012, aims to provide high-quality, cost-effective healthcare services to its clients. This study aims to develop a Stock Inventory Management System for the clinic to improve the control and monitoring of product inflow and outflow, track stock usage, ensure an accurate and organized inventory, enhance operational efficiency, and provide alerts for supply shortages and expiring products. The study employs the Waterfall Model for system development, following a linear and sequential process. The planning phase involves identifying client needs and determining data collection methods. During the analysis phase, the gathered information is examined to form the basis for system design. The development stage covers documentation and actual system building. The design phase focuses on user interface creation and defining the system's structure and functionality. The implementation phase involves programming and coding the system. Afterward, the testing phase ensures all components function as intended. Finally, the maintenance phase is designed to support long-term usability through updates and issue resolution. The development process resulted in a fully functional stock inventory system. Each feature such as login authentication, stock check-in and check-out, usage tracking, expiration alerts, inventory logs, and user management, was tested and validated for reliability and efficiency. The structured approach enabled the successful delivery of a system that addressed the operational challenges initially identified. The implemented system addressed the clinic's key inventory issues and streamlined stock monitoring processes. However, areas for improvement were identified. Future recommendations include the integration of financial accounting, delivery tracking for stock replenishment, and customer relationship management functionalities. These enhancements would further elevate the clinic's operational capabilities and data handling precision.

Keywords: inventory management system, stock monitoring, expiration alerts, waterfall model, health clinic automation, inventory control, system development, topmed diagnostics

**THE EFFECTS OF SOCIAL MEDIA ON ACADEMIC PERFORMANCE IN
BSIT STUDENTS OF BESTLINK COLLEGE OF THE PHILIPPINES**

Ma Fe Corporal, Rayver Carl Tangara, Mathew Medina, Mathew Medina,
Mathew Medina, Reynaldo Hayahay, Kimberly Joy, Español

Abstract

This study investigates the impact of social media use on the academic performance of BSIT students at Bestlink College of the Philippines. It explores both the benefits such as academic collaboration and access to learning resources, and the drawbacks, including distraction and procrastination. Given the digital nature of the BSIT program, the research emphasizes the importance of time management and responsible media consumption. The study advocates for the integration of digital literacy initiatives to help students manage their online habits and optimize their academic performance. This study adopts a quantitative, descriptive-correlational research design to examine how various patterns of social media use affect academic outcomes. Using stratified random sampling, the researchers selected BSIT students across all year levels. Data was collected through an online survey that covered demographic details, social media usage (including frequency, purpose, and platform types), and academic performance as measured by self-reported GPA and perceived academic impact. The data were analyzed using descriptive statistics and inferential tools such as Pearson correlation, t-tests, ANOVA, and multiple regression. Ethical procedures, including informed consent and data confidentiality, were strictly observed. The findings revealed a significant negative correlation between the time spent on social media and students' self-reported GPA. While respondents acknowledged the educational benefits of social media, those who spent more time particularly for entertainment purposes, tended to report lower academic performance. Entertainment-driven social media use emerged as a strong negative predictor of GPA. The results suggest that excessive and non-academic use of social media can negatively affect academic outcomes among BSIT students. However, when used purposefully, social media may serve as a beneficial academic tool. The findings underscore the importance of promoting digital literacy and guiding students toward intentional and educational uses of social media. Future interventions should focus on fostering a balanced approach to media consumption. Further research may investigate long-term academic effects and platform-specific influences within the local context.

Keywords: social media, academic performance, bsit students, digital literacy, self-reported gpa, time management, educational technology, online behavior, descriptive-correlational study, higher education

THE EFFICIENCY AND FEASIBILITY OF DUAL AXIS SOLAR TRACKER USING ARDUINO

Princess Soco, Demver Vergara, Anthony Kyle Xy Tumampo,
Barbasina Geill, Heaven Jay Garado, Ahlen Lamida

Abstract

The rising demand for renewable energy has driven interest in more efficient solar power systems. Dual-axis solar trackers improve energy collection by adjusting photovoltaic panels to follow the sun's position throughout the day, resulting in higher energy output compared to fixed-panel systems. Arduino-based control systems present a cost-effective and programmable solution for accurate solar tracking, making the technology suitable for both residential and small-scale commercial use. This study investigates the efficiency and practicality of an Arduino-controlled dual-axis solar tracker, aiming to evaluate its potential in maximizing energy generation and ensuring reliability. This study adopts a qualitative approach to assess the feasibility of an Arduino-controlled dual-axis solar tracker, focusing on the perceptions of Grade 11 and 12 students at Bestlink College of the Philippines Bulacan. Data were collected using a Likert scale survey that evaluated key indicators such as cost-effectiveness, user-friendliness, system design, and overall acceptance. Thematic analysis of the responses was conducted to identify practical considerations and potential barriers to adoption. By analyzing user perspectives, the research aims to evaluate the system's viability and provide insights for enhancing its application in educational or small-scale renewable energy settings. The study revealed that the Arduino-based dual-axis solar tracker demonstrated improved efficiency and feasibility when compared to a fixed-position solar panel. Measurements of energy output and tracking accuracy under various conditions showed efficiency gains of approximately 30–40%. Feasibility was assessed through material cost, construction ease, and the system's reliability and maintenance requirements. Survey responses from 40 senior high school students indicated high levels of perceived effectiveness and practicality, supporting the system's potential for educational and small-scale energy use. The findings confirm that the Arduino-controlled dual-axis solar tracker significantly enhances energy efficiency by automatically aligning with the sun's movement. Its low-cost, programmable features make it an ideal solution for residential setups and educational projects, especially in sun-rich regions. While external factors such as weather may influence performance, the tracker's consistent energy gains highlight its value in sustainable energy applications. Continued development and testing may further optimize its design and increase its adoption in small-scale renewable energy systems.

Keywords: dual-axis solar tracker, arduino, renewable energy, energy efficiency, solar panel, feasibility study, smart tracking system, sustainable technology, educational applications, it and management

**THE IMPACT OF MODERN TECHNOLOGY ON FIRST-YEAR COLLEGE STUDENTS’
ENGAGEMENT AND ACADEMIC PERFORMANCE AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Bernante Calapre, Lian Sarmiento, Michaella Danaya Sorima,
Jhunrey Binolirao, Jhon David Bravo, Nora Roxas

Abstract

Technology plays a crucial role in modern student life, particularly at the college level. As institutions increasingly adopt digital tools, students are exposed to new and sometimes challenging learning environments. This study explores how technology can enhance student motivation and self-directed learning while also highlighting the potential risks of misuse. According to Upadhyaya and Vrinda (2021), students now rely on technology for nearly all academic tasks, including examinations and projects. While beneficial, improper use can lead to various challenges. The rise of Artificial Intelligence (AI) is unsurprising in this era. For students, AI supports academic tasks and boosts productivity; however, excessive reliance can weaken critical thinking, essential skills, and overall academic engagement. Basha et al. (2024) observed that students overly dependent on AI often struggle with basic skills, become less engaged, and face difficulties in independent problem-solving. Similarly, Kaite et al. (2021) found that while technology offers convenience and flexibility in learning, overuse can hinder fine motor development and cognitive skills. This study aims to assess both the benefits and drawbacks of technology in education and provide recommendations for educators and school leaders on integrating technology effectively into learning environments. This study employed a quantitative cross-sectional design to examine the impact of modern technology on the academic performance of first-year students. Fifty freshmen from Bestlink College of the Philippines were randomly selected as participants. Data were collected through Google Forms, with the survey consisting primarily of open-ended items that encouraged students to reflect on both the benefits and challenges of using technology. This approach provided a comprehensive view of how technology influences academic outcomes and engagement. Most students agreed that digital tools helped them remain focused and motivated. However, approximately 40% reported that excessive reliance on technology diminished their critical thinking and writing abilities. Many also expressed reduced confidence in completing academic tasks without the aid of technology. Several respondents emphasized the importance of clear guidance from instructors to prevent overdependence on digital tools. The data indicate that technology has a strong influence on student motivation, self-directed learning, and collaboration. While many participants reported increased productivity, heavy reliance on technology was also seen as a potential threat to essential skills. Shared digital platforms facilitated teamwork but reduced opportunities for face-to-face interaction. Some students expressed concerns about the potential for increased academic dishonesty, highlighting the need for clearer guidelines and greater awareness.

Keywords: technology in education, ai in education, learning with ai, student drive, self-guidance, group work

**TNVS ADMIN PLATFORM: AN AI- SOLUTION FOR INTEGRATED DOCUMENT,
COMMUNICATION, USER, EVENT, FINANCIAL, SECURITY, CONTRACT
LEGAL COMPLIANCE, AND SECURITY MANAGEMENT**

Jaybie Sosmeña, Emson Tampoc, Shariel Keila Pagdayunan, Roy Turbela,
Carl Angelo Antoy, Sheryl Adovas

Abstract

The capstone project aims to develop a comprehensive administrative platform that leverages artificial intelligence to automate and streamline various operational processes. In an increasingly digital world, organizations face the challenge of managing diverse operational components efficiently and securely. This project addresses those challenges by integrating key functions such as document management, internal communication, user and event coordination, financial tracking, legal compliance, and security oversight into a single, AI-driven system. By consolidating these capabilities, the platform enhances productivity, ensures regulatory compliance, and supports seamless administrative operations. To ensure the project's success, a rigorous methodology was employed, consisting of several key phases: requirements gathering, system design, development, and testing. Agile development principles were adopted to promote flexibility and responsiveness to user feedback throughout the project lifecycle. The platform was developed using modern programming languages and frameworks, with a focus on scalability, security, and ease of maintenance. User involvement was prioritized at each stage to refine features and enhance overall usability, ensuring the system aligns with real-world administrative needs. The project results demonstrated a significant improvement in operational efficiency, user satisfaction, and compliance management. Through user testing and feedback, notable gains were observed in document processing speed and accuracy, internal communication, and event coordination. The platform's AI capabilities contributed to more informed decision-making and optimized resource allocation, ultimately enhancing the organization's overall performance. The findings of this project highlight the transformative potential of the TNVS Admin Platform in organizational practice. By embedding AI into administrative functions, the platform not only streamlines operations but also fosters a culture of innovation and adaptability. This section presents the key implications of our results, challenges encountered during development, and recommendations for future enhancements. Furthermore, the platform demonstrates strong potential as a scalable model that can be adapted by other organizations, paving the way for continued innovation in administrative technology.

Keywords: ai integration, administrative platform, tnvs admin platform, operational efficiency, user satisfaction, compliance management, agile development, innovation, document automation, communication management, event coordination, decision-making, organiz

**TRANSPORTATION NETWORK VEHICLE SERVICE : CORE 1 (AI-ENHANCED FLEET
MANAGEMENT SYSTEM WITH FUEL MONITORING DYNAMIC
DISPATCHING AND PREDICTIVE INSIGHTS)**

Rocky Caguirjab, Jan Maykel Cabaddu, Jhemilyn Luna, Edilyn Riel, Tomas Jr Ale, Sheryl Adovas

Abstract

This document presents the AI-Enhanced Fleet Management System, an innovative solution designed to optimize operations within the Transportation Network Vehicle Services (TNVS) sector. The system leverages artificial intelligence to integrate fuel monitoring, dynamic dispatching, and predictive analytics aimed at minimizing environmental impact, reducing operational costs, and enhancing overall fleet efficiency. Through the use of machine learning, the system tracks fuel consumption, predicts maintenance requirements, and identifies optimal routing strategies. This comprehensive approach to fleet management promotes both operational effectiveness and sustainability, offering a transformative solution for the evolving needs of TNVS providers. The project adopts the Agile Scrum methodology, utilizing defined roles, sprint cycles, and Scrum artifacts to ensure adaptive and efficient project management. The system architecture follows a microservices-based design, promoting scalability, modularity, and ease of maintenance. A DevOps approach is implemented, incorporating Continuous Integration and Continuous Deployment (CI/CD) pipelines to streamline development and deployment processes. Additionally, the TOGAF (The Open Group Architecture Framework) is applied to guide the development across key architectural domains. To enable seamless system integration, a Service-Oriented Architecture (SOA) is proposed, ensuring interoperability and flexibility across components and services. The AI-Enhanced Fleet Management System is designed to improve operations within the Transportation Network Vehicle Services (TNVS) sector by optimizing fuel consumption, streamlining dispatching, and providing predictive insights. These capabilities contribute to cost reduction, decreased environmental impact, and greater operational efficiency. Leveraging machine learning, the system enables real-time fuel monitoring, predictive maintenance scheduling, and route optimization, offering a data-driven solution for sustainable and efficient fleet management. CORE 1 represents a forward-looking, intelligent fleet management solution tailored for TNVS operators. By combining AI-driven insights with a robust technological foundation, it addresses critical challenges such as fuel inefficiency, maintenance delays, and suboptimal routing. This positions CORE 1 as a sustainable, cost-effective platform that enhances the future of transportation network vehicle services.

Keywords: ai-enhanced fleet management, core 1, tnvs, fuel monitoring, dynamic dispatching, predictive analytics, machine learning, microservices architecture, devops, agile scrum, togaf, service-oriented architecture (soa), route optimization, cost reduction,

**TRANSPORTATION NETWORK VEHICLE SERVICES: CORE 2 "STOREROOM
MANAGEMENT, PAYMENT, BOOKING, GPS TRACKING, TRANSPORT
ANALYTICS WITH "AI SOLUTIONS FOR OPTIMIZING ROUTES
AND REDUCING COSTS IN TNVS CORE 2"**

Kenneth Lloyd Ancero, John Arvin Reyes, Yebgeny Santor, Reynald Rebudal,
Eve Dianne Diaz, Sheryl Adovas

Abstract

The rapid rise of TNVS has improved urban mobility but introduced key operational challenges. To address these, an integrated solution is proposed to enhance store room management, streamline booking and payment systems, and leverage transport analytics. Efficient inventory tracking supports vehicle maintenance, while user-friendly booking features and secure payment systems ensure seamless customer transactions. Analytics and GPS tracking enable route optimization and performance evaluation, promoting operational transparency and improved service delivery. The development of the Transportation Network Vehicle Service (TNVS) system employs the Agile Scrum methodology due to its flexibility and adaptability. This framework supports iterative development, fosters continuous communication, and enables quick responses to changing requirements, making it well-suited for the fast-paced and dynamic environment of TNVS operations. The integration of key components such as storeroom management, payment systems, booking, GPS tracking, transport analytics, and AI in TNVS Core 2 has significantly improved efficiency, reduced costs, and enhanced customer satisfaction. These results demonstrate the effectiveness of leveraging technology in the TNVS sector. To maintain a competitive advantage, the study recommends continuous system monitoring, regular updates informed by user feedback, and further exploration of AI and data analytics innovations. TNVS Core 2 integrates storeroom management, payment systems, booking, GPS tracking, transport analytics, and AI to significantly enhance operational functions in transportation services. While challenges remain, the system offers strong potential for increased efficiency, reduced costs, and improved customer satisfaction.

Keywords: tnvs core 2, storeroom management, payment systems, booking procedures, gps tracking, transport analytics, ai integration, operational efficiency, cost reduction, customer satisfaction, system challenges.

**TRANSPORTATION NETWORK VEHICLE SERVICES: FINANCE
WITH INTELLIGENT BUDGET ESTIMATION SYSTEM**

Shine Christine Joy Buen, Juan Carlos Allordo, Justine Francis Reyes,
Raemarc Gullon, Tristan Custodio, Sheryl Adovas

Abstract

As the TNVS industry has evolved, new platforms such as Grab, Uber, and Angkas have emerged as leading providers of on-demand services, posing significant competition in the market. Traditional taxi businesses, including ABC Taxi Company, face difficulties competing with these technology-driven companies due to their lack of digitalization and adoption of modern technologies. To stay competitive, traditional taxi operators must embrace technological advancements. This study focuses on TNVS finance by developing an Intelligent Budget Estimation System designed to support ABC Taxi Company in modernizing its operations through improved financial management. The project highlights the role of technology in enhancing how taxi operators manage their business finances efficiently and effectively. A mixed-methods approach was employed, combining interviews and Agile methodology to evaluate the system's effectiveness. Interviews were conducted with operators from ABC Taxi Company, a traditional taxi business facing challenges in transitioning to modern technology. These interviews provided valuable insights into the obstacles and opportunities associated with adopting digital solutions. Meanwhile, the Agile methodology guided the system's development process, covering planning, design, development, testing, and deployment, ensuring a smooth and adaptive implementation. The implementation of the TNVS: Finance with Intelligent Budget Estimation System, particularly the Disbursement and Accounts Payable Management submodule, led to significant improvements in the financial processes of the selected taxi company. Financial reports became more transparent and easily accessible, facilitating improved decision-making and accountability. Feedback from the company's finance team highlighted increased efficiency, streamlined operations, and enhanced budget control. Overall, the system effectively addressed key financial challenges and supported the company's objective of embracing technological advancements in the competitive transportation industry. The system introduced practical solutions to enhance the taxi company's financial management, particularly in disbursement and accounts payable. By reducing manual tasks and automating critical processes, it minimized errors, accelerated transactions, and ensured accurate tracking of financial activities. The integration of budget estimation further supported effective planning and helped maintain spending within set limits. These improvements not only boosted operational efficiency but also facilitated the company's transition toward more modern, technology-driven practices.

Keywords: tnvs, intelligent budget estimation system, financial management, disbursement and accounts payable, agile methodology, digital transformation, taxi industry, budget control, process automation, traditional taxi operators, financial transparency, tec

TRAVEL AND TOURS ADMINISTRATIVE MANAGEMENT SYSTEM: (FACILITIES RESERVATION, DOCUMENT MANAGEMENT, VISITOR MANAGEMENT, AND LEGAL MANAGEMENT) WITH SMART FACILITIES MONITORING AND ALARM SYSTEMS WITH MICROCONTROLLERS AND MICROSENSORS, ENHANCED BY AI

Joyvie Rebamontan, Jude Mulay, Russel Cosico, Sean John Silverio,
Rylle John Paul Visto, Richelyn Villasor

Abstract

In today's highly competitive travel industry, digital transformation is crucial for achieving operational efficiency and maintaining a competitive edge. This study examines the implementation of the Travel and Tours Administrative Management System (TTAMS) at JVD Events and Travel Management Co. The research addresses key issues associated with manual workflows, such as process inefficiencies, unclear user roles, error-prone data entry, and prolonged service delivery timelines. Furthermore, reliance on legacy, paper-based documentation poses challenges in data traceability and exposes client information to potential security risks. The TTAMS initiative introduced four core capabilities: Facilities Reservation, Document Management, Visitor Management, and Legal Management. The system design integrated process automation through AI algorithms alongside IoT-enabled microcontrollers and sensor arrays to enhance operational performance. A notable advancement in cybersecurity was also implemented, utilizing TensorFlow to analyze malware-converted image data. This technique transforms potentially malicious files into grayscale or RGB images for neural network classification, effectively reducing the risk of cyberattacks on sensitive guest information within the travel industry. Key findings indicate substantial operational improvements following the implementation of TTAMS. The TensorFlow-based malware detection system effectively identified suspicious files, offering robust protection for sensitive travel data. Automation features significantly reduced processing overhead, enabled role-based access controls, and eliminated workflow bottlenecks. The introduction of a centralized document repository ensured version control, maintained data integrity, and enhanced information searchability. Additionally, database optimization techniques improved query response times, addressing previous service inefficiencies and supporting scalability for future customer growth. The adoption of digital record management also established comprehensive redundancy protocols, mitigating vulnerabilities inherent in traditional paper-based documentation systems. Users expressed high levels of satisfaction with the TTAMS platform, with clients particularly appreciating the streamlined process flows and data visualization features. The TensorFlow-based malware image analysis function was notably commended for its ability to perform flexible security tasks without compromising overall system performance. Overall, the findings suggest that the enterprise-level integration of TTAMS has a transformative impact on business operations in the travel sector, extending beyond internal optimization to influencing broader industry practices and standards.

TRAVEL AND TOURS MANAGEMENT SYSTEM: HUMAN RESOURCE 1 (NEW HIRE ON BOARD AND EMPLOYEE SELF SERVICE, RECRUITMENT AND APPLICANT MANAGEMENT, PERFORMANCE MANAGEMENT, SOCIAL RECOGNITION) WITH AI CANDIDATE TOOL

Jewel Anne Rosello, Jayson Aton, John Kinneth Borjal, Alyana Ovilla,
Ellaine Mae Pedere, Richelyn Villasor

Abstract

As the travel and tourism industry continues to evolve, so too do the operations of travel and tours businesses, particularly within their Human Resources (HR) departments. HR plays a vital role in managing personnel, maintaining employee records, monitoring attendance, and ensuring organizational efficiency. Challenges commonly include identifying suitable candidates, maintaining employee satisfaction, processing requests promptly, conducting real-time performance evaluations, and managing promotions and recognition. This study focuses on the development and implementation of the Travel and Tours Management System: Human Resource I, which includes modules for New Hire Onboarding and Employee Self-Service, Performance Management, Recruitment and Applicant Management, and Social Recognition enhanced by an AI-powered candidate selection tool. The Agile methodology was applied to evaluate the effectiveness of this capstone project in enhancing employee satisfaction and operational efficiency. Following Agile principles, the development process included iterative planning, designing, development, testing, and deployment to ensure the system's usability and reliability. Insights regarding the implementation and its impact were gathered through an interview with the Chief Executive. The system was developed using PHP Laravel for the backend, JavaScript with Tailwind CSS for the frontend, and MySQL for database management. The results demonstrate significant improvements in the Human Resource processes following the implementation of the capstone project. Real-time updates on employee requests enhanced both satisfaction and operational efficiency. The systematic organization and secure storage of employee data fostered a greater sense of security among staff while also reducing errors and improving data accuracy. Additionally, the integration of the AI Candidate tool streamlined the recruitment process by efficiently matching applicant skills and qualifications with job postings, thereby minimizing manual screening efforts and reducing applicant wait times. The implementation of the system demonstrates its potential not only to enhance employee satisfaction and streamline HR processes but also to contribute to the overall business performance of the company. However, challenges such as cost preparation and training management must be addressed to fully maximize the system's benefits. This research provides valuable insights for future developers and researchers aiming to modernize HR technologies within the travel and tourism industry. The study underscores the importance of continuous innovation in HR systems to meet the evolving demands of the sector and ensure sustainable operational improvements.

**TRAVEL AND TOURS MANAGEMENT SYSTEM: CORE 2 (ACCOUNT EXECUTIVE,
PASSPORT & VISA PROCESSING, CUSTOMER RELATIONSHIP MANAGEMENT,
SCHEDULE AND RATES) WITH AI-POWERED TRAVEL PLANNER
USING TENSORFLOW**

Marcelino Robles III, Lenard Avila, Angelic Grace Bautista, Zodeline Marababol,
Keannu Salvacion, Richelyn Villasor

Abstract

The Travel and Tourism Management System is designed to facilitate global tour bookings with greater efficiency. Through our research, we observed that many companies in the travel industry still rely on manual operations, resulting in inefficiencies and delays. This study focuses on streamlining essential processes such as passport and visa applications, optimizing travel schedules and pricing, enhancing customer relationship management, and improving the workflow of account executives within the travel and tour sector. Furthermore, the system integrates an AI-powered feature that enables clients to generate customized trip plans based on their preferences and budget, addressing the current lack of intuitive interfaces that support personalized and cost-effective travel planning. This research adopts the Agile Scrum methodology, enabling iterative development and continuous user feedback to enhance system functionality. The system was developed using Vue.js for the front-end, facilitating the creation of responsive and dynamic user interfaces. Laravel, an open-source PHP web framework, was used for back-end development to ensure robust application logic and scalability. Tailwind CSS was implemented for efficient and modern styling, while MySQL served as the database management system. To enable seamless communication between system modules, RESTful API architecture was integrated. Additionally, TensorFlow powered the AI-based Travel Planner, which streamlines customer inquiry handling by suggesting customized tours based on user preferences and budget, improving user experience and decision-making efficiency. The implemented system enhances the Customer Relationship Management (CRM) module by efficiently tracking customer interactions, booking history, and feedback, which facilitates personalized recommendations and strengthens customer engagement. It digitizes and automates application, validation, and documentation workflows, thereby improving processing speed and accuracy. Client interactions are automated, customer data is systematically tracked, and a centralized interface is provided for account executives to manage customer relations effectively. The system also incorporates dynamic pricing and real-time scheduling updates, ensuring customers receive accurate information on tour availability and rates. A key feature is the AI-driven Travel Planner, which empowers customers to customize their tours while simplifying decision-making by suggesting suitable destinations based on their preferences. The outcomes demonstrate the successful implementation of the system's key modules, underscoring their importance in streamlining travel and tour management processes. The study emphasizes the necessity for continuous innovation in travel and tour management systems to adapt to the evolving demands of the industry. However, challenges such as user adaptation and the need for frequent system updates were identified, highlighting areas that require ongoing attention to ensure sustained effectiveness and user satisfaction.

Keywords: travel and tourism management system, crm, ai travel planner, dynamic pricing, real-time scheduling, automation, digital transformation, customer engagement, system innovation, user adaptation

**TRAVEL AND TOURS MANAGEMENT SYSTEM: CORE I: TOUR CREATION,
CUSTOMER ITINERARY MANAGEMENT, TRANSPORTATION BOOKING AND
HOTEL RESERVATION USING AI-DRIVEN ITINERARY ADJUSTMENTS**

April Rose Gaspay, Justine Gullim, Joanna Joy Magno, Christian Sabalbarino,
Roniel John Ken Baclaya, Richelyn Villasor

Abstract

The travel and tourism sectors are rapidly expanding due to digital advancements and increasing customer demand for convenience, personalization, and responsiveness. In response, JVD Event and Travel Management Co. has developed a Smart Travel and Tours Management System (TTMS) designed to simplify tour creation, customer itinerary management, transportation bookings, and hotel reservations. The system incorporates AI-based itinerary modification capabilities, allowing for real-time adjustments that enhance the overall customer experience and operational efficiency. The system is designed with a modular architecture comprising four main modules: Tour Creation, Itinerary Management, Transport Booking, and Hotel Reservation. It leverages AI and machine learning algorithms to enable intelligent decision-making and personalization. Additionally, the system integrates with external APIs to provide real-time availability and facilitate seamless booking functionalities. The system automates key travel management activities, significantly reducing manual data entry and enabling the creation of personalized travel packages. It streamlines scheduling, transportation, and hotel reservations through an intuitive interface. The AI-based itinerary engine dynamically adjusts travel plans in real-time, enhancing both user satisfaction and staff efficiency. As a result, the system minimizes scheduling conflicts and substantially improves the overall customer experience. The Travel and Tours Management System, Core 1, leverages artificial intelligence to automate planning routines, enhance customer satisfaction, and streamline operational procedures. It intelligently responds to disruptions, ensuring consistent and reliable service delivery. Initial challenges were addressed through the implementation of robust security protocols. The system is designed with scalability in mind, supporting future enhancements such as predictive analytics, automated customer service, and multilingual accessibility.

Keywords: travel and tours management system, artificial intelligence, automation, customer satisfaction, operational efficiency, security protocols, predictive analytics, multilingual access, travel industry technology

**TRAVEL AND TOURS MANAGEMENT SYSTEM: FINANCIAL MANAGEMENT SYSTEM
(DISBURSEMENT, BUDGET MANAGEMENT, COLLECTION, GENERAL LEDGER,
ACCOUNTS PAYABLE/RECEIVABLE) WITH PREDICTIVE FINANCIAL
FORECASTING USING PREDICTIVE ANALYTIC TOOLS.**

Ryan Claire Ortega, Jobert Ken Bordamonte, Aeron Carl Cristobal,
Justine Lagario, Jenelyn Lipango, Richelyn Villazor

Abstract

Tourism activities have experienced significant growth in recent years, driven by increasing demand for unique travel experiences alongside the ongoing effects of globalization and urbanization. As market competition intensifies, travel agencies and tour operators are compelled to optimize their financial resource management. The Travel and Tours Management System (TTMS) offers a comprehensive software solution designed to enhance financial operations specifically for these businesses. This paper examines the key components of TTMS, with a particular focus on its Financial Management module, which integrates predictive analytics to provide accurate financial forecasting and support strategic decision-making. Agile development methodologies offer numerous advantages when applied to the creation of a Financial Management System for Travel and Tours Management. Fundamentally, Agile enables teams to rapidly adapt to evolving business requirements in response to the dynamic nature of the travel and tourism industry. This iterative process facilitates continuous identification and resolution of system errors and inefficiencies. Additionally, Agile promotes close collaboration between development teams and stakeholders, ensuring effective communication and the delivery of solutions that fully meet user needs. The implementation of the Travel and Tours Management System delivers multiple benefits that enhance the business performance of travel operators and agencies. It promotes financial transparency by providing comprehensive access to financial information, thereby increasing accountability. Operational efficiency is improved through automation, which significantly reduces the reliance on manual processes. Additionally, tour operators gain the capability to make data-driven decisions supported by predictive analytics and comprehensive data insights. The system also functions as a preventive tool against financial risks by offering timely alerts that detect potential bad debts and cash flow problems. Predictive analytics tools integrated within Financial Management Systems (FMS) have the potential to transform the travel and tourism industry. By leveraging predictive analytics, travel agencies can better anticipate demand for tour packages, enabling dynamic pricing adjustments, optimized inventory management, and a reduction in booking cancellations. Additionally, tour operators gain significant operational advantages by using predictive insights to forecast fluctuations in fuel prices, currency exchange rates, and weather conditions. These capabilities allow for proactive business planning, helping to mitigate financial risks and enhance overall profitability.

Keywords: travel and tours management system, financial management system, predictive analytics, travel industry, dynamic pricing, inventory optimization, risk management, automation, travel agency operations, tour operator efficiency

**TRAVEL AND TOURS MANAGEMENT SYSTEM: HUMAN RESOURCE II:
(COMPETENCY MANAGEMENT, SUCCESSION PLANNING, LEARNING
MANAGEMENT AND
TRAINING MANAGEMENT) WITH SKILLS MAPPING USING AG5**

Lawrence John Laran, John Christian Aylar, Ian Exequiel Delos Reyes,
Jaycob Magno, Dan Louie Relator, Richelyn Villazor

Abstract

JVD Event and Travel Management Company faced significant challenges in managing human resource processes, including inefficient recruitment, limited visibility of employee skills, and the absence of structured succession planning. To address these issues, this capstone project developed a Human Resource Management System (HRMS) comprising modules for Competency Management, Succession Planning, Learning Management, and Training Management. The system is integrated with Ag5 to enable real-time skills mapping. Its primary objective is to enhance strategic HR decision-making, foster employee development, and improve organizational agility. The project employed the Agile Scrum methodology, organizing development into iterative sprints with clearly defined roles, including Scrum Master, Product Owner, and Development Team. Laravel and MySQL were utilized to support back-end development, while Ag5 was integrated to facilitate advanced skill analytics. Regular interviews with JVD staff and iterative testing cycles ensured the system aligned with real operational requirements. Product and sprint backlogs were maintained to prioritize key features such as succession tracking, performance analysis, and training delivery. The implementation of the system significantly improved visibility into workforce skills and accelerated the identification of successors for critical roles. Employee engagement was enhanced through the introduction of gamified learning features. The integration of Learning Management System (LMS) and Training Management System (TMS) modules enabled real-time tracking of training progress and performance metrics. Automation of routine HR tasks reduced manual workload, while comprehensive dashboards provided actionable data to support informed human resource decision-making. The Human Resource Management System II (HR II) effectively addressed JVD's challenges related to manual processing, high employee turnover, and limited workforce insights. By centralizing HR functions and integrating Ag5 for competency tracking, the system aligned talent management strategies with organizational goals. The use of Agile methodology facilitated continuous feedback, enhancing system usability and user adoption. Ultimately, the solution supports improved workforce planning, increased employee satisfaction, and reduced attrition rates.

Keywords: human resource management system, agile scrum, competency tracking, succession planning, employee engagement, talent management, workforce planning, jvd event and travel management, ag5 integration, hr automation

**TRAVEL AND TOURS MANAGEMENT SYSTEM: HUMAN RESOURCES III (LEAVE
MANAGEMENT, TIME AND ATTENDANCE, CLAIMS AND REIMBURSEMENT,
AND PAYROLL) WITH AUTOMATED SCHEDULING
POWERED BY TENSORFLOW**

Mark Jemuel Relator, John Carl Edejer, Joriel Tejada,
Ried John Benitez, Jenelyn Nuique, Richelyn Villasor

Abstract

This capstone project introduces a Travel and Tours Management System with Human Resources III, developed for JVD Event and Travel Management Company. The system automates key HR functions, including leave management, time and attendance tracking, claims and reimbursement processing, and payroll computation. A standout feature is the integration of biometric fingerprint data, manually imported via USB, to ensure accurate and secure attendance records. The system also leverages AI-powered scheduling using TensorFlow to enhance workforce planning and operational efficiency. This capstone project presents a Travel and Tours Management System with Human Resources III, developed for JVD Event and Travel Management Company. The system streamlines core HR operations such as leave management, time and attendance tracking, claims and reimbursement processing, and payroll computation. The project adopts the Agile Scrum methodology, allowing for iterative development, continuous stakeholder feedback, and incremental refinement of system functionalities. Technically, the system is built using PHP Laravel for the backend, JavaScript with Tailwind CSS for the frontend, and MySQL for database management. A RESTful API ensures seamless communication across system modules. Attendance data is captured through biometric fingerprint devices, exported via flash drive, and manually imported into the system to maintain accuracy and security. For workforce optimization, the system integrates AI-powered scheduling using TensorFlow, which automates and enhances the planning of employee work shifts. Comprehensive testing including unit testing, system testing, and user acceptance testing (UAT), was conducted to ensure system reliability, performance, and user satisfaction. The implemented system significantly improves Human Resource Management System (HRMS) procedures at JVD Event and Travel Management Company. The integration of biometric attendance tracking effectively eliminates fraudulent timekeeping, ensuring accurate and reliable employee records. The use of TensorFlow for automated scheduling optimizes workforce deployment, reducing scheduling conflicts and enhancing operational efficiency. Furthermore, automated payroll and claims processing minimize manual errors and accelerate administrative workflows. User feedback, particularly from HR managers and employees, indicates high satisfaction levels, citing the system's user-friendly interface, enhanced transparency, and streamlined processes as key contributors to improved productivity and engagement. The findings underscore the substantial benefits of integrating AI-driven automation into Human Resource Management Systems, particularly within the travel and tour industry. By enhancing attendance tracking, leave management, and payroll processing, the system contributes to increased productivity, improved financial accuracy, and greater administrative efficiency. Despite its advantages, the project also faced challenges, including user adaptation to new technology and the need for regular system updates to maintain optimal performance. Addressing these concerns requires consistent user training, technical support, and a robust update mechanism. For future research and development, the study recommends management. Overall, biometric data synchronization to further streamline attendance tracking, AI-driven predictive analytics for proactive workforce planning and shift allocation, and expanding system integration with other enterprise tools for end-to-end HR and operations management. Overall, the project highlights the critical need for continuous innovation in

HR systems to meet the evolving demands of the travel and tourism sector and to ensure scalable, intelligent, and responsive workforce management solutions.

Keywords: travel and tours management system, human resource management system (hrms), biometric attendance, ai scheduling, tensorflow, payroll automation, php laravel, agile scrum, workforce optimization, predictive analytics, mysql, rest api, user satisfaction

**TRAVEL AND TOURS MANAGEMENT SYSTEM: LOGISTICS 1 (PROJECT
MANAGEMENT, ASSET MANAGEMENT, WAREHOUSING
AND PROCUREMENT) USING BARCODE TRACKING**

Joanna Marie Benigno, James Jerald Amenin, Christian Malto, Justine Ordoño, Richelyn Villazor

Abstract

The Travel and Tour Management System integrates specialized submodules such as project management, asset management, warehouse management, and procurement to address key operational challenges. By streamlining these areas, the system aims to enhance operational efficiency and service quality, critical factors in distinguishing industry leaders from competitors. In today's fast-paced and demanding travel sector, operational excellence has become a vital source of competitive advantage. The system is designed using a modular approach, with each submodule supporting a specific operational area. The Project Management module streamlines task scheduling, progress monitoring, and resource allocation to ensure effective project execution. The Asset Management module facilitates the proper utilization and maintenance of critical resources such as vehicles and equipment. The Warehouse Management module enhances inventory control and tracking, while the Procurement module improves supplier management and purchasing processes to ensure the timely availability of goods. Both the asset and warehouse modules integrate barcode technology to improve accuracy and efficiency in resource tracking. The system is developed using the Agile methodology, allowing for iterative enhancements based on continuous user feedback. The submodules of the Travel and Tour Management System significantly enhance logistical operations. The Warehouse Management module enables accurate tracking of inventory categories, improving stock control and retrieval efficiency. The Asset Management module boosts operational efficiency and accountability by monitoring the use and condition of essential resources. The Procurement module streamlines supply chain operations through the use of real-time data, supporting more informed and timely decision-making. Additionally, the Project Management module facilitates better coordination and integration of various logistical components, resulting in smoother execution and management of work activities. The Travel and Tour Management System efficiently integrates project management, asset management, warehousing, and procurement submodules to maximize operational effectiveness and address the complex challenges of the tourism industry. In essence, the system promotes transparency and delivers efficient service through a centralized, automated approach that eliminates redundant processes. Future enhancements may include the integration of statistical analysis tools to forecast operational demands, optimize procedures, and provide organizations with a strategic advantage in an increasingly competitive and dynamic business environment.

Keywords: travel and tour management system, project management, asset management, warehousing, procurement, automation, transparency, operational efficiency, tourism industry, statistical analysis, competitive advantage

**TRAVEL AND TOURS: LOGISTIC II (VENDOR PORTAL, AUDIT MANAGEMENT,
VEHICLE RESERVATION, FLEET MANAGEMENT, DOCUMENT TRACKING)
WITH ALTERNATIVE MAPS AND QR CODE USING ZAPIER**

Bea Bianca Almirez, Harby Dave Candido, Rixel Churls Cortez,
Daniel Mhar Buccat, Lovell Solero, Richelyn Villasor

Abstract

In today's fast-paced operational landscape, organizations must navigate complex logistics processes, including transportation, documentation, vendor coordination, and compliance monitoring. This capstone project introduces Travel and Tours: Logistics II, a comprehensive logistics management system specifically designed for JVD Events and Travel Management Co. The project was developed to address inefficiencies caused by fragmented and manual workflows in critical areas such as vendor coordination, audit management, vehicle scheduling, fleet monitoring, and document tracking. These challenges often result in delays, miscommunication, and elevated operational costs, ultimately compromising the company's ability to deliver seamless travel and event services. By integrating core logistics modules into a unified digital platform, the system aims to streamline operations, enhance communication, and reduce overall inefficiencies. An agile methodology was employed to promote iterative progress, continuous improvement, and adaptability to user feedback throughout the system's development. The development team collaborated closely with key individuals familiar with existing processes, including project sponsors, stakeholders, and the scrum master, to define the business process architecture. Proper documentation of the system played a vital role in enabling more effective planning and integration. Ultimately, this approach aims to significantly enhance operational efficiency, reduce human error, and improve overall customer satisfaction. The Travel and Tours: Logistics II system successfully streamlined a range of logistics operations, significantly improving accessibility, accuracy, and overall efficiency. By reducing manual tasks, enhancing communication between modules, and enabling real-time monitoring and automation, the system addressed many of the persistent challenges in travel and tour logistics. It proved to be user-friendly, scalable, and effective, making it a valuable tool for modernizing and optimizing operational workflows. The capstone project effectively addresses the major logistical challenges encountered by JVD Events and Travel Management Co. By integrating modules for vendor coordination, vehicle reservation, fleet management, audit automation, and document tracking using QR codes, the system streamlines operations and minimizes manual errors. Developed using the Agile Scrum framework, the project incorporated continuous stakeholder feedback, resulting in a user-friendly and efficient platform. Overall, the system enhances operational efficiency, strengthens security, and lays the groundwork for future innovations in travel logistics.

Keywords: travel and tours: logistics ii, logistics management system, jvd events and travel management, vendor coordination, vehicle reservation, fleet management, audit automation, qr code tracking, agile scrum, stakeholder feedback, operational efficiency,

**WASTE AND SANITATION MANAGEMENT SYSTEM WITH
AI-ASSISTED SCHEDULING AND ISSUES REPORTING**

Gran Railand, Josuah Damayo, Neil Jaztin Granado, Justine Young,
John Rhey Sangalang, Marifel Laynesa

Abstract

Effective waste and sanitation management is essential for protecting public health, preserving the environment, and maintaining the well-being of urban communities. As cities grow and population density increases, the challenges of managing waste collection, disposal, and sanitation services become more complex and resource intensive. Traditional systems often suffer from issues such as inconsistent collection schedules, missed pickups, overflowing bins, and slow responses to reported problems. These challenges are worsened by a limited workforce, aging infrastructure, and the rising volume of waste produced each day. The AI-assisted Waste and Sanitation Management System was developed through a systematic process that combined elements of software engineering, artificial intelligence, user-centered design, and system integration. This section details the essential components, development procedures, and evaluation methods applied throughout the system's design and implementation phases. The AI-assisted Waste and Sanitation Management System was assessed for its ability to enhance scheduling accuracy, efficiently address reported issues, and boost overall service performance. The findings presented are based on a 30-day period of simulation and field testing conducted in collaboration with a local barangay waste management unit. Incorporating artificial intelligence into waste and sanitation management offers a promising shift in how urban services are delivered. This study's findings reveal that AI-assisted scheduling and real-time issue tracking significantly enhance efficiency, responsiveness, and citizen participation. Nonetheless, a thorough evaluation of system implementation and performance is essential to understand its broader impact and potential for large-scale adoption.

Keywords: artificial intelligence, waste management, sanitation services, urban service delivery, smart scheduling, real-time reporting, system efficiency, community engagement, ai integration, scalability

WASTE COLLECTION CART ASSISTANT FOR STREET SWEEPERS USING ARDUINO

Justine Estrebor, Jay Carodan, Jhon Ian Corpin, Jm Clarence Demeterio,
Allan Dave Omboy, John Jhylo Pelisco, R-jay Pornasodoro

Abstract

The Waste Collection Cart Assistant aims to address persistent issues in waste management by introducing an automated system powered by Arduino technology and artificial intelligence. Designed to support street sweepers, this innovative device enhances the segregation and transportation of waste, promoting both efficiency and environmental sustainability. It ensures accurate sorting of biodegradable and non-biodegradable waste, helping to minimize the environmental footprint caused by improper disposal. Additionally, the cart's mobility feature improves accessibility, enabling workers to cover larger areas with less physical effort. Overall, the system seeks to create a cleaner, more sustainable environment while optimizing the performance of local waste management operations. This study utilizes an experimental research design to develop, implement, and assess the effectiveness of the Waste Collection Cart Assistant. The system aims to automate waste segregation processes while enhancing the operational efficiency of street-sweeping activities. By reducing manual effort and increasing the precision of waste classification, the system significantly improves the efficiency of waste collection. Preliminary tests demonstrate that the automated mechanism accurately identifies and separates biodegradable from non-biodegradable waste with consistent reliability. The Waste Collection Cart Assistant is an automated system developed to assist street sweepers in Barangay Sta. Monica, Novaliches, Quezon City. Incorporating Arduino-based technology and artificial intelligence, the cart aims to reduce physical workload, improve waste segregation, and enhance overall waste collection efficiency. Guided by experimental research design, the study focused on the system's development and evaluation. Results show improved operational efficiency through reduced manual labor and more accurate segregation. User feedback reported increased productivity, though minor usability issues were identified. Despite its benefits in promoting better waste management and environmental awareness, limitations such as battery dependency and occasional waste classification errors suggest the need for future enhancements, including solar charging and more advanced AI sorting features.

Keywords: waste collection cart assistant, arduino, artificial intelligence, automated waste management, street sweepers, waste segregation, efficiency, environmental awareness, battery dependency, smart waste system

**DEVELOPMENT OF AUTOMATED MECHATRONICS PRODUCT ORGANIZER
USING ARDUINO MEGA AND ESP32 WITH VERTICAL ACTUATOR**

Christian Lloyd Maltizo, Jigger Kent Pelariz, John Christian Candano, John Genesis Cayabyab,
John Mark Aries Casimiro, Mary Joyce Acob, Reynante Ponay

Abstract

The automated mechatronics product organizer is designed to optimize the management, sorting, and storage of products in industrial environments such as warehouses, manufacturing facilities, and retail operations. This system integrates mechanical, electronic, and computing technologies to automate repetitive and labor-intensive inventory tasks. It applies the principles of mechatronics, a multidisciplinary field combining mechanical engineering, electronics, computer science, and control systems, to develop an efficient and intelligent solution for product organization and inventory handling. The study employed the Experimental Prototype Development Method to design and construct the automated organizer. The development process involved identifying the required materials, assembling an initial prototype, conducting evaluations, and refining the system through iterative enhancements. The prototype utilized an Arduino Mega 2560 as the main microcontroller, supported by ESP32 for wireless connectivity and a vertical actuator for product movement and sorting. These components were selected to ensure functionality, expandability, and real-time control. The integration of mechatronics in manufacturing operations demonstrated multiple advantages, including increased productivity, operational efficiency, enhanced safety, and reduced labor costs. The system effectively automated tasks such as sorting and organizing products, minimizing manual errors and improving process accuracy. The prototype proved capable of performing multiple tasks with precision, confirming its potential for industrial application. The development of the automated product organizer using Arduino Mega and ESP32 successfully met its objective of providing a sustainable and efficient storage management system. The combination of sensors, actuators, and wireless control created a functional and scalable solution. The accuracy and reliability of the system reduce operational errors and contributes to a safer and more streamlined working environment. Future improvements may focus on increasing storage capacity, integrating smart analytics for inventory tracking, and enhancing the system's adaptability for various industrial use cases.

Keywords: mechatronics, automated product organizer, arduino mega, esp32, vertical actuator, inventory management, manufacturing automation, prototype development, industrial engineering, smart storage system

**MANUFACTURING MANAGEMENT SYSTEM: CORE 1 PRODUCTION AND PLANNING
(MASTER PRODUCTION SCHEDULING, MATERIALS REQUIREMENTS PLANNING,
WORK ORDER MANAGEMENT, BILL OF MATERIALS MANAGEMENT)
WITH DEMAND FORECASTING USING TENSORFLOW**

Patrick Vedaño, Francisco Padullo, Jervick Barbecho, Jerson Cornelio,
Genevieve Bantilan, Rommel Constantino

Abstract

In the manufacturing sector, optimizing efficiency and responsiveness is critical to sustaining operational competitiveness. Integrating core production functions such as master production scheduling, materials requirements planning, work order management, and bill of materials handling into a unified digital system can significantly improve operational performance. This study presents a Manufacturing Management System that incorporates TensorFlow-based demand forecasting to enhance planning accuracy and overall productivity. Historical datasets, including sales, inventory, and production records, were collected from a manufacturing firm to train deep learning models using TensorFlow. Neural networks and time series forecasting techniques were applied to generate demand predictions. These forecasts were embedded within the master production scheduling and materials requirements planning modules to support dynamic decision-making. Additional modules for work order and bill of materials management enabled coordinated execution across production tasks. System validation involves testing with real-world data to evaluate forecasting accuracy and operational performance. The TensorFlow-driven forecasting model reduced prediction errors by over 20% compared to traditional forecasting approaches. This resulted in more accurate production scheduling, better inventory optimization, and reduced instances of stockouts. The work order module enabled more streamlined task execution, increasing throughput and aligning production closely with demand. Collectively, the system improved manufacturing agility, resource utilization, and cost efficiency. The study demonstrates that integrating AI-based demand forecasting into production planning significantly enhances manufacturing performance. While deep learning models outperform conventional methods, challenges such as data quality and computational resource demands persist. Future development may explore real-time data integration and broader AI applications to further optimize manufacturing workflows. The system validates the effectiveness of using TensorFlow for demand forecasting in core production planning, highlighting its role in building resilient and responsive manufacturing systems.

Keywords: manufacturing management, demand forecasting, tensorflow, production scheduling, materials requirements planning, work order management, bill of materials, neural networks, deep learning, operational efficiency

**SUGARCANE BAGASSE FUEL PELLET: CHARACTERIZATION ON PHYSICAL
AND THERMOGRAVIMETRIC COMBUSTION PROPERTIES**

Mark Ray Latoza, Khevin Gabriel Buan, Justine Mae Nobresala,
George Vun Juan, Jomari Añago, Roldan Bamondi

Abstract

Waste management continues to be a pressing global issue, with sugarcane bagasse, an agricultural byproduct of sugar production being a significant contributor. Improper disposal or open burning of bagasse releases pollutants such as volatile organic compounds (VOCs) and carbon monoxide (CO), posing environmental and public health risks. This study explores an alternative use for sugarcane bagasse by converting it into fuel pellets, offering a sustainable and eco-friendly biofuel option. The research focuses on characterizing the physical and thermogravimetric combustion properties of the pellets to assess their viability as a renewable energy source. The study adopted quantitative experimental research design and utilized purposive and stratified sampling techniques. Ten respondents, composed of five environmentalists and five chemistry teachers, evaluated the fuel pellets using a validated survey questionnaire. The pellets were produced using sugarcane bagasse, cornstarch, and water, processed through a pelletizing machine. The study measured acceptability in terms of material composition, procedural methodology, combustion behavior, cost-effectiveness, and overall presentation. Thermogravimetric analysis (TGA) was used to evaluate the combustion profile. Statistical tools, including weighted mean, t-test, and F-test, were used to interpret the data. Results indicated that both groups of respondents rated the fuel pellets as "highly acceptable." Environmentalists gave an overall weighted mean of 3.50 with a variance of 0.315, while chemistry teachers rated the product slightly higher with a mean of 3.80 and a variance of 0.019. A t-computed value of 0.368 was recorded against a t-critical value of 2.306 at a 0.05 alpha level (two-tailed) with 8 degrees of freedom, indicating no significant difference between the two groups' evaluations. Suggestions from both respondent groups were noted for further development of the product. Recommendations included improving packaging aesthetics, sealing the product with plastic, adding additives to eliminate odors, ensuring uniform pellet measurements, and enhancing labeling through clear and informative wording. These enhancements are expected to improve the marketability and usability of the sugarcane bagasse fuel pellets as a sustainable biofuel solution.

Keywords: sugarcane bagasse, fuel pellet, biofuel, thermogravimetric analysis, combustion properties, waste management, renewable energy, materials science

**SELF-PARKING SYSTEM: BUILD AN AI SYSTEM THAT ENABLES
VEHICLES TO PARK FREE IN VARIOUS ENVIRONMENTS**

Sarah Mae Villosillo, Janina Eleane Amor, Ashley Lizada,
Johnlouie Padua, John Carlos Zausa, Carlito Gabriel

Abstract

Self-parking systems, which utilize sensors to enable automatic parking, address the growing issue of urban congestion caused by the increasing number of vehicles. These systems help mitigate the negative effects of inefficient parking on traffic flow and resource management. This study highlights the importance of smart parking technologies in optimizing space utilization, reducing emissions, and promoting sustainable urban development by offering more efficient and eco-friendly parking solutions. This study employs descriptive research design and utilizes purposive sampling to gather insights from ten selected respondents, consisting of five Mechanical Engineers and five Information Technology experts. A validated survey questionnaire was administered to collect data on demographic profiles, the acceptability of self-parking systems, encountered challenges, and proposed solutions. Data was collected through paper-based surveys and analyzed using descriptive statistics to effectively summarize the key findings. The results of the analysis, which evaluated materials, reliability, procedural methodology, system accuracy, and presentation, indicate an overall rating of "acceptable." The group of Mechanical Engineers recorded an overall mean of 3.03, with a variance of 0.332. The Information Technology Experts reported a slightly higher overall mean of 3.11, with a variance of 0.217. Both groups shared a significance level (alpha) of 0.05, a t-critical value of 2.306, and a computed t-value of 0.126. Since the t-computed is less than the t-critical, the findings suggest that there is no statistically significant difference between the assessments of the two groups. For the further enhancement and improvement of the project, the following recommendations are proposed based on the respondents' feedback: First, the use of branded and high-quality materials is advised to minimize the risk of device malfunction. Second, greater attention should be given to the core functionality of the device to ensure user safety and prevent accidents. Third, the procedural steps should be clearly defined and easy to follow to support proper implementation and maintenance. Lastly, it is important to remain focused on the objectives of the study and consider the potential benefits it can offer to end-users.

Keywords: self-parking system, smart parking, descriptive research design, purposive sampling, mechanical engineers, it experts, system reliability, procedural methodology, t-test analysis, user safety, device functionality, branded materials, step-by-step pro

**A COMPARATIVE STUDY OF HDP-2200 OFFSHORE PATROL VESSEL OF THE
PHILIPPINES AND DDG X DESTROYER NAVAL SHIP OF USA**

Jamela Cuasito, Jamela Cuasito, Jairus Ace Kis-ing, Reinard Gavrel Rabanal,
Jhaica Tariao, Jake Valenzona, Prince Michael De Leon

Abstract

This study compared expert perceptions of the Philippine HDP-2200 Offshore Patrol Vessel (OPV) and the U.S. DDG(X) destroyer to explore differing approaches to naval design within the context of Asia-Pacific maritime security. The research aimed to identify key factors influencing naval power projection decisions and to contribute to broader discussions on maritime security in the region. A quantitative comparative research design was employed, using a validated survey questionnaire administered to ten maritime professionals, five naval architects and five ship designers. The questionnaire evaluated both vessels in terms of fuel efficiency, passenger capacity, operational effectiveness, speed, and safety features, using a Likert scale. Data analysis involved frequency counts, percentages, weighted means, and the Mann-Whitney U test to determine significant differences in assessments between the two respondent groups. Expert assessments consistently rated the DDG(X) higher than the HDP-2200; however, the extent of this difference varied notably between naval architects and ship designers. Ship designers reported a significantly larger performance gap ($U = 99$, $p = 0.00652$) compared to naval architects ($U = 157$, $p = 0.25014$). Overall, the difference in evaluations between the two groups was statistically significant ($U = 533$, $p = 0.01046$), indicating that professional background plays a significant role in the assessment of naval vessel performance. The findings underscore the importance of incorporating diverse expert perspectives when evaluating naval vessel performance. Future research should explore the specific factors contributing to these differing assessments and examine their implications for naval design and acquisition strategies in the Philippines.

Keywords: asia-pacific maritime security, naval power projection, naval vessel performance

**ASSESSMENT OF TERMINAL POLICY ON THE SELECTED BUS COMPANY
ALONG NOVALICHES, QUEZON CITY**

Zalvie Parce, Mary Rose Oseo, Reina Mitzi Navia, Joshua Pauliana Pomen,
Emanuel Joseph Tolentino, Alezhandrea Clio Barrios

Abstract

The study entitled "Assessment of Terminal Policy on Selected Bus Companies Along Novaliches, Quezon City" aims to assess the effectiveness of terminal policies implemented by Citybus and Pascual Liner. It focuses on evaluating commuter satisfaction, safety, and security within these transport systems. The research explores how terminal policies impact the overall commuter experience, with particular emphasis on payment methods, ticketing systems, and the organization of loading and unloading operations. In response to the high number of commuters using Citybus and Pascual Liner services in the area, the researchers adopted a descriptive research approach to assess the experiences of 60 regular commuters. A Likert scale survey was utilized as the primary data collection tool to evaluate key aspects of terminal policies, particularly in terms of security measures and payment systems. Demographic analysis of the respondents revealed that the majority were male, aged between 18 and 22 years old. The results of the study suggest that commuters, particularly those using cash payments and concerned with fare accuracy, are generally satisfied with the existing ticketing and payment systems. However, the findings also highlight areas needing improvement, specifically in the loading and unloading processes. Respondents stressed the importance of improved communication between drivers and conductors, as well as the need for clearer signage and announcements to ensure smoother and more organized boarding and disembarkation. The survey findings indicate a strong need for regular bus maintenance, improved emergency response procedures, and enhanced security features such as CCTV surveillance and real-time incident reporting systems. The most pressing issues identified by passengers include overcrowding, insufficient facilities, and security risks. The study concludes that strengthening terminal policies is essential to ensuring a safer, more efficient, and commuter-friendly transport system. To address these concerns, the study recommends upgrading infrastructure, standardizing operational procedures, improving communication between staff and passengers, and enforcing stricter security protocols. These proposed enhancements are intended to increase passenger safety, satisfaction, and overall confidence in using public bus transportation services.

Keywords: public transportation, bus maintenance, terminal policies, passenger safety, overcrowding, emergency procedures, cctv surveillance, infrastructure improvement, security measures, commuter satisfaction

**FACTORS AFFECTING THE SUSTAINABILITY OF VISITOR'S
ENGAGEMENT ISSUES IN ARROCEROS, FOREST PARK**

Eron Alviar, Jasmine Agullion, Kristiana Asuncion, Kyla Marie Infante,
Analyn Jaldo, Christine Aliñabo

Abstract

This study aims to identify the factors affecting the sustainability of visitor engagement in Arroceros Forest Park and to propose improvements that can enhance the overall visitor experience in this urban green space. As urban parks play a vital role in promoting community health and environmental well-being, it is essential to examine how visitors interact with such areas and the elements that influence sustained engagement. The study investigates several key factors that contribute to visitor satisfaction, including quality of experience, accessibility, safety and security, available amenities, and community engagement. A combination of surveys and interviews was conducted among park visitors to assess their perceptions and experiences. These tools helped gather relevant data on challenges affecting the sustainability of visitor engagement. Findings revealed that while visitors appreciate the park's natural environment and recreational offerings, issues such as limited accessibility, concerns about safety, and inadequate amenities negatively affect their overall satisfaction. The study also emphasized the importance of fostering community involvement as a means to strengthen visitor connection and promote responsible park usage. Based on the results, the study proposes an improvement plan focused on enhancing accessibility, safety, amenities, and community engagement to ensure the long-term sustainability of visitor interaction with Arroceros Forest Park. These recommendations aim to improve the quality of urban park experiences and support the park's role as a valuable resource for the surrounding community.

Keywords: visitor engagement, urban parks, sustainability, accessibility, community participation, public spaces, arroceros forest park

**AN EVALUATION ON THE POLICE PERSONNEL INTERACTION
WITH THE COMMUNITY IN CRIME REDUCTION**

Joanne Mae Bation, Neicah Puyugao, Angelica Mayo, Javelyn Garibay,
Ej Rombaoa, Eduardo Villaruel

Abstract

This study explores the interactions between the police and the community at Station 4 in Novaliches, Quezon City, with a particular focus on the impact of community engagement in crime prevention. It examines the views of both residents and police officers on community-oriented policies, police visibility, and awareness campaigns, while also analyzing how demographic factors influence their perspectives. Employing a mixed-methods approach, the research aims to identify existing challenges and recommend strategies to improve police-community relations and promote a safer, more cooperative environment. This study utilized a mixed-methods approach, combining both quantitative and qualitative data collection. Participants were selected through purposive sampling to ensure representation from both community members and police personnel at Station 4. Quantitative data were collected using structured questionnaires that assessed perceptions of community-oriented policing, police visibility, and awareness campaigns through a Likert scale. To complement this, qualitative data were gathered through semi-structured interviews, exploring participants' experiences and recommendations for improving police-community engagement. Additionally, demographic information such as age, gender, and educational attainment was collected to support data analysis. The findings reveal that 66% of respondents were male, mostly aged 34–41, with 54% having completed higher education. Respondents generally agreed on the importance of community-oriented policies, police visibility, and awareness campaigns, as indicated by weighted mean scores ranging from 3.28 to 3.34. Despite this, a key challenge identified was the lack of trust and communication between the police and the community, acknowledged by 84% of participants. To address this issue, 88% recommended improving communication and engagement efforts as the most effective solution. The findings highlight the need for a comprehensive approach to improving police-community relations. While respondents generally viewed existing strategies favorably, the prevailing lack of trust and communication demands urgent attention. Recommended actions include strengthening communication channels (e.g., community meetings, social media), enhancing community policing programs, promoting transparency and accountability, and providing cultural sensitivity training for officers. Expanding educational and awareness campaigns is also essential. Future studies should evaluate the impact of these measures on crime reduction and public perception. Ultimately, the study emphasizes the importance of collaboration between police, barangay officials, and the community to rebuild trust and ensure public safety.

Keywords: police-community relations, trust and communication, community policing, transparency, accountability, cultural sensitivity training, public safety, educational campaigns, crime prevention, barangay collaboration

**ASSESSMENT OF SUSTAINABLE TOURISM MEASURES IMPLEMENTED AT RIZAL
PARK LUNETA: BASIS FOR SUSTAINABLE TOURISM DEVELOPMENT PLAN**

Shenna Rose Gile, Roxan Babe Matibag, Jay Ocampo, Arman Petalino,
Mary Grace Sabiles, Rosalie Jacinto

Abstract

This study aims to evaluate the sustainable tourism practices implemented at Rizal Park, a renowned historical and cultural landmark in the Philippines. Also known as Luneta Park, it is a significant urban green space located in Ermita, Manila. The research focuses on assessing existing sustainability efforts while identifying key challenges such as inadequate infrastructure development and the high cost of food and souvenir items. By addressing these concerns, the study seeks to contribute to the development of a comprehensive Sustainable Tourism Development Plan that balances environmental conservation with enhanced visitor satisfaction and cultural preservation. Data collection was conducted through on-site observations and the distribution of visitor surveys, aimed at gaining insights into the experiences, satisfaction levels, and perceptions of individuals visiting Rizal Park. The study identified several key issues that need to be addressed to enhance sustainable tourism at Rizal Park. One major concern is the need for improved infrastructure to elevate the overall visitor experience while ensuring environmental sustainability. This includes constructing modern visitor facilities, upgrading pathways and lighting, adding more public restrooms, and enhancing the park's aesthetics without compromising its historical value. Another notable concern is the high cost of food and souvenirs within the park, which may deter local visitors. The study highlights how pricing affects accessibility and recommends measures to make tourism more affordable, while still supporting the income of local vendors. The Sustainable Tourism Development Plan seeks to enhance the long-term viability of Rizal Park by upgrading infrastructure, incorporating environmentally friendly technologies, and addressing the issue of high prices for food and souvenirs. The plan also proposes a business expansion model that emphasizes eco-conscious practices, improved facilities, and fair pricing mechanisms. Collaboration with private enterprises, local government units, and non-governmental organizations is essential to effectively address these challenges. Through the implementation of these strategies, Rizal Park can become a more appealing and sustainable tourist destination, minimizing environmental impact while ensuring that future generations can continue to enjoy its cultural and historical significance. This initiative also positions Rizal Park as a benchmark for sustainable tourism development both locally and internationally.

Keywords: sustainable tourism, rizal park, infrastructure development, green technologies, fair pricing, business expansion model, environmental sustainability, public-private partnership, tourism planning, cultural preservation

LOCAL GOVERNMENT UNIT 1: PUBLIC MARKET MONITORING SYSTEM (VENDOR PORTAL, VENDOR MAPPING AND FEEDBACK SERVICES)

Vhea Lyzel Egida, Rovigrace Anne Robles, John Philip Alimorong,
Bn Laserna, Nelson Reyes, Richelyn Villasor

Abstract

With the rapid advancement of technology, there is a growing need to modernize the monitoring and management of public markets. This study proposes the implementation of the Public Market Monitoring System (PMMS), which includes a vendor portal, vendor mapping, and feedback services. The system aims to address challenges faced by market masters, vendors, and customers by providing an integrated digital platform that facilitates stall management, vendor oversight, and improved communication among stakeholders. The system was developed using microservices architecture and Agile Scrum methodology to ensure flexibility and continuous improvement. Core features include vendor registration, stall allocation, payment tracking, violation monitoring, customer feedback collection, and real-time notifications. API integrations were implemented to enable seamless data exchange with local government unit (LGU) systems. Separate user interfaces were designed for administrators and vendors to enhance usability. Security and data privacy protocols were incorporated throughout the system, and user experience was prioritized through a clean design and navigational mapping features for market accessibility. The implementation of PMMS resulted in increased efficiency for market masters, as manual processes were reduced through automation. The feedback system, powered by sentiment analysis AI, enabled market administrators to categorize and respond to feedback more effectively. Users were able to submit reports and suggestions through the system, allowing timely resolution of concerns. The mapping feature improved the ability of vendors and customers to locate stalls, facilitating smoother operations and enhancing the overall market experience. This study demonstrates the potential of technology to modernize traditional public market operations. The Public Market Monitoring System improved administrative efficiency, enhanced transparency, and fostered better service delivery. It also supported more informed decision-making and active communication between stakeholders. The system is expected to contribute significantly to the digital transformation of market governance at the barangay level and provide a replicable model for other LGUs aiming to modernize local economic infrastructure.

Keywords: public market monitoring, vendor portal, vendor mapping, feedback services, sentiment analysis, market governance, community development, digital market system

**A COMMUNITY BASED – FIRE PREVENTION PROGRAM FOCUS IN BARANGAY
FOREST HILL SUBDIVISION NOVALICHES QUEZON CITY: AN ASSESMENT**

Joverlyn Blanco, Cedric Dela Cruz, Kristine Joanah Digma,
Donalyn Pelenio, Precios Angel Andaya, Dr. Myrna Cuntapay

Abstract

This study on fire prevention focuses on the practices and measures taken to reduce the risk of fire and minimize its impact. It involves identifying potential fire hazards, implementing safety protocols, and educating individuals on how to prevent fires. One key element of fire prevention is fire safety education, which teaches people about fire risks, safe practices, and appropriate responses in the event of a fire. This study will examine the effectiveness of the Community-Based Fire Prevention Program focused on Barangay Forest Hill Subdivision in Novaliches, Quezon City. The participants will be divided into three groups, comprising a total of fifty (50) respondents: ten (10) firefighters, thirty (30) residents, and ten (10) barangay officials. The researchers will ensure that all respondents are capable of competently and adequately completing the questionnaire and providing the necessary information for the study. A convenience sampling technique will be employed for participant selection. Community-based fire prevention programs face several challenges that hinder their effectiveness in reducing residential fire incidents. One of the most significant issues is the lack of community participation, as many residents do not actively engage in fire prevention efforts due to limited awareness, interest, or trust in such programs. Without active involvement, critical initiatives such as fire safety training, emergency preparedness drills, and hazard identification become less effective, thereby increasing the risk of fire-related disasters. Furthermore, limited financial resources and personnel present additional obstacles, making it difficult to carry out essential preventive measures like regular fire drills, public education campaigns, and the distribution of fire safety equipment. Without sufficient funding and manpower, these efforts remain inadequate and less impactful. Active community participation is essential to the success of fire prevention programs, as it raises awareness and understanding of critical fire safety measures. Residents are encouraged to take part in fire drills, safety training sessions, and emergency response initiatives to ensure preparedness in the event of a fire. Increased awareness and engagement will help reduce the occurrence of fire-related incidents and contribute to a safer and more resilient living environment.

Keywords: fire prevention, drrm, fire safety education, emergency response programs

**A COMPREHENSIVE BARANGAY INTERVENTION PROGRAM TO REDUCE
GANG ACTIVITIES IN BAGUMBONG CALOOCAN CITY**

Edrian Areglamos, Kent Garao, Mark Angelo Hamtig,
Rolly Peralta Jr, Irene Gaviola

Abstract

The rising concern over gang activities presents a significant challenge, as these groups are often involved in criminal and antisocial behavior that endangers public safety and undermines community well-being. Despite numerous efforts to curb such activities, many communities, especially at the local level, continue to struggle with identifying and implementing effective solutions. This study aims to assess the effectiveness of a comprehensive barangay intervention program in reducing gang-related activities in Bagumbong, Caloocan City. A quantitative research design was deemed the most appropriate approach for assessing the effectiveness of a comprehensive barangay intervention program aimed at reducing gang activities in Bagumbong, Caloocan City. Data were collected from 50 respondents, divided into three groups: 40 community residents of Barangay Bagumbong, five barangay officials or volunteers, and five social workers assigned to the area. Structured questionnaires were used to gather information on respondents' demographic profiles and their perceptions of the program's impact. The demographic profile of the respondents showed that the majority were aged 18–25, accounting for 50% of the total sample ($n = 25$). The most pressing concern identified was corruption and collusion with gangs, cited by 82% of respondents as a critical issue. This was followed closely by a lack of community engagement and participation, as well as insufficient resources and funding, both reported by 80% of respondents. These findings reflect the community's ongoing struggle to address gang-related issues due to limited support and involvement. The study revealed that after-school education programs and community engagement initiatives significantly contributed to reducing gang recruitment and violence. Furthermore, mentorship programs and economic empowerment strategies offered alternative opportunities for at-risk youth. Regular progress tracking and gang activity surveys were also found to be essential in monitoring and evaluating the program's effectiveness. The study underscores the importance of community-based approaches in preventing gang involvement and promoting public safety. Key recommendations include strengthening family support systems, expanding access to education and employment opportunities, and fostering positive peer relationships. The findings provide valuable insights for policymakers and local authorities in designing sustainable and effective crime prevention strategies.

Keywords: gang activities, criminal behavior, antisocial behavior, public safety, sustainable crime prevention strategies

**A COMPREHENSIVE CRIME PREVENTION PROGRAM IN
BARANGAY 171 CALOOCAN CITY: A PROPOSAL**

John Buere, Reymart Aballa, Jahmerson Naboya, Harence Nicanor Noro,
Angel Mark Valdepeña, Egdar Reyes

Abstract

A comprehensive crime prevention program is essential for fostering a safe and secure community. Utilizing participatory approaches empowers citizens and harnesses local knowledge to address crime effectively. This report highlights the importance of community engagement, effective prevention strategies, and the role of collective efforts in enhancing public safety. The researchers aim to explore crime prevention through active community involvement by engaging the residents of Barangay 171. The research team employed a quantitative approach to assess the impact of crime prevention measures in Barangay 171. A purposive sampling method was chosen to thoughtfully and intentionally select participants based on relevant criteria. The study focuses on the perspectives and experiences of individuals in Barangay 171, Caloocan City. The participant group includes 30 residents, 10 barangay officials with a minimum of five years of service, and 10 police officers from Sub-station 9. All participants will be surveyed during the academic year 2024–2025. The results of the study reveal that the majority of respondents are male, primarily within the age groups of 18–25 and 26–33 years old. Respondents strongly agreed with key elements influencing the assessment of the crime prevention program in Barangay 171, Caloocan City, particularly in terms of the economic program, enhanced safety and security facilities, and police collaboration initiatives. The study engaged 30 residents of Barangay 171, 10 barangay officials with at least five years of service, and 10 members of the Philippine National Police (PNP), totaling 50 respondents. A survey questionnaire served as the primary instrument for data collection. Residents of Barangay 171 strongly support ongoing efforts in economic development, safety infrastructure, and police–community collaboration. To build on this momentum, the barangay will strengthen partnerships with law enforcement by organizing regular town hall meetings focused on crime prevention and community concerns. To address the current lack of public awareness, officials will launch a targeted campaign to educate residents about their role in maintaining safety, supported by workshops and seminars on recognizing and reporting suspicious activity. Law enforcement will also assist in forming neighborhood patrol groups, encouraging residents to actively monitor and report issues. This unified approach aims to deepen trust, enhance communication, and improve overall crime prevention within the community.

**A COMPREHENSIVE CYBERCRIME AWARENESS PROGRAM IN BARANGAY
NAGKAISANG NAYON NOVALICHES QUEZON CITY: A PROPOSAL**

Myles Viray, Jovelyn Gargar, Niño Go, Marlyn Mengote,
Arnisah Tampla, Irene Gaviola

Abstract

Cybercrime is a broad term that encompasses various illegal activities carried out through digital networks and devices. These crimes often involve the use of technology to commit fraud, identity theft, data breaches, malware attacks, and other malicious acts. This study aims to assess a comprehensive cybercrime awareness program in Barangay Nagkaisang Nayon, Novaliches, Quezon City, with a focus on advocacy, collaboration, and implementation planning. It also identifies key challenges and proposes recommendations for improvement. This study involved 50 respondents, consisting of 30 community residents, 10 barangay officials, and 10 members of the PNP Anti-Cybercrime Group. A random sampling technique was employed to ensure fair representation of perspectives. The study utilized quantitative research design, with data collected through a structured survey questionnaire. For the administration and retrieval of the instrument, the researchers personally approached the respondents, obtained informed consent, and distributed the surveys. Upon completion, the questionnaires were collected and securely stored to maintain confidentiality. The findings revealed that, in the assessment of the program, Advocacy received an overall weighted mean rating of 3.66, interpreted as Strongly Agree. Collaboration obtained an overall weighted mean rating of 3.62, also interpreted as Strongly Agree. Similarly, the Implementation Plan received a weighted mean rating of 3.62, indicating a Strongly Agree interpretation as well. Stay vigilant about online security, report any suspicious activity promptly, and actively share your experiences and feedback. Your insights play a crucial role in shaping effective cybercrime prevention strategies.

**A COMPREHENSIVE SCHOOL BASED INTERVENTION PROGRAM
TO REDUCE CHILD IN CONFLICT WITH THE LAW**

Archer John Roldan, Joseph Angelo Basia, Renz Maceda, John Paulo Mangabang,
Angelo Velano, Denise Ann Osorio

Abstract

This study focuses on the pressing issue of children in conflict with the law (CICL) in the Philippines, highlighting the need for a comprehensive strategy to address the root causes of juvenile delinquency. Contributing factors include broken families, unemployment, lack of education, and peer pressure. In addition, systemic challenges such as inadequate law enforcement policies, poor rehabilitation services, and societal apathy, hinder effective reform and reintegration efforts. This study aims to evaluate a comprehensive school-based intervention program designed to reduce the incidence of CICL through targeted demographic and intervention activities, including parental involvement, outreach through the Alternative Learning System (ALS), and life skills education. The study employed a quantitative research method with random sampling to identify respondents, which included 15 students, 5 parents, 5 teachers or professors, 3 school authorities, and 2 guidance counselors. Data collection was conducted at Maligaya High School, where the researchers secured permission, explained the content of the questionnaire, and ensured confidentiality throughout the process. The data collection took approximately 15 minutes per respondent. The information gathered was statistically analyzed to assess the effectiveness of the intervention program and to profile respondents based on age, gender, and educational attainment. The data revealed that the majority of respondents were male students aged 17 or younger. The composite mean scores indicated strong support for the intervention techniques employed. However, challenges such as societal stigma were identified as significant barriers to the program's success. The most commonly cited solution to these challenges was the need for adequate training for staff and volunteers involved in the intervention programs. The report highlights the need for alternative solutions to address the challenges faced by Children in Conflict with the Law (CICL). While therapeutic programs are generally well-received, the study emphasizes that addressing social stigma is crucial to improving their overall effectiveness. Proper training for staff and volunteers is essential to ensure successful program implementation. Additionally, the study recommends strengthening family support systems, expanding access to education, and increasing public awareness to combat stigma. It advocates for a shift in focus toward prevention, education, and rehabilitation, rather than punitive measures.

Keywords: childhood delinquency, children in conflict with the law, cicl, youth intervention

**A COUNTER MEASURE INITIATIVES TO PREVENT CYBER BULLYING AMONG
BESTLINK COLLEGE OF THE PHILIPPINES CRIMINOLOGY STUDENTS**

John Dhenzel Dizon, Nisren Ali, Mariella Monique Fernando,
Alvin Sadullo, B-jay Allorde, Dr. Antonio Dawagan Sr.

Abstract

Cyberbullying has a significant negative impact on mental health, particularly in contributing to depression among children and adolescents. However, its effects on other conditions, such as anxiety, remain less well understood, indicating a need for further research and targeted interventions. Social media platforms should enhance their reporting systems and implement algorithms to detect harmful content more effectively. Schools are encouraged to provide digital literacy education, promote peer support systems, and establish accessible reporting mechanisms. In addition, policies should ensure that perpetrators are held accountable while offering comprehensive support to victims. Future research should focus on evaluating existing initiatives and identifying gaps in victim support services. This chapter details the research design, participants, and tools used. A questionnaire was administered to 50 Criminology students at Bestlink College of the Philippines, Bulacan Campus, using purposive sampling. The questionnaire covers individual, parental, and legal countermeasures against cyberbullying. It will be reviewed and validated before finalization. Data will be analyzed statistically after collection. This chapter analyzes the data presented in tables. Most respondents (62%) are aged 18-22, with a near-equal gender distribution (52% female, 48% male). The majority are 2nd-year students (34%), followed by 3rd-year students (30%). For countermeasures, the highest-ranked individual strategy is "Use of Technology" (mean 3.16), with an overall effectiveness score of 3.07. "Data Sensitivity Awareness" leads parental countermeasures (mean 3.26), and "Ethical Monitoring Practices" ranks highest for monitoring (mean 3.20). Legal countermeasures like "Evidence of Security Threats" scored the highest (mean 3.36), and cyberbullying advocacy, with a mean of 3.11, was also effective. Overall, the data suggests that the countermeasures to prevent cyberbullying are generally effective across various categories. This study evaluated countermeasures for preventing cyberbullying among criminology students at BCP. The findings revealed that most respondents were between the ages of 18 and 30. Effective individual strategies included digital footprint analysis and behavioral pattern recognition. Parental monitoring and the establishment of clear boundaries also proved effective, although the enforcement of these rules could be strengthened. Legal measures, such as reporting protocols and advocacy efforts, were successful in raising awareness. Overall, while existing countermeasures are generally effective, there is a need for improved data security education and increased parental involvement. The study recommends the implementation of an action plan to enhance these strategies and more effectively combat cyberbullying.

Keywords: cyberbullying, mental health, social media

**A PRACTICAL APPROACH ON DISASTER PREPAREDNESS AMONG RESIDENTS OF
LUCAS CUADRA STA QUITERIA CALOOCAN CITY: A PROPOSAL**

Rolly Ortega, Ana Mae Ambalan, Georgie Bulabos, Shiela Mae Boduso,
Chammy Curayag, Jenalyn Misolas, Dr. Myrna Cuntapay

Abstract

Disasters, whether natural or man-made, pose significant threats globally, affecting countless communities including those in the Philippines. This study aimed to strengthen disaster preparedness among the residents of Lucas Cuadra, Sta. Quiteria, Caloocan City. It examined the demographic profile of the respondents and assessed their perceptions of common disasters about disaster risk assessment, hazard identification, and economic impact. Additionally, the study sought to identify challenges to preparedness and propose strategies for improving community resilience. The study involved 50 purposively selected respondents, including 30 residents, 10 barangay officials, and 10 members of the emergency response team. A descriptive research design was employed. Prior to data collection, the researchers secured the participants' consent. Survey questionnaires served as the main data-gathering tool, which were personally distributed and collected by the researchers upon completion. The results show strong respondent agreement on the effectiveness of disaster preparedness efforts, with weighted mean scores of 3.48 for disaster risk assessment programs, 3.44 for hazard identification, and 3.42 for economic components. A key issue identified was the shortage of trained responders or volunteers. This highlights the need for targeted recruitment and the provision of additional training programs to strengthen community disaster response capacity. The study revealed that most respondents were male, aged 51 and above, and high school graduates. They expressed strong agreement on key aspects of disaster preparedness, particularly disaster risk assessment, hazard identification, and economic components. The most frequently cited issue was the lack of trained responders or volunteers. To address this, the study recommends the implementation of recruitment and training programs to build local response capacity. Additional suggested interventions include increased financial support from local government units (LGUs) and stronger collaboration with non-governmental organizations (NGOs) and public health institutions. Comprehensive recommendations were provided for residents, the community, barangay officials, LGUs, NGOs, and future researchers to enhance disaster preparedness and improve community resilience.

Keywords: disaster preparedness, risk assessment, hazard identification, economic components, trained responders, community resilience, local government units (lgus), non-governmental organizations (ngos), public health institutions, recruitment and training p

A PROPOSED MEASURE TO RESOLVE OVERCROWDING IN JAIL INSTITUTION

Jonnary Trabocon, Niel Joshua Cabarles, John Archie Amistoso,
Carlos Joseph Mendiola, Jed Nichols Nicolas, Edgar Reyes

Abstract

This chapter encompasses the study's history, theoretical framework, conceptual framework, problem statement, significance, scope and limitations, and definitions of words. This chapter presents the research methodology used to explore solutions for overcrowding in jail institutions. It covers research design, respondent selection, sampling methods, development and validation of research instruments, data collection procedures, and the statistical techniques applied to analyze the data. These methodological choices were made to align with the study's objectives and to ensure the collection of accurate, relevant, and reliable information to effectively address the problem of jail overcrowding. The study identified that overcrowding at Station 10 Jail in EDSA Kamuning primarily results from delays in bail, parole, and probation processes, along with limited access to rehabilitation programs. Inmates acknowledge that reforms such as the Good Conduct Time Allowance (GCTA), TESDA training, and NGO-provided livelihood assistance have potential but are impeded by inadequate implementation and resource constraints. The inmate population is largely male, aged 34 to 41, with generally low educational attainment. The findings recommend expediting legal processes, enhancing rehabilitation initiatives, and improving prison conditions as effective strategies to alleviate overcrowding. Chapter 4 connects the empirical findings of this study to their practical applications. This chapter presents an in-depth discussion of the results, interpreting them in the context of the research questions and relevant literature. The analysis serves as a foundation for developing evidence-based recommendations to address jail overcrowding and improve correctional practices. Ultimately, it provides a clear justification for the proposed measures and evaluates their potential effectiveness.

Keywords: jail overcrowding, correctional facility management, inmate population control, rehabilitation programs, legal process efficiency, good conduct time allowance (gcta), probation and parole reform, alternative sentencing, prison conditions improvement,

**A STUDY IN THE ROLE OF TECHNOLOGY IN PREVENTING AND DETECTING
PICKPOCKETING AT NOVALICHES PROPER, QUEZON CITY**

Armild Portera, John Lloyd Batiancila, Rogem Pacardo,
Johnrey Patricio, Berland Villarosa, Edgar Reyes

Abstract

According to Mugari et al. (2020), as urban areas grow more congested, pickpocketing continues to pose a significant problem for public safety officials. Nonetheless, technological advancements have brought forth new techniques to deter and alleviate these offenses. This study primarily seeks to determine how technology can help in preventing and detecting pickpocketing in Novaliches Proper, Quezon City. As cities grow more populated, pickpocketing remains a notable issue for public safety officials, as observed by Mugari et al. (2020). This research will employ a descriptive methodology. The study will involve fifty (50) participants from local community members, police officers, and barangay staff in Novaliches Proper, Quezon City. The researchers will utilize a purposive sampling method to distribute questionnaires to fifty (50) participants. Based on the formulated sub-problem, the study's conclusions are as follows. Of the fifty (50) respondents, twenty-four (24) to twenty-nine (29) years old, or sixteen (16) or thirty-two percent (32%), fall within this age range. There were twenty-seven (27) out of fifty (50) respondents, or 54% of the survey participants, who were female. Of the fifty (50) respondents, seventeen (17) or thirty-four percent (34%), have lived in their current residence for more than fifteen years. The respondents' evaluation of the effectiveness of technology in stopping and identifying pickpocketing at Novaliches Proper, Quezon City, in terms of 2.1 Offender Identification yields a weighted mean rating of 3.12 overall. The goal of this research is to apply technologically advanced, sustainable solutions that improve the ability to identify and stop pickpocketing. The project aims to make Novaliches Proper a safer and more secure public space by utilizing contemporary surveillance methods, encouraging community involvement, and strengthening infrastructure.

Keywords: technology, pickpocketing prevention, pickpocket detection, crime prevention technology, novaliches proper, quezon city, public safety, security systems, surveillance technology, anti-theft measures, urban crime prevention, community safety, technolo

**A STUDY ON THE EFFECTIVENESS OF POLICE ONLINE PRESENCE
IN ENGAGING IN PUBLIC CRISIS SITUATION**

Alyka Mae Claudio, Janine Ellah Magsayo, Angelica Jose,
Irish Ann Marquez, Jessa Rhey Marzan, Jinky Anacta

Abstract

This study assesses the Philippine National Police's (PNP) online presence during crises, with a focus on officers from Quezon City Police Stations. It examines communication response times, trust-building efforts, social media strategies, and transparency. The research aims to understand how the PNP leverages social media to engage the community, deliver timely updates, and counter misinformation. Findings from the study intend to improve the PNP's online communication approaches and strengthen police-community relations during emergencies. This study utilizes a quantitative descriptive design to evaluate the Philippine National Police's (PNP) online engagement during crises. It focuses on communication response time, trust, social media strategies, and transparency. The sample consists of 60 randomly selected officers from Talipapa Police Station 3 and Novaliches Police Station 4. Data collection is conducted through expert-validated structured surveys administered via digital devices. The collected data is analyzed using statistical techniques, including frequencies, means, and weighted means, while demographic information is also examined to contextualize the results. This study employs a quantitative descriptive design to evaluate the Philippine National Police's (PNP) online engagement during crises, focusing on communication response time, trust, social media strategies, and transparency. The sample includes 60 randomly selected officers from Talipapa Police Station 3 and Novaliches Police Station 4. Data was collected through structured surveys validated by experts and administered via digital devices. Statistical analyses, including frequencies, means, and weighted means, were used to interpret the data, with demographic information analyzed to provide context for the findings. The study revealed that the majority of surveyed PNP officers were male, aged 25-44, held bachelor's degrees, and had 11-15 years of service. Although the PNP's social media presence during crises was generally effective, particularly in fostering trust and transparency, challenges persist in managing negative comments, addressing misinformation, and providing real-time updates. Respondents suggested creating a dedicated social media team, enhancing officer training, improving internal communication, and incorporating more interactive content to better engage the public. These findings underscore the critical role of strategic communication and community engagement in strengthening the PNP's crisis response and public trust.

Keywords: philippine national police, pnp, online engagement, crisis communication, social media strategies, trust, transparency, misinformation management, real-time updates, police-community relations, strategic communication, officer training, public trust,

A YOUTH AWARENESS PROGRAM ON RESPONSIBLE SOCIAL MEDIA NAVIGATION

Edwin Miranda Jr., Lemuel Caronan, Zyrus Aron Muana, Salvador Oco Jr,
James Harvy Matabang, Dr. Antonio Dawagan Sr.

Abstract

Social media plays a central role in contemporary life, especially among young people who use it for communication, entertainment, and personal expression. However, its rapid expansion has also brought significant challenges, including cyberbullying, the spread of misinformation, addiction, privacy breaches, and detrimental effects on mental health. This study employs a quantitative research approach to thoroughly analyze the impacts of social media on youth. Survey data is collected from respondents aged 15 to 35, aiming to assess the necessity of youth awareness programs focused on responsible social media use. This method allows the research to identify statistical patterns and understand the experiences of young individuals as they encounter crime-related content online (Zhang, 2023). The findings of this study highlight the need for educational programs that promote responsible social media use among young people. Exposure to crime-related content on social media can distort their perception, leading them to believe that crime is more prevalent and violent than it actually is. This underscores the importance of fostering media literacy and critical thinking in the digital age. Conversely, some forms of social media engagement can foster greater awareness and critical thinking. Platforms that support balanced discourse and share accurate, data-driven crime statistics can encourage youth to participate in civic discussions and develop a more informed and realistic perspective on crime trends.

Keywords: social media engagement, critical thinking, youth awareness, crime statistics, balanced discourse, civic participation, realistic perception, media literacy

**AN ANALYSIS OF DOMESTIC VIOLENCE AGAINST WOMEN
IN BARANGAY 176-A BAGONG SILANG CALOOCAN CITY**

Angelica Joy Sanchez, Mary Jane Ariola, Joyce Bensurto,
Arianne Nicole Jarasa, Edelyn Tayoto, Edgar Reyes

Abstract

Domestic violence against women remains a pervasive issue in Filipino communities, often exacerbated by cultural stigma and gaps in systemic response. In Barangay 176-A, Bagong Silang, Caloocan City, socioeconomic factors such as poverty, overcrowding, and limited access to education and social services heighten the vulnerability of women. This study examines the local dynamics of domestic violence, aiming to identify contributing factors and inform targeted interventions. A descriptive quantitative design is employed to assess perceptions of domestic violence causes and community responses. Purposive sampling selects fifty respondents across four stakeholder groups: ten Philippine National Police officials, ten Violence Against Women and Children Desk personnel, ten barangay employees, and twenty community residents. A structured questionnaire measures agreement with theoretical explanations, strain theory and social learning theory, and socioeconomic and cultural factors, as well as the perceived prevalence of victim experiences and response actions. Data is analyzed using weighted means and rank ordering. Perceptions of intervention readiness were strongest for training and seminar initiatives (mean = 3.45, strongly agree) and community awareness campaigns (propaganda; mean = 3.39, strongly agree). Economic factors (mean = 3.08), strain theory (mean = 3.05), and cultural factors (mean = 3.02) were viewed as moderate contributors to domestic violence, while social learning theory (mean = 2.76) and broader social factors (mean = 2.73) scored lower. Among victim experiences, living in constant fear of harm or retaliation ranked highest. The least reported community response was contacting a domestic violence hotline or support organization. The findings indicated that capacity-building through training and public awareness initiatives were seen as the most effective strategies for addressing domestic violence in Barangay 176-A. As a result, it was recommended that the barangay collaborate with the DSWD, PNP and local VAWC Desk to implement regular seminars, strengthen community outreach, and expand support hotlines. Such advocacy efforts were expected to enhance victim safety, increase community knowledge of domestic violence causes and effects, and ultimately reduce incidence rates in the barangay.

Keywords: domestic violence, women's safety, community intervention, strain theory, social learning theory, barangay 176-a

**AN ANALYSIS OF SAFETY PROCEDURES AND PROTOCOLS
FOR SECURITY PERSONNEL AT SM FAIRVIEW**

Jullie Ann Ventura, Glaiza Mae Aragdon, Angelica Baguiwong,
Christian Glean, Kristine Zumaraga, Jinky Anacta

Abstract

Public spaces, including busy commercial areas such as SM Fairview in Quezon City, Philippines, demand robust safety and security measures to protect both customers and staff. This study evaluates existing protocols and procedures for security personnel at SM Fairview, aiming to identify strengths and areas for improvement to ensure a safer environment in high-traffic mall settings. A quantitative descriptive design is employed to assess the effectiveness of safety and security measures. Purposive sampling selects 100 respondents, comprising mall employees and security staff, to complete a structured questionnaire. The survey measures perceptions of vigilance, threat monitoring, feedback mechanisms, and promotional influence on visitor behavior. Clarification opportunities during data collection help minimize response bias and enhance result accuracy. Respondents were primarily aged 26–30 and 31–40 (each 38 percent), with smaller proportions aged 24–25 (11 percent) and 41–45 (13 percent). Males constituted 67 percent and females 33 percent of participants. Educational backgrounds included college graduates (57 percent), high school graduates (37 percent) and vocational training (6 percent). Respondents strongly agreed that access control personnel displayed high vigilance (mean = 3.71), monitoring efforts effectively identified threats (mean = 3.66), feedback mechanisms such as surveys outperformed those in other malls (mean = 3.71), and mall advertisements influenced their decision to visit (mean = 3.78). The findings suggested that SM Fairview's security protocols were well regarded, particularly in access control, threat monitoring, and feedback integration. As a result, recommendations include enhancing training programs to maintain vigilance, expanding feedback channels to capture real-time concerns, and leveraging promotional communications to reinforce safety messaging. These insights provide a model for other commercial establishments seeking to strengthen their safety operations.

Keywords: safety procedures, security protocols, access control, threat monitoring, feedback mechanisms, commercial security

**AN ANALYSIS ON THE PROLIFERATION OF DRUGS IN
BARANGAY 176 BAGONG SILANG CALOOCAN CITY**

Ma Desiree Baruelo, Cathleen Abcede, Elisa Alburo,
Nicole Andrea Gardon, Fea Suminguid, Jinky Anacta

Abstract

Barangay 176 in Bagong Silang, Caloocan City, the Philippines' most populous barangay, remains challenged by persistent illegal drug activities that undermine public security, health, and economic development. This study examines the root causes of drug proliferation in the community by investigating social, economic, and systemic determinants. The research aims to identify how these factors exacerbate the local drug problem and to propose targeted interventions to minimize or eradicate illicit drug influence. A descriptive quantitative design is employed, using a validated, pilot-tested survey questionnaire administered to sixty respondents selected for their roles and experiences in the barangay: forty residents, ten barangay officials, and ten police officers. The instrument collects demographic data, perceptions of drug proliferation causes, and challenges in containment. Data are analyzed using weighted means to assess consensus on contributing factors and rank ordering to identify primary concerns. Respondents were predominantly female, married, aged 26–33 and had lived in Barangay 176 for over ten years. They agreed that lack of education and employment opportunities (mean = 3.27), weakened social norms (mean = 3.24), and low socioeconomic status (mean = 3.22) were major contributors to drug proliferation. The most commonly identified problems were active drug syndicates and weak enforcement of barangay ordinances, each ranked as top concerns by 11.53 percent of participants. The findings indicated that the drug crisis in Barangay 176 was rooted in underlying socioeconomic challenges, ineffective local enforcement, and persistent syndicate operations. As a result, the study recommended enhanced coordination among local authorities, law enforcement, and community stakeholders; strengthened surveillance and ordinance enforcement; and the development of education and rehabilitation programs. These measures were expected to curtail drug activity and improve overall community well-being.

Keywords: drug proliferation, socioeconomic factors, law enforcement, community intervention, barangay 176

**AN ANALYSIS ON THE SOCIO-ECONOMIC FACTOR AFFECTING THE INCREASING
CRIME INCIDENTS IN BARANGAY 33, ZONE 3, DISTRICT 1, TONDO, MANILA**

James Michael San Diego, Gabriel Angelo Alazo, Joshua Real, Mark John Paul Tangonan,
Marck John Torres, Denise Anne Osorio

Abstract

This study analyzes socio-economic factors contributing to rising crime incidents in Barangay 33, Zone 3, District 1, Tondo, Manila, a densely populated area with significant economic disadvantages. Drawing on Shaw and McKay's Social Disorganization Theory, which posits that weakened social institutions and community cohesion foster higher crime rates, the research examines how variables such as poverty, unemployment, and educational attainment influence criminal activity in this neighborhood. A purposive sampling technique selects sixty residents of Barangay 33 who possess firsthand knowledge of local conditions. A structured questionnaire gathers demographic information and perceptions of socio-economic challenges, poverty levels, joblessness, housing quality, and access to social services, and their impact on crime prevalence. Data is analyzed using descriptive statistics and correlational measures to identify patterns between socio-economic indicators and reported crime incidents. Respondents ranged in age from 18 to over 55, with the largest group aged 25–34 (30 percent) and the smallest aged 18–24 (11.7 percent). Analysis revealed that high poverty rates (mean = 4.12 on a 5-point scale) and chronic unemployment (mean = 3.98) were perceived as primary contributors to local crime. Limited educational opportunities (mean = 3.75) and inadequate housing conditions (mean = 3.60) also correlated with increased criminal incidents. Correlational analysis showed a strong positive association between poverty levels and crime rates ($r = 0.68$, $p < 0.01$). The findings indicated that socio-economic deprivation, particularly poverty and unemployment, drove crime in Barangay 33, confirming Social Disorganization Theory's applicability in this context. As a result, the study recommended targeted interventions: job creation programs, vocational training initiatives, and community policing to strengthen social institutions. Improving access to education and affordable housing was also advised to reduce the root causes of criminal behavior. These measures were expected to foster community resilience and lower crime rates over time.

Keywords: socio-economic factors, crime incidents, social disorganization theory, poverty, unemployment, tondo, manila

**AN ASSESSMENT ON THE IMPACT OF DOMESTIC VIOLENCE AMONG WOMEN IN
NITANG ST. BARANGAY GULOD, NOVALICHES QUEZON CITY**

Lou Andrea Villarosa, Jeffrey Alipio, Andrea Madrid,
Paula Pakingan, Julie Ann Quiroz, Edgar Reyes

Abstract

Domestic violence remains a pervasive threat to women's safety and well-being, with physical assault, emotional abuse, and economic coercion occurring even within the home. In Nitang Street, Barangay Gulod, Novaliches, Quezon City, pregnant women face heightened vulnerability to such abuse. This study examines the impact of domestic violence on women in this community, focusing on physical, economic, and emotional consequences and the factors that exacerbate risk during pregnancy. A descriptive quantitative design is employed to assess the effects of domestic violence in Barangay Gulod. Purposive sampling selects fifty-five participants: twenty pregnant women who have experienced domestic violence, fifteen healthcare providers (doctors, nurses, and social workers) serving pregnant clients, and fifteen police officers from Station 4 trained in domestic violence response. A structured questionnaire gathers demographic data and ratings of violence impact and intervention needs. Weighted means and frequency distributions are used to analyze responses. Respondents were predominantly female, aged 34 to 41, married, middle class, and college graduates. Participants strongly agreed that domestic violence inflicted serious physical harm (mean = 4.35 on a five-point scale), increased economic hardship (mean = 4.20), and caused deep emotional trauma (mean = 4.45). The highest-ranked consequence was elevated risk of miscarriage or preterm birth, cited by 82 percent of women. Healthcare providers and police officers corroborated these findings and emphasized the need for coordinated support services. The study indicated that domestic violence during pregnancy carried severe multi-dimensional impacts in Barangay Gulod. As a result, a holistic intervention strategy was recommended, including regular community information campaigns using posters and flyers at the barangay hall, health centers, schools, and local stores; immediate, accessible support services for survivors; strengthened community capacity to prevent and respond to abuse; and advocacy for policy reforms to enhance legal protection and resource allocation. These measures were expected to improve survivor safety and promote community resilience.

Keywords: domestic violence, pregnancy, physical harm, emotional trauma, intervention strategies

**AN ASSESMENT ON THE TRAFFIC RULES AND REGULATIONS IMPLEMENTATION
IN BARANGAY PASONG TAMO, QUEZON CITY**

Gerald Kin Suela, Carlo Rala, Mark Joshua Roble, Elemar Trero,
Miko Monilar, Dr. Antonio Dawagan Sr.

Abstract

This study assesses the implementation of traffic rules and regulations in Barangay Pasong Tamo, Quezon City, by examining road users' knowledge and compliance. With increasing congestion and safety concerns in the barangay, understanding motorists' and enforcers' familiarity with traffic laws is essential for improving road safety and reducing violations. A qualitative descriptive design is employed, gathering data from fifty participants: forty motorists and ten Traffic and Transport Management Department officers, selected through purposive sampling. A structured questionnaire, validated by experts and administered in person with management permission, collected demographic information and insights on rule awareness, enforcement practices, and encountered traffic problems. Responses were analyzed using frequency distributions to identify predominant issues and compliance gaps. All fifty survey instruments were successfully retrieved. The most frequently reported problem was heavy traffic, leading to delays, frustration, and increased vehicle emissions, cited by 31 respondents (62 percent). The least reported issue was reckless drivers disobeying traffic laws and showing disrespect toward traffic enforcers, noted by 8 respondents (16 percent). These findings highlighted both systemic congestion challenges and the need for stronger adherence to regulations. The results indicated that while traffic enforcers focus on maintaining safety and efficiency through law enforcement and public education, persistent congestion and limited respect for regulations hinder effectiveness. As a result, recommendations include strengthening driver awareness campaigns, enhancing traffic officer visibility at peak hours, and improving infrastructure to ease bottlenecks. Local government units and barangay authorities are urged to collaborate on stricter rule enforcement and community outreach to foster a culture of compliance and ensure safer roads.

Keywords: traffic rules, regulation implementation, road safety, traffic congestion, barangay pasong tamo, motorist compliance

**AN ASSESSMENT OF TASKFORCE DISIPLINA IN ENFORCING CITY ORDINANCE
IN BARANGAY HOLY SPIRIT, QUEZON CITY**

Winston Macapallag, Rommel Econal, Emjay Mendoza, John Mark Rada,
James Benedict Rostata, Dr. Myrna Cuntapay

Abstract

This study evaluates the enforcement of city ordinances by Taskforce Disiplina in Barangay Holy Spirit, Quezon City. Taskforce Disiplina, established under Executive Order No. 48 Series of 2019, serves as the city's local ordinance enforcement arm. The assessment focuses on implementation strategies, personnel readiness, and procedural consistency, while identifying challenges encountered during enforcement and proposing targeted interventions to enhance operational effectiveness. A descriptive quantitative design is employed, with purposive sampling selecting fifty participants: thirty residents, ten Taskforce Disiplina members, and ten barangay officials or tanods. A structured questionnaire measures perceptions of enforcement effectiveness across three dimensions: implementation, personnel training, and procedural consistency. Survey responses are analyzed using weighted means to determine levels of agreement with key performance indicators. Respondents indicated strong agreement that ordinances are effectively enforced by Taskforce Disiplina, with implementation receiving a weighted mean of 3.57 on a four-point scale. Personnel readiness scored highest for the statement that Taskforce members are well trained (WM=3.49). Consistency was reflected in a WM of 3.40 for uniform adherence to procedures when handling violations. These results demonstrated positive perceptions across all measured dimensions. The findings suggested that Taskforce Disiplina was perceived as competent and consistent in ordinance enforcement. As a result, recommendations included increasing staffing levels or creating a volunteer cadre, enhancing public education on city ordinances, providing advanced training for Taskforce personnel, and modernizing enforcement equipment. These measures were expected to strengthen public trust, boost compliance, and improve overall safety and discipline in Barangay Holy Spirit.

Keywords: taskforce disiplina, ordinance enforcement, implementation effectiveness, personnel training, procedural consistency, barangay holy spirit, quezon city

**AN ASSESSMENT OF THE METRO MANILA DEVELOPMENT AUTHORITY ILLEGAL
PARKING CLEARING OPERATION IN BARANGAY HOLY SPIRIT QUEZON CITY**

Lucas Neil Patrick, Ivan Deocariza, Michael Rey Macahdo,
John Paul Orille, John Vincent Surio, Nilmar Plata

Abstract

Illegal parking in Barangay Holy Spirit, Quezon City, disrupts traffic flow, blocks driveways, and endangers pedestrians. Many vehicle owners lack awareness of designated parking areas, resulting in street obstructions and safety hazards. This study examines how Metro Manila Development Authority clearing operations address illegal parking and explores factors such as resident demographics and enforcement practices, that influence their effectiveness. A quantitative descriptive design is employed, surveying fifty participants: five MMDA enforcers, fifteen barangay officials, and thirty residents. Purposive sampling selects individuals directly involved in or affected by parking enforcement. In-person questionnaires gather demographic data and perceptions of clearing operations, regulatory awareness, and enforcement challenges. Data is analyzed using frequency distributions to identify predominant concerns and inform recommendations. Seventy-eight percent of respondents (39 of 50) agreed that illegal parking causes traffic jams and heavy congestion. Other frequently cited issues included limited awareness of parking regulations (65 percent), lack of designated parking spaces (60 percent) and insufficient enforcement of existing laws (58 percent). The least reported concern, close relationships between barangay officials and residents or businesses that hinder enforcement, received agreement from 20 percent. Based on these findings, specialized training for barangay officials and enhanced collaboration with the MMDA were recommended to strengthen clearing operations and public awareness campaigns. The study indicated that illegal parking significantly impaired traffic flow and public safety in Barangay Holy Spirit. As a result, targeted interventions such as capacity building for enforcement personnel, community education on parking rules, and joint MMDA-barangay assessments were proposed to improve compliance and operational efficiency. Future research was advised to explore community-driven solutions and policy enhancements to support sustainable parking enforcement.

Keywords: illegal parking, clearing operations, traffic congestion, mmda enforcement, community awareness, barangay holy spirit

**AN ASSESSMENT OF THE MOTORCYCLE ACCIDENTS AT
BARANGAY RIVERSIDE, QUEZON CITY**

Amanda Mary Mulle, Catherine Joy Matan, Daniela Rose Gozo, Ma Kristina Casandra Omac,
Stephany Roxas, Eduardo Villaruel

Abstract

Motorcycle accidents pose a major public safety concern in urban areas of the Philippines, including Barangay Riverside, Quezon City. With a growing number of motorcycle users, injury and fatality rates have risen. This study assesses the causes, effects, and contributing factors of motorcycle accidents by gathering perspectives from riders and traffic enforcers. The goal is to inform strategies that enhance road safety, improve infrastructure, and promote responsible riding behaviors. A descriptive research design is employed, incorporating quantitative and qualitative approaches. Stratified random sampling selects fifty participants: forty motorcycle riders and ten traffic enforcers. A structured questionnaire, validated and pretested for clarity, measures agreement with potential accident causes and effects using a four-point Likert scale. Data analysis involves frequency distributions, percentage calculations, and weighted means to determine the most critical factors. Respondents strongly agreed that lack of protective gear (WM=3.60), speeding (WM=3.45), rider fatigue (WM=3.30), and poor road conditions (WM=3.25) contributed to motorcycle accidents. A majority acknowledged that riding under the influence of alcohol or drugs increased liability. Critical driver behaviors included overspeeding and fatigue, while rainy nights, delayed emergency responses, and inadequate infrastructure emerged as significant challenges. Recommended interventions included improved road markings and signage, enhanced street lighting, stricter enforcement of traffic regulations, and comprehensive rider safety education programs. The study indicated that motorcycle accidents in Barangay Riverside resulted from a combination of environmental, human, and infrastructural factors. As a result, a coordinated response involving riders, traffic enforcers, local government, and policymakers was advised. Future research was recommended to evaluate the long-term impact of implemented measures and to explore the integration of smart traffic technologies for safer urban mobility.

Keywords: motorcycle accidents, road safety, protective gear, infrastructure, rider behavior, traffic enforcement

**AN ASSESSMENT OF THE TREATMENT PROGRAM IMPLEMENTED IN FEMALE
DORMITORY IN CAMP TOMAS KARINGAL, QUEZON CITY**

Christine Ferrer, Jorebelle Carag, Dinah Mangay-ayam,
Angie Pinto, Julyne Ramirez, Eduardo Villaruel

Abstract

An Evaluation of the Treatment Program for Female Inmates at Camp Tomas Karingal, Quezon City
This study aimed to assess the treatment programs implemented at the Female Dormitory in Camp Tomas Karingal, Quezon City. A descriptive quantitative research design was utilized, with purposive sampling employed to select the respondents. The participants consisted of twenty-five (25) persons deprived of liberty (PDLs) and twenty-five (25) wardens from the Quezon City Female Dormitory. Before data collection, the survey questionnaire was reviewed and improved with the assistance of the researchers' thesis adviser and professors. It was also evaluated by a grammarian to ensure grammatical accuracy and clarity. Once the instrument was approved, the researchers proceeded with the distribution of the survey to gather relevant data regarding the implementation and effectiveness of the treatment programs. The results were presented in the order of the research problems outlined in Chapter 1, accompanied by tables, statistical analysis, and narrative interpretation to clearly describe the findings. The age distribution of the 50 respondents: composed of 25 persons deprived of liberty (PDLs) and 25 wardens or jail officers, was as follows: the largest group was aged 26 to 33 years, with a frequency of 25 (50%). This was followed by the 34 to 41 age group with 12 respondents (24%), the 18 to 25 age group with 6 respondents (12%), the 42 to 50 age group with 4 respondents (8%), and those aged 51 and above with 3 respondents (6%). In terms of program effectiveness, the average weighted mean for Table 1 (Education Program) was 3.68, interpreted as Strongly Agree. Table 2 (Skills Development Program) had an average weighted mean of 3.60, also interpreted as Strongly Agree, while Table 3 (Reintegration Program) showed an average weighted mean of 3.66, likewise interpreted as Strongly Agree. These results indicate a high level of agreement among respondents regarding the effectiveness of the treatment programs implemented at the Female Dormitory in Camp Tomas Karingal. This study enabled the researchers to acquire a comprehensive understanding and meaningful insights into the treatment programs implemented at the Female Dormitory in Camp Tomas Karingal, Quezon City.

Keywords: treatment program, female dormitory, camp tomas karingal, quezon city, assessment, persons deprived of liberty (pdl), rehabilitation, correctional facility, program evaluation, quantitative research

**AN ASSESSMENT ON CHALLENGES ENCOUNTERED
BY BARANGAY CULIAT RESPONDERS.**

Ben Joe Arriesgado, Kenneth Ivan Arcilla, Vincent Antipolo,
Ian Ermis, Christian Vasquez, Eduardo Villaruel

Abstract

This chapter outlines the background of the study, review of related literature and studies, theoretical and conceptual frameworks, statement of the problem, scope and delimitation, significance of the study, and definition of terms. Barangay tanods, also referred to as barangay police officers or BPSOs (Barangay Public Safety Officers), are the lowest-ranking law enforcement personnel in the Philippines. Their roles and responsibilities were already well established even prior to the enactment of the Local Government Code of 1991, serving as the primary peacekeeping force within local communities. The researchers adopted a descriptive research design, which, according to M. Hassan (2023), is a methodology aimed at describing the characteristics, behaviors, attitudes, opinions, or perceptions of a specific population. This design was deemed appropriate as it allows for a deeper understanding of how individuals experience and perceive a particular phenomenon. To determine the respondents, the researchers employed purposive sampling, a method used to deliberately select individuals who are most likely to provide relevant and insightful data. This approach ensures the efficient use of research resources by focusing on participants who can offer the most meaningful contributions to the study. The findings reveal that 50% of the participants, or 25 respondents, are within the 40 to 55 age group, making it the most represented. The 25 to 30 age group is the least represented, with only one respondent or 2% of the total. In terms of sex, 80% of the respondents are female, while 20% are male. When it comes to civil status, 80% or 40 respondents are married. The categories with the lowest representation are separated and widowed, each comprising 4% or two respondents. Barangay Tanod Crime Response Training Program: To ensure barangay tanods are well-equipped, a Basic Law Enforcement and Legal Training Program should be held quarterly, covering essential laws, ordinances, and crime response procedures. Additionally, a Conflict Resolution and Community Relations Program should be offered bi-annually to enhance skills in mediation, de-escalation, and effective community engagement.

Keywords: barangay tanod, crime response training, law enforcement, legal training, conflict resolution, community relations, mediation, de-escalation, training programs, local peacekeeping

**AN ASSESSMENT ON CYBER ISSUES AMONG THE RESIDENTS
OF SAN JOSE DEL MONTE, BULACAN**

Lailanny Abo, Ziell Jhon Mae De La Peña, Jaymar Piñero, Jc Butel,
Jherome Clemente, Joana Flores, Dr. Antonio Dawagan Sr.

Abstract

San Jose del Monte, Bulacan, is undergoing rapid urbanization alongside increasing digital connectivity (Philippine National Police, 2024). This development heightens the community's exposure and vulnerability to cyber threats. This study aims to assess the extent of this vulnerability by examining residents' awareness and cybersecurity practices. The investigation is framed by Routine Activity Theory, which explains crime occurrence through the convergence of motivated offenders, suitable targets, and the lack of capable guardians (Cohen & Felson, 1979). This study utilized a descriptive quantitative research design to evaluate the awareness and experiences of 50 residents and 10 personnel from the Philippine National Police Anti-Cybercrime Group (PNP-ACG). Random sampling was employed to ensure a representative sample of residents across various barangays in San Jose del Monte. Data were collected using a questionnaire based on a 4-point Likert scale. The data analysis involved frequency distribution, percentages, and weighted mean to assess the levels of awareness and preventive behaviors (Creswell & Guetterman, 2020). The findings indicate that identity theft and smishing are the most prevalent cyber issues experienced by residents. Respondents showed limited awareness of phishing scams and lacked knowledge on reporting procedures, reflecting low digital literacy. Cybersecurity practices were notably weak, with enabling Two-Factor Authentication (2FA) having the lowest adoption rate. Only a small portion of respondents reported engaging in proactive cybersecurity measures. Additionally, 82% of residents had never participated in a cybersecurity awareness seminar. When choosing educational formats, residents preferred printed materials like brochures over workshops or online training. These results were confirmed by the Philippine National Police Anti-Cybercrime Group (PNP-ACG), which reported smishing and identity theft as the most common cases locally, often linked to insufficient cybersecurity awareness and failure to identify fraudulent communications (Philippine National Police, 2024). The study recommends launching a Community Outreach Street Campaign to distribute clear and accessible cybersecurity brochures to households in San Jose del Monte. These materials should highlight how to identify phishing and smishing attacks, implement secure account management practices such as strong passwords and Two-Factor Authentication (2FA) and report cyber incidents effectively. Future studies should evaluate the impact and effectiveness of this brochure-based intervention (Creswell & Guetterman, 2020).

Keywords: community outreach, cybersecurity awareness, phishing, smishing, secure account management, two-factor authentication, cyber incident reporting, brochure campaign, san jose del monte, digital literacy

**AN ASSESSMENT ON THE BUREAU OF FIRE PROTECTION VOLUNTEER FIRE
FIGHTER TRAINING PROGRAM IN NORTH CALOOCAN CITY**

John Denrick Roto, Junnell Visagar, Ernesto Lapasanda III,
Ace Alaceda, Cynitche Silvestre, Nilmar Plata

Abstract

This study examines the challenges caused by insufficient training equipment and facilities that hinder effective skill development in education and training programs. The lack of essential resources such as modern equipment, adequate space, proper maintenance, and updated technology, adversely affects training quality and limits learners' readiness for their professional fields. This study aims to evaluate the Bureau of Fire Protection's (BFP) volunteer firefighter training program by examining the influence of demographic factors such as age, sex, civil status, and educational attainment. Understanding these factors is key to assessing the program's effectiveness and identifying opportunities for improvement. The study seeks to explore the relationship between these personal characteristics and training outcomes to determine how well the BFP supports skill development among its volunteers. The research design encompasses a detailed examination of key components, including the study respondents, sampling techniques, and the development, validation, administration, and retrieval of data collection instruments. The study involved fifty (50) respondents, comprising BFP personnel, volunteer firefighters, and residents of North Caloocan City. Demographic analysis indicated that most respondents were male and fell within the 26 to 33-year age range. The study's findings showed that key aspects of the BFP volunteer firefighter training program, namely basic and advanced firefighting training and physical fitness, were strongly endorsed by respondents. However, a major concern was the insufficient training on fire equipment and inadequate facilities. Respondents highlighted the lack of essential equipment and proper facilities as significant barriers to effective training. In response, the researchers recommend mandatory fire safety seminars for all residents, emphasizing proper usage of various fire equipment.

Keywords: bfp volunteer firefighter training, basic firefighting training, advanced firefighting training, physical fitness, training equipment, facilities, fire safety seminars, skill development, north caloocan city

**AN ASSESSMENT ON THE CHILD AT RISK INTERVENTION MEASURES IN
BARANGAY GULOD, NOVALICHES QUEZON CITY**

Jeremy Macaspac, Bea Blanca Del Mundo, Allhaycel Padayag,
Aldren Francisco, Marie Flor Quilit, Irene Gaviola

Abstract

Children's well-being and safety remain critical concerns in communities facing socioeconomic hardships, environmental challenges, and limited access to basic services. Barangay Gulod in Novaliches, Quezon City, is one such community where children are exposed to various risks including poverty, hunger, poor education, child labor, abuse, neglect, and exploitation, that threaten their growth and future prospects. The study included 20 Social Workers/Barangay Council for the Protection of Children (BCPC) members, 20 Barangay officials, and 10 parents, all selected using random sampling. This method ensured equal selection opportunities for participants, promoting an unbiased and representative sample. The researchers utilized this approach to comprehensively address the challenges faced in implementing the barangay justice system, allowing for a focused and systematic investigation. Respondents in Barangay Gulod, Novaliches, Quezon City, expressed strong approval of child-at-risk intervention programs. The Life Skills Recreational Mentor Training Program received the highest rating with a mean score of 3.54, followed closely by the Regular Responsible Parenting Workshop (3.46), Education and Vocational Support (3.48), and Counseling and Family Therapy (3.44), all rated as "Strongly Agree." However, 88% of respondents identified poor communication and collaboration among stakeholders as the main challenge. To address this, the proposed action plan prioritizes Life Skills Training, particularly in problem-solving and conflict resolution, supported by 82% of respondents as vital to improving program effectiveness. To improve the Child-at-Risk Intervention Program, the study recommends implementing stronger preventive measures for early risk detection, expanding community-based initiatives to ensure wider service accessibility, and enhancing family support through parenting workshops and therapeutic services. Additionally, providing educational and vocational training opportunities for at-risk youth can help them acquire essential skills and break the cycle of poverty. These combined strategies aim to establish a holistic and sustainable support system for vulnerable children.

Keywords: child-at-risk, intervention program, preventive measures, community-based services, parenting workshops, vocational training, early risk detection, family support, poverty reduction

**AN ASSESSMENT ON THE CRUCIAL ROLE OF THEORETICAL DRIVING
COURSE TOWARDS FOR SAFE AND RESPONSIBLE DRIVING**

Argie Catarinin, Jerald Aragon, John Patrick Arbiol,
Jerico Bueno, Christopher Rivera, Irene Gaviola

Abstract

The Theoretical Driving Course (TDC) aims to foster safe and responsible driving by educating motorists on traffic regulations, defensive driving techniques, and risk management. Despite its intended purpose, the effectiveness of the TDC in reducing traffic violations remains unclear. This study seeks to assess the program's influence on drivers' knowledge, skills, and behavior, while also identifying existing challenges and recommending improvements to enhance driving education and promote road safety. This study involved 50 respondents, including 30 student drivers, 15 traffic enforcers, and 5 driving school instructors or staff from Susano Road, Novaliches, Quezon City. A purposive sampling technique was employed to ensure the selection of participants directly relevant to the study. Utilizing a descriptive research design, the study systematically gathered data on the respondents' perceptions of the effectiveness of the Theoretical Driving Course (TDC). Survey questionnaires were personally distributed along Quirino Highway, General Luis corner, and Susano Road. Before distribution, consent was obtained and the study's objectives were clearly explained. To ensure a high response rate and address any clarifications, the researchers remained on-site during the data collection process, resulting in accurate and reliable data for evaluating the TDC's effectiveness. The findings reveal that the Theoretical Driving Course (TDC) was rated as very effective across key components. In Classroom Instruction, Traffic Laws, Rules, and Regulations received a weighted mean of 3.47, while Workshops and Seminars scored 3.40. Under Assessment and Evaluation, Interactive Simulation was rated 3.47, and Driver Techniques and Maneuvers received 3.44. In terms of Skill Enhancement, Road Etiquette obtained the highest score of 3.50, followed by Hazard Perception and Risk Management with 3.37. These results highlight the TDC's substantial contribution to enhancing drivers' knowledge, practical skills, and responsible driving behavior. To further improve the effectiveness of the Theoretical Driving Course (TDC), student drivers should actively engage in interactive learning activities, while instructors are encouraged to adopt modern teaching approaches such as simulations and hands-on training. Refresher courses should be implemented regularly to reinforce road safety knowledge. Stronger collaboration between traffic enforcers and educational institutions is recommended, and driving schools should continuously upgrade their curriculum to meet current standards. Moreover, the Land Transportation Office (LTO), local government units (LGUs), and non-governmental organizations (NGOs) should strengthen their advocacy for road safety. Future research is advised to explore how socio-economic backgrounds and learning styles influence the outcomes of TDC. Collectively, these measures aim to enhance driver education and contribute to long-term road safety improvements.

Keywords: theoretical driving course (tdc), road safety, driver education, interactive learning, simulations, refresher courses, traffic enforcers, curriculum enhancement, lto, lgus, ngos, socio-economic factors, learning style

**AN ASSESSMENT ON THE EFFECTIVENESS OF CLOSED-CIRCUIT
TELEVISION CAMERA IN AID OF CRIMINAL INVESTIGATION**

Jean Myca Valiente, Abegail Julve, Michelle Pertez, Maeden Remegio,
Maria Jesa Krislyn Susada, Eduardo Villaruel

Abstract

Technological advancement has greatly transformed modern life, making it more convenient and efficient. Among its many contributions, one notable innovation is the Closed-Circuit Television (CCTV) system. CCTV cameras play a crucial role in enhancing security by providing continuous surveillance to protect individuals, property, and infrastructure. Acting as a force multiplier, these systems allow for broader and more effective monitoring than what could be achieved by security personnel alone. The study adopts a descriptive research design and utilizes purposive sampling to select participants from Barangay Batasan Hills, Quezon City. The respondents include 15 police officers, 15 barangay personnel, 5 CCTV operators, and 15 residents. This research aims to explore the benefits of using Closed-Circuit Television (CCTV) cameras as a tool in criminal investigations, to enhance surveillance strategies to improve public safety and security. Data will be gathered through a structured questionnaire, which will be distributed to the respondents and collected upon completion for analysis. The data collected provided valuable demographic insights, indicating that most respondents were male, aged 21 to 25 years, and held a bachelor's degree. Respondents rated the effectiveness of Closed-Circuit Television (CCTV) cameras in Barangay Batasan Hills, Quezon City as "Strongly Agree" across key areas, including real-time monitoring, cost-efficiency, wide coverage, continuous recording, and integration with other technologies. The most commonly encountered issue was related to suboptimal camera angles. To improve the effectiveness of CCTV systems in supporting criminal investigations, respondents recommended installing cameras in high-crime areas and ensuring proper positioning to maximize coverage and capture critical details. It is recommended to improve camera placement, upgrade surveillance technology to address lighting and visibility issues, and foster stronger collaboration between law enforcement agencies and community stakeholders. These measures aim to maximize the effectiveness of CCTV systems. By harnessing technological advancements and resolving operational limitations, law enforcement can enhance their investigative capabilities and further strengthen public safety and security.

Keywords: cctv effectiveness, camera placement, surveillance technology, law enforcement, community collaboration, public safety, investigative capabilities, lighting issues, operational challenges

**AN ASSESSMENT ON THE EFFECTIVENESS OF COMMUNITY AFFAIRS
PROGRAMS IN VALENZUELA CITY POLICE STATION**

Abdullah Mohammad Munim, Mary Grace Adepin, Rechel Bonita,
Jovelyn Rodeo, Tricia Mae Ubias, Irene Gaviola

Abstract

Community affairs programs play a critical role in modern policing by promoting stronger partnerships between law enforcement and the communities they serve. Their effectiveness greatly influences public trust, safety, and cooperation. This study aims to evaluate the community affairs programs of the Valenzuela City Police Station, focusing on their impact on community engagement, crime prevention, and public perception of the police. The findings seek to provide meaningful insights that can enhance the effectiveness of these programs and strengthen police-community relations. The researchers sought to evaluate the effectiveness of the community affairs programs implemented by the Valenzuela City Police Station. To assess community awareness and participation, a mixed-method approach was utilized, combining both qualitative and quantitative research methods. Data was collected and analyzed through surveys administered to selected respondents. The study involved a total of fifty (50) participants, comprising forty (40) residents and ten (10) police officers assigned to the Community Affairs Section of the Valenzuela City Police Station. The findings of the study revealed that out of fifty (50) respondents, nineteen (19) were aged 34 to 41 years, while four (4) were aged 51 and above. Among the respondents, twenty-six (26) were male and twenty-four (24) were female. Additionally, twenty (20) were classified as low-income earners, and eleven (11) had resided in or served Barangay Karuhatan for over sixteen (16) years. In terms of program effectiveness, the results showed that Program Implementation had an overall weighted mean of 3.59, interpreted as "Very Effective". Community Participation followed with a mean of 3.54, and Community Satisfaction scored 3.49, both also interpreted as "Very Effective". Regarding the challenges encountered, "Lack of funding" emerged as the most significant issue, identified by 40 out of 50 respondents. On the other hand, "Limited community engagement" was the least reported problem, with only 10 out of 50 respondents citing it. Based on the findings, the study recommends improving community participation and fostering stronger collaboration between barangay officials and law enforcement agencies. Additionally, it is advised to provide comprehensive training for barangay officials, police officers, and residents in mediation and conflict resolution techniques to promote effective community engagement and strengthen peacekeeping efforts at the local level.

Keywords: community participation, law enforcement collaboration, barangay officials, conflict resolution, mediation training, public safety, community engagement, valenzuela city police station

**AN ASSESSMENT ON THE EFFECTIVENESS OF HOUSE PARENT'S
ROLE IN BAHAY PAG-ASA PAYATAS, QUEZON CITY**

Kenji Morillos, Al-ameen Dimaampao, Denniel Aureada,
Alvin Luga, Jc Bryan Obra, Dr. Myrna Cuntapay

Abstract

The relationship between house parents and Children in Conflict with the Law (CICL) presents a sensitive and multifaceted concern, with significant implications for both the caregivers and the children. House parents, who are responsible for the care and rehabilitation of CICL, often face physical and emotional challenges that may hinder their ability to provide consistent and effective support. This study aims to assess the effectiveness of house parents in fulfilling their roles at Bahay Pag-asa in Payatas, Quezon City. This study adopted a descriptive research design to examine the implications of assessing the effectiveness of house parents' roles at Bahay Pag-asa, Payatas, Quezon City. Purposive sampling was employed to select participants who could provide meaningful and relevant insights, specifically, house parents working directly with Children in Conflict with the Law (CICL). This method ensured the collection of accurate and reliable data systematically. A total of forty (40) house parents from Bahay Pag-asa, Payatas, Quezon City, served as respondents for this study. At Bahay Pag-asa, the house parents are predominantly middle-aged, married males, most of whom are college graduates with extensive caregiving experience. They demonstrate strong skills in communication, emotional support, and conflict resolution. However, they emphasize the need for consistent training and a deeper understanding of the diverse needs of the children in their care. Their main concern is maintaining a supportive and nurturing environment, while inadequate training is considered a lesser issue. To reduce the risk of delinquency, they prioritize regular skills development over the addition of support staff. These findings reflect their dedication and effectiveness, while also highlighting the need for continuous professional development. A comprehensive support system including training, mentorship, and administrative assistance, is essential to enhance their role and promote the well-being of Children in Conflict with the Law (CICL). Ongoing evaluation and program improvement are crucial to sustaining a safe and rehabilitative environment. The findings reveal that Bahay Pag-asa was founded on the principle of providing Children in Conflict with the Law (CICL) with access to quality educational and social services. While house parents receive basic training in managing juvenile behavior, including strategies for addressing challenging conduct and encouraging positive behavior, these trainings are often limited in scope. To effectively meet the diverse and complex needs of the children, there is a growing need for more comprehensive and continuous training programs.

Keywords: bahay pag-asa, children in conflict with the law (cicl), house parents, training, behavior management, juvenile delinquency, social services, educational services, comprehensive training, caregiving.

**AN ASSESSMENT ON THE EFFECTS OF CYBERBULLYING AMONG
RESIDENTS IN NOVALICHES PROPER, QUEZON CITY.**

Joshua Matthew Lumaban, Edrian Escuro, Christian Jay Sumbilon,
Vince Dacpano, James Peter Manrique, Nilmar Plata

Abstract

The rapid expansion of digital communication platforms in recent years has significantly reshaped the way individuals, particularly adolescents and young adults, interact. However, this progress has also given rise to cyberbullying, defined as the intentional use of digital media to inflict harm through aggressive, threatening, or harmful behavior. Cyberbullying has become a pressing social concern, with serious implications for the mental, emotional, and academic well-being of its victims. Despite growing global awareness, the impact of cyberbullying in suburban and less-studied communities, such as Novaliches, a district in Quezon City, Philippines, remains underexplored in existing literature, which tends to focus on larger urban centers. This study seeks to fill that gap by investigating the prevalence of cyberbullying in Novaliches, analyzing its psychological and social consequences among youth, and identifying the coping strategies employed by affected individuals. By examining this issue within a local context, the research aims to provide a deeper understanding of the unique challenges faced by communities with distinct socioeconomic and cultural conditions. This study encompasses the following components: research design, selection of participants, sampling strategy, construction and validation of research instruments, procedures for data collection and retrieval, and statistical analysis of the data. This study aims to assess the effects of cyberbullying in Novaliches Proper, Quezon City, and to serve as a foundation for developing effective awareness and intervention strategies. Based on the respondents' insights, the study recommends fostering strong community engagement through neighborhood forums, outreach activities, and community policing initiatives. To address the issue effectively and prevent future incidents, the research team needs to demonstrate strong leadership, capable of providing clear guidance, support, and informed decision-making in navigating challenges and implementing solutions. This chapter provides the summary and conclusion of the study, which aimed to assess the effects and prevalence of cyberbullying in Novaliches Proper, Quezon City.

Keywords: cyberbullying, novaliches proper, quezon city, youth, digital harassment, social impact, psychological effects, community awareness, coping mechanisms, research findings

**AN ASSESSMENT ON THE FIRE VOLUNTEERS PREPAREDNESS
DURING FIRE INCIDENT IN BARANGAY TANDANG SORA**

Sean Demmie Aragonese, Darryl Christian Alto, Eli Samuel Baguio,
Ericson Ogalesco, Renz Nomar Sillar, Dr. Myrna Cuntapay

Abstract

This study aimed to evaluate the fire safety measures in Barangay Tandang Sora, Maco, with a focus on community awareness and the implementation of safety protocols. Fire safety is essential to ensuring public welfare, emphasizing the importance of preparedness and effective emergency response. The study explored how well residents are informed and equipped to handle fire-related incidents, as well as their perceptions of the existing fire safety procedures within the barangay. This study utilized a non-experimental descriptive research design and employed survey questionnaires as the primary tool for data collection. A total of 50 respondents were selected through simple random sampling, representing various sectors involved in fire safety such as collaborative initiatives, community participation, and logistical support from both National Government Units (NGUs) and Local Government Units (LGUs). This approach allowed the researchers to effectively assess the respondents' awareness, perceptions, and evaluations of the existing fire safety measures and the challenges faced within Barangay Tandang Sora. The findings indicated a high level of fire safety measures in Barangay Tandang Sora. Respondents generally agreed that community safety protocols and fire safety awareness were well implemented. Both fire volunteers and civilian participants strongly affirmed that firefighters were sufficiently trained to address logistical challenges during fire incidents. However, the study also identified several areas for improvement, including inadequate communication between fire volunteers and barangay officials during emergencies and low community participation in fire drills. The majority of respondents were female, primarily within the 31 to 40 age range. Notably, the statement "Recognizes and respects the contributions and needs of each individual" received a low weighted mean, highlighting the need to strengthen inclusivity and ensure that all members of the community feel valued and involved in fire safety initiatives. While respondents expressed strong agreement regarding the effectiveness of current fire safety training and awareness efforts, the study also revealed areas for improvement. Issues such as poor communication and low participation in fire drills point to the need for more structured and inclusive fire preparedness strategies. A common recommendation among respondents was the regular conduct of fire safety drills to minimize risks and safeguard both civilians and firefighters. These findings informed the development of an action plan aimed at addressing communication gaps, enhancing community engagement, and strengthening logistical readiness during fire emergencies.

Keywords: fire safety, fire drills, community awareness, communication gaps, preparedness, barangay tandang sora, training, logistical readiness, civilian protection, firefighter safety

**AN ASSESSMENT ON THE IMPLEMENTATION OF ANTI-VIOLENCE AGAINST
WOMEN AND THEIR CHILDREN IN POLICE STATION NO.14**

Ishi Duron, Ken-lyka Berolla, Janna Lynn Sozara Bobis,
Lory Vita, John Michael Yuipco, Edgar Reyes

Abstract

Violence against women and children (VAWC) is a serious and pervasive issue affecting communities throughout the Philippines, including Station 14 in Quezon City. Frontline agencies such as the Philippine National Police (PNP) and the Barangay VAWC Desk play a vital role in addressing this concern. They are tasked with enforcing protective laws, implementing intervention measures, and providing essential support to victims. This study aims to evaluate the implementation of the Anti-Violence Against Women and Their Children (VAWC) Act by legal practitioners, focusing on identifying gaps and areas for improvement in current enforcement measures. Conducted at Police Station No. 14 in Quezon City, the research utilized a quantitative-descriptive design. The study involved three groups of respondents: twenty-five (25) VAWC victims, five (5) personnel from the Philippine National Police (PNP), and ten (10) representatives from the Barangay VAWC Desk, totaling forty (40) participants. Data was collected using a researcher-designed questionnaire to gather insights on the effectiveness and challenges of implementing the VAWC law. The study found that most respondents were female, primarily within the 34 to 41 age range. Despite ongoing efforts to address cases of violence, several significant challenges remain. These include insufficient budget support, lack of specialized training for responders, delays in service delivery, weak inter-agency coordination, and a prevailing reluctance among victims to report abuse. These barriers significantly impede the timely and effective provision of support services, highlighting the urgent need for enhanced resources, continuous capacity-building, and stronger collaboration among agencies. To effectively address these concerns, the study recommends increased government funding, broader community education through seminars and media campaigns, and the creation of safe, confidential spaces where victims can speak out without fear. These measures are essential for developing a more responsive, empathetic, and efficient system to protect women and children from abuse. The findings of this study serve as a crucial foundation for enhancing service delivery, strengthening support systems, and improving coordination among local agencies in handling VAWC-related cases.

Keywords: violence against women and children (vawc), government funding, community education, safe spaces, victim support, inter-agency coordination, abuse prevention, local agencies, protection systems, quezon city.

**AN ASSESSMENT ON THE IMPLEMENTATION OF CITY ORDINANCE
NO. 2955 IN BARANGAY U.P. CAMPUS QUEZON CITY**

Kristian Redoblado, Reymond Quinal, Axel Almeda, Jhon Paul De Leon,
Jonel Rivera, Edgar Reyes

Abstract

The purpose of this study is to assess the implementation of City Ordinance No. 2955 in Barangay U.P. Campus, Quezon City. While alcohol consumption is often a part of social interaction, it poses serious risks, especially to minors. In Quezon City, the growing incidence of underage drinking has become a pressing concern due to its links to health problems, accidents, violence, and other risky behaviors. This study aims to evaluate how effectively the ordinance is being enforced, identify challenges in its implementation, and determine the level of community awareness and compliance within the barangay. This chapter outlines the research design, description of respondents, sampling technique, and the procedures for the validation, administration, and retrieval of the research instrument. The study adopted a descriptive quantitative research design to obtain measurable data regarding the implementation of City Ordinance No. 2955. A purposive sampling method was employed to ensure the selection of respondents with direct knowledge and involvement in the ordinance's enforcement. The respondents were grouped into three (3) categories: thirty-five (35) personnel from the Department of Public Order and Safety (DPOS) implementing OPLAN DISIPLINA, twenty (20) Barangay Officials, and fifteen (15) Community Residents from Barangay U.P. Campus. The study presents the findings based on the sub-problems formulated. It first outlines the profile of the respondents in terms of age, sex, and educational attainment. The study then evaluates the respondents' assessment of the implementation of City Ordinance No. 2955 in Barangay U.P. Campus, Quezon City, focusing on four main aspects: restriction of alcohol access to minors, policing and enforcement, guidance and counseling, and community involvement. Among the challenges identified, "insufficient awareness" emerged as the most significant issue, ranking first, with 37 out of 70 respondents (equivalent to 18.05%) citing it as a major concern. To address this issue, it is recommended that Barangay U.P. Campus implement initiatives that promote community participation in enforcing the ordinance. This may include volunteer programs, awareness campaigns, and community-based activities to strengthen local engagement and understanding of the ordinance. Proposed Intervention Program. To effectively reduce and prevent alcohol consumption among minors in Barangay U.P. Campus, a comprehensive intervention program is proposed. This program integrates education, regulation, enforcement, and community engagement to ensure sustainable and long-term impact. The key components are as follows: Education and Awareness. Launch targeted information campaigns in schools and communities to raise awareness about the dangers and consequences of underage drinking. Collaborate with educational institutions to integrate alcohol prevention topics into the curriculum and conduct seminars for students and parents. Regulation and Monitoring. Conduct regular compliance checks on establishments selling alcoholic beverages to ensure adherence to City Ordinance No. 2955. Impose appropriate penalties and sanctions on businesses that violate the ordinance, including fines and possible suspension or revocation of licenses. Enforcement of Protective Measures. Strictly enforce curfew hours for minors and increase police presence in areas prone to underage drinking. Limit the number and location of alcohol-selling establishments, particularly those near schools, youth centers, and residential zones. Community Participation and Support. Encourage community involvement through volunteer monitoring groups and awareness drives. Establish a Barangay-based Task Force to support ordinance implementation and respond to violations. Youth Guidance and Counseling Services. Provide counseling and intervention programs for minors identified as at-risk or involved in alcohol

consumption. Partner with local health and social services to offer support, rehabilitation, and mentoring initiatives.

Keywords: alcohol consumption, minors, city ordinance no. 2955, barangay u.p. campus, prevention program, education. regulation, enforcement, community participation, compliance checks, youth counseling

**AN ASSESSMENT ON THE NEGATIVE RESULT OF DRUNK DRIVING TO ROAD
ACCIDENTS IN MINDANAO AVENUE, QUEZON CITY**

Joel Geanag, Mico Peñas, Gary Jandoc, Mark Niljun Solis,
Leonardo Española, Irene Gaviola

Abstract

The Western Pacific region faces significant challenges related to alcohol consumption, particularly its role as a major risk factor for road traffic injuries. While stringent drunk driving laws have proven effective in some countries, a major concern is the lack of comprehensive data across much of the region, which limits the ability to design targeted and effective interventions. The article also emphasizes the complex impact of alcohol on both physical and cognitive functions, further exacerbating road safety risks. A more in-depth investigation is needed to identify the root causes of this data deficiency, assess the effectiveness of existing policies in comparable regions, and explore how this knowledge can inform the development of more effective strategies. The researchers will employ a survey questionnaire to collect data for this study. It will consist of structured and semi-structured questions aimed at obtaining relevant information from the respondents. The questionnaire may be distributed in person, online, or by mail, depending on the most practical and accessible method for participants. This tool ensures efficient and consistent data collection across all respondent groups. Among the 100 respondents, 36% (36 individuals) are between the ages of 34 and 41, making it the most represented age group. In contrast, only 6% (6 respondents) are aged 51 and above, the smallest group in the sample. The results emphasize the significant contribution of drunk driving to traffic accidents along Mindanao Avenue, Quezon City. In terms of Loss Control, the overall weighted mean rating is 3.36, which falls under the interpretation of "strongly agree", indicating that respondents perceive drunk driving as a major factor in traffic incidents. The category of Trouble in Decision-Making received a weighted mean of 3.22, also interpreted as "strongly agree", reflecting the view that alcohol impairs drivers' ability to make sound judgments. Regarding Legal Repercussions, the study recorded a weighted mean of 3.33, interpreted as "strongly agree", suggesting strong awareness among respondents about the legal consequences of drunk driving. Additionally, the dimension of Imprisonment yielded a weighted mean of 3.23, further affirming respondents' agreement with the severity of penalties imposed on offenders. Furthermore, 65% of the respondents (65 out of 100) agreed that excessive speed leads to longer stopping distances and reduced reaction time, increasing the likelihood of accidents. The majority of respondents are aged 34 to 41, making them the most represented age group in the study. Overall, the respondents strongly agree with the assessment of the harmful effects of drunk driving on traffic accidents along Mindanao Avenue in Quezon City, particularly in terms of loss of control, impaired decision-making, legal consequences, and imprisonment. Furthermore, respondents noted that excessive speed increases stopping distance, further heightening the risk of accidents. As part of the proposed solutions, they recommended the installation of CCTV cameras, strict enforcement of speed limits, and regular speed monitoring to help mitigate the negative impacts of drunk driving and improve road safety in the area.

Keywords: drunk driving, traffic accidents, mindanao avenue, quezon city, speeding, loss of control, legal consequences, cctv, speed limit enforcement, road safety

**AN ASSESSMENT ON THE POLICE VISIBILITY STRATEGIES OF THE POLICE
STATION 6 PERSONNEL IN THE REDUCTION OF PICKPOCKETING**

Will Jain, Diether James Annang, Manuel Kevin Justol,
Richard Romero, Keith Ramos, Irene Gaviola

Abstract

Police visibility refers to the active presence of law enforcement officers in public areas, primarily through routine patrolling. This presence helps instill a sense of security among citizens and serves as a deterrent to potential criminal activity. The purpose of this study is to assess the effectiveness of police visibility in reducing pickpocketing incidents and promoting a safer environment. The study involved 50 respondents, composed of 10 police officers from Police Station 6, Batasan, Quezon City, and 40 local residents within the same jurisdiction. Respondents were selected using a purposive sampling technique to ensure their relevance to the research objectives. A quantitative approach was utilized, specifically a descriptive research design, to evaluate the impact of police visibility on the occurrence of pickpocketing in the area. The researchers, in coordination with Police Station 6, conducted the evaluation of police visibility strategies and their effectiveness in reducing pickpocketing incidents. Prior to data collection, respondents were informed about the purpose of the study, and consent was obtained to ensure voluntary participation. Survey questionnaires were then distributed to the selected participants, and adequate time was allotted for them to complete their responses. The researchers ensured that participants were given clear instructions and that the data collection process was conducted in an organized and respectful manner. Once respondents completed the survey questionnaires, each form was individually collected by the researchers. The data analysis revealed that community awareness received the highest rating, followed by crime solution and crime prevention. Based on these findings, the study recommended several strategies to enhance police visibility and its effectiveness in reducing crime. These include increasing foot patrols, improving communication and engagement between police officers and the community, and incorporating technology, such as surveillance cameras, to support and strengthen law enforcement presence. The researchers recommended that police officers maintain a visible presence in areas identified as hotspots for pickpocketing incidents to help deter criminal activity and enhance public safety. They also advised Barangay officials to initiate information campaigns aimed at educating residents on preventive measures and promoting the use of community reporting systems to increase vigilance. In addition, the formation of Barangay patrol teams was proposed to improve coordination with local police and strengthen overall security efforts. The researchers further encouraged future researchers to utilize credible sources and accurate data to ensure the reliability of their studies. This research is also highly recommended as a reference tool or manual for students, particularly those focusing on crime prevention, community safety, and law enforcement strategies.

Keywords: police visibility, pickpocketing, barangay patrol teams, community awareness, crime prevention, reporting systems, law enforcement, public safety, research reference, student manual

**AN EVALUATION ON THE EFFECTS OF SENSATIONALIZED SOCIAL MEDIA
REPORTING IN CITY OF SAN JOSE DEL MONTE BULACAN**

Rosaleah Estrada, Joey Quimado, Floraine Abelong, Alvin Molina,
Railey Josh Mangubat, Hyasmin Trinidad, Dr. Antonio Dawagan Sr.

Abstract

This study explores the social and informational impacts of sensationalized reporting on social media in the City of San Jose del Monte. As digital journalism and user-generated content continue to expand, sensationalism characterized by exaggeration, emotional appeal, and attention-grabbing headlines, has become increasingly common. The research assesses how such reporting shapes public perception and contributes to the spread of misinformation, ultimately influencing how citizens understand and react to current events (Dagnes, 2021). This study utilized a descriptive quantitative research design through the use of surveys to determine the extent to which sensationalized social media reporting affects public perception and information accuracy. This method was deemed appropriate for measuring relationships between key variables in the study. Prior to data collection, the researchers secured permission from the Dean's Office to administer survey questionnaires. The participants included 5 PNP Cybercrime experts, 10 netizens who reported being affected by sensationalized reporting, and 35 general netizens from the City of San Jose del Monte, Bulacan. The researchers personally approached the participants, including individuals at Police Community Precinct (PCP) 2, to request their voluntary participation in the survey. After completing the data collection, the researchers analyzed the responses to assess the impact of sensationalized social media reporting. The results indicated that the majority of respondents were male, aged between 20 and 25 years old, and single. The data revealed that sensationalized reporting in the City of San Jose del Monte, Bulacan significantly affects public perception, particularly in terms of prejudiced public opinion, dissemination of inaccurate information, judicial and public pressure, compromised rights to a fair trial, irreversible reputational damage, and the experience of social stigma and trauma. Respondents strongly agreed that sensationalized content poses serious risks, including the spread of misinformation, erosion of public trust, increased polarization, manipulation of public opinion, emotional distress, reinforcement of harmful stereotypes, degradation of journalistic integrity, rise of clickbait culture, legal and ethical concerns, and reduced attention spans. In light of these findings, the researchers recommend promoting media literacy campaigns and establishing a reporting and verification system to combat the spread of misinformation on social media platforms. Academics and researchers should engage responsibly with media platforms. When their work is misrepresented by journalists or social media influencers, they are encouraged to address the inaccuracies professionally, either through direct communication or by issuing a public clarification. This approach helps maintain the accuracy of information and upholds the credibility of academic research.

Keywords: sensationalized reporting, social media, misinformation, public perception, media ethics, clickbait culture, netizens, cybercrime, public trust, san jose del monte

**AN EVALUATION ON THE EMERGENCY RESPONSE STRATEGIES
IN BARANGAY MALINTA, VALENZUELA CITY.**

Cristine Joyce Pepito, Jeanne Abides, Pearl Ramos, Rizzalyn Rivera,
Samantha Torculas, Irene Gaviola

Abstract

Emergency response teams are essential during disasters, yet their efficiency can be significantly affected by challenges such as flooding. In the Philippines, the effects of climate change have led to an increase in both the frequency and severity of disasters, as seen in events like Typhoon Yolanda (2013) and Typhoon Carina (2024). These events emphasize the urgent need for stronger disaster management systems. Local communities, particularly flood-prone areas like Barangay Malinta in Valenzuela City, play a crucial role in emergency response. This study aims to assess the effectiveness of Malinta's current emergency response strategies, identify existing weaknesses, and provide actionable recommendations to enhance its disaster preparedness and resilience. This study utilized a quantitative-descriptive research design to assess the effectiveness of emergency response strategies in Barangay Malinta. Data collection involved both direct observation and the distribution of a researcher-made survey questionnaire. A total of 50 respondents participated in the study, comprising 20 barangay officials, rescuers, and volunteers, along with 30 residents. Stratified sampling was used to ensure diverse representation. To ensure the accuracy, clarity, and reliability of the instrument, the survey questionnaire was reviewed and validated by a panel of experts, including a statistician, an English language specialist, and a subject matter professional. The study found that most respondents were young adults aged 18 to 25, with males comprising 62% and females 38%. The majority were single and had completed only high school. Most had 1 to 3 years of service experience. Evaluation of emergency response strategies showed that training, logistics, resources, and relocation efforts were rated highly adequate, while response time was deemed adequate. A significant challenge identified was poor road conditions, which impeded the timely delivery of goods and services. The study recommends establishing alternative routes to enhance the speed and efficiency of emergency responses. The study revealed that Barangay Malinta's emergency response teams are predominantly composed of young adults with limited experience, highlighting the need for enhanced training initiatives. Although logistics, resource management, and relocation strategies were rated as highly adequate, response times continue to be hindered, largely due to poor road conditions and obstructed routes. Implementing alternative routes is recommended to significantly improve emergency response efficiency. Overall, strengthening both training programs and infrastructure is crucial to enhancing the effectiveness of emergency response operations.

Keywords: emergency response, barangay malinta, training, infrastructure, logistics, response time, road conditions, disaster management, alternative routes

**AN EVALUATION ON THE IMPACT OF TRAFFIC CONGESTION IN
BAGUMBONG ROAD, BARANGAY 171, CALOOCAN CITY**

Michael Maculi, Jericho Agub, Mary Flor Caigoy, Renelyn Eraso,
Richelle Palteng, Dr. Myrna Cuntapay

Abstract

This study aims to evaluate the impact of traffic congestion on multiple dimensions of life along Bagumbong Road, Barangay 171, Caloocan City. It specifically investigates the social, economic, environmental, and psychological effects of traffic congestion as perceived by various stakeholders. The research collects perspectives from a diverse group of respondents, including traffic enforcers, commuters, entrepreneurs, community leaders, and private vehicle owners. The study utilizes a descriptive research method to systematically collect detailed information on the perceptions of different stakeholders concerning the impacts of traffic congestion along Bagumbong Road. The sample consisted of 50 participants, evenly distributed among five groups: ten traffic enforcers, ten commuters, ten entrepreneurs, ten community leaders, and ten private vehicle owners. The data reveal key demographic and behavioral characteristics of the respondents. Nearly half (46%) are aged 41 or older, and 70% are male. Additionally, 46% have resided in Barangay 171, Bagumbong, for one to ten years. When it comes to addressing traffic congestion, respondents showed strong support for various initiatives. The use of alternative fuel vehicles received a mean score of 3.26, while smart growth strategies and urban planning scored 3.48. Smart traffic signals prioritizing emergency vehicles were favored with a mean score of 3.56. The most endorsed measure was the visible presence of police and traffic enforcers in high-traffic areas, with a mean score of 3.92, indicating it as a highly recommended solution. These results reflect robust community backing for technological and infrastructural efforts to improve traffic flow and reduce congestion. The findings provide valuable insights into the community's perceptions of traffic congestion and the interventions required to alleviate the problem along Bagumbong Road, Barangay 171. The strong support for increased police and traffic enforcer presence underscores the community's demand for more effective law enforcement to curb traffic violations and improve congestion management.

Keywords: traffic congestion, community perception, law enforcement, traffic management, bagumbong road, barangay 171, police presence, traffic enforcers, urban planning, sustainable transport

**AN EVALUATION ON THE IMPLEMENTATION OF SAFETY AND SECURITY
PROCEDURES IN KAI MALL CALOOCAN: BASIS FOR PUBLIC SAFETY,
ENHANCEMENT**

Benedict Saguinsin, Daniel Morales, Adrian Solon, Melvie Adalid,
Aldren Avila, Denise Anne Osorio

Abstract

This study focuses on evaluating the implementation of safety and security procedures in Kai Mall, Caloocan, as a basis for enhancing public safety. The protection of patrons and the smooth operation of businesses within the mall rely heavily on the effectiveness of safety and security measures. These measures include the presence of trained security personnel, the installation of surveillance cameras, clearly marked emergency exits, and protocols to prevent incidents such as theft, vandalism, and other security threats. A strong security framework not only ensures the safety of employees and customers but also fosters a more positive and trustworthy shopping experience. Therefore, maintaining a secure environment is a top priority for the mall's management. This study employed a quantitative research design to assess the variables related to the implementation of safety and security procedures. The researcher prepared structured survey questions to collect relevant data. A total of 50 respondents participated, consisting of 30 shoppers and 20 security personnel. Data was gathered through face-to-face interviews and survey questionnaires. To ensure ethical standards, respondent confidentiality was upheld, and official permission was secured from the Customer Relations Services Officer of Kai Mall, Caloocan. Based on the data presented in Table 1, the majority of the respondents are aged 11 to 25 years old, with a frequency of 37, accounting for 74% of the total, and ranked first. This is followed by the 26 to 33 years old age group, with a frequency of 5 or 10%, ranked second. The 34 to 41 years old and 42 to 50 years old age groups both have a frequency of 4, each representing 8% of the total, and are tied at rank three. The total number of respondents is 50, representing 100% of the study population. The main purpose of this research is to evaluate the implementation of safety and security procedures to ensure they are effective, efficient, and consistently followed. These measures are essential in protecting individuals, property, and assets from potential risks. To maintain a safe environment for shoppers and support secure business operations, shopping malls must adopt industry-standard security practices. This includes the use of comprehensive security systems, such as strategically installed CCTV cameras in high-risk areas including entrances, exits, parking lots, and escalators. These cameras should be monitored 24/7 by trained personnel to detect and respond promptly to any suspicious activity.

Keywords: safety procedures, security implementation, cctv surveillance, mall security, public safety, trained personnel, risk prevention, retail safety, kai mall, security systems

**AN EVALUATION ON THE POLICE PRACTICE IN BARANGAY MUZON,
SAN JOSE DEL MONTE BULACAN**

Nicole Irish Punzal, Rosalinda Simbulan, Aloha Pucerio,
Marcela Loterte, Jyrami Jordan, Irene Gaviola

Abstract

The core responsibility of police organizations is to safeguard the rights and property of individuals while maintaining public order and community safety. Police officers are tasked with preventing and investigating crimes, ensuring the protection and well-being of citizens. This study aims to evaluate the effectiveness of law enforcement practices in reducing crime rates in Barangay Muzon, San Jose del Monte, Bulacan. This study adopts a quantitative research approach to identify patterns, correlations, and trends by collecting and analyzing numerical data. It relies on objective measurements and statistical analysis to test hypotheses and draw conclusions. The researchers used purposive sampling, a non-probability technique where participants are deliberately selected based on specific characteristics or criteria relevant to the research objectives. Most of the respondents were 26–33 years old, male, single, and had over 11 years of service or residency in Barangay Muzon, San Jose Del Monte, Bulacan. Their assessment of police practices in the area indicated a strong agreement with the implementation of hotspot policing, police visibility, stop-and-search operations, and police-community collaborative initiatives. However, a key issue identified was the inadequate attention given to the needs of vulnerable populations. To address this, the study recommends the immediate introduction of specialized training for police officers and the establishment of dedicated units or programs focused on assisting vulnerable groups. Furthermore, targeted interventions should be developed and implemented to ensure that local law enforcement prioritizes the protection and safety of these individuals. This chapter presents a summary of the key findings and conclusions from the study, which evaluated police practices in Barangay Muzon, San Jose Del Monte, Bulacan. A primary issue identified was the inadequate response to the needs of vulnerable populations, with 27 out of 50 respondents (54%) reporting this concern. The chapter also provides recommendations for both community members and law enforcement agencies to improve service delivery and enhance public safety through more inclusive and responsive policing strategies.

Keywords: police practices, vulnerable populations, barangay muzon, law enforcement effectiveness, community safety, san jose del monte, police-community relations, public safety, police visibility, hotspot policing.

**AN EVALUATION ON THE PROFICIENCY OF BARANGAY PUBLIC SAFETY
OFFICERS IN BARANGAY DULAP, PASOLO, VALENZUELA CITY**

Enrico Magtibay, Kurt Lewen Gabriel, Orly Aguilar, Zaldy Santelices,
Adrian Tiozon, Eduardo Villaruel

Abstract

This study aims to assess the proficiency of Barangay Public Safety Officers (BPSOs) in Barangay Dulap by evaluating their skills, knowledge, and overall effectiveness in managing incidents and emergencies. By identifying their strengths and areas needing improvement, the research seeks to offer actionable recommendations to enhance their capabilities and support the development of a safer and more secure community. In the Philippines, the barangay serves as the cornerstone of local governance and community safety. Central to this system are the BPSOs, commonly known as “tanods,” who play a vital role as first responders to crimes, emergencies, and natural disasters. This chapter presents the research methodology used in the study, detailing the research design, the rationale behind selected procedures, the respondents, the research instrument, sampling techniques, validation and administration processes, and the statistical treatment applied to analyze the data. The study adopted a descriptive research design, which aims to provide a clear picture of the current situation by describing the characteristics of the data. The primary goal of the research is to understand the thought processes and perceptions of the selected population. Titled *An Evaluation of the Proficiency of Barangay Public Safety Officers in Barangay Dulap, Pasolo, Valenzuela City*, the study involved a total of fifty (50) respondents. These were divided into two groups: ten (10) Barangay Public Safety Officers and forty (40) residents of Barangay Dulap, Pasolo, Valenzuela City. This chapter presents the data collected by the researchers, accompanied by tables, analysis, and interpretation. It covers the demographic profile of the respondents, the results of the survey questions, and the statistical tools used to analyze the findings. The presentation is structured to provide a comprehensive understanding of how the data supports the study’s objectives and research questions. This chapter presents the summary and conclusions of the study on the evaluation of Barangay Public Safety Officers (BPSOs) in Barangay Dulap, Pasolo, Valenzuela City. It outlines the key challenges faced by BPSOs in responding to various incidents and emergencies and offers strategic recommendations to enhance their skills, performance, and overall effectiveness in promoting community safety and security.

Keywords: barangay public safety officers, bpsos, barangay dulap, emergency response, community safety, incident management, skills enhancement, local governance, valenzuela city

**AN EVALUATION ON THE PROPER IMPLEMENTATION OF REPUBLIC ACT 10631
ALSO KNOWN AS PHILIPPINE ANIMAL WELFARE ACT OF 2013**

Lyka Gatarin, Shannie Mae Galela, Joanna Moreno, Arabela Navarra,
Charline Paymalan, Dr. Antonio Dawagan Sr.

Abstract

Animal cruelty, including the killing of animals, is a pressing global concern that highlights significant ethical and legal challenges. In response to heightened public awareness and growing advocacy for animal welfare, numerous countries have enacted legislation to combat such cruelty. For example, the United States established the Animal Welfare Act in 1966, and the European Union has introduced various directives aimed at safeguarding animals (Codecasa et al., 2021). These legal frameworks are designed to prevent unnecessary suffering, ensure accountability for offenders, and foster the development of a more compassionate society. The study employed purposive sampling to select respondents, which included Barangay officials, local residents, and representatives from the Philippine Animal Welfare Society (PAWS). The researchers personally engaged these participants to collect data on their assessment of the implementation of R.A. 10631. The findings indicate that law enforcement officers are well-informed about R.A. 10631 and capable of effectively addressing animal cruelty cases. Equipment for handling such incidents is regularly updated and maintained, according to respondents. Enforcement of penalties under R.A. 10631 was also rated positively. However, a notable challenge identified was the perceived weakness of penalties, reported in 30 cases (15%). To address implementation issues, 38 respondents (15.2%) recommended increasing public awareness about the importance of reporting animal cruelty. Public awareness should be enhanced through educational programs that encourage the reporting of animal cruelty and promote responsible pet ownership. Comprehensive training for law enforcement officers on animal welfare laws, investigative procedures, and proper animal handling is also crucial. Furthermore, additional funding must be allocated to provide necessary equipment and transportation to strengthen response capabilities. Lastly, the government should ensure sustainable financial support for ongoing public awareness initiatives, officer training, and the maintenance of animal shelters.

Keywords: animal cruelty, r.a. 10631, law enforcement, public awareness, responsible pet ownership, training, equipment, funding, quezon city, animal welfare

**AN EVALUATION ON THE ROAD SAFETY PROGRAM IMPLEMENTED BY TRAFFIC
AND TRANSPORTATION MANAGEMENT DIVISION ALONG QUIRINO HIGHWAY**

Sean Mico Yambao, Darwin Danos, Jade Francis Macaranas,
Dan Carlo Quillo, Joshua Ermino, Nilmar Plata

Abstract

The Quezon City Government, through its Traffic and Transportation Management Division (TTMD), has implemented several initiatives aimed at improving road safety along Quirino Highway. These initiatives focus on minimizing traffic accidents, enhancing traffic flow, and ensuring pedestrian safety. This study aims to assess the effectiveness of these road safety programs and identify areas that require improvement to further enhance public safety and transportation efficiency. This study employed a descriptive research method, with data gathered from 50 respondents: comprising 30 commuters, 10 drivers, and 10 traffic enforcers. The demographic profile showed that the largest age group among participants was 26–35 years old (32%), while the smallest was 42–50 years old (20%). Based on the study's findings, the following actions are recommended to improve road safety along Quirino Highway: Improve and maintain infrastructure to enhance safety for all road users. Expand public awareness campaigns to educate commuters and pedestrians on road safety. Strengthen enforcement of traffic regulations to ensure greater compliance. Implement ongoing monitoring and evaluation to address emerging road safety challenges. By adopting these recommendations, the Traffic and Transportation Management Division (TTMD) can enhance the effectiveness of its road safety program, reduce accidents, and promote a safer transportation environment along Quirino Highway. Road safety is a significant concern globally, especially in urban areas with dense traffic and complex transportation systems. Quirino Highway in Quezon City exemplifies this challenge, facing frequent congestion, heavy pedestrian traffic, and numerous vehicular accidents. In response, the Traffic and Transportation Management Division (TTMD) has implemented a road safety program aimed at enhancing traffic management, reducing accidents, and improving pedestrian protection. Evaluating the program's effectiveness is crucial to understanding its impact and identifying areas for improvement. Given the mixed traffic on urban roads like Quirino Highway, including public utility vehicles, private cars, motorcycles, and pedestrians, comprehensive management strategies are essential. Studies confirm that such road safety programs are vital to reducing risks and ensuring the safety of all road users.

Keywords: road safety, urban traffic, quirino highway, quezon city, traffic congestion, pedestrian safety, traffic management, vehicular accidents, mixed-use traffic, ttmd

**AN EVALUATION ON TRAFFIC SECTOR 5 TRAFFIC MANAGEMENT STRATEGIES
TOWARDS CONGESTION REDUCTION**

Jayson Estrabela, Daniel Atencio, Melbin Cabrillos, John Mark Dagala,
Benjie Soriano, Nilmar Plata

Abstract

This study evaluates the effectiveness of traffic management strategies implemented by Police Traffic Sector 5 in mitigating congestion along Commonwealth Avenue in Quezon City. As one of the most heavily trafficked and congested roads in the Philippines, Commonwealth Avenue presents ongoing challenges related to traffic flow, public safety, and urban mobility. Despite continuous efforts by law enforcement and local authorities, congestion remains a significant issue. This underscores the need for a thorough evaluation of existing strategies and the identification of areas for enhancement to improve traffic conditions and overall road efficiency. This study utilized a quantitative-descriptive research design to assess the traffic management strategies implemented along Commonwealth Avenue. A total of fifty (50) respondents participated, consisting of ten (10) police personnel from Traffic Sector 5 and forty (40) road users. To ensure fair representation, simple random sampling was employed. Data collection was conducted using a validated survey instrument, which focused on key areas such as road safety enforcement, community engagement, and the use of innovative traffic management systems. The findings indicated that respondents strongly agreed with the implementation of road safety enforcement and community education initiatives, reflecting a generally positive perception of these current strategies. However, the level of agreement slightly declined to agree when it came to the effectiveness of innovative traffic systems, highlighting a need for further technological advancements. One of the most commonly reported challenges was the sudden stopping of public utility vehicles (PUVs) such as buses and jeepneys to pick up or drop off passengers, which significantly contributes to traffic congestion along Commonwealth Avenue. The researchers recommend strengthening Police Traffic Sector 5 by providing advanced training, upgrading equipment, and utilizing CCTV and automated incident detection systems. Local government units and barangay officials should implement designated loading and unloading zones for public utility vehicles (PUVs) and lead comprehensive traffic education campaigns. Motorists and commuters must adhere to traffic laws and use proper loading areas to ease congestion. Students and future researchers are encouraged to explore innovative traffic management solutions. Human rights advocates should monitor traffic enforcement to ensure fairness and inclusivity. Finally, the Quezon City Government is urged to invest in smart traffic technologies and promote sustainable urban transportation systems.

Keywords: commonwealth avenue, traffic congestion, police traffic sector 5, traffic management strategies, road safety, public utility vehicles (puvs), community education, cctv, smart traffic systems, urban mobility, quezon city

**ANALYSIS OF CITY ORDINANCE NO.2955 KNOWN AS ORDINANCE PROHIBITING
THE DRINKING OF ALCOHOLIC BEVERAGES IN PUBLIC PLACES**

Eljay Alpas, Kristan Solis, Elger Orapa, Jake Eclarinal,
Jhon Marvie Castro, Irene Gaviola

Abstract

In Villaflor Village, Barangay Gulod, Novaliches, Quezon City, the public consumption of alcoholic beverages is prohibited under City Ordinance No. 2995, Series of 2020, which was proposed in March 2019 and implemented in January 2020. This study investigates the effectiveness of the ordinance by examining public perception, identifying challenges in its implementation, and recommending strategies to strengthen compliance. The research aims to support the development of more effective enforcement mechanisms and promote responsible public behavior regarding alcohol consumption. A survey involving 50 residents of Villaflor Village, Barangay Gulod, Novaliches, Quezon City, was conducted to assess the impact of City Ordinance No. 2995 in terms of social, cultural, economic, and enforcement aspects. Most respondents were aged 34 to 41, high school graduates, and long-term residents of the community. The findings revealed general agreement with the ordinance's social, cultural, and economic objectives, while enforcement efforts received the highest approval. However, a major challenge identified was the lack of public awareness, with 84% of respondents indicating they were not well-informed about the ordinance's provisions. To effectively address the identified challenges, the study underscores the importance of improving information dissemination, a measure supported by 92% of respondents. It further recommends strengthening enforcement strategies, setting up community hotlines for reporting violations, and reviewing the ordinance's provisions to ensure alignment with the community's changing needs and circumstances. Future studies are encouraged to examine the long-term effects of the ordinance on public safety, crime rates, and community behavior. By adopting the proposed recommendations, local authorities can strengthen enforcement, increase public adherence, and ensure the ordinance serves its intended purpose of promoting order and safety within the community.

Keywords: ordinance no. 2995, alcohol ban, public places, villaflor village, barangay gulod, enforcement, public awareness, compliance, community safety, policy implementation, information dissemination, quezon city

**ANALYSIS ON DRUG RELATED OFFENSES INVOLVING MINORS
IN BARANGAY 176, BAGONG SILANG, CALOOCAN CITY**

Aeron Lumawon, Jomari Operio, Sherwin Imperial,
Fallorina Mark Jonhel, Jinky Anacta

Abstract

The involvement of minors in drug-related offenses presents a complex and pressing issue with significant social, psychological, and legal consequences for individuals, families, and communities. This study focuses on analyzing the prevalence and contributing factors of such offenses in Barangay 176, Bagong Silang, Caloocan City. It explores the types of drug-related activities committed by minors, examines the root causes such as poverty, peer pressure, broken family structures, and lack of education, and considers the long-term impact on the youth involved. The goal of this research is to provide a comprehensive understanding that can guide the development of preventive strategies, intervention programs, and informed policymaking to address juvenile involvement in illegal drug activities. This study will utilize a combination of purposive and stratified random sampling to ensure a well-rounded and representative group of respondents. Purposive sampling will be applied to select individuals with direct involvement or expertise in drug-related offenses involving minors, such as law enforcement officers, community leaders, and social workers. In parallel, stratified random sampling will be used to gather responses from residents of Barangay 176, including, when applicable, minors and their families. The study will involve a total of fifty-five (55) respondents: eight (8) members of the Barangay Anti-Drug Abuse Council (BADAC), five (5) officers from the Philippine National Police (PNP), eight (8) personnel from the Department of Social Welfare and Development (DSWD), and thirty-four (34) parents. The study found that out of the 55 respondents, 16 were aged 51 or older, and 30 were female, representing 63.64% female and 36.36% male. Twenty-one respondents had completed high school, accounting for 38.18% of the group, while 31 respondents, or 56.36%, were married. The respondents evaluated drug-related offenses involving minors in Barangay 176 across three areas: social environment, trauma and abuse, and educational and preventive programs. The primary challenges contributing to minor involvement in drug offenses were identified as family distress, economic hardship, and parental absence. Additionally, 11.96% of minors were considered vulnerable to negative influences. To address these issues, the study recommends implementing community service and leadership programs that foster responsibility and a sense of belonging among minors. The overall program ratings were 2.99 for social environment, 2.80 for trauma and abuse, and 3.20 for educational and preventive initiatives. Partnering with the Barangay Anti-Drug Abuse Council (BADAC) is crucial for safeguarding minors through the provision of seminars, programs, and awareness sessions that address the factors contributing to their involvement in drug-related offenses. Furthermore, the Barangay should conduct regular seminars for parents and ensure timely responses to assistance requests to effectively protect and support the well-being of minors.

Keywords: minors, drug-related offenses, barangay anti-drug abuse council (badac), community programs, parental involvement, seminars, youth protection, drug prevention, barangay 176, caloocan city

**ANALYZING THE SUCCES OF PROBATION PROGRAM AT
NEW BILIBID PRISON: FOR PROGRAM ENHANCEMENT**

Regie Saballa, Aslanie Abdul Awal, Denrick Lanugan, Jinky Anacta

Abstract

This study examines the effectiveness of the Probation Program at New Bilibid Prison in rehabilitating offenders, ensuring public safety, and reducing prison overcrowding. The program serves as an alternative to incarceration for qualified individuals, enabling them to reintegrate into society under supervision. It aims to support personal reform while ensuring adherence to legal obligations, ultimately contributing to safer communities and more efficient correctional systems. This study utilized a descriptive qualitative research design, which focuses on exploring and understanding individuals' experiences, perspectives, and interpretations of a particular phenomenon. The primary goal of this design is not to test a hypothesis but to develop an in-depth and contextual understanding of the subject matter. It seeks to capture how individuals perceive and make sense of specific events or situations in their own words and context. The challenges identified by the respondents, the study proposes several measures: increasing funding for targeted rehabilitation programs, partnering with employers to create job opportunities, providing tailored support services such as job readiness training and mentorship, utilizing technology for job matching, and strengthening collaboration with community organizations. This chapter provides a comprehensive summary of the study's findings, interpretations, and corresponding recommendations. It presents not only the conclusions drawn from the results but also discusses the overall implications of the study, offering insights into future actions and potential areas for improvement.

Keywords: probation program, new bilibid prison, rehabilitation, public safety, prison overcrowding, qualitative research, reintegration, support services, job opportunities, mentorship, technology, community organizations.

**ANTI-SHOPLIFTING STRATEGIES OF SELECTED CONVENIENCE STORE IN
BARANGAY SAN BARTOLOME NOVALICHES QUEZON CITY**

Rexur Bille Uno Dela Rosa, Johne Rich Navales, Jerald Delampasig,
Charlie Pacolor, Rex Sayson, Ricardo Gabatin, Dr. Myrna Cuntapay

Abstract

Shoplifting continues to pose a major challenge in the retail sector, particularly in convenience stores, where limited space, store layout, and low staffing levels hinder effective theft prevention. As retail-related crimes become more frequent and sophisticated, store owners and managers are increasingly pressured to adopt robust anti-theft strategies. Maintaining a secure shopping environment is crucial not only for minimizing losses but also for fostering customer confidence and employee morale. This study examines the effectiveness of various anti-shoplifting measures in convenience stores, focusing on the roles of surveillance systems, employee training, and the presence of visible security personnel. This study utilized a descriptive quantitative research design to assess the effectiveness of various security strategies implemented in convenience stores in Barangay San Bartolome, Novaliches, Quezon City. This design was deemed appropriate as it enabled the collection of data that accurately describes the current security practices and conditions within these establishments. A survey method was employed, using structured questionnaires distributed to convenience store personnel to gather insights into their experiences, perceived safety, and the challenges they encounter. The data collected was analyzed using statistical tools to identify patterns, correlations, and the severity of the issues faced. This approach provided a comprehensive understanding of the existing security landscape and offered evidence-based recommendations for enhancing convenience store safety. This chapter presents the data collected by the researchers, along with corresponding tables, analyses, and interpretations. It includes the demographic profile of the respondents, the results of the survey questions, and the statistical methods applied in the study. The findings show that most respondents are aged between 18 and 27, with an even gender distribution and substantial experience in store operations. This demographic offers valuable perspectives on store functionality and security challenges. Remarkably, all respondents (100%) agreed that the existing security measures are insufficient, emphasizing an urgent need for improvement. They also noted that strengthening security would contribute significantly to both safety and overall operational efficiency.

Keywords: convenience store security, demographic profile, safety measures, operational efficiency, survey results, security inadequacy, respondent insights, anti-shoplifting, retail operations

**ASSESSING OF THE IMPACT OF THE IMPLEMENTATION OF TRUCK BAN ON
TRAFFIC CONGESTION IN DALANDANAN, VALENZUELA CITY**

Nhoe Mariano, Kelvin Aguilando, Sonny Flores, Januz Sta Ines,
Emmanuel Cedrick Tortoles, Dr. Antonio Dawagan Sr.

Abstract

Traffic congestion is a persistent and widespread problem in the Philippines, particularly in major urban centers such as Metro Manila, Cebu, and Davao. In industrialized areas like Valenzuela City, this issue poses significant challenges to mobility, productivity, and urban development. This study adopted a quantitative research design, which involves the collection and analysis of numerical data to obtain measurable insights. The respondents consisted of 20 personnel from the Traffic Management Office and 30 truck drivers based in Barangay Dalandanan, Valenzuela City. A purposive sampling technique was used to select individuals who are directly involved in or affected by traffic congestion in the area. Among the 50 respondents, 18 were aged between 34–41 and 42–49 years old, while only 5 were aged 18–25. All respondents were male. In terms of civil status, 27 were married, while only 1 respondent was widowed, the least represented category. Regarding respondent groups, 30 were truck drivers and 20 were Traffic Management Office (TMO) personnel. For years of service, 25 respondents had been working for 1–5 years, while 6 had over 11 years of experience, the longest service duration among the group. In assessing the implementation of the truck ban and its impact on traffic congestion in Barangay Dalandanan, Valenzuela City, the following average ratings were observed: Peak Hours: 3.65 (Strongly Agree) Weather Conditions: 3.56 (Strongly Agree) Insufficient Infrastructure: 3.57 (Strongly Agree) The most frequently reported issue was the increase in transportation costs due to rerouting, identified by 20 out of 50 respondents as a primary concern. To address the increased transportation costs due to rerouting, coordination with the Traffic Management Office (TMO) is recommended to request special permits when necessary. For the confusion caused by unclear truck ban schedules, it is advisable to conduct orientation sessions for drivers and logistics personnel to ensure a thorough understanding of the regulations. To improve the enforcement of truck ban policies, the adoption of surveillance technologies should be promoted to strengthen compliance monitoring. In response to the deterioration of road conditions due to heavy traffic on alternate routes, reinforcing road infrastructure is suggested to withstand the increased load from heavy vehicles. Lastly, to resolve the issue of longer travel times for delivery and logistics operations, adjusting delivery schedules to avoid peak traffic hours is highly recommended.

Keywords: truck ban, rerouting, transportation costs, traffic congestion, enforcement, surveillance technology, delivery schedules, valenzuela city, tmo, road infrastructure, logistics, truck drivers

**ASSESSING THE AWARENESS OF 4TH YEAR IN BCP BS CRIMINOLOGY STUDENTS
IN THE CONDUCT OF POLYGRAPH EXAMINATION**

Kiah Vallyree Gusi, Realyn Aras, Knor Honie Bagsican,
Jenelyn Laroco, Eddie Nacario, Eduardo Villaruel

Abstract

This aims to examine the complex relationship between lie detector technology and legal procedures, focusing on its historical background, scientific validity, ethical considerations, and potential impact on the justice system. The admissibility of polygraph tests, commonly referred to as lie detector tests, has long been a controversial issue in legal proceedings. These tests, also known as deception detection assessments, involve asking a subject a series of questions while monitoring physiological responses such as blood pressure, heart rate, respiration, and skin conductivity. The premise is that deceptive responses trigger detectable physiological changes; however, the reliability and scientific validity of polygraph results continue to be widely debated. The study identified several limitations in polygraph training. The highest-ranked issue was the limited availability of assessment tools, followed by insufficient practical experience and, in third place, limited exposure to real-world applications and a lack of specific knowledge about polygraph procedures. To address these gaps, the top recommendation is to organize small group sessions where students can practice conducting polygraph examinations on one another, as well as invite professional examiners from law enforcement and forensic agencies to share their expertise and provide mentorship. The second-ranked solution is to offer hands-on training with polygraph equipment through simulations and practical exercises under the guidance of qualified instructors. The most strongly supported solution among respondents directly addressed the primary concern they identified. The recommendation to organize small group sessions where students practice conducting polygraph examinations on one another received the highest level of agreement, with 43 respondents (86%) in favor. Conversely, the least preferred measure was the suggestion to have students write reflective essays on their understanding of polygraph examinations, including ethical implications, limitations, and potential biases, which was supported by 35 respondents (64%).

Keywords: polygraph training, assessment tools, practical experience, simulation, student engagement, mentorship, ethical reflection, forensic education

**ASSESSING THE EFFECTIVENESS OF EQUIPMENT IN
ENHANCING FIRE RESPONSE IN VALENZUELA CITY**

Carl Medina, Randel Briggs, Lourd Kent Dreighfer Reyes,
Aldrin Sagorio, Joshua Villanueva, Irene Gaviola

Abstract

This study, titled "Assessing the Effectiveness of Equipment in Enhancing Fire Response in Valenzuela City," investigates the adequacy, accessibility, and safety features of the firefighting equipment employed by emergency responders in Valenzuela City. It aims to determine how effectively the current equipment supports fire response operations and enhances overall emergency management. Furthermore, the research seeks to identify critical challenges and constraints related to equipment availability and functionality that may impact operational efficiency and firefighter safety. This study utilized a descriptive research design, combining both quantitative and qualitative methods. A total of 40 participants, comprising professional firefighters and fire volunteers, were involved. Data collection was conducted through structured survey questionnaires that examined the availability and operational condition of firefighting equipment, the efficiency of fire response, and the challenges faced in equipment maintenance and procurement. Findings indicate that while the majority of respondents strongly agree that firefighting equipment in Valenzuela City is generally adequate and accessible, several challenges hinder optimal fire response. The most critical issues identified include outdated equipment, an insufficient number of firefighting vehicles, and irregular maintenance. Furthermore, the lack of standardized protocols and limited training on proper equipment use were found to negatively affect the overall effectiveness of fire response efforts. To enhance the efficiency of fire response operations, this study recommends investing in modern firefighting equipment and establishing systematic maintenance schedules to ensure optimal functionality. Strengthening training programs for fire responders is also essential to improve proficiency in equipment handling. Moreover, improving the organization of equipment storage, securing additional funding for procurement, and fostering collaborative partnerships among relevant agencies are crucial measures to bolster the city's overall emergency response capacity.

Keywords: firefighting equipment, emergency response, valenzuela city, fire response effectiveness, fire safety, operational readiness, equipment maintenance, fire department performance, disaster preparedness, public safety, and operational readiness.

**ASSESSING THE EFFECTS OF ILLEGAL GAMBLING IN
BARANGAY BALINGASA QUEZON CITY**

Mark Dennis Garcia, Ralph Lauren Belotindos, Miguelito Diaz, Gerald Gonzales,
Al-amin Mambuay, Antonio Mejia, Dr. Nilmar Plata

Abstract

Illegal gambling poses significant social and economic challenges in urban communities. In Barangay Balingasa, Quezon City, unregulated gambling activities have been linked to unemployment, family conflict, and financial instability. This study assesses the effects of illegal gambling on residents' socioeconomic status, psychological well-being, and family dynamics. A descriptive quantitative design is employed to measure residents' perceptions of gambling impacts. Thirty respondents selected via purposive sampling and representing various age groups, civil statuses, educational backgrounds, and occupations (police officers, barangay officials, and others) completed a structured questionnaire. The instrument, grounded in prior literature, captures demographic data and ratings on socioeconomic, psychological, local economic, and family-related effects using a four-point Likert scale. Data is analyzed using weighted means and frequency distributions. Respondents were primarily aged 26–33 (30 percent), married (56.7 percent) and college graduates (66.7 percent). Police officers, barangay officials, and other occupations were equally represented (33.3 percent each). Socioeconomic effects received a weighted mean of 3.90 (strongly agree), family problems 3.93 (strongly agree), local economic impacts 3.87 (strongly agree), and psychological effects 3.77 (strongly agree). The most frequently cited challenge was insufficient data on illegal gambling incidents (96.7 percent). The study indicated that illegal gambling significantly undermined socioeconomic stability, family cohesion, and psychological health in Barangay Balingasa. As a result, it was recommended that local authorities implement comprehensive data-gathering protocols, establish community education programs, and strengthen collaboration between law enforcement and social services to mitigate gambling-related harms.

Keywords: illegal gambling, socioeconomic impact, psychological effects, family problems, barangay balingasa, descriptive study

**ASSESSING THE IMPACT OF LIVELIHOOD PROGRAM FOR THE REHABILITATION
AND REINTEGRATION OF PERSON DEPRIVED OF LIBERTY IN VALENZUELA CITY
JAIL**

Arlene Mulay, Arlene Mulay, Jobelle Ann Bonaobra, Ma Maica Leaño,
Mario Roberto, Angel Mae Zulueta, Jinky Anacta

Abstract

Livelihood programs administered by the Bureau of Jail Management and Penology provide Persons Deprived of Liberty (PDLs) with community-based, income-generating activities such as crafting bags, bonsai plants, and wallets during confinement. These programs aim to develop skills, foster self-reliance, and offer financial support for PDLs' personal needs and their families. A descriptive survey design is employed to assess the impact of these livelihood initiatives at Valenzuela City Jail. A total of fifty respondents: comprising twenty PDLs, twenty jail officers, and ten community members, are purposively selected. A structured questionnaire gathers demographic data and evaluates perceptions of program selection, training quality, logistical support, policies and procedures, and post-release employability. Respondents were predominantly aged 18–30, married, and college graduates. Assessment scores indicated strong agreement across all dimensions: fair and transparent participant selection, comprehensive training modules, sufficient logistical requirements, clear policies and procedures, and enhanced employability prospects. PDLs and officers rated the overall program impact positively, confirming improved skill sets and readiness for reintegration. Findings demonstrated that livelihood programs significantly enhanced PDLs' technical competencies and self-efficacy, contributing to smoother reintegration into society. Strong training and logistical frameworks fostered confidence among participants, while clear policies ensured program consistency. Enhanced employability outcomes suggested that participants were better prepared for gainful post-release employment, thereby supporting long-term rehabilitation goals.

Keywords: livelihood program, person deprived of liberty, skill development, reintegration, employability, valenzuela city jail

**ASSESSING THE IMPACT OF OVERCROWDING OF PERSON DEPRIVED OF
LIBERTY IN QUEZON CITY JAIL MALE DORMITORY**

Johnny Alinsud, Ariel Alfabeto, Kier Balara, Jhermin Ibayan,
Arron Jorge, Dr. Nilmar Plata

Abstract

Overcrowding occurs when the number of Persons Deprived of Liberty (PDLs) exceeds the designed capacity of a facility, resulting in constrained living space, elevated health risks, and heightened challenges in maintaining security and order. This study assesses the physical, sociological, and environmental impacts of overcrowding on PDLs within the Quezon City Jail male dormitory. A quantitative descriptive design is employed, surveying 50 individuals, including 30 PDLs, 10 jail personnel, and 10 visitors, selected through random sampling to ensure diverse perspectives. Data are collected via a structured questionnaire addressing physical health, social interactions, and environmental conditions. Researchers obtained informed consent, administered the surveys in person, and secured completed questionnaires to maintain confidentiality. Assessment of the physical impact revealed an overall weighted mean of 3.59, indicating that respondents strongly agreed overcrowding adversely affected personal health and well-being. Sociological effects received an overall weighted mean of 3.47, reflecting strong agreement that limited space and resources strained social relations and cooperation. The environmental impact yielded a weighted mean of 3.44, signifying strong agreement that overcrowding degraded living conditions through poor sanitation and inadequate ventilation. The findings highlighted that overcrowding significantly undermined PDLs' physical health, social cohesion, and environmental quality. As a result, policy interventions such as capacity limits, infrastructure expansion, and enhanced health services were identified as priorities. These recommendations aim to guide more effective management strategies and improve living conditions for PDLs in Philippine detention facilities.

Keywords: overcrowding, physical health, sociological impact, environmental conditions, jail management, policy intervention

**ASSESSING THE IMPACT OF TRAFFIC VIOLATIONS AND PENALTIES ON
DRIVERS IN BARANGAY UGONG, VALENZUELA CITY**

Chinee Panganiban, Angelica Barrientos, Hezin Cinso, Jhon Mark Frayres,
Josephine Nacor, Denise Anne G. Osorio

Abstract

Traffic violations contribute significantly to road accidents, congestion, and public safety risks in urban areas. In Valenzuela City, rapid urbanization and increasing vehicle numbers exacerbate these challenges. Barangay Ugong experiences frequent violations that undermine traffic flow and endanger drivers and pedestrians. This study assesses the impact of traffic violations and penalties on drivers in Barangay Ugong, Valenzuela City, to inform enforcement strategies and public safety initiatives. A descriptive quantitative design is employed using purposive sampling to select respondents knowledgeable about local traffic enforcement. Permission was obtained from the Bestlink College of the Philippines School of Criminology and the Barangay Ugong substation commander. A structured survey questionnaire was administered to fifty participants: forty drivers and ten traffic enforcers, to collect numerical data on enforcement effectiveness, penalty perceptions, and enforcement challenges. Responses were analyzed using means and percentages. Respondents were predominantly male, aged 18 to 25, married, with over eleven years of driving experience. Most identified as drivers (80 percent). Enforcement effectiveness received strong agreement (mean = 3.40), with technology applications such as speed and red-light cameras rated highly (mean = 3.60). Penalties were viewed as effective motivators (mean = 3.50), and awareness of traffic laws was high (mean = 3.70), especially regarding safety equipment use (mean = 3.78). Major concerns included difficulties in license renewal and income loss due to vehicle impoundment (both 84 percent). The most supported recommendation was stricter vehicle inspections at checkpoints (88 percent). The findings indicated that robust enforcement measures and technological tools improve compliance, but administrative hurdles and financial impacts undermine driver cooperation. As a result, drivers in Barangay Ugong were encouraged to adhere to traffic regulations and take responsibility for violations. Stricter enforcement of severe offenses, such as drunk driving and illegal parking, was recommended to reduce accident risk and enhance public safety. Implementing these measures contributed to a safer traffic environment in the community.

Keywords: traffic violations, law enforcement, penalties, driver compliance, public safety

**ASSESSING THE INFLUENCE OF PEACE AND ORDER PROGRAMS ON PREVENTING
CHILD IN-CONFLICT WITH THE LAW IN MALIGAYA COMPOUND
UNIT 4 BARANGAY COMMONWEALTH QUEZON CITY**

Myca Ella Cahatol, Micah Barde, Jhane Carla Guardiano,
Mark Angelo Pepito, Ashahiel Villasor, Dr. Myrna Cuntapay

Abstract

Juvenile delinquency remains a significant global social issue, encompassing unlawful behaviors among individuals aged 18 and younger. It poses a threat to community members, young families, and society as a whole. In response, many countries have implemented peace and order programs that include free sports and recreational activities for young people, promoting self-discipline, cooperation, and friendship. These initiatives also support disadvantaged youth by providing free meals, addressing the critical issue of hunger, which often exacerbates social unrest and inequality. By addressing fundamental issues such as education, recreation, and hunger, these programs help mitigate broader societal challenges. Moreover, this study examines the impact of peace and order programs on the prevention of children in conflict with the law. This study used a mixed-methods approach and a descriptive-exploratory research design. Surveys were used in the quantitative component to assess how individuals (those aged 18 and up) who are involved in the execution and assessment of peace and order programs feel about the prevention of juvenile delinquency under RA 9344. Key informant interviews were conducted as part of the qualitative and quantitative component to obtain information about particular program practices, difficulties, and suggestions. This chapter presented tables, analyses, and interpretations of the data gathered by the researchers. It included the demographic profile of the respondents, the survey questions, as well as the statistical treatment used in the study. The top recommendation, with the highest percentage of 11.93% from the respondents, was the indicator: "Implement restorative justice approaches that focus on rehabilitation and reintegration rather than punishment." This can involve mediation, victim-offender dialogue, and community-based programs. The second recommendation that respondents agreed upon was the indicator: "Community policing fosters strong relationships between law enforcement and communities, particularly youth. This can involve community outreach programs, youth dialogues, and joint initiatives to address local concerns. Finally, the measure proposed by respondents regarding effective institutions for the control of juvenile delinquency highlighted the importance of parental involvement, positive parenting, emotional support, and education.

Keywords: influence of peace and order programs on preventing children in conflict with the law, respondents of the study, construction of the instrument

**ASSESSING THE OPERATIONAL EFFICIENCY OF BARANGAY PEACEKEEPING
ACTION TEAM (B.P.A.T) IN NAGKAISANG NAYON, QUEZON CITY**

John Paulo Bobis, Aaron Cristoper Daguia, Jayson Luperia,
Harvey Angelo Ruiz, Iran Sanoy, Denise Anne Osorio

Abstract

The Barangay Peacekeeping Action Team (B.P.A.T.) serves a critical function in Nagkaisang Nayon, Quezon City, addressing drug-related offenses, petty theft, domestic abuse, and other community disorders. This study assesses B.P.A.T.'s operational efficiency by examining its organizational structure, resource allocation, personnel training, coordination with law enforcement agencies, and program effectiveness. The focus is on community engagement, crime prevention, and incident response to determine how these activities contribute to overall barangay safety and security. This study employs a quantitative descriptive research design and purposive sampling to select respondents with relevant experience. A total of 50 participants, 25 B.P.A.T. personnel and 25 barangay residents, completed a structured questionnaire assessing perceptions of B.P.A.T.'s crime prevention, problem-solving, and crime reduction efforts. Data were analyzed using descriptive statistics to evaluate operational efficiency indicators. Respondents strongly agreed that B.P.A.T. exhibited high operational efficiency in crime prevention, crime resolution, and crime reduction activities. The most frequently cited challenge was a lack of knowledge about emerging crime-prevention strategies. An action plan recommending targeted seminars and training was proposed, and subsequent evaluation confirmed improved knowledge among B.P.A.T. personnel in preventive techniques. B.P.A.T.'s strongest performance was in crime prevention and reduction, while crime resolution scored lowest (mean = 3.20, agree). Implementation of the proposed training and seminar program led to measurable gains in personnel competence. These findings suggest that ongoing capacity building and knowledge enhancement are essential for strengthening B.P.A.T.'s ability to resolve incidents and further improve community safety.

Keywords: operational efficiency, crime prevention, peacekeeping action team, community safety, training

**ASSESSING THE OVERCROWDING SITUATION OF PERSON DEPRIVED OF LIBERTY
IN CALOOCAN CITY JAIL: BASIS IN PREVENTING AGGRESSIVE BEHAVIOR**

Marietoshi Abogatal, Ashly Arellano, Jennel Bongalos, Lea Allizon Gemina,
Jhon Chester Princena, Dr. Myrna Cuntapay

Abstract

In this day and age, information about violence inside overcrowded correctional facilities is commonly reported. This long-standing issue seems endless and may weaken the rehabilitation of offenders. This study aimed to determine the basis for preventing aggressive behavior among overcrowded PDLs in Caloocan City Jail. The respondents of the study were 10 jail officers and 40 Persons Deprived of Liberty from Caloocan City Jail. The sampling technique utilized by the researchers was purposive sampling. This study used quantitative methods, particularly descriptive research design. The researchers requested permission from the head of Caloocan City Jail to conduct the survey. Prior to the survey, the researchers asked the consent of the target respondents to complete the survey questionnaires. They waited until the respondents finished answering the survey. Upon completion, the researchers collected the questionnaires and interpreted the information given. The respondents were assured by the researchers that the information gathered would be kept confidential. The highest weighted mean in terms of Personal Factors was “Strong self-control helps PDLs to better control their behavior despite overcrowding.” In terms of Situational Factors, it was “The lack of privacy and space caused by overcrowding makes PDLs more likely to act aggressively.” In Cognitive Processes, it was “PDLs frequently perceive confrontational situations as personal attacks, which can lead to aggressiveness.” Lastly, in terms of Affective States, it was “Prisoners who feel helpless or trapped in their situation are prone to react aggressively.” Persons Deprived of Liberty and their families should be aware of their anger, learn healthy coping mechanisms, and settle disagreements peacefully to avoid conflict escalation. To lessen frustration and provide emotional support, they need to develop stronger relationships with their peers.

Keywords: assessing, aggression, persons deprived of liberty

**ASSESSING THE PHILIPPINE NATIONAL POLICE PERSONNEL ASSIGNED IN
POLICE STATION 4 IN RESPONDING TO STREET CRIME**

Arabella Pergis, Rosemarie Clemente, Riza Maro, Samantha Joy Nerviol,
Janine Tenedora, Dr. Antonio Dawagan Sr.

Abstract

Street crimes encompass unlawful and often violent acts occurring in public spaces, posing significant threats to community safety. Effective response to such crimes requires coordinated law enforcement tactics, proactive community engagement, and preventive strategies. This study assesses how personnel of Police Station 4 in Barangay Bagbag, Novaliches, Quezon City respond to street crime, focusing on enforcement activities and collaboration with local stakeholders. A quantitative descriptive design is employed, with purposive sampling used to select fifty respondents comprising police officers, barangay officials, and residents. A structured survey questionnaire is administered to evaluate perceptions of enforcement effectiveness, community engagement, and operational challenges. Data collection follows a systematic distribution and retrieval process to ensure high response quality, and results are analyzed using descriptive statistics. The demographic profile indicated balanced representation across age, sex, length of service, and residency. Findings revealed that respondents “Strongly Agreed” on the effectiveness of enforcement measures and community engagement initiatives by Police Station 4. The most frequently encountered problem was the lack of CCTV cameras and adequate street lighting, which hindered timely police response. Proposed measures included increasing police visibility through intensified patrols and presence in high-crime areas, particularly during peak hours. The study confirmed that robust enforcement and active community collaboration contributed to positive perceptions of police response to street crime. However, infrastructural deficiencies such as insufficient lighting and surveillance systems limited operational effectiveness. As a result, enhancing environmental support through installation of CCTV cameras, improved lighting, and expanded patrols, was recommended to strengthen overall response capacity and public safety in Barangay Bagbag.

Keywords: street crime, police response, community engagement, enforcement effectiveness, public safety, barangay bagbag

ASSESSING THE ROLE OF BARANGAY WOMEN DESK IN REDUCING DOMESTIC VIOLENCE IN BARANGAY BAGBAG NOVALICHES QUEZON CITY

Harrold James Fabillo, April Tubig, Prencess Jerahcel Suminguid,
Rica Joyce Redon, Rhea Crystel Ricablanca, Irene Gaviola

Abstract

This study examined the role of the Barangay Women Desk in reducing domestic violence. The Philippines has passed various laws and programs to stop domestic violence, yet several Filipino women still long to feel safe and protected, especially in the hands of their partners. The likelihood of them being victims of abuse has remained constant. Despite the prevalence of violence against women, this issue has not been adequately addressed, mainly because it occurs within their own households. Other factors include victims not realizing they are being abused, feeling ashamed or blaming themselves, guilt over reporting their partners, fear of punishment, and fear that if they tell anyone and their partners find out, the abuse will worsen. This chapter entails the research design, study respondents, sampling technique, instrument used in the study, instrument validation, administration and retrieval of the instrument, and statistical treatment of data. The research design is descriptive. For administration and retrieval of the instrument, the researchers personally approached VAW officers and asked local women privately if they had suffered violence at home. The researchers distributed the questionnaires and waited for them to finish answering. Once completed, the questionnaires were collected by the researchers. Based on the findings, in terms of age, the majority of the respondents ranged from 31–34 years old. As to civil status, the majority of married respondents were 17. In terms of educational attainment, 15 of the respondents were high school graduates. Regarding socio-economic status, 15 of the respondents belonged to the middle and lower working class. In Part 2 of the questionnaire, the major indicator for awareness and education was number 2; in proactive measures, the major indicator was number 6; and in counseling and psychological support, the major indicator was number 1. In Part 3, the majority of respondents answered number 7 as a measure. Lastly, the researchers proposed measures and their objectives. This chapter presents the summary and conclusion derived from the conducted study, ASSESSING THE ROLE OF THE BARANGAY WOMEN DESK IN REDUCING DOMESTIC VIOLENCE IN BARANGAY BAGBAG, NOVALICHES, QUEZON CITY. It also provides recommendations to Barangay officials and to the community.

Keywords: women's desk; domestic violence; awareness and education; proactive measures; counseling and psychological support

**ASSESSMENT IN THE CONDUCT OF PEACE AND ORDER PROGRAMS AT
BARANGAY STA. LUCIA NOVALICHES QUEZON CITY**

Mc Duane Montealegre, John Lester Dela Virgen, Rolan Samson,
Vincent Lester Valladores, Jonathan Vienes, Eduardo Villaruel

Abstract

Peace and order refer to the degree of comfort or security provided to a community. It does not only involve stopping and controlling crime but also creating a friendly and cooperative environment where people can live, work, and interact safely. Local government units directly maintain peace and order in the Philippines, with barangays serving as the frontline institutions that promote security and resolve community issues. Barangay Sta. Lucia has its own challenges in crime prevention and in strengthening community relations to ensure public safety. To assess the conduct of peace and order programs in Barangay Sta. Lucia, Novaliches, Quezon City, this study employed descriptive research method, which focused on providing a detailed account of a particular phenomenon or situation. In the context of peace and order programs, the study aimed to explore outcomes, identify participants, and understand how these programs functioned. Purposive sampling was used, involving the deliberate selection of participants or cases based on specific characteristics or criteria that aligned with the research objectives. Respondents strongly agreed that mediation, conciliation, and arbitration processes in peace and order programs were effective in resolving conflicts. Mediation was rated as highly effective in addressing community disputes, conciliation received strong agreement regarding its role in peace and order programs, and arbitration was recognized as an essential service for conflict resolution. The problems encountered by the respondents in assessing the conduct of peace and order programs in Barangay Sta. Lucia, Novaliches, Quezon City, included the lack of awareness among residents about peace and order programs, which was the most frequently reported issue, with a frequency of 18 (18%), ranking first. This was followed by delayed responses from authorities when incidents or issues were reported, with a frequency of 14. The most frequently suggested measure was to conduct regular information campaigns to increase awareness about peace and order programs among residents, with a frequency of 20 (20%), ranking first. This was followed by organizing more community meetings and forums to engage residents, allowing them to discuss their concerns, and by increasing resources for peace and order programs to improve training and overall implementation.

Keywords: peace and order, peace and order programs

**ASSESSMENT OF OUTREACH PROGRAM IN PROTECTING THE CHILD-AT-RISK IN
BARANGAY 176-E, BAGONG SILANG, CALOOCAN CITY**

Luke Cris Pajaron, Mark Angelo Eno, Mark Bryan Malquisto, Ricky Montalaba Jr,
Samuel Junarojie Villar, Eduardo Villaruel

Abstract

This study assesses the effectiveness of an outreach program in protecting children-at-risk in Barangay 176-E, Bagong Silang, Caloocan City. Children-at-risk often face abuse, neglect, poverty, and exposure to criminal behavior, making them vulnerable to long-term developmental challenges. Guided by Bronfenbrenner's Ecological Systems Theory, the research examines how factors at the microsystem, mesosystem, exosystem, and macrosystem levels influence child protection. The outreach program implemented in the community seeks to reduce vulnerability and enhance the safety and well-being of children through education, social engagement, and coordinated local efforts. The study evaluates the program's strengths and weaknesses and offers strategic recommendations for improvement. A descriptive research design is employed, with purposive sampling to select fifty respondents, including twenty children-at-risk, twenty barangay officials, and ten representatives from the Department of Social Welfare and Development. Data are gathered using a validated survey questionnaire and processed through descriptive statistics, including frequency, percentage, and weighted mean. A four-point Likert scale measures respondents' agreement with statements regarding the program's impact across the different ecological system levels. Respondents showed strong agreement on the outreach program's effectiveness at all ecological system levels. At the microsystem level, increased child participation in positive activities received the highest rating (mean = 3.40). Collaboration between families, leaders, and authorities in the mesosystem was rated highest (mean = 3.50). Communication between families and schools in the exosystem stood out (mean = 3.36). At the macrosystem level, positive cultural shifts toward child protection were recognized (mean = 3.44). The most frequently encountered problems were insufficient funding (82%), lack of trained professionals (76%), and absence of long-term support (76%). Effective strategies identified included community-based activities, strong partnerships with law enforcement, and provision of mental health services. The outreach program in Barangay 176-E was perceived as significantly beneficial in safeguarding children-at-risk, fostering positive engagement, and building community resilience. However, the program faced challenges related to limited resources and operational constraints. As a result, it is recommended to enhance collaboration among stakeholders, secure sustainable funding, and integrate continuous evaluation mechanisms to strengthen and sustain the program's long-term impact.

Keywords: outreach program, children-at-risk, ecological systems theory, community collaboration, program evaluation

**ASSESSMENT OF RECIDIVISM AT BARANGAY BIGNAY, VALENZUELA CITY: BASIS
FOR CREATION OF COMMUNITY BASED CRIME PREVENTION STRATEGY**

Selwyn Clapano, Jomar Fuentes, C-Jay Hernandez, Junrey Nelmidia,
Adrian Penilla, Dr. Myrna Cuntapay

Abstract

This study assesses recidivism at Barangay Bignay, Valenzuela City, as a basis for creating a community-based crime prevention strategy. It examines the factors driving repeat offending, such as unemployment, lack of social support, and limited rehabilitation programs, and evaluates existing prevention activities in the barangay. By understanding these dynamics, the study aims to inform targeted interventions that reduce reoffending and enhance public safety. This study employs a descriptive survey design to evaluate recidivism and support the development of a community-based prevention strategy. Purposive sampling is used to select fifty respondents: thirty residents, ten barangay officials, and ten police personnel. Data are collected via a structured questionnaire covering perceptions of repeat offending rates, contributing factors, and the effectiveness of current prevention measures. Survey responses are analyzed using frequency distributions and weighted means to identify predominant themes and areas for strategic focus. The researchers sent a letter to the research adviser to state the intention of the study. After securing the adviser's assurance and cooperation, they distributed the questionnaires to the respondents to establish rapport. Clear instructions were provided to ensure the respondents could answer the questionnaire accurately. The completed questionnaires were collected, tallied, and analyzed by the researchers. The information gathered was reviewed and carefully validated by the adviser. Based on the analyzed data, the researchers prepared a matrix and graph for presentation. The findings indicated that socioeconomic vulnerabilities and gaps in post-release support underlie high recidivism levels at Barangay Bignay. Prevention efforts were found to be fragmented and underresourced. As a result, it was recommended that the barangay establish a centralized database to monitor repeat offenders, implement tailored livelihood and skills training programs for former inmates, and partner with rehabilitation centers and non-governmental organizations to deliver community-based reintegration services. Community awareness campaigns were also advised to engage residents in crime prevention and foster a supportive environment for at-risk individuals.

Keywords: recidivism, crime prevention, community strategy, livelihood programs, valenzuela city

**ASSESSMENT OF THE LAW ENFORCEMENT RESPONSE ON CYBERCRIME
INCIDENT IN BARANGAY SAN JOSE, RODRIGUEZ RIZAL**

Angelo Celso, Hezron Allauigan, Carl Venzent Habulin,
Jaylord Maderas, Oliver Tupas, Eduardo Villaruel

Abstract

This chapter presents the foundational elements of the study, including the background of the research, review of related literature and studies, theoretical and conceptual frameworks, statement of the problem, scope and delimitation, significance of the study, and definition of key terms. The primary aim of this research is to assess the response of law enforcement to cybercrime incidents in Barangay San Jose, Rodriguez, Rizal. This study adopts a descriptive research design, which aims to systematically and objectively describe the characteristics of a specific population, situation, or phenomenon. The selected respondents include sixty (60) police officers stationed at the Police Station located along Mayon Avenue in Barangay San Jose, Rodriguez, Rizal. To ensure fairness and representation, the researchers will employ a random sampling technique, a probability-based method wherein each individual in the population has an equal chance of being chosen. Data will then be gathered from the selected participants to obtain accurate and generalizable insights relevant to the study's objectives. The findings indicate that most respondents are young male officers with limited professional experience. A majority expressed confidence in the current policies and procedures for addressing cybercrime, describing them as systematic and effective in managing present and future incidents. However, respondents also recognized the need to enhance these protocols to keep up with the rapidly evolving strategies employed by cybercriminals. With regard to training, it was noted that officers regularly participate in updates and seminars to stay informed about emerging cyber threats. Despite this, there remains a strong demand for more specialized and advanced training to effectively handle complex cybercrime cases. Additionally, the study found that law enforcement personnel have adequate access to the essential tools and technologies needed for cybercrime investigations. To ensure a proactive and adaptive approach, the effectiveness of current policies, training programs, and equipment used in responding to cybercrime incidents should be regularly evaluated. These assessments must include input from law enforcement personnel, stakeholders, and the local community to identify gaps and areas for improvement. Strengthening the law enforcement response in Barangay San Jose, Rodriguez, Rizal through continuous monitoring and feedback will enhance the overall efficiency of cybercrime prevention and resolution efforts.

Keywords: cybercrime response, law enforcement, policy evaluation, training effectiveness, community feedback, equipment assessment, monitoring and evaluation, cybercrime prevention, rodriguez rizal, stakeholder involvement

**ASSESSMENT OF THE STRATEGIES USED BY TRAFFIC ENFORCERS IN
REDUCING TRAFFIC CONGESTION IN NOVALICHES QUEZON CITY**

Oshin Mojar, Roegae Dianne Aureada, Jazmind Calacat,
Irish Jane Guzman, Irene Gaviola

Abstract

Traffic congestion remains a significant challenge in urban centers worldwide, and Novaliches, Quezon City, is no exception. As one of Metro Manila's busiest districts, Novaliches frequently experiences severe traffic bottlenecks, particularly during peak travel hours. The area functions as a critical transit hub for commuters moving within Quezon City and to neighboring municipalities. With limited road capacity and a rapidly increasing volume of vehicles, the demand for effective traffic management solutions has become increasingly urgent to alleviate congestion and improve mobility. This study utilized a descriptive research design to investigate the traffic management strategies employed by traffic enforcers in Novaliches, Quezon City, aimed at mitigating traffic congestion. This design is well-suited for evaluating existing practices, identifying challenges, and assessing the effectiveness of implemented strategies. Purposive sampling was applied to select participants based on specific criteria relevant to the study's objectives, allowing the researchers to focus on individuals directly impacted by traffic congestion in Novaliches Bayan. The sample consisted of twenty (20) traffic enforcers and seventy (70) local residents. The majority of respondents are aged 18 to 25, predominantly male, and many have lived or worked in Novaliches, Quezon City, for over 11 years. Both traffic enforcers and community residents strongly agree on the effectiveness of strategies related to technology use, transport management, and traffic enforcement in reducing congestion. Despite this, residents identified insufficient parking spaces as a significant issue, leading to illegal parking and worsening traffic congestion. To address this challenge, the study recommends promoting greener transportation policies. The proposed strategy to alleviate traffic congestion involves the implementation of a traffic monitoring system designed to deliver real-time traffic updates to drivers, enhancing overall transportation efficiency.

Keywords: traffic congestion, traffic monitoring system, real-time traffic information, transportation efficiency, traffic management, urban mobility, novaliches, quezon city, traffic enforcement, green transportation policies

**ASSESSMENT ON CLIENT MERCHANT FRAUD AMONGST
DELIVERY RIDER IN NOVALICHES, QUEZON CITY**

John Paul Valdez, Aljun Ariap, Vinz Benedict Corcilles,
Kyle Clarence Degoma, Cyrus Dolores, Jinky Anacta

Abstract

The study entitled “Assessment on Client-Merchant Fraud Among Delivery Riders in Novaliches, Quezon City” was conducted in response to the rising incidence of fraudulent activities within the delivery service industry, particularly with the rapid growth of e-commerce and app-based logistics platforms. While the digital age has brought increased convenience to consumers and expanded income opportunities for businesses and delivery personnel, it has also given rise to various forms of fraud involving both clients and merchants. These fraudulent acts undermine financial security, safety, and trust essential to the efficient operation of the delivery ecosystem. This research aims to evaluate the prevalence, underlying causes, and consequences of client-merchant fraud as experienced by delivery riders operating in Novaliches, Quezon City. The main instrument used in the study was a structured questionnaire designed to gather data across four key dimensions: (1) the demographic profile of respondents, (2) assessment of fraud concerning account security, transaction security, and the security of shipped items, (3) identification of problems related to client-merchant fraud, and (4) proposed strategies to counter such fraudulent activities. The questionnaire underwent expert validation and pilot testing to ensure clarity, relevance, and reliability. Data collection was conducted with prior permission from relevant local authorities and businesses, and questionnaires were distributed and collected in person to ensure a high response rate. Collected data were analyzed using appropriate statistical tools such as frequency, percentage, weighted mean, and ranking to identify trends and highlight areas of concern. The demographic findings indicate that a significant portion of respondents were over the age of 25 (54%), suggesting that delivery services are primarily performed by mature individuals with possible prior work experience. The data also showed a male-dominated workforce (74%), pointing to a gender imbalance that may affect perceptions of risk and exposure to fraud. Furthermore, the majority of respondents were single (60%), which may reflect stronger financial incentives to pursue delivery-related employment. The prevalence of fraud in delivery services, particularly in areas like Novaliches, calls for comprehensive preventive measures. Key recommendations include stricter identity verification protocols, improved tracking of transactions, and educational programs to raise fraud awareness among delivery riders. Establishing mutual rating systems, enhancing cooperation with law enforcement, offering mental health support, and enforcing clear protective policies are also crucial in safeguarding both delivery personnel and customers while fostering a more secure and trustworthy delivery environment.

Keywords: client-merchant fraud, delivery riders, e-commerce, transaction security, identity verification, fraud prevention, risk perception, delivery services, novaliches, rider protection policies, mutual rating system, law enforcement collaboration, digital

**ASSESSMENT ON METROPOLITAN MANILA DEVELOPMENT AUTHORITY TRAFFIC
MANAGEMENT PROGRAM IN REDUCING TRAFFIC CONGESTION
ALONG COMMONWEALTH QUEZON CITY**

Arianne Joyce Suministrado, Irish Libando, Angel Aubrey Orit,
Alinor Pitembangan, Francine Torres, Edgar Reyes

Abstract

The Metropolitan Manila Development Authority (MMDA) is responsible for the oversight and coordination of traffic management in Commonwealth, Quezon City. This encompasses the implementation of traffic control strategies, strict enforcement of traffic laws, and upkeep of road infrastructure. Efficient traffic management is vital not only for facilitating daily commutes but also for ensuring that emergency response services are not impeded. This study utilized a quantitative descriptive research design to evaluate the impact and effectiveness of the MMDA Traffic Management Program in alleviating traffic congestion along Commonwealth, Quezon City. Data was collected through structured questionnaires administered to a purposively selected sample consisting of ten (10) MMDA personnel, twenty (20) drivers, and twenty (20) commuters within the area. This approach allowed for targeted insights from key stakeholders directly involved in or affected by the traffic management efforts. Among the assessed factors, Land Management received the highest weighted mean for Infrastructure at 3.56, indicating strong agreement. Within Traffic Systems, CCTV Cameras scored highest with a mean of 3.51, while Data Collection led in Traffic Technology with a mean of 3.53. For Traffic Discipline, Commuters also achieved a weighted mean of 3.53, all reflecting strong agreement from respondents. The most pressing issue identified was “road accidents resulting from traffic conditions,” ranked as the top concern. Conversely, the least prioritized proposed solution was the enhancement and expansion of traffic signals, signage, and other traffic technologies on roads and highways. Launch a comprehensive public awareness campaign aimed at educating the community on traffic regulations and promoting safety among both drivers and commuters. Furthermore, establish efficient and well-coordinated traffic management systems to ensure smoother and safer road usage for all.

Keywords: public awareness campaign, traffic rules education, driver safety, commuter safety, road coordination, traffic management, community education, road safety, traffic regulation compliance, traffic flow improvement

**ASSESSMENT ON THE BEHAVIOR OF SUSPECT OF PHYSICAL VIOLENCE
CASES IN PASONG PUTIK QUEZON CITY**

Juan Benjamine Duyog, Jestony Capistrano, Paul Aron Dela Cruz,
Jeffrey Marcellano, Jonathan Sulon, Dr. Myrna Cuntapay

Abstract

Physical violence is a pervasive issue that inflicts profound psychological, emotional, and physical harm on victims and their families worldwide. In Pasong Putik, Quezon City, a rapidly developing urban area, incidents of physical violence have emerged as a critical concern for law enforcement, policymakers, and the community. Such violence disrupts social stability and highlights the need to understand the underlying behaviors and motivations of suspects involved. This study aims to provide an in-depth assessment of the behavior of suspects in physical violence cases within Barangay Pasong Putik. Data will be gathered from fifty (50) respondents directly connected to these cases to support a comprehensive analysis. The researchers will employ an appropriate sampling technique to assess the behavior of suspects involved in physical violence cases in Pasong Putik, Quezon City. This study adopts a quantitative descriptive research design to examine key variables. Data collection will involve structured interviews and observations to gain in-depth understanding, complemented by survey questionnaires for statistical analysis. After obtaining approval from the dean's office, the researcher personally administered the questionnaires to respondents in Pasong Putik, ensuring accurate distribution and providing clarifications when necessary. Among the Behavioral Patterns, the most significant factor identified was the influence of alcohol and drugs as a common trigger for violent behavior, highlighting their role in impulsive aggression. In terms of Family Background, the absence of parental guidance was the predominant factor contributing to violent behavior, emphasizing the vital importance of supervision in behavioral development. Future researchers are encouraged to broaden the scope of this study by conducting a comparative analysis across various year levels, departments, or institutions. Additionally, incorporating qualitative methods such as interviews or focus group discussions could offer deeper insights into the community's assessment of suspected physical violence behaviors.

Keywords: behavioral patterns, violent behavior, substance abuse, alcohol influence, drug influence, impulsive aggression, family background, parental guidance, supervision, factors contributing to violence, physical violence, suspect behavior, pasong putik, q

**ASSESSMENT ON THE IMPACT OF TRAFFIC ENFORCER'S
PERFORMANCE IN BARANGAY 171, CALOOCAN CITY**

Edisson Nieva, Edison Nieva, Arsenio Avila, Samuel Dorado,
Genesky Niebres, Aldion Jay Tarce, Jinky Anacta

Abstract

This research program seeks to examine the role and impact of traffic enforcers in regulating vehicular flow within Barangay 171. It focuses on assessing their contributions to traffic management, the challenges they face in daily operations, and the prevailing attitudes of both enforcers and community members. By exploring these key aspects, the study aims to provide a comprehensive understanding of the effectiveness of traffic enforcement and offer insights for improving traffic governance and community engagement. This study employed a quantitative research approach to assess the impact of traffic enforcers' performance. Specifically, it aimed to evaluate their involvement in managing and controlling the flow of traffic in Barangay 171, Caloocan City. The researchers adopted a descriptive research design to gather relevant data, utilizing a structured survey questionnaire in the form of a checklist as the primary data collection instrument. The findings indicate that respondents strongly agreed with the assessment of traffic enforcers' performance in Barangay 171, Caloocan City, particularly to vehicle volume, training, logistical support, and overall management. The results highlight the potential for traffic enforcers, with the support of barangay officials, to be further empowered in understanding and implementing effective traffic control measures. Strengthening this collaboration may lead to enhanced traffic management strategies and a noticeable reduction in traffic congestion in the area. Traffic enforcement officers play a vital role in maintaining road safety and regulating the smooth flow of traffic. Their responsibilities include ensuring that all road users adhere to traffic laws and ordinances. In the performance of their duties, they are authorized to apprehend violators and issue traffic citations to motorists who fail to comply. By effectively managing traffic movement and enforcing road regulations, traffic enforcers contribute significantly to reducing congestion and preventing accidents.

Keywords: traffic enforcement officers, traffic management, road safety, traffic flow, law enforcement, traffic violations, motorist compliance, traffic regulations, barangay 171, traffic control, public safety, traffic congestion, traffic citation, community

**ASSESSMENT ON THE IMPLEMENTATION OF CALOOCAN CITY ORDINANCE
NO. 0643 SERIES OF 2016 ALSO KNOWN AS VIDEOKE REGULATION
ORDINANCE OF CALOOCAN CITY AT BARANGAY 167**

Julius Michael Dollete, Jerome Belarmino, Gerome Duna,
Gene Dave Gajudo, Mark Lowie Talvo, Dr. Myrna Cuntapay

Abstract

Videoke regulation plays a significant role in promoting peace and order, particularly in densely populated urban communities. In Barangay 167, Caloocan City, the excessive and unregulated use of videoke systems has emerged as a pressing concern, affecting the quality of life and well-being of residents. Prolonged videoke sessions often result in noise disturbances that disrupt rest, daily routines, and social harmony, potentially leading to stress, strained neighbor relations, and reduced productivity. In response to these issues, the local government enacted Ordinance No. 0643, Series of 2016, aimed at regulating videoke use and mitigating its negative impact on residential areas. This study aims to assess the implementation and effectiveness of this ordinance, also known as the Videoke Regulation, within Barangay 167, Caloocan City. This study utilized a quantitative research design to evaluate the effectiveness of Ordinance No. 0643, Series of 2016, also known as the Videoke Regulation Ordinance, in Barangay 167, Caloocan City. It aimed to assess community awareness, compliance levels, and the influence of demographic factors on the ordinance's implementation. A total of 50 respondents participated in the study, consisting of 20 enforcement personnel (from the Philippine National Police and barangay officials) and 30 residents. To ensure fairness and reduce sampling bias, the researchers employed simple random sampling using a master list of households as the sampling frame. This approach allowed for an accurate and representative understanding of the community's perceptions regarding the ordinance's impact on local peace and order. This study employs a quantitative research design to evaluate the effectiveness of Ordinance No. 0643, Series of 2016, also known as the Videoke Regulation Ordinance, in Barangay 167, Caloocan City. It specifically examines the levels of community awareness, compliance, and the influence of demographic factors on the implementation of the ordinance. A total of 50 respondents participated in the study, including 20 enforcers (comprising barangay officials and members of the Philippine National Police) and 30 residents. To ensure an unbiased and representative sample, the study utilized simple random sampling, drawing from a master list of households. This method enabled the collection of reliable data that reflects the community's perceptions and experiences regarding the ordinance's impact on peace and order. To improve the effectiveness of the Videoke Regulation Ordinance, it is recommended that targeted awareness campaigns be launched to educate residents on the ordinance's objectives, benefits, and importance in maintaining community peace and order. Facilitating community dialogues can help address resistance, promote open communication, and build public support. Local government units should ensure consistent and fair enforcement by addressing logistical and resource-related challenges, including the allocation of adequate funding for monitoring and enforcement efforts. Moreover, barangay officials are encouraged to strengthen community engagement through regular consultations, public meetings, and localized campaigns to foster cooperation and voluntary compliance. Future studies should consider examining cultural attitudes toward videoke use, identifying effective compliance strategies, and evaluating the impact of enforcement on public perception and acceptance, particularly in densely populated residential areas.

Keywords: videoke regulation, noise control, ordinance no. 0643, community awareness, policy enforcement, barangay 167, caloocan city, public compliance, local governance, residential disturbance, cultural perception, urban community, peace and order, law implementation

**ASSESSMENT ON THE PHILIPPINE NATIONAL POLICE INTERVENTION PROGRAM
FOR PERSONS DEPRIVED OF LIBERTY IN SELECTED POLICE STATIONS IN
QUEZON CITY POLICE DISTRICT**

Kian Shane Dasmariñas, Philip Querubin, John Ariestotel Bungay,
Anton John Gerobin, Jimboy Cepriano, Jinky Anacta

Abstract

This study sought to assess the intervention programs implemented by the Philippine National Police (PNP) for Persons Deprived of Liberty (PDL) in selected police stations under the Quezon City Police District. The results aim to inform police personnel, local government units, and other key stakeholders in formulating more effective, evidence-based strategies that enhance rehabilitation efforts and support the successful reintegration of PDL into society as productive and law-abiding citizens. This study adopted a descriptive research design to evaluate the intervention programs of the Philippine National Police (PNP) for Persons Deprived of Liberty (PDL) in Police Stations 4 and 5 of the Quezon City Police District. The respondents consisted of 30 PDL currently in custody and 20 police personnel involved in program implementation, totaling 50 participants. The majority of respondents were Persons Deprived of Liberty (PDL), primarily male, single, aged 26–33 and 34–41 years old, and college graduates. They strongly agreed on the effectiveness of the Philippine National Police's intervention programs in Values Formation (mean = 3.34) and Moral and Spiritual Development (mean = 3.432). They also agreed on the effectiveness of Skills and Livelihood Training (mean = 3.212) and Psychological Support (mean = 3.248). The most significant challenge identified was the lack of sufficient funding, with the primary recommendation being the allocation of increased budgetary support to improve and sustain these rehabilitation programs. The Philippine National Police (PNP) is encouraged to strengthen collaboration with government agencies and civil society organizations through the establishment of a multi-agency task force dedicated to supporting intervention programs for Persons Deprived of Liberty (PDL). PDL should be actively engaged in various rehabilitation activities, including skills development, educational programs, spiritual counseling, and psychological support services. The Local Government Units (LGUs) and relevant stakeholders should spearhead community awareness initiatives aimed at reducing the stigma and discrimination often faced by former PDL. Simultaneously, community members should promote a culture of acceptance by supporting the goals of intervention programs and advocating for second chances for reintegrating individuals. Criminology students are encouraged to conduct case studies that delve into the lived experiences of PDL, offering deeper insights into the social and psychological factors affecting their rehabilitation. Researchers should contribute to the design of robust monitoring and evaluation frameworks to assess the efficiency, impact, and sustainability of the PNP's intervention efforts. Finally, this study may serve as a useful reference and foundational framework for future researchers pursuing further investigations on the development and improvement of intervention programs for PDL.

Keywords: philippine national police (pnp), persons deprived of liberty (pdl), intervention programs, rehabilitation, reintegration, skills training, psychological support, community awareness, multi-agency collaboration, criminology case studies, monitoring a

**AWARENESS ON SPECIFIC PROVISIONS OF R.A 9262 (ANTI-VIOLENCE
AGAINST WOMEN AND THEIR CHILDREN ACT OF 2004) AMONG
MEN IN BARANGAY 176-A, NORTH CALOOCAN**

John Kyle Castroverde, Jeremy Babagay, Reynald Lerit, John Paulo Merez,
Gabriel Gene Suaiso, Denise Anne G. Osorio

Abstract

This study investigates the awareness of men in Barangay 176-A, North Caloocan, concerning the specific provisions of Republic Act 9262, commonly known as the Anti-Violence Against Women and Their Children Act of 2004. Given that the law's effectiveness is contingent upon public understanding especially among men, who are frequently identified as primary offenders, this research applies the Salutogenic Environmental Health Model to systematically identify gaps in knowledge. Additionally, it examines the influence of social and educational determinants on men's awareness levels. The findings aim to inform evidence-based interventions that promote safer, more informed communities and enhance the law's impact in mitigating gender-based violence. This study employed a descriptive quantitative approach, surveying 50 male residents of Barangay 176-A through purposive sampling techniques. A validated questionnaire was utilized to measure participants' awareness of Republic Act 9262, focusing on its scope and limitations, prohibited actions, and corresponding penalties. Ethical approval was obtained before conducting the study, and informed consent was secured from all respondents. The collected data were analyzed using statistical methods, including frequency counts, percentages, and weighted mean calculations. The research maintained strict confidentiality and impartiality throughout, allowing for an accurate assessment of community awareness and the underlying factors affecting it. The findings reveal that respondents exhibited strong awareness of the penalties and prohibited acts stipulated in Republic Act 9262 yet demonstrated only moderate comprehension of the law's full scope. Contributing factors to these awareness gaps include limited availability of educational resources and prevailing low literacy rates. Among the recommended interventions, the training of school counselors to assist students and families in understanding the law garnered the highest consensus. Additional suggestions emphasized the importance of implementing school-based awareness programs and leveraging social media campaigns. These insights highlight critical deficiencies in community knowledge and provide a strategic framework for targeted and effective awareness initiatives. This study underscores that while male residents exhibit a general awareness of the penalties and prohibited acts outlined in Republic Act 9262, substantial gaps remain regarding their comprehensive understanding of the law's full scope and its societal significance. Persistent cultural norms limited legal literacy, and the absence of systematic educational programs continue to impede effective dissemination and internalization of the law's provisions. The respondents' robust support for school-based interventions highlights the critical role of educational institutions in fostering awareness and shaping attitudes. Anchored in the Salutogenic Model, the study calls for holistic, community-driven approaches that not only enhance legal knowledge but also cultivate responsible and proactive behavior among men, thereby contributing to the prevention of gender-based violence.

Keywords: republic act 9262, anti-violence against women and their children act, male awareness, gender-based violence, legal literacy, cultural norms, educational interventions, salutogenic model, community awareness, school-based programs, social behavior, n

**BARANGAY INTERVENTION PROGRAM IN REDUCING CHILDREN IN CONFLICT
WITH THE LAW AT BARANGAY BIGNAY VALENZUELA CITY.**

Alsimal Lakim, Jaymar Manalansan, Harvey Del Rosario,
Darrel Lapitan, Jethro Pilapil, Jinky Anacta

Abstract

The increasing incidence of children in conflict with the law remains a pressing concern with profound social and individual repercussions. This study investigates the effectiveness of Barangay intervention programs in mitigating juvenile delinquency by focusing on preventive and rehabilitative strategies rather than punitive measures. Key components of these programs include educational support, recreational activities, and mentorship initiatives. Utilizing a descriptive research design and convenience sampling, data were collected from a sample comprising ten police officers, ten barangay officials, and thirty residents of Barangay Bignay, Valenzuela City. This section presents the research methodology applied in the study, detailing the research design, target respondents, sampling methods, data collection instruments, questionnaire development and validation, procedures for administering and retrieving questionnaires, and techniques for statistical data analysis. The study employed a descriptive quantitative research design, which involves systematic gathering and examination of numerical data to characterize a particular population or phenomenon. This approach facilitates the identification and analysis of problems by testing hypotheses through measurable variables, utilizing statistical tools to interpret the results. The results are systematically presented following the sequence of research questions outlined in Chapter 3, incorporating both tabular data and detailed textual analysis to enhance the interpretation of the findings. The overall weighted mean for problem-solving policing was 3.60, indicating a strong agreement among respondents. Similarly, community engagement scored a weighted mean of 3.49, and proactive policing received 3.46, both reflecting strong agreements as well. A critical challenge identified in the implementation of the Barangay intervention program for reducing children in conflict with the law (CICL) is the insufficiency of current policies to adequately address prevalent mental health and substance abuse issues among delinquent youth factors that significantly contribute to criminal behavior. A comprehensive analysis of case studies and interviews with program coordinators and participants, this study emphasizes the essential role of community engagement in addressing juvenile delinquency. The findings reveal that community-based intervention programs serve as a promising framework for crime prevention by fostering adolescents' holistic well-being, facilitating their successful reintegration into society, and ultimately contributing to the reduction of youth crime rates.

Keywords: juvenile delinquency, community-based intervention, crime prevention, adolescent well-being, social reintegration, youth crime reduction, program evaluation, community engagement, rehabilitation programs, juvenile justice

**BARANGAY JUSTICE SYSTEM IN BARANGAY SAN BARTOLOME
NOVALICHES QUEZON CITY**

Ann Adato, Ann Adato, Nicole Belano, Darielica La Rosa,
Justine Rose Plazo, Lorie Sumali, Denise Anne Osorio

Abstract

The Barangay Justice System, locally referred to as the “Katarungan Pambarangay,” serves as a community-based alternative dispute resolution mechanism in the Philippines. Administered by the Barangay, the smallest administrative unit in the country, it is headed by the Barangay Captain, the highest elected official and executive authority at the barangay level. Established to reduce the burden on the formal court system, this localized justice system functions primarily as a mandatory mediation process, facilitating the amicable resolution of disputes within the community and promoting social harmony before matters escalate to formal litigation. The researchers employed quantitative research methods to systematically collect data regarding the current state of the Barangay Justice System in Barangay San Bartolome. Structured surveys and questionnaires were administered to capture respondents’ evaluations and perceptions of the system’s effectiveness. Furthermore, a comprehensive review of relevant literature was conducted to supplement and contextualize the empirical findings. The results underscore the critical need for the development and implementation of comprehensive policies and capacity-building programs to strengthen the competence of barangay staff in effectively administering the Barangay Justice System in Barangay San Bartolome, Novaliches, Quezon City. The respondents’ overall evaluation of the Barangay Justice System in Barangay San Bartolome demonstrates a highly favorable perception of the mediation process, with a weighted mean of 3.76, indicating strong approval. The conciliation process similarly received a positive assessment, with a weighted mean of 3.73, suggesting that respondents view conciliation as an effective means of restoring harmonious relationships in community conflicts. Furthermore, the arbitration process scored a weighted mean of 3.60, reflecting that respondents believe the barangay provides sufficient information regarding arbitration and that the process aligns with their personal values and beliefs.

Keywords: barangay justice system, katarungan pambarangay, mediation, conciliation, arbitration, alternative dispute resolution, community conflict resolution, local governance, barangay san bartolome, novaliches, capacity building, public perception

**BARRIERS IN REPORTING VIOLENCE AGAINST WOMEN AND THEIR
CHILDREN IN BARANGAY BAESA, QUEZON CITY**

Chloegen Palima, Aizel Bernadas, Ara Joy Naz, Elvie Bajador,
Angelica Argomido, Irene Gaviola

Abstract

This study explored the underlying barriers to reporting incidents of Violence Against Women and Children (VAWC) in Barangay Baesa, Quezon City. Despite the presence of legal frameworks designed to protect victims, the persistent issue of underreporting remains a significant concern. Findings suggest that structural, social, and informational barriers play a critical role in discouraging victims from seeking help. Key deterrents include fear of retaliation from perpetrators, societal stigma associated with reporting, and limited awareness of legal rights and available support services. The primary objective of the study was to identify and analyze the most significant obstacles preventing the reporting of VAWC cases. It also considered the demographic profiles of respondents and their perceptions regarding these barriers. The study engaged key informants, including women survivors of violence, VAWC desk officers, and personnel from the Women and Children Protection Desk (WCPD), to gather comprehensive insights into the challenges faced in addressing and reporting VAWC cases. To ensure the relevance and reliability of the data, the study employed both purposive and random sampling techniques in selecting respondents. A mixed-methods research design was utilized, integrating both qualitative and quantitative approaches to obtain a holistic understanding of the barriers to reporting Violence Against Women and Children (VAWC). Prior to the administration of research instruments, formal approval was secured from the Dean's Office of Bestlink College of the Philippines. A preliminary consultation was also conducted with the Barangay Council for the Protection of Children to identify recurring challenges and contextual factors that hinder the reporting of VAWC cases. Furthermore, official request letters were submitted to the Barangay Chairwoman and the Chief of Police of Station 3 to obtain the necessary permissions and institutional support for conducting the study within their respective jurisdictions. Data analysis revealed that limited awareness emerged as the most significant deterrent to reporting cases of Violence Against Women and Children (VAWC), followed closely by fear of retaliation and the pervasive influence of social stigma. These findings emphasize the critical need for proactive interventions that foster public awareness and build confidence in the reporting process. Empowering women in Barangay Baesa through comprehensive education on their legal rights and accessible support mechanisms is essential. Moreover, enhancing the responsiveness and sensitivity of frontline service providers, particularly law enforcement officers and social workers, through intensive gender-responsive training is vital. Such measures would not only improve the handling of VAWC cases but also contribute to a safer, more supportive environment for victims seeking justice and protection. Strengthening community-based initiatives can play a pivotal role in cultivating a culture of vigilance and collective accountability in addressing and reporting Violence Against Women and Children (VAWC). Local government units and policymakers must prioritize the enhancement of monitoring systems, ensure adequate funding for victim support services, and design more accessible and inclusive reporting mechanisms. Incorporating gender-based violence education into school curricula can raise awareness from an early age and foster long-term cultural change. Furthermore, future research should examine additional factors that contribute to the underreporting of VAWC cases and evaluate the impact of current intervention programs. These efforts are essential to advancing a more responsive, effective, and victim-centered approach to combating gender-based violence.

Keywords: vawc, underreporting, community programs, victim support, gender-based violence, monitoring systems, policy intervention, awareness education, reporting mechanisms, local government, curriculum integration, intervention evaluation

**BASIC ROLE OF SANGGUNIAN KABATAAN IN
DISASTER PREPAREDNESS: AN ASSESSMENT**

JM Jasper Tuy, Nelwin Carias, Michael Dagta, Jaycee Lastrilla, Vhins Speed Pradia, Dr. Myrna Cuntapay

Abstract

The Sangguniang Kabataan (SK) plays a crucial role in the Philippine local government system by empowering the youth and fostering their active participation in community development initiatives. As the official representative body of the youth at the barangay level, the SK is tasked with promoting youth welfare and developing their leadership potential. This study explores the role of the SK in the area of disaster preparedness, a critical component in building safe and resilient communities. Barangay Novaliches Proper, like many densely populated urban areas, is highly susceptible to natural hazards such as typhoons, earthquakes, and flooding. The research aims to assess how the SK contributes to disaster risk reduction efforts and enhances community readiness in the face of such emergencies. The research engaged a total of 40 respondents, consisting of 20 residents, 15 Sangguniang Kabataan (SK) officials, and 5 barangay officials, all selected through purposive sampling to ensure the inclusion of individuals with relevant knowledge and experience. A descriptive research design was adopted, employing a structured questionnaire as the primary data-gathering instrument. The questionnaire was carefully constructed to align with the study's objectives and to elicit accurate, relevant, and insightful responses. The formulation of clear, targeted survey questions was essential in capturing meaningful data that would contribute to a comprehensive analysis of the SK's role in disaster preparedness within Barangay Novaliches Proper. The findings reveal that respondents strongly agreed with the essential role of the Sangguniang Kabataan (SK) in advancing disaster preparedness within the community. This is reflected in the weighted mean scores: 3.68 for ensuring the active participation of a broad spectrum of youth in disaster preparedness training and workshops; 3.58 for promoting disaster awareness among the youth; and 3.54 for both conducting regular disaster-related training sessions and ensuring that the content is relevant and beneficial to the youth and the wider community. Additionally, the SK's proactive involvement in youth-led disaster initiatives received a rating of 3.52. Despite these positive perceptions, respondents identified key challenges, most notably, the difficulty in ensuring widespread youth participation in preparedness activities. This underscores a critical gap that must be addressed to strengthen community resilience and the overall effectiveness of disaster risk reduction efforts led by the SK. The demographic profile of the 40 respondents in this study is classified into three main categories: 20 respondents (50%) were community residents, 15 (37.5%) were Sangguniang Kabataan (SK) officials, and 5 (12.5%) were barangay officials. In terms of age, the majority of participants, 17 respondents (42.5%), were between 18 and 25 years old, followed by 12 respondents (30%) aged 26 to 33 years old. Additionally, 4 respondents (10%) were between 34 and 41 years old, while 5 respondents (12.5%) were aged 51 and above. With regard to sex, 23 respondents (57.5%) identified as male, while 17 (42.5%) identified as female. For civil status, most respondents were single, accounting for 29 individuals (72.5%). Ten respondents (25%) were married, and one respondent (2.5%) was widowed. In terms of educational attainment, 15 respondents (37.5%) were currently enrolled at the college level, 13 (32.5%) were college graduates, 7 (17.5%) were high school graduates, 3 (7.5%) had completed vocational training, and 2 (5%) had reached the high school level.

Keywords: demographic profile, respondents, age distribution, sex, civil status, educational attainment, sangguniang kabataan, residents, barangay officials, purposive sampling

**BENEFITS OF SOCIAL MEDIA IN REPORTING CRIME IN
BATASAN POLICE STATION QUEZON CITY**

Arabella Campos, Jessica Castilla, Angelica Concepcion,
Rodelyn Cuenca, Carren De Paz

Abstract

The purpose of this research is to understand how social media affects the way people report crimes at Batasan Police Station, Quezon City. This study focuses on the opinions of both residents and police officers about using social media to share crime information within their community. It aims to determine whether social media makes it easier or harder to report crimes and what can be done to improve collaboration between citizens and the police through this technology. The research seeks to provide helpful insights and ideas to enhance crime reporting and build stronger trust and safety in the community. In the digital age, social media platforms such as Facebook have become vital tools for communication, allowing individuals to share information quickly and efficiently. Crime reporting has also evolved as more people turn to social media to report incidents, spread awareness, and seek assistance from law enforcement. However, while social media offers convenience and accessibility, it also raises concerns about misinformation, false reports, and privacy issues. This study examines both the positive and negative impacts of using social media in crime reporting. A key aspect of this research is understanding how law enforcement responds to crime reports made through social media. It explores whether police officers actively monitor online reports, how they verify the authenticity of information, and how their responses to digital crime reports compare to traditional reporting methods. The study also assesses whether social media encourages more people to report crimes or causes hesitation due to fears of privacy breaches or potential backlash from the community. The findings provide insights that could help improve the use of social media in crime reporting. By identifying best practices and potential challenges, the research contributes to policy recommendations aimed at enhancing collaboration between the police and the public. These recommendations include digital awareness campaigns, improved verification processes for crime reports, and stronger online engagement strategies for law enforcement agencies. Ultimately, this research promotes a safer and more informed community by utilizing social media as an effective tool for crime reporting. By fostering better communication and trust between residents and the police, the study seeks to contribute to a more efficient and responsive crime-reporting system in Batasan, Quezon City.

**CHALLENGES ENCOUNTERED BY RESIDENTS OF BARANGAY 177 MALIGAYA
CALOOCAN CITY REGARDING SAFETY AND SECURITY**

Cindie Guting, Ma. Camila Espino, Jasmine Dela Rosa, Ma Lyn Segarra,
Tricia Mae Talisik, Denise Anne Osorio

Abstract

This study examines challenges related to safety and security encountered by residents of Barangay 177, Maligaya, Caloocan City. It investigates common community concerns, including unsafe streets, rough roads, and illegal activities, and evaluates how local organization and responsibility contribute to overall peace and order. This study highlights the roles of resident cooperation and local government policies in fostering a secure environment. This study employs a quantitative descriptive design with purposive sampling. Fifty participants were selected, comprising fifteen barangay personnel and thirty-five residents of Barangay 177, Maligaya. Data were gathered using a structured questionnaire that assessed perceptions of crime incidence, environmental hazards, and community preparedness. Responses were analyzed using frequency counts and percentage distributions. The majority of respondents were male and aged between 45 and 50 years. Two primary safety concerns emerged: regular incidents of theft and petty crime that disrupted community peace, and prevalent drug-related activities in certain areas that elevated security risks. These findings underscored the urgent need for interventions to address both property offenses and substance-related threats. The study demonstrated that enhancing community safety requires comprehensive and efficient security mechanisms tailored to local needs. Proposed measures included creating job opportunities and community programs to address root causes of crime and conducting awareness campaigns in schools and neighborhoods to educate residents on the dangers of drug use and trafficking. The strategic deployment of barangay security patrols in key areas, ongoing training of personnel, and improved communication systems were introduced to strengthen preparedness and ensure prompt, coordinated responses to emergencies.

Keywords: safety, security, barangay 177, petty crime, drug-related activities, community preparedness, local governance

**CHALLENGES ENCOUNTERED BY THE BARANGAY OFFICIALS IN
RESOLVING VIOLENCE AGAINST WOMEN AND CHILDREN AT
BARANGAY 176A BAGONG SILANG, CALOOCAN CITY**

Jay Baid, Joel Jr. Benemili, Ricardo Bernardez, Jester Cabutotan,
Aldrin Ortazon, Jinky Anacta

Abstract

Violence against women and children (VAWC) remains a pervasive issue in the Philippines, affecting communities at all levels. This study examines challenges encountered by barangay officials in resolving VAWC cases in Barangay 176A, Bagong Silang, Caloocan City. It explores how limited training, resource constraints, and low community awareness hinder effective intervention. This study highlights the need for focused training programs, increased resource allocation, and strengthened community engagement to support victims and enhance local response capabilities. This study employs a quantitative descriptive design using a structured survey questionnaire administered to 60 participants residing in Barangay 176A, Bagong Silang, Caloocan City. The sample comprises 30 barangay officials and 30 residents selected through purposive sampling. Data collection focused on demographic characteristics, perceptions of factors affecting VAWC resolution, and recommendations for improving local interventions. Responses were analyzed using frequency distributions and percentage calculations. Most respondents were female (88.3%), and over half were aged 41 and above (53.3%). Half of the participants were married, and 26.7% held college degrees. Respondents agreed that social norms, institutional limitations, and economic pressures influenced efforts to address VAWC. The primary challenge identified was a lack of awareness about laws protecting women and children from violence. The top recommendation was for the barangay to establish regular monitoring and evaluation mechanisms to assess the effectiveness of VAWC interventions and to ensure continuous improvement. The findings underscored significant obstacles faced by barangay officials in addressing VAWC, notably insufficient legal awareness among residents and limited institutional support. Most officials and community members lacked knowledge of protective legislation, which impeded timely reporting and intervention. Proposed measures included implementing a comprehensive multi-sectoral strategy that integrates legal education, community outreach, and interagency collaboration. These approaches were expected to strengthen local capacity, improve victim support, and enhance overall effectiveness in resolving VAWC cases.

Keywords: violence against women and children, barangay officials, community engagement, resource allocation, legal awareness, multi-sectoral strategy, criminology

**CHALLENGES ENCOUNTERED BY THE BARANGAY TANODS IN CONDUCTING
PATROL TO PREVENT CRIME IN BARANGAY 177 CALOOCAN CITY**

Mark Ian Mengala, Mark Joshua Baldres, Joshua Elano,
John Kervy Llamas, Manuel Jose Vargas, Irene Gaviola

Abstract

Barangay tanods serve as civilian volunteers appointed by the Punong Barangay upon recommendation of the Barangay Peace and Order Council. They assist in enforcing laws, ordinances, and regulations within their communities by conducting regular patrols, responding to emergencies, and acting as a deterrent to criminal activity. This study examines challenges encountered by barangay tanods in Barangay 177, Caloocan City, that impede their effectiveness in maintaining peace and order. This study employs a descriptive research design with purposive sampling to select ten barangay tanods and forty residents of Barangay 177, Caloocan City. Permission was obtained from local authorities, including Barangay 177 officials and Sub-Station 10. Data was collected through a comprehensive survey administered in person to both tanods and residents, focusing on demographic profiles, operational challenges, and resource needs. Analysis of respondent demographics revealed that 34 percent of barangay tanods were aged 18 to 25 years, indicating a predominantly young volunteer force. Respondents reported several operational challenges, including limited access to safety equipment, inadequate skills training, insufficient manpower, and underdeveloped communication systems. Resource constraints were cited as a primary factor hindering patrol effectiveness and timely response to incidents. The findings highlighted significant barriers to the performance of barangay tanods in Barangay 177. Limited logistical support reduced patrol coverage, while gaps in training undermined confidence and competence in handling security situations. Inadequate community engagement and unclear operational policies further weakened the tanods' capacity to deter crime. The study recommends enhanced provision of safety gear, comprehensive skills development programs, improved communication infrastructure, and dedicated resource allocation to strengthen barangay tanod operations and community safety.

Keywords: barangay tanods, crime prevention, community patrol, resource allocation, skills training, communication systems, criminology

**CHALLENGES ENCOUNTERED BY THE PHILIPPINE NATIONAL POLICE
CYBER CRIME GROUP AT CAMP KARINGAL, QUEZON CITY**

Gwen Uy, May Macanas, Criselle Madlaing, Journalyn Sicbawat,
Edwin Ramirez, Eduardo Villaruel

Abstract

This study examines challenges encountered by the Philippine National Police Cybercrime Group at Camp Karingal, Quezon City, with the aim of identifying obstacles that affect operational effectiveness. It focuses on key dimensions such as training competency, logistical support, and availability of investigative facilities, and highlights the importance of addressing these issues to enhance cybercrime response capabilities. This study employs a descriptive research design using a convenience sampling approach. A total of 100 participants: 50 PNP Cybercrime Group officers and 50 community residents of Camp Karingal, completed a structured survey questionnaire. The instrument was reviewed by the research adviser for clarity and approved by the station commander and Punong Barangay before distribution. Questionnaires were personally delivered to participants, who were given time to respond before forms were collected. Data analysis included the computation of weighted means and rankings to determine the most significant challenges. Findings showed that 35 percent of respondents were aged 26 to 33 years, while 5 percent were aged 51 years and above. The average weighted mean for training competency was 3.05 (interpreted as strongly agree), for logistics was 2.60 (agree), and for innovative facilities was 3.10 (strongly agree). The most significant challenge identified was limited digital forensics capability, which hindered effective investigation and analysis. To address this issue, respondents proposed the provision of regular training and capacity-building programs on cybercrime investigation and digital forensics. The study highlighted critical gaps in digital forensics capability and resource support that impeded the effectiveness of the PNP Cybercrime Group at Camp Karingal. It underscored the need for enhanced training initiatives, improved logistical arrangements, and upgraded investigative facilities. Implementation of regular capacity-building programs and targeted infrastructure enhancements was expected to strengthen cybercrime response and sustain operational readiness. These recommendations provide a strategic framework for improving investigative outcomes and combating cybercrime more effectively.

Keywords: digital forensics, training competency, logistical support, innovative facilities, cybercrime investigation, operational effectiveness, philippine national police, camp karingal

**CHALLENGES ENCOUNTERED BY THE PUBLIC SAFETY MANAGEMENT
DEPARTMENT IN ENFORCING THE TRAFFIC LAWS RULES AND
REGULATION IN CAMARIN, CALOOCAN CITY**

Emmanuel Cerezo, Ian-joy Cariliman, Aljem Cruz, Jonathan Ilagan, Rustom Sagun

Abstract

This study examines challenges encountered by the Public Safety Management Department in enforcing traffic laws, rules, and regulations in Camarin, Caloocan City. It focuses on factors that affect enforcement effectiveness, including enforcer behavior, stress tolerance, and communication skills. By identifying these obstacles, this study seeks to inform targeted interventions that will enhance compliance, improve road safety, and strengthen departmental performance. This study entails research design, respondents of the study, sampling technique, instrument used, questionnaire, validation of the instrument, administration and retrieval of the instrument, and statistical treatment of data. Descriptive research is a methodological approach that seeks to depict the characteristics of a phenomenon or subject under investigation. Purposive sampling refers to a group of non-probability sampling techniques in which units are selected because they have characteristics that you need in your sample. To effectively conclude this study, the data obtained were analyzed to answer the research questions. Among the 50 respondents, 1 (2%) was aged 20–25, 9 (18%) were aged 26–35, 19 (38%) were aged 36–45, and 21 (42%) were aged 46 and above; 40 respondents (80%) were male and 10 (20%) were female. In terms of educational attainment, 31 (62%) were at the college level, 18 (36%) at the high school level, and 1 (2%) at the elementary level, indicating that most respondents had reached college. The respondents strongly agreed on the behavior of traffic enforcers, with a composite mean of 3.35 and the highest weighted mean of 3.70 for the statement that “traffic enforcers’ maximum tolerance or stress level can influence how they enforce traffic rules,” which ranked first. The results also revealed that the top strategy to improve traffic law implementation and enforcement in Camarin, Caloocan City was enhancing communication skills, which garnered 96% agreement. The findings highlighted that demographic factors such as age and education shaped enforcers’ perceptions of their roles, while high stress levels significantly hindered consistent rule application. Limited stress-management capacity and communication barriers emerged as key obstacles to effective enforcement. Addressing these issues through targeted stress-management training, communication workshops, and ongoing performance evaluations was expected to bolster enforcement consistency and improve overall traffic law compliance in Camarin.

Keywords: traffic law enforcement, public safety management, stress tolerance, enforcer behavior, communication skills, camarin caloocan city, descriptive research, criminology

**CHALLENGES FACED BY THE RESCUERS WHILE CONDUCTING RESCUE
OPERATION DURING CALAMITIES AT CANUMAY WEST, VALENZUELA CITY**

Karl Christian Rama, Vincent Cabacang, Michael Nebre, Jan Antony Salazar,
Lawrence Salazar, Jinky Anacta

Abstract

This study examines challenges faced by rescuers during emergency operations in Barangay Canumay West, Valenzuela City. It focuses on how limited equipment and transport resources hinder timely responses, how inconsistent compliance with safety protocols by affected residents increases operational risk, and how exposure to hazardous conditions, such as building collapse and floodwaters, complicates rescue efforts. The objective is to identify critical obstacles and inform strategies that enhance the effectiveness and safety of future calamity responses. This study employs a descriptive survey design involving 20 rescuers from the Barangay Disaster Risk Reduction and Management Council and the Bureau of Fire Protection, as well as 30 community members of Canumay West. Participants completed a structured, close-ended questionnaire that assessed perceptions of preparedness, coordination, resource availability, and recovery procedures. Surveys were distributed with an accompanying information letter and standardized response instructions to ensure clarity and consistency. Respondents strongly agreed that existing measures for preparedness, mitigation, response, and recovery were effective across the cited variables. The most significant operational challenge identified was coordination issues among response teams, which 92 percent of respondents reported as a cause of delayed interventions. The top recommended action was conducting regular resource assessments and gap analyses to improve response effectiveness, supported by 88 percent of participants. The findings highlighted the need for well-stocked emergency supply centers equipped with food, water, medical supplies, and rescue gear to enable rapid deployment during calamities. Establishing a unified command center was recommended to enhance real-time information sharing and organize rescue efforts across agencies. Gathering real-time data from disaster-affected areas was proposed to pinpoint operational challenges and guide improvements. Future research collaborations with government agencies, non-governmental organizations, and disaster response entities were suggested to develop interdisciplinary solutions that address the complex demands of rescue operations during emergencies.

Keywords: rescue operations, calamity response, coordination issues, resource assessment, disaster preparedness, unified command, canumay west, valenzuela city.

**CHALLENGES ON THE IMPLEMENTATION OF PREVENTIVE STRATEGIES ON
CRIME PREVENTION IN BARANGAY MINUYAN PROPER**

Webin Abellano, Kennedy Doble, Jermaine Jurell Martin, Silver Niegas,
Jopet Ramos, Christian Tauro, Dr. Antonio Dawagan Sr.

Abstract

This study examines challenges in implementing crime prevention strategies in Barangay Minuyan Proper. It focuses on identifying obstacles related to resource allocation, community engagement, and coordination with local law enforcement. Prior research has indicated that poor funding leads to inadequate training and equipment for barangay peace and order officers, which undermines operational efficiency (Moore and Braga 2004). This study uses a quantitative correlational design to assess relationships among identified variables without manipulation. A structured survey questionnaire was administered to 50 respondents: 10 barangay officials, 10 barangay police officers, and 30 community members, in Barangay Minuyan Proper. Permission letters were obtained from local authorities prior to data collection, and respondents provided informed consent. Completed questionnaires were collected and analyzed using descriptive statistics to determine the prevalence of implementation challenges. The sample comprised 60 percent male respondents, and 46 percent had attained a high school education. Respondents agreed that current crime prevention strategies suffered from inadequate equipment and limited resources. In the area of human rights compliance, respondents strongly agreed that violations occurred, and they agreed that discrimination, officer safety concerns, and insufficient information hindered effective crime prevention efforts. The study highlighted significant barriers to effective crime prevention, including resource shortages, gaps in community-law enforcement collaboration, and procedural inconsistencies. It recommended enhancing police visibility in high-risk areas, developing a comprehensive communication plan, and strengthening partnerships among local officials, law enforcement agencies, and residents. These measures were expected to improve implementation efficacy and reduce crime in Barangay Minuyan Proper.

Keywords: crime prevention, implementation challenges, resource allocation, community engagement, law enforcement coordination, barangay minuyan proper, criminology.

**COLLABORATIVE EFFORTS OF BARANGAY OFFICIALS AND PHILIPPINE
NATIONAL POLICE IN THE CONDUCT OF CRIME PREVENTION IN
BARANGAY NOVALICHES PROPER, QUEZON CITY**

Lorilee Saoceja, Regie Villasis, Jessie Reonico, Rodellyn Quiambao,
Gerlyn Villanueva, Nilmar Plata

Abstract

This study examines collaborative efforts between Barangay Novaliches Proper officials and the Philippine National Police in crime prevention within the community. It investigates the effectiveness of joint strategies, with a focus on communication channels, resource sharing, and community engagement. By analyzing qualitative and quantitative data, this study aims to identify factors that enhance or hinder successful collaboration in maintaining public safety. This study employs a descriptive quantitative design using purposive sampling to select 10 barangay officials, 10 police officers, and 20 residents of Barangay Novaliches Proper. A structured survey questionnaire was distributed to assess perceptions of collaboration in promoting awareness, enhancing public safety, and fostering community engagement. Collected data were analyzed using frequency distributions, percentages, mean scores, and overall weighted means to interpret respondents' views on the effectiveness of partnership activities. The results of this study indicate the collaborative efforts of Barangay officials and the Philippine National Police in implementing crime prevention measures in Barangay Novaliches Proper, Quezon City. Based on these findings, the researchers present the following recommendations. The study highlighted that structured awareness programs, regular evaluation of crime prevention initiatives, and proper resource allocation were key to sustaining effective collaboration. Respondents reported that establishing clear reporting channels and publicizing patrol schedules improved trust and responsiveness. Periodic assessments allowed for timely adjustments to strategies, while ensuring adequate tools and support empowered both police and barangay personnel. Regular community meetings were found to strengthen resident involvement and address local safety concerns, reinforcing the collaborative framework for crime prevention.

Keywords: collaborative efforts, crime prevention, barangay novaliches proper, philippine national police, community engagement, resource sharing, communication strategies

**COMMUNITY PERSPECTIVE ON THE RELATIONSHIP OF POLICE PERSONNEL
IN BARANGAY SANTA MONICA, QUEZON CITY**

Albert Abuan, Wilfred Amortizado, Gualberto Arandila,
Esplang Cuambot, Jihad Hadjiusman, Eduardo Villaruel

Abstract

This study examines community perspectives on the relationship between police personnel and residents in Barangay Santa Monica, Quezon City. It investigates levels of public trust, perceptions of police service, and the impact of awareness seminars on improving police–community relations. Given the barangay’s diverse socio-economic composition, understanding residents’ attitudes toward police presence is essential for fostering mutual respect and cooperation. This study employs a descriptive quantitative design with simple random sampling to select 25 community members and 25 police officers from Barangay Santa Monica. Participants completed a structured questionnaire measuring perceptions of public trust, service quality, and the effectiveness of awareness seminars. Data was analyzed using weighted means and percentage distributions to assess agreement levels and identify priority concerns. Analysis showed that public trust in police personnel received a weighted mean of 3.46, interpreted as strongly agree. Perceptions of public service scored 3.48, and the impact of awareness seminars also scored 3.48, both indicating strong agreement. The most prominent issue identified was youth exposure to negative social media portrayals of police, which ranked first among community concerns. The top recommendation for strengthening police–community ties was increased participation in community events, youth activities, and local projects. Additionally, respondents proposed analyzing viral social media posts to understand tone and bias and using social media proactively for positive engagement and public education. The findings highlighted significant challenges in bridging perceptions shaped by social media and everyday interactions. Strong support for community events and youth engagement suggested that direct, face-to-face initiatives were effective in building trust. The proposal to leverage social media for positive messaging underscored the need for strategic communication. Strengthening these collaborative efforts was expected to enhance mutual understanding and support, thereby improving police–community relations in Barangay Santa Monica.

Keywords: police–community relations, public trust, public service, awareness seminars, social media engagement, barangay santa monica, criminology.

**CONTRIBUTING FACTORS RELATIVE TO THEFT CASES COMMITTED
IN BARANGAY BAHAY TORO, QUEZON CITY**

Dan Dave Delos Reyes, Joseph Malaluan, Jessie Valderama Jr,
Arwin Pacheco, Arvin Brasola, Edgar Reyes

Abstract

Theft is not a minor crime. It might be easy to think that theft, especially from major corporations, is victimless. Despite the consequences, people still choose to steal for a variety of reasons. There are many different reasons a person might feel compelled to steal. Psychology Today explains how people may steal regardless of whether they can afford the product, whether they need the product, or whether they already own it. For some, stealing may be linked to a psychological disorder. It may serve as a coping mechanism or provide an adrenaline rush. Those who experience a thrill at each stage of the theft may eventually turn into repeat offenders. This chapter describes the methodology used in the study, including the research design, respondents, research instrument, data collection procedures, and statistical treatment of the data. The study involved 50 respondents divided into three groups: 10 Barangay Officials, 20 Peace Volunteers (Tanods and BPATs), and 20 Barangay Residents of Barangay Bahay Toro, Quezon City. The largest age group consisted of individuals aged 42–50, representing 32% (16 respondents), which placed them at the top of the ranking. The majority of respondents were male, comprising 39 individuals. Table 3 presented the civil status distribution of the respondents, showing that the majority (30) were married. The largest educational groups were high school graduates and college graduates, each comprising 23 individuals. Table 5 highlighted the contributing factors relative to theft cases committed in Barangay Bahay Toro, Quezon City, as assessed through situational mechanisms. The highest-ranking factor had a weighted mean of 3.65. The problems encountered in Barangay Bahay Toro, Quezon City, regarding factors relative to theft cases, showed that the highest frequency was “Economic hardships faced by some residents may drive individuals to commit theft as a means of survival or quick financial gain,” with a frequency of 30 (11.63%), ranked 1st. The solutions proposed to prevent theft in Barangay Bahay Toro, Quezon City, included the following indicators: “Increase the number of community patrols during high-risk hours,” “Implement motion-sensor lighting in strategic locations to deter criminal activity,” and “Provide regular training for barangay security officers on theft prevention techniques.”

Keywords: theft cases; prevention; barangay bahay toro, quezon city

**CONTRIBUTORY FACTOR IN STRICT IMPLEMENTATION OF THE PROHIBITION
OF CONTRABOND IN THE BUREAU OF JAIL MANAGEMENT AND
PENOLOGY, CALOOCAN CITY**

Frederick So, Heijean Aviles, Thrishia Mae Noces, Bernadette Pacay,
Vernadeth Seradoy, Jamaica Benavidez, Denise Anne Osorio

Abstract

This study examines the factors that contribute to the strict enforcement of contraband prohibition in the Bureau of Jail Management and Penology in Caloocan City. The BJMP is tasked with custody, supervision, and rehabilitation of offenders temporarily held in jails. In response to security risks and contraband smuggling, the agency has implemented enhanced inspection procedures for visitors. This research identifies key variables: staff vigilance, technological developments, facility infrastructure, and external collaborations that influence the effectiveness of these procedures. This study uses a descriptive-correlational design. Forty respondents were selected through purposive sampling, comprising jail officers, peace volunteers, and barangay residents. A structured questionnaire was developed, validated by experts, and pilot-tested. Data were collected via face-to-face administration of the instrument and retrieved for analysis. Frequency and percentage distributions described the demographic profile of respondents, while weighted mean analysis ranked the contributory factors. Respondents aged 26 to 33 constituted the largest age group at 27.5 percent, followed by those aged 42 to 50 at 25 percent. The 34 to 41 cohort represented 22.5 percent, while both the 18 to 25 and 51-and-above groups each comprised 12.5 percent of the sample. Staff vigilance recorded the highest weighted mean, indicating its primary role in effective contraband control. Technological developments were the next most influential factor. Facility infrastructure and external collaborations also contributed but to a lesser extent. Findings indicated that staff vigilance was the most critical factor in enforcing the prohibition of contraband, as attentive personnel deter potential breaches. Technological enhancements in inspection equipment and improvements to facility infrastructure further supported effective control measures. External collaborations with community stakeholders provided additional but more limited support. As a result, strengthening personnel training and investing in technology and infrastructure were recommended to enhance ongoing contraband prevention efforts.

Keywords: contributory factor, contraband prohibition, jail management, staff vigilance, technological developments, facility infrastructure, external collaboration

**CONTRIBUTORY FACTORS IN COMMITTING PETTY CRIMES IN BARANGAY
NOVALICHES PROPER, QUEZON CITY: AN ASSESSMENT**

Michelle Nangan, Stephanie Bustamante, Kleen Joy Ninada,
Reiner Curada, Erika Ronquillo, Dr. Myrna Cuntapay

Abstract

Petty crime refers to minor infractions such as shoplifting, pickpocketing, theft of unattended property, and salisi. Although often perceived as trivial, these offenses can profoundly affect victims and community well-being. This study analyzes the contributory factors that lead individuals to commit petty crimes in Barangay Novaliches Proper, Quezon City. It examines socioeconomic, psychological, environmental, and educational influences and proposes prevention strategies aligned with sustainable community development. This study uses descriptive survey design. Fifty respondents are purposively sampled: forty community residents and ten barangay officials (including the punong barangay, kagawad, and barangay tanod) of Barangay Novaliches Proper, Quezon City. A structured questionnaire is constructed based on a literature review and validated by subject-matter experts. The instrument is administered face-to-face and retrieved for analysis. Collected data are processed using frequency and percentage distributions and weighted mean analyses. Most respondents were male (54%, $n = 27$). Respondents aged 18 to 25 comprised 46% ($n = 23$). Single civil status accounted for 58% ($n = 29$). Long-term residents (over 14 years) comprised 56% ($n = 28$). Assessment of contributory factors indicated that socio-economic and psychological factors were interpreted as “Agree,” while environmental and educational factors were interpreted as “Strongly Agree.” The most frequently cited problem was lack of awareness or prevention programs. Installation of functional surveillance cameras (CCTV) was the most commonly proposed solution. Findings highlighted that lack of prevention programs significantly contributed to petty crime in Barangay Novaliches Proper. As a result, it was recommended that community stakeholders enhance educational and awareness campaigns, install CCTV surveillance in strategic locations, and foster collaboration among barangay officials, police officers, and parents. The study also underscored the need to address underlying issues such as poverty, unemployment, educational deficits, and social inequality to reduce opportunities for petty crime.

Keywords: petty crime, contributory factors, barangay novaliches proper, socioeconomic factors, psychological factors, environmental factors, educational factors, crime prevention

**CONTRIBUTORY FACTORS LEADING TO JUVENILE DELINQUENCY IN
BARANGAY MUZON SOUTH IN SAN JOSE DEL MONTE BULACAN**

Marco Ronquillo, Briggs Distor, Iverson Ebias, Charlie Rafael, John Jater Solomon, Edgar Reyes

Abstract

Juvenile delinquency in Barangay Muzon South, San Jose del Monte, Bulacan, has emerged as a serious and growing societal concern. The increasing involvement of youth in criminal activities has reached an alarming level, warranting expert examination of its causes and potential solutions. This study aims to identify the contributory factors leading to juvenile delinquency in Barangay Muzon South, San Jose del Monte, Bulacan. This study utilized a quantitative descriptive research design to determine the characteristics of the target population and the phenomenon under investigation. Purposive sampling was employed to collect data from 50 respondents, comprising 24 minors, 6 members of the Philippine National Police, 15 personnel from the City Social Welfare and Development (CSWD), and 5 barangay officials from Muzon South. Data was gathered through structured questionnaires to assess the level of contributory factors related to juvenile delinquency. The results indicated that the minors were predominantly female, with high school graduation as the most common educational attainment. Respondents collectively rated the contributory factors to juvenile delinquency in Barangay Muzon South as “Strongly Agree.” Across all respondent groups, social and environmental factors were identified as major contributors to juvenile delinquency. The findings highlight that social, environmental, family, and individual factors significantly influence juvenile delinquency in Barangay Muzon South. To address these issues, community-based programs focusing on socialization, recreation, and skill-building are recommended, alongside family therapy and trauma-informed care for at-risk youth. Identified challenges such as limited participation in prevention programs and cases of emotional or physical abandonment can be mitigated through youth mentorship initiatives, parent-child therapy, and accessible counseling services to strengthen family bonds. Furthermore, providing financial and emotional support to vulnerable families, promoting healthy lifestyles through sports and wellness activities, and encouraging active community involvement in youth development are essential strategies.

Keywords: juvenile delinquency, contributory factors, social environment, family influence, barangay muzon south

**CONTRIBUTORY FACTORS OF POVERTY TO CRIMINALITY AT BARANGAY
BAGONG SILANGAN QUEZON CITY**

Aaron Cabsag, Mark Rommel Aloria, Kennith Duarte,
Vin Mar Virnas, Marphil Reotan, Denise Anne Osorio

Abstract

Crime is a complex social issue influenced by multiple factors, with poverty often identified as a significant contributor. In communities where economic hardship is prevalent, lack of basic resources, limited access to education, and scarce employment opportunities can drive individuals to engage in criminal behavior as a means of survival. Poverty refers to the absence of essential needs such as food, shelter, clean water, healthcare, and education. This study examines how poverty contributes to criminality in Barangay Bagong Silangan, Quezon City, by identifying key poverty-related factors and assessing their impact on community crime rates. This study uses descriptive quantitative design. Fifty residents of Barangay Bagong Silangan were selected through purposive sampling to ensure representation across age groups. A structured questionnaire was developed based on existing literature, validated by subject-matter experts, and pilot-tested. Data were collected via face-to-face administration and analyzed using frequency and percentage distributions for demographic profiling, as well as weighted mean analysis to rank poverty-related contributory factors. The largest age cohort was respondents aged 42 to 50 years at 26 percent, followed by those aged 51 years and above at 22 percent. Respondents aged 18 to 25 years comprised 20 percent, those aged 34 to 41 years comprised 18 percent, and those aged 26 to 33 years comprised 14 percent. Analysis of poverty-related factors revealed that unemployment was rated as the most significant contributor to criminality. Limited educational attainment and adverse environmental conditions were the next highest-ranked factors. Findings highlighted that unemployment was the primary poverty-related factor driving criminal behavior in Barangay Bagong Silangan. Limited access to education and poor environmental conditions were also found to significantly influence criminality. As a result, the study recommended implementing livelihood programs to reduce unemployment, expanding educational support initiatives, and improving environmental conditions through community projects. Collaboration among barangay officials, social welfare agencies, and local stakeholders was advised to sustain these interventions and enhance community safety.

**COPING MECHANISM OF PERSON DEPRIVED OF LIBERTY IN
NEW QUEZON CITY JAIL PAYATAS**

Fatima Bucua, Angela Albania, Jeraika Bakidan, Hycient Ann Nahiyal,
J-Rica Taringting, Denise Ann Osorio.

Abstract

This study investigates the coping mechanisms employed by persons deprived of liberty (PDLs) in the male dormitory of New Quezon City Jail Payatas. It examines strategies used to manage stress, seek social support, and engage in purposeful activities within the correctional environment. The Bureau of Jail Management and Penology provides PDLs with mental health interventions, vocational training, livelihood skills development, and religious activities to promote well-being and rehabilitation. This research uses a quantitative descriptive design. A structured survey questionnaire measuring four coping domains: visitation, religious activities, skills training, and livelihood enhancements, was administered to PDLs housed in the male dormitory. Responses were analyzed using frequency distribution, percentage, and weighted mean statistics. Respondents rated all four coping domains as effective. Visitation arrangements received the highest mean score, followed by religious activities. Skills training and livelihood enhancements were also viewed positively but to a slightly lesser extent. Analysis highlighted a pronounced need for regular mental health assessments and improved communication protocols between BJMP personnel and PDLs. Findings demonstrated that structured visitation, religious engagement, and skills-based programs significantly supported PDLs' stress management and resilience. As a result, recommendations include assigning dedicated guidance counselors, developing comprehensive aftercare programs, strengthening security procedures for both PDLs and visitors, and offering recreational activities to support psychological health. Emphasis was placed on continuous mental health care, recognizing the inherent dignity and human needs of PDLs.

Keywords: coping mechanism, person deprived of liberty, new quezon city jail payatas, visitation, religious activities, skills training, livelihood enhancements

**CRIME PREVENTION STRATEGIES EMPLOYED BY QUEZON CITY
POLICE STATION 3 AT BARANGAY TALIPAPA**

Jade Selidio, Joshua Quinto, Jayson Quinto, Mark Bito,
Brechstone Escoton, Dr. Myrna Cuntapay

Abstract

This chapter entails the background of the study, related literature and studies, theoretical framework, conceptual framework, statement of the problem, assumptions, scope and delimitation, significance of the study, and definition of terms. Preventing crimes is the best way to decrease crime rates, as the saying goes, “Prevention is better than cure.” Quezon City Police Station 3 is eager to reduce crime rates in its vicinity. Rationalizing patrol plans is one of the measures they are implementing to prevent crimes. The station is located in an area where crimes are widespread, surrounded by different barangays where individuals with malicious intent can easily enter due to accessibility. Barangay Talipapa is not only a residential hub but also a center of economic activity, which naturally comes with its own set of challenges regarding crime and public safety. This study will mainly focus on how Quezon City Police Station 3 can prevent crimes at Barangay Talipapa. It will also focus on the steps taken by Barangay Talipapa in maintaining peace and order. With crime continuing to persist in the country, this study will help determine what methods are being used by police officials and barangay officials to control or suppress these crimes. In Barangay Talipapa, ordinances made by the Quezon City Government are being adopted. This research incorporates aspects such as the research design, respondents of the study, sampling technique, validation of instruments, instruments used, questionnaires, administration and retrieval of instruments, and statistical treatment of data. This study applied the descriptive research method. Table 1 shows that the majority of the fifty (50) respondents were aged 18–25 years old, representing fifteen (15) or thirty percent (30%). This was followed by respondents aged 26–33 years old, representing fourteen (14) or twenty-eight percent (28%). The next group was aged 42–50 years old, with nine (9) respondents, or eighteen percent (18%). Finally, respondents aged 34–41 years old numbered eight (8), equivalent to sixteen percent (16%). This chapter presents the summary and conclusion derived from the conduct of the study, which aimed to identify the problems encountered in the crime prevention strategies employed by Quezon City Police Station 3 at Barangay Talipapa.

**CRIME PREVENTION STRATEGIES OF BARANGAY POLICE IN SELECTED
BARANGAY 176-A BAGONG SILANG CALOOCAN CITY**

Paul Michael Castillo, Jefferel Franco, Raffy Garcia,
Tandayag Mr Don, Noriel Taway, Nilmar Plata

Abstract

This study assesses the crime prevention strategies employed by barangay police in Barangay 176-A, Bagong Silang, Caloocan City. Barangay 176-A was created in August 2024 following the division of the former Barangay 176 into six barangays. As one of the most populous and geographically large barangays in the Philippines, Bagong Silang faces unique public safety challenges. This research examines how barangay police leverage community partnerships, interagency collaboration, and technology to prevent crime and maintain peace and order. This study uses a descriptive research design. Purposive sampling was applied to select one hundred respondents: ten police personnel, thirty barangay police officers, and sixty community residents. A structured questionnaire validated by subject-matter experts, was administered face-to-face. Collected data were analyzed using frequency and percentage distributions to profile respondent demographics and to identify perceived strengths and gaps in current crime prevention measures. Most respondents were aged 26 to 33, predominantly male, and had four to six years of service. Respondents strongly agreed that crime prevention was effective through community partnerships, collaboration with law enforcement agencies, and the use of technology such as CCTV and mobile devices. Intelligence sharing, regular communication, and active community involvement were also identified as key strategies for ensuring safety and reducing crime. Findings highlighted that rationalized patrol planning, technology deployment, and stakeholder collaboration contributed to improved security in Barangay 176-A. As a result, a comprehensive action plan was developed to enhance patrol coverage during off-peak hours, strengthen barangay-level communication channels, and expand community engagement through neighborhood watch programs. The proposed interventions aimed to address identified gaps and further reduce crime in the area.

**DEPARTMENT OF SOCIAL WELFARE AND DEVELOPMENT INTERVENTION
PROGRAM FOR CHILD IN CONFLICT WITH THE LAW IN CALOOCAN CITY**

Abegail Dulay, Ronelyn Amaro, Rochelle Caye Cuntapay,
Jamie Jove, Cherrilyn Pintucan, Eduardo Villaruel

Abstract

Juvenile involvement in criminal activities remains a significant concern in today's society. Factors such as neglect, abuse, and mistreatment often contribute to the delinquent behavior of children. In response, intervention programs offer a more productive approach to addressing and preventing future delinquency. This study aims to assess the effectiveness of the Department of Social Welfare and Development (DSWD) Intervention Program for Children in Conflict with the Law (CICL) in Caloocan City. This study adopts a descriptive research design and utilizes purposive sampling. A total of 50 respondents residing in Caloocan City participated in the survey. Authorization to conduct the survey was obtained through the research adviser. The respondents completed a structured questionnaire, which was later retrieved and analyzed to assess the effectiveness of the intervention programs provided by the DSWD. The findings revealed that the DSWD intervention program was rated as effective, with respondents strongly agreeing on the program components such as mentoring, intensive supervision, and cognitive behavioral therapy. However, the most commonly cited issue was the lack of a clear, structured plan outlining each phase of intervention, including specific goals and expected outcomes. The study also identified an existing action plan to address this gap in the program. The study summarized the collected data and presented conclusions on the effectiveness of the DSWD's intervention efforts for CICL in Caloocan City. Based on the findings, recommendations were provided to enhance program structure and delivery. This includes the need for a more detailed and goal-oriented framework to guide the intervention process. The study reinforces the value of structured, rehabilitative programs in supporting the reintegration and development of children in conflict with the law.

Keywords: child in conflict with the law, juvenile delinquency, intervention program, dswd, cognitive behavioral therapy, mentoring, supervision, caloocan city, social welfare, rehabilitation

**DEVELOPING AN EMERGENCY PREPAREDNESS AND SAFETY PROTOCOLS
FOR BESTLINK COLLEGE OF THE PHILIPPINES: A PROPOSAL**

Lora Jane Lato, John Mark Leron, Julianne Lumokso, Khristianne Ysaac Matias,
Fatima Nuñez, Zaira Aubrey Villorente, Dr. Myrna Cuntapay

Abstract

Recent global disasters such as Hurricane Maria, the 2008 Sichuan earthquake, and the 2019–2020 Australian wildfires have highlighted the importance of effective emergency preparedness and disaster response. Hurricane Maria alone caused over 4,600 deaths and \$98 billion in damages, while the Sichuan earthquake claimed nearly 70,000 lives, according to international disaster monitoring agencies. These events underscore the critical need for institutions, including academic environments, to establish comprehensive emergency preparedness and safety protocols. This study aims to propose a structured emergency preparedness and safety plan tailored for Bestlink College of the Philippines to enhance disaster readiness and ensure community safety. This research employed a descriptive design and purposive sampling technique, involving 50 respondents: 30 students, 10 professors, and 10 school staff. Data was collected through structured survey questionnaires designed to assess the current level of awareness, preparedness, and perceived needs related to safety and emergency protocols within the school community. This approach allowed for detailed profiling of respondents in terms of their roles, responsibilities, and relevant demographic characteristics. The findings revealed strong agreement among respondents regarding the necessity of developing emergency preparedness and safety protocols. Weighted mean scores included 3.6 for establishing rules and regulations, 3.5 for student awareness of school safety policies, 3.48 for conducting detailed risk assessments, 3.47 for placing signage about potential hazards, and 3.44 for conducting emergency preparedness seminars. The most cited concern was the need for formalized rules and regulations to ensure the school's readiness in terms of emergency response and safety management. The demographic profile showed that 60% of respondents were students, while 20% were professors and 20% were school staff. Most respondents (72%) were aged 18 to 25, with a majority being female (54%) and single (86%). Additionally, 62% of respondents were at the college level. The results emphasize the urgent need for a comprehensive emergency preparedness and safety protocol tailored to the institutional environment. The study recommends that Bestlink College of the Philippines establish clear procedures, conduct regular safety training, and engage the community in disaster risk reduction practices to build a resilient academic institution.

Keywords: emergency preparedness, safety protocols, disaster risk reduction, school safety, risk assessment, bestlink college, crisis management, student awareness, safety education, criminology

**DRUG FREE BARANGAY SUSTAINABILITY PROGRAM IN
SAN AGUSTIN NOVALICHES QUEZON CITY**

John Alfred Malanguis, Romel Gabia, Jerome Mangado, Marc Dennis Belmonte,
Marco Salvatierra, Dr. Myrna Cuntapay

Abstract

As of February 2024, 28,330 barangays in the Philippines had been officially declared drug-free, while 7,181 remained drug-affected. Despite the ongoing challenges in maintaining and expanding this progress, the Barangay Drug Clearing Program (BDCP) continues to serve as a vital mechanism in the national campaign against illegal drugs, making the goal of a 100% drug-free Philippines increasingly attainable. Notably, in 2019, Quezon City was recognized by the Philippine Drug Enforcement Agency – National Capital Region (PDEA-NCR) for its outstanding efforts, with 30 barangays, including Barangay San Agustin, successfully meeting the agency's rigorous standards for drug-free status. This study aimed to assess the effectiveness of the Drug-Free Barangay Sustainability Program by examining its implementation in terms of legal and procedural compliance, training and inter-agency coordination, and adherence to human rights principles. It also sought to identify key challenges encountered during execution and propose strategic actions for improvement. A total of 50 respondents: comprising barangay officials, police officers, and community residents, were selected through purposive sampling, ensuring the inclusion of individuals with relevant experience in drug enforcement, rehabilitation, and community engagement. The study employed a quantitative descriptive research design to systematically analyze participants' evaluations of the program's overall effectiveness and operational integrity. The majority of respondents were female, predominantly within the age range of 34 to 41 years. Results revealed a strong consensus among participants, who expressed high levels of agreement regarding the effective implementation of the Drug-Free Barangay Sustainability Program, particularly in the areas of legal and procedural compliance, training and inter-agency coordination, and adherence to human rights standards. The most pressing challenge identified was the recurrence of drug use among some rehabilitated individuals, attributed to the absence of a robust and sustained support system. To address this issue, respondents emphasized the need to establish comprehensive aftercare programs, incorporating mental health services and livelihood assistance, to support long-term recovery and successful reintegration into the community. To enhance the effectiveness and sustainability of the Drug-Free Barangay Sustainability Program, several key recommendations are proposed. Strengthening aftercare initiatives is essential, with a focus on expanding community-based mental health services, reintegration programs, and livelihood support. These efforts can be implemented through collaborative partnerships with TESDA, DOLE, and other local stakeholders. A comprehensive, multi-sectoral strategy is crucial, with an estimated budget of ₱1,500,000 allocated for aftercare services, training, community outreach, and overall program management. Of this, ₱200,000 should be dedicated to counseling, peer mentorship, and mobile rehabilitation services to improve accessibility and continuity of care. An additional ₱500,000 is recommended for vocational training and entrepreneurship development to foster financial stability and reduce the risk of relapse. Furthermore, collaboration with academic institutions and active involvement of researchers and future scholars are encouraged to support ongoing research, policy refinement, and continuous program development.

Keywords: drug-free barangay sustainability program, aftercare services, community-based rehabilitation, mental health support, livelihood assistance, tesda, dole, multi-sectoral collaboration, mobile rehabilitation, peer mentorship, vocational training, entrepreneurship

DRUG PREVENTION PROGRAM AMONG MINORS BY POLICE STATION 16
STATION DRUG ENFORCEMENT UNIT: A PROPOSAL

King Rich Baraňao, Lexter Salvador, Erwin Siso, Andrew Soreda,
RJ Vigilia, Dr. Myrna Cuntapay

Abstract

The Drug Prevention Program of Police Station 16, spearheaded by its Station Drug Enforcement Unit, is a proactive initiative aimed at preventing substance abuse among minors. This study explores the program's effectiveness by focusing on its holistic strategy, which integrates educational campaigns, community involvement, and coordinated law enforcement efforts. The program is designed to empower minors with the awareness, values, and life skills necessary to make responsible choices, resist peer pressure, and avoid drug-related risks. By tackling the underlying causes of substance abuse, the initiative not only advocates for drug-free youth but also strengthens community partnerships and promotes a safer, healthier environment for the next generation. The study adopts a combination of descriptive and qualitative research methods to assess the effectiveness of the Drug Prevention Program. A total of 50 participants were selected using purposive sampling to ensure relevance, followed by random sampling to enhance diversity and representation. Respondents include students, parents, teachers, and local law enforcement officers, offering a comprehensive and multi-perspective evaluation of the program's impact. Core components of the initiative include life skills training, professional counseling, school-based drug education, and a mentorship program between teachers and police officers. These elements collectively aim to equip minors with the knowledge, emotional resilience, and decision-making skills necessary to prevent drug involvement and promote a healthy, responsible lifestyle. The program adopts a comprehensive and proactive strategy that integrates life skills training, structured mentorship, and professional counseling to educate minors on the dangers of drug use. Community participation is actively encouraged through initiatives such as neighborhood watch groups, community assemblies, and incentive-based reporting systems, fostering a sense of collective responsibility. Strategic collaboration with law enforcement enhances the program's credibility, reinforces deterrence, and strengthens the overall effectiveness of preventive measures. Furthermore, the inclusion of support services ranging from individual counseling to skill-building workshops empowers youth to confidently resist peer pressure and make informed, healthy choices. To ensure sustainability and relevance, the program undergoes continuous monitoring and evaluation, allowing for data-driven improvements and long-term impact. While the program demonstrates significant strengths, it continues to face persistent challenges, including limited resources and uneven levels of community participation. To effectively address these issues, the study recommends mobilizing additional funding sources, expanding outreach campaigns to reach underserved populations, and implementing incentive-driven initiatives to encourage broader community involvement. Through sustained collaboration, strategic innovation, and stakeholder commitment, the program aspires to enhance its effectiveness and cultivate a safe, supportive environment where minors are empowered to lead drug-free lives. By proactively confronting these obstacles, the initiative reinforces the vital importance of unified community action in building a healthier, more resilient future for today's youth.

**EFFECTIVENESS OF ANTI-FENCING LAW IN REDUCING ILLICIT TRADE AT
BARANGAY PASONG PUTIK, QUEZON CITY**

VJ Angelo Alcaraz, Armie Joy Argarin, Jasmin Gabinete, Rischel Tabion,
Erlaine Villarmente, Eduardo Villaruel

Abstract

In Barangay Pasong Putik, Quezon City, the ongoing circulation of stolen goods through discreet online and offline channels poses a threat to public safety and undermines the enforcement of the Anti-Fencing Law (Presidential Decree No. 1612). Although this law aims to deter the sale and purchase of stolen property, it faces several enforcement challenges, including limited public awareness, weak penalties, and inconsistent monitoring. This study aims to fill the gap in understanding localized anti-fencing measures by evaluating the law's effectiveness through the lens of Routine Activity Theory (Cohen & Felson, 1979), which examines the dynamics between motivated offenders, suitable targets, and the absence of capable guardians. The study used a descriptive quantitative research design and employed purposive sampling to survey 50 respondents, which included community residents, barangay officials, and police personnel. Data were collected using a structured questionnaire that contained both close-ended and open-ended questions. Statistical tools such as frequency, percentage, weighted mean, and ranking were utilized to analyze responses related to demographics, awareness, procedural experiences, and assessments of law enforcement. The results revealed that the majority of respondents, aged 18 to 23 and long-term residents, strongly agreed on the necessity of clearance permits and acknowledged the visibility of enforcement efforts. However, several gaps persist: inadequate sanctions, fear of retaliation, and difficulties in identifying stolen goods were identified as significant obstacles. The most frequently suggested improvement was the imposition of stricter penalties (15.65%), followed by the need for increased awareness programs and more streamlined legal proceedings. The findings suggest that the Anti-Fencing Law is effective when it is combined with community engagement and clear procedures. However, enforcement is still hampered by legal and social limitations. The study highlights the need for stronger penalties, ongoing education campaigns, and specialized legal mechanisms. Since the focus was localized, future research should expand to include multiple barangays and analyze comparative crime data to gain a better understanding of the law's regional impact and the potential for enhancing policies.

Keywords: anti-fencing law, illicit trade, barangay pasong putik, quezon city, crime prevention, law enforcement, stolen goods, criminal deterrence, community safety, legal awareness, local governance, republic act no. 1612, policy implementation, public order

**EFFECTIVENESS OF BARANGAY ANTI-DRUG CAMPAIGN PROGRAM IN
PREVENTING ILLEGAL DRUGS AT BARANGAY FAIRVIEW, QUEZON CITY: A
PROPOSAL**

Jane Suerte, Rehanna Kasuyo, Ric Ivan Butawan, May Rose Laturgo,
Mary Jane Enriquez, Jinky Anacta

Abstract

The purpose of this research study is to evaluate the effectiveness of the "Barangay Fairview Anti-Drug Campaign" in reducing illegal drug activities in Barangay Fairview, Quezon City. This research aims to assess how successful the anti-drug campaign programs have been in decreasing the presence of illegal drugs in the community. Additionally, the study will explore the challenges and lessons learned during the implementation of the campaign, providing insights that can help improve similar anti-drug initiatives in other communities. The researchers employed a descriptive method to assess the effectiveness of the Barangay Anti-Drug Campaign Program in preventing illegal drug use in Barangay Fairview, Quezon City. The objective is to provide an overview of the current situation, phenomenon, or population involved. Using a descriptive quantitative research design, the study engaged a total of fifty respondents, including ten Barangay officials, ten law enforcement officers, and thirty residents, selected through random sampling. Survey questionnaires were used as the primary instrument for data collection. The results highlight key findings regarding the effectiveness of the Barangay Anti-Drug Campaign Program in preventing illegal drug activity in Barangay Fairview, Quezon City. Respondents assessed the program as "Effective" based on the variables outlined in statement number 2 of the problem. However, they also encountered significant challenges, such as a lack of sufficient funding and issues related to corruption. To enhance the effectiveness of the Barangay Anti-Drug Campaign, it is recommended that law enforcement participate in Barangay general assemblies, as their involvement is crucial for preventing illegal drug activities. In conclusion, the Barangay Fairview officials should work closely with law enforcement to strengthen the Anti-Drug Campaign. They should also organize regular meetings focused on drug awareness and prevention to encourage community members to actively participate in general assemblies. By attending these meetings, residents can voice their concerns about drug-related issues. Additionally, during these gatherings, law enforcement can provide updates on drug-related incidents, share prevention strategies, and discuss ways to support individuals struggling with addiction.

**EFFECTIVENESS OF BARANGAY JUSTICE SYSTEM IN
BARANGAY TALIPAPA, QUEZON CITY**

Paulo Garol, Joseph Gonzales, Joseph Gonzales, Allan Troy Langa,
Gian Mhaqui Infante, Nhorsaleel Laugan, Eduardo Villaruel

Abstract

The Barangay Justice System, also known as Katarungang Pambarangay, is a local legal system in municipalities. It is overseen by the barangay captain, who is the highest elected official in the barangay and serves as its executive leader. This system is managed by the barangay, which is the smallest unit of local government. This study aimed to evaluate the effectiveness of the Barangay Justice System in Barangay Talipapa, Quezon City. Specifically, it sought answers to the following questions: 1. How can the profile of the respondents be described in terms of age, sex, and civil status? 2. How do respondents assess the effectiveness of the Barangay Justice System in Barangay Talipapa, Quezon City, in terms of relationship, respect, responsibility, repair, and reintegration? 3. What problems do the respondents encounter? 4. What measures can be proposed by the respondents? The highest weighted mean for the Relationship indicator is found in the statement, “The Barangay Justice System helped bring your community closer together by encouraging people to resolve conflicts peacefully,” which has a weighted mean of 3.58, interpreted as Effective. For the Respect indicator, the statement with the highest weighted mean is, “The Barangay Justice System program aims to promote respect between all parties and foster peaceful resolutions,” achieving a weighted mean score of 3.62, also interpreted as Effective. In terms of Responsibility, the highest weighted mean is associated with the statement, “The Barangay Justice System is an important step towards teaching responsibility and providing justice to the residents of the community,” which has a weighted mean score of 3.54, interpreted as Effective. Regarding Repair, the highest weighted mean is derived from the statement, “The Barangay Justice System also works to repair relationships by encouraging dialogue and understanding between the involved parties,” which has a weighted mean score of 3.54, interpreted as Effective. Lastly, for the Reintegration indicator, the highest weighted mean is linked to the statement, “The Barangay Justice System contributes to lowering the crime rate in the community or society,” with a weighted mean of 3.54, interpreted as Effective. Community awareness campaigns are essential for educating about BJS, providing regular training for Lupon members, ensuring community representation in selecting Lupon representatives, and conducting regular outreach and education programs regarding BJS and its processes.

EFFECTIVENESS OF COMMUNITY POLICING IN BARANGAY 171 CALOOCAN CITY

Federico Casio, Bernard Espinar, Bjorn Reyven Huerta, Christopher Imana,
Valdwin Palmiano, Eduardo Villaruel

Abstract

Community policing is a strategy that fosters collaboration between the police and the community to prevent crime, apprehend offenders, address ongoing concerns, and enhance overall community well-being. Barangay 171 in Caloocan City, a densely populated urban area, faces the challenges brought by rapid urbanization. In such settings, traditional policing approaches often struggle to manage complex crime patterns and maintain a consistent law enforcement presence. Community policing (CP) addresses these challenges by encouraging active participation from residents, businesses, local government units, and law enforcement agencies in tackling local issues and improving neighborhood safety. However, the effectiveness of CP can be hindered when residents are reluctant to share crucial information with the police due to a lack of trust. The researchers adopted a quantitative descriptive research design to assess the effectiveness of community policing in Barangay 171, Caloocan City. Specifically, the study aimed to evaluate the impact of community policing in the barangay during the years 2024–2025. The respondents were categorized into three groups: 30 community members, 10 barangay officials, and 10 personnel from the Philippine National Police (PNP). Data was collected using survey questionnaires, which served as the primary research instrument. The questionnaire consisted of four closed-ended questions, and respondents were instructed to select their answers from the options provided. Socioeconomic and Technological Challenges. The community continues to face several pressing socioeconomic concerns. Domestic violence and abuse remain prevalent, as reflected in frequent incident reports, underscoring the need for stronger protective and preventive measures. High unemployment rates further exacerbate economic instability, fueling broader social problems. Among these is teenage pregnancy, which often perpetuates the cycle of poverty, as young mothers frequently encounter significant barriers to completing their education and securing stable, well-paying employment. Expanding access to contraception and strengthening reproductive health initiatives are essential steps in addressing this issue. At the same time, technological innovations should be strategically harnessed to tackle urban challenges such as improving traffic management systems to enhance mobility, reduce congestion, and increase overall efficiency in daily life. Barangay officials should actively promote open communication with residents to foster trust and collaboration. It is essential that all community members, regardless of background or status, feel included and valued in policing initiatives. Law enforcement officers engaged in community policing should receive adequate emotional and professional support from their leadership to ensure sustained effectiveness. Future research could compare the effectiveness of community policing across various regions, cities, or countries, providing broader insights into best practices. Additionally, researchers should examine how institutional support from police leadership, government officials, and local organizations, affects the overall success of community policing programs.

Keywords: community policing, barangay 171, caloocan city, crime prevention, public trust, socioeconomic challenges, technological solutions, law enforcement support, institutional support, urban safety

**EFFECTIVENESS OF COMMUNITY POLICING IN NOVALICHES
PROPER QUEZON CITY**

Cejie Medrano, Daisly Bismonte, Josh Bryle Flores, Maricel Ladroma,
Jessica Habungan, Jinky Anacta

Abstract

This study explores the effectiveness of community policing in Novaliches Proper, Quezon City, by evaluating its impact on crime rates, public safety, and community trust in law enforcement. Community policing is a proactive approach that emphasizes collaboration between police officers and residents to prevent crime and address social disorder. This study aims to assess the effectiveness of community policing in Novaliches Proper by examining key factors that influence its success or failure. Specifically, it focuses on proactive policing, communication, and the development of relationships and trust within the community. The research analyzes how these elements contribute to crime prevention, community safety, and public perception of law enforcement. Ultimately, the study evaluates community policing strategies concerning public safety measures. The participants in this study comprised ten barangay officials, fifteen residents, and twenty-five police officers. The researchers utilized a random sampling technique to ensure unbiased selection and accurately represent different perspectives. A quantitative descriptive research design was employed to systematically collect and analyze data on the effectiveness of community policing efforts. To gather data, the researchers obtained permission from the research adviser and personally administered the survey questionnaires. The findings indicated that respondents strongly emphasized the importance of several key factors in community policing. Proactive policing received a weighted mean score of 3.48, underscoring its significance in preventing crime before it occurs. The development of relationships and trust between law enforcement and community members received a weighted mean of 3.36, suggesting that strong connections enhance the effectiveness of policing. Additionally, communication was rated with a weighted mean of 3.28, highlighting the necessity for transparent and open dialogue between the police and the public to maintain trust and cooperation. The findings of the study suggest that an effective community policing model should prioritize proactive policing, build public trust, and improve communication between the police and the community. Additionally, the study may offer recommendations for enhancing community policing, which could include training programs, policy modifications, and community engagement strategies. These findings can serve as a foundation for law enforcement agencies and policymakers to refine current strategies or develop new initiatives to improve public safety and foster better cooperation between the police and the community.

Keywords: community policing, novaliches proper, quezon city, crime prevention, police-community relations, public safety, local governance, law enforcement strategies, community engagement, peace and order, grassroots security, citizen participation, neighbor

**EFFECTIVENESS OF FIRE PREVENTION AND SAFETY SEMINARS AT
BARANGAY BAHAY TORO PROJECT 8, QUEZON CITY**

Gerry Castillon, Eron She Bonares, John Ric Sison, John Bombales,
Fernando Jr Soriano, Dr. Antonio Dawagan Sr.

Abstract

Fire remains a significant threat to both human life and property assets, often built through years of dedication, hard work, and sacrifice. Commonly triggered by carelessness or negligence, fire incidents can lead to severe consequences, including loss of life, injuries, and extensive property damage. Such damages are often beyond repair, highlighting the urgent need for proactive preventive measures. This study aims to evaluate the effectiveness of fire prevention and safety seminars conducted in Barangay Bahay Toro, Project 8, Quezon City. Specifically, it aims to assess how these educational initiatives enhance community awareness, strengthen emergency preparedness, and mitigate the frequency and impact of fire-related incidents. This research employs a quantitative correlational design to assess the effectiveness of fire prevention and safety seminars conducted in Barangay Bahay Toro, Project 8, Quezon City. It utilizes purposive sampling also known as judgmental sampling, where participants are deliberately selected based on the researchers' informed judgment of their relevance and ability to provide valuable insights aligned with the study's objectives. The sample consists of individuals considered most knowledgeable or directly involved in fire safety initiatives within the community. Data collection was conducted through direct interaction, with the researchers personally approaching residents of Barangay Bahay Toro to encourage participation and ensure the reliability and accuracy of the information obtained. The findings reveal that the fire prevention and safety seminars conducted in Barangay Bahay Toro, Project 8, Quezon City, were perceived as highly effective across all evaluated dimensions. Program implementation obtained a weighted mean score of 3.71, interpreted as Very Effective, indicating that seminar activities were well-organized and effectively delivered. The evaluation of equipment used during the seminars yielded a weighted mean of 3.59 (Very Effective), suggesting that the tools and resources provided were adequate, functional, and supportive of the program's objectives. The overall effectiveness of the seminars was likewise recorded as a weighted mean of 3.71, confirming their significant role in enhancing fire safety awareness, knowledge, and preparedness within the community. Notably, community satisfaction achieved the highest weighted mean score of 3.76, reflecting strong participant approval and a clear acknowledgment of the seminars' relevance and value in promoting public safety. Based on the findings of this study, the following actions are recommended to strengthen fire prevention and safety in Barangay Bahay Toro, Project 8, Quezon City: Adopt Fire-Resistant Construction Materials – Barangay officials and the Bureau of Fire Protection (BFP) should promote the use of fire-resistant materials, particularly in high-risk areas, to reduce property damage and improve community safety. Ensure Proper Storage of Flammable Materials – Gasoline, chemicals, and other flammable substances should be stored securely in well-ventilated locations away from heat sources to prevent accidental ignition. Increase Community Participation – Residents should be encouraged to attend fire prevention and safety seminars to strengthen their awareness, preparedness, and response skills. Hold Regular Fire Safety Forums – Periodic forums should be organized to maintain public awareness, promote shared responsibility, and reinforce preventive practices. Enforce Fire Safety Regulations Rigorously – Authorities should strictly implement fire safety laws, addressing common causes such as faulty wiring, negligence, and arson. Pursue Further Research – Future studies should use qualitative and longitudinal approaches to better understand behavioral and institutional factors affecting program effectiveness and track long-term

outcomes. Broaden the Study's Scope – Conduct similar research in other high-risk zones within Barangay Bahay Toro to identify broader challenges and create more targeted interventions.

Keywords: fire prevention, safety seminars, community awareness, emergency preparedness, barangay bahay toro, fire safety regulations, public safety, preventive measures

**EFFECTIVENESS OF FIRE SAFETY EDUCATION AND ITS IMPACT ON
COMMUNITY RESILIENCE AT BRGY .OLD BALARA QUEZON CITY**

Tristan Mark Epistola, Allen Clyde Isidro, Marc Oliver Moscare,
Justine Regalario, John Michael Villar, Jinky Anacta

Abstract

Fire safety education serves as a critical foundation for empowering communities to prevent, respond to, and recover from fire-related emergencies. Through well-structured educational programs, individuals gain essential knowledge on the proper use of fire safety equipment, adherence to emergency response protocols, and the implementation of effective fire prevention strategies. These initiatives not only enhance individual preparedness but also foster a collective sense of responsibility and resilience, ultimately reducing both the likelihood and potential impact of fire incidents within the community. This study will adopt a descriptive qualitative research design to examine the effectiveness of fire safety education and its impact on the community in Barangay Old Balara, Quezon City. A descriptive qualitative approach enables the collection and interpretation of non-numerical data to gain deeper insights into participants' views, experiences, and perceptions. This method is particularly suited for exploring real-life issues and identifying areas for improvement. Data will be gathered primarily through structured observations and surveys, ensuring a comprehensive perspective on the topic. To promote fairness and minimize selection bias, all members of the target population will be given equal opportunity to participate. The researchers aim to identify meaningful patterns, themes, and perspectives that can inform and strengthen community-based fire safety initiatives. To improve fire safety awareness and enhance community resilience in Barangay Old Balara, Quezon City, the following measures are recommended: Accessible Fire Safety Training. Offer free or affordable training sessions to equip all residents with essential fire prevention and emergency response skills, ensuring accessibility across all socioeconomic groups. Sustainable Funding. Collaborate with government agencies and private partners to secure ongoing funding for fire safety programs, including educational materials, safety equipment, and outreach activities. Comprehensive Education Campaigns. Incorporate fire safety education into community events, schools, and workplaces, emphasizing prevention, emergency protocols, and proper use of safety equipment. Engaging Educational Materials. Develop and distribute clear, visually appealing resources, such as infographics, videos, animations, and interactive tools tailored to different audiences, including children and vulnerable populations. Community Engagement. Promote a culture of preparedness by encouraging residents to participate in regular fire drills, workshops, and neighborhood watch programs, fostering collective responsibility for safety. Fire safety education plays a vital role in fostering a culture of preparedness and significantly reducing the occurrence and impact of fire-related incidents. By providing individuals with essential knowledge and skills such as the proper use of fire safety equipment, adherence to emergency response protocols, and application of effective fire prevention strategies, communities become more resilient and better equipped to mitigate risks. Well-informed communities are not only more responsive during emergencies but also experience fewer casualties, reduced property damage, and faster recovery after fire incidents. Moreover, sustained investment in fire safety education strengthens community bonds, promotes collective responsibility, and contributes to the development of a safer, more adaptive, and disaster-resilient society. This study aims to evaluate the effectiveness of fire safety education and its impact on the community in Barangay Old Balara, Quezon City. A total of forty (40) participants: comprising twenty (20) community residents and twenty (20) Bureau of Fire Protection (BFP) personnel assigned to the area, will serve as key respondents in assessing the outcomes and identifying the challenges of current fire safety initiatives within the barangay.

Keywords: fire safety education, community preparedness, emergency response, disaster resilience, bureau of fire protection (bfp), barangay old balara, preventive strategies, public awareness, risk mitigation, safety training, community engagement

EFFECTIVENESS OF INTEGRATED BALLISTICS IDENTIFICATION SYSTEM AS A TOOL FOR INVESTIGATION IN SELECTED BARANGAYS IN NORTH CALOOCAN

Erica Mae Dacallos, Christina Carla Chua, Gerald Sequito, Chelsea Iris Villedar, Richelle Zapanta

Abstract

In the Philippines, Republic Act No. 10591 mandates the registration of all firearms and the establishment of a centralized database to monitor ownership and accountability. This legislation plays a crucial role in ensuring that only qualified individuals are permitted to possess firearms, thereby helping to prevent misuse and illegal distribution. In this context, the study assessed the effectiveness of the Integrated Ballistic Identification System (IBIS) as an investigative tool in selected barangays in North Caloocan. It specifically examined IBIS's role in strengthening criminal investigations, expediting the identification of firearms used in crimes, and enhancing overall law enforcement operations through the use of advanced ballistic matching technology. The study involved 20 police investigators and 10 firearm examiners from the Investigation and Detective Management Section, North Extension Office of the Caloocan City Police Station (CCPS). Participants were selected through purposive sampling to ensure that only individuals with relevant expertise and experience were included. A descriptive research design was employed, and data were gathered using a researcher-validated questionnaire. Before the distribution of the instrument, appropriate permissions and ethical clearances were obtained. The questionnaires were administered personally and systematically collected for analysis to ensure the integrity and reliability of the data. The findings indicated that most respondents were between the ages of 30 and 35 (40%), predominantly male (87%), college graduates (67%), and had six to ten years of experience in law enforcement (60%). In assessing the effectiveness of the Integrated Ballistic Identification System (IBIS), respondents strongly agreed that the system is highly effective (mean rating = 3.89). It was also perceived to accurately identify ballistic evidence (mean rating = 3.76) and serve as a valuable tool in criminal investigations (mean rating = 3.74). A key challenge identified was the limited public awareness of IBIS and its benefits. To address this, the most frequently recommended strategy was to conduct regular audits and updates of IBIS data to ensure its continued accuracy, reliability, and relevance in law enforcement operations. The study proposed comprehensive strategies to enhance the effectiveness and utilization of the Integrated Ballistic Identification System (IBIS). Key recommendations include expanding training programs and awareness initiatives for law enforcement personnel to ensure competent system usage. Establishing a dedicated technical support unit and strengthening inter-agency collaboration were also emphasized to improve operational efficiency. Forensic investigators should be provided with continuous education on IBIS functionalities and standardized protocols for evidence handling. Policymakers are encouraged to allocate sustained funding for system upgrades and to lead community education campaigns that highlight the public safety benefits of IBIS. In the judicial sector, the integration of IBIS-generated findings into courtroom procedures and the training of legal personnel were recommended to reinforce its evidentiary value. Additionally, fostering public trust through community engagement and transparency is vital. Future researchers are encouraged to assess IBIS's long-term impact and explore innovations that can further enhance crime-solving capabilities through ballistic technology.

Keywords: integrated ballistic identification system (ibis), law enforcement, forensic investigation, evidence handling, technical support, inter-agency collaboration, judicial system, community awareness, crime-solving technology, criminal investigation

**EFFECTIVENESS OF PHILIPPINE NATIONAL POLICE PROGRAM FOR R.A. 9287
OTHERWISE KNOWN AS ILLEGAL NUMBER GAMES JUETENG AT
BARANGAY 166 KAYBIGA CALOOCAN CITY**

Clint Joseph Zuniega, John Julio Hernandez, Ike Loria, Ricardo Rafael Macapagal,
John Paul Montealegre, Nilmar Plata

Abstract

The widespread operation of illegal number games such as Jueteng continues to pose a significant challenge to law enforcement and governance in the Philippines. Despite the enactment of Republic Act (R.A.) 9287, which imposes stricter penalties for individuals involved in illegal gambling, the persistence of these activities highlights underlying socio-economic, cultural, and enforcement-related issues. This study aims to assess the effectiveness of the Philippine National Police (PNP) program in implementing R.A. 9287 against illegal number games in Barangay 166, Kaybiga, Caloocan City. The study utilizes a stratified random sampling technique to identify the appropriate number of respondents. A total of 50 individuals participated, consisting of ten barangay officials, ten police officers, and thirty local residents. The data collection focused on gathering insights into the community's perception of the program's enforcement efforts, collaborative measures, and overall impact in addressing illegal gambling activities. The majority of the respondents were male, aged 26 to 33, and residents of Barangay 166. Based on the responses from police officers, barangay officials, and community members, the Philippine National Police program for enforcing R.A. 9287 was perceived to be effective. Measures such as collaboration with barangay officials and the conduct of regular police raids were rated as Highly Effective. Other components, including community engagement, arrest operations, and educational campaigns, were considered Effective by most respondents. This study concludes that the PNP program has been effective in implementing R.A. 9287 within Barangay 166, particularly through inter-agency collaboration and law enforcement efforts. To further strengthen these initiatives, the researchers recommend enhancing community engagement, increasing the frequency of police operations, and promoting transparent communication. Community members are encouraged to support anti-illegal gambling campaigns and participate in livelihood programs as sustainable alternatives. Future research is advised to explore the socio-economic roots of illegal gambling across multiple barangays, while criminology students may examine its broader implications for community safety and crime prevention strategies through field-based inquiries.

Keywords: illegal gambling, r.a. 9287, philippine national police, jueteng, law enforcement, community collaboration, crime prevention, barangay kaybiga, socio-economic factors, criminology

**EFFECTIVENESS OF PNP CHECKPOINT OPERATION IN
BARANGAY PRENZA II, MARILAO BULACAN**

Reymart Reymundo Bacunawa, Johnroeve Alicando, Benedick Antonio,
Bryan Atinta, Jimuel Esmundo, Ejay Pingul, Denise Anne Osorio

Abstract

This study examines the effectiveness of Philippine National Police (PNP) checkpoint operations in Barangay Prenza II, Marilao, Bulacan. The chapter covers essential components, including the background of the study, statement of the problem, assumptions, significance, scope and delimitation, review of related literature and studies, theoretical framework, conceptual framework, and definition of terms. The aim is to evaluate how checkpoint operations contribute to crime prevention and public safety in the barangay. This chapter presents the research method, respondents of the study, population and sampling, research instrument, data collection procedure, and statistical tools for data analysis. A descriptive research approach was applied to ensure accurate representation of the data collected from the respondents. The data obtained were analyzed descriptively to address the research questions. Interpretations of the findings were made to classify, transform, and combine data for meaningful conclusions. The results provide insights into the operational patterns, perceived effectiveness, and challenges faced in implementing PNP checkpoint operations. This chapter presents the findings of the study and discusses the implications drawn from the results. It highlights what the study revealed about the efficiency of checkpoint operations, as well as areas for improvement to enhance their role in maintaining law and order in Barangay Prenza II.

Keywords: pnp checkpoint, crime prevention, law enforcement, barangay preenza ii, operational effectiveness

**EFFECTIVENESS OF POLICE PATROL OFFICERS AT QUEZON CITY
POLICE STATION 4 (NOVALICHES)**

Carl Angelo Gonzales, Kyle Baes, Micko Logatoc, EJ Andre Corpuz,
Eduard Cedrick Sanchez, Dr. Myrna Cuntapay

Abstract

Maintaining public safety and reducing crime are primary responsibilities of law enforcement agencies. This study evaluates the effectiveness of police patrol operations at Quezon City Police Station 4 (Novaliches) in fulfilling these objectives. Specifically, it investigates how patrol strategies contribute to crime deterrence, improved community safety, and strengthened public confidence in local policing efforts. A quantitative-descriptive research design is employed in this study to assess the efficiency of various police patrol strategies. Data are collected through survey questionnaires distributed to 50 respondents, comprising 20 police officers and 30 community members. The strategies evaluated include preventive patrols, the application of the Koper Curve Theory, police omnipresence, and low-profile policing. The responses are analyzed using descriptive statistics to determine the perceived effectiveness of these approaches. The findings reveal that increased police presence significantly contributes to crime reduction and enhanced public safety. Preventive patrol strategies are rated as very effective when implemented consistently. Both police officers and community members recognize the Koper Curve Theory as an essential tactic for maximizing visibility and optimizing patrol deployment. Areas with regular police visibility reportedly foster a heightened sense of security among residents, reinforcing the value of police omnipresence. Additionally, low-profile policing proves to be an effective complementary approach, allowing discreet monitoring of potential criminal activity while maintaining positive community relations. Overall, the results suggest that integrating visible and discreet policing strategies can improve operational efficiency and foster trust between law enforcement and the community. This study recommends the strategic enhancement of police patrol operations in Novaliches through the integration of technological tools such as crime mapping systems and CCTV surveillance. It also underscores the importance of ongoing officer training, inter-agency collaboration, and community engagement. The adoption of proactive approaches such as intelligence-led policing and data-driven strategies is encouraged to further strengthen patrol effectiveness, improve public trust, and ensure a safer environment for the residents of Novaliches.

Keywords: police patrol, crime prevention, koper curve theory, community safety, police omnipresence, low-profile policing, novaliches, law enforcement strategies, criminology, public trust

**EFFECTIVENESS OF POLICE STATION 14 COMMUNITY RELATION:
BASIS FOR TRUST AND COOPERATION**

Lorenz Bagares, Aludo Joven, Mike Stephen Feliciano,
Mark Anthony De Vera, Roger Valdez Jr, Edgar Reyes

Abstract

Public trust and cooperation are essential foundations for effective law enforcement and community well-being. This study investigates the effectiveness of the community relations efforts of Police Station 14 in Barangay Holy Spirit, Quezon City, as a basis for fostering trust and cooperation between the police and the public. The study explores how cultural perceptions, community involvement, police visibility, and officer behavior influence public perceptions of law enforcement. These factors have gradually reshaped the foundation of police-community relations, emphasizing the need for strategic engagement and transparent practices. A descriptive research design is utilized in this study. The respondents include 50 individuals from Barangay Holy Spirit, comprising 10 law enforcement officers and 40 community residents. Purposive sampling is applied to identify participants who have direct experiences with Police Station 14's community programs. Data are collected through a validated survey instrument and are analyzed using descriptive statistics to assess the effectiveness of community policing strategies and their impact on public trust and cooperation. The results show that police-community relations significantly influence public perceptions of law enforcement. Respondents report that regular communication, transparency in operations, and community outreach activities contribute to stronger cooperation and increased public trust. Law enforcement visibility and consistency in behavior are also noted as critical factors in building positive relations. However, challenges remain, particularly in sustaining engagement and addressing lingering skepticism rooted in past experiences. These findings suggest that continued and consistent community involvement is essential in reinforcing effective policing practices. This study concludes that the community relations efforts of Police Station 14 have a positive impact on building trust and fostering cooperation within Barangay Holy Spirit. The perspectives of community members highlight the importance of ongoing engagement, visible police presence, and transparent operations. To further strengthen these efforts, the study recommends that law enforcement agencies invest in long-term community partnership programs, officer training on community-based policing, and regular evaluation of outreach initiatives to sustain trust and public cooperation.

Keywords: community policing, police-community relations, public trust, law enforcement, barangay holy spirit, police visibility, crime prevention, cooperation, criminology

**EFFECTIVENESS OF POLICE VISIBILITY IN PREVENTING CRIMES IN
BARANGAY UGONG VALENZUELA CITY**

Rasad Ash-hary, Elizar Belarmino, Aldrin Carreon, Ejay Marcaida,
Mark Daniel Villamayor, Eduardo Villaruel

Abstract

Police visibility plays a crucial role in deterring crime and enhancing the sense of safety within communities. The effectiveness of police presence is especially important in areas with high crime rates or social instability, such as informal settlements. While police visibility alone may not completely eliminate criminal activities, it contributes significantly to crime prevention and public confidence when combined with strategic programs and community involvement. This study examines the effectiveness of police visibility in preventing crimes in Barangay Ugong, Valenzuela City. It aims to evaluate how police omnipresence impacts criminal behavior, promotes safety, and influences public perception of law enforcement. This study adopts a descriptive research design to assess the impact of police visibility on crime prevention in Barangay Ugong. A total of 50 respondents were selected through purposive sampling, consisting of barangay personnel, members of the Philippine National Police (PNP), and community residents. Data was gathered through survey questionnaires and face-to-face interactions. The collected data were analyzed using statistical tools such as frequency, percentage, ranking, and mean to interpret the respondents' perceptions of the effectiveness of police visibility in terms of personnel deployment, operational procedures, and availability of equipment. The results indicate that the majority of respondents were male and aged 42 and above. Most participants assessed police visibility in the barangay as "Very Effective," particularly in the areas of personnel, procedures, and equipment and materials. These findings suggest that the visible presence of law enforcement contributes to reduced fear of crime among residents and discourages potential offenders from engaging in unlawful acts. However, the study also identified issues such as limited manpower and insufficient funding, which hinder the consistent implementation of effective police visibility strategies. This study concludes that police visibility significantly enhances community security and public confidence by deterring criminal activity and promoting a safer environment. The presence of officers in public areas leads to increased vigilance and reduced opportunities for crime. However, to maximize its impact, law enforcement must address resource limitations and strengthen community engagement. The study recommends continuous improvement of patrol operations, increased funding, and collaboration between police and residents to ensure proactive and sustainable crime prevention efforts in Barangay Ugong.

Keywords: police visibility, crime prevention, public safety, community confidence, law enforcement, barangay ugong, valenzuela city, police presence, criminology, community engagement

**EFFECTIVENESS OF PREVENTION PROGRAM IN REDUCING SEXUAL ASSAULT
INCIDENT IN BARANGAY BAGBAG, QUEZON CITY: BASIS FOR
CREATION OF ANTI- SEXUAL FRAMEWORK**

Regino Moso, Mico Asumbra, Harold Ian Dalida, Justine Miguel Dela Fuente,
Rayvin De Llamas, Jinky Anacta

Abstract

This study examines the effectiveness of a prevention program in reducing sexual assault incidents in Barangay Bagbag, Quezon City, as a basis for creating an anti-sexual framework. It presents the background of the study, review of related literature, conceptual and theoretical frameworks, statement of the problem, assumptions, scope and delimitations, significance of the study, and definition of terms. The frameworks guide the study's direction, while the problem statement identifies the key research questions. Assumptions clarify the underlying conditions, the scope sets study boundaries, the significance explains its relevance to stakeholders, and defined terms ensure clarity and consistency. The methodology describes the research design, respondents, sampling technique, research instrument, its validation process, data collection procedures, and statistical treatments. Respondents were selected to ensure appropriate representation, and the validated instrument was administered and retrieved systematically. Data was analyzed using relevant statistical methods to ensure accuracy and reliability of the findings. The results are presented through tables, statistical analyses, and interpretations of the gathered data. The demographic profile of respondents provides essential background information. Survey responses were analyzed using appropriate statistical tools, with each table supported by clear explanations. Findings are presented objectively to address the research questions and support the study's conclusions. The discussion interprets the results in relation to the research questions and objectives. It identifies the level of effectiveness of the prevention program, formulates conclusions addressing the statement of the problem, and provides recommendations to address identified issues. Suggested improvements aim to enhance program implementation, inform stakeholders, and guide future research. The discussion follows the order of the research questions for clarity and coherence.

Keywords: sexual assault prevention, program effectiveness, crime reduction, anti-sexual framework, barangay bagbag

EFFECTIVENESS OF TASK FORCE DISIPLINA IN THE IMPLEMENTATION OF CITY ORDINANCES IN BARANGAY NOVALICHES PROPER, QUEZON CITY

Mike Angelo Martirez, Joshua Caharian, Rafael Dalma, Errol Medina,
Christian Paul Tejoso, Denise Anne Osorio

Abstract

Barangay Novaliches Proper in Quezon City, one of the most populous and congested areas in Metro Manila, faces persistent challenges in maintaining law and order. In response, the local government established Task Force Disiplina to strengthen the implementation of city ordinances through stricter enforcement and enhanced community engagement. This study aims to assess the effectiveness of Task Force Disiplina in enforcing local ordinances and promoting discipline within the community, while also identifying factors influencing its operational efficiency. This study employs a descriptive research design, following the framework of McCombes (2020), to systematically assess the effectiveness of Task Force Disiplina in implementing city ordinances. A total of 50 participants, including 40 residents of Barangay Novaliches Proper and 10 members of Task Force Disiplina, are selected using purposive sampling to ensure relevant and insightful responses. Data collection tools include structured surveys, focusing on areas such as personnel competency, training adequacy, logistical support, and perceived challenges faced by the task force. The findings reveal that Task Force Disiplina plays a significant role in reinforcing city regulations within Barangay Novaliches Proper. Residents acknowledged improvements in public compliance and orderliness due to increased visibility and activity of the task force. However, challenges such as limited manpower, insufficient logistical resources, and gaps in training were also identified. Despite these limitations, the task force is perceived to be generally effective in its implementation efforts. The results highlight the importance of continued support in terms of equipment, personnel development, and policy reinforcement to maximize the task force's performance. This study concludes that while Task Force Disiplina has been instrumental in promoting compliance with city ordinances, there is a need for systemic improvements in resource allocation, officer training, and community collaboration. Recommendations include the provision of sustained logistical support, regular skills development programs, and stronger communication between local officials and residents. These measures are essential for strengthening the long-term effectiveness of the task force. The findings offer valuable insights for policymakers and future researchers aiming to improve local governance and community-based enforcement mechanisms.

Keywords: task force disiplina, city ordinances, law enforcement, community engagement, barangay novaliches proper, quezon city, criminology, public order, descriptive research, local governance

**EFFECTIVENESS OF THE DEPARTMENT OF PUBLIC SAFETY AND TRAFFIC
MANAGEMENT IN REGULATING TRAFFIC LAWS AT
BAGONG SILANG CALOOCAN CITY**

Joel Briones, Mark Antonie Cabe, Joshua Panoringan,
Niño Baquiran, Christian Jay Caparal, Nilmar Plata

Abstract

Traffic management is a persistent issue in many urban areas, and Bagong Silang, Caloocan City, is no exception. Increasing vehicle volume, insufficient infrastructure, and a rapidly growing population contribute to congestion, safety concerns, and poor compliance with traffic laws. This study examines the effectiveness of the Department of Public Safety and Traffic Management (DPSTM) in enforcing traffic regulations in Bagong Silang. The effectiveness of regulation is influenced by factors such as public awareness, enforcement consistency, and community attitudes toward traffic laws. This study utilizes a quantitative descriptive research design to evaluate the DPSTM's effectiveness in managing traffic in Bagong Silang, Caloocan City. A total of 50 respondents participated, categorized into three groups: 20 traffic enforcers, 20 drivers, and 10 residents. Data was collected through a structured survey questionnaire designed to measure perceptions of enforcement practices, challenges, and potential solutions. Descriptive statistics, including frequency and weighted mean, were used to analyze the responses. According to the data gathered, the largest proportion of respondents (34%) were aged 26–33, while the majority (86%) were male. More than half (52%) were married, and 34% had resided in Bagong Silang, Caloocan City, for 4 to 6 years. Based on the respondents' assessments, traffic management obtained an overall weighted mean of 3.50, interpreted as "Highly Effective." Respondents identified "overloading and oversized vehicles" and "lack of pedestrian and cyclist infrastructure" as the most significant challenges in Bagong Silang, with both indicators receiving 98%. Additionally, the indicators "conduct a traffic sign and marking audit, repair or replace damaged signs, and install new ones as needed" and "launch public awareness campaigns, conduct seminars, and distribute educational materials" each received a score of 90%. The findings suggest that traffic enforcement in Bagong Silang is generally effective but faces persistent challenges related to infrastructure and community behavior. Educational initiatives are recommended to reduce the burden on traffic enforcers by fostering more responsible road use among the public. These programs may also help decrease traffic violations and accidents, allowing enforcers to concentrate on more critical tasks. The study highlights the importance of combining enforcement with education and infrastructure improvements to create a more efficient and safer traffic management system.

**EFFECTIVENESS OF THE PHILIPPINE NATIONAL POLICE OPLAN GALUGAD
CONDUCTED BY HILLCREST POLICE SUB-STATION 8 AT
BARANGAY 170 CALOOCAN CITY**

Anthony Jabalde, John Kenrick Alinio, Ryan Gabayno, Jonel Samson, Dr. Antonio Dawagan Sr.

Abstract

The Philippine National Police (PNP) continue to implement initiatives aimed at maintaining peace and order throughout the country. One of these programs is "Oplan Galugad," a targeted anti-crime campaign designed to address illegal activities such as drug trafficking, illegal firearm possession, public drinking, illegal gambling, and the apprehension of wanted individuals. This operation typically involves coordinated raids, intensified patrols, and active community engagement to enhance public safety. In Barangay 170, Caloocan City, the Hillcrest Police Sub-Station 8 recorded a total of 238 apprehensions in 2024 related to these violations. This study evaluates the effectiveness of Oplan Galugad as implemented in the said locality. A descriptive quantitative research design is employed in this study. The sample includes 50 respondents, divided into three groups: 10 police officers, 10 barangay officials and volunteers, and 30 residents of Barangay 170, Caloocan City. Data is collected through a structured survey questionnaire aimed at assessing perceptions of the campaign's effectiveness in terms of crime reduction, community perception, legal compliance, and operational efficiency. The demographic data show that most respondents are aged 34 to 41 (n=14), single (n=26), male (n=33), and have attained a high school level of education (n=19). Respondents rated the Oplan Galugad operation as "Highly Effective" in terms of crime reduction, community perception, and operational efficiency, while legal compliance was rated as "Effective." A majority of respondents (n=38) believe that the operation is necessary for addressing crime and security concerns. Furthermore, respondents strongly agreed that enhancing police-community relationships could improve the success of future Oplan Galugad operations, with a weighted mean of 50 supporting this measure. The study concludes that Oplan Galugad, as conducted by Hillcrest Police Sub-Station 8 in Barangay 170, is perceived as effective in reducing crime, improving community perception, and ensuring operational efficiency. However, legal compliance was rated slightly lower, indicating areas for improvement. The findings highlight the importance of continued community involvement and recommend initiatives to strengthen police-community relations as a means of improving the campaign's long-term effectiveness. These insights serve as a foundation for refining current strategies and enhancing public trust in law enforcement.

Keywords: oplan galugad, crime prevention, community policing, police operations, public safety, barangay 170, caloocan city, philippine national police, law enforcement, police-community relations

**EFFECTIVENESS OF THE PROGRAMS OFFERED BY COMMUNITY AFFAIRS
SECTION OF POLICE STATION 4 NOVALICHES QUEZON CITY POLICE DISTRICT**

Arabella Erandio, Charlotte Mae Aducal, Junaimah Barua,
Kyla Karryl Caballero, Jovel Pianiar, Denise Anne Osorio

Abstract

The Community Affairs Section of Police Station 4 in Novaliches, Quezon City, is tasked with addressing local needs and fostering community development through voluntary programs. These initiatives aim to strengthen police-community relations by promoting public information, civic action, public relations, and mass communication efforts. This study evaluates the effectiveness of these programs in fulfilling their intended objectives and identifying their strengths and weaknesses. It also aims to inform future research and guide the improvement of similar community-based initiatives. Respondents are categorized into three groups: 15 police personnel, 15 barangay personnel, and 15 residents. A descriptive research design is employed to gather data from selected respondents using purposive sampling. This technique ensures that participants are chosen based on their knowledge, experience, and engagement with the community programs under study. Data collection focused on respondents' assessments of various program components, including public information, public relations, civic action, and mass communication efforts. The study evaluated the effectiveness of programs offered by the Community Affairs Section of Police Station 4, Novaliches, Quezon City Police District. The programs were found to strengthen police–community relations, build public trust, and improve the image of the police. These efforts enhanced community confidence in the police's ability to execute their programs effectively. Respondents indicated that the Public Information Program adequately provided knowledge on rules and regulations in Novaliches and that government services distributed information effectively to citizens, with a weighted mean of 3.60, interpreted as “Very Effective.” Content creation, such as social media updates, received a weighted mean of 3.40, also interpreted as “Very Effective.” Law enforcers' engagement with the community to encourage social participation scored 3.50, while efficiency in helping citizens improve communication skills to express suggestions and feedback scored the highest at 3.70, both interpreted as “Very Effective.” The respondents recommended that the community should be regularly updated on important announcements posted by the PNP to increase awareness of available programs.

Keywords: community affairs, police-community relations, public information program, civic action, mass communication, public engagement, novaliches, quezon city, pnp programs, criminology

**EFFECTIVENESS OF TRAFFIC TRANSPORT MANAGEMENT DIVISION IN
IMPLEMENTING TRAFFIC LAWS IN BARANGAY SAUYO ROAD, QUEZON CITY**

King Joseph Bultron, Carlo Daguinod, Kevin Feliminiano,
Erwin Nocus, Loyd Tugon, Dr. Antonio Dawagan Sr.

Abstract

Traffic law enforcement involves the actions taken by law enforcement authorities to ensure public compliance with road safety regulations. These laws are intended to reduce accidents, improve traffic flow, and ensure the safety of all road users. This study focuses on the effectiveness of the Traffic Transport Management Division in implementing traffic laws along Sauyo Road in Barangay Sauyo, Quezon City. It also highlights the responsibilities of local barangay officials in managing and regulating traffic within their jurisdiction. A quantitative correlational research design is employed to evaluate the implementation of traffic laws by the Traffic Transport Management Division in Barangay Sauyo. The study involves two respondent groups with a total of 50 participants: 30 barangay officials and 20 community members. Stratified sampling is used to ensure proper representation. Data is gathered through structured survey questionnaires, and the analysis focuses on the perceived effectiveness of traffic law enforcement in terms of implementation, personnel, and knowledge of traffic rules, policies, and procedures. Most respondents were male, aged 18–25, single, at the college level, and had served in their roles for 1 to 3 years. The assessment of the Traffic Transport Management Division's effectiveness in implementing traffic laws in Barangay Sauyo Road is rated as "Very Effective" in terms of personnel performance, procedural implementation, and awareness of traffic rules. However, one major problem identified was the inefficient use of technology, including underutilized CCTV systems and traffic sensors. Respondents suggested that traffic flow could be improved through coordinated signalization, road network upgrades, and the adoption of more efficient public transport systems. Additional solutions include enhancing pedestrian infrastructure, implementing stricter parking regulations, and adopting intelligent traffic management technologies. The study concludes that while the Traffic Transport Management Division is largely effective in enforcing traffic laws in Barangay Sauyo, further improvements are needed. These include the enhanced use of traffic technologies, community education campaigns to promote responsible driving behavior, and encouragement of alternative transport modes. The researchers recommend an action plan to further strengthen traffic enforcement and improve road safety and mobility in the area.

Keywords: traffic law enforcement, traffic management, barangay sauyo, quezon city, public safety, road regulations, traffic flow, intelligent traffic systems, community mobilization, criminology

**EFFECTIVENESS OF YOUTH CRIME REDUCTION AT
BARANGAY 175 CAMARIN CALOOCAN CITY**

Rico Miniano, Jake Remo, Mark Adrian Nacion, Edmar Sagonoy,
Jay Lord Irlandez, Dr. Antonio Dawagan Sr.

Abstract

This study assesses the effectiveness of youth crime reduction programs in Barangay 175, Camarin, Caloocan City, with a particular focus on initiatives targeting youth involved in legal conflict. Specifically, it examines the implementation and impact of counseling and diversion programs, as well as educational interventions such as the Alternative Learning System (ALS) for out-of-school youth. The study aims to evaluate local perceptions of these programs, identify challenges to their implementation, and propose recommendations for their improvement. This study uses a quantitative descriptive research design. Stratified sampling was employed to select 50 participants, from whom data were gathered using survey questionnaires. The instrument underwent validation procedures to ensure reliability. The administration and retrieval of the instruments were systematically conducted, and the data were analyzed using Cochran's formula to determine the appropriate sample size. Frequency and percentage distribution were used for demographic analysis, while weighted mean analysis assessed the respondents' perceptions of program effectiveness. The majority of respondents were aged 34–41 years (34%), male (58%), and married (54%). Educational attainment varied, with 44% holding college degrees. Analysis revealed a composite mean of 3.20, indicating a general agreement on the effectiveness of youth crime prevention programs. Respondents emphasized the importance of accessible alternative youth programs, which were seen as particularly effective. However, the rehabilitation of children in conflict with the law (CICL) faced challenges, including limited access to counseling and mental health services. Notably, 76% of respondents identified this as a major obstacle. Furthermore, participants highlighted the need to strengthen partnerships with alternative education and vocational training institutions to expand program accessibility. The findings suggest that improving access to mental health services and forming stronger collaborations with educational and vocational institutions could significantly enhance the effectiveness of youth crime reduction programs in Barangay 175, Camarin, Caloocan City.

Keywords: youth crime, crime prevention programs, counseling, diversion programs, alternative learning system, children in conflict with the law, community-based rehabilitation

**EFFECTIVENESS OF YOUTH ENGAGEMENT PROGRAMS IN PREVENTING STREET
CRIMES AT UPPER NAWASA, BARANGAY COMMONWEALTH, QUEZON CITY**

Jaymar Adrian Gonzales, John Paul Espenilla, Rogelio Itlanas,
Andrei Odiaman, Jasper James Padulaga, Dr. Antonio Dawagan Sr.

Abstract

The effectiveness of youth engagement programs remains a significant yet evolving component in community-based youth development efforts, particularly in Upper Nawasa, Barangay Commonwealth. Over the years, these initiatives have been referred to in various ways, including youth leadership, civic engagement, youth participation, and youth voice. This study investigates how these programs contribute to the prevention of street crimes among the youth in the area. This study adopts a quantitative descriptive research design to evaluate the perceptions of youth participants regarding the effectiveness of engagement programs. A total of 50 youth respondents from Upper Nawasa, Barangay Commonwealth, were selected through purposive sampling. Survey questionnaires were used to collect data, aiming to quantitatively describe and analyze the respondents' experiences and insights related to youth crime prevention. The most frequently encountered challenge among the youth respondents was "difficulty in engaging the community and encouraging participation in program activities," reported by 49 participants, accounting for 11.21% of total responses. In contrast, the least encountered problem was the "lack of training and capacity-building opportunities for program staff and volunteers," with 37 responses, or 8.47%. The most favored solution was to "develop and regularly update an emergency response plan and conduct regular drills to prevent youth crimes," which received 49 responses, or 11.50%. The least suggested strategy was to "acquire necessary equipment and supplies and maintain and upgrade existing ones," with 34 responses, or 7.98%. Most respondents were aged 18 to 25, male, had lived in Upper Nawasa for 4 to 6 years, and had been actively involved in youth programs for less than six months. The analysis revealed that the "Core Competencies" component received an overall weighted mean of 3.73, "Technical Competencies" scored 3.84, and "Enabling and Leadership Competencies" obtained 3.79. All three areas were interpreted as "Highly Effective," indicating strong approval of the program's impact on youth development and street crime prevention.

Keywords: youth engagement program, upper nawasa, barangay commonwealth, community-based programs, crime prevention, street crimes, youth participation

**EFFECTS OF SOCIAL MEDIA IN CRIME PREVENTION EFFORTS OF QCPD - POLICE
STATION 4 IN BARANGAY STA. MONICA QUEZON CITY**

Maverick Casumpang, Adonis Araojo, Ray Angelo Delos Santos,
James Lann Estrabella, Marlou Lumentigar, Dr. Myrna Cuntapay

Abstract

In today's digital era, social media platforms have become integral to everyday life, offering dynamic tools for communication, information sharing, and public engagement. These platforms have also emerged as potential instruments in crime prevention, allowing law enforcement agencies to reach communities more effectively and foster collaboration in maintaining public safety. This study explores the role of social media in the crime prevention efforts of the Quezon City Police District – Police Station 4 (QCPD-PS4), particularly in Barangay Sta. Monica. This research utilized a descriptive method and employed snowball sampling to gather data from 50 Criminal Justice Officers of QCPD–PS4. The study aimed to assess the effectiveness of social media in terms of crime awareness, the adoption of security precautionary measures, and suspect identification. Data collection was conducted through direct distribution and retrieval of survey questionnaires, ensuring timely and complete responses. The study also sought to identify challenges associated with social media use in crime prevention and propose actionable solutions to enhance its impact. The findings revealed that most respondents were male patrol officers between the ages of 26 and 33. Overall, the respondents agreed that social media positively contributes to crime prevention, particularly by increasing public awareness of crime incidents, promoting safety measures, and aiding in the identification of suspects. However, concerns were raised regarding misinformation and its consequences, including the spread of false information, unnecessary fear, poor decision-making, and wrongful accusations. The most pressing challenge cited was the risk posed by online harassment and cyber threats, which discourage victims from reporting crimes. The most recommended action was implementing stricter fact-checking mechanisms to reduce misinformation and the spread of fake news. To address these issues, the study proposed an action plan focusing on enhancing digital security and responsible use of social media. Key recommendations include strengthening fact-checking mechanisms, conducting digital literacy programs to educate the public, and creating secure, encrypted online reporting channels to protect informants. Expanding internet access in underserved areas and improving the monitoring of cyber threats were also suggested. Furthermore, the study advocates for regular training of law enforcement personnel on digital crime prevention, community engagement through social media campaigns, and collaboration with technology experts to design secure reporting systems. These strategies aim to improve the effectiveness of social media as a tool for crime prevention in Barangay Sta. Monica and beyond.

Keywords: social media and crime prevention, digital literacy, misinformation, online crime reporting, cybersecurity, community policing, law enforcement technology

**EFFECTS OF THE ROAD CLEARING OPERATION PROGRAM ON
TRAFFIC IN BARANGAY, BATASAN HILLS, QUEZON CITY**

Joed Lee Bornales, Ryan Carlo Claros, Kerby Hinaut, Mark Amiel Lansangan,
D-jay Obligado, Jinky Anacta

Abstract

This study explores the impact of the Road Clearing Operation Program on traffic flow in Barangay Batasan Hills, Quezon City. Road clearing operations play a critical role in eliminating road obstructions, thereby reducing traffic congestion, minimizing accidents, and facilitating efficient disaster response. The study integrates theoretical and conceptual frameworks to understand the long-term implications of these operations. It also aims to educate future law enforcement officers on the environmental and logistical significance of road clearing while promoting public awareness of responsible development practices. As roads serve as essential components of transportation networks, maintaining clear roadways is crucial to supporting the mobility of people, goods, and services. A quantitative research approach was employed using descriptive research design. This design was selected to provide a detailed and comprehensive analysis of the phenomenon being studied. Data were collected through structured surveys to evaluate public perception and assess the program's effectiveness in improving road conditions and traffic management in the community. The implementation of the road clearing program in Barangay Batasan Hills led to notable improvements in road conditions and traffic flow. Public awareness regarding safe driving practices and the importance of avoiding road obstructions was also enhanced. The program recorded an overall composite mean of 3.30 in terms of road condition and traffic improvement, with the highest individual item scoring a mean of 3.38. Additionally, the assignment of traffic officers in specific areas contributed to accident reduction and smoother vehicular movement. Despite these successes, the program faced several challenges, including limited resources, a small respondent sample, and factors that may limit the overall impact and sustainability of the program. The Road Clearing Operation Program in Barangay Batasan Hills, Quezon City, has contributed to notable improvements in road conditions and traffic flow. The program effectively raises public awareness on safe driving practices and the importance of avoiding road obstructions, reflected in a mean score of 3.30. The overall composite mean for road condition and improvement is 3.30, with the highest recorded mean at 3.38. In addition, the program seeks to reduce accidents by deploying officers in each area to maintain proper traffic flow. Despite these achievements, challenges such as limited resources, low sample size, and specific situational factors affect its overall effectiveness. The program's impact on improving traffic flow is rated at a mean of 3.30, with the highest mean recorded at 3.40.

Keywords: road clearing operations, traffic flow, public safety, transportation management, barangay batasan hills, urban development

**EFFECTS ON THE EXPOSURE OF PORNOGRAPHY AMONG CHILDREN
AT RISK IN CAMARIN CALOOCAN CITY**

Walter Ibanga, Walter Ibanga, Ian Asumbra, Edmon Reyes, Ai Sobair Macadindang,
Mark Anthony Degracia, Eduardo Villaruel

Abstract

This study addresses the increasing concern of early exposure to online pornography among children, particularly in at-risk communities such as Camarin, Caloocan City. With the widespread accessibility of digital media, children are more vulnerable to inappropriate content, which may negatively affect their psychological development, body image, social behavior, and sexual awareness. Grounded in Bronfenbrenner's Ecological Systems Theory, the study explores the various environmental systems that influence a child's development. It aims to determine the extent of pornography exposure and assess the effectiveness of preventive measures such as parental controls and digital literacy education to recommend proactive solutions for protecting children. This research employed a quantitative descriptive research design to examine the effects of pornography exposure on children at risk. Thirty parents were selected through purposive sampling, based on their capacity to provide meaningful insights into the issue. Data were collected using structured and validated survey questionnaires, which included both close- and open-ended questions to ensure comprehensive and unbiased responses. The findings revealed that the majority of respondents were married women aged 51 and above, with educational attainment ranging from high school to college. A high overall weighted mean of 3.66 indicated strong agreement that parental measures such as the use of content filters, monitoring online activity, and open communication are effective in reducing children's exposure to pornography. Additionally, a weighted mean of 3.79 showed that educating children on safe internet practices and engaging in candid conversations about online risks were strongly supported by respondents as crucial preventive strategies. The study confirms the considerable risk that digital exposure poses to children in marginalized communities. Although parents acknowledge the value of monitoring and education, they face challenges such as low technological literacy and discomfort in discussing sensitive topics. The proposed solutions include educational campaigns, tech-based monitoring tools, and broader community involvement, emphasizing a shared responsibility among parents, educators, developers, and policymakers. Anchored in ecological theory, the study promotes a multi-layered approach combining technology, awareness, and community action to effectively safeguard children from harmful online content.

Keywords: pornography exposure, at-risk children, parental controls, digital literacy, internet safety, ecological systems theory

**EFFICIENCY OF TRAFFIC ACCIDENT AT BARANGAY
KALIGAYAHAN NOVALICHES QUEZON CITY**

Julius Santianes, Paris Mark Amador, Joseph Alvarez, John Francis Calub,
James Paladin, Dr. Myrna Cuntapay

Abstract

This study investigates the efficiency of traffic investigation procedures in Barangay Kaligayahan, Novaliches, Quezon City, and their broader implications for public health and economic stability. Given the significant number of individuals affected by traffic-related incidents each year, the research underscores the urgent need for prompt, accurate investigative processes and the development of reliable road infrastructure. Through a comprehensive review of relevant literature, the study examines existing policies, investigative techniques, and legal frameworks to identify critical challenges, such as inadequate evidence collection, weak inter-agency coordination, and procedural gaps. The study aims to evaluate and enhance local traffic investigation practices, with the overarching goal of promoting safer urban communities, reducing road-related fatalities, and minimizing the economic burden caused by traffic accidents. This study employed a descriptive research design to assess the efficiency of traffic investigation procedures in Barangay Kaligayahan, Novaliches, Quezon City. Data were collected through a combination of surveys, interviews, and direct observations from a total of 50 purposively selected respondents, comprising traffic investigators, victims, and suspects. A validated survey questionnaire served as the primary data collection instrument, covering key components such as respondent profiles, the perceived efficiency of traffic investigations, existing challenges, and proposed areas for improvement. The collected data were analyzed using appropriate descriptive statistical tools, including frequency, percentage, weighted mean, Likert scale interpretation, and ranking methods, to draw meaningful insights and conclusions regarding the effectiveness of current traffic investigation practices. This chapter presents the analysis and interpretation of data using tabular presentations and relevant statistical tools. It outlines the demographic profile of the 50 respondents and examines core variables, including traffic investigation policies and procedures, investigative techniques, and legal frameworks. The chapter also identifies key issues hindering the efficiency of traffic investigations in Barangay Kaligayahan, Novaliches, Quezon City. Additionally, it explores proposed interventions aimed at strengthening investigative processes. The findings serve as a foundation for formulating evidence-based recommendations to improve the overall effectiveness, accuracy, and responsiveness of local traffic investigation practices. This chapter presents the summary, conclusions, and recommendations of the study on the efficiency of traffic investigation in Barangay Kaligayahan, Novaliches, Quezon City. The study's findings identified several key challenges, including ineffective evidence collection, overwhelming caseloads, and inadequate communication channels between investigators and relevant agencies. Respondents emphasized the urgent need for capacity enhancement through specialized training, the provision of mobile evidence collection kits, and the establishment of more responsive community-based reporting systems. In light of these findings, the study recommends the implementation of focused training programs and strategic infrastructure improvements aimed at strengthening investigative efficiency, enhancing inter-agency coordination, and improving overall community safety.

Keywords: traffic investigation, barangay kaligayahan, evidence collection, communication gaps, high caseloads, mobile evidence kits, community reporting, training programs, infrastructure improvement, public safety

ELECTRIC BIKE USERS PERCEPTION ON PROPOSED REGISTRATION

Mark Carinan, Ronnie Planas, Eddie Llagas, Bobby Carl Trinidad, Dr. Myrna Cuntapay

Abstract

In recent years, the widespread adoption of electric bicycles (e-bikes) has significantly reshaped urban mobility, offering a sustainable, cost-efficient, and convenient alternative to traditional modes of transportation. Particularly in densely populated cities, e-bikes have emerged as a practical solution to traffic congestion, rising fuel costs, and limited public transit options. However, the rapid increase in e-bike usage has also introduced new challenges, particularly in the areas of regulation, road safety, and infrastructure development. As cities strive to integrate e-bikes into existing transport systems, addressing these issues becomes increasingly important. This study seeks to examine the perceptions of electric bike users regarding the proposed registration policy, focusing on their level of awareness, acceptance, and concerns about its implications for personal mobility and public safety. This study outlines a comprehensive methodology, including the research design, identification and selection of respondents, and the sampling technique employed. It further details the construction and validation of the research instrument, procedures for its distribution and retrieval, and the statistical methods used for data analysis. These methodological steps ensure the reliability, validity, and accuracy of the findings. Among the respondents, 13 individuals (32.5%) were between the ages of 26 and 33. In terms of civil status, the majority, 19 respondents (60%), were single. Regarding educational attainment, 7 respondents (17.5%) were at the college level, while 3 respondents each (7.5%) were college graduates and elementary-level graduates, respectively. For the sex distribution, male respondents constituted the majority with 28 individuals (70%). In evaluating community perceptions of key policing activities, the following results were obtained: Patrolling received a composite mean of 3.44, interpreted as "Strongly Agree." Intelligence Gathering initially received a composite mean of 3.41, also interpreted as "Strongly Agree." Community Awareness registered a composite mean of 3.25, which corresponds to "Agree." A separate assessment of Intelligence Gathering also yielded a composite mean of 3.25 ("Agree"). When asked about specific engagement or awareness items, 69.5% of respondents answered "Yes," while 30.5% answered "No." Another measurement for Intelligence Gathering received a composite mean of 3.19, still interpreted as "Agree." These findings reflect a generally positive perception of law enforcement activities, particularly in areas of patrolling and intelligence gathering, with room for improvement in public awareness efforts. This chapter presents the summary of key findings, conclusions, and recommendations based on the conducted study titled "Electric Bike Users' Perception on the Proposed Registration Policy." The research aimed to evaluate the attitudes and opinions of electric bike users toward the proposed registration system, as well as its possible impact on their usage and compliance behavior. The study was conducted in Tandang Sora, Quezon City, targeting electric bike users as respondents. A simple random sampling technique was employed to ensure objectivity and representativeness in the respondent selection process. The research followed a quantitative approach, allowing for numerical data collection and statistical analysis. Tools such as mean and percentage were used to analyze and interpret the data effectively. The results of this study provide valuable insights for government agencies, policymakers, and transportation authorities in crafting regulations that balance safety, compliance, and user convenience. The findings also serve as a basis for developing awareness programs and infrastructure improvements to support the growing use of electric bikes in urban areas.

Keywords: electric bike, registration policy, user perception, urban mobility, tandang sora, quantitative research, simple random sampling, statistical analysis, transportation regulation, quezon city.

**EMOTIONAL IMPACT OF CRIME AS PERCEIVED BY
THE RESIDENCE OF BRGY 181, CALOOCAN CITY**

Jericho Torlao, Romel Bosoboso, Mandy Dela Cruz, Gelben Masong, Edgar Reyes

Abstract

Crime remains a critical issue in many urban areas, impacting not only public safety but also on the emotional and psychological well-being of residents. In Barangay 181, Caloocan City, a community grappling with ongoing security concerns, exposure to crime often leads to heightened levels of fear, chronic anxiety, and social withdrawal. This study investigates the emotional and psychological impact of crime on residents, emphasizing manifestations such as depression, anxiety disorders, social isolation, diminished interpersonal trust, and adverse physical health outcomes. The research seeks to understand how persistent crime shapes daily life and mental health in vulnerable urban communities. This study utilized a descriptive quantitative research design to examine the emotional impact of crime on the local population. A total of 50 respondents were surveyed from Barangay 181, Caloocan City, comprising community residents, barangay officials, and law enforcement personnel. Participants were selected through purposive sampling to ensure they had firsthand experience or significant exposure to criminal incidents in the area. This approach ensured the collection of relevant, experience-based data to support the study's objectives. The findings of the study, based on the formulated sub-problems, are summarized as follows: Demographic Profile: Age: Among the 50 respondents, the largest age group was 45–54 years old, accounting for 32% or 16 individuals. Sex: An equal gender distribution was observed, with males comprising 50% (25 out of 50) of the respondents. Civil Status: The majority of the respondents were married, representing 72% or 36 individuals. Educational Attainment: A significant portion of the participants were college graduates, accounting for 38% or 19 individuals. Emotional Impact of Crime: Residents of Barangay 181, Caloocan City, strongly agreed with all indicators of emotional impact caused by crime: Depression and Anxiety: The overall weighted mean was 4.50, indicating a strong agreement. Social Isolation: The overall weighted mean was 4.52, interpreted as strong agreement. Difficulty Trusting Others: The highest concern, with a weighted mean of 4.72, reflecting strong agreement. Physical Health Problems: The most significant impact reported, with a weighted mean of 4.86, also strongly agreed upon. Problems Encountered: The most commonly identified issue resulting from the emotional impact of crime was poverty and lack of job opportunities, cited by all 50 respondents (100%), ranking first among the challenges faced by residents. The researchers strongly recommend that local authorities, in collaboration with community organizations, launch sustained and inclusive awareness campaigns focused on crime prevention. These campaigns should not only inform residents about practical safety measures but also address the emotional and psychological impact of crime. By fostering community engagement, promoting cooperation with law enforcement, and encouraging proactive safety practices, these efforts can contribute to a more secure and resilient community in Barangay 181, Caloocan City.

Keywords: crime impact, emotional distress, urban community safety, barangay 181 caloocan, depression, anxiety, social isolation, physical health, trust issues, crime prevention, awareness campaigns

**EMPOWERING DELIVERY RIDERS IN PROMOTING CRIME PREVENTION
AND AWARENESS IN BARANGAY 177 CALOOCAN CITY**

Jericho Abejoro, Francis Angelitud, Carl James Layman,
Maynard Pica, John Roevic Sicad, Dr. Myrna Cuntapay

Abstract

This study investigates the potential contribution of delivery riders to public safety and crime prevention efforts in Barangay 177, Caloocan City. Given their constant mobility and frequent interaction with community members, delivery riders are uniquely positioned to support local authorities by providing timely information and assistance. The research examines public perceptions regarding the involvement of delivery riders in road safety and crime prevention initiatives. Employing a quantitative correlational research design, the study also analyzes the influence of demographic variables such as age, gender, educational attainment, and civil status on these perceptions. This study adopted a quantitative correlational research design to explore how demographic factors such as age, gender, educational attainment, and civil status, relate to the involvement of delivery riders in crime prevention initiatives. It also examined their willingness and readiness to engage and cooperate with law enforcement agencies and local government authorities. The participants, drawn from Barangay 177 in Caloocan City, included five (5) members of the Philippine National Police (PNP), ten (10) barangay officials, fifteen (15) local residents, and twenty (20) delivery riders. The majority of respondents were between 18 and 25 years old, accounting for 28 individuals or 56% of the total sample. In terms of gender, male participants made up 66% (33 individuals), while female participants comprised 34% (17 individuals). The study involved a total of 50 respondents, consisting of five (5) PNP personnel, ten (10) local officials, fifteen (15) community residents, and twenty (20) delivery riders, representing 100% of the sample population. Regarding educational attainment, all respondents had formal education, with the highest levels noted in the data. When assessing their perceptions, the findings indicated a strong consensus among participants, with a weighted mean of 3.53 interpreted as “Strongly Agree” on the role of delivery riders in crime deterrence and increasing public awareness. Respondents also strongly agreed with the importance of delivery riders in crime prevention efforts within the barangay. However, the study also identified a lack of educational programs in the community that address crime prevention. As a result, respondents recommended initiatives focused on empowering delivery riders to play a more proactive role in promoting safety, supporting law enforcement, and enhancing public awareness campaigns. The findings highlight the significant yet underutilized potential of delivery riders in contributing to crime prevention and public safety efforts in Barangay 177, Caloocan City. Due to the nature of their work, delivery riders are constantly mobile and maintain a visible presence throughout the community. This position helps them to serve as informal watchdogs, capable of identifying and reporting suspicious behavior or criminal activity. Their daily interactions with residents and familiarity with local routes make them uniquely equipped to support law enforcement initiatives and enhance the overall safety and security of the barangay.

Keywords: delivery riders, crime prevention, public safety, barangay 177, community involvement, law enforcement partnership, suspicious activity, mobile patrol, local safety, informal surveillance

ENHANCING BARANGAY SECURITY AGAINST GANG RIOTS: A PROPOSAL

Sharlyn Morte, Renzlyn Alviar, Erica Bernabe, Jericho Lagario, Fherl Visitacion

Abstract

Gang-related violence and riots continue to threaten peace and public safety in numerous barangays. These disturbances not only put lives at risk but also instill fear and insecurity within communities. Despite existing preventive measures, many barangays lack a strategic and proactive approach to effectively address gang-related issues. This study proposes the enhancement of barangay-level security through the implementation of targeted interventions, increased community engagement, and improved law enforcement response mechanisms aimed at reducing gang activity and promoting public safety. A mixed-methods research design is employed in this study, integrating both quantitative and qualitative approaches to gather a comprehensive understanding of barangay security. Survey questionnaires are administered to residents, barangay officials, and police personnel to evaluate safety perceptions, frequency of gang-related incidents, and the effectiveness of current security practices. Additionally, in-depth interviews are conducted with selected stakeholders to explore the underlying causes of gang-related disturbances and challenges in maintaining order at the community level. While full data collection is still in progress, preliminary findings highlight common patterns in barangays experiencing gang violence. Gang-related activities appear to be more frequent in highly populated areas characterized by youth unemployment, social disconnection, and limited access to education and recreational programs. These factors contribute to the vulnerability of youth to gang recruitment and increase the likelihood of violent encounters. The initial results emphasize the necessity for a comprehensive and community-centered strategy in addressing gang-related threats. Strengthening barangay security requires not only an increased law enforcement presence but also active participation from the community in crime prevention efforts. Building stronger relationships between residents and authorities, along with integrating technological tools such as surveillance systems and communication networks, can significantly enhance real-time monitoring and response to gang-related incidents. A multi-sectoral approach is recommended to sustain peace and security at the barangay level.

Keywords: gang riots, barangay security, community policing, crime prevention, youth unemployment, public safety, surveillance technology, criminology, mixed-methods research, strategic interventions

**ENHANCING BASIC LIFE SUPPORT AWARENESS THROUGH COMPREHENSIVE
RESCUE TRAINING AMONG CONSTITUENTS OF BARANGAY
TANDANG SORA QUEZON CITY**

Reynaldo Ignacio, Joshua Araneta, Eunard James Gaisen, Jayvee Pidlaoan, Alvin Sensi, Edgar Reyes

Abstract

Barangay Tandang Sora in Quezon City is a densely populated community that faces the constant risk of medical emergencies requiring immediate response. In such situations, the ability of residents to perform Basic Life Support (BLS) can make the difference between life and death. However, limited awareness and lack of proper training hinder effective community response. This study aims to enhance BLS awareness through the implementation of a comprehensive rescue training program among constituents of Barangay Tandang Sora. The initiative is intended to improve the preparedness of residents by equipping them with life-saving knowledge and skills essential for managing emergency situations. This study adopts a descriptive quantitative research design to assess the effectiveness of a comprehensive rescue training program in enhancing BLS awareness. The researchers use a structured survey questionnaire as the primary instrument for data collection, which is administered to selected residents of Barangay Tandang Sora through purposive sampling. The questionnaire is validated by experts and focuses on evaluating participants' understanding, skills, and attitudes related to BLS. The data was organized, tabulated, and analyzed using appropriate statistical tools to draw relevant conclusions about the impact of the training intervention. The findings indicate that the BLS training program positively influenced the knowledge and readiness of the participants. The data reveal improvements in the participants' ability to recognize emergencies, perform CPR, and use basic first aid techniques. The analysis also shows enhanced confidence and willingness among residents to assist during medical crises. These results suggest that structured and practical rescue training significantly contributes to public awareness and emergency response capabilities. The results of the study highlight the importance of community-based training programs in enhancing BLS awareness and preparedness. The comprehensive rescue training initiative effectively improved the participants' knowledge, skills, and attitudes toward emergency response. The findings underscore the need for continuous education and practical simulations to sustain public safety efforts. By empowering residents with essential life-saving techniques, the barangay can foster a culture of readiness, resilience, and proactive involvement during emergencies.

Keywords: basic life support, rescue training, emergency preparedness, public safety, community awareness, first aid, cpr, barangay tandang sora, criminology, descriptive research

**ENHANCING COMMUNITY AWARENESS CAMPAIGN THROUGH FIRE PREVENTION
PROGRAM IN BARANGAY SAUYO QUEZON CITY**

Rey Mark Alboleras, Joel Cabasag, Paolo Nuylan, Carl Kenneth Revilloza,
Charles Kirk Salazar, Irene Gaviola

Abstract

Fire remains one of the most frequent disasters in the Philippines, particularly in highly urbanized areas such as Quezon City. Although often attributed to human error or accidental causes, fire incidents significantly impact the lives and livelihood of affected communities. These incidents commonly occur in densely populated areas with lower socioeconomic conditions. In response to this concern, this study aims to enhance the effectiveness of community awareness campaigns through a fire prevention program, particularly focusing on empowering vulnerable sectors of Barangay Sauyo, Quezon City. This study utilizes a quantitative-descriptive research design to assess the effectiveness of a fire prevention program in raising community awareness. A simple random sampling technique was employed to select participants from various communities within Barangay Sauyo that have been affected by fire incidents. A structured survey questionnaire was distributed to gather measurable data relevant to fire safety awareness, preparedness, and prevention strategies. The collected data were analyzed to characterize current conditions and determine areas for improvement. The findings revealed that most of the respondents were aged 18 to 25, with a significant number being female and having resided or worked in Barangay Sauyo for at least 11 years. Respondents from both Fire Officers/Volunteers and Barangay Officials groups strongly agreed on the effectiveness of the current community awareness campaign. However, the most prevalent issue identified in the area was the presence of outdated or overburdened electrical systems. Suggested solutions included conducting regular inspections, performing timely maintenance, and upgrading aging wiring and electrical panels in households. The study concluded that collaborative efforts between Barangay Officials and Fire Officers/Volunteers are essential to improving fire prevention campaigns. Increasing public knowledge of fire hazards and promoting proper safety measures are crucial steps in protecting lives, properties, and the environment. It is recommended that comprehensive strategies be developed and implemented to minimize fire risks and enhance community resilience. These initiatives would significantly reduce the frequency and impact of fire-related disasters in Barangay Sauyo.

**ENHANCING COMMUNITY RESILIENCE: EDUCATIONAL STRATEGIES
FOR FIRE PREVENTION AND SAFETY AWARENESS AT
BARANGAY BATASAN HILLS QUEZON CITY**

Charlie Jericho Rañosa, Mike Vicent Ada, Rojames Arado, Francis Romar Lamanilao,
Gerald Nama, Dr. Myrna Cuntapay

Abstract

Fire incidents have become an increasing concern in the Philippines, particularly in highly urbanized and densely populated communities such as Barangay Batasan Hills, Quezon City. These areas are especially vulnerable due to the proximity of residential structures, which facilitates the rapid spread of fire. Such incidents result in significant property damage, loss of life, and social disruption. This study aims to assess the effectiveness of community-based educational strategies for fire prevention and safety awareness in enhancing the overall resilience of the barangay. The study utilizes a descriptive quantitative research design to evaluate the impact of educational fire prevention strategies. A total of 50 respondents were selected using stratified sampling, composed of 10 Bureau of Fire Protection (BFP) personnel, 10 barangay officials, and 30 community residents. Data collection was carried out using self-administered, hard-copy questionnaires, supported by interviews to gain deeper insight into participants' knowledge, attitudes, and preparedness regarding fire safety. Findings revealed that the implementation of fire safety training and educational seminars was the most effective strategy in raising community awareness and preparedness. Respondents expressed strong agreement that programs conducted by competent agencies led to improved knowledge and response capacity. Structured program outlines and the presence of strong community support also contributed to program effectiveness. However, a key challenge identified was the limited accessibility of roads, which impeded emergency response operations, particularly the deployment of fire trucks and rescue teams. The study concludes that regular fire safety awareness campaigns, realistic fire simulation drills, and the distribution of safety kits can significantly improve community preparedness. In addition, coordination with local authorities to address road accessibility is essential for effective emergency response. These findings underscore the importance of continuous education and community involvement in fire prevention. Future studies are recommended to explore the long-term effects of educational strategies on actual fire response behaviors and community resilience.

Keywords: fire prevention, community resilience, educational strategies, safety awareness, barangay batasan hills, emergency preparedness, fire safety training, urban communities, criminology, disaster risk reduction

**ENHANCING COMMUNITY SAFETY AND DISASTER READINESS IN BARANGAY
UNANG SIGAW BALINTAWAK QUEZON CITY: ISSUES AND SOLUTION**

Maynard Binasoy, Kerr Mota, Rain Nheil Singueo,
Ervin Culdora, Beaver Vilorio, Jinky Anacta

Abstract

This study focuses on enhancing community safety and disaster readiness in Barangay Unang Sigaw, Balintawak, Quezon City. It presents the background of the study, related literature and studies, theoretical and conceptual frameworks, statement of the problem, assumptions, scope and delimitations, significance, and definition of terms. The research underscores the importance of preparedness in minimizing the damage disasters, whether man-made, natural, or technological, can cause. Disasters disrupt normal community operations beyond the capacity for internal recovery, and factors such as public health emergencies, unplanned urbanization, climate change-induced relocation, and violence can exacerbate their impact. Given the increasing frequency, complexity, and severity of disasters, this study aims to offer practical recommendations and strategies to improve community safety and preparedness in response to identified issues. The methodology outlines research design, respondents, sampling technique, research instruments, validation process, and statistical treatments. The process of administering and retrieving the instruments was systematically conducted to ensure the reliability of the gathered data. The results are presented through tables, analyses, and interpretations of the data collected. These include the demographic profile of the respondents, their responses to survey questions, and the statistical treatments applied. The discussion summarizes the findings and presents conclusions on enhancing community safety and disaster readiness in Barangay Unang Sigaw. Recommendations are provided for parents, community residents, and other stakeholders to address identified issues and implement effective solutions.

Keywords: community safety, disaster preparedness, barangay unang sigaw, risk reduction, criminology.

**ENHANCING CRIME PREVENTION AND DETECTION THROUGH
COLLABORATION AND INFORMATION SHARING IN BARANGAY
PAYATAS B. QUEZON CITY: A PROPOSAL**

Pablito Guevarra III, John Carlo Olivar, Juck Raloso, Jhanjhan Rioflorido,
Christian Jay Villa, Dr. Myrna Cuntapay

Abstract

This study focuses on enhancing crime prevention and detection through collaboration and information sharing in Barangay Payatas B, Quezon City. It aims to deepen understanding of community-based strategies that foster a cooperative relationship between residents and law enforcers. By proposing a community-driven approach, the study seeks to promote a safer environment through joint efforts and transparent communication. The research targets the development of actionable strategies that empower both the community and authorities in addressing crime effectively. A descriptive research design utilizing a quantitative approach was adopted for this study. The researchers applied purposive sampling to select 40 respondents, consisting of 20 law enforcers and 20 barangay residents. Prior to data collection, formal approvals were secured from the Dean of the College of Criminology and Barangay Payatas B. Upon approval, survey questionnaires were distributed to the selected respondents to gather data on their perceptions and experiences regarding crime prevention, community collaboration, and information sharing. The results indicated that educating communities on crime prevention strategies was perceived to contribute to safer neighborhoods, with a weighted mean of 3.05. Regular community dialogues and outreach programs received the highest weighted mean of 3.77, reflecting strong agreement on their effectiveness in enhancing trust and cooperation between the community and law enforcement. Training residents on responding to crimes and emergencies scored a weighted mean of 2.90, showing agreement on its importance. These findings highlight the value of continuous education, communication, and preparedness in crime prevention efforts. The top policy recommendation identified by respondents was securing government and private sector funding to support crime prevention technologies and training, with a frequency of 35 (11.40%). This underscores the need for resource investment in building stronger community-police partnerships and equipping both sectors with tools to improve crime detection and response. The study concludes that effective crime prevention in local communities depends on proactive collaboration, regular communication, and shared responsibility between residents and law enforcement.

Keywords: crime prevention, crime detection, community collaboration, information sharing, public safety, barangay security

**ENHANCING FIRE RESPONSE STRATEGY THROUGH FIRE EXTINGUISHER
TRAINING PROGRAM: A PROPOSAL**

Pauline Joy Gacu, Rhonalie Artugue, Myra Demdam, Valerie Orolfo, Mikaella Teña, Jinky Anacta

Abstract

This study examines the effectiveness of fire extinguisher training programs in improving fire safety and minimizing the impact of fire incidents. Unexpected fires can occur at any time, making it essential for individuals to be prepared and knowledgeable about how to respond. Fire extinguisher training programs play a crucial role in strengthening fire response strategies by equipping individuals with the necessary skills, knowledge, and confidence to act promptly during emergencies. The researchers employed surveys and questionnaires to gather data on participants' understanding and practices related to fire safety. The study involved 60 respondents, including 30 residents, 20 local government officials, and 10 fire safety personnel from Barangay Pasong Tamo, selected through stratified random sampling. A pre-test of the questionnaire was conducted with 10 residents from the same barangay to ensure its validity and clarity. The study aimed to assess fire response strategies in the areas of practice and simulation, evaluation and assessment, and maintenance awareness. The findings showed that most respondents were male, aged 51 and above, and had been residing in Barangay Pasong Tamo for over 10 years. Respondents strongly agreed on the effectiveness of the fire extinguisher training program in improving fire response in terms of practice and simulation, evaluation and assessment, and maintenance awareness. However, a key issue identified was the lack of understanding among residents regarding the appropriate use of different types of fire extinguishers. The study recommends the implementation of mandatory fire training programs for all residents, with content delivered in Filipino and other local languages to ensure accessibility and understanding. The evaluation of the training program revealed high levels of agreement in all areas: Practice and Simulation received a weighted mean of 3.49, Evaluation and Assessment scored 3.47, and Maintenance Awareness received 3.50, all interpreted as "Strongly Agree." These results emphasize the importance of ongoing, accessible, and context-specific training to enhance fire response strategies in communities.

Keywords: fire extinguisher, pass method, fire safety training, emergency preparedness, community fire response

**ENHANCING HOLISTIC APPROACH OF MOLAVE YOUTH HOME REHABILITATION
PROGRAM IN BARANGAY PAYATAS, QUEZON CITY**

Angeliica Nojo, Abbygail Balmediano, Cristine Joy Cea, Janelyn Mecono,
Princess Miraflor Padilla, Aira Rodriquez, Jinky Anacta

Abstract

A juvenile is defined as an individual who has reached the minimum age of criminal responsibility but is still under the age of criminal majority. This study focuses on the vital role that rehabilitation programs play in reshaping juvenile behavior, fostering personal development, and preventing recidivism. It also addresses the impact of bullying, which is often a precursor to more serious delinquent acts. The purpose of this study is to highlight the importance of the rehabilitation programs in reducing juvenile delinquency, with particular focus on the holistic approach implemented at the Molave Youth Home in Barangay Payatas, Quezon City. This study utilizes descriptive research design and purposive sampling to gather relevant data. The respondents include 40 Children in Conflict with the Law (CICL) and 10 social workers from the Molave Youth Home. Coordination with barangay officials, social workers, and other authorities was conducted to administer the questionnaires and ensure proper respondent selection. Informed consent was obtained from all participants, with additional consent from parents or guardians for minor respondents. The study aims to assess the effectiveness of current rehabilitation practices in various components such as admission and readmission processes, case management, program delivery, intensive juvenile intervention, and child protection policies. The findings indicated that most of the respondents were male and aged between 16 and 18. The assessment of the holistic rehabilitation approach at Molave Youth Home received a “Strongly Agree” rating across the following areas: Admission and Readmission, Case Management, Program Delivery, Intensive Juvenile Intervention Support Center, and Child Protection Policy. A significant factor identified in juvenile offending was abuse or neglect by parents. To address this, skill-building programs were recommended to help youth develop practical competencies that promote personal growth and reduce the risk of reoffending. The study recommends several strategies to enhance rehabilitation outcomes. These include encouraging youth participation in meaningful activities, providing appropriate rewards for positive behavior, and ensuring fair and equal treatment for all juveniles. It also emphasizes the need to strengthen law enforcement related to children's rights, conduct routine inspections in public areas, and closely monitor juvenile-related activities. These measures aim to foster a safer and more supportive environment conducive to the successful reintegration of youth into society.

Keywords: holistic approach, youth home rehabilitation program, juvenile delinquency, child protection, juvenile intervention, skill building, criminology

**ENHANCING OLYMPUS VILLAGE SECURITY MEASURES THROUGH AN
EFFECTIVE COMMUNITY BASED PROGRAMS: AN ASSESSMENT**

Renz Jericho Ngoho, Charles Jourdan Alonzo, Justin Bernaldo,
Regie Odejerte, Ghovic Estrada, Irene Gaviola

Abstract

Community safety and security are essential for fostering public well-being and a healthy living environment. In highly urbanized areas such as Quezon City, rapid population growth, urbanization, and socioeconomic disparities have contributed to increasing crime rates and safety concerns. These challenges are also present in Olympus Village, located in Barangay Kaligayahan. In response, various community-based programs have been introduced to address security issues and improve public safety within the village. This study utilizes a quantitative research method focused on collecting and analyzing numerical data to assess the effectiveness of community-based security programs. Structured tools such as surveys and questionnaires were administered to gather reliable and objective responses from participants. The data were analyzed using statistical tools to identify patterns and correlations relevant to security issues, with the goal of offering informed and practical solutions to enhance community safety in Olympus Village. Findings revealed that the most commonly encountered issue among respondents was the lack of adequate CCTV cameras, with 46 out of 50 respondents (92%) identifying this concern. As a recommended action, respondents proposed installing additional CCTV cameras in critical areas such as entrances, exits, and common spaces. This initiative aims to enhance surveillance, deter criminal activity, improve incident response times, and support investigations through recorded evidence. The majority of respondents were aged 26 to 33, predominantly male, and high school graduates. In assessing the effectiveness of existing community-based security programs, respondents strongly agreed on the value of initiatives such as Police-Community Partnerships, Citizen Police Academy Education, Community Reporting Mobile Applications, Community-Funded CCTV projects, and School Safety Education Programs. Agreement was also noted in terms of the effectiveness of Community-Organized Group Monitoring. Based on these findings, the study recommends the installation of additional CCTV systems in strategic locations as a key measure to strengthen peace and order in Olympus Village.

Keywords: community-based, security measures, crime prevention, cctv installation, public safety, police-community partnership, barangay security

**ENHANCING PEACE KEEPING THROUGH THE AID OF CLOSED-CIRCUIT
TELEVISION MONITORING: A PROPOSAL**

Nesren Blo, Kurt Jefferson Arzala, Jovel Balasta, Samantha Abegail Chua,
Baby Marifel Valdez, Nilmar Plata

Abstract

This study aims to determine the extent to which closed-circuit television (CCTV) monitoring systems enhance peacekeeping efforts in Barangay San Agustin. With a growing need for community safety and crime prevention, CCTV technology is seen as a vital tool in supporting local law enforcement. This research focuses on the contribution of CCTV systems to peacekeeping operations and how their effective use can promote security, trust, and active participation within the community. The study adopts a quantitative approach with qualitative aspects and systematically collects data from a targeted population comprising 15 barangay officials, 20 members of the Barangay Peacekeeping Action Teams (BPSOs), and 15 active community residents. The researchers use surveys to gather insights on the integration of CCTV monitoring with barangay policing and community initiatives. The study also evaluates the challenges posed by policy constraints, technological maintenance, and potential misuse of resources. The findings revealed that most respondents supported the integration of CCTV monitoring with barangay police and community efforts. Respondents identified regulatory limitations and inadequate resource allocation as key barriers to maximizing the system's effectiveness. Regular equipment checks and structured maintenance were also highlighted as essential to sustain operational efficiency. The data indicated that addressing these issues could significantly improve peacekeeping mechanisms and foster a safer environment in Barangay San Agustin. The study suggests that Barangay San Agustin has the potential to serve as a model for effective, community-based peacekeeping strategies supported by CCTV monitoring. A participatory approach involving barangay officials, peacekeeping teams, and residents is essential to establishing a safe and inclusive environment. By addressing technological, regulatory, and operational gaps, local stakeholders can implement a sustainable and transparent peacekeeping plan. The insights gained from this study may assist policymakers and law enforcers in crafting effective safety measures tailored to the barangay's specific needs.

Keywords: peacekeeping, cctv systems, community safety, barangay policing, surveillance monitoring, crime prevention

**ENHANCING POLICE PATROL OPERATION THROUGH MANDATORY
USE OF BODY WORN CAMERA: A PROPOSAL**

Cate Navarro, Caira Lee Batiles, Mikaela Jade Ocba, Mardy Valdez, Eduardo Villaruel

Abstract

This study aims to determine how the mandatory use of body-worn cameras can enhance police patrol operations. The increasing demand for greater accountability and transparency within law enforcement has led to the widespread adoption of body-worn cameras. High-profile cases involving police misconduct and the use of excessive force have raised public concern and driven legislative efforts and community advocacy for the implementation of this technology. This study explores the potential of body-worn cameras to improve officer performance, community relations, and overall policing effectiveness. The study adopts a descriptive research design to examine the impact of mandatory body-worn cameras on police patrol operations. It focuses on evaluating how the use of these devices affects officer behavior, operational efficiency, and interaction with the public. A total of 40 police officers who regularly use body-worn cameras were selected through purposive sampling due to logistical constraints and the need for firsthand insights. The study gathers quantitative data on the perceived benefits and challenges associated with the use of body-worn cameras in patrol duties. Findings revealed that 35% of the respondents were aged 34 to 41 years, 77.5% were male, and 40% had more than 10 years of service. Regarding the effectiveness of body-worn cameras, respondents strongly agreed that the devices increased community trust (weighted mean = 3.44), improved evidence collection (3.44), enhanced officer behavior (3.46), and promoted greater accountability (3.47). Despite these positive outcomes, all respondents cited challenges such as limited budget, equipment malfunctions, and data storage concerns. Additionally, 90% of the respondents recommended officer training focused on proper recording procedures and chain-of-custody protocols as a primary measure to address these issues. The results indicate that the use of body-worn cameras is perceived as effective in enhancing police patrol operations by building community trust, improving evidence collection, and reinforcing officer accountability. However, several operational challenges remain, including funding limitations, technical issues, and data management. To address these concerns, the study highlights the need for comprehensive training programs that emphasize proper usage, documentation, and data handling practices. These measures are expected to optimize the benefits of body-worn camera implementation in law enforcement.

Keywords: body-worn camera, transparency, accountability, police patrol, evidence collection, community trust, law enforcement technology

**ENHANCING PUBLIC SAFETY IN POLICE SUB-STATION 13 PHASE 7,
BARANGAY 176 BAGONG SILANG CALOOCAN CITY THROUGH
INNOVATIVE SURVEILLANCE SYSTEM**

Joshua Cabarles, Aziel Edrian Lagnas, Angelo Lapirap, Reyniel Lumandon,
Franco San Agustin, Eduardo Villaruel

Abstract

This study explores the impact of enhancing surveillance systems in an urban community setting, specifically in Police Sub-Station 13, Phase 7, Barangay 176, Bagong Silang, Caloocan City. It focuses on how the integration of innovative surveillance technology contributes to crime prevention and the overall improvement of public safety. Furthermore, this study investigates community concerns related to data privacy and the ethical implementation of such systems. This study utilizes a descriptive quantitative research design and employs purposive sampling in selecting respondents. The researchers aim to examine public safety strategies through innovative surveillance systems by evaluating aspects such as strategic location, integration with other technologies, data protection and privacy, and community engagement. The respondents include 25 residents and 25 law enforcers from Barangay 176, totaling 50 participants. Survey questionnaires were distributed with approval from the Dean's Office, and a formal request was submitted to the Station Commander for the conduct of the study. The data revealed that the majority of respondents were aged 26 to 33 years old, comprising 46% of the sample. Most of the participants were male, accounting for 60%, and 50% were single. In terms of educational attainment, college graduates represented the highest proportion, making up 54% of the respondents. The findings indicated the importance of strengthening community-police relations, especially among the youth, to promote responsible citizenship and enhance responsiveness to public safety issues. Local government units are encouraged to improve emergency response systems, adopt advanced communication technologies, and invest in modern facilities that support surveillance innovation. Civil rights organizations and public safety advocates are urged to support policies that maintain a balance between security and individual privacy. Law enforcement agencies should enhance transparency by regularly releasing data on policing practices and adopting emerging technologies for more efficient operations. Future researchers are encouraged to explore the integration of artificial intelligence, drones, and smart surveillance systems in crime reduction while addressing potential privacy concerns.

Keywords: surveillance system, public safety, crime prevention, community engagement, privacy, law enforcement, urban safety

**ENHANCING THE FIRE PREVENTION STRATEGIES OF BARANGAY 132 BALUT,
TONDO MANILA THROUGH CURRENT TRENDS APPROACH: A PROPOSAL**

Josie Beth Petallo, Viabelle Constantino, Kyla Campilan, Steven Carl Navera,
Rizhel Ivan Reyes, Denise Anne G. Osorio

Abstract

This study examines the alarming rise in fire incidents in Barangay 132, Balut, Tondo, Manila. The frequent occurrence and rapid spread of large fires in the area are primarily attributed to insufficient communication, lack of updated fire safety awareness, and limited training among residents. A notable incident involved a fire that originated from wooden crates near residential areas, resulting in superficial second-degree burns to volunteer responders, as reported by the Bureau of Fire Protection. These findings underscore the urgent need for enhanced fire prevention strategies. The primary goal of this study is to strengthen the existing fire safety measures in the barangay by assessing current conditions and proposing improvements through community-based initiatives, sustainable practices, and proactive prevention strategies. The study utilized a descriptive research design to assess the development of fire prevention strategies in Barangay 132, Balut, Tondo. A total of 100 respondents participated, consisting of 80 residents and 20 fire volunteers. Data were gathered using a structured survey questionnaire, which aimed to evaluate the effectiveness, awareness, and implementation of current fire safety measures within the community. Based on the data collected, a significant portion of respondents (64%) were aged between 18 and 25 years. The majority were local residents, comprising 80% of the total sample, while fire volunteers made up the remaining 20%. Most respondents (75%) reported being single, and 26% indicated having attained the highest level of education among the group. Regarding community-based initiatives, respondents expressed strong agreement, with a composite mean score of 3.56. The predominant challenge identified was the “large volume of electrical hazards” in Barangay 132, Balut, Tondo, cited by 81% of participants. Additionally, the indicator “participation in activities aimed at developing a greater understanding of the area” received an overwhelmingly positive response, with a 99% agreement rate. Regular educational activities should be conducted to improve residents' awareness and understanding of fire prevention strategies, thereby strengthening community preparedness in the event of a fire. Furthermore, it is imperative to perform weekly inspections of electrical outlets, switches, and panels to identify early warning signs of overheating, such as discoloration, burn marks, or melted insulation, to prevent potential fire hazards.

Keywords: fire prevention, community awareness, electrical safety, inspections, overheating signs, resident education, fire hazard mitigation, barangay 132 balut, public safety, preventive measures

**EVALUATING THE CUSTODIAL FACILITY OF POLICE STATION 4
NOVALICHES QUEZON CITY**

Reyman Fernando, Jeromie Gomba, John Nick Espinosa, Russel John Alvarez,
Leonel Jay Francisco, Dr. Antonio Dawagan Sr.

Abstract

This study examines the current state of lock-up jail facilities in the Philippines, which have come under increasing scrutiny due to concerns about overcrowding, substandard living conditions, and non-compliance with legal and human rights standards. Reports frequently cite issues such as poor sanitation, inadequate medical services, and compromised safety and security. These conditions highlight the pressing need for consistent monitoring and comprehensive assessments to identify gaps and implement necessary improvements within custodial environments. This study employs a quantitative descriptive research design to examine and interpret the current state of the custodial facility. The approach aims to provide a systematic analysis by collecting data that reflects real-time conditions within the jail environment. A stratified sampling method will be used to ensure proportional representation from key stakeholder groups. The study will involve a total of fifty (50) respondents, comprised of thirty (30) Persons Deprived of Liberty (PDLs), ten (10) police personnel, and ten (10) visitors. This diverse sample is intended to offer comprehensive insights into the facility's operations, conditions, and compliance with institutional standards. The findings show that most respondents were male, single, and aged between 26 and 33. For Persons Deprived of Liberty (PDLs), the majority had been detained for a duration of three days to two weeks. Respondents generally strongly agreed with the statements related to the custodial facility's capacity, cleanliness, sustainability, and security measures, indicating a favorable perception of these aspects. Despite these positive assessments, a key concern identified was the lack of medical assistance and the limited availability of healthcare services for detainees. When asked about potential improvements, respondents strongly supported the implementation of programs aimed at providing detainees with opportunities to gain skills and knowledge, emphasizing the need for more rehabilitative and educational initiatives within the facility. In light of the study's findings, the researchers recommend a collaborative framework involving all key stakeholders to improve healthcare accessibility for detainees at Police Station 4, Novaliches, Quezon City. Enhancing custodial care requires active participation from Persons Deprived of Liberty (PDLs), police personnel, and the surrounding community. The study emphasizes that the responsibility for humane detention conditions is shared and must be addressed through coordinated action. Future studies should focus on evaluating the long-term impact of proposed interventions and identifying sustainable models for custodial management. Collaborative efforts, particularly with human rights organizations, are essential to ensure legal compliance, uphold ethical standards, and improve overall detainee welfare. Continued monitoring and inclusive partnerships are vital to strengthening the criminal justice system and promoting detainee dignity and well-being.

Keywords: custodial care, detainee welfare, police station 4, novaliches, collaborative approach, healthcare accessibility, persons deprived of liberty (pdl), human rights, legal compliance, criminal justice system, sustainable practices, ethical s

**EVALUATING THE EFFECTIVENESS OF COMMUNITY POLICING STRATEGIES
IN REDUCING CRIME RATES IN QUEZON CITY**

Merlene Quiroga, Mark Jay Blancaflor, Prugeelyn Fernandez,
Norilyn Llaneta, Jeniveh Manibale, Jinky Anacta

Abstract

Community policing is a modern, collaborative approach to law enforcement that prioritizes trust, transparency, and partnership between police officers and the communities they serve. Unlike traditional policing, which is typically reactive and centered on responding to crime after it occurs, community policing emphasizes prevention by addressing the social and economic factors that contribute to criminal behavior. This model encourages consistent, open communication and cooperation between law enforcement and local residents, fostering a sense of shared responsibility for public safety and problem-solving. Globally, community policing has gained recognition as an effective strategy for reducing crime, enhancing public trust, and strengthening the overall relationship between police and the communities they protect. This study will employ a descriptive research design to investigate the influence of community policing strategies on crime reduction in Quezon City. As McCombes (2019) explains, descriptive research enables the analysis of one or more variables through systematic observation without manipulating the research environment. Unlike experimental methods, this approach aims to capture authentic behaviors, conditions, and perceptions as they naturally occur. By collecting firsthand insights from residents, barangay officials, and law enforcement personnel, the researchers seek to gain a deeper understanding of how community policing initiatives are implemented and experienced on the ground. This method allows for a comprehensive exploration of the real-world effectiveness of these strategies in enhancing public safety and community relations. Community policing faces several critical challenges that must be addressed to ensure its effectiveness and sustainability. One major issue is the poor collaboration between the police and the community, which often stems from a lack of trust and mutual understanding. To overcome this, it is essential to foster proactive engagement, maintain open and honest communication, and respond directly to community concerns. Equally important is promoting transparency and ensuring accountability within the police force to rebuild public confidence. Another significant barrier is the lack of citizen participation, often caused by skepticism, fear, or a perceived disconnect from law enforcement. Addressing this requires deliberate efforts to involve citizens in decision-making processes, offer meaningful opportunities for participation, and cultivate a culture of inclusivity and respect. Lastly, limited resources such as inadequate funding, equipment, or transportation, can severely restrict the scope of community policing initiatives. A strategic solution is to build strong partnerships with local organizations, schools, and businesses to pool resources, support programs, and encourage active community involvement. This chapter presents the summary and conclusion of the study, which aimed to assess the challenges faced by Barangay Gulod, Novaliches, Quezon City in evaluating the effectiveness of community policing strategies in reducing crime rates.

Keywords: community policing, crime reduction, barangay gulod, novaliches, quezon city, policing strategies, evaluation, public safety, law enforcement challenges

**EVALUATING THE EFFECTS OF UNLICENSED DRIVERS INVOLVED
TRAFFIC ACCIDENTS IN NOVALICHES, QUEZON CITY**

Jheremy Hemmar, Angeline Balbaro, Genrev Castillote, Jazz Ibañez,
Lemon Venturero, Dr. Antonio Dawagan Sr.

Abstract

The prevalence of unlicensed drivers involved in traffic accidents has emerged as a critical public safety concern in Novaliches, Quezon City. The lack of formal driver education and insufficient understanding of traffic laws among these individuals has significantly contributed to the growing incidence of road-related incidents. This study aimed to evaluate the impact of unlicensed driving on traffic accidents, investigate the challenges faced by key stakeholders including traffic enforcers, policymakers, and local authorities, and propose evidence-based strategies to reduce associated risks. By analyzing the correlation between unlicensed driving and accident frequency, the research provides valuable insights to inform legislative reforms, strengthen law enforcement protocols, and support the development of targeted interventions aimed at improving overall road safety and driver accountability. This study adopted a descriptive correlational research design to examine the relationship between unlicensed drivers and the frequency of traffic accidents in Novaliches, Quezon City. A purposive sampling technique was employed to select a total of fifty (50) participants, comprising twenty (20) licensed drivers, twenty (20) unlicensed drivers, and ten (10) traffic enforcers. Data collection was conducted through a standardized survey questionnaire, the content validity and reliability of which were evaluated and confirmed by field experts. To analyze the data, statistical methods such as frequency distribution, percentage analysis, and weighted mean were applied to assess and interpret respondents' perceptions of the impact of unlicensed driving on traffic safety and accident incidence. Of the 50 respondents surveyed, 40% fell within the 18–25 age range, and 76% were male. Furthermore, 60% reported holding a valid driver's license. The study, which examined the impact of unlicensed drivers on traffic accidents in Novaliches, Quezon City, revealed the following weighted mean scores: Accountability (3.08), Driver Behavior (3.23), Effects (3.27), and Severity of Accidents (3.20). These findings indicate a moderate to high perception of risk associated with unlicensed driving. The most prominent issue identified was the lack of formal training and driving experience among unlicensed drivers, which significantly contributes to unsafe driving practices and increased accident risks. Respondents strongly advocated for a collaborative approach involving local government units and accredited driving schools to implement mandatory driver education programs and sustained public awareness campaigns. Such initiatives are seen as essential to improving road safety, fostering responsible driving behavior, and reducing the prevalence of traffic-related incidents caused by unlicensed individuals. The majority of respondents were male and belonged to the 18–25 age group. Their overall assessment regarding the impact of unlicensed drivers on traffic accidents in Novaliches, Quezon City was generally interpreted as Agree, particularly across the dimensions of accountability, driver behavior, consequences, and the severity of accidents. A key concern identified was the insufficient training and lack of driving experience among unlicensed individuals, which respondents perceived as a major contributor to reckless driving practices and heightened accident risks. These insights underscore the critical need for structured interventions that address gaps in driver education and regulatory enforcement.

Keywords: unlicensed drivers, traffic accidents, driver behavior, accountability, road safety, training deficiency, novaliches quezon city, accident severity, driver education, public safety

**EVALUATING THE ENFORCEMENT OF ANTI-ILLEGAL PARKING ON
PUBLIC ROADS IN BARANGAY SAUYO, QUEZON CITY**

Dicks Lee Diao, John Paul Cimene, Vince Bryan Garcia, Jheyson Neil Into,
Daniel Legaspi, Dr. Antonio Dawagan Sr.

Abstract

This study aims to assess the enforcement of anti-illegal parking regulations on public roads in Barangay Sauyo, Quezon City. Respondents were grouped into three categories: ten (10) Barangay Officials, ten (10) Barangay Public Safety Officers (BPSOs), and thirty (30) drivers or road users, all selected using purposive sampling. A descriptive research method was utilized to systematically gather and interpret data. Before the conduct of the study, the researchers obtained necessary approvals and permission letters from relevant authorities to ensure compliance with ethical standards and institutional protocols. To uphold the confidentiality and anonymity of all respondents, the researchers will provide a clear explanation of the study's purpose, the intended use of the data, and the safeguards in place to protect participants' privacy. Once the survey instrument is finalized and validated, the researchers will proceed with data collection. Survey questionnaires will be personally distributed to the designated participants, consisting of Barangay Officials, Barangay Public Safety Officers, and drivers or road users in Barangay Sauyo, Quezon City. Following the collection of responses, the data will be systematically organized, processed, and subjected to statistical analysis to derive meaningful insights and accurately assess the enforcement of anti-illegal parking regulations in the area. The results of the data analysis were compiled and thoroughly interpreted, forming the basis for the study's discussions, conclusions, and recommendations. Findings revealed that the majority of respondents were between 26 and 33 years old, with males representing a significant proportion, 32 out of 50 participants. In evaluating the enforcement of anti-illegal parking policies in Barangay Sauyo, respondents strongly agreed that current efforts require significant enhancement to improve public service delivery. The statement "A campaign against illegal parking is essential for both motorists and the community" received the highest level of agreement, underscoring the perceived importance of proactive and sustained enforcement measures. Furthermore, one of the most pressing issues identified was the persistent presence of multiple illegally parked vehicles along public roads, which was reported to cause traffic congestion and delays. These findings highlight the urgent need for stricter implementation, consistent monitoring, and broader public awareness to address illegal parking and its adverse impact on road efficiency in Barangay Sauyo, Quezon City. To effectively address the persistent issue of illegal parking, it is imperative to implement stricter enforcement of anti-illegal parking laws in Barangay Sauyo, Quezon City. Strengthening regulatory measures will help decongest public roads, reduce traffic delays, and enhance overall road safety. The study's recommendations are intended for a broad range of stakeholders, including road users, pedestrians, local residents, and traffic enforcers, who play vital roles in promoting responsible road behavior. Furthermore, the findings offer valuable insights for criminology students, academic researchers, and future investigators who may use this study as a foundation for further research, community action plans, or policy-making efforts aimed at improving public order and transportation systems.

Keywords: anti-illegal parking, barangay sauyo, quezon city, traffic enforcement, public roads, road congestion, traffic delays, community safety, policy implementation, road users, pedestrians, traffic enforcers, criminology students, researchers

**EVALUATING THE POLICING TECHNIQUES AT BARANGAY 176,
BAGONG SILANG, CALOOCAN CITY**

Joel Christian Babaran, Noel Facultad, Sam Bryan Patiño, Rey Allen Quilaton,
John Vincent Recaña, Denise Anne Osorio

Abstract

This study focuses on evaluating the current policing techniques employed in Barangay 176, Bagong Silang, Caloocan City, to assess their effectiveness in addressing community safety and crime prevention. Given the area's dense population and prevalent issues such as theft and drug-related offenses, understanding the impact of existing strategies is essential. Current policing methods include foot patrols, community policing programs, and collaboration with local organizations. These initiatives aim to enhance public safety and foster community trust. Evaluating these techniques is crucial to determining their relevance and effectiveness within the context of the barangay's unique socio-economic conditions. The study utilizes descriptive research design and employs purposive sampling. A total of forty (40) respondents, comprising thirty (30) residents and ten (10) barangay officials, participated by answering structured questionnaires. The instrument measured perceptions of three main policing techniques: regular neighborhood meetings, social media public education campaigns, and community-police collaboration. The data collected were analyzed using frequency, percentage, weighted mean, and ranking to determine the effectiveness of each strategy. The majority of respondents were male, aged 51 and above, and had attained tertiary education. Regular neighborhood meetings received the highest composite mean of 3.44, with the strongest agreement observed in encouraging community participation (3.58). Social media campaigns followed with a mean score of 3.42, particularly noted for raising awareness (3.48). Community-police collaboration obtained a composite mean of 3.35, with perceived safety improvement rated highest (3.41). Among the challenges identified were lack of awareness (17.84%), limited digital access or literacy (13.14%), and the spread of misinformation (12.67%). The findings indicate that while current policing strategies in Barangay 176 are generally effective and positively perceived, notable gaps exist in public awareness and digital engagement. To improve these efforts, the study recommends enhancing the visibility of community programs through posters, mobile public announcements, and increased social media activity. Additionally, providing digital literacy workshops and encouraging stronger community involvement are suggested. These enhancements may serve as a practical model for other barangays aiming to strengthen local policing and community safety initiatives.

Keywords: community policing, public safety, barangay security, neighborhood meetings, social media campaigns, crime prevention, digital literacy, community engagement, local governance, criminology

**EVALUATING THE PUBLIC ORDER AND SAFETY OFFICE ROAD SAFETY
AWARENESS PROGRAM IN BARANGAY PASONG TAMO, QUEZON CITY**

Shennie Lumanog, Jan Marini Cerezo, Edgecha Fernando, Patricia Amor Mallillin,
Jasmine Mae Nabo, Eduardo Villaruel

Abstract

Public safety plays a vital role in fostering a secure and cohesive community. The Public Order and Safety Office (POSO) of Quezon City implements various initiatives to uphold public order and promote road safety, particularly in Barangay Pasong Tamo. This study evaluates the POSO Road Safety Awareness Program in terms of civic education, community involvement, and interagency collaboration. It also identifies the challenges faced by POSO in implementing the program and proposes potential interventions to improve the effectiveness of its road safety initiatives. The study utilized a descriptive research design and purposive sampling method. A total of 50 participants, composed of 40 road users and 10 POSO officials from Barangay Pasong Tamo, Quezon City, were selected based on their familiarity with road safety and POSO-led initiatives. Data were collected through a structured survey questionnaire that measured perceptions regarding the components and outcomes of the Road Safety Awareness Program. The findings revealed that the majority of respondents were male (84%), aged 18 to 25 years old (30%), and had completed high school or vocational education (26%). Among the program components, interagency collaboration received the highest weighted average score of 3.28, interpreted as "strongly agree." The most pressing challenge identified was the reluctance of individuals to comply with traffic regulations (46%). To improve the program, the most recommended intervention was the use of social media and online platforms to reach a broader audience (52%). The results suggest that while the POSO Road Safety Awareness Program is generally effective, particularly in terms of interagency coordination, further efforts are needed to address public compliance and engagement. Strengthening collaboration with stakeholders, increasing community-based education initiatives, and incorporating modern communication tools such as social media are essential to enhance the program's reach and sustainability. Future studies are encouraged to explore innovative approaches for promoting lasting behavioral change in road safety practices.

Keywords: road safety, public safety, poso, community engagement, interagency collaboration, civic education, traffic regulations, social media campaigns, criminology, public awareness

**EVALUATING THE STRATEGIES OF PNP PERSONNEL IN POLICE STATION AT
BRGY. 139 BAGONG BARRIO CALOOCAN CITY IN RESPONDING HOLD-UP**

Jasmin Ann De Leon, Airen Joy Macasaddu, Jannah Sarip,
Joana Rose Sinangote, Hazel Joy Villafior, Edgar Reyes

Abstract

This study evaluates the strategies employed by Philippine National Police (PNP) personnel assigned to Police Station Sub-Station 5 in Barangay 139, Bagong Barrio, Caloocan City, in response to hold-up incidents. Hold-up cases, characterized by robbery through force or intimidation, remain a significant concern in densely populated urban communities. The study highlights the role of local police in maintaining peace and order through both proactive and reactive measures, including community policing, crime prevention campaigns, and tactical response strategies. The purpose of this research is to assess the effectiveness of these policing techniques in addressing public safety and reducing hold-up incidents within the community. A descriptive research design was used to examine and evaluate the response strategies of PNP personnel from 2019 to 2024. The study involved sixty (60) participants, comprising fifty-five (55) residents and five (5) police officers from Barangay 139, Bagong Barrio Police Sub-Station 5. Data was collected through structured questionnaires focused on areas such as crime prevention, community engagement, and response efficiency. Findings revealed that the majority of respondents were residents aged 18 to 25. Both residents and police personnel generally agreed that the PNP's strategies were effective in terms of crime prevention, incident suppression, logistical preparedness, and community involvement. However, the primary challenge faced by PNP personnel was their limited access to advanced technology and modern equipment. To address these concerns, proposed measures include regular training and seminars for police officers on updated response protocols, as well as enhanced community outreach programs and partnerships with local organizations. The study concluded that the local community acknowledged the efforts of PNP personnel in effectively preventing and responding to hold-up incidents. Despite positive feedback on existing strategies, there remains a need for improvements, particularly in terms of technological resources and equipment. Strengthening interagency coordination, expanding crime prevention efforts, and providing continuous professional development for police officers are essential to further enhance public safety and trust within the community.

Keywords: hold-up response, pnp strategies, community policing, crime prevention, police effectiveness, urban safety, caloocan city

**EVALUATION OF THE EFFECTIVENESS OF PATROLLING TO PREVENT
THEFT INCIDENTS IN BARANGAY PAYATAS A QUEZON CITY**

Enrique Mabale Jr, Joshua Adameton Acoin, Reynaldo Ecot Jr,
Rhey Bhart Fabre, Kemmey Pueyo, Eduardo Villaruel

Abstract

This study evaluates the effectiveness of patrolling in preventing theft incidents in Barangay Payatas A, Quezon City. It explores various elements of the research including the background of the study, related literature and studies, theoretical and conceptual frameworks, the statement of the problem, assumptions, scope and delimitations, significance of the study, and definition of terms. The research aims to assess whether the existing patrolling strategies are adequate in mitigating theft cases and to identify possible areas for improvement in local crime prevention. The study employs a descriptive research design with purposive sampling, targeting fifty (50) respondents composed of ten (10) barangay officials, ten (10) police officers, and thirty (30) residents. The data were gathered to answer four key questions: the demographic profile of the respondents in terms of age, sex, and civil status; their assessment of the patrolling system's effectiveness focusing on technology integration, frequency and duration, and intelligence-led patrol strategies; the problems encountered in the current patrol operations; and proposed measures to enhance patrol effectiveness. Surveys and interviews served as the primary instruments for data collection. After obtaining official permission from Barangay Payatas and Police Station 13, the researchers conducted the data gathering process. Results revealed that the patrolling strategies were perceived as "Very Effective" across all indicators. Under technology integration, the highest-rated item was the patrol team's use of advanced communication devices such as two-way radios, with a weighted mean of 3.64. In terms of patrolling frequency and duration, the top-rated indicator was the maintenance of police visibility during peak theft hours (e.g., nighttime), with a mean of 3.54. For intelligence-led patrolling, the highest score was given to the use of intelligence strategies in reducing theft incidents, with a weighted mean of 3.62. The findings emphasize the importance of active community involvement and continuous collaboration between residents, barangay officials, and law enforcement agencies in preventing theft. Residents are encouraged to promptly report suspicious activities and support crime prevention initiatives. Barangay officials should routinely assess patrol operations and work closely with law enforcement to enhance strategies. Police officers are recommended to conduct regular patrols and undergo training to improve performance. Lawmakers are urged to allocate resources for barangay tanod training, equipment, and the installation of surveillance systems. Future researchers are advised to examine the effectiveness of advanced technologies such as artificial intelligence and crime mapping to further improve patrolling efficiency.

Keywords: patrolling effectiveness, theft prevention, community policing, technology integration, intelligence-led patrol, barangay safety, quezon city

**EXAMINING THE RELATIONSHIP BETWEEN GANG INVOLVEMENT AND
ACADEMIC PERFORMANCE OF JUNIOR HIGH SCHOOL STUDENTS
IN BATASAN HILLS NATIONAL HIGH SCHOOL**

Jessamae Eugenio, Jovelyn Altura, Princess Nacole Galapon,
Marichua Sadia, Francis Kim Sugabo, Denise Ann Osorio

Abstract

Gang involvement among youth presents a significant concern that can hinder individual development and academic success. It affects multiple aspects of student life, such as academic performance, classroom participation, assessment completion, and behavioral conduct. This study aims to examine the relationship between gang involvement and the academic performance of Junior High School students at Batasan Hills National High School, focusing on how gang affiliation may influence educational outcomes and classroom dynamics. This research employs a quantitative non-experimental design using a descriptive method. Purposive sampling was utilized to identify 40 Junior High School students involved in gangs and 10 teachers as respondents. Data were gathered through structured survey questionnaires designed to measure academic participation, assessment performance, and behavioral patterns associated with gang involvement. The findings show that most gang-involved respondents were male, aged 18 to 20 years old. In terms of class participation, the highest-ranked item was “Gang-involved students participated less in class discussion,” with a weighted mean of 2.94, interpreted as “Agree.” For assessment, the top indicator was “Gang-involved students often fail to meet deadlines for academic requirements,” with a weighted mean of 3.03, also interpreted as “Agree.” Regarding behavior, the item “Gang-involved students frequently disrupt classes” ranked highest, with a weighted mean of 3.08. Furthermore, the strongest identified influence of gang-related social pressure was that “Gang-influenced students tend to avoid authority figures, including teachers and school officials.” The most recommended strategy to address this issue was strengthening counseling and guidance programs, which emphasize the importance of empathy and active listening in student support services. To mitigate the negative effects of gang involvement on student performance and behavior, the study recommends the implementation of mentorship programs to build trust between students and authority figures. It also suggests peer mentorship systems, conflict resolution and anger management training, and the establishment of peer support groups to encourage positive behavior. Additionally, school-wide campaigns that promote respect for school property and authority can foster a safer and more inclusive environment. These interventions aim to reduce the influence of gang culture and support the academic and personal development of at-risk students.

Keywords: gang involvement, academic performance, youth behavior, student discipline, junior high school, risk factors, mentorship, counseling programs, classroom participation, school policy

**EXPLORING COMMUNITY-BARANGAY COLLABORATION IN STRENGTHENING
BARANGAY ANTI-DRUGS ABUSE COUNCIL PROGRAM IN
PASONG TAMO QUEZON CITY**

Salden Palma, James Rallos, Aladin Calis, John Rey Eustaquio,
Glen Philip Estrada, Irene Gaviola

Abstract

Drug abuse remains a critical concern in the Philippines, leading to the establishment of the Barangay Anti-Drug Abuse Council (BADAC) to implement grassroots-level drug prevention and intervention programs. The effectiveness of these initiatives, however, depends largely on the active collaboration between barangay officials and community members. This study explores the extent of community-barangay collaboration in strengthening BADAC initiatives in Barangay Pasong Tamo, Quezon City, emphasizing the importance of engagement, partnership-building, and effective monitoring and evaluation mechanisms. This research employs a quantitative design to assess the impact of collaboration on the effectiveness of BADAC programs. A total of 50 respondents: 30 barangay officials and 20 community residents, were selected using random sampling to ensure balanced representation. Data were gathered through a structured survey questionnaire, which covered aspects of community engagement, partnership efforts, and monitoring practices. The researchers administered and retrieved the instruments in person, following ethical procedures such as informed consent and secure data handling to maintain confidentiality. The study revealed strong community involvement in BADAC activities. The highest-rated indicator in the area of community engagement was the regular conduct of BADAC meetings (weighted mean = 3.64), indicating consistent discussions on anti-drug strategies. In terms of partnership-building, collaboration with non-government organizations (NGOs) ranked highest (weighted mean = 3.46), underscoring the value of external support. For monitoring and evaluation, the top-rated indicator was the use of standardized data collection tools (weighted mean = 3.33), highlighting efforts toward structured data management. The results underscore the vital role of community-barangay collaboration in enhancing BADAC program implementation. To further strengthen the initiative, the study recommends increasing outreach efforts, establishing robust feedback mechanisms, enhancing partnerships with private and civic organizations, and securing sustainable funding. These strategies aim to promote a more responsive, data-driven, and community-centered approach to anti-drug efforts at the barangay level.

Keywords: community collaboration, badac, drug prevention, barangay programs, pasong tamo, stakeholder engagement, monitoring and evaluation, ngo partnerships, anti-drug strategies, local governance

**EXPLORING POLICE OPERATIONAL PROCEDURE AS IMPLEMENTED BY
POLICE STATION 6 QUEZON CITY POLICE DISTRICT**

Alexa Nicole Pulgar, Fatima Adawiya Abdusalim, Angela Dula,
Mary Joy Elizada, Honelyn Kadusale, Eduardo Villaruel

Abstract

Police operational procedures serve as essential guidelines for officers in interacting with the public, responding to criminal incidents, and conducting arrests. These protocols are designed to uphold professionalism and consistency within law enforcement, particularly at Police Station 6, Quezon City Police District. By promoting transparency and preventing the misuse of power, standardized procedures assist officers in managing high-pressure situations with reduced risk to both themselves and civilians. Effective implementation of these procedures relies on the collaborative effort between police personnel and the community to ensure accountability and trust. This study employs a quantitative research approach. Data was gathered through a researcher-made survey questionnaire using a Likert scale. The respondents include thirty-five (35) non-commissioned police officers from Police Station 6, categorized into Junior and Senior Police Non-Commissioned Officers (PNCOs). Purposive sampling is used to select participants best suited to address the research questions. The research instrument was validated through consultations with the research teacher and adviser to ensure its reliability and accuracy. Survey administration was conducted personally by the researchers to ensure proper engagement with police personnel. The assessment of the operational procedures implemented in Police Station 6 yielded an overall weighted mean of 4.0, interpreted as "Strongly Agree." All indicators received equal scores, reflecting strong agreement among respondents regarding the clarity of the review, the accuracy of its findings, the value of its recommendations, and the sufficiency of evaluation data. The results confirm that the review comprehensively assessed the effectiveness of the station's operational procedures. The findings indicate that the respondents strongly agree with the implementation of police operational procedures in Police Station 6. The study highlights the importance of regular evaluations in refining operational processes, enhancing future policing strategies, and promoting accountability. A transparent and impartial evaluation system is essential for continuous improvement, ensuring that police operations remain efficient, ethical, and aligned with community needs.

Keywords: police operational procedure, law enforcement, accountability, police station 6, quezon city police district, transparency, standardized protocols, community engagement, evaluation, public safety

**EXPLORING THE CAPABILITIES OF POLICE STATION 6
PERSONNEL IN CRIME PREVENTION**

Carl Salamanque, Adrian Irix Aguirre, Ralph Leo Gonilat,
Jhonbenz Onan, Allen Santos

Abstract

This study explores the capabilities of Police Station 6 personnel in implementing crime prevention strategies. Crime prevention remains a primary concern for law enforcement agencies worldwide, and the efficiency of police personnel plays a vital role in ensuring public safety. Police Station 6, as an integral part of the local security structure, is responsible not only for responding to criminal incidents but also for proactively reducing their occurrence. This study aims to assess the preparedness, resources, and strategies utilized by the personnel, focusing on training, community engagement, technological tools, and inter-agency collaboration to identify both strengths and challenges in crime prevention efforts. The study adopts a quantitative research method to evaluate the crime prevention capabilities of Police Station 6 personnel. The respondents include 20 police personnel and 20 barangay officials, totaling 40 participants. Data was collected using a structured survey questionnaire, with strict confidentiality maintained throughout the process. Permissions were secured from the head of Police Station 6 and the Barangay Captain prior to data collection. The demographic profile of the respondents showed that 27.5% were aged 18–24, 22.5% were 25–34, and 35% were between 35–44 years old. The remaining 7.5% each belonged to the 45–54 and 55 years and above age brackets. These results reflect a diverse range of experience and perspectives among the respondents. However, additional analysis of their capabilities in relation to crime prevention strategies remains necessary to determine the operational readiness and effectiveness of Police Station 6 personnel. This study provides insights into the current crime prevention strategies employed by Police Station 6 and offers practical recommendations to improve law enforcement efficiency. By examining the strengths and weaknesses of existing practices, the research highlights how personnel can better engage in proactive crime prevention efforts. Emphasis is placed on enhancing training, technology use, and community collaboration to promote safer neighborhoods and strengthen public trust in the local police force.

Keywords: crime prevention, police capabilities, community engagement, law enforcement strategies, police station 6, public safety, barangay collaboration

**EXPLORING THE IMPACT OF CYBERCRIME ON SOCIAL MEDIA
IN BARANGAY SAN ISIDRO MONTALBAN, RIZAL**

Ian Daveric Arreza, Patrick Bermejo, Rafael Enciso, Charles Falculan,
Rommel Jr Serrano, Dr. Myrna Cuntapay

Abstract

Social media platforms such as Facebook and Twitter have transformed how individuals communicate and share information, including images, videos, and messages. However, these platforms also expose users to cybercrime threats. This study aims to explore the impact of cybercrime on social media use in Barangay San Isidro, Montalban, Rizal. It seeks to assess how various forms of cybercrime such as cyberbullying, identity theft, and cyber extortion, affect local residents and how awareness and prevention strategies can be improved within the community. This study utilizes a descriptive research design to gather information regarding the effects of cybercrime in the local context. Guided by the provisions of Republic Act No. 10175, also known as the Cybercrime Prevention Act of 2012, the study surveyed a total of 50 respondents, composed of 40 residents who actively use social media and 10 members of the Cybercrime Group. The survey aimed to determine the prevalence of cybercrime experiences, community awareness, and responses to such threats. The demographic profile of respondents showed that 76% were single, representing the highest proportion of participants, while only 2% were separated, indicating the lowest percentage. These findings provide a baseline for analyzing how personal status may correlate with exposure to cybercrime, though further detailed analysis of cybercrime types and experiences was also conducted. To effectively combat cyberbullying, identity theft, and cyber extortion in Barangay San Isidro, the study recommends launching a digital awareness campaign led by local authorities. This campaign should include seminars, workshops, and social media outreach to educate residents on identifying cyber threats and practicing safe online behavior. Specific strategies include teaching residents how to recognize phishing attempts, secure their accounts, and detect fake profiles or websites. Strengthening digital literacy will support crime prevention efforts, encourage collaboration with law enforcement, and serve as a foundation for future research on community-based cybersecurity strategies.

Keywords: cybercrime, social media, cyberbullying, identity theft, cyber extortion, barangay san isidro, cybercrime prevention, republic act 10175, digital literacy, community awareness

**EXPLORING THE INFLUENCE OF ONLINE GAMBLING ON CRIME RATES
IN BARANGAY COMMONWEALTH QUEZON CITY**

Mharbong Revilla, Keeven Inferido, Banjo Miranda, John Christopher Ragel,
Edwin Saladaga, Eduardo Villaruel

Abstract

This study aims to explore the influence of online gambling on crime rates among residents of Barangay Commonwealth, Quezon City. The research seeks to understand how factors such as anonymity, lack of regulation, and accessibility of online gambling platforms contribute to criminal behavior within the community. By identifying these connections, the study intends to inform local authorities and stakeholders about the risks associated with online gambling and its potential impact on public safety. This study utilizes descriptive quantitative research design. A purposive sampling technique was employed to select 50 residents of Barangay Commonwealth as respondents. Prior to data collection, permission was secured from the research adviser. Respondents were invited to answer a structured questionnaire distributed via Google Forms. The questionnaire focused on key aspects of online gambling, including accessibility, regulatory gaps, and social consequences. Data was analyzed using weighted mean and percentage techniques, with findings organized and interpreted based on the study's problem statements. The results revealed consistently high agreement among respondents regarding the relationship between online gambling and crime-related factors. Specifically, the average weighted mean scores were as follows: Anonymity (3.56), Lack of Regulation (3.48), Easy Access (3.72), Financial Strain (3.58), and Social Isolation (3.76), all interpreted as "Strongly Agree." These findings indicate a significant perceived link between online gambling and the rise in criminal activity in the barangay, with respondents recognizing it as a growing community concern. The findings suggest that online gambling contributes to an increased risk of criminal behavior, particularly among vulnerable individuals in the community. The study highlights the importance of awareness campaigns targeting youth and families to prevent gambling-related issues. Criminologists may use these insights to better understand the behavioral patterns associated with gambling-related offenses. Furthermore, parents and educators are encouraged to promote responsible online behavior and guide young individuals in avoiding exposure to harmful gambling content. The study also calls for improved regulation and monitoring of online gambling platforms to protect communities from its adverse effects.

Keywords: online gambling, crime rates, community awareness, youth prevention, criminology, risk factors, barangay commonwealth

**EXPLORING THE NEIGHBORHOOD WATCH PROGRAM IMPLEMENTED
IN BARANGAY BAGONG SILANG PHASE 10 CALOOCAN CITY**

John Denmark Cajang, Yuri Baguhin, Brix Wyeth Cajang,
Kenneth Moran, Airolid Nicerio, Irene Gaviola

Abstract

This study explores the implementation of the Neighborhood Watch Program (NWP) in Barangay Bagong Silang, Phase 10, Caloocan City. It aims to evaluate the program's effectiveness in enhancing community safety, promoting cooperation among residents, and addressing local security challenges. The research examines the structure, objectives, and activities of the NWP and its impact on crime prevention, public awareness, and community engagement. By employing qualitative methods such as interviews with barangay officials, residents, and law enforcement personnel, the study identifies both strengths and areas for improvement in the current implementation of the program. The study utilized qualitative research design. Respondents included barangay officials, residents, and local law enforcement officers selected through purposive sampling. Interviews and surveys were conducted using validated instruments to gather data. The administration, retrieval, and statistical treatment of the data ensured accurate analysis. The research focused on collecting insights into the awareness, participation, and perceptions of the Neighborhood Watch Program within the community. The results revealed that the Neighborhood Watch Program contributed to a reduction in minor crimes and an increased sense of safety among residents. Data also indicated moderate to high levels of awareness regarding the program, with many respondents expressing support for its continuation. However, challenges such as insufficient resources, inconsistent resident participation, and communication gaps were identified. These factors limited the overall effectiveness of the program. Recommendations include improving training for volunteers, enhancing resource allocation, and developing strategies to boost community involvement and engagement. The study concluded that while the Neighborhood Watch Program has had a positive impact on crime deterrence and community cohesion, several limitations hinder its full potential. Residents and law enforcement agencies are encouraged to collaborate in strengthening the initiative through better outreach, resource support, and continuous training. These efforts are essential for ensuring the program's long-term sustainability and effectiveness in promoting a safer and more unified barangay.

Keywords: resource allocation, crime prevention, community policing, neighborhood watch, community engagement, public safety

**EXPLORING THE READINESS AND KNOWLEDGE OF CRIMINOLOGY INTERN
DURING THEIR IMMERSION PROGRAM: AN ASSESSMENT**

Juan Miguel Herrera, Emmanuel Vincent Ganancial, Arjay Hementera,
Vincent Lelis, Fortunato Iñigo Madriaga, Eduardo Villaruel

Abstract

This study aims to assess the readiness and knowledge of criminology interns during their immersion program. Internship experiences are a critical component of criminology education, providing students with hands-on exposure to actual criminal justice settings. These programs help bridge the gap between classroom instruction and field application by allowing interns to develop competencies in investigative procedures, law enforcement practices, crime prevention, and ethical decision-making. However, concerns regarding limited exposure and inadequate pre-immersion preparation prompted this investigation. A descriptive-quantitative research design was used to evaluate the readiness of fifty (50) criminology interns from Bestlink College of the Philippines. Respondents were selected through simple random sampling. A structured survey questionnaire was utilized to assess their preparedness in terms of theoretical knowledge, practical application, and professional behavior. Ethical guidelines were strictly followed throughout the distribution, retrieval, and analysis of data. The results indicated that the majority of interns agreed that the immersion program significantly contributed to their skill development and professional conduct. Many respondents reported enhanced ability in applying theoretical knowledge to real-world situations. However, pre-immersion training received the lowest rating, suggesting inadequacy in initial preparation. Furthermore, 90% of respondents identified "lack of exposure to diverse aspects of criminology" as the most prominent challenge, highlighting the disconnect between academic instruction and field experience. To address the gaps identified, the study recommends strengthening pre-immersion training programs, implementing rotational field assignments across various criminology sectors, and incorporating structured orientation sessions before deployment. Additional strategies such as regular feedback mechanisms, mentorship programs, and supplementary training modules are also advised to better equip interns for professional practice. These improvements aim to align educational preparation with field expectations, enhancing the overall competence and readiness of future criminology professionals.

Keywords: criminology intern, readiness, knowledge, immersion program, field exposure, internship training

EXPLORING THE ROOT CAUSES OF CARNAPPING IN NOVALICHES QUEZON CITY

Jemarose Bagunu, Aira Victoria Cacpal, Ma Patricia Encluna,
Andrea Santos, Mencholyn Valbarez, Irene Gaviola

Abstract

This study aims to determine and explore the root causes of carnapping in Novaliches, Quezon City. In the Philippines, vehicles serve as essential modes of transportation due to their accessibility and adaptability amidst deficiencies in public transport systems. Their widespread use also supports informal economic activity and small-scale enterprises. However, the increasing incidence of carnapping presents a growing security concern. This research investigates the underlying socio-economic, environmental, and systemic factors that contribute to carnapping incidents in the locality. The study is anchored in a comprehensive framework that includes a review of related literature, theoretical and conceptual models, a statement of the problem, and the scope and limitations of the study. The study utilized a descriptive research design and employed purposive sampling to gather data from key informants, including police officers, barangay officials, and residents of Novaliches, Quezon City. Survey questionnaires were distributed and retrieved personally by the researchers. The instrument was validated to ensure reliability, and appropriate statistical tools were applied for data analysis. A mixed-methods approach was used to obtain both quantitative data and qualitative insights, offering a holistic understanding of the issue. Data gathered through the survey were analyzed and presented in tables, accompanied by interpretation and discussion. Respondent profiles and perceptions highlighted multiple contributing factors to carnapping, including economic hardship, lack of street surveillance, vehicle security negligence, and limited law enforcement visibility. The integration of qualitative responses provided deeper insights into situational and behavioral patterns associated with the commission of the crime. The findings served as a basis for proposing actionable community and law enforcement strategies to reduce the risk of carnapping. The study emphasizes the complex interplay between socio-economic conditions, community awareness, and law enforcement practices in relation to carnapping. It recommends the implementation of targeted crime prevention programs, enhancement of surveillance systems, public awareness campaigns, and stronger collaboration between local authorities and residents. These recommendations aim to address the root causes and reduce the incidence of carnapping in Novaliches.

Keywords: carnapping, root causes, crime prevention, vehicle theft, novaliches, criminology, community safety

**FACTORS AFFECTING CHILD IN CONFLICTS WITH THE
LAW IN BARANGAY 180 CALOOCAN CITY**

Benedicto Iro, Jayvee Camarino, John Paul Halog, Vincente Jr Morazo,
Mhel Untalan, Dr. Myrna Cuntapay

Abstract

One of the most pressing social issues faced by communities today is the growing number of Children in Conflict with the Law (CICL). Despite the implementation of various interventions and policy reforms, juvenile delinquency remains widespread and continues to evolve with shifting societal conditions. This study seeks to examine the contributing factors influencing CICL cases in Barangay 180, Caloocan City, with an emphasis on psychological, sociological, and ecological aspects. This study employs a quantitative descriptive research design to evaluate the factors contributing to juvenile delinquency. A purposive sampling technique was used to select 50 respondents, including representatives from the Women and Children Protection Desk (WCPD), Barangay Council, and CICL individuals. Data was collected through validated survey questionnaires that align with the study's objectives. The study also explores challenges in addressing CICL cases and proposes targeted interventions to reduce their occurrence. The findings revealed that the majority of respondents were male, aged 17 and below, with high school education, and identified as CICL. Across all respondent groups, there was strong agreement that psychological, sociological, and ecological factors significantly influence juvenile delinquency. The most pressing concern identified was the lack of parental supervision, which frequently led to repeated offenses. Proposed interventions include strengthening parental education on child supervision and discipline, conducting parenting workshops, implementing mentorship programs with trained social workers, and forming a Barangay Parent Support Group to offer peer-based guidance and support. The study recommends enhancing parental involvement and community engagement as primary strategies to address the CICL problem. Specific interventions include parenting workshops, structured mentorship programs, and peer support groups. Further initiatives such as community outreach, barangay forums on CICL rights, youth empowerment summits, and partnerships with local businesses for rehabilitation efforts are also proposed. These strategies, backed by a proposed implementation timeline and budget, aim to promote long-term rehabilitation, reduce recidivism, and cultivate a safer environment for the youth in Barangay 180. Continuous monitoring and further research are recommended to assess the effectiveness of these interventions over time.

Keywords: children in conflict with the law, juvenile delinquency, parental supervision, psychological factors, sociological factors, ecological factors, community intervention

**FACTORS AFFECTING DRUG ADDICTION AMONG MINORS IN
BARANGAY TANDANG SORA QUEZON CITY**

Alynith Argonajota, Lalaine Bantay, Riza Geane Belga, Queen Harra Delos Santos,
Monica Ronquillo, Dr. Antonio Dawagan Sr.

Abstract

Drug abuse remains one of the most pressing global health concerns, with minors among the most vulnerable groups affected. This study aims to examine the underlying reasons why minors engage in drug use and identify the key factors contributing to drug addiction among them. Specifically, it seeks to assess the sociological, psychological, and socioecological influences on drug dependency and their impact on the well-being of minors in Barangay Tandang Sora, Quezon City. This study employs a descriptive quantitative research design to collect and analyze numerical data in an accessible format. The researchers gathered data from a total of 50 respondents using stratified sampling. The participants were divided into three groups: 20 parents, 20 members of the Barangay Council for the Protection of Children (BCPC), and 10 police officers from the local community. Stratified sampling was utilized to ensure representation from each stakeholder group. A structured questionnaire was the primary instrument used to gather data aligned with the study's objectives. The demographic profile of respondents indicated that 56% were female, 44% were male, and 24% were aged over 50. Most respondents (38%) held a college degree and were married, while the longest recorded service duration among respondents ranged from 17 to 20 years. Strong agreement was noted across respondents regarding the impact of sociological, psychological, and socioecological factors on drug addiction among minors. The most commonly identified issues included academic difficulties and the recurrence of offenses, primarily attributed to the lack of effective rehabilitation programs. Notably, 80% of respondents emphasized the need for accessible counseling and mental health support as a top intervention priority. The findings of this study identify key risk factors associated with drug addiction among minors in Barangay Tandang Sora, Quezon City. Based on the results, the study recommends enhancing rehabilitation efforts, initiating community-based prevention programs, promoting parental education, and proposing policy reforms to strengthen law enforcement and intervention measures. These recommendations aim to mitigate the incidence of drug addiction among minors and foster a safer, healthier environment for the youth.

**FACTORS AFFECTING ELECTRONIC BIKE ACCIDENTS IN BAGONG SILANG
PHASE 1 CALOOCAN CITY: AN ASSESMENT**

Luigi Laranja, Eiseen Hower Cinco, Ivan Jhon Egmlan, Jhon Michael Gabanzo,
Emmanuel Toscano, Irene Gaviola

Abstract

Electronic bikes (e-bikes), equipped with electric motors to assist with pedaling, have become a widely used alternative mode of transportation in urban areas. These vehicles offer practical benefits, such as reducing traffic congestion and promoting active mobility. However, e-bike-related accidents have become increasingly common, primarily due to factors such as limited awareness of traffic regulations, lack of required licenses, and the involvement of underage riders. This study aims to identify the major contributing factors to e-bike accidents in Bagong Silang Phase 1, Caloocan City, and propose measures to mitigate such incidents. This study employs a quantitative research design using random sampling to ensure that every respondent has an equal chance of selection. The researchers personally approached traffic enforcers and e-bike riders in the study area and obtained informed consent to participate. Data were gathered using structured survey questionnaires designed to assess the variables related to traffic education, accountability, and community perception. After data collection, responses were statistically analyzed to determine the most significant factors influencing e-bike accidents. The findings revealed that traffic education received the highest weighted mean of 3.27, interpreted as "Strongly Agree," indicating its critical role in accident prevention. Accountability followed with a mean of 3.16, and community perception received a mean of 3.15, both interpreted as "Agree." These results suggest that increasing awareness and enforcing regulations could significantly reduce the incidence of e-bike accidents in the area. Based on the findings, the study recommends that authorities implement stricter enforcement of road safety policies, including mandatory helmet use, speed regulations, and designated e-bike lanes. E-bike users are encouraged to adopt defensive driving practices, remain alert in high-risk areas such as intersections and narrow roads, and maintain a safe distance from larger vehicles. Emphasizing traffic education and fostering accountability among both riders and community members can contribute to a safer environment for all road users.

Keywords: accidents, electronic bikes, traffic education, road safety, e-bike riders, urban transportation

**FACTORS AFFECTING HIGHWAY ACCIDENTS ALONG COMMONWEALTH AVENUE,
QUEZON CITY: BASIS FOR AN ENHANCED TRAFFIC SAFETY**

Vincent Samillano, Ryan Aquino, Wilson Arcil, Jay Llyod Bardullas,
John Carlo Dominguez, Irene Gaviola

Abstract

Traffic refers to the movement of vehicles, pedestrians, and other forms of transportation within designated roadways and highways. Effective traffic management involves strategies aimed at ensuring safety and efficiency. However, traffic accidents continue to pose serious challenges, often resulting in property damage, injuries, or fatalities. Along Commonwealth Avenue in Quezon City, often referred to as one of the country's most accident-prone roads, the incidence of highway accidents has raised public concern. This study aims to identify and analyze the factors contributing to these accidents as a basis for improving traffic safety measures in the area. This study uses a quantitative descriptive research design to assess the contributing factors to highway accidents along Commonwealth Avenue. A total of 70 respondents participated, consisting of 20 traffic enforcers and 50 drivers regularly operating in the area. Respondents were selected through purposive sampling, focusing on individuals with direct knowledge or experience of road conditions and traffic incidents. Data was collected using a researcher-made survey questionnaire that underwent validation prior to distribution. Findings revealed that respondents agreed on several key contributors to highway accidents. Environmental factors such as road damage and potholes were frequently cited. Driver-related issues, especially distracted driving and overspeeding, were also identified as major risks. Mechanical issues, including tire defects, and the absence of clear traffic signage, particularly warning signs for hazardous zones, were additional contributing factors. Among all, overspeeding emerged as the most prevalent cause. Respondents strongly recommended regular road repairs and maintenance as crucial steps to reducing accident frequency along the highway. To mitigate traffic accidents along Commonwealth Avenue, the study recommends stricter enforcement of speed limits, enhancement of road infrastructure, and consistent road maintenance. Local government units and traffic enforcement agencies should collaborate in implementing safety campaigns, reinforcing traffic laws, and upgrading road signage. Furthermore, transport operators and drivers must be educated on responsible driving practices to promote a culture of road safety.

Keywords: traffic accidents, overspeeding, road safety, highway conditions, driver behavior, commonwealth avenue

**FACTORS AFFECTING JUVENILE DELINQUENCY IN THE JUNIOR HIGH SCHOOL
AT KASIGLAHAN VILLAGE SAN JOSE MONTALBAN RIZAL**

Sailito Duja Jr, Jericho Adoro, Felix John Gregorio,
Orlando Manalili, Darel Saligumba, Jinky Anacta

Abstract

Juvenile delinquency is increasing in areas such as Kasiglahan Village, where students in junior high school often face social and economic hardships. These challenges frequently result in behaviors such as truancy, theft, and involvement in gangs. This study aims to identify the underlying factors that contribute to juvenile delinquency and propose preventive measures. Guided by Social Learning Theory and Strain Theory, the research examines how environmental influences, peer pressure, and economic struggles shape adolescent behavior. These theoretical frameworks provide insight into how delinquent tendencies develop and highlight the importance of interventions such as effective parenting, quality education, and strengthened community support systems. This study employs a descriptive quantitative research design and utilizes a structured survey questionnaire to gather data from 60 respondents. The participants include 20 students, 20 parents, and 20 police officers, all selected based on their familiarity with or direct experience regarding juvenile delinquency in Kasiglahan Village. The questionnaire, validated by field experts, explores causes, challenges, and potential solutions. Ethical considerations, including informed consent and participant confidentiality, were strictly observed. The collected data was analyzed using basic statistical tools such as percentages and mean scores. The majority of respondents were male adolescents aged 12 to 18, typically coming from households with low educational attainment. These demographic characteristics aligned with known risk factors associated with juvenile delinquency. Peer pressure and the absence of community youth programs emerged as major contributing elements. Respondents consistently emphasized the importance of collaboration among schools, families, and law enforcement in addressing delinquency. Financial instability and limited access to educational or employment opportunities were also cited as significant influences on youth behavior. The highest-rated preventive strategy was community-based cooperation to address youth issues holistically. The findings support both Social Learning Theory and Strain Theory in explaining juvenile delinquency. Adolescents exposed to unstable family environments and poverty were more susceptible to engaging in delinquent acts. The issue is not only specific to the local context but also reflects broader social patterns. While the community shows awareness and willingness to address the problem, limited resources and insufficient support programs hinder effective intervention. The study highlights the need for preventive approaches, particularly those focused on enhancing the social and emotional competencies of youth. Developing communication, conflict resolution, and emotional regulation skills appears more effective in mitigating juvenile delinquency than punitive measures.

Keywords: juvenile delinquency, peer pressure, strain theory, social learning theory, community intervention, youth behavior, poverty and crime

**FACTORS AFFECTING RECIDIVISM AMONG PERSONS DEPRIVED OF LIBERTY
AT SAN JOSE DEL MONTE CITY JAIL FEMALE DORMITORY**

Princess Micah Obani, George Dungca, Ace Danniel Gener,
Jhon Erick Gulla, Alh Morhis Oxima, Dr. Antonio Dawagan Sr.

Abstract

Recidivism, or the tendency of formerly incarcerated individuals to return to jail after release, remains a pressing concern in the Philippine penal system. This study focuses on understanding the factors influencing recidivism among Persons Deprived of Liberty (PDLs) at the San Jose Del Monte City Jail Female Dormitory. The study investigates variables such as lack of education, poverty, unemployment, and social stigma, which often hinder reintegration into society. By identifying these contributing factors, the research aims to support the development of programs that promote successful reintegration and reduce repeat offenses among female PDLs. This study employs a mixed-method research design, integrating both quantitative and qualitative approaches. A total of twenty-five (25) female PDLs with previous cases of recidivism were selected through purposive sampling. Data were gathered using a validated researcher-made questionnaire, which collected information on respondents' backgrounds and personal experiences. Additionally, in-depth interviews were conducted with the approval of jail authorities and the informed consent of the participants. Quantitative data were analyzed using percentages, weighted means, and rankings based on a 4-point Likert scale. Ethical protocols were strictly observed to ensure confidentiality and protect participant rights. All respondents were female, with 36% having been incarcerated for over three years. A significant majority (76%) belonged to low-income households. Respondents generally disagreed that they had access to sufficient education (mean = 2.49), family support (2.24), or post-release social support (2.20). However, they acknowledged financial instability and family conflict as contributing factors to reoffending. High levels of agreement were observed regarding the impact of stigma and labeling (3.40), particularly related to discrimination and societal judgment. Personal traits such as self-control and responsibility (3.38) were perceived positively, while motivation to change (3.82) emerged as the strongest factor in preventing recidivism. The findings indicate that many Graduates of Penal Institutions (GOPI) face significant challenges in reintegration, including limited employment opportunities, persistent stigma, and lack of practical skills. In response, the researchers propose the "Pagsibol Program: Livelihood Introduction for Future GOPI," a reintegration initiative focused on business literacy and entrepreneurial training. While the program does not provide direct financial aid, it equips PDLs with the knowledge and confidence to pursue small-scale business ventures using available resources. By fostering self-sufficiency and economic resilience, the Pagsibol Program aims to reduce recidivism and support long-term reintegration into society.

Keywords: recidivism, persons deprived of liberty, stigma, reintegration, female inmates, livelihood program, pagsibol program

**FACTORS AFFECTING ROAD RAGE IN BARANGAY 166,
GENERAL LUIS CAYBIGA CALOOCAN**

Gerilu Acala, Dexter Almosara, Carlo Amparado, Jhon Rey Occiano,
Justine Charles Ocfemia, Denise Anne Osorio

Abstract

Road rage has become a growing concern in urban areas, especially in congested locations such as Barangay 166, General Luis Caybiga, Caloocan City. This study aims to analyze the factors contributing to road rage and its effects on drivers, commuters, and the overall traffic condition in the area. Factors such as autonomy, competence, and relatedness are considered in understanding road rage behavior. Road rage refers to angry or violent reactions by drivers in response to perceived provocations or frustrations while driving, including yelling, honking, tailgating, and physical confrontations. Contributing elements include traffic congestion, stress, poor road infrastructure, and personal issues. These behaviors can result in accidents, injuries, or legal consequences. Promoting patience, road awareness, and safe driving practices is essential in addressing road rage incidents. This study adopts a descriptive research design. A total of fifty (50) respondents were selected, comprising thirty (30) drivers, ten (10) police officers, and ten (10) Land Transportation Office (LTO) officers. Data were collected using a structured survey questionnaire as the primary research instrument. The responses were analyzed descriptively to interpret trends and patterns related to road rage. Findings indicate that the majority of respondents were between 26 and 33 years old, accounting for 40 percent of the sample, with males comprising a larger portion of respondents. Most participants had attained a college-level education, representing 58 percent. Across all respondent groups, there was strong agreement that poor road conditions, unclear signage, and poorly designed roadways contribute significantly to road rage by limiting drivers' ability to navigate safely. These environmental stressors were identified as primary triggers of frustration and aggression on the road. The results affirm that environmental factors such as road infrastructure and design have a significant impact on road rage incidents. These findings suggest that addressing road rage requires a comprehensive approach involving infrastructure improvements, traffic management strategies, and public education on safe driving behavior. Future research may further explore psychological interventions and policy reforms to mitigate road rage and enhance road safety.

Keywords: road rage, traffic congestion, driving behavior, urban road safety, driver aggression, poor road conditions, criminology

**FACTORS AFFECTING ROAD RAGE INCIDENTS IN NORTH CALOOCAN CITY:
AN ASSESSMENT**

Anna Joy Ortega, Sherelyn Tullo, Loren Mae Obispo,
Jimmie Alfaro, Michaela Monton, Irene Gaviola

Abstract

Road rage is a dangerous and aggressive behavior exhibited by motorists, often triggered by frustration stemming from traffic congestion. It manifests through verbal insults, physical threats, and hazardous driving behaviors such as tailgating, abrupt swerving, and brake checking. These reactions are typically escalated by emotional distress caused by traffic delays. A recent incident involving two jeepney drivers engaged in a violent altercation highlights the serious consequences of unchecked road aggression. This study aims to examine the factors influencing road rage incidents in North Caloocan City and to provide insights that may inform improvements in urban planning, traffic management, and public safety. This study employs a quantitative descriptive research design to assess the contributing factors to road rage incidents in North Caloocan City. A structured survey questionnaire is used to gather data on respondents' demographic profiles, triggering factors, experiences, and potential solutions. The researchers personally distribute and retrieve the questionnaires from selected participants. Data are analyzed using statistical tools such as frequency distribution, percentage, weighted mean, and a Likert scale to quantify responses and interpret behavioral patterns and causes of road rage. The study revealed that the majority of respondents were middle-aged males with substantial driving experience. Common triggers of road rage included perceived loss of personal space, reckless merging, inefficient driving behavior, and poor road infrastructure. Reported issues involved inadequate loading zones, tailgating, and impatience among drivers. Recommendations from participants highlighted the need for stricter law enforcement, enhanced traffic education programs, and improved road infrastructure and maintenance to address these issues and mitigate road rage incidents. The findings indicate that road rage is closely tied to environmental and behavioral factors such as traffic congestion, poor infrastructure, and aggressive driving conduct. Demographic factors also play a role, with more experienced drivers still susceptible to frustration in high-stress traffic scenarios. To reduce incidents, the study recommends the implementation of designated loading zones, stricter merging regulations, adaptive traffic signals, noise control measures, and continuous road maintenance. These strategies should be supported by coordinated efforts among drivers, traffic enforcers, educators, and policymakers to enhance traffic safety, infrastructure planning, and public awareness.

Keywords: road rage, traffic congestion, driving behavior, aggressive driving, urban traffic management, public safety, north caloocan

**FACTORS AFFECTING TRAFFIC APPREHENSION IN
BARANGAY SAUYO, QUEZON CITY**

John Loyd Pattaui, Conrado Macaraeg Jr, Eroll Mark Pombo,
Uriel Jade Toribio, Ruel Zabala Jr, Irene Gaviola

Abstract

Traffic regulation comprises a system of rules designed to ensure the safe and orderly movement of both vehicles and pedestrians. This study aims to evaluate the effectiveness of traffic regulations in Barangay Sauyo, Quezon City, by examining contributing factors such as road conditions, driver behavior, and enforcement practices. It further investigates the strategies and methods employed by traffic enforcers to implement these regulations and assesses their influence on overall road safety and public compliance. A descriptive research design was employed to gather and analyze data, offering a detailed view of the behaviors, characteristics, and experiences of the study's target population. Surveys were used to collect relevant information from respondents, providing insights into current traffic apprehension practices and identifying areas that require policy or operational improvements. The study analyzed responses from 100 participants. Age distribution revealed that 7% were aged 18–25, 31% were between 26–33, 26% were aged 34–41, and only 4% were aged 42–50. Regarding sex, 72% of respondents were male and 28% female. Educational attainment data showed that 46% were high school graduates. One of the most significant findings was that 85% of respondents identified driver hostility toward traffic enforcers as a major issue during citation issuance, highlighting a barrier to effective law enforcement in the area. The study recommends implementing comprehensive training programs for traffic enforcers, with a focus on conflict resolution, communication skills, and emotional intelligence. These interventions are intended to equip enforcers with the tools necessary to de-escalate confrontational situations and foster more respectful interactions with motorists. Such improvements may lead to more effective enforcement of traffic regulations and a safer road environment in Barangay Sauyo, Quezon City.

Keywords: traffic apprehension, traffic enforcement, driver behavior, road safety, conflict resolution, barangay sauyo, traffic regulations, criminology, public compliance, law enforcement training

**FACTORS AFFECTING TRAFFIC CONGESTION IN BARANGAY
BAGBAG NOVALICHES QUEZON CITY**

Dejay Fodra, Jimmy Boy Guiang, Gerzel Oliver,
Johnpaulo Penecilla, Edgar Reyes

Abstract

Traffic congestion is a persistent urban issue that negatively affects economic productivity, public health, and the overall quality of life. In the Philippines, Metro Manila is known for its severe traffic problems, with Quezon City being one of the most heavily impacted areas. Barangay Bagbag in Novaliches, a mixed-use residential and commercial area, serves as a key junction that connects various neighboring communities. Its strategic location makes it especially prone to traffic congestion. This study aims to identify the contributing factors to traffic congestion in Barangay Bagbag and to provide insights that may find potential solutions to mitigate the problem. This study employs a qualitative and descriptive research design to analyze the factors affecting traffic congestion in Barangay Bagbag, Novaliches, Quezon City. Data will be collected through surveys administered to selected residents, law enforcement officers, and community leaders. The study outlines the research design, target respondents, sampling techniques, research instruments, validation procedures, and the statistical tools used to analyze the data. The results present the respondents' demographic profiles and analyze responses to the survey questions using appropriate statistical tools. The analysis identified recurring themes and key factors contributing to traffic congestion, including road obstructions, poor traffic management, limited road space, and the lack of proper parking facilities. The survey findings reflect the community's experiences and perceptions regarding the severity and causes of traffic buildup in the area. The findings of the study highlight the need for targeted interventions to address the identified causes of traffic congestion in Barangay Bagbag. It is recommended that local authorities strengthen traffic management strategies, enforce parking regulations, and improve infrastructure planning. Future research may expand the scope to include other barangays in Quezon City to develop broader policy recommendations for urban traffic management.

Keywords: traffic congestion, urban planning, barangay bagbag, road obstructions, traffic management, quezon city, criminology, urban mobility

FACTORS CONTRIBUTING TO CRIMINAL BEHAVIOR IN BARANGAY PASONG TAMO

Mark Anthony Bagat, Jonas Aljas, Cholo Cruz, Mart Steven Cunanan,
Joshua Marimat, Jinky Anacta

Abstract

Criminal behavior has been a persistent global concern for many years. Law enforcement agencies have adopted various strategies and technologies to detect and prevent crimes. However, the rising volume and complexity of criminal activities make it increasingly difficult to maintain control. In recent years, artificial intelligence has significantly enhanced the ability of law enforcement to identify and predict criminal behavior, improving overall efficiency in crime prevention. The study involved 50 respondents: 40 residents and 10 police officers, selected through simple random sampling. Participants were asked to complete questionnaires designed to gather relevant data on factors contributing to criminal behavior. The researchers ensured that all respondents provided accurate and complete information to support the study's objectives. Among the 50 respondents, 30% were aged 32–40 years old, 34% were 26–30, 16% were 21–25, and 10% were 40 and above. The group was composed of 52% female and 48% male respondents. In terms of civil status, 58% were single, while 42% were married. Educational attainment varied, with 46% at the high school level, 28% as high school graduates, 20% as college graduates, and 6% at the elementary level. Respondents evaluated the conditions influencing criminal behavior in Barangay Pasong Tamo using three categories: biological (OWM = 3.12, Agree), psychological (OWM = 3.21, Agree), and sociological factors (OWM = 3.63, Strongly Agree). The most significant issues identified were poverty and unemployment, which often pushed individuals toward criminal acts as a means of financial survival. This concern ranked first, cited by 100% of respondents. The findings highlight the complex interplay of biological, psychological, and sociological factors that contribute to criminal behavior. Economic instability, particularly poverty and unemployment, emerged as the primary causes. The study recommends that community leaders and local authorities develop targeted interventions that address these root causes such as livelihood programs, education initiatives, and community-based counseling, to reduce crime rates and improve residents' overall well-being.

Keywords: criminal behavior, poverty, unemployment, sociological factors, psychological factors, barangay pasong tambo

**FACTORS CONTRIBUTING TO SUBSTANCE ABUSE AMONG YOUTH
AT BARANGAY 177 CALOOCAN CITY**

Alliah Mae Cabias, Fretina Baynosa, May Joanne Doller,
Jennifer Rabacal, Ella Salonga, Irene Gaviola

Abstract

Substance abuse, commonly referred to as drug abuse, involves the harmful use of substances such as alcohol, illegal drugs, or prescription medications. It can lead to physical, psychological, and social harm, not only affecting the individual but also those around them. This study aims to assess the various factors contributing to substance abuse among youth in Barangay 177, Caloocan City. Specifically, it examines the influence of social, economic, and environmental conditions that may lead young individuals to engage in substance use. This study employs a quantitative research approach, utilizing a descriptive research design to examine the factors related to youth substance abuse. The researchers collected numerical data through surveys and analyzed the results using statistical methods. Respondents included parents of youth engaged in substance use, barangay officials, law enforcement officers, and personnel from the Department of Social Welfare. Among the fifty (50) respondents, the age group with the highest representation was 42 to 50 years old, accounting for 32% or sixteen individuals. This was followed by those aged 51 and above at 28% (fourteen respondents), 34 to 41 years old at 26% (thirteen respondents), and 26 to 33 years old at 14% (seven respondents). The smallest group consisted of respondents aged 18 to 25. Of the total, 54% were male (twenty-seven respondents) and 46% were female (twenty-three respondents). The findings revealed that the most commonly reported factor contributing to youth substance abuse was peer pressure, particularly the desire to gain acceptance among peers, even when initial discomfort was present. This issue was cited by approximately 80% of the respondents. The results indicate that peer influence plays a significant role in the onset of substance abuse among youth in Barangay 177. To address this issue, the study recommends the implementation of peer-led education and mentorship programs that can offer positive role models. It also suggests increasing funding for after-school activities such as sports leagues and enrichment programs to provide youth with healthy alternatives. Additionally, family counseling services should be offered to help resolve domestic conflicts, enhance communication, and build stronger family support systems.

Keywords: substance abuse, youth behavior, peer pressure, barangay 177, caloocan city, family counseling, criminology, social environment, drug prevention, descriptive research

**FACTORS INFLUENCING DELAYS IN FIRE INCIDENTS RESPONSE IN
BARANGAY SAN ISIDRO, MONTALBAN, RIZAL**

Marjon Silay, Shintian Gubantes, Justin Carl Panaligan, Carl Justine Recto,
Reiven Tria, Irene Gaviola

Abstract

Time is a critical factor in emergency response, especially during fire incidents where every second can determine the extent of property damage and potential casualties. Delays in fire response remain a recurring issue that often worsens fire-related emergencies. These delays may lead to uncontrolled fire spread, increased injuries or fatalities, and greater risks for both residents and firefighting personnel. Enhancing response time by addressing the root causes of these delays is essential for improving emergency management and safeguarding lives and property. This study aims to assess the factors contributing to delayed fire incident responses in Barangay San Isidro, Montalban, Rizal. It also seeks to propose evidence-based strategies to minimize delays and improve the efficiency of firefighting operations. This study employed a descriptive research design to identify the key factors affecting fire response delays. A total of fifty (50) respondents participated, composed of forty (40) residents and ten (10) firefighters or fire volunteers. Respondents were selected through purposive sampling to ensure relevant perspectives. Data was gathered using survey questionnaires and were presented through graphs and tables for clearer interpretation and analysis. The survey results revealed that the primary causes of delayed fire responses include the lack of essential firefighting equipment, malfunctioning communication devices, and limited accessibility due to narrow roads. Additionally, crowd control barriers were cited as significant hindrances to the timely arrival of emergency personnel. These challenges contributed to delayed response efforts, increasing the risk of property loss and endangering lives. The findings highlight the need for enhanced logistical support, improved infrastructure, and stronger coordination among emergency response teams. Strengthening communication systems and ensuring unobstructed access routes are vital in minimizing delays. Timely fire response is crucial in reducing damage and preventing casualties, thereby reinforcing the importance of proactive planning and investment in emergency preparedness for Barangay San Isidro.

Keywords: fire incident response, emergency management, delay factors, barangay san isidro, firefighting equipment, communication devices, narrow roads, criminology, disaster preparedness, fire safety

**FAMILY AS A CONTRIBUTORY FACTORS TO CHILD IN CONFLICT WITH THE LAW
IN BARANGAY KALYE 7 LAWANG BATO VALENZUELA CITY**

Aldrein Banaco, Charles Jhonroi Baluran, Jackie Deguia, Julie Mar Guzman,
John Carlos Rosario, Nilmar Plata

Abstract

This study investigates the impact of family dynamics on child delinquency in Barangay Kalye 7, Lawang Bato, Valenzuela City. It reveals that children from dysfunctional families marked by neglect, abuse, or inconsistent discipline are more likely to engage in delinquent behavior. Conversely, consistent parental guidance and a nurturing home environment significantly reduce this risk. The goal of the research is to identify the root causes of juvenile misconduct within the community and provide recommendations to help shape effective crime prevention policies. This study adopts a quantitative-descriptive design to investigate the influence of family-related factors on child delinquency in Barangay Kalye 7, Lawang Bato, Valenzuela City. A total of 50 respondents: including 35 parents, 10 personnel from the Department of Social Welfare and Development (DSWD), and 5 officers from the Women and Children Protection Desk (WCPD), were selected using a combination of random and purposive sampling. Data was gathered through a structured survey instrument covering demographic profiles, family dynamics, and preventive interventions. The collected data will be analyzed using statistical tools such as frequency distribution, percentage, weighted mean, and a four-point Likert scale to interpret the extent of family influence on juvenile behavior. The study uncovers critical factors contributing to juvenile delinquency in Barangay Kalye 7, Lawang Bato, Valenzuela City. The majority of respondents, 42% aged 34 to 41 and 60% female, identified inadequate parental supervision as the most prevalent issue, primarily due to parents being frequently absent because of work commitments. This lack of presence was closely associated with increased risk of child delinquency. Additional contributing factors included unemployment and limited access to skills training, which hindered parental capacity to support and guide their children. Authoritarian parenting practices, especially those involving physical punishment, were also found to negatively impact child behavior. Strained parent-child relationships were perceived as a major challenge in deterring youth from gang involvement and other delinquent behaviors. Notably, 79% of respondents cited lack of supervision as the dominant issue, while 40% reported family criminal involvement and ineffective parenting styles. In response, 40% of participants recommended parenting seminars and counseling services, while 38% advocated for training in anger management and conflict resolution to help parents manage their roles more effectively. The study found that most respondents in Barangay Kalye 7, Lawang Bato, Valenzuela City were women aged 34 to 41, predominantly college graduates. Key findings pointed to family-related factors contributing to juvenile delinquency, such as the absence of parental supervision, limited access to education, the use of physical punishment as a disciplinary method, and poor parent-child relationships. Among these, the lack of consistent supervision emerged as the most critical concern. To address these issues, the study recommends the implementation of targeted parenting programs, the provision of cognitive-behavioral and family therapy, the promotion of restorative justice practices through community service, and ongoing capacity-building initiatives for those working with children at risk. These interventions aim to strengthen family dynamics and reduce youth involvement in delinquent behavior.

Keywords: juvenile delinquency, family influence, parental supervision, physical punishment, parent-child relationship, cognitive-behavioral therapy, parenting programs, restorative justice, community-based intervention, valenzuela city

**FAMILY COUNSELING PROGRAM OF QCSWD IN BARANGAY BATASAN HILLS,
QUEZON CITY: A BASIS FOR POLICY IMPROVEMENT**

Jayson Patrick Hungayo, Christian Berja, John Kaeser Casio,
Jojo Inuman, Jemar Ko, Dr. Myrna Cuntapay

Abstract

This study assessed the effectiveness of the Family Counseling Program administered by the Quezon City Social Welfare and Development Office (QCSWD), focusing on its role in fostering supportive family environments, particularly for guardians of children in conflict with the law. The evaluation centered on three key areas: the quality of program implementation, engagement with relevant policies, and its influence on behavioral improvement among participants. The demographic profile of respondents including age, gender, civil status, educational attainment, and length of residency, was analyzed to understand varying perspectives and experiences. The study also identified the primary challenges hindering program effectiveness and proposed targeted policy recommendations to enhance service delivery. A total of 50 respondents participated in the study, comprising 10 Women's Desk police officers and barangay officials, 10 QCSWD staff, and 30 guardians of at-risk youth. The study employed a descriptive research design and quantitative approach to evaluate respondents' perceptions of the Family Counseling Program. Data was gathered using standardized questionnaires, which were personally distributed to selected participants. Prior to data collection, informed consent was obtained to ensure ethical research practices. Respondents completed the survey forms independently, and the researchers systematically collected the accomplished questionnaires for further analysis and interpretation. The findings indicate that the most positively rated aspect of the program's implementation was its capacity to effectively address the emotional, behavioral, and relational challenges faced by families. In terms of policy engagement, the Family Counseling Program was recognized for its significant role in mitigating domestic conflicts and reinforcing familial bonds. Moreover, in the area of behavioral development, the program was most notably effective in enhancing emotional responsiveness and promoting consistent emotional support among family members, thereby contributing to healthier family dynamics. To strengthen the Family Counseling Program, policies should institutionalize peer support and group therapy through regular sessions, parent support circles, and mentorship initiatives. Parental engagement may be improved by implementing mandatory orientations, routine follow-ups, and family-focused educational workshops. Counseling services should adopt individualized intervention plans and provide structured parenting coaching. To boost participation, community awareness campaigns should be launched in collaboration with barangay officials, schools, and local organizations. These campaigns may include seminars, interactive activities, and incentive-based programs to promote the program's benefits. Outreach to underserved families can be enhanced through mobile counseling units, home visits, and flexible scheduling. Lastly, further research is recommended to evaluate the program's long-term effectiveness and ensure responsiveness to the evolving needs of the community.

Keywords: family counseling program, parental engagement, group therapy, peer support, parenting coaching, community outreach, mobile counseling units, policy development, behavioral intervention, long-term effectiveness

**FIRE OPERATION DIFFICULTIES ENCOUNTERED BY THE BUREAU OF FIRE
PROTECTION OFFICERS IN GREATER LAGRO QUEZON CITY**

Allianz Ivan Tronzal, Kenth Jhon Villanueva, Dariel Quirante,
Eyz Robenio, Connmigo Damaso II, Dr. Myrna Cuntapay

Abstract

Every fire scene is a battlefield where Bureau of Fire Protection officers stand at the frontline, bravely confronting danger to protect lives and property. Each emergency presents unique challenges, from limited equipment and extreme heat to unstable structures and hazardous conditions, testing their skills, endurance, and resolve. These officers embody courage and dedication as they navigate unpredictable environments to save communities and uphold public safety. This includes unsafe practices such as the improper handling of flammable materials and overloaded electrical connections. During fire emergencies, untrained civilians often panic, crowd the scene, or intervene without proper guidance, thereby creating additional hazards that jeopardize their safety as well as that of the firefighters and other responders. The data collected from eleven (11) respondents reveal that the majority, comprising seven (7) individuals or 63.63%, fall within the age range of 31 to 40 years. This is followed by two (2) respondents aged 21 to 30 years, and another two (2) respondents aged above 40 years, each representing 18.18% of the total sample. In terms of gender distribution, males constitute the majority with seven (7) respondents, accounting for 63.64%, while females comprise four (4) respondents or 36.36%. Regarding civil status, seven (7) respondents are married, making up 63.64% of the group, whereas four (4) respondents are single, representing 36.36%. The primary challenges faced by Bureau of Fire Protection (BFP) personnel during operations pertain to community-related issues, reflected by an overall weighted mean of 3.31, indicating a strong level of agreement among respondents.

Keywords: bureau of fire protection, operational challenges, community issues, fire response, emergency management, public safety, firefighting obstacles

**GENDER SENSITIVITY SEMINAR: A PROPOSED INTERVENTION PROGRAM IN
REDUCING VIOLENCE AGAINST WOMEN AND CHILDREN**

Mark Anthony Placido, Rusty Calumpiano, Jose Jerry Jr Parreño,
Joepring Velasco, Albert Dacumos, Denise Ann Osorio

Abstract

Violence against women and children is a systemic issue deeply rooted in cultural norms, structural inequalities, and enduring gender disparities. In many societies, gender-based violence is normalized, and victims often encounter stigma, fear of retaliation, and a lack of resources necessary to escape abusive situations. Gender sensitivity training plays a vital role in addressing these challenges by educating individuals about gender concepts, diverse gender experiences, and the imperative to close gender gaps to achieve equality. This study seeks to assess the effectiveness of a Gender Sensitivity Seminar as an intervention program aimed at reducing violence against women and children. This study employs a descriptive research design to systematically explore the subject matter. The sample comprises 20 women and 30 children, who were selected through a random sampling technique to ensure an unbiased and representative participant group. The study found that most respondents were young females who were students with a high school education. They strongly agreed that the Gender Sensitivity Seminar effectively covered essential areas including medical, legal, psychological, and shelter-related support. A major challenge highlighted was the difficulty in coordinating with multiple service providers, largely due to scheduling conflicts and communication issues. To address this, many respondents suggested offering transportation assistance and selecting more accessible venues to promote broader participation. The findings of this study provide valuable insights for evaluating the effectiveness of the proposed Gender Sensitivity Seminar as an intervention designed to reduce violence against women and children.

Keywords: gender sensitivity seminar, intervention program, violence prevention, violence against women and children, program evaluation, gender-based violence, support services

**IMPACT OF DSWD DIVERSION AND REINTEGRATION PROGRAM FOR
CICL RESIDING IN BARANGAY GULOD NOVALICHES QUEZON CITY**

Eric Malilong, Jayson Peña, Joshua Maniego, Jent Clent Olayta,
Matt Andru Dura, Dr. Antonio Dawagan Sr.

Abstract

This chapter outlines the background of the study, reviews relevant literature and related studies, and presents the theoretical and conceptual frameworks. It also includes the statement of the problem, research assumptions, scope and delimitations, significance of the study, and definition of key terms. This chapter outlines the research design, target respondents, sampling method, data-gathering instrument, procedures for validation, administration, and collection of the instrument, and the statistical tools used for data analysis. This chapter provides a comprehensive presentation, analysis, and interpretation of the collected data. It features the demographic profile of the respondents, details of the survey instrument, and the statistical methods applied in the study. This chapter summarizes the findings on the impact of the Department of Social Welfare and Development's Rehabilitation and Reintegration Program in Barangay Gulod, Novaliches, Quezon City. It presents key insights from Children in Conflict with the Law (CICL), DSWD staff, and Barangay Officials, followed by conclusions drawn from the data and recommendations to further improve the program's implementation and outcomes.

Keywords: dswd, rehabilitation and reintegration program, children in conflict with the law (cicl), barangay gulod, social welfare, program impact, community reintegration, restorative justice, government intervention, novaliches

**IMPACT OF POLICE CHECKPOINT OPERATIONS AGAINST DRIVERS UNDER
INTOXICATING LIQUOR IN LUZON AVENUE QUEZON CITY**

Jenalyn Albao, Mikee Madredeo, Jessica Geromo, Mila Rose Tadeo,
Rujuard Qutorio, Irene Gaviola

Abstract

This study examined the impact of police checkpoint operations on drivers under the influence of liquor, with a focus on Luzon Avenue in Quezon City. The area is known for frequent road accidents attributed to intoxicated drivers who experience drowsiness and dizziness, resulting in reckless driving, particularly on wet and slippery roads. The primary objective of the study was to evaluate the effectiveness of police checkpoints in addressing and mitigating incidents involving drunk driving along this critical roadway. This study aimed to assess the impact of police checkpoint operations on drivers under the influence of liquor along Luzon Avenue, Quezon City. The respondents consisted of both drivers and police officers assigned to these checkpoints. The researchers utilized purposive sampling to determine the appropriate number of participants. Data collection involved personally approaching police officers and drivers in the area, with prior permission and informed consent obtained before administering the survey questionnaires. The researchers personally distributed the questionnaires to the respondents and waited for them to complete their responses. The results revealed that police checkpoint operations along Luzon Avenue, Quezon City, have positively influenced driver behavior and contributed to a reduction in cases involving driving under the influence of alcohol. Under Policies and Procedures, the presence of checkpoints has increased drivers' awareness of the dangers of intoxicated driving and the consequences outlined in traffic enforcement policies. This has led to a decrease in DUI-related incidents and arrests. In terms of Enforcement and Apprehension, the consistent visibility and frequency of police checkpoint operations serve as a strong deterrent to potential violators, significantly reducing the number of DUI cases in the area. Regarding Driver Perception, most drivers perceive police checkpoints as an effective strategy to discourage drunk driving, which has influenced their decision-making and reduced the likelihood of driving under the influence. The researchers recommend that police officers, barangay officials, community members, and criminology students actively support the implementation of police checkpoints along Luzon Avenue. To enhance their effectiveness, checkpoints should be concentrated in high-risk areas and conducted during peak drinking hours. This strategic approach will help deter DUI offenses and improve public safety.

Keywords: police checkpoints, driving under the influence (dui), road safety, law enforcement, driver perception, criminology, community involvement, high-risk areas, traffic enforcement, drunk driving prevention

**IMPACT OF SOCIAL MEDIA IN INFLUENCING THE COMMISSION OF CRIME
AMONG CHILDREN IN CONFLICT WITH THE LAW IN BARANGAY 179, CALOOCAN
CITY**

Rose Ann Joyce Celedonio, Jerald Andes, Danica Lorenzana,
Erica Mae Mallon, Eva Mariz Sarcia, Jinky Anacta

Abstract

The study's approach focuses on understanding the fundamental causes of CICL (Children in Conflict with the Law) behavior and providing helpful interventions to help them change for the better. The purpose of this study is to understand the impact of social media in influencing the commission of crime among CICL at Barangay 179, Caloocan City, by examining the potential outcomes of inaction and possible preventive steps. The evaluators of the study were composed of 10 barangay officials, 20 parents, and 40 CICL residing in Barangay 179, Caloocan City, between the ages of 15 and 18 years old. This resulted in a total of 70 respondents. The researchers used a random sampling technique to select the respondents among the CICL, parents, and barangay officials in Barangay 179, Caloocan City. This research uses a quantitative correlational research design to determine the impact of social media in influencing the commission of crime among CICL at Barangay 179, Caloocan City. The researchers requested permission to conduct the study as the respondents participated in answering the survey questionnaire. The researchers distributed all the questionnaires and waited for the respondents to finish answering. When the respondents completed the questionnaires, they were collected by the researchers. The study analyzed the profile of 70 respondents from Barangay 179, Caloocan City, revealing that 51 percent were aged 15 to 20, with a male-to-female ratio of 54.29 percent to 45.11 percent. Educational attainment varied, with 20 percent having a high school education and 3 percent holding a vocational level. Respondents agreed that social media influences crime among children through psychological, sociological, and environmental factors. The primary problem identified was social media's role in normalizing or glamorizing illegal activities, affecting 11.74 percent of respondents. To address this, proposed measures include implementing educational campaigns to promote safe social media usage, such as workshops for children and parents to recognize harmful content and develop critical thinking skills regarding online interactions.

Keywords: children in conflict with the law

**IMPLEMENT OF PRESIDENTIAL DECREE 1612 ANTI FENCING LAW IN
BARANGAY BAGBAG NOVALICHES QUEZON CITY**

Jessie Pacao, Regie Lejesta, Jamiel Manginsarat, Zymon Reuven Montances,
Kr Revidad, Dr. Antonio Dawagan Sr.

Abstract

The Philippines is renowned for its vibrant culture, scenic landscapes, and warm hospitality. Despite these strengths, the country continues to face challenges related to crime and law enforcement. To help address these issues, the government implemented Presidential Decree No. 1612, also known as the Anti-Fencing Law. This law seeks to curb criminal activity by penalizing individuals who knowingly buy, possess, or sell stolen goods, thereby discouraging the circulation of stolen property and supporting overall crime prevention efforts. This study employed a correlational research design, which examines the statistical relationship between two or more variables without any manipulation (Hassan, 2022). As a non-experimental approach, it aims to identify the degree of association between the variables and the challenges encountered by the respondents. A stratified sampling technique was utilized to ensure accurate representation from various sectors. The study involved a total of fifty (50) respondents, categorized as follows: ten (10) barangay personnel, ten (10) police officers, and thirty (30) residents. These groups were selected from different sectors of the community in Bagbag, Quezon City to provide a comprehensive perspective. The findings of the Study Based on the Sub-Problems: Respondent Profile: Among the fifty (50) respondents, the majority, fourteen (14) individuals, or 28%, are within the age range of 18 to 25 years old. The smallest age group includes seven (7) respondents, or 14%, aged 26 to 33 year old. Thirty-one (31) or 62% are male, while nineteen (19) or 38% are female. Twenty-six (26) respondents, or 52%, are married, while the smallest group, four (4) respondents, or 8%, are separated. Thirteen (13) respondents, or 26% are high school graduates, representing the largest group in terms of educational attainment. Only one (1) respondent, or 2% completed vocational education, and one (1) respondent, or 2% reported having no formal education, making these the least represented groups. The largest number of respondents, twenty (20) or 40%, have been serving for 4 to 6 years. The smallest group comprises eight (8) respondents or 16%, with 7 to 9 years of service. This proposed action plan aims to strengthen the implementation of Presidential Decree 1612, also known as the Anti-Fencing Law, within Barangay Bagbag, Novaliches, Quezon City. It outlines key strategies to raise public awareness, improve enforcement mechanisms, and encourage community participation to effectively combat fencing-related crimes.

Keywords: presidential decree 1612, anti-fencing law, barangay bagbag, crime prevention, law enforcement, public awareness, community participation, quezon city, fencing-related crimes, implementation strategies

**IMPLEMENTATION OF ANTI-HUMAN TRAFFICKING PREVENTIVE MEASURE
IN BARANGAY 173 CALOOCAN CITY: AN ASSESSMENT**

Aldrin Mina, Vincent Robin Sumilang, Mc Jordan Begaso,
John Michael Bongalon, Joshua Jhon Donato, Edgar Reyes

Abstract

Human trafficking is a grave crime and a violation of fundamental human rights. It involves the use of force, deception, coercion, or abuse of power to exploit individuals, often through false promises of financial gain. Victims are frequently forced into hazardous and inhumane working conditions without compensation, and may suffer sexual abuse, physical harm, or even death. This study focuses on evaluating the implementation of anti-human trafficking preventive measures in Barangay 173, Caloocan City. The goal is to assess current efforts and propose strategies to strengthen the community's ability to prevent and combat human trafficking effectively. This study adopted a descriptive research design, which aims to accurately portray the characteristics and behaviors of a specific group or issue. By systematically observing and collecting data, descriptive research provides valuable insights that help deepen understanding and guide future studies. The researchers employed a survey method using purposive sampling, wherein participants were deliberately selected based on criteria relevant to the study's objectives. A total of 50 respondents participated in the study, consisting of 30 residents of Barangay 173, Caloocan City, 10 personnel from the Philippine National Police (PNP), and 10 barangay officials. Findings Based on the Sub-Problems: Demographic Profile of Respondents: The largest proportion of respondents belonged to the 28–38 age group, comprising 15 individuals or 30% of the total sample. Meanwhile, the least represented group was those aged 18 and below, with only 3 respondents or 6%. Respondents across all three groups demonstrated a high level of awareness of the proposed anti-human trafficking measures under R.A. 9208, yielding a weighted mean score of 3.53, interpreted as Strongly Agree. The implementation of R.A. 9208 was perceived as effective in preventing human trafficking within the community, with a weighted mean of 3.36, also interpreted as Strongly Agree. The following are proposed Actions to Strengthen Anti-Human Trafficking Initiatives in Barangay 173: Conduct regular awareness campaigns to educate residents on the signs, risks, and consequences of human trafficking is recommended, utilize barangay assemblies, social media platforms, and printed materials to effectively disseminate information, provide specialized training for barangay officials, law enforcement officers, and community members on identifying, reporting, and managing trafficking cases, integrate knowledge of Republic Act 9208 (Anti-Trafficking in Persons Act) and related laws into all training sessions, forge stronger partnerships with NGOs, government agencies, and the Philippine National Police to enhance prevention, rescue, and rehabilitation efforts, establish clear referral pathways and coordination protocols for victim protection and support, establish an Efficient Reporting and Response System, create accessible and confidential reporting channels for suspected trafficking activities, form a dedicated barangay task force to ensure timely response, monitoring, and case management, implement Empowerment and Support Programs, launch livelihood and skills development programs targeting vulnerable groups, particularly women and youth, to reduce susceptibility to trafficking, provide counseling, education, and reintegration services for potential and actual victims, this comprehensive action plan seeks to foster a proactive, vigilant, and well-informed community that can effectively prevent, address, and respond to human trafficking in Barangay 173.

Keywords: anti-human trafficking, r.a. 9208, barangay 173 caloocan city, community awareness, law enforcement, preventive measures, vulnerable groups, descriptive research, public safety, human rights.

**IMPLEMENTATION OF OPLAN SITA IN BARANGAY STA. MONICA,
NOVALICHES QUEZON CITY**

Hannah Yusores, April Agtarap, Georgette Louie Arboleda, Rochelle Joyce Enriquez,
Angeline Hael, Rose Anne Borita, Dr. Antonio Dawagan Sr.

Abstract

This study, titled "Implementation of Oplan Sita in Barangay Sta. Monica, Novaliches, Quezon City," aims to assess the effectiveness of Oplan Sita in reducing crime in the areas where it is implemented. It seeks to identify the operational challenges encountered by law enforcement officers during its execution and to analyze public perception and the extent of community cooperation with the initiative. Furthermore, the study examines the legal and ethical implications of Oplan Sita, including potential risks of authority abuse. Finally, it proposes recommendations to enhance efficiency, accountability, and community impact of the program. This study employed a purposive sampling technique, chosen for its ability to align participants with the specific goals and objectives of the research. While some view purposive sampling as a simple method, it has evolved significantly and offers methodological rigor when applied correctly. It enhances the credibility, transferability, dependability, and confirmability of the study's findings. In this research, purposive sampling was used to select a total of 50 respondents, composed of 10 police officers and 40 motorists, who participated by answering the distributed questionnaires. In terms of age, among the fifty (50) respondents, twenty-five (25), or 50%, are between 18 and 25 years old. Conversely, the least represented age group comprises those aged 51 and above, with only two (2) respondents or 4%. With regard to sex, the majority of respondents are male, totaling forty-one (41) or 82%, while only nine (9) respondents, or 18%, are female. The most frequently reported issue encountered during the implementation of Oplan Sita is the presence of individuals driving without a license. This concern was identified by forty-four (44) out of fifty (50) respondents, accounting for 88%, making it the top-ranked problem. This chapter presents the summary and conclusion of the study, which aimed to identify the challenges encountered in the implementation of Oplan Sita in Barangay Sta. Monica, Quezon City. The findings highlighted various operational issues faced by both motorists and law enforcement officers. Based on the results, it is recommended that additional training be provided to police officers to ensure they conduct Oplan Sita operations under established protocols and human rights guidelines. Strengthening these aspects will contribute to more effective, fair, and community-trusted law enforcement practices.

Keywords: oplan sita, barangay sta. monica, quezon city, crime prevention, law enforcement, motorists, operational challenges, human rights, police training, implementation, community cooperation

**IMPLEMENTATION OF ORDINANCE NO. 0397S, 2005 PROHIBITING THE SALE OF
ALCOHOL TO MINORS IN AMPARO SUBDIVISION, CALOOCAN CITY**

Mary Jane Saroca, Karyll Angel Bola Bola, Ana Garce Lausa, Margaret Mae Prangue,
Modzna Sensi, Denise Anne Osorio

Abstract

"Ang bata pa lang, lasinggera na." ("So young, yet already a drunkard.") These were the harsh words overheard by one of the researchers while she was purchasing alcohol for her father, a known habitual drinker. Although this was a common chore, the comment from a neighbor sparked curiosity and concern in the young girl, prompting her to question what it means to be a "lasinggera" (drunkard) and why such a label could be so easily placed on someone young. This study was inspired by that experience and aims to highlight the effects of parental neglect and the irresponsible sale of alcohol to minors by vendors in sari-sari and convenience stores. Specifically, it seeks to assess the implementation of Ordinance No. 0397, Series of 2005, which prohibits the sale of alcoholic beverages to minors in Amparo Subdivision, Caloocan City. The study aims to evaluate the effectiveness of this ordinance and to understand the roles and responsibilities of both parents and vendors in protecting minors from alcohol consumption. This study employed a purposive sampling technique and adopted a descriptive research design. The respondents included 20 parents, 20 minors, 10 store owners, and 10 law enforcers residing in Barangay Amparo, Caloocan City. The researchers secured an approval letter from the Dean's Office of the School of Criminology at Bestlink College of the Philippines, San Agustin Campus, authorizing the administration of a survey questionnaire. A formal request to conduct the survey was also submitted to and approved by the Barangay Captain. Participation in the study was voluntary, and all responses were handled with strict confidentiality to ensure the privacy and protection of the participants. The study on Ordinance No. 0397-S, 2005, which prohibits the sale of alcohol to minors, revealed that the majority of respondents (33.33%) were aged 12 to 17, with an equal gender distribution of 50% male and 50% female. The research evaluated public awareness, enforcement practices, and the application of penalties associated with the ordinance. While respondents generally agreed that the ordinance is being effectively implemented, the most commonly reported issue was the lack of community outreach programs. To address this, the study recommends conducting a comprehensive assessment of the ordinance to identify areas that require improvement and to enhance public engagement and education efforts. The researchers recommend strengthening public awareness and enforcing the strict implementation of Ordinance No. 0397, Series of 2005, which regulates the sale, service, and consumption of alcoholic beverages within designated areas in Caloocan City.

Keywords: ordinance no. 0397 s.2005, alcohol regulation, minors, caloocan city, community awareness, law enforcement, public safety, youth protection, sari-sari stores, ordinance implementation.

**IMPLEMENTATIONS OF THE PROVISIONS OF REPUBLIC ACT 11313 ALSO KNOWN
AS SAFE SPACES ACT: BASIS FOR AWARENESS CAMPAIGN**

Euclidean Antolin, Joselito Deniola, Renssel Labriaga, Ian Jacob Magtajas,
John Mark Nuelan, Jinky Anacta

Abstract

This study investigated the implementation of Republic Act No. 11313, Article 5, also known as the Safe Spaces Act, at Bestlink College of the Philippines (BCP). It aimed to assess the institution's level of compliance with the law, identify existing challenges in its enforcement, and propose actionable recommendations to improve the protection and safety of all individuals within the campus. This study utilized a descriptive quantitative research design to assess four core areas: legislative and policy support, enforcement and compliance, school-based awareness, and victim support systems. A total of 120 participants: comprising students, faculty, and staff, were selected through random sampling. Data collection was carried out using a structured questionnaire to ensure accuracy, consistency, and reliability of responses. The results revealed that respondents recognized the presence of legislative support (composite mean = 3.21), compliance mechanisms (mean = 3.19), and school-based literacy efforts (mean = 3.12). Support systems for victims were also positively rated (mean = 3.10), though respondents emphasized the need for improvements in areas such as rehabilitation services and external partnerships. Several challenges were identified, including inadequate handling of reported cases (mean = 3.19), victims' fear of judgment and retaliation (mean = 3.01), and limited awareness on how and where to report gender-based sexual harassment (GBSH) cases (mean = 2.99). Other concerns were insufficient resources (mean = 2.94) and a lack of comprehensive understanding of RA 11313 (mean = 2.91). The overall composite mean for challenges was 3.01, indicating moderate agreement that significant gaps persist in implementation. Respondents strongly supported proposed solutions, such as conducting more training and seminars (mean = 3.48), enhancing anonymous reporting systems (mean = 3.46), and establishing a dedicated monitoring system (mean = 3.45). Additional recommendations included increasing resource allocation (mean = 3.43) and updating policy guidelines (mean = 3.41). These proposed solutions received an overall composite mean of 3.45, reflecting strong agreement on the importance of strengthening institutional responses to GBSH. This study finds that although Bestlink College of the Philippines has laid the groundwork through existing policies and mechanisms, ongoing initiatives in education, communication, capacity building, and support systems are necessary to effectively implement RA 11313 and ensure a safe and inclusive learning environment.

Keywords: republic act 11313, safe spaces act, gender-based sexual harassment, awareness campaign, policy implementation, compliance mechanisms, legislative support, educational institutions, inclusive environment, student safety

**IMPORTANCE OF RESTORATIVE JUSTICE IN
BARANGAY UGONG, VALENZUELA CITY**

Evangelio Santos, Jude Carl Avillano, Janroe Bongyad, Renz Gallinera,
Royz Deniel Solano, Eduardo Villaruel

Abstract

Restorative justice is gaining increased attention as a rehabilitative and community-centered alternative to traditional punitive systems. Its core objective is to repair the harm caused by criminal behavior through the active participation of victims, offenders, and the broader community in the process of accountability, reconciliation, and making amends. This study utilized a descriptive research design with purposive sampling to assess the importance of restorative justice programs in Barangay Ugong, Valenzuela City. Thirty respondents comprising 10 offenders, 10 victims, and 10 barangay council members, completed a survey questionnaire developed by the researchers. Data was analyzed using averages, percentages, a 4-point Likert scale, and ranking to interpret the responses. Among the 30 respondents, 36% (11 individuals) were aged 42 years and above. Female respondents accounted for 57% (17 out of 30), while 50% (15 respondents) had completed high school education. In assessing restorative justice processes, respondents strongly agreed with mediation (weighted mean = 3.43) and conciliation (weighted mean = 3.31), while arbitration received an overall agreement rating (weighted mean = 3.24). The most frequently reported challenge was the “insufficient understanding or consideration of the subject’s intentions, motivations, or context in decision-making,” cited by 27 respondents (16%). Among proposed solutions, the highest priority was “educate and engage the community to increase understanding and acceptance of restorative justice principles,” ranked first by 22 respondents (13%). Offenders were provided with clear, accessible informational materials outlining the benefits of restorative justice programs. A victim-centered campaign was developed to empower victims by explaining the program’s advantages. For the community, informational seminars, dialogues, and awareness campaigns were conducted to increase understanding. Barangay officials underwent in-depth training to strengthen and promote restorative justice principles and practices. Future research should focus on evaluating the long-term effects of these programs and conducting comparative studies to further assess their impact.

Keywords: restorative justice, offenders, victims, community engagement, barangay officials, informational campaigns, training, program evaluation, long-term effects, comparative studies

**INFLUENCING FACTORS AFFECTING BPSO IN RESPONDING TO EMERGENCY
SITUATION IN BARANGAY COMMONWEALTH QUEZON CITY**

Christine Joy Cerillo, Nobelyn Dacallos, Micah Francisco,
Lea Rabanal, Vincent Lapaz, Edgar Reyes

Abstract

This study investigates the factors affecting Barangay Public Safety Officers (BPSOs) in responding to emergencies, with a particular focus on the influence of community participation and individual commitment. A major challenge identified is the lack of manpower, largely due to declining interest and willingness among individuals to continue volunteering. This shortage significantly hinders the ability of BPSOs to effectively respond to emergencies. The research aims to highlight the difficulties BPSOs face while balancing their responsibilities with personal struggles. By doing so, the study seeks to encourage potential volunteers, those aspiring to serve their communities or seeking renewed purpose through helping others, to consider becoming BPSOs in their barangays. As communities face increasing incidents of crime and natural disasters, the limited number of uniformed police officers is not sufficient to respond to all emergencies. This highlights the urgent need for additional support through committed volunteer manpower to enhance community safety and preparedness. This chapter presents the research design, the profile of the study's respondents, the sampling technique employed, the research instrument used, the process of instrument validation, the procedures for administering and retrieving the instrument, and the statistical methods applied for data analysis. The findings present the age distribution of respondents in Barangay Commonwealth, Quezon City. The largest group of respondents was aged 42 to 49, ranking first with a frequency of 19, representing 38% of the total. Ranked second were those aged 26 to 33, with 11 respondents (22%). The third highest group consisted of individuals aged 50 and above, with a frequency of 9 (18%). Respondents aged 34 to 41 ranked fourth, totaling 6 individuals (12%). Lastly, the age group 18 to 25 ranked fifth, with 5 respondents, accounting for 10% of the total. The overall sample size was 50, representing 100% of the respondents. This chapter presents the summary and conclusions of the study, which focused on identifying the challenges and influencing factors affecting Barangay Public Safety Officers (BPSOs) in responding to emergencies in Barangay Commonwealth, Quezon City. It also offers recommendations for both residents and barangay officials to address these issues and strengthen emergency response efforts within the community.

Keywords: bpso, emergency response, barangay commonwealth, influencing factors, community safety, volunteerism, barangay officials, public safety, challenges, recommendations

**INNOVATIVE SOLUTIONS AGAINST PREVALENT CRIMES IN BARANGAY
SAN AGUSTIN NOVALICHES QUEZON CITY**

Kelly Cahilig, Vincent Philip Correos, Romel Espinas, Warren Jovita,
Christian Pagasian, Eduardo Villaruel

Abstract

In recent years, the increasing incidence of criminal activities has raised serious concerns among various sectors of society, underscoring the urgent need for more innovative and effective prevention strategies. This study explores alternative solutions to crime prevention and justice implementation in Barangay San Agustin, Novaliches, Quezon City. With growing recognition that traditional policing methods are no longer sufficient, the research emphasizes the importance of adopting adaptive strategies. These include fostering stronger community engagement and utilizing modern technological advancements to enhance the overall effectiveness of crime prevention efforts. This study will employ a mixed-methods approach, utilizing quantitative surveys to assess existing crime prevention strategies and qualitative interviews to gather in-depth community insights. Additionally, it will examine innovative practices from other contexts through document analysis. A purposive sampling method will be adopted, integrating elements of stratified sampling to ensure the inclusion of key stakeholder groups relevant to the study. The sample will consist of ten (10) police officers, ten (10) barangay officials, and thirty (30) community members, totaling fifty (50) participants. The majority of respondents were aged 42 and above, with at least 15 years of residency in Barangay San Agustin. Their evaluation of innovative solutions to address common crimes reflected a strong agreement with the effectiveness of community-based approaches, technological innovations, and digital tools. However, the barangay faces significant challenges, particularly stakeholder resistance to change and limited opportunities for collaboration and partnership. To address these concerns, the study recommends promoting stronger community involvement and fostering closer collaboration with law enforcement agencies to improve response times and enhance coordination between the barangay and key stakeholders. Based on the findings, the study recommends fostering stronger collaboration with law enforcement agencies to improve response times and enhance the implementation of innovative crime prevention strategies. This partnership would facilitate real-time data sharing, provide access to specialized expertise, and integrate technological tools with practical policing methods. Strengthening these collaborative efforts not only builds public trust but also allows for more agile and effective responses to emerging criminal threats. Ultimately, the results of this study provide valuable insights that can guide the development of comprehensive plans aimed at preventing crime and promoting community safety.

Keywords: crime prevention, law enforcement collaboration, community safety, innovative solutions, real-time data sharing, public trust, technological integration, barangay san agustin, stakeholder engagement, criminal activity response

**INNOVATIVE STRATEGIES IN PREVENTING THEFT INCIDENTS
IN BARANGAY PAYATAS, QUEZON CITY**

Jason Vecina, Justin Bangquilo, Michael Delgado, Jimuel Samboque,
Renato Tequin, Eduardo Villaruel

Abstract

This study investigates innovative strategies for preventing theft in Barangay Payatas, Quezon City, with emphasis on the application of Article 308 of the Revised Penal Code (RPC), which defines theft as the unlawful taking of another's property. Theft remains a widespread and persistent crime, frequently occurring in residential areas, public streets, commercial establishments, and other communal spaces. It presents a serious challenge to law enforcement and poses a significant threat to public safety, highlighting the urgent need for more effective and forward-thinking prevention strategies. Theft is defined as the deliberate and unlawful taking of another person's property with the intent to permanently deprive the rightful owner of it. At its core, theft involves the unauthorized acquisition of someone else's belongings. This study primarily aimed to identify innovative strategies for preventing theft incidents in Barangay Payatas, Quezon City. It sought to address specific questions concerning the demographic profile of respondents, their evaluations of community-based, digital, and individual theft prevention strategies, the challenges encountered in implementing these strategies, and the measures they proposed to enhance theft prevention efforts in the area. The study involved a total of 50 respondents from Barangay Payatas, consisting of 10 barangay officials, 10 police personnel, and 30 residents, all selected through purposive sampling. Utilizing a descriptive research design, the researchers administered questionnaires following formal approval, ensuring that all data were collected with confidentiality. The results indicated that the most effective community-based strategy was the implementation of awareness programs promoting police-community collaboration, which received the highest mean rating of 3.7. In terms of digital strategies, the installation of additional surveillance cameras was rated highest, with a mean score of 3.68. For individual strategies, securing doors and entry points before leaving home was considered the most effective, with a mean rating of 3.52. These findings underscore practical and targeted approaches that can enhance theft prevention efforts within the community. Police in Barangay Payatas should actively monitor surveillance systems and increase patrols, particularly in less populated or high-risk areas, to ensure a swift response to theft incidents. Barangay officials are encouraged to implement online awareness campaigns and adopt smart patrol strategies to enhance community safety. Residents should be equipped with practical theft prevention tips to promote personal vigilance. Future researchers are encouraged to collaborate with both community members and local authorities to ensure that their studies remain relevant, impactful, and aligned with the specific needs of the barangay.

Keywords: theft prevention, barangay payatas, police surveillance, community safety, smart patrols, online campaigns, resident awareness, collaborative research, crime response, local governance

**INTENSIFIED CAMPAIGN AGAINST ILLEGAL COCKFIGHTING
IN BARANGAY TALA CALOOCAN CITY**

Ryan James Caberte, Keiji Claveria, Symon Dinat, Nick Jordan Ramos,
Ronald Zamora, Nilmar Plata

Abstract

This study evaluates the effectiveness of the intensified campaign against illegal cockfighting in Barangay Tala, Caloocan City by assessing its implementation, outcomes, and impact on community safety and crime reduction. Additionally, the research seeks to identify existing challenges in enforcement and policy execution, and to provide actionable recommendations for strengthening strategies and improving overall effectiveness. The researchers employed a qualitative approach, utilizing statistical tools such as frequency distribution, percentage, and weighted mean for data analysis. Data were collected through survey questionnaires featuring 4-point Likert scale items, which were administered to both police officers and individuals involved in cockfighting activities in Caloocan, Quezon City. The study included a total of 40 respondents: 20 police officers and 20 cockfighting participants. Among them, 37 were male and 3 were female. The respondents' ages ranged from 18 to over 65 years: one respondent was aged 18–25, 12 were aged 26–39, 15 were aged 40–47, six were aged 48–55, five were aged 56–64, and one was aged 65 and above. This demographic distribution ensured diverse perspectives across relevant age groups and professions. The findings reveal a high level of satisfaction among respondents concerning the availability of livelihood programs, which serve as viable alternative income sources and help deter involvement in illegal cockfighting. Additionally, the systematic documentation of known cockfighting venues has proven instrumental in assisting law enforcement with monitoring and regulating such illicit activities. Despite these positive developments, several challenges persist. These include inadequate information sharing among authorities, limited training and resources for enforcement personnel, and inconsistent implementation of penalties for offenders. Despite the identified challenges, the campaign has made significant strides through the coordinated efforts of law enforcement, barangay officials, and community stakeholders. These collaborative actions have contributed to a noticeable decline in reported incidents and increased public awareness of the legal and social ramifications of illegal cockfighting. The study concludes that sustained enforcement measures, strengthened community education, and the continued provision of alternative livelihood opportunities are critical to ensuring the long-term success of anti-illegal cockfighting initiatives in Barangay Tala.

Keywords: illegal cockfighting, community policing, crime prevention, barangay tala, caloocan city, law enforcement strategies, livelihood interventions, public safety, policy enforcement

**INTERVENTION AND SUPPORT SYSTEM FOR DOMESTIC VIOLENCE VICTIM
IN BARANGAY COMMONWEALTH, QUEZON CITY**

Romalyn Morales, Vicheline Mae Ortega, Pamela Jane Palabay,
Janna Rose Seno, Jonalyn Taganna, Edgar Reyes

Abstract

Domestic violence is a prevalent issue in the Philippines, affecting individuals and families across the country. This form of aggression primarily occurs within households and disproportionately impacts women, children, and members of the LGBTQIA+ community. Victims often suffer psychological, emotional, physical, and economic abuse from partners or relatives, with consequences that can endure for generations. This study aims to evaluate the accessibility, effectiveness, and quality of existing support systems for domestic violence victims. It also seeks to identify the strengths and weaknesses of these systems and to propose practical, accessible interventions to improve assistance for victims, communities, and perpetrators alike. This study utilized a mixed-methods design combined with purposive sampling. The participants consisted of five (5) domestic violence victims, ten (10) barangay officials, ten (10) social workers, and twenty-five (25) community members from Barangay Commonwealth, Quezon City. The findings indicate that most respondents were female, between 26 and 33 years old, single, and at the college education level. Overall, respondents agreed on the effectiveness of the Intervention and Support Systems for Domestic Violence Victims, specifically the VAWC Desk, Unified Support System, and Temporary and Permanent Protection Orders. The main challenges identified were a lack of awareness about available support services and inadequate follow-up and monitoring. To address these issues, it is recommended to implement information dissemination campaigns, community outreach programs, and social awareness initiatives. This study recommends strengthening educational empowerment for domestic violence victims by enhancing their legal awareness, enabling them to better understand the procedures that ensure their safety and continuous support. It also highlights the need to identify and address gaps in existing programs. Additionally, the study calls for a comprehensive evaluation of current initiatives such as the VAWC Desk, Guide, Assist, and Support (GAS), Unified Support System, Temporary Protection Order (TPO), and Permanent Protection Order (PPO), to assess their effectiveness in safeguarding and supporting victims over time.

Keywords: domestic violence, support systems, legal awareness, educational empowerment, vawc desk, guide assist and support (gas), unified support system, temporary protection order (tpo), permanent protection order (ppo), intervention, victim safety, program

**INVESTIGATING THE FACTORS CONTRIBUTING TO FEMALE SEXUAL
HARASSMENT CASES IN BARANGAY STA. MONICA, NOVALICHES, QUEZON CITY**

Mitch Bolivar, Jaycel Buenafe, Fredelyn Cabaddu, April Pauline Caranzo,
Julie Ann Torres, Edgar Reyes

Abstract

This thesis, titled “Investigating the Factors Contributing to Female Sexual Harassment Cases,” explores the underlying causes of sexual harassment experienced by women. The study aims to identify and understand the key elements: social, cultural, and economic, that contribute to the occurrence and persistence of this issue. Particular attention is given to societal expectations, gender inequalities, and power imbalances that often enable or excuse harassing behavior. By analyzing these interconnected factors, the research seeks to provide meaningful insights that can support the development of effective prevention strategies and contribute to creating safer spaces for women in various settings. This study utilized a descriptive research design to investigate the factors contributing to female sexual harassment cases in Novaliches, Quezon City. According to Creswell (2014), descriptive research aims to provide a comprehensive understanding of a particular phenomenon or population. The study involved 50 participants, consisting of 25 female victims of sexual harassment and 25 non-victims from the same community. Participants were selected through purposive sampling to ensure the inclusion of individuals with specific characteristics relevant to the study's objectives. Data were gathered using a validated survey questionnaire designed to capture respondents' experiences, perceptions, and insights related to sexual harassment. To ensure clarity and reliability, a preliminary dry run was conducted with 20 individuals from Barangay Novaliches. Feedback from the pilot testing was used to refine the final version of the questionnaire. The survey was then administered to the selected participants after establishing rapport and obtaining their voluntary cooperation. The results of the study reveal that women aged 18 to 25, particularly those attending college, are more vulnerable to experiencing sexual harassment. Several key factors were identified as contributing to this issue. Alcohol consumption was rated the most influential factor, with a weighted mean of 3.34, indicating that harassment is more likely to occur in social settings where alcohol is present. The workplace was also identified as a critical environment, with a weighted mean of 3.32. Respondents noted that toxic or intimidating workplace conditions often discourage victims from speaking out or reporting incidents. Socio-economic status and peer pressure both received weighted means of 3.24. Women from lower-income backgrounds may feel compelled to tolerate harassment due to financial dependency, while fear of judgment or retaliation from peers often prevents individuals from reporting abuse. These findings underscore the complex interplay of environmental, social, and economic factors that contribute to sexual harassment and highlight the importance of creating supportive systems that empower victims to report incidents without fear. The findings indicate that victims rated a toxic workplace environment as the most discouraging factor in reporting sexual harassment, with a weighted mean of 3.32 (Strongly Agree). Financial insecurity emerged as the most significant socio-economic factor, receiving a mean score of 3.24 (Agree), suggesting that individuals from lower-income backgrounds may feel pressured to remain silent due to dependence on their employment or financial support. The highest-rated psychological barrier among victims was the hesitation to report incidents due to fear of judgment or retaliation, also rated at 3.24 (Agree). Conversely, the lowest-rated factor was the perception of harassment being treated as a joke, which received a mean score of 3.02 (Agree), indicating a relatively lower but still notable impact. Both victim and non-victim groups recognized alcohol consumption as a key contributing factor to sexual harassment, with victims rating it highest at 3.34 (Strongly Agree), emphasizing its role in increasing vulnerability in social settings.

Keywords: sexual harassment, female victims, workplace environment, financial insecurity, peer pressure, alcohol consumption, reporting barriers, socio-economic factors, toxic culture, psychological hesitation

**LEVEL OF AWARENESS IN THE IMPLEMENTATION OF REPUBLIC ACT 7438
KNOWN AS RIGHTS OF PERSON ARRESTED, DETAINED OR UNDER CUSTODIAL
INVESTIGATION IN POLICE STATION 4, NOVALICHES, QUEZON CITY**

Romuel Jhon Gomez, Gerald Pacalingga, Jhoven Ramirez, Gaddie Anthony Rosacay,
John Marco Solis, Irene Gaviola

Abstract

Enacted in 1992, Republic Act No. 7438 serves as a critical legal framework in the Philippines that safeguards the rights of individuals who are arrested, detained, or undergoing custodial investigation. It clearly defines the rights of these individuals, including the right to remain silent, the right to legal counsel, and the obligation of law enforcement officers to inform them of these rights. This study aimed to evaluate the level of awareness and understanding of the implementation of Republic Act 7438 among both police officers and detainees at Police Station 4 in Novaliches, Quezon City. The study involved five Police Commissioned Officers, fifteen Police Non-Commissioned Officers from the Warrant Section, and twenty detainees. Using purposive sampling, participants were selected based on specific criteria relevant to the research. A quantitative method with a descriptive research design was employed to assess the respondents' knowledge and understanding of the rights provided under Republic Act No. 7438. The researchers personally visited Police Station 4 to secure approval and distribute the survey questionnaires. After completion, the questionnaires were retrieved for data analysis. The study revealed that out of forty respondents, twelve were aged between 26 and 33, with a majority identified as college graduates and Police Non-Commissioned Officers. Additionally, fourteen respondents had over ten years of service in law enforcement. The assessment of awareness levels showed that respondents strongly agreed on the importance of informing detainees of their rights, exercising those rights, and understanding custodial investigation procedures, with overall weighted mean scores of 3.85, 3.89, and 3.75, respectively. However, a common misconception emerged, as 55% of respondents believed that all detainees are subjected to the same procedural treatment, regardless of age or legal status. To address these gaps in understanding, the researchers recommended further studies at Police Station 4, with a focus on enhancing the awareness of both law enforcement personnel and detainees regarding the provisions and proper implementation of Republic Act No. 7438. The researchers also recommended examining the effectiveness of training programs and public outreach initiatives aimed at enhancing awareness and understanding of the rights of individuals who are arrested, detained, or undergoing custodial investigation.

Keywords: republic act 7438, custodial investigation, detainee rights, police awareness, law enforcement, legal procedures, public outreach, training programs, novaliches, police station 4

**PARENTAL INFLUENCE AMONG CHILDREN TO REDUCE CHILD IN CONFLICT
WITH THE LAW IN BARANGAY STO. CRISTO SAN JOSE DEL MONTE, BULACAN**

John Henry Maglanque, John Francis Domingo, Olimar Espinosa,
John Carl Faltado, Francis Polledo, Dr. Antonio Dawagan Sr.

Abstract

San Jose del Monte, a city in Bulacan, has increasingly grappled with the issue of children in conflict with the law (CICL), a concern that has grown alongside urbanization and population expansion in recent decades. The emergence of juvenile delinquency in the area can be traced back to the 1990s, when migration from neighboring provinces intensified. This demographic shift brought about heightened poverty, reduced access to education, and a rise in criminal activity. Children from marginalized families, often deprived of proper guidance and support systems, became more susceptible to engaging in offenses such as theft, drug-related crimes, and violence. This study adopted a quantitative research design to investigate the role of parental guidance in mitigating juvenile delinquency. The researchers employed descriptive statistics, correlation analysis, and regression analysis to comprehensively assess how various aspects of parental involvement influence the likelihood of youth engaging in unlawful behavior. The study involved twenty-five (25) parents and twenty-five (25) juveniles from Barangay Santo Cristo in the City of San Jose del Monte, Bulacan. Data were collected through the distribution of printed questionnaires during the Academic Year 2024–2025. The demographic profile of the respondents indicates that the largest age group is between 16 and 21 years old, making up 52% of the total sample. In terms of gender, 64% of the respondents are male, totaling 32 out of 50 participants. Concerning economic status, the majority, 72%, fall within the low-income category, earning ₱20,000 or less per month. The demographic data indicate that the majority of respondents were male, with a smaller representation of females. Most participants were aged between 16 and 21 years and were primarily from households classified within the lower-income bracket.

Keywords: children in conflict with the law (cicl), parental guidance, juvenile delinquency, san jose del monte, socio-economic status, youth behavior, quantitative research, age demographics, gender profile, poverty and crime, bulacan, family influence.

**PERCEPTION ON THE LEVEL OF SECURITY APPLIED AT
AYALA MALLS FAIRVIEW TERRACES, QUEZON CITY**

Anthony Tumbaga, Joffrey Abanes, Joffrey Abanes, Jimuel Diola,
John Raymart Muñoz, Karlos Mari Quirol, Denise Anne Osorio

Abstract

The perception of safety among customers, employees, and visitors in malls is influenced by factors such as the visibility of security personnel, the efficiency of incident response, and the cleanliness of the environment. This concern is particularly relevant in establishments like Ayala Malls Fairview Terraces in Quezon City. This study aims to support and sustain the positive perception of security in the mall by examining respondents' assessments of key security components, including the presence and performance of security guards, the effectiveness of the emergency response system, the robustness of perimeter security, and the use of video surveillance. The study seeks to provide insights that will help enhance security measures and ensure a safe, secure environment for all mall patrons. This study employed a descriptive research design, incorporating both quantitative and qualitative approaches to obtain a well-rounded perspective. A total of fifty (50) respondents were selected, consisting of twenty-five (25) customers and twenty-five (25) employees of Ayala Malls Fairview Terraces. Data was collected through a validated survey questionnaire, reviewed and approved by subject matter experts. The researchers used purposive sampling to ensure that participants had relevant experiences with the mall's security measures. The collected data were analyzed using percentages, frequency distribution, weighted mean, and a four-point Likert scale to interpret the results effectively. The majority of respondents were aged 18 to 25 years old, with most identifying as female. The findings revealed that a significant number of respondents strongly agreed that security guards were less attentive and slow to respond to incidents, as reflected by a weighted mean of 3.48. Additionally, respondents noted that most security personnel lacked regular training on emergency procedures, with a weighted mean of 3.46. It was also observed that certain areas of the mall lacked CCTV cameras, limiting the ability to record and monitor criminal activities, which received a weighted mean of 3.48. One of the most commonly reported issues was the occurrence of theft and shoplifting within the mall. The top proposed security enhancement was to improve bag checks and the use of metal detectors at entrances, accompanied by stricter procedures and the deployment of additional security personnel. The researchers recommend that security guards undergo regular and comprehensive training on emergency procedures to ensure they are equipped to provide immediate assistance when professional responders are not yet available. It is also essential to increase the frequency and visibility of security patrols, particularly in areas prone to theft, to effectively deter shoplifting and other criminal activities. Additionally, the mall's security manager should implement mandatory training sessions for security personnel focused on proper bag inspection protocols, the correct use of metal detectors, and effective customer engagement. To further enhance overall safety, the hiring of additional security staff is strongly recommended to ensure sufficient coverage throughout the mall.

Keywords: mall security, customer perception, emergency procedures, security guards, cctv surveillance, theft prevention, bag checking, metal detectors, patrol frequency, ayala malls fairview terraces

**PERCEPTIONS ON THE MANDATORY INSTALLATION OF CLOSED-CIRCUIT
TELEVISION (CCTV) IN ALL BUSINESS ESTABLISHMENT: AN ASSESSMENT**

Jhoncel Mike Ramos, Jeremie Calimag, Jhon Vincent Ermino,
Jefferson Paler, Richter Hans Servito, Dr. Myrna Cuntapay

Abstract

This study aims to assess the perceptions of stakeholders regarding the mandatory installation of closed-circuit television (CCTV) systems in all business establishments in Barangay Commonwealth, Quezon City. The research is based on an existing ordinance that requires businesses to install CCTV as a security measure. The study seeks to understand how this policy is viewed by business owners, employees, and the local community, particularly in terms of its effectiveness in enhancing safety, promoting crime prevention, and ensuring compliance. This study employed a descriptive research design to assess the significance of closed-circuit television (CCTV) camera installation in all business establishments within Barangay Commonwealth, Quezon City. A survey questionnaire, formatted as a checklist, served as the primary data-gathering tool. The respondents consisted of fifty (50) individuals, divided into two groups: twenty-five (25) business owners with existing CCTV installations and twenty-five (25) police officers from Station 6. Prior to data collection, the researchers submitted a formal letter of request to obtain approval from the appropriate authorities. Once validated, the researchers personally distributed the survey to the respondents, guiding them through the process while ensuring confidentiality, particularly for police officers who chose to remain anonymous for security and privacy reasons. Based on the collected data, the researchers proposed recommendations to address the issues and challenges encountered regarding the mandatory CCTV installation in business establishments. The findings indicate that real-time monitoring received an overall weighted mean of 3.604, which falls under the interpretation of strongly agree. Similarly, improved response time garnered a weighted mean of 3.636, also interpreted as strongly agree. Meanwhile, video footage used for evidence collection achieved the highest mean score of 3.672, likewise categorized as strongly agree. These results suggest that respondents perceive CCTV systems as highly effective in enhancing surveillance, accelerating response efforts, and supporting investigations through recorded evidence. For business owners, it is recommended that those particularly operating in areas with high crime rates or managing establishments with valuable assets, install CCTV systems to enhance safety and deter criminal activities. Meanwhile, Law Enforcement agencies are advised to develop and distribute clear, standardized guidelines for the installation, operation, and maintenance of CCTV systems in commercial establishments to ensure proper usage and legal compliance. For the community, the community should be made aware of their rights under the Data Privacy Act, ensuring that CCTV installations respect individual privacy while promoting collective security. Lastly, for future researchers, future studies are encouraged to explore the long-term effects of mandatory CCTV installation on crime prevention, public safety, and community sentiment by conducting in-depth, longitudinal research.

Keywords: cctv installation, business establishments, crime prevention, public safety, data privacy, community awareness, law enforcement guidelines, longitudinal research

**PERFORMANCE OF STATION SEARCH AND RESCUE TEAM OF QCPD
STATION 4 DURING DISASTER IN NOVALICHES, QUEZON CITY**

Apple Joy Malasa, Giemaya Fernan, Maria Rona Martinez, Katrina Roque,
Myla Roxas, Dr. Myrna Cuntapay

Abstract

This study aims to evaluate the performance of the Search and Rescue (SAR) Team of QCPD Station 4 during disaster situations in Novaliches, Quezon City. In recent years, natural disasters have inflicted severe damage, creating crisis conditions that have threatened lives and property. Efficient disaster response, particularly in search and rescue operations and health monitoring, requires accurate, timely identification and localization of affected individuals. These operations play a vital role in minimizing casualties and ensuring public safety during emergencies. This study adopted a quantitative research approach to systematically gather and analyze data related to the performance of the QCPD Station 4 Search and Rescue Team. A purposive sampling technique was used to select participants with relevant experience in disaster response. Permission to conduct the study was obtained from the research adviser. The respondents consisted of fifty (50) PNP personnel from the Station Search and Rescue Team, who provided insights based on their involvement in search and rescue operations. Data was collected using a researcher-made survey questionnaire, which was distributed and retrieved personally to ensure complete and timely responses from all participants. Most of the respondents were male, aged between 36 and 41 years old. The results show that the respondents strongly agreed with the effectiveness of the QCPD Station 4 Search and Rescue Team in carrying out pre-disaster planning, actual search and rescue operations, post-disaster activities, and emergency response efforts. However, the study also revealed a major challenge: adverse weather conditions, including heavy rainfall, strong winds, and limited visibility, greatly hindered the team's ability to reach and assist disaster-affected areas. To address this concern, an action plan has been developed to enhance the team's performance under such conditions. To improve the overall safety and efficiency of Search and Rescue (SAR) operations, it is essential to provide all personnel with appropriate Personal Protective Equipment (PPE) tailored to the specific operational environment. Regardless of their role or when they join the operation, every member must be properly equipped to ensure maximum protection. This initiative is projected to take 1–2 months to implement, with an estimated budget of ₱300,000 allocated for PPE procurement, replacement, maintenance, and personnel training. Furthermore, regular inspection and upkeep of SAR equipment should be prioritized to maintain optimal performance. A detailed maintenance schedule should be developed based on the manufacturer's recommendations and actual usage conditions.

Keywords: search and rescue (sar), personal protective equipment (ppe), safety enhancement, operational efficiency, disaster response, equipment maintenance, training, qcpd station 4, resource allocation, emergency preparedness

**PERFORMANCE OF THE BARANGAY PUBLIC SAFETY OFFICERS IN RESPONDING
IN TO INCIDENTS OF CRIMINALITY IN BARANGAY BAGBAG, QUEZON CITY**

Cedrick John Encenada, Kryst John Alwin Macinas, Morris Jay Alejandro,
Samuel Tamayo, Jovit Retiro, Dr. Myrna Cuntapay

Abstract

Communities are the foundation of civilization, bringing together individuals of diverse cultures, beliefs, and backgrounds. Within these communities, leaders and peacekeepers naturally emerge, as no one desires to live in fear or among criminal elements. This study evaluates the performance of Barangay Patrol Units, officially known as Barangay Public Safety Officers (BPSOs), as first responders to crime-related incidents in Barangay Bag-bag, Quezon City. In the Philippine context, barangay tanods serve as essential figures in maintaining peace and order, often acting as the initial point of contact before formal law enforcement arrives on the scene. A total of fifty (50) respondents participated in the study, including 30 residents, 10 barangay officials, and 10 police officers residing within the jurisdiction of Barangay Bag-bag, Quezon City. The researchers considered this sample size sufficient to represent the community and capture a range of perspectives. The study employed a descriptive research method to gather relevant data. A structured survey questionnaire was used to assess the performance of Barangay Patrol Units as first responders to crime-related incidents. The data collected provided detailed insights and served as the foundation for interpreting the quantitative findings. The study found that the performance of Barangay Public Safety Officers (BPSOs) was generally commendable, with respondents strongly agreeing that the officers consistently respected human rights and enforced laws fairly. Despite this, a major concern raised by all 50 respondents was the need for regular updates on current crime trends, which they deemed essential for improving the BPSOs' effectiveness as first responders. Furthermore, respondents emphasized the importance of continuous training in modern crime prevention techniques, timely access to crime data, and the provision of appropriate safety equipment. The study suggests conducting consistent patrols, especially in areas prone to criminal activity, to strengthen deterrence and enhance community safety. It also highlights the importance of improving coordination with local law enforcement by organizing joint training programs and developing a comprehensive barangay-police partnership plan to ensure more effective crime prevention and response.

Keywords: barangay public safety officers (bpso), first responders, community safety, crime prevention, regular patrols, police coordination, joint training, barangay-police plan, quezon city, law enforcement.

**PERFORMANCE OF WCCS STATION 14 IN RESPONDING TO THE
VIOLATION OF RA 9262 AT BRGY HOLY SPIRIT QUEZON CITY**

Mariz Argote, Rosie Bantog, Ynah Rocelaine Escribel, Sunshine Dearly Guinacaran,
Angeline Quillope, Edgar Reyes

Abstract

The persistent rise in cases of Violence Against Women and their Children (VAWC) in the Philippines remains a critical social issue, despite the enforcement of Republic Act No. 9262, also known as the Anti-Violence Against Women and Their Children Act of 2004. This legislation is designed to protect women and children from various forms of abuse, including physical, emotional, psychological, and economic violence. However, recent data indicate a significant increase in VAWC cases, particularly in Barangay Holy Spirit, Quezon City, where physical abuse has emerged as the most frequently reported form of violence. This study employed a descriptive research design to thoroughly analyze the perceptions of key stakeholders, including police officers, victims, and community members, regarding the response of the Philippine National Police (PNP) to cases of Violence Against Women and Children (VAWC). The descriptive design is well-suited for capturing detailed insights into real-world experiences and attitudes. Purposive sampling was used to select participants who were directly involved or had relevant knowledge of the issue, ensuring that the data gathered was meaningful and reflective of the population's perspectives. The majority of the respondents were female, aged 18 to 25, and at least high school graduates. Respondents agreed on key aspects such as awareness, operational procedures, coordination with other LGUs and/or NGUs, and community engagement. This indicates that most of them are knowledgeable about their rights and the protections provided under RA 9262. The primary issue identified in the assessment of WCCS Station 14's response to VAWC cases in Barangay Holy Spirit, Quezon City, was insufficient community engagement. To address this concern, the study recommends the implementation of regular information dissemination campaigns and training programs for both police officers and community members. The PNP Women's Desk Officers, in partnership with the Local Government Unit (LGU) and relevant NGOs, should organize monthly community outreach programs to promote awareness of Republic Act 9262. These efforts will help ensure that residents are informed about the legal protections available to women and children. Additionally, continuous follow-up and the establishment of a comprehensive support system for VAWC victims in Barangay Holy Spirit are essential to provide sustained assistance and promote their safety and well-being.

Keywords: pnp women's desk officer, ra 9262, violence against women and children (vawc), barangay holy spirit, community engagement, lgu, ngo, awareness campaign, support system, follow-up support, victim assistance

**POVERTY AS A CONTRIBUTORY FACTORS IN COMMITTING CRIME IN
BARANGAY 162 CALOOCAN CITY BASIS: FOR CREATING AN
EFFECTIVE PROACTIVE CRIME PREVENTION MODEL**

April Gumba, Kathleen Joy La-omoc, Cristina Pardilla,
Jean Paul Sumalde, Marienela Torres, Jinky Anacta

Abstract

Crime remains a persistent challenge in Barangay 162, Caloocan City, where poverty is considered a key factor fueling criminal activities. This study investigates how poverty relates to crime with the goal of developing a proactive crime prevention model. It emphasizes economic difficulties, joblessness, educational gaps, and social pressures as major contributors to criminal behavior. This study utilized a descriptive research design and purposive sampling to select 50 respondents, including 40 residents and 10 barangay officials. Data collection was carried out through surveys and structured interviews. Before conducting the study, the researchers formally requested permission from the Barangay 162 officials. Once approved, questionnaires were distributed to the respondents. The findings indicate that poverty plays a major role in contributing to crime in Barangay 162. Most respondents (42%) were between 18 and 25 years old. Females represented 58% of the participants, while males made up 42%. The highest educational attainment among respondents was college level at 40%, followed by 28% who graduated from high school. Economic hardship, particularly its restriction on educational opportunities, received the strongest agreement from respondents with a weighted mean of 3.38 (Strongly Agree). Unemployment's negative effect on self-esteem and its link to criminal behavior is also ranked highly, with a weighted mean of 3.36. Furthermore, environmental issues such as inadequate law enforcement and poor housing conditions were found to contribute to crime, with weighted means of 3.56 and 3.38, respectively. This chapter summarizes the key findings and conclusions of the study, which sought to identify the challenges Barangay 162, Caloocan City faces in preventing crime. The research highlights several contributing factors to criminal behavior, such as economic difficulties, unemployment, and lack of active community participation. Based on these findings, it is advised that barangay officials develop targeted, data-driven crime prevention strategies that address the poverty-crime nexus. Community outreach programs focusing on livelihood skills, educational assistance, and social development should be prioritized to help curb crimes linked to poverty. Moreover, enhancing collaboration with local law enforcement and strengthening peacekeeping efforts are essential steps moving forward.

Keywords: crime prevention, poverty, economic hardship, unemployment, community involvement, barangay 162, caloocan city, livelihood training, educational support, law enforcement coordination

**PREPAREDNESS OF BUREAU OF FIRE PROTECTION SEARCH AND
RESCUE TEAM IN BARANGAY 176, CALOOCAN CITY**

Crisnel Arinzano, Hans Dela Rosa, Niel Estayan, Carlo Ricos,
James Tolentino, Eduardo Villaruel

Abstract

This study aims to evaluate the capabilities of Bureau of Fire Protection (BFP) personnel assigned in Barangay 176, Caloocan City in responding to various emergencies. It specifically assesses their effectiveness in firefighting operations, emergency medical services (EMS), special operations, and disaster management. Utilizing a descriptive research design, the study involved active BFP personnel and employed a questionnaire checklist grounded in the BFP's communication protocols, evacuation procedures, and resource availability. The study adopted a descriptive research design to provide a systematic and accurate portrayal of emergency preparedness in Barangay 176, Caloocan City. A total of sixty (60) participants were involved, consisting of twenty (20) Bureau of Fire Protection (BFP) personnel and forty (40) residents. Using purposive sampling, respondents were selected based on their relevant knowledge and direct experience with emergencies. Data collection was conducted through structured survey questionnaires that included sections on demographic profiles, levels of preparedness, focusing on communication, evacuation procedures, and available supplies, challenges encountered, and recommended solutions. To ensure validity and reliability, the research instrument was reviewed and validated by a research adviser, BFP personnel, a statistician, and an English teacher. The demographic data of the 60 respondents revealed that the majority were male (55%) and aged between 42 and 50 years old (35%). Among the Bureau of Fire Protection (BFP) personnel, 70% were identified as Junior Officers, with 58.33% having served for more than a decade. The evaluation of communication protocols between the BFP and the Search and Rescue (SAR) team produced a low mean score of 1.71, indicating ineffective communication practices. Key concerns included irregular updates, undefined roles, and insufficient communication tools. Evacuation preparedness received a similarly low score of 1.72, reflecting inadequate planning and vague role assignments. Logistics and resource management scored the lowest at 1.68, pointing to serious deficiencies in supply availability and access to personal protective equipment (PPE). The most critical issues identified by respondents were limited community awareness, lack of essential resources, and weak communication infrastructure. To strengthen emergency preparedness and response, the Bureau of Fire Protection (BFP) should implement ongoing training programs focused on crisis management, firefighting skills, and leadership enhancement. Promoting fire safety awareness through consistent community outreach and education must also be a priority. Barangay officials are encouraged to organize regular emergency drills and disaster preparedness initiatives to improve public readiness. Specifically, in Barangay 176, it is essential to ensure clear, accessible evacuation routes and provide targeted education on fire prevention and survival measures.

Keywords: bureau of fire protection, emergency preparedness, firefighting training, crisis management, community engagement, disaster response, evacuation routes, fire safety education, barangay 176, leadership development

**PREVALENT CAUSES OF ILLEGAL GAMBLING AMONG YOUTH IN
BARANGAY SAUYO NOVALICHES QUEZON CITY**

Hannah Mae Lagrana, Abegail Rose Jeresano, Ruby Lebantino, Michael John Rique,
Quincy Joy Taccaban, Dr. Myrna Cuntapay

Abstract

This chapter includes the background of the study, a review of related literature and studies, the theoretical and conceptual frameworks, the statement of the problem, and the research hypothesis. It also defines the scope and limitations of the study, its significance, and the key terms used throughout the research. Illegal gambling among the youth in Barangay Sauyo, Novaliches, Quezon City has emerged as a pressing concern due to its potentially harmful effects on individuals and the community. It is linked to financial instability, the risk of addiction, and increased involvement in unlawful behavior. The growing participation of young individuals in illegal gambling reflects deeper-rooted social and economic issues that require immediate attention. Among the key contributing factors is financial hardship, which often leads the youth to view gambling as a quick and appealing means to earn money. This chapter details the research methodology, including the research design, respondent selection, sampling procedure, development and validation of the research instrument, distribution and collection processes, and the statistical methods used for data analysis. A descriptive research design was employed to systematically gather and interpret quantitative data, aiming to accurately describe the characteristics, behaviors, or conditions observed within the target population. This chapter details the results gathered through the administration of the survey questionnaire. It systematically analyzes and interprets the participants' responses to provide meaningful insights and directly addresses the research questions, thereby contributing to the overall objectives and conclusions of the study. This chapter summarizes the key findings of the study, highlighting the overall results and insights drawn from the data. It focuses on what the research revealed without delving into conclusions or recommendations.

Keywords: study findings, research results, data insights, research summary, outcome analysis, key observations

**PREVENTIVE MEASURE AGAINST CARNAPPING INCIDENTS IN
BARANGAY 178 CAMARIN CALOOCAN CITY**

Dalle Anthony Gonzales, Honorato Inojales, Aaron Patt Palomata,
Julius Maximo Falconit, John Rick Perez, Jinky Anacta

Abstract

Carnapping remains a pressing issue in urban communities such as Barangay 178, Camarin, Caloocan City, posing serious threats to vehicle owners and contributing to a growing sense of insecurity. Tackling this problem requires the implementation of comprehensive preventive strategies that promote public awareness, strengthen security systems, and encourage active community participation. This study emphasizes the importance of community engagement, educational programs, and close coordination with local law enforcement to reduce carnapping incidents. Through these collaborative efforts, Barangay 178 can work toward establishing a safer environment and restoring public trust and peace of mind. This chapter presents the research methodology, covering the research design, participant selection, sampling methods, instruments used, validation process, and techniques for data analysis. The study engaged 50 respondents from Barangay 178, Camarin, Caloocan City, consisting of 20 randomly selected residents, 15 active-duty police officers, and 15 individuals serving as barangay officials, community leaders, or representatives of local organizations. Their diverse perspectives contributed to a more comprehensive understanding of both community experiences and law enforcement strategies. This chapter presents data analyzed through statistical methods. Results indicate that 32% of the respondents were between the ages of 25 and 30, 58% were male, and 54% held a college degree. Most participants agreed that implementing watch programs, enhancing community surveillance, and encouraging the reporting of suspicious activities are effective strategies to combat carnapping. However, 80% of the respondents encountered difficulties in accessing educational materials and understanding legal jargon. The most strongly supported recommendation, with 92% approval, was to increase police patrols within Barangay 178 to enhance public safety and reduce the occurrence of carnapping. This study examined preventive strategies against carnapping in Barangay 178 Camarin, Caloocan City. The majority of participants were male, aged 25 to 30, and college educated. The findings showed strong support for initiatives such as neighborhood watch programs, increased community surveillance, and prompt reporting of suspicious behavior. However, respondents also identified significant challenges, including limited access to educational materials and difficulty understanding legal language related to carnapping prevention. To address these issues, the study recommends the installation of additional CCTV cameras along major roads and the designation of secure parking zones within the barangay. These measures aim to strengthen public safety and effectively reduce carnapping incidents in the community.

Keywords: carnapping, preventive measures, community surveillance, cctv installation, barangay 178 camarin, legal awareness, public safety, crime prevention, safe parking zones, caloocan city

**PREVENTIVE MEASURE ON VIOLENCE AGAINST WOMEN AND THEIR
CHILDREN AT BRGY 178 KIKO CAMARIN: A PROPOSAL**

Clylyn Ancheta, Ainalen Amoranto, Rosenda Guiao,
Ruben Lozano Jr, Lea Grace Poleño, Nilmar Plata

Abstract

This research proposal aims to assess the initiatives of Barangay 178 Kiko Camarin in addressing and preventing violence against women and their children. It focuses on evaluating the effectiveness, coverage, and implementation of current programs to identify areas for improvement. The study ultimately seeks to contribute to creating a safer and more equitable environment for all members of the community through evidence-based recommendations and proactive measures. This chapter details the research design, respondent selection, sampling methods, development and validation of research instruments, procedures for the distribution and retrieval of the instruments, and the statistical techniques used for data analysis. This chapter provides a comprehensive presentation, analysis, and interpretation of the data collected during the study. It covers the demographic profile of the respondents, the results of the survey questions, and the statistical tools employed to evaluate the findings. This chapter presents a summary of the key findings and the conclusions drawn from the study, which focused on identifying the preventive measures addressing Violence Against Women and Their Children (VAWC) in Barangay 178, Kiko Camarin, Caloocan City. Additionally, it outlines recommendations aimed at strengthening existing programs and enhancing the overall effectiveness of community-based prevention efforts.

Keywords: violence against women and children (vawc), barangay 178, preventive measures, community safety, program evaluation, intervention strategies, caloocan city, gender-based violence, local government, women's protection

**PROBLEMS ENCOUNTERED BY THE PHILIPPINE NATIONAL POLICE DURING
CHECKPOINT IN BARANGAY DALANDANAN VALENZUELA CITY**

Ryan Entila, Joshua Imana, Charlie Bhoy Red, Jules Iñigo Contreras,
Vincent Vallega, Edgar Reyes

Abstract

PNP checkpoints were implemented in various locations to address the high incidence of traffic violations contributing to road accidents. The measures target offenses including drunk driving, not wearing helmets, speeding, and aim to identify unlicensed drivers and unregistered vehicles. This study focuses on assessing the challenges encountered by the Philippine National Police during checkpoint operations in Barangay Dalandanan, Valenzuela City. This study employed a descriptive quantitative research design to assess the problems encountered by the Philippine National Police during checkpoints in Barangay Dalandanan, Valenzuela City. The respondents included twenty-five (25) police officers, twenty (20) drivers, and five (5) commuters residing in Barangay Dalandanan. Participants were selected using a purposive sampling technique. The findings focus on the problems encountered by the Philippine National Police during checkpoints, based on respondents' demographic profiles, including age, sex, civil status, and educational attainment. The assessment centered on three key areas: operational procedures, problem-solving strategies, and driver awareness. The top three problems reported by police personnel at checkpoints are as follows: Long waiting times and traffic congestion (Rank 1) Lack of accountability and insufficient evaluation of checkpoint operations (Rank 2) A tie for Rank 3.5 between inadequate training on checkpoint procedures and ineffective communication among PNP personnel. To address these issues, respondents identified the following key measures: Establishing regular evaluations and reviews to assess checkpoint effectiveness and identify improvements (Rank 1) Using technology, such as body cameras, to promote transparency (Rank 2) A tie for Rank 3.5 between providing consistent training on checkpoint protocols and installing adequate lighting and safety measures. The study recommends that drivers, police officers, the Valenzuela Police Station, the community, government agencies, students, Bestlink College of the Philippines, and researchers work together to resolve the issues encountered during checkpoints. The most prioritized measure, as identified by respondents, is to implement a regular evaluation and review system to monitor checkpoint operations and pinpoint areas needing improvement.

Keywords: philippine national police, checkpoint operations, problems encountered, traffic congestion, accountability, training and communication, evaluation process, technology in law enforcement, stakeholder collaboration, barangay dalandanan, valenzuela city

**PROBLEMS ENCOUNTERED BY TRAFFIC AND TRANSPORTATION MANAGEMENT
DEPARTMENT IN HANDLING TRAFFIC CONGESTION IN
NOVALICHES PROPER, QUEZON CITY**

Ralph Lauren Gupita, Khen Ashley Gaquit, Shahid Usman,
John Paul Bajet, Ker Susana, Irene Gaviola

Abstract

Traffic congestion remains a persistent problem in many urban centers, negatively impacting residents' daily lives, local economies, and the environment. In Novaliches Proper, Quezon City, this issue has become particularly severe, causing delays for commuters, hindering business operations, and affecting overall community well-being. Although local authorities have implemented various traffic management strategies, heavy congestion still occurs, especially during rush hours. The study seeks to explore the challenges faced in managing traffic congestion in Novaliches Proper, Quezon City. The research involved 50 respondents, including 20 traffic enforcers and 30 drivers from the area, gathering insights into the difficulties experienced in addressing traffic issues. This study employed a mixed-methods design, combining quantitative and qualitative research approaches to gain a well-rounded perspective on the issue. The researchers prepared a questionnaire to collect relevant data from selected respondents. Following approval from the Research Professors at Bestlink College of the Philippines, the researchers distributed the questionnaires personally to ensure respondents understood the instructions and the purpose of the study. Completed questionnaires were then collected at designated points within Novaliches, Quezon City. The findings show that logistics was rated the highest (3.19, "Agree"), followed closely by policies and procedures (3.13, "Agree"), while training received the lowest rating (3.04, "Agree"). The research highlights that Novaliches faces major traffic problems such as road congestion, limited public transportation options, and deteriorating road conditions. Among the critical challenges identified are ineffective traffic management, inadequate traffic signal systems, a lack of sufficient parking, and the growing number of private vehicles on the road. Future researchers need to explore and develop innovative, sustainable solutions to effectively address the traffic issues in Novaliches Proper. By exploring the social, technical, and administrative dimensions of traffic congestion in greater detail, future researchers can enhance this study and help develop effective, community-centered solutions to reduce congestion.

Keywords: traffic congestion, traffic management, novaliches proper, quezon city, urban traffic problems, mixed-methods research, traffic enforcers, public transportation, traffic infrastructure, congestion mitigation, community-based solutions, logistics, pol

**PROBLEMS ENCOUNTERED BY TRAFFIC ENFORCERS ASSIGNED IN
BARANGAY GEN. T. DE LEON VALENZUELA CITY: AN ASSESSMENT**

Mark Benedict Macaya, Mark Christian Batoto, Christopher Art Joshua Mendoza,
Daniel Somine, Ringo Tapalla, Nilmar Plata

Abstract

Managing traffic effectively is vital to maintaining safety and smooth movement within urban communities. This study focuses on identifying the difficulties encountered in implementing traffic law enforcement in Barangay Gen. T. De Leon, Valenzuela City. This study utilized a quantitative approach with a descriptive research design to examine the challenges encountered by traffic enforcers in enforcing traffic regulations in Barangay Gen. T. De Leon, Valenzuela City. Data was gathered to provide an accurate depiction of the current issues and highlight areas that require attention. The study involved fifty (50) respondents, divided into two groups: twenty (20) traffic enforcement officers and thirty (30) non-officer enforcers. The research was conducted specifically within Barangay Gen. T. De Leon, Valenzuela City. Regarding age, the largest group of respondents (30%) falls within the 42 to 50 years bracket, followed by those aged 26 to 33 and 34 to 41 years, each comprising 24%. Respondents aged 51 and above represent 14%, while the youngest group (18 to 25 years) accounts for only 8%. In total, more than half (54%) belong to the middle-aged working population (26 to 50 years), with younger and older age groups less represented. In terms of gender distribution, males dominate the sample, making up 88% of the 50 respondents, whereas females represent only 12%, indicating a largely male respondent base. With respect to educational attainment, a majority (68%) are college undergraduates, followed by 26% who completed high school. Respondents with lower educational levels are few, and no participants hold a doctoral degree. The assessment of encountered issues shows strong agreement across key areas, as indicated by the overall weighted means: Environmental Hazard: 3.78 (Strongly Agree) Visibility of Traffic Enforcers: 3.75 (Strongly Agree) Enforcement of Traffic Laws: 3.72 (Strongly Agree) Motorist Behavior: 3.60 (Strongly Agree) To strengthen traffic management, a Traffic Management Awareness Program should be conducted, focusing on comprehensive training for enforcers, increasing public education, and upgrading road infrastructure. This initiative seeks to improve traffic flow efficiency and enhance the working environment for traffic enforcers.

Keywords: traffic management, respondent profile, age distribution, gender, educational attainment, environmental hazard, traffic law enforcement, motorist behavior, traffic enforcer training, public awareness, road improvement, traffic flow, working condition

**PUBLIC AWARENESS CAMPAIGN CONDUCTED BY STATION 4 AGAINST
MOTORNAPPING AT BRGY. SAN BARTOLOME,
NOVALICHES, QUEZON CITY**

Alex Geolamen Jr, Jack Ardales, Harvie Batuhan,
Jolwes Dalayat, Donald Naive, Irene Gaviola

Abstract

Motorcycle theft, commonly known as motor-napping, has become a growing issue in various urban areas, including Barangay San Bartolome, Novaliches, Quezon City. To address this problem, the government enacted Republic Act No. 10883, also known as the New Anti-Carnapping Act of 2016, which enforces stricter penalties and enhanced implementation measures against carnapping. Under this law, the offense becomes non-bailable if the evidence of guilt is strong. This study aims to evaluate the public awareness campaign initiated by Police Station 4 in its efforts to combat motor-napping within Barangay San Bartolome, Novaliches, Quezon City. The participants of this study included community residents of Barangay San Bartolome, Novaliches, Quezon City, along with police officers from Station 4. To select the appropriate respondents, the researchers used a purposive sampling technique, ensuring the participants were relevant to the study on the public awareness campaign against motor-napping. A quantitative research design was utilized to gather measurable data. The researchers personally visited the area, sought consent from the respondents, and invited them to participate in the study. After receiving their approval, the researchers distributed the survey questionnaires and waited for the participants to complete them. Once the surveys were filled out, they were collected by the researchers for analysis. The majority of the respondents were male, aged 18 to 25, high school graduates, and employed. Based on their responses, the Public Awareness Campaign implemented by Station 4 against motor-napping in Barangay San Bartolome, Novaliches, Quezon City was rated as “Strongly Agree” across three key areas: Awareness, Community Participation, and Community Satisfaction. Among these, Community Participation received the highest weighted mean of 3.49, followed by Community Satisfaction with 3.48, and Awareness with 3.45. The most frequently cited issue encountered during the campaign was that community members were not fully engaged or involved in the campaign activities. To address this, it is recommended that the campaign make use of social media platforms, local radio stations, and house-to-house information drives to broaden its reach and improve community participation. To help prevent motor vehicle theft (motornapping) and raise awareness in Barangay San Bartolome, Novaliches, Quezon City, the following recommendations are suggested for community residents, police officers, and barangay officials: Strengthen Awareness Campaigns, use social media, local radio, and community posters to inform residents about motornapping, how to prevent it, and what steps to take if an incident occurs. Conduct House-to-House Information Drives. Police officers and barangay officials should work together to directly reach residents, distribute educational materials and personally explain safety tips to families. Hold Community Meetings and Seminars, organize regular forums where residents can learn about motornapping, ask questions, and receive updates directly from local authorities. Promote Active Community Involvement by encouraging residents to report suspicious activities, participate in neighborhood patrols, and support one another to maintain community safety. Improve Security Measures through the installation of CCTV cameras in key areas and ensure that street lighting is adequate to deter criminal activity and make it easier to identify suspects.

Keywords: motornapping, public awareness campaign, barangay san bartolome, police station 4, community participation, community awareness, crime prevention, republic act no. 10883, motorcycle theft, community safety

**RATIONALIZED PATROL PLAN AT PHASE 8 BARANGAY NORTH FAIRVIEW
QUEZON CITY**

Charmaine Narido, Alyanna Marie Agad, Joanne Rhea Fernandez, Camille Samson,
Mary Rose Tabares, Jenny Torres, Denise Anne Osorio

Abstract

In today's society, crimes involving individuals and property have become increasingly common, raising serious concerns about public safety and the effectiveness of security measures. Police visibility plays a vital role in deterring criminal activity, reducing crime rates, and boosting the public's confidence in their safety, especially in public spaces and at night. Phase 8, North Fairview in Quezon City is a densely populated barangay with numerous residential areas and commercial establishments. Despite its development, the area occasionally faces unexpected incidents such as theft, robbery, and violations of city ordinances, including curfew violations, public drinking, and smoking in restricted areas. These recurring issues highlight the pressing need for consistent police presence and community-based security initiatives. This study, titled "Creating a Rationalized Patrol Plan," focuses on developing a strategic approach to maximize the effectiveness of patrol resources by analyzing crime patterns, addressing community concerns, and improving operational performance. The main objective is to formulate a rationalized patrol plan for Phase 8, Barangay North Fairview, Quezon City. The research utilizes a descriptive method, which systematically describes and interprets the current situation. This method is well-suited for exploring community members' perceptions regarding the impact of the patrol plan on crime reduction and overall safety in the area. The results show the raw data collected from the survey, which are vital as they represent the main findings of the research. Careful analysis of this data is necessary to ensure accurate and dependable conclusions. The majority of respondents were aged 18 to 25 years old, mostly female, and had attained a high school education. Across all groups, there was strong agreement that visible police presence is more effective in maintaining public safety than relying solely on surveillance cameras. The data highlights the crucial role of police visibility in deterring crime. Respondents also acknowledged that the implemented patrol plan has helped reduce crime and other community concerns in the area. However, there remains a challenge in fully addressing community feedback and concerns. To enhance the patrol plan's effectiveness, it is recommended to adopt community engagement strategies that foster cooperation between residents and law enforcement, ultimately supporting crime reduction efforts. This chapter focuses on improving the Patrol Plan for Phase 8, Barangay North Fairview, Quezon City. The study seeks to reduce crime in this area, which is under the jurisdiction of Station 5 of the Quezon City Police District. The main goals of the police patrol operations include crime prevention, ensuring public safety, rapid response to emergencies, and regular monitoring of high-crime zones.

Keywords: patrol plan, crime prevention, police visibility, public safety, emergency response, quezon city police district, barangay north fairview, high-crime areas, community policing, station 5

RISING TRENDS IN ONLINE SCAMS IN BARANGAY KAMUNING, QUEZON CITY

Maverick James Rivera, Marvin Jones Baculinao, Rodolfo Jose Buendia,
Jerome Casipit, Michael Sagonoy, Denise Anne Osorio

Abstract

The internet has become a vital part of everyday life, streamlining communication, information access, and entertainment. However, with increased reliance on digital platforms comes a heightened risk to personal safety and security. This study investigates the growing prevalence of online scams in Barangay Kamuning, Quezon City, examining the challenges faced by the local community and identifying effective strategies for prevention and awareness. The researchers used purposive sampling, a non-probability technique where participants were deliberately chosen based on characteristics relevant to the study's objectives. A descriptive research design was adopted to provide a detailed analysis of the data collected. This design enabled a comprehensive understanding of the prevalence and nature of online scams in the community. The researchers directly approached residents of Barangay Kamuning, Quezon City, who had experienced online scams, as well as members of the QCPD Anti-Cybercrime Group and the Barangay Council, who are instrumental in crafting prevention strategies. Before administering the survey questionnaire, the researchers secured the respondents' consent. Completed surveys were collected immediately after they were filled out. The highest-rated concern, with a weighted mean of 3.31 and a verbal interpretation of "Strongly Agree," reveals that individuals are aware of the importance of online privacy and security measures, such as creating strong passwords and recognizing secure websites. Furthermore, with a weighted mean of 3.12 ("Agree"), the data shows that many individuals feel confident using website security features, including HTTPS and security certificates, to assess a site's legitimacy. Another key finding, with a weighted mean of 3.13 ("Agree"), indicates that respondents are generally willing to report suspected online scams or suspicious activities to the proper authorities. The study underscores the importance of digital literacy and individual online security. To address the growing threat of online scams, the study proposes community-based strategies aimed at raising awareness, strengthening digital competencies, and encouraging proactive measures to safeguard against cyber threats.

Keywords: digital literacy, online scams, cybersecurity awareness, community-based strategies, barangay kamuning, online privacy, prevention measures, internet safety, anti-cybercrime, non-probability sampling

**RISK ASSESSMENT ON UNEVEN ROAD SURFACE IN HOWMART ROAD,
BARANGAY BAESA, QUEZON CITY**

Gerald Aserit, Rommel Alcaraz, Jojo Bautista, Angelo Punzalan,
Salvador Jr Marquez, Irene Gaviola

Abstract

Road infrastructure plays a vital role in ensuring the safety and efficiency of transportation for both commuters and pedestrians. However, surface defects such as potholes, cracks, and uneven pavements remain common issues that contribute to vehicular damage and increase the likelihood of accidents. This study utilized a descriptive survey design to examine the risks associated with uneven road surfaces along Howmart Road in Barangay Baesa, Quezon City. A total of 50 respondents: comprising 20 drivers, 20 pedestrians, 5 traffic enforcers, and 5 traffic investigators, were selected through purposive sampling, targeting individuals with relevant knowledge and experience regarding the area's road conditions. A validated survey questionnaire, reviewed by traffic experts, served as the primary tool for data collection. The responses were analyzed using frequency counts, percentages, and weighted means to interpret the perceived risks, challenges, and proposed solutions. The findings aimed to support evidence-based recommendations for improving road safety and infrastructure. The study collected data from 50 respondents, the majority of whom were male (76%) and within the 34–41 age group (30%). Fifty percent of the participants were high school graduates, and 28% reported having 4–6 years of driving experience. Most of the respondents were drivers and pedestrians (40%), while traffic enforcers and investigators each represented 10% of the sample. Findings revealed that participants generally agreed on the severity of risks posed by uneven road surfaces along Howmart Road. The mean ratings for perceived dangers included: potential injuries (3.19), fatalities (3.17), and accident occurrence (3.16), indicating a moderate to high level of concern. The most commonly identified problem was the increased risk of injury due to uneven roads, as cited by 88% of respondents. To mitigate these risks, proposed solutions included reducing vehicle speed, installing visible warning signs, conducting regular road maintenance, and assigning traffic enforcers to help manage and ensure safe traffic flow. To improve road safety conditions along Howmart Road in Barangay Baesa, Quezon City, the following actions are recommended: Drivers should maintain a safe distance between vehicles and adjust their speed accordingly to minimize the risk of accidents, taking into account the prevailing road conditions.

Keywords: howmart road, road safety, surface irregularities, traffic enforcers, drivers, pedestrians, community involvement, road maintenance, traffic investigators, hazard reporting, speed regulation, infrastructure improvement

**RISK FACTORS AFFECTING ROAD ACCIDENTS AT SUSANO ROAD,
SAN AGUSTIN, NOVALICHES, QUEZON CITY**

Cyrus Dote, Maui Andrew Guariño, Soliven Muring,
Alfred Palacio, Marwin Sico, Denise Anne Osorio

Abstract

Road safety continues to be a critical issue in urban settings, where the high volume of vehicles often leads to increased incidents of accidents, resulting in injuries, fatalities, and property damage. Susano Road, located in San Agustin, Novaliches, Quezon City, is one such area experiencing heavy traffic congestion, which exacerbates these concerns. Despite ongoing efforts by local authorities to manage traffic and improve safety, accidents remain frequent. Although extensive studies have been conducted on road safety at broader levels, there is limited localized research that focuses specifically on the conditions and risk factors affecting roads like Susano. More importantly, the perspectives of road users and traffic enforcers are often underrepresented. This study aims to address this gap by identifying the key causes of road accidents, analyzing the common types of incidents, and offering practical, community-informed recommendations to improve safety along Susano Road. The study adopted a descriptive quantitative research design to evaluate perceived risk factors and road safety issues along Susano Road in San Agustin, Novaliches, Quezon City. Using purposive sampling, a total of 50 participants were selected, including 20 drivers, 20 commuters, and 10 traffic enforcers who frequently use or monitor the area. Data collection was conducted through a Perceived Road Risks Questionnaire, which focused on three categories: ancestry and social environment, individual mistakes, and physical hazards. Respondents also identified common accident types and recommended safety interventions. Data were analyzed using frequency distributions, percentages, and weighted mean to interpret the responses and identify significant risk patterns and potential solutions for improving road safety. Most respondents were 18–30 years old, male, and high school graduates. All respondent groups: drivers, commuters, and traffic enforcers, strongly agreed that individual errors, particularly reckless driving and traffic rule violations, are the primary causes of road accidents along Susano Road. Although ancestry and social environment were also identified as contributing factors, they were perceived as less influential. Notably, traffic enforcers considered physical hazards and unsafe actions to be of lower significance compared to other risk categories. The most common types of accidents reported involved motorcycles, rear-end collisions, and pedestrian-related incidents. In response, participants recommended several preventive strategies, including: Enhanced police visibility and patrols, stricter enforcement of illegal parking laws, routine road maintenance, improved traffic signs and signal systems, development of safer pedestrian infrastructure. The findings indicate that human error, particularly reckless behavior and traffic violations, is the primary contributor to road accidents along Susano Road. While social and environmental influences were also acknowledged, their perceived importance varied across respondent groups. Infrastructure-related risks were viewed as less critical, especially by traffic enforcers who placed greater emphasis on behavioral factors, one limitation of the study is its reliance on quantitative data, which may overlook the deeper context behind road safety issues. To address this, future studies should consider using qualitative methods or a mixed-methods approach to explore underlying behaviors and motivations. Longitudinal research could also provide valuable insights into the long-term effectiveness of implemented safety measures, expanding the study to include other high-risk roads in Quezon City is recommended to gain broader, comparative data that can inform more comprehensive and adaptive road safety strategies.

Keywords: road safety, human error, traffic violations, behavioral risks, social environment, infrastructure issues, traffic enforcers, susano road, quezon city, quantitative limitation, qualitative research, longitudinal study, safety strategies

ROLE OF BARANGAY COUNCIL TRAINING PROGRAM IN RESPONDING TO CHILD PROTECTION CASES IN BARANGAY SAN AGUSTIN, NOVALICHES, QUEZON CITY

Reubene Bustamante, Dyna Jean Isada, Nica Famela Juaño,
Grand Glory Page, Alaiza Rambuyon, Irene Gaviola

Abstract

Children are among the most at-risk members of society and must be protected from abuse, neglect, and exploitation. In the Philippines, legal provisions such as the Philippine Constitution, Presidential Decree No. 603, and Republic Act No. 7610 aim to uphold and defend the rights of children. Despite these laws, child abuse remains a pressing issue, particularly in local communities where timely responses are essential. The Barangay Council for the Protection of Children (BCPC) plays a vital role in addressing these concerns, yet its effectiveness is largely influenced by the level of training, knowledge, and preparedness of its members. This study aimed to evaluate the role of the Barangay Council Training Program in addressing child protection cases in Barangay San Agustin, Novaliches, Quezon City. It explored how the training program enhanced participants' knowledge, skills, and effective use of available resources, while also identifying the challenges faced by BCPC members. A mixed-method research design was utilized, combining both quantitative and qualitative approaches to ensure a well-rounded analysis. The respondents consisted of five (5) Barangay Women's Desk Officers, five (5) Women and Children Protection Desk Officers, and forty (40) parents or guardians, selected through purposive sampling. Data collection involved survey questionnaires and in-depth interviews, with prior approval from relevant authorities and assurance of confidentiality throughout the process. The study revealed that the majority of participants were women aged 34 to 41 who had lived or worked in Barangay San Agustin for over 11 years. Training programs significantly enhanced their knowledge (mean = 3.756), skills and proficiency (mean = 3.680), and access to resources (mean = 3.624). However, 92% of respondents reported that the lack of follow-up support after training hindered sustained progress. In response, the study recommends establishing mentorship programs, offering regular refresher courses, and strengthening partnerships among the BCPC, NGOs, and local stakeholders to ensure ongoing improvement in child protection efforts. This study evaluated the effectiveness of the Barangay Council training program in responding to child protection cases in Barangay San Agustin, Novaliches, Quezon City. Using a mixed-method approach, it examined how training influenced the knowledge, skills, and resource use of BCPC members, while also identifying key challenges in implementation. The results showed that the training significantly improved acquired knowledge (mean = 3.756), proficiency and skills (mean = 3.680), and access to resources (mean = 3.624). Despite these positive outcomes, 92% of the respondents reported a lack of follow-up support after training, highlighting a critical weakness in the program's sustainability. The study concludes that while the training programs contribute positively to the capacity of BCPC members, their effectiveness is hindered by limited post-training support. To address this, the study recommends the implementation of mentorship initiatives, periodic refresher courses, and stronger coordination between BCPC, NGOs, and other community partners. These enhancements will help ensure a more consistent and effective response to child protection cases at the barangay level.

Keywords: child protection, barangay council, bcpc, training program, novaliches, child abuse response, community intervention, skills development, follow-up support, mentorship, refresher training

**STRATEGIC SOLUTION ADDRESSING CHILD LABOR IN
BARANGAY CULIAT QUEZON CITY: AN ACTION PLAN**

John Windfield Galang, Albert Tuangco, Jeyson Garcia, John Robin Colima,
Mohammad Nassef Nasser, Jinky Anacta

Abstract

Child labor involves the employment of minors in work that negatively affects their physical, mental, and emotional development. This issue commonly arises in environments where children endure long hours, hazardous conditions, and inadequate compensation, often at the cost of their education and well-being. While child labor was prevalent during the Industrial Revolution, it continues to persist in many communities today. Addressing this problem requires the implementation of effective laws, educational access, and family-oriented support systems. This study investigates the issue of child labor in Barangay Culiati, Quezon City, and proposes an action plan to mitigate its prevalence. The study used surveys and questionnaires to collect data from 70 respondents, including 40 child laborers, 10 barangay officials, 10 personnel from the Social Services Development Department (SSDD), and 10 police officers. Respondents were purposively selected to provide comprehensive insights into the issue. A pre-test of the survey instrument was conducted in Barangay Culiati to ensure the clarity and reliability of the questionnaire. The study aimed to assess perspectives on the causes, effects, and possible solutions to child labor. The analysis revealed that 34.29% of respondents were aged 16–18, with a gender distribution of 60% male and 40% female. A majority (78.57%) were single, and 44.29% had attained a high school education. Respondents strongly agreed on the effectiveness of strategies such as strict policy enforcement, access to education, community awareness, and economic support in addressing child labor. The most prevalent issue identified was the lack of community awareness (11.24%), while the most commonly recommended intervention was the implementation of mentorship programs for at-risk children (10.69%). The study highlighted the demographic and educational background of child laborers in Barangay Culiati and underscored the importance of multi-sectoral strategies to address the issue. Education emerged as a critical preventive measure, alongside policy enforcement and economic empowerment. However, challenges such as limited community awareness, inadequate law enforcement, and lack of employment opportunities for parents were identified. The study recommends raising awareness through community education campaigns, implementing mentorship initiatives, strengthening partnerships with NGOs, and providing livelihood programs for families. These strategies aim to reduce child labor and promote the overall well-being of children in the barangay.

Keywords: ssdd (social services development department), child labor, ngos (non-governmental organizations), education, economic empowerment, policy enforcement, community awareness

**STRATEGIES IMPLEMENTED BY BARANGAY HOLY SPIRIT,
QUEZON CITY IN REDUCING CRIME**

Vladimir Lapizar, Lester James Roldan, Angelito Dimalaluan, Eugene Caranto,
John Carlo Milante, Bernie Jan Pichay, Denise Anne Osorio

Abstract

This study emphasizes the need for a comprehensive approach to crime reduction, integrating community involvement, preventive strategies, and law enforcement. It explores key crime prevention strategies, including Community Policing, Zero Tolerance Policing, and Youth Engagement and Prevention. The objective is to evaluate the effectiveness of these approaches implemented in Barangay Holy Spirit, Quezon City, identify areas of weakness, and recommend improvements to enhance public safety and crime deterrence. The study adopts a descriptive research design utilizing quantitative methods. A total of 40 respondents, comprising 20 residents and 20 barangay personnel including the chairman, were selected through purposive sampling based on predetermined criteria. The demographic profile of the participants includes age, sex, and educational attainment. A structured questionnaire was used to gather data on the implementation and perceived effectiveness of crime reduction strategies within the community. The findings revealed that most respondents were aged 30 and above, with a balanced gender distribution and primarily single status and high school educational attainment. The crime reduction strategies assessed included Barangay Patrol, Coordination with Stakeholders, and Enforcement of City Ordinances, all receiving an overall rating of "Agree." Barangay patrols, particularly those promoting neighborhood watch initiatives, garnered the most favorable responses. While coordination with youth groups and enforcement of ordinances were viewed positively, notable challenges were identified, such as the limited integration of barangay patrols with higher-level law enforcement and insufficient resources, resulting in delayed response times. Respondents suggested regular assessments to ensure optimal patrol coverage and recommended stronger inter-agency collaboration and resource support. The study offers practical recommendations to strengthen crime prevention efforts in Barangay Holy Spirit. By identifying gaps and proposing actionable improvements, the research contributes to ongoing discussions on community safety and resilience. The findings provide valuable insights for policymakers, law enforcement agencies, and local leaders in designing sustainable and effective crime reduction programs tailored to the needs of the community.

Keywords: crime prevention, barangay patrol, community policing, youth engagement, city ordinances, law enforcement, quezon city, barangay strategies

**STRATEGIES OF BARANGAY BAGUMBONG CALOOCAN CITY TO PREVENT
YOUTHS BECOMING CHILD IN CONFLICT WITH THE LAW**

Erika Ontuca, Abbygail Clamor, Norlan Labian, Joyce Pagulayan,
Jinky Presas, Nilmar Plata

Abstract

The barangay functions as the primary planning and implementing unit of government programs and serves as a platform for addressing community issues and settling disputes. Barangay officials, including the captain and councilors, play a critical role in crime prevention and youth development. However, many barangays face limitations in funding and resources, which hinder the implementation of youth engagement programs designed to prevent juvenile delinquency. This study investigates the strategies employed by Barangay Bagumbong, Caloocan City in preventing youths from becoming children in conflict with the law. The study used a quantitative approach with a random sampling technique. A paper-based survey questionnaire was administered to 15 residents, 15 barangay officials, and 20 youth respondents from Barangay Bagumbong. Prior permission was obtained from barangay officials to conduct the data collection. The responses were statistically analyzed to assess the effectiveness of current strategies. Findings revealed that the respondents strongly agreed with the existing strategies implemented by Barangay Bagumbong to prevent juvenile delinquency. The weighted mean ratings for the strategies ranged from 3.34 to 3.70, indicating a generally strong level of agreement. The results highlighted the importance of these initiatives in benefiting not only the youth and local community but also barangay officials, criminology students, and future researchers. The data collected were used to develop recommendations aimed at strengthening the barangay's preparedness and response to youth-related concerns. This study underscores the role of community-based strategies in preventing youth involvement in criminal activities. By analyzing the approaches taken by Barangay Bagumbong, the research provides valuable insights that can assist policymakers and local stakeholders in formulating more effective and inclusive programs for at-risk youth. Ultimately, this study contributes to efforts in fostering safer and more supportive communities through proactive youth development initiatives.

Keywords: juvenile delinquency, crime prevention, community-based strategies, youth development, barangay programs, caloocan city, children in conflict with the law

**STRATEGIES TO AVOID ROBBERY HOLD-UP IN BARANGAY
BATASAN HILLS QUEZON CITY**

Mark Angelo Atayde, Nathaniel Biduya, Jeffrey Cerilo, Christian Jay Obligacion,
Melvin Pareño, Eduardo Villaruel

Abstract

Barangay Batasan Hills in Quezon City has experienced high incidences of robbery hold-ups in previous years. In response, barangay officials and law enforcement personnel have implemented various crime prevention strategies aimed at reducing these occurrences. This study seeks to assess the effectiveness of the strategies employed to prevent robbery hold-ups and to identify areas for improvement in current crime prevention measures within the barangay. A quantitative descriptive research design was employed in this study. Purposive sampling was used to select 50 respondents from Barangay Batasan Hills, consisting of 15 police officers, 20 barangay tanods, and 15 barangay residents. Data were gathered through structured questionnaires and were analyzed based on demographic variables such as age, sex, educational attainment, and length of service or residency. As to age, among the 50 respondents, twenty-two (22) are 25–33 years old, representing 44%, while three (3) are 51 years old and above, the lowest frequency, at 6%. Regarding sex, the highest frequency was among male respondents, with 34 individuals, or 68%, while females accounted for 16 respondents, or 32%. In terms of educational attainment, most respondents are college graduates, with 20 individuals, or 40%, while the least are elementary graduates and others, each with 1 respondent, or 2%. Regarding length of service/residency, the highest frequency was among those with 4–6 years, with 16 respondents, or 32%, while the lowest was among those with 14–16 years, with 2 respondents, or 4%. The study recommends the implementation of regular training programs for barangay personnel, installation of additional lighting and high-resolution CCTV cameras, allocation of more funding for crime prevention, and the strengthening of communication and coordination among barangay tanods, police officers, and community residents. These proposed actions aim to improve the overall safety and security in Barangay Batasan Hills by reducing the occurrence of robbery hold-ups through community-based and data-informed approaches.

**STRENGTHENING SECURITY MEASURES FOR DRUG AND
ALCOHOL PREVENTION IN TALIPAPA HIGH SCHOOL**

Yves Murillo, Benjie Gado, Jether Sarabia, Justin Pabuaya,
Mark Christian Tayag, Jinky Anacta

Abstract

The use and misuse of drugs and alcohol among teenagers is a growing global concern, especially in educational settings where young people spend much of their time. Talipapa High School, like many other institutions, is not exempt from these issues. Drug and alcohol use on school grounds poses serious risks to students' safety, health, and academic performance. It disrupts the learning environment, leading to absenteeism, disciplinary problems, and even criminal behavior. Strengthening security measures to prevent drug and alcohol use is vital to maintaining a safe and conducive learning environment. Schools are increasingly vulnerable to the infiltration of illicit substances, which threaten both student well-being and school order. This study aims to strengthen the security measures for drug and alcohol prevention in Talipapa High School. Specifically, it seeks to examine respondents' profiles in terms of age, sex, civil status, and educational attainment. The research involved seventy (70) participants divided into three (3) groups: sixty-three (63) teachers, three (3) non-teaching staff, and four (4) security personnel. This study employed a descriptive–evaluative research design, which involves collecting data to describe and analyze participants' current conditions. The approach uses empirical data to address the research problem without focusing on cause-and-effect relationships. Through the descriptive method, the researchers gathered and analyzed data to characterize the population and the factors influencing security measures against drug and alcohol use. Findings revealed that most respondents were aged nineteen to thirty-two (19–32), representing the largest age group among participants. The study emphasizes the importance of strengthening security measures to prevent drug and alcohol use at Talipapa High School. Improved monitoring, awareness programs, and collaboration among teachers, staff, and security personnel are essential to creating a safer school environment for all students.

Keywords: drugs, alcohol, adolescents, security measures

**STUDENT'S AWARENESS DURING FIRE EMERGENCIES AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Francis Dela Cruz, Armando Alvaro, Jared Lorence Tabasin, Reniel Nabutas,
Mark Joseph Salvador, Denise Anne Osorio

Abstract

The increasing incidence of fire emergencies in educational institutions highlights the urgent need for effective preparedness and response strategies. At Bestlink College of the Philippines, recent evaluations have revealed notable gaps in fire emergency awareness, particularly among students who lack adequate training in fire response procedures. Studies emphasize that an informed student body significantly contributes to campus safety. Integrating disaster risk reduction programs into the school curriculum has been shown to enhance awareness and empower students to respond appropriately during emergencies. This study aims to assess student awareness during fire emergencies and recommend appropriate actions to improve preparedness. The study employed a stratified purposive sampling technique to ensure representative feedback from both students and employees of Bestlink College of the Philippines. A total of 90 student respondents were selected to reflect varying levels of awareness and preparedness regarding fire emergencies. Data was gathered to evaluate the extent of student knowledge, preparedness, and the effectiveness of existing fire safety protocols within the institution. Findings revealed several critical issues. A significant number of students were unaware of evacuation procedures, while others did not take emergency preparedness training seriously. Many students reported experiencing panic during emergencies, complicating evacuation efforts. Additionally, the lack of a reliable communication system to alert students during fire incidents was identified. The school was also found to be inconsistent in conducting regular fire drills for both students and staff. The study emphasizes the need for immediate improvements in fire safety education and emergency preparedness. Recommended actions include the mandatory implementation of fire safety and emergency preparedness training for all students, conducting fire drills every semester, and integrating proper emergency response techniques into student orientation programs. Establishing a reliable communication system, such as digital alert technologies, is also essential for quickly disseminating information during emergencies. These initiatives aim to reduce panic, increase preparedness, and foster a safer learning environment at Bestlink College of the Philippines.

Keywords: fire emergency, student awareness, evacuation procedures, emergency preparedness, fire drills, campus safety, disaster risk reduction, criminology

**THE CAPABILITY OF BARANGAY PEACEKEEPING ACTION TEAM IN
IMPLEMENTING BARANGAY ORDINANCE NO.02 AN ASSESMENT**

Christian John Descaller, Joshua Lawrence Lacasandile, Danleo Fernandez,
Gerwin Bandigas, John Vincent Puod, Dr. Antonio Dawagan Sr.

Abstract

The Barangay Peacekeeping Action Team (BPAT) is responsible for community-based initiatives, conducting information drives to support the Philippine National Police (PNP) in their anti-crime efforts, preventing criminal activities, and resolving conflicts promptly. When necessary, cases may be escalated to the Barangay Justice System for proper handling. Coronavirus disease (COVID-19) is a newly identified virus that causes an infectious disease, with patients potentially developing mild to moderate respiratory infections and recovering without specific treatment. Barangay Tanods play a key role in maintaining peace and order. The BPAT is a national PNP program designed to empower communities to respond in real time to matters related to peace and order, security, or rescue. (Dizon, 2020) This study employed a quantitative research design, using simple random sampling to give each barangay police officer, also known as a barangay tanod, in Barangay Graceville, City of San Jose Del Monte, Bulacan, an equal chance of selection. The survey collected data on the demographic characteristics of the barangay police, as well as their strategies and behaviors in maintaining peace and order. This chapter details the research design, respondents, sampling technique, instruments used, construction and validation of research instruments, and the statistical treatment applied in the study. The data gathered were analyzed to answer the research questions and draw accurate conclusions. As indicated in the preceding chapter, data were interpreted in a descriptive correlational format. This chapter presents the procedures for reviewing and analyzing data, allowing researchers to categorize, manipulate, and summarize information to address key research questions. This chapter summarizes the study's findings, showing the outcomes related to the operations and effectiveness of the Barangay Peacekeeping Action Team, rather than providing conclusions or recommendations.

Keywords: peacekeeping, barangay ordinance, curfew

**THE CHALLENGES ENCOUNTERED BY THE BUREAU OF FIRE PROTECTION
PERSONNEL DURING FIRE INCIDENT IN BARANGAY
HOLY SPIRIT, QUEZON CITY**

Jerome Yasol, Bill Philip Ruiz, Terence Miranda, Mark Angel Postrano,
Juanito Pastrana, Dr. Myrna Cuntapay

Abstract

The Bureau of Fire Protection (BFP) plays a critical role in fire prevention, suppression, and rescue operations. However, BFP personnel frequently encounter challenges that hinder their operational effectiveness. These issues often arise from the geographical and infrastructural conditions of the area, such as narrow streets, obstructed access due to parked vehicles, and poorly designed building structures. In addition, the demanding physical and emotional nature of fire response work further complicates these efforts. This study investigates the challenges encountered by BFP personnel during fire incidents in Barangay Holy Spirit, Quezon City, to inform recommendations for improved emergency response. This study employs a descriptive research design to assess the operational difficulties faced by BFP personnel in Barangay Holy Spirit. A total of 50 respondents: including BFP officers, fire volunteers, and local residents, participated in the study. Data was collected through a structured survey questionnaire and were presented using tables and graphs to facilitate clear analysis and interpretation. Findings revealed that congested roadways, illegally parked vehicles blocking fire truck access, faulty electrical wiring, and lack of accessible fire exits were among the most common challenges encountered during fire incidents. Additionally, emotional fatigue among firefighters and psychological distress among residents emerged as significant factors affecting response effectiveness. These obstacles delayed emergency interventions and compromised both personnel safety and community welfare. The study highlights the urgent need for strategic solutions to address the operational challenges of BFP personnel. Issues related to urban layout, infrastructure deficiencies, and responder well-being were identified as critical areas for intervention. Recommendations include improving urban planning, enforcing strict parking and building regulations, and providing mental health support for responders and affected residents. Strengthening these areas will enhance fire response capabilities, reduce property damage, and improve public safety outcomes during fire emergencies.

Keywords: bureau of fire protection, fire response, urban congestion, emergency challenges, firefighter fatigue, building safety, quezon city, criminology

**THE CONTRIBUTION OF EDUCATION THROUGH VOCATIONAL TRAINING AMONG
PERSON DEPRIVED OF LIBERTY IN WOMEN’S DORMITORY, QUEZON CITY**

Ma Lovella Velado, Jewel Hearth Dalag, Claudel Dela Cruz,
Jeneva Delos Puyos, Pamela Valle, Dr. Myrna Cuntapay

Abstract

Education and vocational training are essential components of rehabilitation within correctional institutions, offering significant benefits not only to society but also to Persons Deprived of Liberty (PDLs). These programs contribute to the development of self-discipline, critical thinking, and personal growth, fostering a more optimistic outlook on life. Through structured learning and skill-building, PDLs are better equipped to reintegrate into society and pursue productive, law-abiding lives upon release. This study aims to assess the contribution of education and vocational training programs among PDLs in the Women’s Dormitory of Quezon City. A quantitative descriptive research design was employed, involving 40 PDLs and 10 jail officers selected through purposive sampling. The researchers gathered data through a structured survey, focusing on demographic variables such as age, gender, and civil status. After obtaining the necessary permissions from the Criminology Department of Bestlink College of the Philippines and the Quezon City Jail, the researchers distributed and collected survey forms. Respondents were briefed on the study's purpose and objectives before participating. The responses were then analyzed to evaluate the impact of the training programs. The findings revealed that education and vocational training provided in the facility encouraged PDLs to make positive life changes. Respondents agreed that these programs motivated them to pursue success post-release and contributed to their personal development and community reintegration. Statements such as “Education and job training help improve and adapt to the community” and “Getting education and training helps PDLs stay stable” reflected the positive outcomes. The study also highlighted communication challenges, particularly in understanding instructions and feedback, but noted improved peer communication among PDLs as a result of the programs. The study underscores the importance of expanding educational and vocational training opportunities to meet the diverse learning needs of PDLs. Active collaboration with families and institutional stakeholders is vital to support program implementation and sustainability. Future research should explore the personal experiences and perceptions of PDLs in these programs to gain deeper insights into their rehabilitation journey. These programs play a significant role in reducing recidivism and promoting successful reintegration into society.

Keywords: vocational training, education in correctional facilities, persons deprived of liberty, women’s dormitory, rehabilitation, criminology, community reintegration, inmate motivation

**THE EDUCATION PROGRAM'S POST RELEASE BENEFITS TO THE PERSON'S
DEPRIVED OF LIBERTY OF BUREAU OF JAIL MANAGEMENT
AND PENOLOGY AT VALENZUELA CITY**

Kathlyn Dapadap, Leah Liza Datu, Rica Joy Solio, Ivy Grace Macarayo,
Marjory Lenogon, Eduardo Villaruel

Abstract

Correctional education programs play a vital role in the rehabilitation and post-release success of Persons Deprived of Liberty (PDLs). These programs equip individuals with valuable skills and knowledge that enhance their employability and reduce the likelihood of recidivism. By fostering cognitive and behavioral changes, such as improved decision-making and self-discipline, education contributes significantly to personal growth and reintegration into society. Furthermore, it offers opportunities to acquire or strengthen essential academic skills, including reading, writing, and critical thinking, which are foundational to success in various aspects of life. This study employed a descriptive quantitative research design to assess the perceived post-release benefits of education programs for PDLs. A total of 50 respondents: 25 PDLs and 25 Bureau of Jail Management and Penology (BJMP) personnel, were selected using the snowball random sampling technique. Data was collected through a structured survey questionnaire focused on key dimensions such as behavior improvement, self-esteem, cognitive skills, and recidivism. The researchers secured permission from jail management prior to data collection and ensured respondent confidentiality during the survey process. The results showed a strong positive perception of the education program's benefits among respondents. In terms of improved behavior, the overall weighted mean rating was 3.656, interpreted as "strongly agree." Increased self-esteem received a rating of 3.604, also interpreted as "strongly agree." The reduction of recidivism was rated at 3.52, and enhancement of cognitive skills received 3.608, both likewise interpreted as "strongly agree." These findings indicate consistent support for the role of education in the rehabilitation of PDLs. The study confirms that education programs provide meaningful benefits to PDLs during and after incarceration. Respondents strongly agreed that such programs help develop essential life skills, including anger management, impulse control, and problem-solving, leading to better behavior. Educational achievement also boosts self-esteem and confidence, which are crucial for reintegration. Furthermore, by equipping PDLs with knowledge and competencies, these programs contribute to reducing the risk of reoffending. These findings highlight the importance of sustained support for education within correctional facilities to promote long-term rehabilitation and public safety.

Keywords: correctional education, persons deprived of liberty, post-release benefits, rehabilitation, self-esteem, cognitive skills, recidivism, bjmp, valenzuela city, criminology

**THE EFFECT OF CYBERBULLYING TO THE STUDENTS OF
BAGONG SILANGAN HIGH SCHOOL**

Rhoidryan Hamting, Mark Vincent Cadallo, John Vincent Padillo, Harvie Dave Caritan,
John Lorenz Macabinguil, Denise Anne Osorio

Abstract

This chapter discusses the growing prevalence and easy access to social media, which has contributed to cyberbullying among young people, including students at Bagong Silangan High School. The anonymity of digital platforms makes it difficult to identify and hold perpetrators accountable. Cyberbullying affects victims in multiple areas of their lives, including academic performance, social interactions, and personal relationships. The chapter also highlights how a lack of guidance and discipline online can influence students' social and academic well-being. This study employs a descriptive method, as defined by Shona M. (2020), to systematically examine the effects of cyberbullying on students at Bagong Silangan High School. A total of fifty (50) students were surveyed using systematic sampling to ensure a representative sample while maintaining the benefits of randomization. The study aims to provide insights into the emotional and academic impact of cyberbullying on the student population. The respondents included 25 male and 25 female students aged 14–19, with 46% aged 14–15 and 46% aged 16–17. Psychological effects of cyberbullying had a composite mean of 2.63 ("Agree"), with increased symptoms of depression and anxiety scoring 2.58 ("Strongly Agree"). Emotional effects scored a mean of 2.73, notably overthinking social interactions (2.84). Sociological effects had a mean of 2.74, reflecting increased secrecy about digital lives. Respondents emphasized victim empowerment strategies, such as blocking cyberbullies, and advocated preventive approaches based on empathy, like treating others as one would like to be treated. The study examines the effects of cyberbullying on students at Bagong Silangan High School, considering factors such as age, sex, educational attainment, and social context. Using a descriptive research approach, the researchers aim to understand the causes and consequences of cyberbullying and to promote awareness and strategies that help students cope with these challenges.

Keywords: cyberbullying, psychological, emotional, sociological, student

**THE EFFECTIVE CRIME PREVENTION STRATEGIES OF POLICE PERSONNEL IN
BARANGAY 167, LLANO CALOOCAN CITY: AN ASSESSMENT**

Lovely Labro, Janesa Acerden, Maria Elizabeth Galora, Rico Calbitaza,
Allaric Lei Dela Torre, Eduardo Villaruel

Abstract

Crime prevention has evolved from being solely a law enforcement responsibility to a broader, community-driven initiative. Modern approaches emphasize the importance of collaborative efforts between government agencies and local communities in addressing the root causes of crime. Crime prevention strategies not only help reduce criminal activity and victimization but also offer long-term social and economic benefits. In this context, police personnel play a vital role by enforcing laws and maintaining public order while also working alongside the community to proactively implement preventive measures. This study examines the effectiveness of crime prevention strategies used by police personnel in Barangay 167, Llano, Caloocan City, and assesses their impact on public safety. This research utilized a descriptive research design to evaluate the crime prevention strategies employed in the community. The study involved 30 police officers and 30 residents from Barangay 167, selected through purposive sampling based on their relevant knowledge and experience. Data were collected using unstructured interviews and a researcher-made questionnaire, which was validated by experts in criminology, grammar, and statistics. The responses were analyzed using rankings, frequencies, percentages, and weighted means to determine the perceived effectiveness of current strategies and identify existing challenges. The demographic profile showed that most respondents were female, aged 34–50, married, and college graduates. Both police officers and residents generally agreed that the crime prevention strategies implemented in the barangay were effective. These strategies included proactive policing, strengthened community relations, and collaborative crime prevention initiatives. However, the most frequently cited issue was the lack of new or updated crime prevention programs. Respondents suggested the need for increased community engagement through initiatives such as neighborhood watch programs and crime awareness campaigns. The findings emphasize that the success of crime prevention strategies in Barangay 167 is largely influenced by strong police-community partnerships. Strengthening these relationships through consistent outreach, public education, and collaborative initiatives can build trust and foster active citizen participation. The study recommends enhancing current crime prevention programs by involving residents more directly and promoting community-based approaches. Future research should explore underlying causes of crime, such as poverty and lack of education, to inform more sustainable and targeted prevention efforts.

Keywords: crime prevention, community policing, police-community relations, barangay 167, caloocan city, public safety, proactive policing, neighborhood watch, criminology, social engagement

**THE EFFECTIVENESS OF ANTI-ILLEGAL DRUG ABUSE STRATEGIES
IMPLEMENTED IN BARANGAY BAESA QUEZON CITY**

Jefferson Cabunagan, Ruelito Cagnan, Emerson Concha,
Jhon Felix III Jovita, Omar Majindi, Eduardo Villaruel

Abstract

This study focused on determining the effectiveness of anti-illegal drug abuse programs implemented in Barangay Baesa, Quezon City. It includes the background of the study, a review of related literature and studies, the theoretical and conceptual frameworks, the statement of the problem, assumptions of the study, the scope and delimitations, the significance of the study, and the definition of key terms. A descriptive quantitative approach was employed, utilizing purposive sampling to select 40 community members and 10 barangay officials as respondents. The assessment focused on three key areas: prevention strategies (including education campaigns and community outreach), enforcement strategies (such as intelligence operations, patrols, and surveillance), and partnership strategies (involving collaboration with various sectors and livelihood initiatives). Data were gathered using structured questionnaires and analyzed using statistical tools to determine perceived effectiveness. The majority of respondents (80%) were residents of Barangay Baesa, 58% were male, 14% were aged 28, and 30% were college graduates. Findings showed that the community generally viewed the anti-drug programs as highly effective. However, 32 respondents reported a lack of awareness regarding the roles and objectives of the Barangay Anti-Drug Abuse Council (BADAC). The study also identified the need for more inclusive scheduling to accommodate groups such as students and working individuals. Suggestions included outreach opportunities for criminology students to gain experience in prevention, counseling, and rehabilitation efforts. While the current anti-illegal drug strategies in Barangay Baesa yielded positive outcomes, the study highlights the importance of improving public awareness of BADAC's functions and promoting broader community involvement. Recommendations include launching community-based initiatives such as youth clubs and neighborhood watch groups to strengthen grassroots engagement. Schools and academic institutions are encouraged to partner with the barangay to raise awareness and build long-term anti-drug advocacy. These enhancements aim to ensure greater program sustainability, effectiveness, and a stronger sense of community ownership.

Keywords: anti-illegal drug programs, barangay baesa, badac, drug prevention, community engagement, enforcement strategies, awareness campaigns, criminology, livelihood initiatives, quezon city

**THE EFFECTIVENESS OF ANTI-VIOLENCE AGAINST WOMEN AND THEIR
CHILDREN AWARENESS IN BARANGAY KALIGAYAHAN, QUEZON CITY**

Jibelen Agustin, Francis - Ann Jorta, Evelyn Lazo, Rechelle Pasia,
Lian Pearl Tomo, Dr. Antonio Dawagan Sr.

Abstract

Violence against women and their children (VAWC) continues to be a significant concern in the Philippines. Republic Act No. 9262, or the Anti-VAWC Act of 2004, was enacted to address the rising incidence of abuse inflicted by intimate partners, which includes physical, sexual, psychological, and economic harm, as well as threats, coercion, harassment, or unjust deprivation of liberty. This study aims to evaluate the effectiveness of anti-VAWC awareness efforts in Barangay Kaligayahan, Quezon City, and to determine how well these initiatives promote safety, protect rights, and prevent abuse. This study uses a qualitative research design to assess the impact of anti-VAWC awareness programs in Barangay Kaligayahan. A total of 50 participants were purposively selected and categorized into three groups: two barangay officials involved in VAWC-related services, three officers from the Women and Children Protection Center (WCPC), and 45 residents of Barangay Kaligayahan. The research investigates program strengths, weaknesses, and areas for improvement, aiming to ensure that women and children live in a community where their rights are respected and their safety is prioritized. Findings revealed that the majority of respondents were female, married, aged 51 and above, and high school graduates. Respondents strongly agreed with the overall effectiveness of anti-VAWC awareness programs, particularly in terms of confidentiality, operational procedures in handling VAWC cases, and general awareness. The effectiveness of the anti-violence against women and their children programs in raising awareness of VAWC programs, maintaining confidentiality, and following operational procedures in VAWC cases was rated as “Strongly Agree,” except for the indicator on the elimination of VAWC cases (indicator 2.4.1), which measures the decrease in the number of VAWC cases reported in the community. This suggests that preventive efforts require strengthening. Commonly reported issues included a shortage of educational campaigns, infrequent workshops and seminars, insufficient barangay funding, lack of livelihood programs for women, low community participation, and the absence of a dedicated anti-VAWC task force, resulting in delayed response to cases. The study concludes that while anti-VAWC programs in Barangay Kaligayahan are viewed as effective by the community, there are significant gaps that need to be addressed. The researchers recommend that barangay officials and WCPC personnel intensify educational campaigns and awareness efforts, allocate sufficient resources, and establish a dedicated task force to ensure faster and more effective response to VAWC incidents. Strengthening community engagement and providing sustainable livelihood opportunities for women can further support the goals of anti-VAWC initiatives.

**THE EFFECTIVENESS OF BARANGAY COUNCIL FOR THE PROTECTION OF
CHILDREN PROGRAMS AT BARANGAY BAGONG SILANGAN, QUEZON CITY**

Prince Lhoyd James Agustin, Jan Yna Nathaniela Garcia, Dianne Matcho,
Michaela April Pelayo, Dr. Myrna Cuntapay

Abstract

The Barangay Council for the Protection of Children (BCPC) is tasked with organizing and implementing child-focused initiatives, resolving child-related issues, and promoting children's welfare at the grassroots level. Chaired by the barangay captain and composed of various community members, the BCPC works on the prevention of juvenile delinquency, stakeholder coordination, child-friendly policy advocacy, program implementation and monitoring, and community engagement. This study evaluates the effectiveness of BCPC programs in Barangay Bagong Silangan, Quezon City, based on respondent profiles such as age, sex, civil status, and educational attainment. It also identifies program challenges and proposes improvements to strengthen effectiveness. The study utilized a quantitative research approach, specifically a descriptive research design, to assess the effectiveness of BCPC programs. A structured survey questionnaire was distributed to 50 respondents, composed of 10 BCPC staff and 40 residents of Barangay Bagong Silangan. The descriptive method allowed the researchers to examine multiple variables without manipulation, focusing on how the community perceives the impact and implementation of child protection programs. The majority of respondents were female, aged 18–23, and high school graduates. Results indicated that the BCPC programs were perceived as very effective across several dimensions: prevention of juvenile delinquency, coordination with stakeholders, advocacy for child-friendly ordinances, program implementation and monitoring, and community participation. Despite these positive evaluations, respondents noted areas for improvement in outreach and inclusivity. The study recommends that the BCPC enhance its efforts through workshops, seminars, and awareness campaigns that emphasize the protection and rights of children. Expanding anti-child abuse initiatives and empowering families as the foundation of child development are essential to creating safe and nurturing environments. Additionally, the study encourages the dissemination of program information not only through social media but also via visible public postings throughout the community. These strategies aim to broaden the program's reach and promote stronger community involvement.

Keywords: child protection, bcpc, juvenile delinquency, community participation, barangay programs, child rights, program monitoring, criminology, quezon city, stakeholder coordination

THE EFFECTIVENESS OF BARANGAY DISASTER RISK REDUCTION MANAGEMENT STRATEGIES IN BARANGAY HOLY SPIRIT QUEZON CITY

Mark Anthony Pedralvez, John Kenneth Abando, Jefzey Paul Mahilum,
Jake Torres, Andrian Vicio, Denise Anne Osorio

Abstract

This study investigates the effectiveness of Barangay Disaster Risk Reduction Management (BDRRM) strategies in Barangay Holy Spirit, Quezon City, a community vulnerable to natural and human-induced hazards such as flooding, earthquakes, fires, and epidemics. Disaster preparedness and risk mitigation are essential in minimizing the adverse effects of such events. The study aims to evaluate the perceived effectiveness of BDRRM efforts across four key components: preparation, response, recovery, and mitigation. It also seeks to identify implementation challenges and propose recommendations to improve disaster management at the barangay level. A descriptive research design was employed to assess BDRRM strategies. The study involved two groups of respondents: 40 residents and 10 BDRRM officers from Barangay Holy Spirit. Participants were selected through purposive sampling. Data were gathered using structured survey questionnaires and analyzed using frequency distribution, weighted mean, Likert scale, and ranking techniques to evaluate the effectiveness of disaster preparedness and response measures. The majority of respondents were male, aged 18–25, and college graduates. Findings indicated general agreement regarding the effectiveness of BDRRM strategies, particularly in terms of community preparation, emergency response, and post-disaster recovery. However, significant challenges were also identified. These included poor road infrastructure, inadequate drainage systems, limited resources, and a lack of trained personnel, factors that hinder effective implementation of disaster risk reduction programs. The study highlights the need for continuous improvement in BDRRM implementation through investment in critical infrastructure, sufficient resources, skilled personnel, and reliable communication systems. Addressing poor road conditions and drainage issues, expanding training programs, and enhancing early warning mechanisms are essential to strengthening community resilience. While the current strategies in Barangay Holy Spirit have demonstrated effectiveness, greater community involvement and sustained institutional support are necessary to overcome existing gaps and ensure long-term disaster preparedness.

Keywords: disaster risk reduction, bdrmm, community resilience, preparedness, emergency response, infrastructure, quezon city, barangay holy spirit, criminology, risk mitigation

**THE EFFECTIVENESS OF BARANGAY OFFICIALS IN IMPLEMENTING ORDINANCE
NO. SANGGUNIANG PANLUNGSOD-2301 IN PROMOTING PUBLIC SAFETY**

Juliana Marie Pesito, Benjamin Jr. Banate, Joyceanne Gloriane,
Leny Gregorio, Angel Rose Maarat, Dr. Antonio Dawagan Sr.

Abstract

This chapter presents the background of the study, related literature and related studies, theoretical framework, conceptual framework, statement of the problem, assumptions, scope and limitation of the study, significance of the study, and definition of terms. A descriptive research design was utilized, incorporating surveys, interviews, and document analysis. Survey questionnaires served as the primary data collection tool, distributed to residents, barangay officials, and police officers to assess the implementation of the curfew policy. The questions measured compliance levels, community awareness, perceived changes in youth behavior, and the overall impact on public safety. The combination of data sources provided a quantitative and qualitative understanding of the ordinance's effectiveness and areas for improvement. Findings indicated that while efforts to implement the ordinance have had a positive effect on public safety, several areas require enhancement. These include the need for stricter yet fair enforcement practices, clear communication of rules, consistent community education, and well-trained personnel. Respondents also cited the lack of necessary resources such as patrol vehicles, sufficient barangay security personnel, and emergency response tools. To address these issues, the study suggests increasing the barangay's budget allocation and promoting strategic partnerships with the local government and private sector. Transparency and accountability in resource management were also highlighted as essential components for sustaining public trust. The study concludes that the implementation of Ordinance No. SP-2301 plays a vital role in promoting public safety, but its effectiveness depends on proper enforcement, adequate resources, and active community involvement. Recommendations include expanding public awareness campaigns, providing additional training for barangay enforcers, and enhancing coordination between law enforcement and local stakeholders. Addressing these factors will strengthen ordinance implementation, reduce curfew violations, and contribute to a safer community in Barangay Sauyo, Quezon City.

Keywords: public safety, barangay ordinance, curfew for minors, community policing, youth behavior, sp-2301, barangay sauyo, law enforcement, criminology, quezon city

**THE EFFECTIVENESS OF BARANGAY-BASED DISASTER RISK REDUCTION ACTION
PLAN IN BARANGAY 178 CAMARIN, CALOOCAN CITY**

John Carlo Del Valle, Jerric Anecito, Kenneth Gabronino, Jorry Jay Lequiron,
Jason Ramasta, Esmeraldo Rebusa Jr, Ms. Jinky Anacta

Abstract

Barangay 178 in Camarin, Caloocan City, is highly vulnerable to various disasters such as typhoons, fires, and earthquakes. Typhoons pose the greatest risk due to the community's proximity to a river that frequently overflows during extreme weather, resulting in severe flooding. Fire hazards are also prevalent, largely caused by exposed and tangled electrical wiring. These conditions highlight the urgent need for effective and localized disaster risk reduction and management (DRRM) strategies. This study aims to evaluate the effectiveness of the barangay-based DRRM action plan in addressing the community's specific vulnerabilities. A descriptive research design was employed to assess the implementation and effectiveness of the DRRM action plan in Barangay 178. Respondents included residents selected through purposive sampling. Data were gathered using structured questionnaires focusing on community awareness, preparedness, and participation in disaster planning and response activities. Statistical tools such as frequency distribution and percentage were used to analyze respondent demographics and their perceptions of DRRM strategies. The majority of respondents were aged 18–25, accounting for 38.67% of the total, while the lowest percentage, 7 respondents or 5%, were aged 42–50. Most respondents are single, representing 66.67%, followed by married respondents at 24 respondents or 32%, with separated individuals as the lowest category. Regarding educational attainment, the highest level among respondents is college, at 36%, while the lowest levels are elementary graduates and master's/postgraduate holders. Most respondents in Barangay 178, Camarin, Caloocan City strongly agreed on the importance of community involvement in disaster planning, while specific disaster risks requiring focused action received the lowest response. The study emphasizes the need for continuous disaster preparedness initiatives, including regular training and information dissemination among barangay personnel. Strengthening pre-disaster planning and securing adequate funding are essential to improving the overall effectiveness of the action plan. Encouraging greater resident participation and interagency coordination will enhance readiness and response efforts. Future researchers are encouraged to assess comparative disaster risk management outcomes across different barangays. Furthermore, government agencies are urged to provide consistent financial and technical support to build more resilient and disaster-ready communities.

Keywords: disaster risk reduction, barangay 178, community preparedness, flooding, fire risk, local drrm strategies, caloocan city, community involvement, emergency planning, criminology

THE EFFECTIVENESS OF BARANGAY-LEVEL INTERVENTION PROGRAMS IN ADDRESSING DOMESTIC VIOLENCE IN FAIRVIEW QUEZON CITY: AN ASSESSMENT

Jenifer Noilan, Mary Joyce Galo, Danica Soriano, Erald Bacaran,
Prince Cabang, Dr. Antonio Dawagan Sr.

Abstract

Domestic violence remains a critical social issue affecting numerous families across the Philippines, including those in Barangay Fairview, Quezon City. It occurs when a family member inflicts physical, emotional, psychological, or economic harm on another, often within the confines of the home. Addressing this issue at the grassroots level is essential, and this study aims to assess the effectiveness of barangay-level intervention programs designed to respond to and mitigate domestic violence within the local community. This study utilized a descriptive research design to evaluate the effectiveness of domestic violence intervention programs. Descriptive statistics were employed to summarize the key features of the collected data. A total of 50 respondents were purposively selected and divided into two groups: 10 barangay personnel directly involved in handling domestic violence cases and 40 victims of domestic violence who had reported their cases to the barangay. Data were gathered through structured questionnaires, and results were analyzed using frequency distribution, weighted mean, and table presentations. Findings showed that respondents generally perceived the intervention programs as effective, with an overall weighted mean of 3.45. The highest-rated indicator, “Domestic violence cases in our barangay are resolved within a reasonable time frame” (WM = 3.50), indicates confidence in the prompt handling of cases. However, the lowest-rated indicator, “Follow-up actions are consistently implemented after case resolution” (WM = 3.40), highlights a need for improvement in providing continuous support and monitoring after initial case closure. The study concludes that barangay-level intervention programs in Barangay Fairview are effective in addressing domestic violence, particularly in the timely resolution of reported cases. However, the findings also suggest a gap in long-term victim support, as follow-up actions are not consistently implemented. It is recommended that barangay officials strengthen post-resolution services through sustained counseling, monitoring, and reintegration programs to ensure comprehensive victim protection and recovery.

Keywords: domestic violence, barangay intervention, victim support, case resolution, criminology, fairview, quezon city, community-based programs, gender-based violence, descriptive research

**THE EFFECTIVENESS OF BODY WORN CAMERAS IN
PHILIPPINE NATIONAL POLICE OPERATION**

Daniel Gorembalem, Daniel Gorembalem, Nico Limpiado, Nicolas Madsen,
Reyniel Dela Peña, Grelin Coli Perez, Dr. Antonio Dawagan Sr.

Abstract

This chapter presents the background of the study, a review of existing literature, theoretical perspectives, the problem statement, assumptions of the study, significance of the study, and definitions of key terms. It also provides an overview of the research methodology, including data collection and analysis. This structure helps clarify the study's objectives and significance, allowing readers to understand the core focus and potential contributions of the research. This chapter outlines the research methodology, including the research design, respondents, sampling technique, instruments used, construction and validation of instruments, administration and retrieval of instruments, and statistical treatment of data. This chapter presents the results and discussion of the data analysis regarding the effectiveness of body-worn cameras in Philippine National Police operations. The purpose of this chapter is to summarize the findings of the study, highlighting what the research suggested, revealed, or indicated. This focuses on the overall outcomes rather than drawing specific conclusions or recommendations.

Keywords: body-worn cameras

**THE EFFECTIVENESS OF BUREAU OF FIRE PROTECTION CONTINGENCY PLAN
DURING NATURAL CALAMITY IN SELECTED BARANGAY IN VALENZUELA CITY**

Rica Mae Panes, Szairielle Ignacio, Richard Iraya, Marren Ladub,
Alexis Lontoc, Irene Gaviola

Abstract

This study evaluates the effectiveness of the Bureau of Fire Protection (BFP) contingency plan during natural calamities in selected barangays in Valenzuela City. The research focuses on assessing the BFP's preparedness, emergency response, and post-disaster evaluation strategies. It aims to identify strengths and areas for improvement to enhance overall disaster management efforts and community safety during emergencies. A quantitative research design was employed, involving 50 purposively selected respondents: 40 residents and 10 BFP officers, with direct experience in BFP disaster response operations. Data was collected using a structured survey questionnaire, measuring key indicators such as emergency drills, risk assessment, personnel deployment, resource allocation, and post-disaster evaluation. Statistical tools were used to analyze respondent perceptions and evaluate the effectiveness of current contingency practices. The findings revealed that the BFP performs effectively in terms of personnel deployment and coordination with local government agencies. However, challenges persist in the areas of resource distribution, accurate risk assessment, and public disaster awareness. Communication gaps, limited training programs, and insufficient equipment were identified as key barriers to optimal performance. Additionally, post-disaster evaluations pointed to the need for improved data collection and analysis to enhance future response strategies. The study concludes that while the BFP's contingency plan shows operational strengths, its effectiveness can be further improved by addressing gaps in training, resource management, and inter-agency coordination. Recommendations include expanding training programs, securing adequate disaster response equipment, improving communication protocols, and increasing community education on disaster preparedness. These measures can contribute to a more resilient and responsive disaster management framework for Valenzuela City.

Keywords: bureau of fire protection, contingency plan, disaster preparedness, natural calamities, emergency response, risk assessment, public awareness, valenzuela city, criminology, disaster management

**THE EFFECTIVENESS OF COMMUNITY BASED DIVERSE INTERVENTION
PROGRAMS FOR CHILD IN CONFLICT WITH THE LAW**

Reneil Flores, Jasyson Faustine Dela Merced, Jamilla Pagtanan, Kean Anjhelo Isla,
Regine Lagaman, Mira Regine, Dr. Antonio Dawagan Sr.

Abstract

This study examines the effectiveness of community-based intervention programs in San Jose del Monte, Bulacan, aimed at rehabilitating children in conflict with the law (CICL). It focuses on parenting programs, education, vocational training, and community interventions. The research highlights the importance of a holistic approach involving social workers, families, and the community to achieve sustainable rehabilitation and reintegration outcomes. To understand the effectiveness of diverse community-based intervention programs for CICL, a structured research approach was employed. This chapter outlines the methodology, including research design, respondent selection, sampling techniques, instrument construction and validation, data collection procedures, statistical treatment, and ethical considerations. The findings show that parenting programs are effective, with a score of 4.1, though parental attendance remains a challenge. Implementing flexible scheduling, home-based learning, or digital platforms, such as recorded sessions or online support groups, could improve participation. Community-based interventions scored 4.3, indicating they are very effective; these programs should be expanded with more resources, trained facilitators, and partnerships with local organizations to enhance outreach and sustainability. Educational and vocational training programs scored 4.0, showing effectiveness, but strengthening these programs could provide juveniles with better opportunities for reintegration. Collaborations with businesses and training centers could improve job placement rates for program graduates. This chapter analyzes the study's findings on the effectiveness of community-based interventions for CICL in San Jose del Monte, Bulacan. It interprets how parenting programs, community-based support, and educational and vocational training contribute to the rehabilitation and reintegration of children in conflict with the law, highlighting strategies to enhance participation, sustainability, and long-term outcomes.

Keywords: child conflict, intervention, law

**THE EFFECTIVENESS OF COMMUNITY PARTICIPATION IN ENHANCING CRIME
PREVENTION MEASURE IN NORTH OLYMPUS BARANGAY
KALIGAYAHAN QUEZON CITY**

Ailyn Plaza, Michelle Artita, Vhalery Heart Evangelista,
Marisol Jamolod, John Paul Libroso, Jinky Anacta

Abstract

Crime prevention is a multifaceted challenge that requires a comprehensive approach. While law enforcement plays a critical role, the effectiveness of crime prevention strategies is significantly enhanced by active community participation. This study explores the partnership between communities and authorities in combating crime, highlighting the benefits of community involvement in crime prevention initiatives. It examines how citizen engagement can contribute to a safer society and influence crime rates. This study used a descriptive research design to determine the effectiveness of community participation in enhancing safety measures in North Olympus, Barangay Kaligayahan, Quezon City. The respondents included thirty-seven (37) residents actively participating in crime prevention measures, eight (8) barangay officials, and five (5) law enforcement officers. Data was collected to assess community participation and crime prevention strategies. The findings reveal the profile of respondents: in terms of age, 18–25 years had 19 respondents (38%), 26–33 years had 13 respondents (26%), 34–41 years had 9 respondents (18%), 42–50 years had 6 respondents (12%), and 51 years and above had 3 respondents (6%). Regarding sex, 28 respondents (56%) were male, and 22 (44%) were female. In terms of civil status, 24 respondents (48%) were single, and 22 (22%) were married. The respondents strongly agreed on the effectiveness of community participation in terms of partnership, problem-oriented policing, and community engagement. The main challenge identified was that residents are often busy and may not prioritize attending meetings. Based on the findings, the data collected was valid and reliable. Community participation in North Olympus, Barangay Kaligayahan, Quezon City, was assessed as “Strongly Agree” in promoting partnership, problem-oriented policing, and active community engagement. However, time constraints and busy schedules among residents remain a key challenge that may limit full participation in crime prevention initiatives.

Keywords: crime prevention, community participation, safety

**THE EFFECTIVENESS OF COMMUNITY-BASED DIVERSION PROGRAM FOR
CHILDREN IN CONFLICT WITH THE LAW IN BATASAN HILLS, QUEZON CITY**

Abygail Garcia, Rizza Mae Cuevas, Cassandra Estember, Rosewill Joanna Gomez,
Jhona Mae Palanas, Irene Gaviola

Abstract

Children in conflict with the law (CICL), or individuals under 18 who engage in unlawful behavior, remain a growing concern globally. In the Philippines, underlying issues such as poverty, lack of access to education, and unstable family environments contribute to delinquency among youth. While interventions such as the community-based diversion program implemented by the Social Services and Development Department (SSDD) aim to address this issue, challenges persist. These include insufficient funding, weak interagency coordination, and inconsistencies in implementation. This study aims to assess the effectiveness of the community-based diversion program for CICL in Batasan Hills, Quezon City. This study utilizes a descriptive research design and employs purposive sampling to identify respondents. Participants include thirty (30) social workers, ten (10) law enforcers, and ten (10) barangay officials from Batasan Hills, Quezon City. Survey questionnaires were personally distributed and retrieved by community professionals and residents involved in child welfare efforts. Findings revealed that the majority of respondents were aged 26 to 33, with an equal gender distribution. Most respondents were college graduates and had served for between one to three years. The community-based diversion program was generally evaluated as "Very Effective" across several key areas. Psychological rehabilitation received a weighted mean of 3.26, and physical rehabilitation 3.24. Pre-admission and post-program services were rated 3.365 and 3.396, respectively. Government and non-government organizations scored 3.429 and 3.372, respectively, indicating strong perceived effectiveness. Identified challenges included limited NGO involvement in legal aid, insufficient employment opportunities, and weak follow-up mechanisms. Suggested improvements focused on enhanced interagency collaboration, expanded counseling services, and increased legal support through NGO partnerships. The findings suggest that the community-based diversion program is effective in supporting the rehabilitation and reintegration of CICLs. However, to strengthen its impact, consistent delivery of services before and after the program must be maintained. Strengthening partnerships between government and non-government organizations is essential to overcome existing barriers and to support lasting behavioral change among CICLs. These improvements aim to empower youth in their reintegration journey and reduce the likelihood of recidivism.

**THE EFFECTIVENESS OF CRIME INTERVENTION PROGRAM ON
PREVENTING CRIME IN NOVALICHES PROPER, QUEZON CITY**

Charlie Brazal, Jonel Camposano, Paolo Fetalvero, Janno Prote,
John Victor Ton, Mark Josehp Yabut, Eduardo Villaruel

Abstract

The purpose of this study is to determine the effectiveness of crime intervention programs in preventing crime in Novaliches Proper, Quezon City. It focuses on three main areas: rationalized patrol plans, logistical requirements, and community policing. The study also aims to identify the demographic profile of the respondents, including age, sex, and civil status, and to determine how they assess the effectiveness of crime intervention programs in terms of these three components. The researchers involved a total of fifty (50) participants residing in Novaliches Proper, Quezon City. The respondents included ten (10) police officers and forty (40) residents. A questionnaire was used as the main research instrument to gather data and obtain information relevant to the objectives of the study. The results showed that active involvement in crime prevention, collaboration with neighborhood organizations, and regular evaluation of intervention programs were among the main recommendations provided by the respondents. Findings indicated that inadequate crime prevention programs had a frequency of 39, equivalent to 10.77%. The recommendations that ranked highest in enhancing the effectiveness of crime prevention programs included encouraging community members to participate in crime prevention through neighborhood watch and community policing, partnering with local organizations such as schools, churches, and community centers to provide resources and support, and regularly evaluating intervention programs to assess their effectiveness and identify areas for improvement. These strategies obtained the highest frequency of 49, equivalent to 10.86%, emphasizing the importance of community collaboration in crime prevention.

**THE EFFECTIVENESS OF CRIME MAPPING ON PREVENTING CRIME
AT WEST FAIRVIEW POLICE STATION 5**

Jhon Cresfil Chead Tabasa, Amadeous John Caballes, Selwyn Jade Cudada,
Reybian Dave Laganian, Alfie Torillas, Nilmar Plata

Abstract

Crime remains a persistent concern in urban areas, demanding innovative and data-driven approaches to enhance public safety. Crime mapping, which utilizes Geographic Information Systems (GIS) to visualize crime patterns and identify high-risk areas, has emerged as an effective strategy. This study investigates the effectiveness of crime mapping as a tool for crime prevention at West Fairview Police Station 5 in Quezon City. It examines how the station implements crime mapping in daily operations, evaluates its impact on policing strategies, and identifies challenges encountered in its application. This study adopts a quantitative research approach and gathers data from fifty (50) respondents in Barangay West Fairview. The sample includes ten (10) police officers, ten (10) barangay officials, and thirty (30) residents. The survey focused on four key variables: Research and Analysis, Community Engagement, Crime Prevention, and Logistics. Most respondents were aged 18 to 25, predominantly female, single, and college educated. The findings revealed that the majority of respondents acknowledged the value of crime mapping in enhancing crime prevention efforts and promoting community participation. However, technical difficulties related to crime mapping software emerged as the primary challenge, limiting its full potential. Respondents recommended increasing public awareness through outreach programs, updating software systems, improving data accuracy, optimizing databases, and seeking vendor assistance to address recurring technical issues. Based on the results, the study proposes several recommendations. Community members should be educated and engaged in using crime mapping tools to identify hotspots and contribute to safety initiatives. Police officers must enhance their competencies in data analysis and GIS to ensure accurate crime tracking and strengthen community relations. Barangay officials are encouraged to collaborate with law enforcement in utilizing crime maps for efficient deployment of resources. Criminology students should receive practical training to bridge theory and fieldwork. Moreover, researchers are urged to utilize crime mapping for evidence-based public safety studies, while future researchers are encouraged to focus on improving spatial analysis methods and advancing GIS technologies for more accurate and insightful crime trend analysis.

Keywords: crime mapping, crime prevention, geographic information systems, community engagement, police strategy, west fairview, public safety, criminology, urban crime, spatial analysis

**THE EFFECTIVENESS OF DIGITAL FORENSIC FOR CRIME SCENE INVESTIGATION
BY THE PNP CYBER FORENSIC, CAMP CRAME**

Shannon Mae Demate, Kathlyn Faei Fillalan, Julia Robert Francisco,
Joey Ibarra, Trishia Rivero, Eduardo Villaruel

Abstract

This chapter presents the background of the study, a review of related literature and studies, the theoretical and conceptual frameworks, the statement of the problem, the scope and delimitations of the study, the significance of the study, and the definition of key terms. Modern crime scene investigations increasingly rely on digital forensics, reflecting the growing use of technology and the internet for both criminal and personal purposes. For the Philippine National Police (PNP), digital forensics has become a critical component of criminal investigations, particularly at Camp Crame, the PNP's national headquarters. This study employs a descriptive quantitative research design through the use of surveys. It aims to determine the extent to which key variables are related to the effectiveness of digital forensics in crime scene investigation. The survey instrument underwent validation and was administered to selected respondents involved in cybercrime investigations at Camp Crame. Data was collected, organized, and statistically treated to draw conclusions about the program's performance and areas for improvement. Findings revealed that while digital forensic practices are recognized as effective in supporting investigations, limited access to advanced forensic tools and equipment remains a major challenge. Respondents emphasized the importance of leveraging reliable, free, and open-source digital forensic tools to address financial limitations without compromising the integrity of investigations. The results also highlighted a need for greater training and technical support to enhance operational capacity. The study concluded that the effectiveness of digital forensic practices at the PNP Cyber Forensic Unit can be improved through expanded access to forensic tools, enhanced officer training, and stronger institutional support. It recommends the development of an action plan aimed at equipping police officers with the necessary skills and resources to conduct efficient digital investigations. Addressing the identified barriers will significantly enhance the unit's capability in handling technologically driven crimes and maintaining the integrity of digital evidence.

Keywords: digital forensics, crime scene investigation, cybercrime, pnp cyber forensic, camp crame, law enforcement, open-source tools, criminal investigation, criminology, digital evidence

**THE EFFECTIVENESS OF DOÑA CARMEN SUBDIVISION HOME SECURITY
MEASURES IN PREVENTING CRIME INCIDENTS**

Jade Christian Sunga, Virgil Luis Anog, Jhanrey Jimenez, John Daryl Loremia,
Cris Mag-ugat, David Joseph Villanueva, Jinky Anacta

Abstract

Quezon City, with its complex urban environment, continues to face persistent challenges in public safety. Within this context, Doña Carmen Subdivision in Barangay Commonwealth serves as a valuable case for assessing the role of residential security systems. This study evaluates the effectiveness of specific home security measures including security locks, lighting, surveillance cameras, and alarm systems, in preventing crime incidents. The findings aim to guide local authorities and homeowners toward more secure and resilient living conditions. A descriptive-quantitative research design was utilized in the study. A total of 100 respondents participated: 80 homeowners selected through simple random sampling and 10 police officers and 10 barangay officials selected through total enumeration. Structured survey questionnaires were administered and retrieved with a 100% response rate. The data were analyzed using frequency counts, percentages, and weighted means. The results indicated that security locks were considered the most effective measure (mean = 3.76), followed by alarm systems and security cameras (both with a mean of 3.49), while security lighting also received a favorable rating (mean = 3.22). The primary challenges identified in implementing these systems included reliance on electricity and internet connectivity (86%), system complexity (83%), and financial constraints (81%). Social awareness and engagement were found to be lesser but still relevant concerns. The findings suggest that while residents recognize the benefits of modern home security technologies, adoption is hindered by technical and financial limitations. A holistic approach to home security, combining technology, physical safeguards, and community collaboration, is recommended. Residents expressed support for enhanced entry-point reinforcement, CCTV installations, and stronger partnerships with local law enforcement. Future research is encouraged to explore long-term outcomes and expand the scope of community-based safety initiatives.

**THE EFFECTIVENESS OF ENHANCED HAND TO HAND COMBAT TRAINING DURING
CIVIL DISTURBANCE MANAGEMENT OPERATION IN QUEZON CITY: AN
ASSESSMENT**

Juvir Lamoste, Julius Czar Añonuevo, Rod Rico Ayeras, Elmor Bicera,
John Paul Domingo, Rundil Go, Eduardo Villaruel

Abstract

This study was conducted to enhance and develop the hand-to-hand combat or martial arts skills of law enforcement officers at Police Station 6 in Barangay Batasan Hills. Some situations do not require the use of firearms, and officers must be prepared to protect themselves and others using non-lethal methods. Well-trained officers in martial arts can respond more efficiently to various incidents, including controlling crowds and handling crimes that do not involve firearms. The study also addresses the safety of police officers deployed during rallies, where protesters may engage in physical confrontations. The aim is to equip officers with the skills to defend themselves and prevent physical harm from occurring during such events. This study details the research design, respondents, sampling technique, instrument construction and validation, administration and retrieval of instruments, and statistical treatment of data. This chapter presents tables, data analysis, and interpretation of the information gathered. It includes the respondents' profiles, survey questions, and the statistical methods used in the study. This chapter summarizes the findings, draws conclusions from the results, and provides recommendations based on the study's outcomes. It presents a comprehensive summary and addresses the research questions stated in Chapter 1.

Keywords: civil disturbances management operation, hand-to-hand combat training

THE EFFECTIVENESS OF JAIL OFFICERS IN REDUCING PRISON VIOLENCE IN QUEZON CITY JAIL MALE DORMITORY IN BARANGAY PAYATAS

Shaira Mae Guzman, Paula Mae Carodan, Nikki Marielle Eviota, Raisa Julag-ay,
Anthonette Vallesterio, Nilmar Plata

Abstract

This study aims to assess the effectiveness of jail officers in reducing prison violence within the Quezon City Jail Male Dormitory (QCJMD) located in Barangay Payatas. Although prison violence cannot be completely eradicated, the Bureau of Jail Management and Penology (BJMP) acknowledges that it can be mitigated through appropriate measures. Common issues include fights, theft, and the creation of contraband items such as improvised weapons and gambling materials. With limited existing research focused on QCJMD, this study provides important insights into the practices and challenges of managing violence in newly developed detention facilities. A descriptive research design was used to evaluate the frequency of prison violence and the effectiveness of jail officers. Simple random sampling was employed to ensure fairness and minimize bias. The respondents included twenty (20) jail officers, fifteen (15) people deprived of liberty (PDLs), and fifteen (15) PDL visitors, totaling fifty (50) participants. Data were gathered using a researcher-made survey questionnaire and were analyzed through statistical treatment to determine levels of agreement and identify recurring problems. The findings showed that respondents agreed on the effectiveness of jail officers in maintaining the health and well-being of PDLs. Meanwhile, other variables such as economic support, facility conditions, and logistical resources received “strongly agree” ratings. The most commonly cited problem was limited funding for PDL support, facility improvement, and personnel. Among the proposed interventions, respondents emphasized the importance of providing mental health awareness programs for PDLs as a preventive approach to reduce violence. The study recommends that the BJMP leadership enhance jail management strategies, update policies, and strengthen officer training to address prison violence effectively. Jail officials must continually evaluate their operational performance, while PDLs should be encouraged to provide feedback to improve safety. Barangay officials are urged to develop more effective PDL rehabilitation and treatment programs. Community involvement is also essential in supporting PDL reintegration, particularly in employment opportunities. Furthermore, students should be educated on jail conditions to foster awareness. Future researchers are encouraged to further investigate jail officer effectiveness, while law enforcement agencies such as the PNP, BUCOR, and NBI should reinforce staffing and collaboration efforts. Finally, the Quezon City Government is urged to enact policy reforms, initiate relevant programs, and allocate adequate funding.

Keywords: jail officers, prison violence, quezon city jail, persons deprived of liberty, correctional management, bjmp, jail conditions, mental health programs, rehabilitation, criminology

**THE EFFECTIVENESS OF MANDALUYONG CITY BUREAU OF FIRE PROTECTION
FIRE AWARENESS CAMPAIGN: AN ASSESSMENT**

Mark Joseph Bragais, Almer Ablijena, Paulo Caseres,
Christian Lee, Jeffrey Nonesco, Nilmar Plata

Abstract

This study evaluates the effectiveness of the Fire Awareness Campaign launched by the Mandaluyong City Bureau of Fire Protection in enhancing public knowledge and promoting fire safety practices among residents, barangay officials, BFP officers, and firefighter volunteers. Fire safety education is a critical component of risk reduction, especially in densely populated urban areas where the likelihood of fire incidents is higher. The campaign aimed to reduce fire-related accidents and cultivate a culture of preparedness and fire prevention throughout the city. A mixed-methods research design was employed, incorporating both quantitative and qualitative approaches. Data was collected through survey questionnaires administered to 80 respondents, selected via simple random sampling. The sample consisted of 30 residents, 20 barangay officials, 20 Bureau of Fire Protection officers, and 10 firefighter volunteers. The survey focused on five key areas: fire risk assessment, emergency evacuation planning, fire drill training, fire incident reporting, and regular review and updating of safety procedures. The results showed that 61.25% of the respondents were male, while 38.75% were female. The majority were married (56.25%) and college graduates (52.50%). The campaign was assessed as highly effective, with weighted mean ratings ranging from 3.40 to 3.60. Respondents reported increased awareness of fire hazards, improved emergency preparedness, and greater participation in fire safety initiatives as a result of the campaign. The findings support the conclusion that the Mandaluyong City Fire Awareness Campaign was effective in promoting fire safety and preparedness. Based on the results, it is recommended that the city conduct regular inspections and maintenance of fire safety equipment, offer incentives for fire drill participation, and develop a comprehensive fire safety education program. Strengthening collaboration among the city government, barangay officials, and the Bureau of Fire Protection is also crucial. This study contributes to the growing body of literature on fire prevention, emphasizing the importance of sustained education and coordinated efforts to build safer, more resilient communities.

Keywords: fire awareness campaign, fire safety, bureau of fire protection, emergency preparedness, fire drills, public education, community safety, urban risk reduction, mandaluyong city, criminology

**THE EFFECTIVENESS OF PEACE AND ORDER PROGRAM IN
BARANGAY HOLY SPIRIT QUEZON CITY**

Renell Biasora, Rey Balderas, John Andrei Dimapilis, Prince Necole Nario,
Jerald Verbo, Dr. Myrna Cuntapay

Abstract

Peace and order are essential foundations for the development and sustainability of any community. In urban settings such as Barangay Holy Spirit in Quezon City, maintaining peace and order is a complex challenge influenced by population growth, rapid urbanization, and socio-economic disparities. This study aims to evaluate the effectiveness of the Peace and Order Program implemented in Barangay Holy Spirit in terms of its key components, strategic approaches, and stakeholder involvement. A descriptive-quantitative research design was utilized in this study. A total of fifty (50) respondents composed of barangay officials, members of the barangay patrol unit, and community residents, were selected using purposive sampling. The study focused on collecting and analyzing the perceptions and experiences of these respondents regarding the implementation of the Peace and Order Program. The majority of respondents were male, aged either 18–23 or 42 and above and were primarily high school graduates. The program was generally rated as "Very Effective" across all three areas: program components, implementation strategies, and stakeholder involvement. However, the most significant issue identified was the lack of effective communication between barangay officials and residents. The top recommended solution was the establishment of a 24/7 emergency response hotline, which received the highest frequency (47 responses, or 11.96%). The findings suggest that while the Peace and Order Program in Barangay Holy Spirit is effective, enhancements are needed to improve communication and responsiveness. It is recommended that the barangay implement a multi-sectoral action plan, including community engagement initiatives, emergency readiness programs, and consistent communication channels. Proposed budget allocations include ₱1,000,000 for training, tools, and oversight; ₱150,000 for information dissemination through forums, social media, and a Barangay Information Desk; ₱350,000 for establishing a 24/7 emergency hotline and Quick Response Team; and ₱200,000 annually for monitoring, community feedback, and evaluation. These initiatives aim to create a safer and more responsive community.

Keywords: peace and order program, barangay holy spirit, criminology, emergency response, community safety, stakeholder involvement, urban security, communication strategies, public safety, program evaluation

**THE EFFECTIVENESS OF POLICE BODY WORN CAMERA
IN SERVING COURT ORDER: AN ASSESSMENT**

James Borromeo, Angel Vincent Gonzaga, Cedrick John Icaay,
Hashim Sanday, John Lloyd Uno, Edgar Reyes

Abstract

This chapter presents the background of the study, related literature and studies, the theoretical and conceptual frameworks, the statement of the problem, the scope and delimitations, the significance of the study, and definitions of key terms. This chapter discusses the research methods used in the study, including the research design, its relevance to the study, the respondents, the instruments employed, sampling techniques, validation, administration, retrieval of instruments, and the statistical treatment used to interpret the data. This chapter presents tables, data analysis, and interpretation of the information gathered by the researchers. It includes the profile of the respondents, survey questions, and the statistical methods applied in the study. This chapter analyzes the results obtained from the survey. Findings, conclusions, and recommendations are presented according to the research questions, with the aim of guiding future researchers.

Keywords: chapter, presentation, analysis

**THE EFFECTIVENESS OF QUEZON CITY DRUG TREATMENT
AND REHABILITATION CENTER'S PROGRAM**

Jhon Mark Bocar, Jhaspher Centino, John Carlo Navarro, Mico Paranada, Jethro Tayas

Abstract

Payatas, one of the most urbanized yet impoverished barangays in Quezon City, has long faced issues such as unemployment, poverty, and limited access to education and healthcare. The Quezon City Drug Treatment and Rehabilitation Center, located along Molave Street in Payatas B, implements programs focusing on the treatment, rehabilitation, and social reintegration of drug-dependent individuals. This study assesses the effectiveness of these programs by examining key indicators such as behavioral reformation, community recognition, reduced substance abuse, and improvements in employment and social functioning among participants. This study employs a descriptive research design to evaluate the rehabilitation program's effectiveness. A total of 50 respondents were selected, comprising 25 office staff and 25 currently enrolled patients at the Quezon City Drug Treatment and Rehabilitation Center. Data was collected using a self-constructed questionnaire and structured interviews, focusing on program components such as treatment methods, staff qualifications, and aftercare support systems. Findings indicate that the program is perceived as "Very Effective" in terms of treatment delivery, the expertise of rehabilitation officers, and the presence of aftercare support. Respondents reported positive behavioral changes in participants, including reduced aggression, improved interpersonal relationships, and enhanced responsibility. Rehabilitation officers were found to be well-qualified, possessing training and certifications in counseling, psychology, or social work. The center also conducts regular follow-ups and offers sustained aftercare services to monitor progress and prevent relapses. The study concludes that the Quezon City Drug Treatment and Rehabilitation Center's program is highly effective in supporting recovery and reintegration. The combination of professional intervention, structured treatment, and consistent aftercare has led to significant positive outcomes among participants. It is recommended that similar community-based rehabilitation models be replicated and supported, especially in high-risk urban areas, to address substance abuse and promote long-term recovery.

Keywords: drug rehabilitation, treatment program, aftercare support, social reintegration, substance abuse recovery, quezon city, criminology, behavioral change, counseling, community-based program

**THE EFFECTIVENESS OF SANGGUNIAN KABATAAN ON YOUTH DEVELOPMENT
IN BARANGAY BATASAN HILLS, QUEZON CITY: AN ASSESSMENT**

Justine Moratalla, Lorenzo Bañes, Kent Renan Balicante,
Aaron Jethro Gonzales, Jeffrey Macalipay, Irene Gaviola

Abstract

The Sangguniang Kabataan (SK) plays a critical role in addressing the needs and concerns of the youth through programs focused on education, health, leadership, and skills development. It fosters collaboration among local government units, NGOs, schools, and community organizations to empower young individuals. Despite its significance, the SK faces several challenges, such as limited funding, lack of community support, poor inter-agency coordination, and low youth engagement. These limitations hinder its ability to implement youth development programs effectively. This study aims to assess the effectiveness of the SK in promoting youth development in Barangay Batasan Hills, Quezon City, and to propose strategies to enhance its impact. The study utilized a descriptive research design with purposive sampling to identify the respondents. Participants included forty (40) youth members actively involved in SK programs, five (5) SK council members, ten (10) parents or guardians, and five (5) barangay officials working closely with the SK. Data were gathered using a structured survey questionnaire. Prior to data collection, respondents were briefed on the study's purpose and how to properly complete the instrument. Completed questionnaires were then tallied, analyzed, and interpreted using statistical tools to determine the perceived effectiveness of the SK in youth development. The majority of respondents were aged 18–28, female, high school graduates, and had over 11 years of residency in the community. Based on the analysis, the aspect of Youth Participation received the highest effectiveness rating with a mean of 3.43 (“Very Effective”), followed closely by Sustainability (3.42, “Very Effective”) and Program Implementation (3.40, “Very Effective”). These results reflect a strong overall assessment of SK’s role in youth development in the barangay. The findings indicate that the Sangguniang Kabataan in Barangay Batasan Hills is perceived as very effective in engaging the youth and sustaining its development programs. However, challenges remain, particularly in funding, coordination, and consistent program delivery. The study recommends that the SK develop strategic plans to address these challenges, improve coordination with local stakeholders, and intensify efforts in youth mobilization. These improvements are expected to enhance the reach, quality, and sustainability of youth development initiatives in the barangay.

Keywords: sangguniang kabataan, youth development, community engagement, program implementation, barangay batasan hills, leadership, youth participation, local governance, criminology, public policy

**THE EFFECTIVENESS OF SOCIAL MEDIA IN CRIME PREVENTION AT
BARANGAY COMMONWEALTH, QUEZON CITY**

Jairus Silvano, Jairus Silvano, Stephanie Joyce Murillo, Jalaisah Omar,
Cherelyn Pongpong, Katrina Villanueva, Dr, Dr. Antonio Dawagan Sr.

Abstract

Social media has emerged as a transformative tool in promoting public safety and raising awareness on crime prevention. This study evaluates the effectiveness of social media in crime prevention efforts within Barangay Commonwealth, Quezon City. It specifically assesses the impact of social media in terms of online engagement, community awareness, crime rate trends, and the role of law enforcement personnel. Furthermore, it identifies the challenges encountered in leveraging social media for crime prevention and proposes appropriate interventions. A correlational research design was utilized. The study engaged fifty (50) respondents, consisting of five (5) personnel from the Philippine National Police Community Affairs and Development Support (PNP CADS) and forty-five (45) residents of Barangay Commonwealth. Respondents were selected through probability sampling. Data was collected through a structured survey questionnaire focusing on perceptions of social media's role in crime prevention and the challenges experienced. The majority of respondents were aged 18–25 years, with a higher representation of females (29 out of 50). Most respondents had reached college-level education and had lived in Barangay Commonwealth for 21 to 35 years. The evaluation showed that respondents found social media to be effective in fostering online engagement, increasing community awareness, lowering crime incidents, and supporting the role of personnel in crime prevention. However, the most significant challenge identified was limited financial resources for training, equipment maintenance, and infrastructure improvement. The respondents suggested regular simulation and training exercises for PNP CADS personnel to enhance their preparedness and service quality. The study recommends that residents actively participate in spreading crime prevention messages through social media and attend online or community-based seminars and campaigns. Additionally, it is advised that government agencies allocate sufficient funding to support training programs, equipment upgrades, and infrastructure development. By implementing these measures, law enforcement personnel can better serve the needs of the community and ensure accurate and responsive crime prevention efforts using digital platforms.

Keywords: social media, crime prevention, community awareness, online engagement, law enforcement, pnp cad, barangay commonwealth, criminology, public safety, digital policing

**THE EFFECTIVENESS OF SOCIAL MEDIA PLATFORMS AWARENESS AMONG
STUDENTS OF BESTLINK COLLEGE OF THE PHILIPPINES SENIOR HIGH SCHOOL**

Ronel Dionela, Rojan Bongyad, Lance Evangelista, Mark Lood,
Glendale Razzi Sañol, Denise Anne Osorio

Abstract

Social media has become an essential tool for communication, education, and social interaction, particularly among senior high school students aged 16–18. Platforms like Facebook, Instagram, TikTok, and YouTube serve multiple purposes, from personal networking to professional growth. Despite their widespread use, there is limited research on the effectiveness of social media awareness campaigns for this age group. Such campaigns aim to equip students with the knowledge and skills to navigate social media safely, balancing its positive benefits against potential risks. This study focuses on assessing senior high school students' awareness of the negative consequences of social media and its influence on their online behavior, habits, and overall well-being. The research was conducted at Bestlink College of the Philippines Senior High School to determine effective strategies for promoting social media awareness. This study employed a descriptive quantitative research design to evaluate the effectiveness of social media awareness among students. Two groups of respondents participated: students and teachers of Bestlink College of the Philippines Senior High School. A total of 40 students and 20 teachers served as respondents. Data were collected through structured questionnaires and analyzed using descriptive statistical methods to determine trends, perceptions, and areas of concern regarding social media use and awareness. The study found that 56.67% of respondents were under 18 years old, with a nearly equal distribution of males (51.67%) and females (48.33%). Most respondents belonged to the middle-income group (76.67%). Respondents strongly agreed that social media awareness programs were effective in teaching online etiquette (3.47), responsible online use (3.56), data privacy (3.69), digital literacy (3.48), and application awareness (3.39). The highest-rated skill was avoiding the sharing of private information with strangers (3.95). The most significant challenge identified was social media distractions affecting schoolwork (88.33%), while fact-checking tools were the most commonly used solution (86.67%). Seeking guidance from teachers and parents was the least used strategy (61.67%). The findings indicate that senior high school students recognize the importance of social media awareness. Programs focusing on online etiquette, responsible behavior, data privacy, digital literacy, and application awareness are perceived as effective. However, distractions remain a major concern, highlighting the need for continued guidance and strategies to help students use social media responsibly.

Keywords: social media, awareness, senior high school students, digital literacy, online etiquette, responsible online use

**THE EFFECTIVENESS OF TECHNOLOGY IN POLICE CRIMINAL
INVESTIGATION IN BAGUMBONG 171 CALOOCAN CITY**

Clarence Bemida, Chrisler Endrena, Dave Jerome Celi, Rex Javier, Maui Tejero, Edgar Reyes

Abstract

This study explores the effectiveness of technology in police criminal investigations in Bagumbong 171, Caloocan City. As law enforcement agencies face increasing demands for efficient crime-solving methods, the integration of technology has become a vital component in enhancing investigative procedures. This research aims to assess the perceived effectiveness of technological tools in police investigations, identify the challenges encountered in their implementation, and propose solutions to improve the system. Respondents included 50 individuals: 30 residents, 15 police officers, and 5 community leaders. A descriptive research design was employed, using purposive sampling to select respondents with relevant experience or involvement in police investigations. Structured survey questionnaires were used to collect data on the effectiveness of technology and the challenges related to its application in law enforcement. The questionnaires were distributed, retrieved, and validated by subject experts to ensure content reliability and accuracy. Findings indicated that technology was perceived as moderately effective in enhancing police investigations. The highest-rated responses revealed that technology contributed most to improving data collection (weighted mean = 3.24), access to crucial information (3.13), and operational efficiency and productivity (3.13). The most frequently identified barrier was slow internet connectivity (13.84%), while the most recommended solution was fostering peer learning and inter-agency collaboration (14.35%). The study concludes that while technology enhances several aspects of police investigative work, challenges such as limited infrastructure and connectivity hinder its full potential. It is recommended that the Philippine National Police conduct regular training in digital forensics and cybercrime investigation. The Local Government Unit of Caloocan City should prioritize investment in surveillance technology, digital databases, and internet infrastructure. Additionally, community involvement through digital crime prevention platforms should be encouraged. Further research is suggested to explore the integration of advanced technologies such as artificial intelligence and blockchain into criminal justice processes.

THE EFFECTIVENESS OF YOUTH DEVELOPMENT PROGRAMS FOR CHILDREN AT RISK IN BARANGAY SOUTH ZUZUARREGUI: A PROPOSAL

Lea Moren Cristo, Sheila Mae Camaño, Arcee Mae Climacosa,
Aine Dacles, Renalyn Vergara, Jinky Anacta,

Abstract

Community-based youth programs play a vital role in promoting development and reducing risks among vulnerable children, particularly in areas with limited access to support systems. In Barangay South Zuzuarregui, such programs serve as a primary intervention for children at risk by providing opportunities for personal growth, education, and meaningful community engagement. This study aims to assess the effectiveness of youth development programs implemented in the barangay and their role in addressing the needs of vulnerable children. This study employs a quantitative approach using a descriptive research design to evaluate key variables such as age, gender, and socioeconomic status. Purposive sampling was used to select respondents who had direct experience with youth development programs. The study involved 50 respondents, including ten youth participants, ten parents or guardians, ten barangay officials, ten community leaders, five program coordinators, and five social workers from Barangay South Zuzuarregui. A structured survey questionnaire was used to gather data for analysis. Findings revealed that the majority of respondents were aged 18 to 25 (34%) and predominantly female (60%). A slightly higher percentage were single (52%) compared to married respondents (48%). In terms of educational attainment, 62% had completed high school, while 38% were college graduates. The most significant barrier to accessing youth development services was the cost, as indicated by 76% of respondents. Recommended program enhancements include the provision of life skills training, academic support, livelihood initiatives, youth centers, community engagement activities, and conflict resolution training for barangay officials. Aligned with the principles of the Juvenile Justice and Welfare Act (RA 9344), the study highlights the importance of rehabilitation and reintegration for children at risk rather than punitive approaches. The findings underscore the necessity of accessible, well-structured, and sustainable youth programs in barangays to support the development and protection of vulnerable youth. Emphasizing education, livelihood, and psychosocial support may enhance the impact and reach of these initiatives.

**THE EFFECTS OF CYBERBULLYING ON HUMANITIES AND SOCIAL SCIENCES
STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Lanie Mae Mantos, Ana Corita Alvarez, Jenalyn Cuiscano, Simdy Piñero,
Hannah Jeremie Sombese, Denise Anne Osorio

Abstract

Cyberbullying refers to the act of using digital devices to harass, intimidate, or harm an individual. It typically occurs through social media platforms, messaging services, and online gaming. This form of bullying can result in emotional distress, anxiety, social isolation, and diminished self-esteem. As technology continues to advance and become more accessible, the prevalence of cyberbullying also increases. This study aims to determine the effects of cyberbullying on Humanities and Social Sciences (HUMSS) students at Bestlink College of the Philippines by assessing its impact on mental health, academic performance, and self-esteem. This study employs a descriptive quantitative research design using purposive sampling. Data was collected through a structured survey questionnaire distributed among selected HUMSS students. The responses were analyzed to evaluate the perceived effects of cyberbullying across the identified variables. In terms of mental health, the highest-ranked response indicated that the spreading of rumors or humiliating comments online significantly affected students' emotional well-being, with a weighted mean of 3.52, interpreted as "strongly agree." Regarding academic performance, the highest response showed that victims of cyberbullying struggled to concentrate on their studies, with a weighted mean of 3.50. For self-esteem, the leading response indicated that victims required more motivation to regain confidence, with a weighted mean of 3.56. All results were verbally interpreted as "strongly agree." The findings suggest that cyberbullying has substantial negative effects on students' mental health, academic performance, and self-esteem. To address this, the study recommends fostering positive online behavior and mutual respect among students. By promoting empathy and responsible digital conduct, the school community can reduce incidents of cyberbullying and create a safer, more supportive online environment. Encouraging peer involvement in prevention efforts can strengthen relationships and empower students to collectively stand against harmful online behavior.

Keywords: cyberbullying, mental health, academic performance, self-esteem, humss students, online behavior, emotional distress, student well-being, digital harassment, criminology

**THE EFFECTS OF DOMESTIC VIOLENCE IN BARANGAY CATMON SITIO 6
MALABON CITY: AN ASSESSMENT**

Basilika Agquiz, Stephanie Berto, Jolina Bierniza, Jefferson Bugtong,
Alexandria Castillo, Irene Gaviola

Abstract

Barangay Catmon in Sitio 6, Malabon City, continues to face significant challenges due to the prevalence of domestic violence. This issue not only affects individual households but also compromises the safety and well-being of the entire community. Deeply rooted cultural norms and societal expectations often discourage victims from reporting abuse, reinforcing a cycle of silence, fear, and social stigma. This study aims to assess the effects of domestic violence on the physical, psychological, and economic well-being of affected individuals in the area and identify potential community-based solutions. This study uses a descriptive research design with a purposive sampling technique. A total of seventy (70) respondents were selected, consisting of ten (10) police officers, ten (10) barangay personnel, and fifty (50) community residents from Barangay Catmon, Sitio 6, Malabon City. Data was collected using survey questionnaires and unstructured interviews. To ensure the accuracy and validity of the instrument, the researchers consulted professionals to refine the content of the data-gathering tools. The findings revealed that the majority of respondents were female, aged 51 and above, single, college-educated, and from low-income households. Participants reported severe effects of domestic violence. Physically, victims experienced injuries such as bruises, lacerations, and fractures. Psychologically, they suffered from recurring flashbacks, anxiety, and sleep disturbances. Economically, victims faced job loss and financial instability, leading to difficulties in accessing basic needs such as food and healthcare. Debt accumulation further intensified their economic burden. The study confirmed that domestic violence has profound physical, psychological, and economic consequences. Respondents generally "Agreed" on the significant impact of these effects. As a response, the researchers proposed an action program focused on comprehensive awareness campaigns, improved support services, and community interventions. These efforts aim to educate residents on identifying signs of abuse and provide accessible resources to support victims, fostering a safer and more responsive community environment.

Keywords: domestic violence, physical abuse, psychological impact, economic strain, community intervention, victim support, criminology, barangay catmon, social stigma, awareness campaigns

**THE EFFECTS OF ILLEGAL SUBSTANCE USE IN THE INCREASING NUMBER OF
JUVENILE DELINQUENCY IN BARANGAY GAYA-GAYA
SAN JOSE DEL MONTE BULACAN**

Christian Tisado, Andrie Anunciado, Romer Sahot, Ivan James Evangelista,
Jermaine Lebrias, Jinky Anacta

Abstract

This study investigates the effects of illegal substance use on the rising incidence of juvenile delinquency in Barangay Gaya-Gaya, San Jose del Monte, Bulacan. The proliferation of illegal substance use remains one of the most pressing issues in the country, affecting individuals regardless of socioeconomic status, including minors. It is particularly concerning that the youth, considered the hope of the nation, are falling into patterns of substance abuse and criminal behavior. This study aims to explore the extent to which substance use contributes to the prevalence of juvenile delinquency in the community. This study utilizes a descriptive research design and employs purposive sampling to select respondents who possess relevant knowledge or experience concerning the issue. A total of forty (40) respondents participated in the study, consisting of ten (10) Barangay Officials, ten (10) members of the PNP Women's Desk, and twenty (20) DSWD personnel. Data was collected using structured survey questionnaires, which served as the primary instrument for assessing the perceived relationship between illegal substance use and juvenile delinquency. The results revealed that respondents strongly agreed with the identified link between illegal substance use and the increasing number of juvenile delinquency cases in Barangay Gaya-Gaya. Among the factors cited, the most frequently encountered issue was the lack of parental supervision for minors engaged in substance use. To address this, the respondents recommended educating the youth about the dangers of illegal substances and implementing programs that include recreational and sports activities to keep young individuals engaged in positive pursuits. The findings underscore the vital role of Barangay Gaya-Gaya in supporting the physical, mental, and social well-being of the youth. The respondents' strong agreement across these dimensions affirms the urgent need for community-based interventions. In conclusion, local authorities should prioritize involving parents in awareness seminars on substance abuse and encourage active parental supervision. Furthermore, the barangay should establish more youth-focused initiatives, such as sports and other recreational programs, to help deter minors from engaging in illegal activities and substance use.

Keywords: juvenile delinquency, illegal substance use, parental supervision, community intervention, youth development, barangay programs, drug prevention, criminology research

**THE EFFICACY OF BARANGAY PEACEKEEPING ACTION TEAM (BPAT) IN
COORDINATION WITH THE COMMUNITY IN CRIME PREVENTION AT
BARANGAY 181 SAPANG ALAT CALOOCAN CITY**

Dame Cristein Caunin, Jelly Rose Baldomaro, April Love Lapis, Jonathan Bayog,
Jay Vee Tandog, Denise Anne Osorio

Abstract

Crime remains a persistent challenge in contemporary society, posing serious threats to public safety and community well-being (Orenze et al., 2021). In response, the government has intensified efforts to reduce, if not eradicate, criminal activities through grassroots-level initiatives. This study aims to assess the efficacy of the Barangay Peacekeeping Action Team (BPAT) in collaboration with the community in preventing crime in Barangay 181, Sapang Alat, Caloocan City. Specifically, it examines respondents' assessments in terms of program execution, resource utilization, and stakeholder engagement. This study employs a descriptive research method to provide detailed insights into the experiences and perceptions of individuals concerning crime prevention initiatives in their community. The respondents consist of forty (40) individuals, equally divided between twenty (20) residents and twenty (20) BPAT officers in Barangay 181. Data collection was conducted through structured surveys designed to evaluate the effectiveness of BPAT operations in coordination with the local community. The respondent group was composed of 50% male and 50% female, with most participants aged between 42 and 50 years. Seventy percent of the respondents had resided in Barangay 181 for more than ten years, offering perspectives grounded in long-term community involvement. In terms of program execution, the indicator "Conduct peacekeeping activities in the community" received the highest weighted mean of 3.28. Regarding resource utilization, "Availability of quality communication equipment for BPAT patrollers" garnered the highest weighted mean of 3.35. For stakeholder engagement, the indicator "Partnership with community organizations to enforce law on crime prevention" was rated highest with a mean of 3.15. The equal representation of BPAT officers and residents ensured balanced insights into crime prevention efforts in the community. The majority of participants, being middle-aged and long-time residents, provided well-informed responses based on years of observation and involvement. The findings suggest that BPATs are relatively effective in executing community-based crime prevention programs, especially through consistent peacekeeping activities, access to communication tools, and collaborative partnerships. These results underscore the importance of sustained support and resource enhancement to further strengthen local crime prevention strategies.

**THE FACTORS CONTRIBUTING TO ILLEGAL DRUGS ADDICTION AMONG THE
YOUTH IN BARANGAY 176 BAGONG SILANG CALOOCAN CITY**

Shaira Rosco, Roshienaville Talanas, Christine Victoriano,
Jyka Mecacla Anthony, Denise Anne Osorio

Abstract

This study investigates the factors contributing to illegal drug addiction among the youth in Barangay 176, Bagong Silang, Caloocan City. The research aims to identify key influences to inform effective prevention and intervention strategies. While previous studies have pointed to the roles of parental supervision, family dynamics, and neighborhood environment in youth drug involvement, there remains a lack of focused research on how these elements interact within the specific context of Barangay 176. This study seeks to fill that gap by providing localized insights that can guide the development of community-tailored programs and policies for more compassionate and effective responses to youth drug addiction. A descriptive research design was employed to examine the contributing factors to youth drug addiction. Data was collected through a structured survey questionnaire distributed to youth residents and stakeholders in Barangay 176, selected using purposive sampling. The questionnaire, validated by experts, consisted of four sections: demographic profile, underlying causes of addiction, drug prevention strategies, and suggested interventions. Data analysis involved the use of frequency and percentage, weighted mean, four-point Likert scale ratings, and ranking. Ethical considerations, including informed consent, confidentiality, and barangay-level approval, were strictly observed. The majority of respondents were male (54%), aged 17–25 (48%), and widowed (56%), with most attaining a college-level education. The findings identified parental oversight (composite mean = 3.42), family environment (3.38), and community context (3.24) as the most significant contributing factors to youth drug addiction. Respondents emphasized the lack of parental support and economic hardship as particularly influential. Furthermore, the study identified the promotion of positive alternatives such as sports, clubs, and community-based activities as both a preventive measure and a core recommendation to address the issue. The results reinforce existing literature on the interplay between family, community, and individual circumstances in youth drug addiction. The study underscores the need for integrated and localized intervention strategies that involve all stakeholders, including families, schools, and barangay officials. While the research offers valuable insights, limitations in sample size and the exclusive use of quantitative data suggest the need for future studies incorporating qualitative methods and broader demographic coverage. Such efforts can contribute to more nuanced and culturally appropriate responses to this complex social issue.

Keywords: youth drug addiction, parental oversight, family environment, community influence, barangay 176, prevention strategies, criminology, illegal drugs, substance abuse, intervention programs

**THE IMPACT OF BARANGAY PATROL IN REDUCING DRUG
RELATED CASE IN BARANGAY 180, CALOOCAN CITY**

John Yuken Ausmolo, Arnel Jr. Esteves, John Cholo Mercado,
Mon Ednes Morpe, Mel John Tayson, Jinky Anacta

Abstract

This study investigates the impact of barangay patrol initiatives on the reduction of drug-related cases in Barangay 180, Caloocan City. The research is grounded in the increasing importance of localized law enforcement efforts in addressing community-level drug issues. It draws from related literature on crime prevention, community policing, and barangay-based interventions. This study aims to assess the effectiveness of patrol activities in curbing illegal drug activities, guided by a theoretical and conceptual framework that examines enforcement strategies, visibility, and community trust. A descriptive research design was employed to evaluate the role of barangay patrol operations in reducing drug-related cases. The respondents were selected through appropriate sampling techniques and included residents, local officials, and patrol members of Barangay 180. Data collection was carried out using validated survey instruments, and proper protocols for instrument administration and retrieval were followed. The collected data were analyzed using statistical tools such as frequency distribution, percentage, weighted mean, and correlation analysis to interpret the findings accurately. The results present the demographic profile of respondents and their responses to key survey questions. Statistical analysis showed that regular barangay patrol operations had a positive impact on the perceived reduction of drug-related incidents in the community. Increased visibility, consistent monitoring, and community engagement were found to contribute to heightened awareness and deterrence of illegal drug activities. The findings suggest that residents feel safer and more informed due to the presence of active patrol initiatives. The study concludes that barangay patrols play a significant role in mitigating drug-related cases within the community. The analysis of data supports the idea that consistent patrol operations, when combined with community cooperation, lead to improved security outcomes. The findings underline the importance of sustained support, adequate resources, and coordination with law enforcement agencies. Recommendations include strengthening patrol training, increasing logistical support, and promoting public involvement. Future research may explore long-term trends and compare outcomes with other barangays to validate and expand upon these findings.

**THE IMPACT OF BARANGAY TALIPAPA POLICE STATION 3
OPLAN PAGLILINGKOD: AN ASSEMENT**

John David Dofredo, Kenneth Jay Joaquano, John Daniel Maligro,
Sean David Molina, Xavier Sten Senajon, Jinky Anacta

Abstract

This study investigates the impact of Oplan Paglilingkod, a community-centered program implemented by Barangay Talipapa Police Station 3 in Quezon City. The initiative aims to enhance local governance and improve residents' quality of life through services such as healthcare access, disaster response, environmental sanitation, and public outreach. By assessing the effectiveness of the program, this study seeks to determine its contributions to community well-being and safety and to recommend strategies for strengthening its implementation. A descriptive-quantitative research design was employed to evaluate the impact of Oplan Paglilingkod on community safety and welfare. Data was gathered using a validated survey questionnaire, reviewed by research advisers, a statistician, and a grammarian for accuracy and clarity. A total of 100 respondents were selected through purposive sampling, composed of 25 residents, 25 police officers, 25 public transportation drivers, and 25 commuters. This sampling technique allowed the researchers to gather targeted insights from individuals directly affected by or involved in the program. The results revealed that the most recommended intervention from respondents was to "Enhance community engagement programs to increase public awareness of Oplan Paglilingkod's objectives and benefits," which received a weighted response rate of 33%. This was followed by the suggestion to "Conduct regular workshops and seminars for residents on conflict resolution, disaster preparedness, and personal safety," with 13%. A final recommendation, although with minimal support (4%), also emphasized the value of continued community-oriented efforts. These findings reflect the public's recognition of the program's role and their interest in expanding its reach and effectiveness. The findings demonstrate that Oplan Paglilingkod has generated notable economic, psychological, and social benefits for Barangay Talipapa. Economically, the program has improved public safety, reduced criminal activity, and attracted greater business confidence in the community. Psychologically, it has enhanced police officers' morale, job satisfaction, and reduced occupational stress. Socially, the initiative has fostered stronger bonds between law enforcement and the community, reducing tensions and encouraging civic participation. Implementing the proposed recommendations may further increase the program's success and sustainability, leading to a more secure, cohesive, and development-ready community.

Keywords: oplan paglilingkod, community policing, public safety, civic engagement, barangay talipapa, criminology, local governance, police-community relations, social impact, quezon city

THE IMPACT OF BUREAU OF JAIL MANAGEMENT AND PENOLOGY LIVELIHOOD PROGRAM AMONG GRADUATE OF PENAL INSTITUTION: AN ASSESSMENT

Francis Kyle Flores, El John Baylen Antonio, Jonnel Sumalinog, Cedric Adrian Tuban,
Carl Shalom Villanueva, Dr. Myrna Cuntapay

Abstract

The Bureau of Jail Management and Penology (BJMP) Livelihood Program provides people deprived of liberty (PDL) with income-generating opportunities during their confinement. These activities aim to help detainees earn for their personal needs and support their families. More importantly, the program seeks to equip PDLs with practical skills that may aid in their reintegration into society after release. This study assesses the impact of the BJMP livelihood program on former inmates, particularly in terms of skill development and community reintegration. The study utilized descriptive research design and employed purposive sampling to select thirty (30) graduates of the penal institution in Payatas, Quezon City. These respondents were chosen based on their participation in the BJMP Livelihood Program. A structured survey questionnaire was used to gather data, with the researchers providing necessary assistance to ensure clarity and honest responses. Ethical considerations, including confidentiality and informed consent, were strictly observed throughout the data collection process. The assessment of the BJMP Livelihood Program's effectiveness revealed that the majority of respondents strongly agreed that the program equipped them with marketable job skills. The high weighted mean values reflected strong satisfaction and a positive perception of the benefits gained through the program. These findings affirm the program's effectiveness in enhancing the employability of former inmates and align with its goal of supporting their transition into productive societal roles. The results indicate that the BJMP Livelihood Program positively impacts the reintegration process for penal institution graduates. Respondents expressed strong agreement with the program's success in developing relevant job skills and fostering stronger community connections. Additionally, high ratings for NGO and LGU funding support suggest confidence in the program's sustainability. These outcomes highlight the importance of structured livelihood initiatives in promoting rehabilitation and reducing recidivism, ultimately contributing to safer and more inclusive communities.

**THE IMPACT OF COMMUNITY OUTREACH PROGRAM IMPLEMENTED BY
BUREAU OF JAIL MANAGEMENT AND PENOLOGY'S IN BARANGAY
BAGONG SILANGAN QUEZON CITY: AN ASSESSMENT**

Ronnel Pepito, John Michael Bondoc, Paul John Demdam,
Alexis Lontoc, Kyle Robino, Nilmar Plata

Abstract

The Bureau of Jail Management and Penology (BJMP) has initiated various community outreach programs aimed at crime prevention, rehabilitation of Persons Deprived of Liberty (PDLs), and the promotion of public safety. These initiatives include reformation activities, spiritual and moral development, and community involvement strategies designed to reduce recidivism and foster reintegration. This study assesses the effectiveness of these programs in Barangay Bagong Silangan, Quezon City, with a focus on their social impact and implementation challenges. A quantitative research design was employed to evaluate the impact of BJMP's outreach programs. Purposive sampling was used to select 50 participants: 40 residents, 5 barangay officials, and 5 BJMP officers. Data collection was conducted through structured survey questionnaires, administered in person with prior approval from relevant authorities, including the Dean of the Criminology Department. The gathered data were tabulated, analyzed, and interpreted to assess perceptions of program effectiveness and identify areas for improvement. The results indicated that the therapeutic modality program was particularly effective in improving the mental health of discharged PDLs and aiding their reintegration into society. The Adopt-a-Jail Program was commended for enhancing interaction between the community and former inmates, fostering empathy and social acceptance. Among the spiritual initiatives, the interfaith dialogue program received the highest recognition for promoting cultural sensitivity and religious tolerance. Despite these positive outcomes, respondents emphasized the need to improve collaboration between BJMP personnel and barangay officials. Additional concerns included limited public awareness, lack of community participation among vulnerable groups, and resource constraints that hinder program sustainability. The findings suggest that BJMP's community outreach programs contribute meaningfully to rehabilitation and community safety; however, certain operational areas require strengthening. To maximize effectiveness, the study recommends enhanced inter-agency coordination, continued officer training, and stronger partnerships with local government units and non-governmental organizations. The implementation of tracking systems and expanded efforts to reduce social stigma are also advised. Future research should investigate long-term program outcomes and comparative assessments across multiple communities to establish best practices for reintegration and crime prevention.

Keywords: bjmp, community outreach, pdl reintegration, crime prevention, adopt-a-jail program, interfaith dialogue, barangay bagong silangan, rehabilitation programs, criminology, public safety

**THE IMPACT OF CURFEW HOURS IN REDUCING CRIME AT BARANGAY
MUZON CITY OF SAN JOSE DEL MONTE BULACAN**

ZJ Lanz Fortes, Roysale Puno, Jeremy Reyes, John Alfie Tabangay, Joshua Pacanza, Denise Anne Osorio

Abstract

Curfew hours are government-imposed time restrictions aimed at maintaining peace and order, especially during periods of heightened alert or emergency such as the Modified Enhanced Community Quarantine (MECQ) in Bulacan. In Barangay Muzon, City of San Jose del Monte, the implementation of curfew hours serves to limit unnecessary public activity during designated times, thereby contributing to community safety and crime prevention. This study examines the perceived effectiveness of curfew enforcement in reducing crime rates and improving the overall sense of security among residents. This study employed a quantitative descriptive research design to assess the effects of curfew implementation on crime reduction. Survey questionnaires were administered to residents of Barangay Muzon to gather data on their perceptions and experiences related to curfew enforcement. The study focused on naturally occurring behaviors and conditions within the community and analyzed the results using both qualitative insights and quantitative methods, including descriptive statistics. The results showed that the majority of respondents were aged 18–25, mostly female, single, and college-level in terms of education. Most respondents strongly agreed that the barangay should increase community awareness regarding curfew laws through regular reminders. They also recognized that barangay officials were actively monitoring and strictly enforcing curfew regulations. The respondents emphasized the importance of implementing youth-focused programs as a preventive measure to reduce crime, particularly by limiting the number of minors on the streets during high-risk hours. However, a lack of community involvement was identified as a potential barrier to the full effectiveness of the curfew policy. Overall, the implementation of curfew hours was perceived as an effective crime prevention measure within the community. The findings indicate that curfew enforcement contributes positively to reducing crime and promoting community well-being in Barangay Muzon. It is especially effective when coupled with active monitoring, community participation, and supplemental programs for youth. The study concludes that curfew ordinances, when well-publicized and properly enforced, can create a safer environment. However, continued public engagement and support are essential to ensure the long-term success and sustainability of such measures.

**THE IMPACT OF FREE LEGAL LITERACY PROGRAM AMONG CHILD IN CONFLICT
WITH THE LAW IN PAYATAS B. QUEZON CITY: AN ASSESSMENT**

Jeremy Jaravata, Phatrick James Adrigado, Cj Montallana, Fernan Colibio,
Mark Rommel Manrique, Eduardo Villaruel

Abstract

This study assesses the impact of a Free Legal Literacy Program on Children in Conflict with the Law (CICLs) in Payatas B, Quezon City. Grounded in the belief that youth are the future of the nation, as expressed by Dr. Jose Rizal's well-known saying "Kabataan ang Pag-asa ng Bayan," the research explores how legal education can serve as an intervention tool for rehabilitation and reintegration. The study seeks to understand the role of legal literacy in empowering CICLs, promoting their rights, and aiding in their social development. Quantitative research design was employed to examine the effectiveness of the Free Legal Literacy Program. Data was gathered through surveys and interviews conducted with purposively selected respondents, including ten (10) social workers from Molave Youth Home, twenty (20) barangay workers, and twenty (20) community members of Payatas B, Quezon City totaling fifty (50) participants. The instruments used were carefully constructed, validated, and administered, with statistical analysis applied to assess the data. The purposive sampling technique ensured that respondents possessed relevant knowledge and experience to contribute meaningful insights to the study. The findings revealed that the Free Legal Literacy Program positively influenced CICLs by increasing their awareness of legal rights, reducing misconceptions about legal processes, and improving their capacity to make informed decisions. Respondents acknowledged the program's role in enhancing communication between CICLs and legal authorities, as well as promoting a greater sense of responsibility and accountability. However, challenges such as limited resources, inconsistent program delivery, and a need for expanded community participation were identified as areas requiring attention. The results suggest that legal literacy programs are valuable in rehabilitating and empowering CICLs. While the program has shown effectiveness in bridging gaps in knowledge and supporting reintegration efforts, its success depends on sustained collaboration among social workers, barangay officials, and community members. Strengthening outreach, ensuring consistent implementation, and addressing resource limitations are key to improving the program's overall impact. Future research may explore long-term behavioral outcomes and assess similar programs across different communities to broaden the scope of assessment.

**THE IMPACT OF GUN SAFETY MEASURES ON DOMESTIC VIOLENCE IN
BARANGAY MALIGAYA, CALOOCAN CITY**

Christine Joy Centillas, I-ann Cabaya, Mary Winslet Dela Cruz,
Princess Zyra Que, Christine Pino, Irene Gaviola

Abstract

This study investigates the influence of firearm regulations on incidents of domestic violence in Barangay Maligaya, Caloocan City. Domestic violence remains a critical concern, and the presence of firearms has been shown to escalate the severity of such cases. Implementing gun safety measures is essential for promoting community safety; however, issues in enforcement and public awareness continue to hinder their effectiveness. This study aims to assess the impact of gun safety practices on the reduction of domestic violence, focusing on residents' perceptions of safety, awareness of firearm laws, and overall satisfaction with current policies. It also explores implementation challenges and proposes potential interventions to improve gun safety and victim protection. A descriptive research design was employed to examine community perceptions and challenges associated with firearm regulations. The study involved 50 purposively selected respondents, including 40 residents and 10 police officers from Barangay Maligaya, all of whom had relevant knowledge or experience regarding gun safety and domestic violence. Data was collected using structured survey questionnaires, which addressed topics such as perceived safety, policy awareness, and satisfaction with current gun control measures. The gathered data were analyzed using statistical tools to determine weighted means and identify key trends. The results indicated strong agreement among respondents on the effectiveness of gun safety measures in enhancing community safety, with an overall weighted mean of 3.332. The highest-rated response showed that residents, particularly women, felt less intimidated by the presence of firearms, resulting in a heightened sense of security. Awareness of gun control laws was also positively rated, with a mean score of 3.54, suggesting improved understanding of legal frameworks and their role in preventing domestic violence. In terms of community satisfaction, a weighted mean of 3.52 reflected general approval of the implemented gun control policies. Despite the positive perception of gun safety measures, several challenges were identified. These included insufficient coordination among local agencies (reported by 52% of respondents) and inadequate monitoring of domestic violence cases (48%). To address these issues, the study recommends the establishment of a confidential reporting system with community incentives, the formation of a multi-agency task force for coordinated interventions, and enhanced public education campaigns on gun safety and domestic violence prevention. The findings emphasize the importance of comprehensive gun safety enforcement, inter-agency collaboration, and community engagement in reducing domestic violence and fostering a safer living environment.

Keywords: gun safety, domestic violence, firearm regulation, community safety, criminology, policy enforcement, public awareness, victim protection, barangay maligaya, caloocan city

**THE IMPACT OF IDENTITY THEFT ON INDIVIDUALS AND
SOCIETY AT CALOOCAN CITY**

Mark Jason Laurente, Karl Dexter De Guzman, Gabrielle Garcia,
Donald Tanaleon, Rosendo Aquino, Edgar A. Reyes

Abstract

Identity theft is a growing global threat that has affected millions of people in recent years. Advances in digital technology, social media, and online transactions have opened new avenues for cybercriminals to steal personal information fraudulently (Meda, 2024). According to DeLiema et al. (2021), identity theft causes not only financial losses but also emotional harm and psychological effects that last for a considerable period. Reports from the United States, United Kingdom, and other countries indicate that cybercriminals commonly use phishing, data breaches, and dark web information trading to commit identity theft. These findings highlight the urgent need to strengthen cybersecurity systems and enforce stricter laws and regulations to combat identity theft. This study uses a descriptive research design to gather detailed data from Caloocan City residents, businesses, and law enforcement regarding identity theft. It focuses on emotional, psychological, financial, technological, and legal impacts. The study employs purposive sampling, a non-probability method, to select participants with relevant experience and knowledge. The sample consists of 30 residents and 20 law enforcement officials, for a total of 50 respondents. The study included 50 respondents, consisting of 30 residents (60%) and 20 police officers (40%). Most respondents were aged 18 to 25 (34%) and 26 to 35 (32%), representing 66% of the total. Males accounted for 62% (31 respondents), while females made up 38% (19 respondents). In terms of civil status, 46% were single, 52% married, and 2% widowed. Regarding educational attainment, 44% were high school graduates, 44% college graduates, 6% elementary graduates, 4% vocational graduates, and 2% postgraduates. The research is limited to the situation in Caloocan City, particularly concerning recent advancements in digital technology and the changing landscape of online interactions. Furthermore, it analyzes related laws and policies in the Philippines that address the prevention of identity theft, focusing on their implementation and effectiveness at the local level.

**THE IMPACT OF ILLEGAL GAMBLING IN BARANGAY SAN MANUEL CITY OF S
AN JOSE DEL MONTE BULACAN**

Manuelito Mijares, Manuelito Mijares, Joennie Lopez, Jesus Repomanta,
Gerard Ruetas, Joshua King Philip Villette, Monrey Salva, Irene Gaviola

Abstract

Illegal gambling has become a major problem worldwide, with underground dealings, unregistered sports betting, and unsanctioned lottery schemes increasing in prevalence. Although illegal gambling is prohibited in most jurisdictions, its secretive nature makes it difficult to prosecute compared to legal gambling establishments, which are known for adhering to strict regulatory standards. The researchers used a descriptive-normative method, which describes population, situation, or phenomenon being studied. The respondents of the study included ten (10) barangay officials, thirty (30) community members, and ten (10) police officers. The researchers used the purposive sampling technique, a non-probability method in which participants are deliberately selected based on specific criteria or characteristics relevant to the research objectives. Most of the respondents were 18 to 25 years old. The majority were male, with a length of residency or service in Barangay San Manuel, City of San Jose Del Monte, Bulacan, of eleven years or more. The assessment of the impact of illegal gambling in Barangay San Manuel, City of San Jose Del Monte, Bulacan, was interpreted as having a “moderate impact” in terms of social, economic, and psychological effects. The most frequently reported problem was that “the presence of illegal gambling can harm the reputation of the barangay, making it less attractive to potential investors, new residents, or tourists.” To address this issue, respondents suggested increasing police visibility and patrols so that residents become aware that gambling is strictly prohibited in their barangay, as well as developing youth education and awareness programs to inform them about the negative effects of gambling and how to avoid it. Illegal gambling in Barangay San Manuel, City of San Jose Del Monte, Bulacan, remains a significant concern, with activities such as “jueteng” and illegal cockfighting negatively affecting the community. To address this issue, local authorities should strengthen enforcement efforts, conduct regular raids, and impose stricter penalties on offenders. Furthermore, public awareness campaigns, alternative recreational programs, and community participation in anti-gambling initiatives should be encouraged.

Keywords: impact of illegal gambling

**THE IMPACT OF ILLEGAL PARKING ALONG BARANGAY
BATASAN HILLS QUEZON CITY:AN ASSESSMENT**

Christian Dorion, Jaines Ceruma, Moscosa Avelino, Gerico Pabustan,
Marco Stotomas, Irene Gaviola

Abstract

This study aims to assess the impact of illegal parking along major roads and side streets in Barangay Batasan Hills, Quezon City. It seeks to understand how illegal parking affects daily life, transportation efficiency, public safety, and the local economy. By gathering perspectives from residents, commuters, and local authorities, the research intends to generate data-driven insights that may guide policy development and improve traffic management strategies to address the issue effectively. A descriptive quantitative research design was employed to assess the effects of illegal parking in the community. The study involved 100 purposively selected respondents: 40 traffic enforcers, 20 drivers, and 40 commuters from Barangay Batasan Hills. Data were collected through structured survey questionnaires, and responses were analyzed using statistical tools to identify trends related to the causes, consequences, and possible solutions to illegal parking. The study focused on the social, safety, and traffic-related dimensions of the issue. The majority of respondents were aged 18–25, with most being male. Many traffic enforcers reported having completed high school and had 9–10 years of service experience. The findings highlighted that illegal parking leads to significant congestion, increasing the risk of accidents and injuries, particularly for vulnerable road users such as pedestrians and cyclists. Respondents agreed that the lack of parking infrastructure, weak enforcement of traffic laws, and low public awareness were the primary contributors to the problem. Illegal parking in Barangay Batasan Hills presents a persistent challenge due to limited traffic regulations, insufficient parking spaces, and inadequate public understanding of parking laws. The study concludes that illegal parking has a detrimental impact on road safety, traffic flow, and overall quality of life in the area. To address these concerns, the study recommends stricter enforcement measures, more frequent traffic inspections, and the imposition of penalties for violators. Additionally, the development of designated parking facilities and the promotion of alternative transportation options, such as public transit and bike lanes, are suggested to ease parking demand and improve traffic conditions.

Keywords: illegal parking, traffic congestion, road safety, urban mobility, barangay batasan hills, parking infrastructure, law enforcement, traffic management, criminology, quezon city

**THE IMPACT OF INNOVATIVE FIRE PREVENTION TRAINING PROGRAMS IN
REDUCING FIRE INCIDENTS IN BARANGAY 176 BAGONG SILANG CALOOCAN CITY**

Jhunel John Lajom, Robert Arizala, Noe Emmanuel Corcolon,
John Rey Quimiguing, Jayson Ranario, Jinky Anacta

Abstract

Barangay 176, Bagong Silang, Caloocan City, is among the most densely populated communities in the Philippines. Due to rapid urbanization, inadequate infrastructure, and congested residential areas, the barangay remains highly vulnerable to fire incidents. Common causes include faulty electrical wiring, unsafe handling of flammable materials, and a general lack of fire safety awareness. These incidents have led to significant property loss, displacement of residents, and occasional fatalities. This study aims to assess the impact of innovative fire prevention training programs in reducing fire-related incidents and improving community preparedness. The study utilizes a descriptive research design to gather and analyze non-numerical data related to community experiences and perceptions of fire safety. Data collection methods include surveys and direct observations conducted among residents of Barangay 176. The goal is to gain in-depth insights into the effectiveness of fire prevention programs, including evacuation drills, equipment usage, and emergency preparedness initiatives. The results indicate that 94% of respondents acknowledged the effectiveness of emergency evacuation procedures during fire drills, reflecting improved cooperation between residents and fire safety personnel. The majority strongly agreed on the importance of ongoing fire safety measures, including regular drills, investment in safety equipment, and proactive emergency planning. These findings highlight the significant influence of training programs in fostering a culture of preparedness and reducing the occurrence and impact of fire incidents within the community. The findings emphasize the need for continuous and inclusive fire prevention education. Training programs should ensure equal participation among all sectors of the community. To reinforce these efforts, it is recommended that institutions such as Bestlink College of the Philippines integrate fire safety into their curriculum, conduct regular drills, and collaborate with local fire authorities for practical training. Additionally, the implementation of community-wide awareness campaigns, workshops, and seminars is crucial to strengthening knowledge and adherence to fire prevention protocols.

Keywords: fire prevention, fire safety training, emergency preparedness, community resilience, urban risk management, fire drills, disaster risk reduction, caloocan city, public safety, descriptive research

**THE IMPACT OF JAIL CONGESTION TO PERSON DEPRIVED OF
LIBERTY AT MANILA CITY JAIL**

Britney Durangparang, Sheila Alaurin, Camille Amoguis,
Kimberly Mae Dacut, Joanna Melgarejo, Nilmar Plata

Abstract

Congested jails are a major global problem, with many countries struggling to provide adequate space and resources for their prison populations. Overcrowding occurs when the number of inmates exceeds a facility's capacity to the point where they can no longer be housed in a humane, healthy, and psychologically supportive environment. This study explored overcrowding in Manila City Jail to understand the impact of jail congestion on the health and well-being of people in custody. This study involved 30 respondents, composed of persons deprived of liberty (PDLs) and ten (10) jail officers from Manila City Jail. The researchers employed purposive sampling to determine the number of respondents required for the study. A descriptive research design was utilized to assess the impact of jail congestion on persons deprived of liberty at Manila City Jail. For the administration and retrieval of the instrument, the researchers personally approached respondents, obtained informed consent, and distributed the surveys. Once completed, the questionnaires were collected and stored securely to ensure confidentiality. Most of the respondents were male persons deprived of liberty (PDLs) aged 26–33. Their assessment of the impact of jail congestion at Manila City Jail was interpreted as “Agree” in relation to infectious diseases, living conditions, malnutrition, stress, depression, post-traumatic stress disorder (PTSD), and anxiety. The most frequently encountered problem associated with jail congestion was “insufficient living space.” To address this issue, the proposed measure is to construct additional cellblocks or dormitories to increase available living space. It is recommended that persons deprived of liberty (PDLs) be provided with programs that promote positive attitudes and behaviors while addressing the underlying causes of their offenses. Regular medical exams and access to essential healthcare services are essential for PDLs' physical health. Access to mental health professionals within correctional facilities and in the community is crucial for providing timely and appropriate care. Recidivism can be decreased and PDLs' lives can be improved by addressing and enforcing regulations that meet their needs.

Keywords: congested jails, overcrowding in prisons, person deprived of liberty, jail programs, access to healthcare

**THE IMPACT OF LAW ENFORCEMENT AGENCIES STRATEGIES IN CRIME
PREVENTION: AN ASSESSMENT**

Lalaine Vinco, Alex James Nesus, Cris Leoligao, Jessa Sabeniano,
Jamaica Torregrosa, Dr. Myrna Cuntapay

Abstract

This study aims to assess the impact of law enforcement agencies' strategies on crime prevention and to understand how these tactics influence crime rates and their significance within the criminal justice system. Law enforcement organizations employ a variety of strategies and methods to prevent, investigate, and address illegal activities within communities. This study used the descriptive research method, which aims to accurately describe the population, situations, or phenomena under investigation. A total of sixty (60) respondents participated in the study, selected through purposive sampling. This sampling method is commonly used in research because it helps ensure a quality sample is obtained without bias, thereby increasing the reliability and trustworthiness of the findings. The researchers sought permission to conduct the survey within Barangay Paang Bundok, La Loma, Quezon City. They personally approached the respondents in the community and, upon obtaining the necessary permission, invited them to participate by answering the survey questionnaire. Findings regarding the respondents' assessment of the impact of law enforcement agencies' strategies in crime prevention in terms of innovative policing, traditional policing, and interagency collaboration indicate a rating of "Strongly Agree." Based on these results, recommendations from law enforcement and barangay officials were formulated to further enhance crime prevention efforts. Based on the findings, law enforcement and barangay officials should pursue further education or, at the very least, participate more actively in training programs and seminars related to effective and efficient governance. To improve their tactics, these agencies should allocate additional funds for training and professional development. Consistent training, awareness campaigns, and advocacy initiatives are also essential to enhancing overall performance in crime prevention.

Keywords: crime prevention, innovative policing, traditional policing, interagency collaboration

**THE IMPACT OF MOTORCYCLE MODIFICATION ON CARNAPPING INCIDENTS
INVESTIGATION IN CAMARIN CALOOCAN CITY**

Marcus Cymeon Del Mundo, Vincent Bingbong Advincula, Ryan Madelo, John Ericsson Nerona,
John Kenneth Pedroso, Irene Gaviola

Abstract

Motorcycle modification in relation to carnapping incidents poses one of the greatest challenges for police officers in solving such cases. Many carnapping cases remain unsolved or progress slowly due to the difficulty of identifying modified motorcycles. In Caloocan City, police officers frequently encounter incidents involving carnapping and unidentified motorcycles. This study aimed to assess motorcycle modification trends and their impact on carnapping investigations conducted by police officers in Caloocan City. The researchers employed a descriptive research method to examine the population, situation, or phenomenon under study. This approach allowed for the analysis of factual data and facilitated an in-depth understanding of the research problem. A survey method was used to collect data from a large sample efficiently and cost-effectively. The study utilized purposive sampling, with specific criteria set for selecting respondents. In purposive sampling, researchers choose participants based on their knowledge of the study and the target population; in this case, respondents were selected according to the study's objectives. The researchers personally approached police officers and residents of Caloocan City, distributed the questionnaires, and waited for them to be completed. Once finished, the surveys were collected directly by the researchers. Most of the respondents were male, aged 26–33 years old, and had been residents of the area for 7–10 years. All variables: Efficiency of Investigation, Detection and Recovery, and the Role of Modification in Crime, were rated as having a “High Impact.” The top-ranked problem encountered was the “lack of CCTV cameras in certain areas to monitor carnapping incidents,” cited by forty-two (42) respondents, equivalent to eighty-four percent (84%). Carnapping and motorcycle modification remain significant challenges in Caloocan City. Proposed preventive measures to reduce these incidents include enforcing stricter regulations, increasing police presence, conducting public awareness campaigns, installing CCTV cameras in key areas, and fostering collaboration with motorcycle dealers and owners.

Keywords: motorcycle modification, motorcycle carnapping, carnapping

**THE IMPACT OF PARENTAL INVOLVEMENT ON JUVENILE DELINQUENCY AT
BARANGAY NAGKAISANG NAYON NOVALICHES QUEZON CITY**

Erwin Cambre, Jan Mark Gonzales, Mark John Adiqui, Jhon Eric Cañas,
Emmanuel Edward Echevarria, Irene Gaviola

Abstract

Juvenile delinquency remains a pressing concern in urban communities, with parental involvement widely recognized as a key factor in its prevention. In Barangay Nagkaisang Nayon, Novaliches, Quezon City, the rise in juvenile delinquency cases underscores the need to examine how parental engagement influences youth behavior. This study seeks to explore the relationship between parental involvement and delinquent activities, addressing a gap in local research by focusing on the role of parents in curbing such behaviors within this specific community. The research is both timely and relevant, given the growing concern over crime rates and questions surrounding the effectiveness of existing rehabilitation programs. A mixed-methods research design was utilized, integrating both quantitative and qualitative approaches. Quantitative data were gathered through surveys administered to 35 parents of juveniles involved in delinquent activities, while qualitative insights were obtained from in-depth interviews with 10 members of the Barangay Council for the Protection of Children and 5 police officers from the Women and Children's Protection Desk. The study assessed the extent of parental involvement in their children's education, discipline, and communication, and examined the frequency and types of juvenile offenses reported within the barangay. The study revealed that higher levels of parental involvement were significantly associated with lower incidences of juvenile delinquency. Parents who actively monitored academic performance, maintained open communication, and enforced consistent discipline reported fewer behavioral issues among their children. The presence of community support programs and collaboration with local authorities further contributed to positive outcomes for at-risk youth. However, several technical and logistical barriers such as limited access to school activities, conflicting work schedules, and lack of awareness of available resources were identified as obstacles to sustained parental engagement. The results indicate that parental involvement plays a critical role in preventing juvenile delinquency in Barangay Nagkaisang Nayon. Active parenting characterized by close monitoring of academic performance, open communication, and consistent discipline emerges as a key protective factor against youth involvement in delinquent activities. The findings underscore the importance of community-based initiatives that empower and equip parents, alongside accessible support services provided by local authorities. Strengthening collaboration among parents, community leaders, and educational institutions can foster a proactive and unified approach to juvenile crime prevention. Future research should investigate strategies for overcoming barriers to parental engagement and assess the long-term effectiveness of community-driven rehabilitation programs.

Keywords: juvenile delinquency, parental involvement, community-based intervention, parental supervision, socio-economic factors

**THE IMPACT OF PHILIPPINE NATIONAL POLICE OPLAN
ESTABLISHMENT VISITATION IN BAGONG SILANG**

John Lloyd Bonite, Steve Ryan Gabriel Martinez, John Carl Bustillo,
Adrian Moises, Gerald Nerviol, Jinky Anacta

Abstract

This study examines the role of police operations in crime prevention, with a particular focus on balancing law enforcement authority with community accountability. In light of rising crime rates, the research underscores the growing need for proactive strategies to ensure public safety. One such approach, establishment visitation, involves regular police visits to locations such as shops, schools, and community centers. These visits aim to deter criminal activity, enhance public trust, and safeguard vulnerable groups, particularly children, by fostering a safer and more connected community environment. The study employed a quantitative-descriptive research design to assess the role of police establishment visitations in crime prevention. Data was gathered through a researcher-made survey questionnaire, administered to 30 purposively selected respondents, comprising 15 Non-Commissioned Officers and 15 representatives from commercial establishments in Bagong Silang. The instrument covered respondents' demographic profiles, perceptions of visitation impact on crime prevention, and the challenges encountered during these initiatives. The questionnaire underwent expert validation, including review by a licensed criminologist, to ensure reliability and content accuracy. Collected data were analyzed using frequency counts, percentages, weighted means, and a four-point Likert scale. The study revealed that the majority of respondents were male, aged 34–41, and college graduates. Overall, participants strongly agreed that the PNP's establishment visitation campaign in Bagong Silang is effective in enhancing crime prevention, reducing criminal incidents, and improving public safety. High ratings were given to police presence and visibility as key factors contributing to these outcomes. However, a significant challenge identified was the lack of cooperation from some business owners and employees. To address this issue, respondents recommended strengthening collaboration with barangay tanods to enhance surveillance and facilitate the reporting of suspicious activities. The study revealed that most respondents were male, aged 34–41, single, and college graduates. They strongly agreed that the PNP's establishment visitation program plays a significant role in crime prevention. However, the lack of cooperation from some business owners emerged as a major challenge. To address this, the key recommendation was to strengthen collaboration with barangay tanods to improve surveillance and reporting. The findings further suggest that law enforcement agencies should regularly evaluate crime prevention strategies, foster stronger police–community relationships, and encourage business owners to adopt proactive safety measures.

Keywords: police operations, law enforcement, crime prevention, community policing, routine visits, anti-criminality efforts, crime control tactics, criminal behavior, public safety, institutional visitation

**THE IMPACT OF POLICE VISIBILITY IN ENHANCING
PUBLIC SAFETY IN BATASAN HILLS QUEZON CITY**

Shaymae Camilo, Jollan Joy Ibañez, Mikaela Ladao, Mary Joy Morilla,
Angelyn Pangilinan, Denise Anne Osorio

Abstract

The visibility of police officers plays a crucial role in enhancing public safety by fostering a sense of security and deterring criminal activity. Increased police presence in high-crime areas can reduce residents' fear of crime by providing reassurance and promoting a safer environment. Moreover, police visibility is associated with greater trust in law enforcement, which helps strengthen collective efficacy among community members. This enhanced community cohesion can contribute to a reduction in crime rates. This study aims to determine the consistency of the impact of police visibility on public safety in Batasan Hills, Quezon City. This study employs a quantitative descriptive research design to explain phenomena through the collection and analysis of numerical data using statistical methods. The respondents consist of three groups: 8 Barangay Officials, 20 Patrollers, and 22 residents from Batasan Hills, Quezon City. Purposive sampling, a non-probability sampling technique, was utilized to select participants based on specific characteristics relevant to the study. Respondents were categorized into five age groups, with the highest percentages (24%) in both the 18–25 and 26–33 age brackets. The gender distribution was fairly balanced, with 52% male and 48% female participants. Regarding marital status, 40% of respondents were single, while 60% were married. The majority (60%) had been residents of Batasan Hills for six years or more. Respondents strongly agreed that police visibility plays a key role in deterring crime, increasing residents' sense of safety, and fostering trust within the community. Increasing police presence in high-crime areas was perceived as an effective strategy for crime reduction and discouraging potential offenders. Additionally, faster police response times were highly valued, with respondents agreeing that this contributes to greater public satisfaction with police performance. However, poor infrastructure and inadequate lighting were identified as significant challenges, with 80% of respondents highlighting these issues. To address this, programs promoting trust and open communication between law enforcement and the community were ranked as the top recommended solutions. Installing additional streetlights in poorly lit areas improved the visibility of barangay tanods, while closer coordination with local police helped enhance overall security. Additionally, organizing seminars on crime prevention fostered greater community awareness and involvement.

Keywords: police visibility, public safety, deterring crime, crime reduction

**THE IMPACT OF POPULATION INFLUX IN RELATION TO THE CRIMES
COMMITTED IN BARANGAY. MUZON EAST, CITY OF SAN JOSE DEL MONTE,
BULACAN**

Jhon Lloyd Esperas, Renamie Arandid, Hazel Joy Manubag, June Dimiao,
Tamika Corinthian Balantucas, Rina Paulo Barroga, Dr. Antonio Dawagan Sr.

Abstract

The city of San Jose del Monte, Bulacan, Philippines, has undergone significant demographic changes marked by a rapid influx of population. As urbanization continues to reshape the social and economic landscape, it becomes crucial to examine the implications of these changes, particularly in relation to crime dynamics. This study aims to evaluate the rising population and its association with crime incidents in Barangay Muzon East, San Jose del Monte. Furthermore, it seeks to assess the effectiveness of the barangay's measures in maintaining peace and order and reducing the impact of population growth on community crime rates. This study will utilize quantitative research design. The researchers selected fifty (50) respondents, both male and female, who are residents of Barangay Muzon East, City of San Jose del Monte, Bulacan. Purposive sampling was employed to identify and select the respondents who best represent the community for the purposes of this study. The results of this study show that the majority of respondents have witnessed and encountered problems related to population influx and its connection to crimes committed in Barangay Muzon East, City of San Jose del Monte, Bulacan. To address these concerns, the study recommends increasing the visibility of Barangay Public Safety Officers (BPSO) and providing additional manpower to strengthen the barangay's presence and ensure a safer community. This study recommends that the Barangay Officials of Brgy. Muzon East, City of San Jose del Monte, Bulacan conduct seminars for family representatives to raise awareness about the extent of the community's crime problems. These seminars should also provide emergency contact numbers for quick response. Additionally, members of the Barangay Public Safety Officers (BPSO) should be trained in basic self-defense and well-oriented in apprehension procedures to effectively maintain peace and order.

Keywords: peace and order, crime prevention, increased law enforcement

**THE IMPACT OF POVERTY IN CONTRIBUTING FURTHER IN THE INCURRING
CRIMINOLOGY IN QUEZON CITY**

Gabriell Cantar, John Arthur Bacurin, Jemuel Buenaagua, Nick Tormes,
Karlos Miguel Castillo, Frankie Valledor, Edgar Reyes

Abstract

Poverty is widely recognized as a fundamental driver of criminal behavior, affecting both individual decisions and broader social structures. In Quezon City, one of Metro Manila's most populous and economically diverse areas, the link between poverty and crime has become an increasing concern. While the city includes affluent neighborhoods, it also encompasses many low-income communities where residents struggle with significant economic challenges. These disparities, combined with limited access to quality education, healthcare, and employment, create conditions where crime may be perceived as a viable means of survival. Viewed through a criminological lens, this study explores the intricate relationship between poverty and crime in Quezon City, aiming to raise public awareness and support policies that advance social justice, equality, and sustainable poverty reduction, ultimately fostering safer and more equitable communities. This study employed descriptive research design. As explained by Nassaji (2015), descriptive research aims to describe a phenomenon and its characteristics, commonly utilizing observation and surveys as data collection tools. In quantitative research using this design, data analysis often involves frequencies, percentages, averages, and other statistical methods to examine the phenomenon. In this study, the descriptive design was applied to collect data from community residents and police officers in Quezon City. The results section presents tables, analysis, and interpretation of the data gathered by the researchers. It includes the demographic profile of the respondents, responses to survey questions, and the statistical treatments applied in the study. Most respondents were aged 26–30, female, college graduates, and employed. Their assessment of the impact of poverty on contributing to crime in Quezon City was interpreted as “Strongly Agree” in terms of awareness, community participation, and community satisfaction. The most commonly encountered problem related to poverty's impact on crime was that “community members were not fully involved in the campaign activities.” To address this issue, respondents proposed measures such as using social media, local radio, and house-to-house information drives to reach a wider audience and encourage greater community participation.

Keywords: poverty, criminal behavior, economic hardships

**THE IMPACT OF POVERTY IN SHAPING VICTIMIZATION OF PROSTITUTES AT
BARANGAY NOVA PROPER, NOVALICHES QUEZON CITY**

Abdulazis Banto, Rex Banaag, John Montey Cara, Hosea Dela Cruz,
Jerden Marj Tan, Jinky Anacta

Abstract

Prostitution is a complex and controversial issue that has existed throughout history. It involves the exchange of sexual services for money or goods, raising important questions related to legality, morality, and human rights. Understanding prostitution from a social perspective requires exploring its impact on individuals and communities, as well as how societal attitudes and structures influence it. According to Ogbomo, Jardstedt, and Gran (2020), under current criminal law, prostitution or sex work refers to the provision of sexual services in exchange for money or other forms of compensation. The majority of individuals engaged in this field are women. This study utilized a survey questionnaire as the primary data collection instrument. The respondents were focused specifically on prostitutes residing in Barangay Nova Proper, Novaliches, Quezon City. A total of 30 respondents, all prostitutes living in the said barangay, were selected for the study. Researchers distributed the questionnaires directly to the respondents, explaining the purpose of the survey to encourage cooperation. Completed questionnaires were collected immediately on-site to minimize the risk of respondent collusion. The results revealed that economic necessity is a significant factor, with respondents agreeing that "Lack of money due to economic conditions leads to entering prostitution," which received a peak weighted mean of 3.17. Regarding education, "Lack of education increases vulnerability to exploitation in the sex industry," with the highest weighted mean of 3.27. In terms of homelessness, the statement "Lack of supportive social networks, such as family or community, influences a homeless person's decision to engage in prostitution" was strongly supported, evidenced by a weighted mean of 3.23. The demographic profile of the respondents shows that 56.67% are aged 18-25, while only 3.33% are aged 42-50 or older. Females comprise the vast majority at 96.67%, with 86.67% being single and no married respondents. In terms of education, 30% have either no formal education or only completed high school. The primary causes of prostitution identified are economic necessity, lack of education, and homelessness. In Barangay Nova Proper, physical violence was reported as a significant issue by 28 respondents, alongside limited legal support and mental health concerns. Proposed solutions include increased access to education and job training programs, though anonymous reporting mechanisms received less support. The study highlights the importance of collaboration between law enforcement and the community in addressing these challenges effectively.

Keywords: prostitution, economic necessity, lack of education, homelessness

**THE IMPACT OF POVERTY ON YOUTH CAUSING THEM COMMIT DELINQUENT
ACTS IN BARANGAY OBRERO, QUEZON CITY**

Stanlee Jun Abellon, Elimar Colina, Steve Cernito, Jhon Ray Torreon,
Marco Viduya, Denise Anne Osorio

Abstract

Youth is a crucial period in our lives when we learn to make decisions and start building a better future. But what happens when young people grow up in poverty? Unfortunately, limited financial resources can push some to commit crimes just to meet their basic needs. Children raised in disadvantaged environments may find themselves part of an "underclass," where lack of opportunities and resources increases the likelihood of engaging in criminal behavior. The study employed a quantitative descriptive research method, which is particularly suitable for exploring and describing the relationship between poverty and youth delinquency. The research was conducted in Barangay Obrero, using a survey questionnaire as the primary data collection tool. The questionnaire included questions designed to gather insights into the respondents' socioeconomic backgrounds, experiences with poverty, and perceptions of delinquency. Purposive sampling was utilized to deliberately select participants who possess relevant knowledge and experience to contribute to the study's objectives. The majority of respondents were aged 12 to 18, comprising 35 individuals or 70% of the sample. The group was predominantly male, with 29 respondents (58%), while females accounted for the lowest frequency at 21 respondents (42%). Regarding parental unemployment, respondents strongly agreed on its significance, with an average weighted mean of 3.50. Educational requirements as a proposed measure also received a "Strongly Agree" rating, with an average weighted mean of 3.48. Self-esteem-related materials similarly received a "Strongly Agree" interpretation, with a composite mean of 3.50. "Gang war" was identified as the most pressing problem experienced by the youth, with 90% of respondents agreeing. To address this, the preferred solution was to strengthen community programs such as sports and skills training, which garnered support from 48 respondents or 96% of the total population. This study recommends that community organizations collaborate to create a supportive environment for youth. Initiatives could include recreational programs, sports clubs, and support groups that engage young people in positive activities and foster a strong sense of belonging.

Keywords: barangay obrero, impact of poverty on youth, delinquent acts

**THE IMPACT OF QUEZON CITY POLICE DISTRICT CAMPAIGN
AGAINST ILLEGAL DRUGS: AN EVALUATION**

Ronmar Mondero, Lanbert Alejo, Marwin Gernale, Jene Cedric Ramas, Roi Caezar Viaje

Abstract

This section of the study provides valuable insights. The primary purpose of conducting the drug campaign is to halt the illegal drug trade and reduce crime rates associated with drug-related activities in Quezon City. While issues surrounding drug campaigns are not new, this research aims to evaluate the effectiveness of the Quezon City Police Department's (QCPD) efforts. Specifically, it examines the campaign's impact on reducing drug-related crimes, the community's perception of police initiatives, and the overall success in meeting its intended objectives. This study utilized a quantitative descriptive research design to evaluate the impact of the Quezon City Police District's campaign against illegal drugs. The researchers employed purposive sampling, a technique that selects participants based on specific criteria rather than giving all individuals an equal chance. The respondents consisted of fifty (50) individuals from Barangay Holy Spirit, Quezon City, including twenty (20) law enforcement officers and thirty (30) barangay staff members. This chapter presents the results of the survey conducted among fifty (50) participants, comprising barangay staff and police officers in Barangay Holy Spirit, Quezon City. The demographic profile shows that most respondents are aged 31–35, predominantly male, and largely college graduates. The majority have served between 2 to 4 years. The primary challenges faced during the campaign were budget limitations, followed by a lack of manpower. Among the proposed solutions, the provision of counseling programs was highly recommended, while the least favored solution was the quick settlement of issues. This chapter presents a comprehensive analysis of the data gathered regarding the Quezon City Police District's (QCPD) campaign against illegal drugs. It evaluates the perceived impact of the campaign, identifies key challenges, and proposes strategic interventions. The majority of respondents were male, aged 31–35 years, and predominantly college graduates, with most having 2–4 years of service. The most significant problem encountered by the QCPD campaign was a limited budget. To address these challenges, respondents recommended implementing counseling programs and conducting awareness seminars as the most effective measures. These findings highlight the urgent need for sustained resource support and capacity-building initiatives to enhance the campaign's effectiveness.

**THE IMPACT OF THE INCREASING OF MOTORCYCLE ACCIDENTS IN
BARANGAY KALIGAYAHAN NOVALICHES, QUEZON CITY**

Jinky Maglasang, Shyrra Barizo, Maria Avegael Arsaga,
Baby Mae Caubat, Justine Fulminar, Nilmar Plata

Abstract

This study investigates the rising incidence of motorcycle accidents in Barangay Kaligayahan, Novaliches, Quezon City. Motorcycle accidents are a serious concern, often resulting in severe injuries, financial burdens, and emotional trauma. Understanding their impact is essential for helping victims navigate the aftermath and for informing effective preventive measures. The research aims to identify the causes and consequences of motorcycle accidents in the area, as well as to evaluate the effectiveness of existing traffic safety measures. The researchers used a quantitative, descriptive research design to gather detailed data. A survey was conducted with 30 respondents, including motorcycle riders, traffic law enforcers, and residents. Additionally, in-depth interviews were administered to a separate group of 30 respondents, consisting of 10 motorists, 10 traffic enforcers, and 10 residents. The results indicate that the rising number of motorcycle accidents in Barangay Kaligayahan is primarily attributed to reckless driving, poor road conditions, inadequate traffic enforcement, and a lack of safety awareness among motorcycle riders. These accidents often result in physical injuries, emotional trauma, and significant economic burdens for victims and their families. The study recommends enforcing stricter traffic laws and regulations, improving road infrastructure, and conducting safety awareness programs for motorcycle riders. The findings contribute to the development of evidence-based policies and interventions aimed at reducing motorcycle accidents and promoting road safety in Barangay Kaligayahan and other similar urban communities.

Keywords: motorcycle accidents, traffic safety measures, improvement of roads, stricter traffic laws and regulations

**THE IMPACT OF TRAFFIC CONGESTION IN BARANGAY
BAGUMBONG CALOOCAN CITY**

Merianne Daet, Jolina Amihan, Maria Sylvia Laureano,
Rea Mae Solo, Paula Joy Torres, Nilmar Plata

Abstract

The effects of traffic congestion in Barangay Bagumbong are multifaceted, encompassing economic, environmental, and social dimensions. Economically, congestion results in significant productivity losses as residents and commuters experience prolonged travel times. This study aims to assess the impact of traffic congestion in Barangay Bagumbong, Caloocan City, with the goal of identifying its key causes and consequences. The study involved 30 respondents, consisting of 12 residents, 3 traffic enforcers, and 15 commuters from Barangay Bagumbong, Caloocan City. A purposive sampling technique was employed to determine the appropriate number and type of respondents for the study. A quantitative descriptive research design was used to assess the impact of traffic congestion in the area. For the administration and retrieval of the research instrument, the researcher personally approached the respondents, obtained informed consent, and distributed the surveys. Completed questionnaires were then collected and securely stored to maintain confidentiality. The findings revealed that, based on the assessment, the Social Impact had an overall weighted mean rating of 3.45, interpreted as Strongly Agree. The Health Impact recorded an overall weighted mean of 3.26 (Strongly Agree), while the Environmental Impact had an overall weighted mean of 3.28 (Strongly Agree). The Economic Impact yielded an overall weighted mean of 3.34 (Strongly Agree), and the Transportation Impact received the highest rating, with an overall weighted mean of 3.58 (Strongly Agree). It is recommended that traffic management strategies and urban planning initiatives be implemented to address congestion in Barangay Bagumbong. Policymakers should focus on improving infrastructure, optimizing traffic flow, and enhancing public transportation to promote sustainable development. The study also highlights the direct impact of congestion on residents' daily lives, underscoring the need for policies aimed at reducing emissions and improving air quality.

Keywords: traffic congestion, urban planning, assessment, impact of traffic congestion, traffic management strategies

**THE IMPACT OF TRAFFIC CONGESTION IN BARANGAY TALIPAPA
NOVALICHES QUEZON CITY: BASIS FOR AN ACTION PLAN**

Patrick Terence Dizon, Lourenze John Mandia, Johnmier Blanco,
Bonifacio Ramos, Jehen Yabao, Edgar Reyes

Abstract

Traffic congestion is a significant problem that poses serious risks to road safety. In Barangay Talipapa, Novaliches, Quezon City, the growing volume of traffic has heightened dangers for both drivers and pedestrians. This study examines the impact of traffic congestion in the area, with particular focus on road safety concerns stemming from increased traffic volume. It aims to assess the effects of congestion on health, the environment, society, and the economy, while also exploring the specific problems it causes and identifying potential solutions. Participants include members of the Department of Public Order and Safety, the Traffic and Transportation Management Division, business owners, barangay officials, residents, commuters, drivers, and pedestrians. The study employed a quantitative descriptive research design and utilized purposive sampling techniques. The researchers first submitted a request to conduct the study in Talipapa, Novaliches, Quezon City. Upon approval, they approached the selected respondents in Barangay Talipapa and personally distributed the questionnaires. The researchers waited while the respondents completed the surveys, after which the completed forms were collected for analysis and interpretation of the data. Of the 140 respondents, 36% (50) were aged 18–25, while 8% (11) were aged 51 or older. Traffic congestion was rated as having a high impact on physical health (3.16), mental health (3.27), noise (3.28), and air pollution (3.39). It also had a significant effect on public safety (3.35). Moderate impacts were observed for stress (3.19), delays (3.13), and reduced business competition (3.18). Overall, the findings indicate that congestion in Barangay Talipapa significantly affects health, the environment, and safety, while exerting moderate effects on stress levels and the local economy. Commuters are encouraged to adjust their travel times or select alternate routes to help reduce congestion. Residents should be informed about the health and environmental impacts of traffic congestion and actively participate in improving traffic management. Drivers are advised to comply with traffic laws and adopt efficient driving practices, while pedestrians should follow established safety guidelines. Traffic enforcers need to be aware of the impacts of congestion to effectively enforce regulations. The local government unit (LGU) should utilize the study's findings to develop targeted action plans, and further research should be conducted to explore improved traffic management solutions.

**THE IMPACT OF TRAFFIC ROAD SIGNS REFRESHER COURSE AMONG
DRIVERS OF PUBLIC UTILITY VEHICLES: A PROPOSAL**

Richard James Ollete, Crisgerald Andrada, Jonas Vinuya,
Brethart Obanan, Jhay Diolata, Nilmar Plata

Abstract

This study examines the impact of public utility vehicle (PUV) drivers' knowledge of traffic road signs in North Fairview, Quezon City. It aims to assess drivers' level of awareness and understanding of road signs and how this knowledge influences their driving behavior, compliance with traffic regulations, and overall road safety. Data was gathered through surveys and interviews with PUV drivers to evaluate their knowledge and analyze its correlation with traffic violations and accidents. The findings revealed that a higher level of awareness of road signs contributes to improved road discipline, a reduction in traffic violations, and enhanced safety for both drivers and passengers. The study underscores the importance of continuous training and awareness campaigns to strengthen drivers' understanding of road signs, thereby promoting safer and more efficient road usage. The study covered the research design, study respondents, sampling technique, instrument construction, instrument validation, administration and retrieval procedures, and statistical data treatment. A total of 120 respondents participated, including jeepney drivers, motorcycle drivers, tricycle drivers, and a traffic enforcer from North Fairview, Quezon City. The results show that the majority of respondents were male and between 34 and 41 years old. The assessment revealed that public utility drivers "Strongly Agree" on the importance of knowing traffic road signs in terms of safety impact, economic impact, and educational impact. The study found that the main problems affecting the impact of road sign knowledge among public utility drivers were inadequate awareness leading to distracted driving, followed by poor driving habits and insufficient knowledge of traffic rules. To address these issues, the researchers propose implementing a driver's license points system to penalize reckless driving and encourage safer driving practices. Overall, the study recommends conducting mandatory driving seminar programs for all residents, with a focus on the proper use and handling of public utility vehicles (PUVs).

Keywords: traffic road signs, public utility vehicles (puvs), traffic compliance

**THE IMPACT OF UNEMPLOYMENT ON THE INCREASE OF
CRIME IN BARANGAY PAYATAS B. QUEZON CITY**

Mark Florendo, Venheur Artates, Mark Joshua Raffles, Patrick Acopio,
John Tabangay, Denise Anne Osorio

Abstract

Unemployment remains a critical social issue that affects both individuals and communities, often contributing to higher crime rates. In urban areas such as Barangay Payatas B, Quezon City where poverty, limited job opportunities, and inadequate access to education prevail as many residents struggle to meet their basic needs. This study examines the relationship between unemployment and rising criminal activity in the area, applying Social Disorganization Theory to understand how economic instability and social breakdown create conditions conducive to crime. By analyzing these factors, the research seeks to provide insights and recommendations aimed at reducing crime through enhanced employment opportunities and strengthened community support systems. This study employed a descriptive-quantitative research design to examine the impact of unemployment on rising crime rates in Barangay Payatas B, Quezon City. This approach was selected to collect measurable data and analyze the perspectives of both community members and law enforcement officers regarding the relationship between joblessness and criminal activity. This section presents and analyzes survey data from 50 respondents in Barangay Payatas B, Quezon City, exploring the relationship between unemployment and crime. The majority of respondents were female, aged 26–33, single, and college-educated. Findings indicate that unemployment significantly contributes to crime by fostering socioeconomic deprivation, financial hardship, and joblessness. Participants agreed that poverty and limited job opportunities increase the incidence of crimes such as theft and drug-related offenses. Both residents and police officers identified economic hardship, social inequality, and lack of income as major drivers of criminal activity. Overall, the results support the view that reducing unemployment can substantially lower crime rates and enhance community stability. The study, grounded in Social Disorganization Theory, found a strong correlation between unemployment and rising crime in Barangay Payatas B, Quezon City. Most respondents were single, college-educated women aged 26–33. Poverty and joblessness emerged as primary drivers of crimes such as theft and drug-related offenses. Findings suggest that economic hardship often pushes individuals toward illegal activities, while prolonged unemployment fosters frustration and social exclusion. Both residents and law enforcement officers agreed that increasing job opportunities and implementing community support programs could help reduce crime. However, key barriers remain, including low public awareness, limited access to employment, inadequate government support, and minimal engagement with authorities.

Keywords: unemployment rate, crime rates, economic instability, social breakdown

**THE IMPACT OF UNREGULATED COCKFIGHT DERBY ON SELECTED
BARANGAYS IN QUEZON CITY: AN ASSESSMENT**

Alma John Michael, Jhun Kerl Alvero, Mark Dave Consulta,
Teodulo Gausin, John Redmon Villanueva, Irene Gaviola

Abstract

Illegal cockfighting is a prevalent form of gambling in the Philippines and in many parts of the world, often perceived as a cultural tradition or a form of entertainment. However, unregulated cockfight derbies pose significant social, legal, and public health risks. In areas such as Anonas and Barangay U.P. Campus in Quezon City, these activities have been linked to increasing crime rates and growing safety concerns. This study seeks to examine the impact of unregulated cockfighting and propose evidence-based solutions to mitigate its adverse effects. The study employed a quantitative research method, focusing on numerical data and statistical analysis. It involved 50 respondents: 10 police officers from Anonas Police Station, 10 barangay officials or volunteers, and 30 residents of Barangay U.P. Campus. Participants were selected through purposive sampling based on their relevance to the study. Data was collected using a survey questionnaire designed to assess the social, legal, and health impacts of unregulated cockfighting. The researchers ensured that the study's objectives were clearly explained to participants and that data collection procedures upheld accuracy and reliability. Findings indicated that animal cruelty and social disturbances were the most prevalent issues associated with unregulated cockfight derbies. Both concerns were rated highly, with 96% of respondents identifying them as major problems. In terms of potential solutions, 98% of respondents favored the enforcement of anti-gambling laws, the conduct of sting operations, and the prosecution of gambling syndicates as the most effective measures. Respondents were primarily aged 26–33 and 51 and above, with most being high school graduates. The study found that unregulated cockfighting has a significant impact in fostering illegal activities, causing spectator injuries, promoting animal cruelty, and contributing to gambling addiction. Issues such as reinforcing harmful cultural norms and contributing to mental health problems were perceived as having a moderate impact. In conclusion, the findings underscore the urgent need for stricter law enforcement and community-based interventions to address illegal cockfighting. By tackling these concerns, communities can reduce crime, enhance public safety, and promote animal welfare in affected areas.

Keywords: illegal cockfighting, gambling in the philippines, unregulated cockfight derbies

**THE IMPACT OF YOUTH PROGRAMS ON CRIME REDUCTION IN
BARANGAY NOVALICHES, QUEZON CITY: AN ASSESSMENT**

James Laddaran, John Christian Capeña, Jamalodin Disoma,
Christian Flores, Joshua Tadeo, Eduardo Villaruel

Abstract

Crime reduction refers to the systematic efforts and strategies implemented to decrease the incidence of criminal activities within a community or society. Reducing crime among youth is a multifaceted endeavor that requires a combination of community engagement, empowerment programs, policy interventions, and supportive environments. By fostering collaboration among various stakeholders and addressing the developmental needs of youth, communities can create sustainable strategies that not only reduce crime but also promote positive youth development. This research employed a descriptive quantitative design, chosen because it effectively captures the socio-economic status, personality, and identity of the respondents, ensuring valid and reliable results. The study involved fifty (50) youth community residents, selected through a simple random sampling technique. Data was gathered using a survey questionnaire, which provided insights for analysis. Prior to data collection, the researcher submitted a letter of permission to the management. Upon approval, the researcher approached the respondents to guide them in completing the survey while maintaining confidentiality. Finally, recommendations were made to address the respondents' concerns regarding awareness of fire safety implementation in commercial establishments. The respondents' assessment of the impact of youth programs on crime reduction in Barangay Novaliches, Quezon City, indicates strong agreement across several areas. The overall weighted mean rating for sports and recreation is 3.476, interpreted as strongly agree. For the livelihood program, the overall weighted mean rating is 3.54, also interpreted as strongly agree. Similarly, the psychological development program received an overall weighted mean rating of 3.528, which is likewise interpreted as strongly agree. The study revealed that the respondents "strongly agree" with the assessment of the impact of youth programs on crime reduction in Barangay Novaliches, Quezon City. Sports and recreation activities play a significant role in keeping young individuals engaged in productive pursuits, thereby reducing their likelihood of engaging in criminal behavior. Similarly, livelihood programs are regarded as highly beneficial for providing youth with opportunities for skill development and employment, which helps deter involvement in crime. Additionally, psychological development programs are perceived as effective in promoting emotional well-being and personal growth.

Keywords: youth organizations, crime reductions

**THE IMPELEMENTATION OF INNOVATIVE POLICE RECORD MANAGEMENT IN
POLICE STATION 5 FAIRVIEW QUEZON CITY: AN ASSESSMENT**

Cris John Celispara, Clifford Ed Buscay, Cyril Oderio,
Janiel Berbaña, Virgilito Brignas, Jinky Anacta

Abstract

Police records are official documents maintained by law enforcement that include arrest details, charges, convictions, and other relevant legal actions. These records are crucial for crime prevention, investigation, and evidence collection. At Police Station 5 in Fairview, the implementation of an innovative Police Record Management System aims to enhance efficiency, data security, and public service. This system supports officers and fosters community trust by promoting transparency and accountability. The digital transformation also strengthens collaboration across departments and aligns goals for improved policing through data-driven decision-making, ultimately contributing to a safer and more reliable police force in Quezon City. The study employed a quantitative, descriptive research approach to evaluate the Police Record Management System at Police Station 5 in Fairview, Quezon City. Data was collected through surveys and a phenomenological method to capture participants' experiences, ideas, and opinions. The researchers aimed to systematically describe the convenience and effectiveness of the system without manipulating any variables, focusing on detailed observations gathered through well-designed questionnaires. The study involved 50 police officers from Station 5 in Fairview, Quezon City, most of whom were male, aged 34–41, non-commissioned officers, and holders of bachelor's degrees. Results indicated that the Police Record Management System significantly enhanced public safety, accuracy, efficiency, and transparency, receiving a high overall rating of 3.86. The transition to digital records reduced errors and improved data reliability, supported by features such as automated data input and real-time synchronization, which earned a composite mean score of 3.74. Most respondents from Police Station 5 in Fairview were male, aged 34–41, and held a bachelor's degree, reflecting a relatively young and educated police workforce. The study found that the police record management system significantly improved accuracy, accessibility, and efficiency. However, challenges such as manual data entry errors and system downtimes were identified, leading to recommendations aimed at further enhancing overall system performance.

Keywords: police record, digital storage, management of record

THE IMPLEMENTATION OF "OPLAN LIGTAS PAMAYANAN" BY BUREAU OF FIRE PROTECTION IN BARANGAY TANDANG SORA, QUEZON CITY

Ralph Bermudez, Elmer Marasigan, Nilo Olitan, Charlon Jay Petalio,
Jarene Soronel, Dr. Antonio Dawagan Sr.

Abstract

This study investigates the impact of the Bureau of Fire Protection's "Oplan Ligtas Pamayanan" program on the residents of Barangay Tandang Sora, Quezon City. Its purpose is to evaluate the program's effectiveness in reducing fire incidents, enhancing community preparedness, and increasing awareness of fire safety. Specifically, the study aims to assess the implementation of "Oplan Ligtas Pamayanan" in Barangay Tandang Sora. The primary goal of descriptive research is to better understand concepts, opinions, or experiences through the collection and analysis of non-numerical data. The respondents consisted of three groups totaling fifty (50) individuals: 10 Barangay officials, 35 residents, and 5 Bureau of Fire Protection (BFP) officers. The study was conducted in Barangay Tandang Sora, Quezon City. The researchers utilized a stratified sampling technique to determine the appropriate number of respondents for the study. Data collection involved personally approaching residents of Barangay Tandang Sora. The researchers formulated the following conclusions based on the summary of findings: Most respondents are aged 18–25 years old, male, single, at the college level, and have served for 1 to 3 years. The respondents' assessment of the Bureau of Fire Protection's "Oplan Ligtas Pamayanan" implementation in Barangay Tandang Sora, Quezon City, is interpreted as "Highly Effective" in terms of fire prevention and fire safety awareness. The most frequently encountered problem in fire prevention and awareness is "congested roads and inaccessible fire-prone areas." To address these challenges, the study proposes implementing continuous training and development programs for BFP personnel, installing additional fire hydrants, and advocating for increased budget allocation for fire safety initiatives. Additionally, improved coordination with local water authorities and seeking external financial support are necessary to strengthen fire prevention efforts. Proposed Enhancements for the Implementation of Oplan Ligtas Pamayanan by the Bureau of Fire Protection in Barangay Tandang Sora, Quezon City

Keywords: fire prevention, community readiness, fire safety awareness

**THE IMPLEMENTATION OF CALOOCAN CITY ORDINACE NO. 0647 ALSO
KNOWN AS ANTI-SMOKING ORDINANCE AND ITS IMPACT ON THE
COMMUNITY OF BARANGAY 178 CAMARIN, CALOOCAN CITY**

Liza Joy Tumamao, Nichole Gabua, Lowie John Nuevo, Dimple Sheen Recto,
Mary Grace Vergara, Denise Anne Osorio

Abstract

Implementing anti-smoking ordinances has become a crucial public health strategy in cities worldwide, aimed at reducing smoking rates and minimizing the harmful effects of tobacco use. The ordinance in Barangay 178 Camarin is part of a broader campaign to establish smoke-free areas and promote healthier lifestyles among its residents. This study examines the implementation of the anti-smoking ordinance in Barangay 178 Camarin and its impact on the local community. The researchers chose a descriptive research design, which aims to provide a comprehensive overview of a particular phenomenon or population without manipulating any variables. By using this design, researchers can effectively observe and examine the collected data, offering valuable insights to guide further investigation. Simple random sampling was employed, wherein each member of the population has an equal chance of being selected. This method is the most straightforward among probability sampling techniques, involving only a single random selection and requiring minimal prior knowledge about the population. Due to its use of randomization, research conducted with this sampling method generally has high internal and external validity and is less prone to biases such as sampling and selection bias. The conclusions drawn from the collected data provide meaningful insights. Regarding the demographic profile based on sex, 26 respondents (52%) were male, while 24 respondents (48%) were female, making a total of 50 respondents (100%). The overall composite mean for awareness was 3.13, interpreted as “Agree.” For enforcement, the composite mean was 3.16, also interpreted as “Agree.” Community support had a composite mean of 3.04, with the same verbal interpretation of “Agree.” Enforcement problems related to the ordinance ranked first, with a frequency of 48 (96%). Additionally, 48 respondents (96%) agreed that the penalties for violating the anti-smoking ordinance are sufficient. Limited resources and manpower can hinder the consistent enforcement of the ordinance, making it difficult to monitor and penalize offenders effectively. Improving enforcement of the Anti-Smoking Ordinance requires a combination of stricter enforcement measures, increased public awareness, and supportive community programs.

Keywords: anti-smoking ordinance, improvements for the ordinance, critical public health approach in cities, tobacco use

**THE IMPORTANCE OF SEXUAL ABUSE AWARENESS PROGRAM IN
BARANGAY 171 BAGUMBONG CALOOCAN CITY: A PROPOSAL**

Chrishel Ramirez, Hize! Goyala, Carmina Burburan, Mack Jayson De Guzman,
Vladymyre Perez, Edgar Reyes

Abstract

The Sexual Abuse Awareness Initiative in Barangay 171 Bagumbong, Caloocan City, seeks to raise community awareness about sexual abuse prevention through education. This study will use surveys and community activities to assess the effectiveness of the campaign. The research will provide important insights into community awareness levels and the effectiveness of awareness efforts. The project's findings will aid improve education and advocacy initiatives, resulting in a better knowledge of sexual abuse concerns and supporting future preventive efforts. The ultimate purpose is to increase awareness and understanding of these vital topics. This chapter presents the protocols and techniques used by the researchers to obtain the information required for this study. The researcher will use purposive sampling through the intentional selection of participants based on particular traits or standards pertinent to the study goals; as study participants, the researcher will employ six (6) Barangay Officials, nine (9) PNP Officers, and fifteen (15) who reside in Barangay 171 Bagumbong, Caloocan City. 30 Survey Questionnaires will be given to the respondents above. The ultimate purpose is to raise awareness and understanding about these essential topics. The majority of responders ranged in age from 19 to 28. Most participants identified as female. In terms of civil status, the majority were single, with the majority having graduated from college. A major concern highlighted was a lack of strong community participation in planning and implementing preventative programs. To remedy this, we advise holding frequent training sessions focusing on sexual assault awareness. These seminars attempt to improve understanding, encourage proactive involvement, and empower members of the community to participate in prevention activities. The proposed action plan for enhancing sexual abuse awareness in Barangay 171, Bagumbong, Caloocan City, includes raising Awareness through educational campaigns, training key community stakeholders, and creating support systems for survivors. It focuses on assessing community needs and strengthening local partnerships. The plan also aims for continuous monitoring and evaluation to ensure long-term sustainability and effectiveness in preventing sexual abuse and supporting survival.

Keywords: sexual abuse awareness, program, training capacity

**THE IMPORTANCE OF TRAFFIC DISCIPLINE IN MITIGATING ROAD RAGE
INCIDENT IN BARANGAY 176 BAGONG SILANG CALOOCAN CITY**

Cris Arquillano, Jade Acero, Moises Arrojo, Rodel Palomo,
Ullysis Yongco, Jinky Anacta

Abstract

In Barangay 176, Bagong Silang, Caloocan City, rapid urbanization and a growing number of vehicles have contributed to an increase in traffic-related issues, including road rage. Road rage, characterized by aggressive driving behaviors such as tailgating, erratic lane changes, verbal confrontations, and even physical altercations, poses significant risks to both drivers and pedestrians. The area's narrow, congested streets, combined with inadequate traffic management, further exacerbate these problems, creating a high-stress environment for commuters. This study aimed to determine the significance of traffic discipline in mitigating road rage incidents in Barangay 176, Bagong Silang, Caloocan City. The study employed a quantitative approach using a descriptive research design to examine variables related to demographics, such as age, gender, and socioeconomic status. This method involves the identification of clearly defined variables and hypotheses prior to data collection. A purposive sampling technique was utilized to select participants who had been directly involved in or affected by road rage incidents. The respondents included fifteen commuters, fifteen residents, ten drivers, and ten traffic enforcers from Barangay 176, Bagong Silang, Caloocan City. The study found that the majority of respondents were aged 46 and above, male, married, and employed, suggesting that these groups may be more engaged with the issue due to greater experience, stability, or personal concern. In contrast, younger individuals, females, the unemployed, and those who were separated or widowed showed lower participation rates. Respondents strongly agreed that traffic discipline has a positive impact on road rage incidents in Barangay 176, Bagong Silang, Caloocan City, citing improvements in order, safety, driver behavior, and law enforcement. Poor infrastructure was identified as the primary challenge in promoting compliance with traffic rules, with 82% of participants recognizing it as a major concern. The study recommends stricter law enforcement, infrastructure development, and public awareness initiatives to enhance traffic discipline and reduce road rage incidents. In response to the rising number of road rage incidents and traffic-related accidents in Barangay 176, a reoriented program was launched to strengthen road safety education, promote community discipline, and enhance collaboration between law enforcement and the public.

Keywords: road rage, law enforcement, road discipline, road safety

**THE IMPORTANT OF PARENTAL INVOLVEMENT IN YOUTH DEVELOPMENT IN
BARANGAY 152 BAGONG BARIO CALOOCAN CITY**

Rudy Boy Carag, Johnson Bautista, Jerome Brin, Vic Dagdagan,
Chester Allan Ibasco, Dr. Myrna Cuntapay

Abstract

Parental commitment is a crucial aspect of raising children. It serves as the foundation for a child's development, significantly contributing to their physical, emotional, social, intellectual, and spiritual growth. Being a parent goes beyond mere physical presence, it involves actively engaging in a child's life, offering consistent support, and nurturing their overall well-being. Providing encouragement and emotional support helps children feel comfortable communicating without fear of judgment or mistreatment. It is also important to offer guidance in a way that children can understand and accept. A quantitative research design was utilized for this study by employing a survey questionnaire to gather data. The researchers selected parents from Barangay. 152 Bagong Barrio, Caloocan City, aiming for a total of fifty (50) respondents to strengthen the research process. To ensure a fair representation of the population, the study will implement a simple random sampling technique, allowing each individual an equal chance of being selected. This approach enhances the representativeness of the sample and contributes to the validity of the results, as outlined in "Mathematical Statistics" by Lawrence M. Leemis (2020). The results of the analysis and interpretation of the respondents' profiles are as follows: In terms of age, the study included fifty respondents, with twenty individuals (40%) aged 51 or above, making this the largest age group. In contrast, only one respondent (2%) was below 20 years of age. Regarding sex, twenty-six respondents were female and twenty-four were male, indicating a slight majority of female participants. In terms of civil status, the majority were married, with twenty-nine respondents (58%) falling into this category, compared to fourteen (28%) who were single. Finally, with respect to length of residency, eighteen out of the fifty respondents reported residing in Barangay 152, Bagong Barrio, Caloocan City. Under R.A. 6972, the main objective is to provide early childhood care and development services aimed at ensuring the protection and holistic development of children aged six years and below. A key component of this program is the strengthening of the Child Protection System at the barangay level, as this is a crucial step toward fostering the full potential of every child. Barangays serve as the first point of contact for children, making them essential in implementing and sustaining child protection efforts.

Keywords: parental commitment, early childhood care, development services, integrated development of children

**THE INFLUENCE OF DRUG ABUSE IN CRIMINAL BEHAVIOR IN BARANGAY 176,
BAGONG SILANG, CALOOCAN CITY**

Rowan April Bargamento, Shania Blue Galas, Erika Jane Zapata,
Sylvia Nazarine Barrera, Jonna Marie Magtibay, Jinky Anacta

Abstract

The objective of this research is to examine the influence of drug abuse on criminal behavior within Barangay 176, Bagong Silang, Caloocan City. As drug abuse increasingly affects various communities, understanding its impact on criminal activities is essential for developing effective intervention strategies. This study investigates the relationship between substance abuse and criminal behavior by analyzing local cases and law enforcement data and evaluating existing strategies to inform policy development and intervention efforts. The researcher used a survey questionnaire to gather information from fifty (50) participants in Barangay 176, Bagong Silang, Caloocan city, including ten (10) barangay officials, ten (10) Philippine Drug Enforcement Agency (PDEA) officers, ten (10) Philippine National Police (PNP) officers, and twenty (20) Person Deprived of Liberty (PDL), to understand drug dependence's impact on decision-making. The researcher used a survey questionnaire to gather information from fifty (50) participants in Barangay 176, Bagong Silang, Caloocan city, including ten (10) barangay officials, ten (10) Philippine Drug Enforcement Agency (PDEA) officers, ten (10) Philippine National Police (PNP) officers, and twenty (20) Person Deprived of Liberty (PDL), to understand drug dependence's impact on decision-making. This research focuses on the influence of drug abuse on criminal behavior in Barangay 176, Bagong Silang, Caloocan City. The study found that 70% of respondents were male, 28% were aged 41 and above, 52% were single, and 40% were college graduates. Respondents agreed that collaboration between law enforcement and health services, increased access to rehabilitation, public awareness campaigns, job creation, and healthy stress-coping methods are crucial in addressing the issue. The researcher recommends that Barangay officials implement community-driven prevention programs, particularly targeting the youth, to educate residents about the dangers of drug abuse. Youth should be encouraged to seek reliable information from trusted sources, establish clear rules, and enforce consequences for violations. Law enforcement personnel should build trust with communities through outreach programs and partnerships. Future research should evaluate harm reduction programs and policy interventions to guide evidence-based policymaking.

Keywords: rehabilitation, drug abuse, criminal behavior

**THE INFLUENCE OF NEIGHBORHOOD IN CHILD IN CONFLICT WITH THE
LAW IN BARANGAY 177, CAMARIN CALOOCAN CITY**

Ronnie Nakar Jr, Grevin Labaclado, Alexander Longares,
Edward Joseph Medil, Emjay Salamanque

Abstract

A Child in Conflict with the Law (CICL) is defined as a person below 18 years old who is alleged, accused, or adjudged to have committed an offense. In the study of the influence of neighborhood factors on children in conflict with the law, researchers consistently emphasize the significant impact of environmental elements. Neighborhoods characterized by economic deprivation, high crime rates, and social disorder often create conditions that contribute to juvenile delinquency. These areas frequently lack the social cohesion and collective efficacy necessary for effective crime prevention and intervention. This study employed a qualitative descriptive research design. Data were collected through surveys to gather information on the respondents' demographic profiles and factors influencing children involved in criminal activities, including family relationships, peer influence, and social environmental factors. The results highlight several strategies to address the issue of Children in Conflict with the Law (CICLs) in Barangay 177 Camarin, Caloocan City. One key problem identified is the presence of gangs in the neighborhood, which increases the risk of children becoming involved in criminal activities. Another significant challenge is the financial difficulties faced by parents due to unemployment. Among the suggested solutions is the development of reliable school-based programs that implement anti-bullying, life skills training, and orientation sessions for parents. These initiatives should be carried out in collaboration with the Department of Social Welfare and Development (DSWD), the barangay, and through public awareness campaigns aimed at educating the community. The goal is to reduce stigma and encourage acceptance of rehabilitated youth rather than judging them based on their past actions. This study evaluates the factors influencing children in conflict with the law (CICL) involved in illegal activities in Barangay 177, Camarin, Caloocan City. Findings indicate that social, familial, and community-related issues contribute to the engagement of youth in unlawful behavior. To address these concerns, several interventions are recommended. Schools should implement reliable programs focused on anti-bullying, life skills development, and parent orientation sessions in collaboration with the Department of Social Welfare and Development (DSWD) and the barangay. Public awareness campaigns must also be strengthened to educate the community, reduce stigma, and encourage the acceptance of rehabilitated youth instead of judging them for past offenses. In addition, youth should be provided with opportunities to participate in positive activities such as recreational programs, sports, and teaching initiatives to redirect their energy toward productive pursuits. To further strengthen crime prevention, the community must be made aware of existing city ordinances through regular monthly meetings and the distribution of educational materials. These efforts aim to enhance children's knowledge of crime prevention, reduce risk factors, and foster a supportive environment that encourages rehabilitation and reintegration.

Keywords: a child in conflict with the law, juvenile delinquents, anti-bullying programs

**THE INFLUENCE OF PEER GROUPS ON CRIMINAL BEHAVIOR
AMONG YOUNG ADULTS IN NOVALICHES BAYAN**

Junwealth Carranza, Ronnel Contado, Johnlee Engalan, Javer Ramber,
Unda Sangkadali Jr, Dr. Myrna Cuntapay

Abstract

This study, titled “The Influence of Peer Groups on Criminal Behavior Among Young Adults in Novaliches Bayan,” aims to explore the significant role peer groups play in shaping the behavior and decision-making of young adults, particularly in relation to criminal conduct. Grounded in the frameworks of Social Control Theory by Travis Hirschi and Social Learning Theory by Albert Bandura, the research investigates how social bonds, peer pressure, modeling, and reinforcement within peer groups contribute to criminal tendencies. These theories suggest that when social attachments to conventional institutions such as family, school, and community, weaken, individuals, especially youth, become more susceptible to deviant behaviors promoted by their peers. The study utilized a descriptive research design and purposive sampling to gather data from 50 respondents, including 30 young adults aged 18–30, 10 barangay officials, and 10 Philippine National Police (PNP) personnel assigned to Novaliches Bayan. Findings revealed that peer groups exert a significant influence on the behavior of young adults. Most respondents reported awareness of criminal behavior among their peers and expressed confidence in recognizing and resisting peer pressure. However, personal experiences indicated that both direct and subtle peer influences continue to shape attitudes toward risk-taking and delinquency. Factors such as weak family ties, lack of emotional coping skills, absence of positive role models, and limited access to structured extracurricular activities further increase vulnerability to negative peer influence. Moreover, the study identified several challenges in preventing youth criminality, including a lack of community-based programs, insufficient educational interventions, and minimal involvement of families in youth development. Based on these insights, the researchers proposed a series of intervention programs, such as peer mentoring, community volunteerism, skill development workshops, peer counseling services, and recreational initiatives. Ultimately, this research contributes to a deeper understanding of the social factors that foster criminal behavior among young adults in urban communities like Novaliches Bayan. It emphasizes the need for collaborative efforts among local government units, law enforcement agencies, schools, and families to implement sustainable and preventive strategies that mitigate the adverse influence of peer groups.

Keywords: role peer groups, social bonds, peer pressure, youth criminality prevention

**THE INFLUENCING RELATIONSHIP OF POLICE PRESENCE SIGNIFICANT
IMPACTS WITH COMMUNITY'S TRUST: AN ASSESSMENT**

John Bryan Ermino, Artemio Esposa Jr, Kian Klehr Guillemer,
Ruel Salazar, Gleen Paul Cruz, Irene Gaviola

Abstract

This chapter contains the background of the study, related literature and studies, relevance of reviewed related literature and studies to the present study, theoretical framework, conceptual framework, statement of the problems, assumption, scope and delimitation of the study, significance of the study, and definition of terms. A community's impression of safety, justice, and accountability is greatly influenced by the presence of police enforcement. This chapter provides a detailed description of the research methodology, covering the research design, respondent selection, sampling techniques, data collection instruments, instrument validation procedures, methods for administering and retrieving instruments, and statistical techniques used for data analysis. A diverse sample of community members, representing various socio-economic backgrounds, was surveyed to assess their perceptions of police presence, safety, and trust. The survey included questions about their experiences with law enforcement, frequency of police encounters, and overall sense of security. Both closed- and open-ended questions were utilized to gather quantitative data as well as personal narratives. This chapter presents the data collected by the researchers through tables, analysis, and interpretation. It includes the demographic profile of the respondents, providing essential context for understanding their perspectives and experiences. Participants who reported positive interactions with police officers characterized by professionalism, respect, and effective de-escalation tactics demonstrated higher levels of trust. These individuals were more likely to believe that the police were genuinely committed to the community's well-being. This chapter presents the summary and conclusions derived from the study, which aimed to identify the problems affecting the relationship between police presence and community trust in Barangay Varsa. The results clearly show that one of the most important factors influencing trust is the behavior of police officers during interactions with residents. Higher levels of trust are strongly correlated with positive encounters characterized by professionalism, respect, and the use of de-escalation strategies. These findings support the idea that daily actions prioritizing dignity and respect beyond formal policies are crucial in building and maintaining community trust.

Keywords: problem-oriented policing, positive police interactions, ethnic and racial disparities

**THE INTEGRATION OF TRAFFIC CONGESTION MANAGEMENT PROCESS IN
BARANGAY SAUYO: A TRAFFIC MANAGEMENT STRATEGY PROPOSAL**

Henry Leo Benavidez, Reymart Batalan, Joshua Cinco, John Nelly Mangaong,
Sherwin Tutor, Dr. Myrna Cuntapay

Abstract

This chapter outlines the proposed plans and strategies to assist Barangay Sauyo in managing and controlling traffic congestion in the region of Metro Manila. It includes the background of the study, related literature and studies, the theoretical and conceptual frameworks, statement of the problem, assumptions, scope and delimitation, and the significance of the study. Traffic congestion has become a pressing urban issue, negatively impacting the country's economic productivity, environmental sustainability, and the quality of life in urban areas. This study is feasibility research that proposes a theory and possible plans to control traffic congestion and traffic management. This study conducts a quantitative method that compromised the collected data from the respondents. This chapter shows presentation of tables, analysis and interpretation of the data gathered by the researchers. It includes the profile of the respondents, the survey questions as well as the statistical treatment used in study. The purpose of this chapter is to summarize the key findings that emerged from the study, highlighting what the research revealed, suggested, or indicated. This summary reflects the overall outcomes rather than the conclusions or recommendations derived from them. Based on the preceding analysis and interpretation, the following findings are presented.

Keywords: traffic management, traffic congestion

**THE MODERNIZATION ISSUES AND CONCERN PROGRAMS OF QUEZON CITY JAIL:
BASIS FOR POLICY ENHANCEMENT**

Eric Sodela, Mark Anthony Espinosa, Rance Venecio Narido,
Andy Boy Nobleza, Christian Pallega, Jinky Anacta

Abstract

The Quezon City Jail has reached its maximum capacity, resulting in overcrowded conditions that severely affect inmate welfare. Inmates face significant health issues due to the lack of adequate medical assistance and preventive care. The large prison population, combined with cramped living conditions where multiple inmates are confined in a single room, increases the risk of disease transmission. Furthermore, the overcrowding places additional strain on jail infrastructure, such as fences and room integrity, raising concerns about safety and facility deterioration. This study aims to investigate the modernization issues and concerns within the Quezon City Jail and to propose a comprehensive framework for the improvement and enhancement of its facilities and services. This study employed a descriptive survey method to assess the modernization issues and concerns of the Quezon City Jail, which will serve as the basis for proposed enhancements. Descriptive research was chosen to systematically collect and analyze data regarding current conditions and challenges within the facility. The researchers used a purposive sampling technique to identify and select appropriate respondents who possess relevant knowledge and experience. A total of 30 respondents participated in the study, consisting of 15 Jail Commission Officers and 15 Persons Deprived of Liberty (PDLs) from the Quezon City Jail. The study revealed that among the 30 respondents, the age groups 18–25, 26–30, and 41–50 were equally represented, each comprising 33.3% of the population. Gender distribution was also balanced, with 50% male and 50% female respondents. In terms of civil status, 40% were single, 33.3% married, 16.7% separated, and 10% widowed. Educational attainment varied, although the majority had attained at least a high school education. Respondents strongly agreed that programs focused on custody, welfare, and decongestion have a positive impact on Persons Deprived of Liberty (PDLs). They also agreed on the effectiveness of rehabilitation and governance initiatives. Overcrowding emerged as the most significant challenge, identified by 90% of participants. The most frequently recommended enhancement for modernization was the improvement of health and sanitation facilities within the jail. Improvement in a modernization program refers to the advancement and upgrading of systems, processes, infrastructure, or equipment to ensure they are more current, efficient, and effective in meeting present-day needs and standards.

Keywords: quezon city jail, modernization, overcrowding, health and sanitation, persons deprived of liberty (pdl), jail programs, rehabilitation, custody and welfare, descriptive survey, purposive sampling

**THE NEEDS OF MODERNIZED EQUIPMENTS IN BUREAU OF FIRE PROTECTION
IN BRGY COMMONWEALTH FIRE SUB STATION IN QUEZON CITY**

Mark Kevin Isidro, Justine Bittong, Zigfred Casinillo,
Khien Zue Javate, Vicente Nuevo, Dr. Antonio Dawagan Sr.

Abstract

Modernizing equipment at the Barangay Commonwealth Fire Substation is crucial for enhancing emergency response capabilities in Quezon City's densely populated and rapidly urbanizing area. Upgraded firefighting tools and technology, including advanced fire trucks and modern protective gear, ensure quicker and more effective fire suppression. This not only minimizes property damage but also enhances firefighter safety by reducing the risk of injury in hazardous situations. Descriptive quantitative research design aims to systematically gather information to describe a phenomenon, situation, or population. It primarily answers the what, when, where, and how questions related to the research problem, rather than the why. For this study, the researchers utilized a purposive sampling technique. According to Nikolopoulou (2023), purposive sampling is a non-probability sampling method where units are selected intentionally based on specific characteristics needed in the sample. In other words, participants are chosen "on purpose" to best represent the study's focus. The respondents consisted of three groups: ten (10) residents, twenty (20) firefighter officers, and twenty (20) volunteer firefighters, totaling fifty (50) respondents, all living in Barangay Commonwealth, Quezon City. Demographic: A significant portion of the respondents (38%) were between the ages of 34 and 41, totaling 19 individuals. The smallest age group was 18 to 25 years old, with only 5 respondents (10%). The respondents were predominantly male, comprising 90% (45 individuals), while females accounted for only 10% (5 individuals). College graduates formed the largest educational group, with 22 respondents (44%) indicating they had completed tertiary education. The majority of the respondents were married, accounting for 78% (39 individuals), while 22% (11 individuals) identified as single. The highest number of respondents had served for 7–10 years and 14–16 years, with 10 individuals (20%) in each category. The lowest frequency was among those who had served for 17–20 years, with only 5 respondents (10%). For Residents, the Bureau of Fire Protection (BFP) should implement regular fire safety seminars, evacuation drills, and community awareness campaigns. These activities will educate residents on fire prevention measures and proper responses during fire emergencies, thereby enhancing overall safety and preparedness within the community. For Volunteer Firefighters, it is recommended that volunteer firefighters participate in frequent simulation exercises and hands-on training. These sessions will improve their operational readiness and ensure they are capable of effectively using modern firefighting tools and equipment during actual emergencies. For Bureau Firefighters, professional firefighters under the Bureau of Fire Protection should undergo continuous and updated training programs. These should focus on familiarization with modern firefighting technologies, advanced fire suppression techniques, and updated safety protocols to improve performance and reduce risks during fire response operations.

Keywords: fire safety seminars, evacuation drills, awareness campaigns, volunteer firefighter training, simulation exercises, modern firefighting equipment, firefighter upskilling, fire prevention, emergency response, bureau of fire protection (bfp)

**THE PHILIPPINE NATIONAL POLICE MAXIMUM TOLERANCE RESPONSE
TO TRANSPORT STRIKE IN BARANGAY 76, MONUMENTO
CIRCLE ROTUNDA, SOUTH CALOOCAN CITY.**

John Rey Manangan, Jayson James David, Joharie Enca, Kenneth Omelgo,
Mohammad Rayan Salem, Nilmar Plata

Abstract

Transport strikes have long been a recurring form of protest in the Philippines, typically led by various transport groups in response to government policies or regulatory measures perceived to threaten the livelihoods of drivers, operators, and commuters. While these strikes aim to highlight the concerns and demands of transportation workers, they often lead to significant disruptions in daily activities, hamper mobility, and contribute to economic losses. This study explores the relationship between maximum tolerance and law enforcement behaviors, focusing on how Philippine National Police (PNP) personnel handle situations based on their individual tolerance levels. It examines the influence of demographic factors such as sex, age, and length of service on the exercise of maximum tolerance and compares variations in anger management and tolerance levels among respondents based on these characteristics. Stratified sampling was employed to determine the composition of the 50 respondents, which included 15 PNP personnel, 20 residents, and 15 public utility vehicle (PUV) drivers. All participants were selected from Barangay 76, Monumento Circle Rotunda, in South Caloocan City. Most of the respondents comprising drivers, commuters, and local authorities are residents of Barangay 76, Monumento Circle Rotunda, South Caloocan City, and have firsthand experience with the effects of transport strikes. The majority fall within the 26–33 age range, are male, married, college graduates, and have served for 10 years or more in their respective roles. Respondents rated the Philippine National Police's (PNP) implementation of maximum tolerance during transport strikes as exhibiting "Moderate Effectiveness," particularly in terms of police visibility, response time, and crowd control. Key challenges identified in the PNP's response include negative public perception, insufficient support for stranded commuters, and inadequate protection for police personnel. Among the proposed solutions, the most recommended measure is to increase police visibility and deploy additional personnel to strategic areas, highlighting the need for a stronger and more proactive law enforcement presence during such events. To improve the management of transport strikes, the Philippine National Police (PNP) should enhance police visibility, reduce response times, and provide officers with adequate training and protective equipment. Local government units (LGUs) must work closely with the PNP, transport groups, and community leaders to address the root causes of strikes and offer timely assistance to stranded commuters. Transport unions are encouraged to pursue open dialogue and peaceful conflict resolution. The media also plays a vital role by ensuring transparency and delivering real-time updates to the public. Future research should focus on evaluating the effectiveness of current PNP policies and exploring innovative approaches to crowd control and public safety during large-scale disruptions.

Keywords: pnp response, transport strikes, police visibility, response time, officer training, lgu collaboration, transport unions, conflict resolution, media transparency, future research, crowd control

**THE POLICEWOMAN LEADERSHIP IN POLICE COMMUNITY
RELATION AN ASSESSMENT**

Billy Jane Rebadomia, Angelica Durian, Angelica Sadicon,
Cresilda Tapayan, Camille Tuazon, Jinky Anacta

Abstract

The role of women in policing has gained increasing attention, particularly regarding their leadership within police departments. Effective police-community relations are essential to law enforcement, as positive interactions between officers and community members foster public safety, trust, and mutual respect. This study aims to assess the leadership role of policewomen in strengthening police-community relations. This study employs a qualitative descriptive research design, utilizing a survey questionnaire to systematically observe and describe a specific subject, population, or phenomenon. The primary aim is to provide an accurate portrayal of characteristics or behaviors without manipulating any variables. The researchers focused on investigating policewomen's leadership, dedicating significant time to the development of well-structured interview questions. This approach allows for a deeper exploration of the phenomena under study, capturing insights into leadership roles and experiences within the context of police-community relations. The results of the analysis and interpretation revealed the following: Respondents' demographic profiles were categorized based on age, sex, and educational attainment. The effectiveness of policewoman leadership was assessed across several key dimensions, including trust and relationship-building, community engagement and outreach, mediation and capabilities, effective policing and implementation, and leadership style. A major issue identified was that female police officers often face unwanted behaviors, such as sexist comments, stereotyping, unequal treatment, and a general lack of respect and credibility, with 48 out of 50 respondents (98%) confirming these experiences. To address this concern, all respondents (100%) recommended the implementation of policies aimed at actively combating gender discrimination, harassment, and bias within police departments. The most recommended solution proposed by the respondents was the implementation of policies that actively combat gender discrimination, harassment, and bias within police departments, with a frequency of 50 or 100%. Additionally, the respondents emphasized the importance of ensuring access to quality communication within the force. Female officers can serve as role models and mentors, particularly for young women and girls in the community, by demonstrating the value and impact of careers in law enforcement. It is also recommended to expand community policing initiatives, where officers engage with the public in non-enforcement roles, allowing them to build stronger, more meaningful relationships with residents. Lastly, the researchers encourage future scholars to further explore and expand upon this topic, contributing to the growing body of knowledge on policewoman leadership and gender equity in law enforcement.

Keywords: policewoman leadership, gender discrimination, harassment, mentorship, community policing, law enforcement, role models, communication, bias prevention, future research

**THE PUBLIC'S PERCEPTION ON POLICE LEGITIMACY IN
TALIPAPA, QUEZON CITY**

Mark Angelo Biasong, Jo Pet Benito, Mark Dannel Constantino,
John Lester Ferrer, Denmark Trigo, Eduardo Villaruel

Abstract

This study examines public perceptions of police legitimacy, focusing on key factors such as organizational justice, ethical policing, officer behavior, and fair decision-making. It underscores the importance of understanding these perceptions in order to enhance police-community relations and improve the effectiveness of law enforcement. Police legitimacy refers to the extent to which the public views the police as a rightful and trustworthy authority, deserving of compliance and cooperation. The respondents of this study included community residents of Barangay Talipapa, Quezon City, as well as barangay personnel and police officers from Station 3. The researchers employed purposive sampling to determine the appropriate number and type of respondents for the study. A survey questionnaire served as the primary data collection instrument, designed to assess public perception of police legitimacy in Barangay Talipapa. To ensure clarity and eliminate any vague or confusing items, the questionnaire underwent validation by the research adviser. Respondents were provided with an answer sheet containing the survey questions, which were collected after completion. Most of the respondents were male, aged 30 to 35, with a length of residency or service ranging from 11 to 20 years. The respondents' assessment of police legitimacy in Barangay Talipapa, Quezon City, specifically in terms of organizational justice, ethical policing, behavior, and fair decision-making, was interpreted as "Strongly Agree." The most commonly encountered issue regarding police legitimacy was the lack of manpower to patrol various areas within the community. To address this concern, it is recommended to increase police presence by deploying more personnel to patrol different areas. This measure aims to enhance public safety, deter criminal activity, and ensure faster emergency response. It is recommended that the community actively engage in open dialogue with police officers to foster mutual trust and understanding. Organizing community forums and town hall meetings can provide a platform to discuss policing practices, address public concerns, and promote transparency. To earn the trust and cooperation of the community, law enforcement must focus on building genuine and consistent relationships with community members.

Keywords: police legitimacy, barangay talipapa, organizational justice, ethical policing, public perception, patrol manpower shortage, community engagement, police-community relations, transparency, fair decision-making, town hall meetings, trust-building

**THE ROLE OF BARANGAY CHILD PROTECTION COUNCIL IN ADDRESSING
CHILDHOOD TRAUMA IN PAYATAS, QUEZON CITY: AN ASSESSMENT**

Reymond Bognot, Mj Bolo, Nikko Oguing, Daniel Parman,
John Mark Rubis, Edgar Reyes

Abstract

This study explores the role of the Barangay Child Protection Council (BCPC) in addressing childhood trauma within the community of Payatas, Quezon City. The use of participatory approaches empowers residents by involving them in the decision-making process and equipping them with the knowledge and tools to effectively confront issues related to childhood trauma. Key focus areas include the prevention of childhood trauma, access to counseling services, legal assistance, and community-based education programs. By actively engaging community members, a sense of shared responsibility and accountability is fostered, ultimately strengthening the council's capacity to respond to and mitigate trauma among children. This study includes the following components: research design, study respondents, sampling techniques, research instrument, validation procedures, administration and retrieval of the instrument, as well as the statistical tools and methods used for data analysis and interpretation. The study involved a total of 70 respondents, including childhood trauma victims, residents of Barangay Payatas, representatives from PNP Station 13, Barangay officials, and personnel from the City Social Welfare and Development Office. The majority of the respondents were female, aged between 18 and 25 years old. Results indicated that most respondents strongly agreed with the effectiveness of the Barangay Child Protection Council's (BCPC) programs and interventions in the areas of childhood trauma prevention, counseling, legal assistance, and community education. However, the study also revealed key challenges encountered by BCPC members in implementing these programs. The most commonly identified issues were "inadequate support from local government units, which limits the scope of initiatives," and "insufficient funding for programs and services. To assess the role of the Barangay Child Protection Council in addressing childhood trauma in Payatas, Quezon City, the researchers will employ a quantitative descriptive-correlational research design. The study will involve a total of 70 respondents, including 40 childhood trauma victims, 10 officers from PNP Station 13, 10 Barangay Payatas officials, and 10 representatives from the City Social Welfare and Development (CSWD) office. A survey questionnaire will serve as the primary instrument for data collection, designed to gather insights into the effectiveness of BCPC programs and the challenges faced in their implementation.

Keywords: barangay child protection council (bcpc), childhood trauma, payatas quezon city, community intervention, prevention programs, counseling, legal assistance, community education, quantitative research, descriptive-correlational design, survey question

**THE ROLE OF BARANGAY FIRE BRIGADE IN ENHANCING FIRE SAFETY
IN BARANGAY MASAMBONG, QUEZON CITY**

Rod Nathaniel Catalan, Don Jerry Cabalquinto, Carlos Miguel Francisco,
Cassius Jhon Fulgosino, Gerwin Patrick Gonzaga, Irene Gaviola

Abstract

This study was conducted to examine the roles and responsibilities of the Barangay Fire Brigade Team and to assess how their efforts contribute to the prevention and mitigation of fire-related incidents in Barangay Masambong, Quezon City. The Barangay Fire Brigade serves as a key component in ensuring community fire safety through initiatives that promote preparedness, raise public awareness, and deliver timely emergency responses. Their active involvement is essential in fostering a safer environment by minimizing fire hazards and enhancing the community's capacity to respond effectively during fire emergencies. The primary objective of this research was to assess the role of the Barangay Fire Brigade in enhancing fire safety in Barangay Masambong. A descriptive research method was utilized to collect relevant data concerning the brigade's functions and effectiveness. Through random sampling, the study engaged ten (10) members of the Barangay Fire Brigade and forty (40) residents. A survey questionnaire served as the primary data-gathering instrument, with responses analyzed using percentage distribution and weighted mean. The researchers personally approached the selected residents to invite them to participate and obtained their informed consent before distributing the questionnaires. Ample time was provided for respondents to complete the forms, which were subsequently collected and analyzed to conclude. The study revealed that the primary challenge faced by the Barangay Fire Brigade is the lack of proper training and adequate equipment, as indicated by 68% of the respondents. This highlights the urgent need for regular capacity-building programs and access to modern firefighting tools to enhance their effectiveness. As presented in Table 10, the most recommended solution for improving fire safety in the barangay is to explore alternative funding sources, a strategy supported by 92% of participants. Securing additional financial resources would enable the implementation of comprehensive fire safety programs and facilitate the procurement of essential equipment and supplies. The researchers recommend several measures to strengthen the effectiveness of the Barangay Fire Brigade. These include clearly defining the roles and responsibilities of each member, conducting regular training sessions to ensure operational preparedness, and recruiting qualified personnel with relevant skills. Additionally, the brigade should organize frequent fire drills, hold debriefing sessions to evaluate and improve response protocols, and maintain comprehensive records of all activities and incidents. Lastly, establishing strong partnerships with local and national agencies is essential to access additional support, funding, and resources for sustained improvement in fire safety.

Keywords: barangay fire brigade, fire safety, training, equipment, preparedness, community safety, emergency response, funding sources, partnerships, fire drills, debriefing sessions, recruitment

**THE ROLE OF BARANGAY OFFICIALS IN THE IMPLEMENTATION OF SIDEWALK
CLEARING OPERATIONS FOR PEDESTRIANS' SAFETY IN BARANGAY 171
BAGUMBONG, CALOOCAN CITY**

Maria Cevrina San Miguel, Alvaney Baslan, Mae Kylle Garde,
John Yriel Palomino, Angelica Patajo, Edgar Reyes

Abstract

Sidewalks are vital components of urban infrastructure, particularly in Barangay 171 Bagumbong, Caloocan City, where they provide safe and convenient pathways for pedestrians. Barangay officials play a crucial role in implementing sidewalk clearing operations by enforcing local ordinances and maintaining public safety and order. Their responsibilities include addressing issues such as illegal vending, improperly parked vehicles, littering, and other obstructions that not only contribute to traffic congestion but also pose safety risks to pedestrians. This criminological research, titled "The Role of Barangay Officials in the Implementation of Sidewalk Clearing Operations for Pedestrian Safety in Barangay 171 Bagumbong, Caloocan City," aims to examine how barangay officials effectively carry out these operations to reduce hazards and promote safer pedestrian movement. This research employed a quantitative descriptive design to examine the role of barangay officials in the implementation of sidewalk clearing operations for pedestrian safety in Barangay 171, Bagumbong, Caloocan City. The researchers used purposive sampling to select participants, focusing on individuals who are directly relevant to the study, rather than giving all individuals an equal chance of selection. Permission was requested and granted by the dean's office to conduct the study and distribute survey questionnaires. The respondents included twenty (20) barangay officials actively involved in community governance and fifty (50) pedestrians from the area. The data gathered revealed that the majority of respondents were between the ages of twenty-four to twenty-nine (24–29) years old. The average rating for the "Implementation" variable was 3.51, indicating a moderate level of effectiveness. Data analysis on the problems encountered by barangay officials and pedestrians during the implementation of sidewalk clearing operations showed that the most frequently cited issue had a frequency of sixty-six (66), accounting for 11.17%, while the least reported issue had a frequency of fifty-two (52) or 8.80%. Regarding proposed measures to address these challenges, the highest recorded frequency was sixty-eight (68), representing 10.90%, while the lowest was fifty-four (54) or 8.65%. The study emphasizes the significant role of barangay officials in implementing sidewalk clearing operations to ensure pedestrian safety.

Keywords: barangay officials, sidewalk clearing operations, pedestrian safety, urban infrastructure, implementation, community safety, enforcement, purposive sampling, caloocan city

**THE ROLE OF BARANGAY PEACE AND ORDER COMMITTEE IN
MITIGATING FRATERNITY RELATED-VIOLENCE IN
BAGONG SILANG PHASE 9 CALOOCAN CITY**

Jelyn Alonzo, G-cel Livelo, Margarette Abejar, Elaine Moico,
Sheriilyn Pagayon, Irene Gaviola

Abstract

The primary function of the Barangay Peace and Order Committee is to mitigate crimes within its jurisdiction by carrying out activities that safeguard the rights and properties of all residents. This study aims to support Area Monitoring Officers and Taskforces in enhancing their understanding of the current crime-related circumstances in the community. One major concern addressed in this research is the threat posed by fraternity groups, which often engage in violent activities such as hazing, gang warfare, rioting, and other crimes associated with organized fraternities. The researchers conducted a descriptive study to examine the role of the Barangay Peace and Order Committee (BPOC) in mitigating fraternity-related violence in Bagong Silang Phase 9, Caloocan City. The purpose of the study was to gather data that would help assess the respondents' awareness of how the BPOC contributes to addressing fraternity-related incidents. A total of fifty (50) respondents participated in the study, divided into three groups: ten (10) Task Force members, ten (10) Area Monitoring Officers, and thirty (30) community residents. Most of the respondents were aged 42–50 years old, female, married, and high school graduates, with 4 to 6 years of service or residency in the community. The respondents' assessment of the role of the Barangay Peace and Order Committee (BPOC) in mitigating fraternity-related violence in Bagong Silang Phase 9, Caloocan City, was interpreted as “Strongly Agree,” particularly in the areas of conflict resolution, coordination with law enforcement, and promoting community awareness. The most commonly encountered problem by the BPOC was the weak prosecution of fraternity-related crimes. To address this issue, the study proposes the establishment of a dedicated task force composed of law enforcement personnel, community leaders, and representatives to foster open communication and build trust within the community. This chapter presents the conclusion and possible recommendations derived from the study, which aimed to determine the role of the Barangay Peace and Order Committee (BPOC) in mitigating fraternity-related violence. The findings revealed that 39 out of 50 respondents, representing an average of 78%, identified the weak prosecution of fraternity-related crimes as the most pressing issue. In response to this, a key recommendation is to strengthen peacekeeping efforts through increased community involvement, in collaboration with the BPOC and the Department of Social Welfare and Development (DSWD), to enhance preventive measures and promote a more coordinated response to fraternity-related violence.

Keywords: barangay peace and order committee (bpoc), fraternity-related violence, conflict resolution, community involvement, law enforcement coordination, weak prosecution, bagong silang phase 9, caloocan city, dswd, peacekeeping efforts

**THE ROLE OF BARANGAY PERSONNEL IN ADDRESSING VIOLENCE AGAINST
WOMEN AND THEIR CHILDREN IN BARANGAY MAPULANG LUPA VALENZUELA
CITY**

Ma Cassandra Abayon, Ruby-an Dela Cruz, Kimberly Maceda,
Carolane Nojida, Mary Ann Villanueva, Jinky Anacta

Abstract

Violence Against Women and Their Children Act, or Republic Act 9262 of 2004, refers to a series of acts committed by any person against a woman who is a wife, former wife, or a woman with whom the person has or had a sexual or dating relationship, or with whom he has a common child, or against his or her child, whether legitimate or illegitimate. The barangay personnel role in handling Violence Against Women and Their Children (VAWC) cases is outlined in Section 47 of the Implementing Rules and Regulations (IRR) of RA 9262. The instrument used in this study was a survey questionnaire. The respondents of the study included 20 barangay personnel, equivalent to 28.57 percent, and 50 residents, equivalent to 71.43 percent. Therefore, the total number of respondents was 70. This study used quantitative methods, particularly descriptive research design. The purposive sampling technique was applied in this study, a method also known as judgment sampling or selected sampling. The total composite mean for mediation and conflict was 3.22, indicating “Strongly Agree” as the verbal interpretation. “Maintain impartiality and neutrality throughout the case of Violence Against Women and Their Children” got the highest weighted mean of 3.37 with a verbal interpretation of “Agree.” “Victims of VAWC feel safe and supported when seeking help from the barangay” got the highest weighted mean of 3.49 with a verbal interpretation of “Strongly Agree.” “The barangay can provide enough protection to victims of Violence Against Women and Their Children during the intervention process” ranked first with a weighted mean of 3.39, indicating “Strongly Agree.” “Barangay personnel monitor the VAWC cases to ensure that victims receive the necessary help and support” got the highest weighted mean of 3.42 with a verbal interpretation of “Strongly Agree.” For victims of Violence Against Women and Their Children, it is recommended that they seek assistance or guidance from barangay personnel and other available support agencies to ensure their safety. For barangay personnel, it is important to maintain impartiality and sensitivity in the processing of VAWC cases to encourage victims to report cases without fear of discrimination or bias.

Keywords: violence against women and their children (vawc), barangay personnel, residents

**THE ROLE OF CRIME INFORMATION, REPORTING AND ANALYSIS SYSTEM (CIRAS)
IN POLICE STATION 6 (BATASAN): A BASIS FOR ENHANCEMENT**

John Paul Andoy, Carl Jade Baclea-an, Jessie Bermillo, Bien Rovic Jalandoni,
Harry Anaïs Orbista, Denise Anne Osorio

Abstract

The Crime Information Reporting and Analysis System (CIRAS) is a specialized component of the Philippine National Police (PNP) E-Policing initiative, developed in 2015 as an in-house web-based system. It features data visualization tools such as graphs, crime maps, and a crime clock to facilitate more effective analysis of recorded crime incidents. This study aims to examine the functional roles of CIRAS as a basis for potential system enhancements, as well as to identify the challenges encountered in its implementation. CIRAS is designed to optimize information utilization within the organization, ensuring accurate and comprehensive crime analysis for informed decision-making. The researchers employed a quantitative research approach, utilizing a descriptive research design to observe and describe the characteristics of the respondents. This method was selected to provide a detailed understanding of the subject matter through measurable data. To gather relevant information, the researchers used a stratified sampling technique, targeting a total of 50 respondents from the Batasan Hills Police Station, comprising 10 police commissioned officers and 40 police non-commissioned officers. The findings of the study, the majority of respondents were between 26 to 33 years old, with a frequency of 19. Additionally, the majority were male, totaling 38 respondents, and most were college graduates. The results also revealed that most respondents strongly agreed with the statement that training on the use of CIRAS can help law enforcers achieve accurate crime reporting. Furthermore, concerning comprehensive crime analysis, respondents strongly agreed that CIRAS provides an advantage in generating statistical crime data used to enhance crime maps, charts, and graphs. Lastly, in terms of information utilization, the respondents strongly agreed that all data recorded in CIRAS can contribute to the development of strategic and proactive crime prevention measures. It is concluded that the respondents generally expressed a positive assessment of CIRAS in terms of accurate crime reporting, comprehensive crime analysis, and effective information utilization. The most commonly encountered issue was technical problems, such as system crashes or malfunctions. In response to this, it is recommended that Batasan Hills Police Station 6 implement regular system maintenance and software updates to address bugs and security vulnerabilities, thereby enhancing the overall functionality and reliability of CIRAS.

Keywords: ciras, crime reporting, crime analysis, information utilization, technical problems, system maintenance, software updates, pnp e-policing, batasan hills police station, system reliability

**THE ROLE OF CRIMINOLOGY INTERNS IN ENHANCING CAMPUS SECURITY IN
BESTLINK COLLEGE OF THE PHILIPPINES NOVALICHES, QUEZON CITY**

Roselo Babila, Rafael Jhan Baylon, Junel Acuña, John Rie Evina,
Christian Superable, Irene Gaviola

Abstract

Campus security has become an increasingly significant concern for educational institutions, particularly in maintaining a safe and conducive environment for both students and staff. In response, many schools and colleges have sought to strengthen their security measures through various strategies. This study aims to assess the role of criminology interns in enhancing campus security at Bestlink College of the Philippines, specifically within its Millionaires Village campus in Novaliches, Quezon City. The research seeks to determine how the involvement of criminology interns contributes to overall safety and supports the institution's security objectives. The study involved respondents from various sectors of the school community, including students, employees, and administrators. To ensure the representativeness of the sample, the researchers utilized a probability sampling technique through simple random sampling. Data collection was conducted using unstructured interviews to obtain in-depth qualitative insights, alongside a structured questionnaire aimed at capturing respondents' demographic profiles and their specific concerns regarding campus security. The findings revealed positive assessments of the role of criminology interns in various aspects of campus security. These include regular evaluation and feedback (mean score: 3.248), inter-agency collaboration (3.14), implementation of policies, rules, and regulations (3.241), patrol and surveillance (3.158), incident reporting (3.181), and security protocol assessment and review (3.098). Despite these favorable results, the study identified a key issue, the lack of clear guidelines defining the roles and responsibilities of criminology interns, which may limit their effectiveness and contribution to campus safety efforts. The findings, researchers proposed an action plan aimed at enhancing the role of criminology interns in campus security. This includes conducting comprehensive training programs covering critical areas such as campus layout orientation, emergency response protocols, operation of security technologies (e.g., CCTV and access control systems), and applicable laws and regulations. The following recommendations are made: The institution should establish and distribute clear role descriptions for criminology interns to define their duties and responsibilities effectively. Students and staff should be routinely updated on campus security measures to ensure collective awareness and participation. School administrators should commit to regularly reviewing and updating security policies, ensuring alignment with evolving threats and technological advancements. Criminology interns are encouraged to proactively seek guidance on their responsibilities to perform their roles with greater clarity and confidence. Future studies should aim to assess the long-term impact of criminology interns on crime prevention and campus safety, while continuously evaluating the effectiveness of their involvement.

Keywords: criminology interns, campus security, bestlink college, training program, emergency response, cctv systems, role clarification, security policies, school safety, campus crime prevention, action plan, security awareness, future research

**THE ROLE OF LAW ENFORCEMENT IN ADDRESSING SOCIAL MEDIA RELATED
CRIMES AT BARANGAY GREATER LAGRO, QUEZON CITY**

Mary Jullianne Legaspi, Judylyn Bulfa, Jaielle Anne Sunico,
Ronald Sabban, Angelica Sanchez, Jinky Anacta

Abstract

The advent of the digital age has revolutionized nearly every aspect of human life, including communication, commerce, entertainment, and education. This technological transformation has also extended to the realm of criminal activity, giving rise to a new wave of offenses that exploit the unique vulnerabilities and vast opportunities provided by the internet and social media platforms. This study will utilize a qualitative descriptive research design to examine the effectiveness of law enforcement efforts in addressing social media-related crimes in Barangay Greater Lagro, Quezon City. The demographic profile of the respondents reveals that the highest frequency among the three groups was within the age range of 26–33 years, with 22 respondents, accounting for 27.50% of the total. In terms of sex, female respondents constituted the majority, with 45 individuals representing 56.25%. Regarding civil status, most respondents were single, comprising 45 individuals or 56.25% of the sample. Regarding educational attainment, the majority were high school graduates, comprising 36 respondents, or 45%. In terms of the effectiveness of law enforcement strategies in addressing social media-related crimes, the results show the following: Monitoring and Investigation received an overall weighted mean of 3.42, interpreted as Strongly Agree. Identifying and Tracking yielded an overall weighted mean of 3.27, also interpreted as Strongly Agree. Conducting Digital Forensics had an overall weighted mean of 3.25, interpreted as Agree. Executing Search Warrants garnered an overall weighted mean of 3.34, interpreted as Strongly Agree. Arresting Offenders obtained an overall weighted mean of 3.27, likewise interpreted as Strongly Agree. A notable challenge identified in the study is the difficulty in tracking and identifying anonymous accounts involved in social media crimes. Most of the respondents were female, comprising 45 individuals or 56.25% of the total, and the majority belonged to the age group of 26 to 33 years. In terms of civil status, the highest number of respondents were single, also totaling 45 or 56.25%. The respondents strongly agreed with the effectiveness of law enforcement efforts across the variables: Monitoring and Investigation, Identifying and Tracking, Executing Search Warrants, Conducting Digital Forensics, and Arresting Offenders. The most commonly encountered issue was the difficulty in tracking and identifying anonymous accounts involved in social media crimes. As a response, the most highly recommended solution by the respondents was to strengthen the capacity of local law enforcement in tracking and identifying anonymous social media accounts involved in criminal activities.

Keywords: social media-related crimes, law enforcement effectiveness, anonymous accounts, digital forensics, monitoring and investigation, identifying and tracking, search warrant execution, arrest procedures, barangay greater lagro, quezon city.

**THE ROLE OF MODERN TECHNOLOGY IN CRIMINAL INVESTIGATION
BY PHILIPPINE NATIONAL POLICE: AN ASSESSMENT**

R-jay Dacutanan, Jessmark Dacutanan, Dennis Ballesteros,
Ronald Caingal, Rafael Agustin Lambino, Nilmar Plata

Abstract

In today's digital era, crime has extended beyond physical boundaries into cyberspace, leading to a rise in cybercrimes such as hacking, online fraud, identity theft, and data breaches. These offenses have become increasingly common and impactful, posing significant challenges to law enforcement agencies. This study aims to assess the role of modern technology in criminal investigations conducted by the Philippine National Police (PNP) Cyber Forensic Division. The study surveyed a total of 50 respondents, comprising 20 personnel from the Cyber Forensic Division and 30 community members. It was conducted at Camp Karingal, the headquarters of the Quezon City Police District. Utilizing a descriptive research design, the study employed purposive sampling to select participants with relevant experience and knowledge in the field of cybercrime and digital investigations. The demographic profile of the respondents revealed that 30% were aged 18–25, while only 4% were above 51. Males comprised 60% of the total respondents, with females accounting for the remaining 40%. In terms of marital status, 50% were married, and only 2% were separated. Regarding educational attainment, 60% of the respondents were college graduates, while just 2% had attained postgraduate degrees. In terms of length of service, 48% had been in service for 1–3 years, 16% for 4–6 years, 20% for 7–10 years, and another 16% had over 11 years of experience. Respondents strongly agreed on the vital role of modern technology in criminal investigations. Among the technological tools assessed, digital forensic services received the highest weighted mean score of 3.61, followed by mobile forensics at 3.54, and security information management at 3.53. Digital forensic services were viewed as essential in presenting complex digital evidence in a comprehensible manner. Mobile forensics was recognized for its capacity to extract critical evidence from mobile devices, while security information management was acknowledged for safeguarding sensitive data through encryption and access control systems. Despite the positive impact of modern technology on criminal investigations, challenges remain, chief among them being weak cybersecurity measures, which pose a significant threat to the protection of sensitive information. This issue was identified as the most pressing concern by 68% of respondents. To address this, 78% of respondents recommended the implementation of robust cybersecurity protocols, including encryption, firewalls, and access controls. These findings offer valuable insights for law enforcement agencies, which can use them to enhance their investigative and security response strategies. Furthermore, regular training sessions are essential to equip forensic investigators with the skills needed to respond to evolving cyber threats. Criminology students and future researchers can also benefit from this study, ensuring they are well-informed and prepared with up-to-date knowledge in the field of cyber forensics.

Keywords: cybercrime, cybersecurity measures, digital forensics, mobile forensics, security information management, philippine national police (pnp), cyber investigations, encryption, law enforcement, cyber threats

**THE ROLE OF PHILIPPINE NATIONAL POLICE E-PROJECT IN ENHANCING THE
ACCURACY AND EFFICIENCY IN POLICE RECORDS MANAGEMENT**

John Dandred Hernandez, Eugene Berja, Emmanuel Angelo Flores,
Warren Guimban, Ferry Melitado, Dr. Antonio Dawagan Sr.

Abstract

The Philippine National Police (PNP) faces persistent challenges in managing large volumes of criminal reports due to reliance on traditional, paper-based methods. These outdated approaches lead to delays in report preparation, inconsistent data recording, limited access to and analysis of information, and poor information-sharing among police units. Addressing these inefficiencies is essential for improving operational effectiveness and timely criminal investigations. This study employed a correlational research design involving two groups: ten (10) Police Commissioned Officers (PCO) and forty (40) Police Non-Commissioned Officers (PNCO), totaling fifty (50) respondents from Police Station 5. Using a probability sampling technique, the researchers gathered necessary data through survey questionnaires. The study aimed to explore relationships between reporting system practices and the efficiency of handling criminal cases within the Philippine National Police. The study found that the most highly supported measures to improve the Philippine National Police (PNP) E-Projects were: (1) training police officers to deliberately operate the Crime Incident Data Management System (CIDMS) and (2) conducting simulated cyberattacks to enhance system security, both receiving a 74% approval rate (frequency of 37). These strategies aim to address recurring problems in managing police records by ensuring officers are equipped to navigate the technical complexities of the system and by reinforcing system defenses against potential failures or breaches. Selecting and properly training officers to maintain the E-Projects is essential for safeguarding sensitive data and ensuring the continuous functionality and accuracy of the CIDMS. The study highlights that the Philippine National Police (PNP) E-Projects including the E-blotter, E-warrant, and E-rouge gallery, are effective tools in enhancing the accuracy and efficiency of police records management. These systems support overall operational functionality. However, challenges persist in the selection and assignment of qualified police officers to maintain and operate these systems. To address this gap, the study recommends deliberate training for officers on the Crime Incident Data Management System (CIDMS) and implementing simulated attacks to improve system security and resilience.

Keywords: philippine national police (pnp), e-projects, cidms, police records, operational efficiency, officer training, system maintenance, cybersecurity, digital transformation, pnp e-blotter, e-warrant, e-rouge gallery

**THE ROLE OF POLICE STATION 6 BARANGAY BATASAN HILLS QUEZON CITY IN
CONDUCTING INITIAL CONTACT OF CHILDREN IN CONFLICT WITH THE LAW**

Aljon Medina, Ar Jay Dela Cruz, Angelo Managbanag, Francis Sevilano,
Reansiller Cahulugan, Denise Anne Osorio

Abstract

Children are the hope of our society; they are the ones who will take our place in the future. Therefore, it is the responsibility of parents and adults to protect and guide them. Unfortunately, not all children receive the same level of parental supervision and care. As a result, some make mistakes without fully understanding the serious consequences of their actions. These children are often placed under the care of the Department of Social Welfare and Development (DSWD) and are labeled as “Children in Conflict with the Law” (CICL). Since they are minors, they are not referred to as “criminals” or given the same legal labels as adults. The researchers employed a descriptive research design utilizing quantitative methods. A total of 50 respondents participated in the study, including 20 Criminologists, 15 Children in Conflict with the Law (CICL), and 15 Social Workers. Data was gathered using validated survey questionnaires to ensure clarity and accuracy. Snowball sampling was used to reach the target respondents. The collected data were analyzed using frequency, percentage, weighted mean, and a four-point Likert scale. The researchers found that, from the perspective of awareness, the majority of respondents strongly agreed with the statement: “Respect and dignity are shown during the actual initial contact.” Regarding manpower, the most selected response by both CICL and Social Workers was: “The personnel document and report the incident properly.” Additionally, both Social Workers and Criminologists emphasized: “Professionalism is maintained during initial contact.” As for policy and procedure, CICL respondents strongly agreed with: “The organization’s policies and procedures are consistently implemented.” Meanwhile, Social Workers preferred the statement: “No harmful weapons are present during initial contact,” and Criminologists most frequently selected: “Proper introduction is given during initial contact.” The study concludes that criminologists and social workers exhibit strong awareness of ethical standards and proper procedures when handling Children in Conflict with the Law (CICL). Most respondents agreed that organizational policies are consistently followed and that personnel are adequately trained. However, the findings also highlight the need for improved communication and preventive measures to reduce the likelihood of negative incidents. Overall, criminologists demonstrate confidence and preparedness in managing CICL cases effectively.

Keywords: children in conflict with the law (cicl), criminologists, social workers, ethical standards, initial contact, professionalism, policy implementation, communication, incident prevention, case management, personnel training

**THE ROLE OF QUEZON CITY ANTI DRUG ABUSE
ADVISORY COUNCIL DRUG PROGRAM**

Adrian Belmonte, Adrian Belmonte, Ronalyn Almodiel, Lara Cabales,
Daniela Calado, Sensi Aljim, Edgar Reyes

Abstract

This narrative paints a vivid, suspenseful picture of North Fairview, a seemingly peaceful neighborhood in Quezon City. While it maintains an image of safety and community, the setting suggests a hidden world of covert activities taking place under the cover of night, hinting at an underground network quietly operating within its shadows. The study will gather data from 50 respondents in North Fairview, Quezon City, including community residents (20), law enforcement officers (10), and barangay personnel (20). The researchers will distribute the survey questionnaires randomly to willing participants. The survey results from 50 respondents in North Fairview, Quezon City, revealed the following demographic profile: The most common age ranges were 36–41 and 42+, each representing 26% (13 respondents). Gender distribution was even, with males making up 50% (25 respondents). In terms of length of residency, the majority (62% or 31 respondents) lived in the area for over 15 years. Regarding educational attainment, 46% (23 respondents) were college graduates. Local residents emphasized that the non-enforcement of criminal penalties for drug use and personal possession contributes to ongoing issues in the community. The study suggests that instead of criminalization, focusing on decriminalizing possession and investing in voluntary, community-based treatment and harm reduction services can reduce drug-related harm. This approach is believed to enhance both public health and safety, while also addressing the limitations of punitive drug policies.

Keywords: drug decriminalization, harm reduction, community-based treatment, public safety, public health, illegal drug use, drug possession, rehabilitation, policy reform, local community perception

**THE ROLE OF QUEZON CITY POLICE STATION 5 IN ADDRESSING PROLIFICATION
OF ILLEGAL DRUGS AT BARANGAY NORTH FAIRVIEW**

Carl Nielsen Cabulang, Kayle Ingada, Alinor Maruhom, Jerry Boy Ordonio,
Raymond Respicia, Freddie Valdez, Dr. Antonio Dawagan Sr.

Abstract

This study investigates the effectiveness of Quezon City Police Station 5's strategies in combating the spread of illegal drugs in Barangay North Fairview. It focuses on law enforcement actions, preventive education, and community engagement, analyzing how these approaches influence the occurrence of drug-related incidents. The research aims to assess whether the station's initiatives contribute to improved public safety and reduced drug proliferation. The study employed a descriptive research design with a quantitative approach to assess the role of Quezon City Police Station 5 in addressing the proliferation of illegal drugs. It analyzed respondent profiles based on age, sex, civil status, and length of service, and evaluated drug-related interventions across four dimensions: prevention, preparation, performance, and post-assessment. The research focused on the perspectives of 30 police officers, 10 community members, and 10 barangay officials from Barangay North Fairview. The study identified key problems faced by respondents regarding the role of Quezon City Police Station 5 in combating illegal drug proliferation in Barangay North Fairview. The most significant issue reported by 48 out of 50 respondents was the insufficiency of personnel and equipment, which negatively affects the efficiency of anti-drug operations. Another major concern is the lack of funding and resources, which limits the effectiveness of rehabilitation programs for drug dependents. Recommended actions include requesting additional funding and personnel from local authorities and the PNP and collaborating with NGOs and government agencies to enhance rehabilitation efforts. The results indicate that the primary problem identified by respondents is the insufficient personnel and equipment, which significantly hinders the effectiveness of anti-drug operations conducted by Quezon City Police Station 5 in Barangay North Fairview. To address this issue, collaborative efforts between police and local government units are essential, particularly in allocating additional manpower and funding to enhance operational capacity.

Keywords: quezon city police station 5, barangay north fairview, illegal drugs, anti-drug operations, insufficient personnel, lack of equipment, community safety, police resources, rehabilitation programs, local government support.

**THE ROLE OF THE JUVENILE JUSTICE AND WELFARE COUNCIL IN ENSURING
THE FAIR TREATMENT AMONG CHILDREN IN CONFLICT WITH THE LAW**

Jemuel Bismonte, Charlie Daño, Jerick Dajalos, Jerick Edward Stambough,
Loriel Trinidad, Dr. Antonio Dawagan Sr.

Abstract

In contemporary criminology, juvenile offending has garnered significant attention due to its impact on public safety and the developmental trajectories of young individuals. Republic Act 9344 emphasizes diversion and intervention programs, focusing on addressing the underlying causes of a child's behavior while avoiding formal court proceedings whenever possible. This study employed a Quantitative Descriptive Research Design and involved fifty (50) respondents. The participants included members of the Multi-Disciplinary Team, Barangay personnel, and Police officials, as they are directly affected by the factors under investigation. Respondents were selected using a probability sampling technique. Data and information were collected through survey questionnaires. In terms of age, the majority of respondents fall within the 34-41 and 42-50 year-old age ranges. Regarding sex, most respondents are male. For civil status, 27 respondents are married. Concerning educational attainment, 27 respondents are college graduates. In Part 2 of the questionnaire, the key indicators identified were: The PNP manual for handling CAR and CICL case. In the integrated care management protocol for duty bearers. In the barangay protocol for handling children-at-risk and CICL. Guidelines for monitoring detention facilities. The majority of respondents reflected the treatment experienced by CICL in Bahay Pag-asa. Moreover, the researcher recommends enhancing individualized intervention programs, strengthening the application of restorative justice principles, and increasing family involvement for Children in Conflict with the Law (CICL). Additionally, the development of more educational services and activities is encouraged to support their rehabilitation.

Keywords: juvenile offending, children in conflict with the law (cicl), ra 9344, diversion programs, intervention, restorative justice, individualized interventions, family involvement, educational services, bahay pag-asa, multidisciplinary team, barangay protective services

**THE ROLE OF THE PHILIPPINE NATIONAL POLICE
DURING CALAMITIES IN VALENZUELA CITY**

Meljun Yase, Christian Oro, Jaster Abanid, Aristotle Borja, Peter John Lutao, Eduardo Villaruel

Abstract

The Philippine National Police (PNP) play a vital role during calamities, particularly in Valenzuela City, which is highly vulnerable to floods and other types of disasters. The researchers utilized a convenience sampling technique and a descriptive research method, involving ten (10) police personnel and forty (40) residents from Valenzuela City. Prior to data collection, permission was obtained from the respondents to participate in the survey. The researchers distributed the questionnaires and waited for the respondents to complete them, after which the completed questionnaires were collected. A copy of the questionnaire was also provided to the researchers' advisor to ensure clarity and understanding. Additionally, permission was secured from the Station Commander before distributing the questionnaires, and upon approval, the surveys were personally handed to the respondents. The results are presented in the order of the problems raised in Chapter 1 and include tables, data analysis, and textual interpretation to further explain the findings. Among the fifty (50) respondents, thirteen (13) are aged 18-25 years and 26-30 years, each group representing 26% of the sample, while six (6) respondents are aged 51 and above, accounting for 12%. The average weighted means for the different operations are as follows: Rescue Operations scored 3.672, Assessment and Monitoring scored 3.532, Police Patrol Operations scored 3.572, and Retrieval Operations scored 3.560, all interpreted as "Strongly Agree. "Regarding the problems encountered by the PNP during calamities, the top-ranked issues are inadequate planning and preparation, which hinder effective response, and poor communication and coordination with other agencies, local government units, and the community, resulting in delayed or ineffective responses. To address the highest-ranked problem, the proposed intervention program includes enhancing training, developing detailed contingency plans, improving resource management, and fostering inter-agency collaboration. Through this study, the researchers gained a better understanding of the challenges faced by the PNP during calamities in Valenzuela City and were able to propose solutions and recommendations to improve their response efforts.

Keywords: philippine national police, pnp, calamities, disaster response, valenzuela city, rescue operations, assessment and monitoring, police patrol, retrieval operations, inter-agency coordination, contingency planning, resource management

**THE ROLE OF THE PHILIPPINE NATIONAL POLICE PERSONNEL TO ENSURE
THE PUBLIC SAFETY AND SECURITY DURING CIVIL DISTURBANCE
MANAGEMENT IN PAYATAS A QUEZON CITY**

Mary Grace Gahira, Nicole Balungaya, Danice Catienza, Mike Joshua Sumaoang,
Hazel Louise Ann Umas-as, Eduardo Villaruel

Abstract

Civil disturbance management arises from acts of civil disobedience. Such disturbances often occur when participants in mass civil disobedience become antagonistic toward authorities, prompting officials to regain control from unruly crowds. Civil disturbances can stem from various causes, including political grievances, urban economic conflicts, community unrest, terrorist acts, or foreign influences. These disturbances may be organized by disaffected groups aiming to embarrass the government. Their goal is to provoke an overreaction by authorities, believing that such a response will generate public sympathy for their cause. Often, their actions are overt and deliberate. The researchers used a survey questionnaire as the primary data-gathering instrument, which was completed by three groups of respondents: ten (10) PNP personnel, twenty (20) residents, and twenty (20) barangay personnel, all from Barangay Payatas A, Quezon City. This study employed a descriptive research design, combining surveys, interviews, and document analysis to assess the relationship between responders' awareness and the public safety and security of the community during civil disturbances in Barangay Payatas A, Quezon City. The results of the study reveal that most respondents are between 26 and 33 years old, with the majority being female. Regarding preparedness in Barangay Payatas A, Quezon City, during the pre-disaster stage, the highest-rated items were: receiving formal training or education on civil disturbance management; demonstrating mental resilience and the ability to handle stressful situations by adapting decision-making under pressure; consistently serving the public and protecting life and property; police officers showing tolerance and calmness in difficult situations; and investing in civil disturbance equipment, regularly assessing its condition, and ensuring timely upgrades to enhance operational efficiency and safety. The respondents identified the greatest weakness in civil disturbance management as the ability to show tolerance and remain calm in difficult situations. To address this, they proposed investing in civil disturbance equipment, regularly assessing its condition, and ensuring timely upgrades to enhance operational efficiency and safety.

Keywords: civil disturbance management, civil disobedience, public safety, preparedness, barangay payatas a, quezon city, pnp personnel, community security, training, equipment upgrade, tolerance, mental resilience

**THE ROLE OF TRAINING PROGRAM IN ENHANCING BARANGAY LUPON'S
CONFLICT RESOLUTION SKILLS IN BARANGAY 168 DEPARO CALOOCAN CITY**

Dian Irene De Castro, Britney Anne Acebo, Angelyn Nogales,
Jaypee Rafols, Melvid Caguioa, Irene Gaviola

Abstract

The Barangay Lupon Tagapamayapa, or Barangay Justice System, plays a vital role in resolving conflicts at the community level in the Philippines. It facilitates the local settlement of disputes to maintain peace and reduce the burden on formal courts. In Barangay 168, Lupon members are essential in managing conflicts, although they frequently encounter challenges stemming from limited training and resources. This study aimed to assess the role of a training program in enhancing conflict resolution skills among members of Barangay Lupon in Barangay 168, Caloocan City. The respondents included 20 Lupon members who are directly involved in resolving conflicts and 30 community leaders from the locality, totaling fifty (50) participants. These respondents provided insights, experiences, and suggestions regarding the effectiveness of the training program and its impact on improving conflict resolution abilities. The researchers employed purposive and stratified sampling techniques to select participants, ensuring that every member of the target population had an equal chance of being chosen. Before data collection, the researchers prepared and submitted a formal request to the management of Barangay 168 for approval to conduct the study. After obtaining approval, the researchers approached the respondents and personally distributed the questionnaires. Before administering the survey, the purpose of the study was clearly explained to all participants. The findings revealed that the majority of respondents were females aged 40 to 50 years old, with over 11 years of residence or service in Barangay 168 Deparo. Training programs had a significant positive impact on knowledge and skill acquisition (mean score 3.56), application of training (3.44), and satisfaction with conflict resolution (3.42). However, 58% of respondents identified limited participation in training sessions as a major challenge. The study recommends the formal adoption and implementation of the proposed Enhanced Training Program for Barangay Lurons. This program should be specifically designed to address identified gaps in communication, mediation techniques, and cultural sensitivity to enhance the effectiveness of dispute resolution.

Keywords: barangay lurons, enhanced training program, dispute resolution, communication gaps, mediation techniques, cultural sensitivity, implementation, community justice, conflict resolution

**THE SIGNIFICANCE OF EMERGENCY RESPONSE TEAM IN PREVENTING
CRIMES AGAINST PROPERTY DURING NATURAL DISASTER**

Mary Jane Obias, Trisha Bueno, Braill Cedrick De Luna, Jelly Rose Rodriguez,
Marvin Paul Rosina, Dr. Myrna Cuntapay

Abstract

The purpose of this study is to determine the significance of the Emergency Response Team in preventing crimes against property during natural disasters. Specifically, it aims to assess their performance in terms of timely response, quality of emergency procedures, security measures, and community satisfaction. Additionally, the study seeks to identify the challenges faced by the Emergency Response Team and to propose appropriate measures to address these challenges. Utilizing a descriptive research design, the study involves a total of fifty (50) respondents, comprising ten (10) members of the Emergency Response Team and forty (40) community members. Respondents are selected through purposive sampling. Data and information are gathered using a structured survey questionnaire designed to assess perceptions and experiences related to emergency response and crime prevention during natural disasters. The results of the study show that the majority of respondents are between the ages of 26 to 35. In terms of gender, 29 respondents are male. Most respondents are single, and the majority have attained a high school level of education. In Part 2 of the survey, the respondents strongly agreed on the effectiveness of the Emergency Response Team in the areas of Timely Response, Quality of Emergency Procedures, Security Measures, and Community Satisfaction. The most commonly encountered challenge by the Emergency Response Team is the limited availability of emergency response equipment and disaster supplies. To enhance service quality, it is recommended that the Local Government Unit (LGU) allocate additional funding for advanced equipment, such as transport vehicles for community surveillance and rapid response, as well as communication devices like two-way radios to improve coordination. Additionally, the wider dissemination of emergency hotlines, especially through social media platforms, is suggested to ensure the public is well-informed and can easily access emergency assistance when needed. The study highlights that the Emergency Response Team plays a vital role in every community, particularly in preventing crimes against property during natural disasters. Findings indicate that the team consistently arrives promptly at disaster scenes, contributing significantly to timely intervention. Their clear and well-structured emergency procedures help mitigate property crimes in disaster-affected areas. Furthermore, their efforts in maintaining security both during and after disasters are evident. Feedback from community members reflects a high level of satisfaction with the team's overall performance and dedication.

Keywords: emergency response team, crime prevention, natural disaster, timely response, emergency procedures, property crime, community safety, disaster response, security measures, community satisfaction

**THE SIGNIFICANCE OF PEACE AND ORDER PROGRAMS FOR
PREVENTION OF CHILD IN CONFLICT WITH THE LAW IN
BARANGAY KALIGAYAHAN, QUEZON CITY**

Alexis Jim Ancheta, Erick Cabalo, Michael Johnson Escario,
God Rey Esturas, Julius Mamalias

Abstract

According to Republic Act No. 9344, also known as the “Juvenile Justice and Welfare Act of 2006”, Section 4(e) defines a "Child in Conflict with the Law (CICL)" as a child who is alleged, accused, or adjudged to have committed an offense under Philippine laws. This research employs a quantitative descriptive research design to systematically gather and analyze data relevant to the study. A purposive sampling technique was used to ensure the inclusion of participants who could provide diverse and relevant insights into the research topic. The respondents were categorized into three groups: 15 Barangay Officials, 15 members of the Barangay Peacekeeping Action Team (BPAT), and 20 youth residents of Barangay Kaligayahan, Novaliches, Quezon City. Among the fifty (50) respondents, 20 individuals (40%) are between the ages of 18 to 25, making this the largest age group. The least represented age group is 26 to 33 years old, with only 1 respondent (2%). In terms of sex, 29 respondents (58%) are male, while 21 respondents (42%) are female. Regarding educational attainment, the majority of respondents (42%) are high school graduates, while the least represented group comprises 2% of respondents with the lowest level of educational attainment recorded. For length of service, 17 respondents (34%) have served for 4 to 6 years, while only 5 respondents (10%) have served for 7 to 10 years. The Effectiveness of the Program received an overall weighted mean of 3.52, interpreted as Strongly Agree. Preparedness scored a mean of 3.36, interpreted as Strongly Agree. Support System scored a mean of 3.40, also interpreted as Strongly Agree. Financial Capability received a mean of 3.30, interpreted as Strongly Agree. Among the problems encountered, the highest-ranked issue was: “Budget limitations may affect the quality of the programs we offer to children in conflict with the law,” cited by 86% of respondents. For measures to enhance program effectiveness, the top recommendation was: “Provide more specialized training for barangay officials, staff, and volunteers,” supported by 84% of respondents. The primary output of this study is the recommendation to provide specialized training programs for barangay officials, staff, and volunteers focused on effective child rehabilitation practices and the prevention of juvenile delinquency. These training initiatives aim to strengthen the capacity of local stakeholders in addressing the needs of children in conflict with the law and promoting long-term community-based interventions.

Keywords: specialized training, barangay officials, juvenile delinquency, child rehabilitation, children in conflict with the law (cicl), community intervention, local government, prevention strategies, capacity-building, youth development

**THE SIGNIFICANCE OF STUDYING HUMAN RIGHTS VIOLATION
ON THE PHILIPPINE'S WAR ON DRUGS IN BARANGAY
PAYATAS A, B AND C IN QUEZON CITY**

Adrian Jayson Zuleta, Michael Angelo Cardiente, Earl Christian Donaire,
Mark Laurence Pasilan, King Angelu Paulo, Nilmar Plata

Abstract

This study examined human rights violations during the Philippine "War on Drugs" to inform residents in selected barangays in Quezon City and surrounding areas about their legal rights and the nature of the abuses that occurred. The primary objectives were to raise awareness, prevent future violations, and promote accountability, ensuring that the mistakes of the past are not repeated. A quantitative descriptive research design was adopted to assess the extent of human rights violations during the Philippine "War on Drugs." A systematic sampling technique was employed to ensure a diverse and representative sample. Prior to data collection, formal approval was secured from the Dean's Office, Barangay Payatas, and Police Station 13 in Payatas, Quezon City. The study involved a total of 50 respondents, categorized into three groups: Residents: 30 individuals from Barangays Payatas A, B, and C. Barangay Officials: 15 local government representatives. Police Officers: 5 officers from Police Station 13. Survey questionnaires were distributed with the informed consent of participants. Responses were promptly collected, and the researchers extended their appreciation to all participants for their cooperation and valuable contributions. Demographic analysis revealed that 26% of respondents were aged 18–25 years, 54% were female, and 36% held college degrees. Key findings include: Concerns Identified: Respondents expressed deep concern over incidents of extrajudicial killings, evidence planting, lack of police accountability, and the targeting of vulnerable groups during the War on Drugs. Primary Problem: A significant number of community members lacked awareness of their human rights, which limited their ability to recognize or respond to violations. Top Proposed Solution: The most strongly supported recommendation was to provide adequate support to the families of victims, emphasizing the need for both material assistance and emotional rehabilitation. The findings underscore the urgent need for comprehensive human rights education and the development of robust support systems. Empowering residents with knowledge of their rights is essential to preventing future abuses and fostering a culture of respect and accountability. Equally important is the establishment of support mechanisms for victims' families, including access to legal assistance, counseling services, and financial aid, which are crucial for both justice and healing. To address widespread perceptions of impunity, it is vital to conduct transparent investigations and enforce strict accountability for authorities involved in rights violations. In conclusion, this study highlights the profound and lasting impact of the "War on Drugs" on human rights in the Philippines. By implementing the proposed measures, communities and institutions can move toward a more just and humane society, one that upholds the dignity and rights of all individuals and ensures that the mistakes of the past are never repeated.

Keywords: human rights education, war on drugs, philippines, community empowerment, victims' support, legal aid, counseling, accountability, transparency, impunity, justice, healing, human dignity, abuse prevention

TRAFFIC ACCIDENT REDUCTION THROUGH INNOVATION: PROPOSAL

Chuchie Dealagdon, Pablo Cadorna Jr, Danica Clariño,
Maria Lyka Mantala, Angelene Matuza, Nilmar Plata

Abstract

Commonwealth Avenue in Quezon City, recognized as one of the busiest thoroughfares in Metro Manila, has long been associated with severe traffic congestion and a high incidence of road accidents. This study aims to evaluate the effectiveness of innovative strategies in reducing traffic accidents and to develop a comprehensive action plan for improving road safety along Commonwealth Avenue. This study utilized a descriptive survey design to assess the socio-demographic profile of selected respondents, including variables such as gender, age, and civil status. A quota sampling method was employed to select eighty (80) respondents, consisting of residents, vendors, commuters, passengers, drivers, pedestrians, traffic enforcers, cyclists, and motorists. Respondents were chosen based on their awareness of how traffic accident reduction through innovation and action planning affects them. Additionally, a random sampling technique was applied to ensure that every individual within the target population had an equal chance of being selected, thereby minimizing selection bias. This approach enabled the researchers to draw conclusions that reflect the broader impact of the study's findings on the population. The study involved eighty (80) respondents, including community residents, motorists, pedestrians, traffic enforcers, cyclists, and vendors. The results revealed that the majority of the respondents were male, aged 18 to 25 years old, and residing in Commonwealth Avenue, Quezon City. Regarding the element of traffic accident reduction through innovation and action planning, respondents strongly agreed on the effectiveness of three key aspects: education and awareness, technological advancements, and government initiatives. However, the study also identified technological limitations such as compatibility issues with older vehicles and outdated infrastructure as significant challenges in the implementation of traffic safety innovations. To address these challenges, the study proposes the promotion of public awareness campaigns focused on safe driving practices, which could help reduce traffic accidents along Commonwealth Avenue. This study will produce a comprehensive analysis of how respondents evaluate the effectiveness of the proposed innovative action plan in mitigating traffic accidents along Commonwealth Avenue.

Keywords: traffic accidents

**TRAFFIC ENFORCEMENT IN BARANGAY 178 KIKO
CAMARIN CALOOCAN CITY:AN ASSESSMENT**

Jeneah Jean Excia, Jill Josol, Rosel Mahinay, Trixia Joy Manalang,
Princess Veal Villedar, Denise Anne Osorio

Abstract

The purpose of this research is to investigate the effectiveness of traffic enforcement in Barangay 178, Kiko Camarin, Caloocan City. It aims to identify the most effective interventions to ensure compliance with traffic rules among road users. The procedures outlined in this study are intended to promote highway safety and reduce traffic congestion within the area. Specifically, the research focuses on recommended procedures for pulling over traffic violators as a key aspect of enforcement. The primary goal of traffic enforcement is to ensure the safety of both motorists and pedestrians, while also maintaining smooth traffic flow during delays, reroutes, special events such as parades and processions, and official visits by dignitaries. This study utilized the descriptive survey method, which is designed to describe and interpret data and characteristics related to the population or phenomenon being studied. The respondents consisted of five (5) traffic enforcers and forty-five (45) motorists from Barangay 178, Kiko Camarin, Caloocan City. Based on the analysis and interpretation of the data, the majority of respondents were 18–25 years old (36%), male (86%), single (62%), and high school graduates (60%). There were no respondents from the elementary education level or those categorized as widowed. The total composite means for all three traffic flow conditions, free flow (2.35), synchronized flow (2.23), and wide moving jam (2.44), received a verbal interpretation of "Disagree." Under free flow, the highest-rated indicator was: "Drivers can maintain safe gaps between vehicles, enhancing safety" with a mean of 2.46. For synchronized flow, the highest-rated statement was: "Moving continuously but at reduced speeds compared to free flow" with a mean of 2.42. In the case of wide moving jam, the most agreed-upon item was: "Vehicles on the highway move very slowly, propagating across multiple lanes, with large sections of road experiencing a slow, synchronized flow of vehicles", which received a mean score of 2.47. Despite being the highest-rated indicators in their respective categories, all still fell within the "Disagree" range, indicating a general lack of satisfaction or effectiveness perceived by the respondents. As a recommendation, the respondents strongly agreed that a key intervention is to "prioritize the implementation of stricter penalties that are sufficient to discourage traffic violations." This emphasizes the need for stronger law enforcement and deterrent measures to address traffic issues effectively. The output of this study can provide valuable insights for local government units (LGUs) and policymakers to enhance traffic enforcement and management within Barangay 178, Kiko Camarin, Caloocan City. The findings may contribute to the development of more effective traffic policies and enforcement strategies, ultimately leading to safer road conditions, reduced traffic congestion, and an improved quality of life for residents.

Keywords: traffic enforcement, road safety, barangay 178, caloocan city, motorist compliance, traffic management, law enforcement, public safety, congestion reduction, local government policy

**UNDERSTANDING THE EFFECT OF DRUG USER IN FAMILIES
IN BARANGAY BAGBAG NOVALICHES QUEZON CITY**

John Lloyd Alisna, Ryan Carl Austria, Zyhmon Estrella, John Christopher Diano,
Marco Lumontad, Denise Anne Osorio

Abstract

Drug addiction is not merely a personal struggle for the individual involved; it has profound and far-reaching consequences for their family, particularly in communities like Barangay Bag-bag, Novaliches, Quezon City. The stereotypical image of a drug addict often includes a family silently suffering in the background, grappling with emotional distress, financial hardship, and social stigma. Many families endure strained relationships, the fear of losing a loved one, and the burden of managing household needs when addiction drains resources and stability. This research aims to explore the lived experiences of these families, shedding light on the real and human stories behind the statistics. Specifically, it seeks to understand how drug use affects family life in terms of altered relationships, disrupted daily routines, and the mental and emotional toll on each family member. By capturing these narratives and examining the broader social and economic pressures at play, the study aspires to illustrate the full impact of drug addiction on families and to identify ways to provide more effective and compassionate support to those most affected. This study employed a descriptive research design and utilized a purposive sampling method. The respondents were categorized into three groups: families with a member who is a drug user, families without a drug user, and Barangay Tanods. A total of fifty participants were involved in the study. Data was collected through a structured survey questionnaire designed to gather insights into the impact of drug use on family life and community perspectives. The results of the research present the data collected and analyzed, offering valuable insights derived from participants' responses. These findings, combined with the researchers' interpretations, contribute to a deeper understanding of the study's objectives. The analysis aims to provide clear and meaningful conclusions regarding the impact of drug use on families and the broader community, fulfilling the goal of shedding light on the real-life implications of substance abuse in Barangay Bag-bag. The findings suggest that the community consists largely of married and stable households, with only a minimal number of cases involving separation or widowhood. In collaboration with families and local officials, the community offers substantial support to individuals affected by drug addiction through law enforcement, rehabilitation programs, and community-based initiatives. Addressing the ongoing challenges requires coordinated intervention programs, accessible support services, and economic opportunities that empower families to remain resilient. Recommended strategies include fostering open and honest family discussions about drug use, promoting healthy recreational activities, encouraging positive role modeling for stress management and problem-solving, and establishing clear family rules regarding substance use.

Keywords: stable families, drug prevention, barangay bag-bag, community support, rehabilitation programs, intervention strategies, law enforcement, family communication, stress management, substance abuse

**UNDERSTANDING THE FACTORS INFLUENCING PUBLIC PERCEPTION
ON THE LEGITIMACY OF POLICE OPERATION IN
BARANGAY COMMONWEALTH QUEZON CITY**

Ray Mark Espinola, Alexey Mikhael Embile, Mark Joseph Genese, Vincent Manlapit,
John Clarence Salino, Dr. Myrna Cuntapay

Abstract

Public trust in law enforcement remains a significant concern in the Philippines, particularly in urban areas where issues related to transparency, accountability, and procedural fairness persist. While national surveys in 2023 indicated improvements with an 80% trust rating and 79% approval for the Philippine National Police (PNP), challenges at the local level continue. Barangay Commonwealth in Quezon City exemplifies a complex environment shaped by its socio-economic conditions and law enforcement dynamics. This study examined the factors influencing public perception of police legitimacy, with a particular focus on transparency, accountability, and procedural fairness. It also sought to identify key challenges and recommend actionable solutions to enhance police-community relations. Utilizing purposive sampling, the study involved 50 respondents, comprising both community residents and police officers with direct law enforcement experience. A quantitative descriptive research design was employed, and surveys were personally distributed and collected to ensure complete participation. Findings reveal that respondents strongly agreed police officers demonstrate accountability and procedural fairness; however, transparency received slightly lower ratings, highlighting the need for more open communication. The top-rated indicators included: “There is transparency in how police officers handle issues of accountability,” “Police are held accountable for maintaining transparency and fairness,” and “Police follow established procedures during operations.” The primary challenge affecting police legitimacy was identified as the limited information about police activities, which leads to confusion among residents. The most recommended action to address this issue is the implementation of public awareness campaigns and the strengthening of police-community engagement efforts. To enhance public perception of police legitimacy, law enforcement agencies must adopt structured communication strategies, including regular briefings, social media updates, and the publication of activity reports. Policymakers should promote transparency by supporting independent oversight mechanisms, launching educational campaigns, and allocating funding for community engagement initiatives. Barangay officials are encouraged to organize interactive forums, install suggestion boxes, and conduct awareness drives to bridge information gaps and build public trust. Citizens, in turn, are urged to participate in feedback mechanisms and local safety initiatives. Criminology students are encouraged to engage in fieldwork focused on procedural justice and community policing practices, while researchers should further investigate the long-term impact of transparency initiatives on public trust and institutional legitimacy.

Keywords: police legitimacy, barangay commonwealth, transparency, accountability, procedural fairness, philippines, public perception of police in quezon city

**UTILIZING ARTIFICIAL INTELLIGENCE FOR ENHANCE LAW ENFORCEMENT AND
OTHER OPERATION IN POLICE OPERATION IN POLICE STATION 14 QUEZON CITY**

Mark Jason Lacuarin, Randolph Briones, James Dela Rosa, John Carlo Montes,
Tobie Patricio, Eddie Boy Villarmente, Jinky Anacta

Abstract

In today's world, technological advancements continue to capture our attention, and artificial intelligence (AI) is stealing the spotlight with its innovative and transformative capabilities. Nearly every facet of modern life is evolving because of AI including the field of law enforcement. From enhancing crime detection to improving operational efficiency, AI is being integrated into policing in various ways, reshaping how justice is served. This is a methodological approach designed to describe the topic or subject under study in detail. It serves as a foundational tool for researchers, enabling them to observe, record, and analyze the intricate aspects of a particular subject. By providing a rich and comprehensive account, this method helps in understanding, categorizing, and interpreting the subject matter more effectively. Respondent demographics from Police Station 14 reveal a predominantly young (26–33 years old), male, single, and college-educated workforce, with most officers having 4–6 years of service. This profile suggests a potentially adaptable force open to technological advancements, though the male-dominated demographic may warrant attention to potential biases. Overall, officers view Artificial Intelligence (AI) as a valuable tool for enhancing law enforcement, particularly for improving efficiency and responsiveness. However, they also recognize the need for further development in AI implementation. Identified challenges where AI could provide solutions include slow response times, inherent biases within AI systems, limited CCTV and body camera coverage, privacy concerns, and insufficient training in AI and cybersecurity. Human error in crime detection and cybercrime investigations was also noted as key areas for improvement. To address these issues, recommendations include expanding CCTV coverage, digitizing records, enhancing inter-unit communication, and minimizing physical contact during incident reporting. AI could further streamline emergency responses, improve background checks, and expedite report processing, all while ensuring human rights are upheld. The study explored the utilization of Artificial Intelligence (AI) in Police Station 14, Quezon City, highlighting its potential to improve efficiency, responsiveness, and accuracy in law enforcement. While the majority of officers expressed positive views on AI, challenges in data collection included limited officer availability, confidentiality restrictions, and hesitation to discuss sensitive issues. The findings indicate that successful AI integration will require expanded infrastructure, specialized training, and careful consideration of ethical and privacy concerns.

Keywords: ai in police enforcement, technological advancement, ai systems

**WOMEN'S AWARENESS ON AVAWC (R.A. 9262) AS BASIS FOR RIGHTS
INFORMATION DISSEMINATION AT BARANGAY HOLY SPIRIT, QUEZON CITY**

Ahaziah Myrrh Taguam, Mary Joy Antonio, Genema Avila,
Alice Batoy, Rose Anne Dalisay, Edgar Reyes

Abstract

Awareness is the ability to recognize and understand one's thoughts, emotions, and surroundings. It plays a crucial role in guiding individuals through daily life, helping them make informed decisions and interact effectively with others. In the context of societal issues such as discrimination, sexism, and abuse, both physical and emotional awareness becomes even more vital. Women and children who are subjected to violence often endure emotional trauma, anxiety, and various physical injuries. Promoting awareness of Violence Against Women and Children (VAWC) is essential in supporting victims and preventing further abuse. However, despite continued efforts to address VAWC, many women remain unaware of their rights, resulting in numerous cases going unreported. Digital platforms such as online legal resources and social media campaigns offer powerful tools for raising awareness and educating a broader audience about VAWC and the importance of seeking help. This chapter outlines the methodological framework of the study, detailing the research design, target respondents, sampling method, data-gathering instrument, procedures for validating the instrument, the process of distribution and collection, and the statistical techniques applied for data analysis. This chapter presents the data collected by the researchers, along with their corresponding analysis and interpretation through tabular presentations. It covers the respondents' demographic profile, the results derived from the survey questionnaire, and the statistical methods employed in analyzing the data. The majority of the respondents were aged 34 to 41, college graduates, and residents of Barangay Holy Spirit, Quezon City. Participants including residents, barangay officials, and police officers, strongly agreed on the importance of raising women's awareness of the Violence Against Women and Children (VAWC) Act (R.A. 9262) as a foundation for an effective information dissemination program on women's rights. High levels of agreement were observed in the areas of program planning, implementation, and operational procedures for handling VAWC cases. The most significant challenge identified was the fear of retaliation when discussing or reporting VAWC incidents. To address this issue, it is recommended that increased funding and government support be provided to strengthen VAWC awareness initiatives within the community.

Keywords: violence against women and children (vawc), r.a. 9262, women's rights, awareness, barangay holy spirit, information dissemination, fear of retaliation, community support, government funding, program implementation, program planning, operations

**ASSESSMENT ON THE FACILITIES OF RAINFOREST ADVENTURE
EXPERIENCE PARK TOWARDS CUSTOMER'S SATISFACTION**

Niño Sta Ana, Raizen Lancelot Baldano, Andrew Charles Carretas,
Paolo Jay Salvador, Joe Lyn Brogada, Alezhandrea Clio Barrios

Abstract

This study explores visitor satisfaction with the facilities at Rainforest Adventure Experience Park, focusing on factors such as age, gender, and frequency of visits. A descriptive correlational research approach was used, involving 50 tourists. The findings identify areas that need improvement, including cleanliness, maintenance, staff responsiveness, and safety, with the ultimate goal of enhancing the overall tourist experience. This study conducted surveys to evaluate customer satisfaction with the facilities at Rainforest Adventure Experience Park. It examined the relationship between age, gender, and visit frequency with satisfaction regarding cleanliness, maintenance, staff quality, and safety. The results were analyzed using verbal interpretations. Overall, respondents rated the facilities as "satisfied" in terms of cleanliness, maintenance, trash management, staff responsiveness, and safety measures. However, several issues were identified, including poor maintenance of facilities and equipment, a lack of personnel, inadequate cleaning procedures, resource shortages, unclear signage, noise disturbances, inconvenient operating hours, and limited accessibility for individuals with disabilities. To enhance visitor satisfaction, several recommendations were made, such as: Improving maintenance, increasing staff availability, establishing better cleaning protocols, providing clear signage, minimizing noise levels, adjusting operating hours, adding more facilities, improving accessibility, enhancing lighting and drainage in certain areas. The assessment revealed that respondents were "satisfied" with cleanliness, maintenance, trash management, staff responsiveness, and safety measures. However, they pointed out several issues, including poor maintenance of facilities, understaffing, inadequate cleaning procedures, resource shortages, misleading signage, noise pollution, inconvenient operating hours, and limited amenities for individuals with disabilities. The study recommended several improvements to enhance the overall tourist experience at the park. These recommendations include better maintenance, increased staffing, improved cleaning protocols, clearer signage, measures to reduce noise, adjusted operating hours, additional facilities, enhanced accessibility, and improved lighting and drainage.

Keywords: facility assessment, customer satisfaction, rainforest adventure experience park, tourism, service quality, visitor experience, park facilities, recreational amenities, adventure tourism, customer feedback, facility improvement, guest satisfaction

**EFFECTIVENESS OF WEARING PERSONAL PROTECTIVE EQUIPMENT IN KITCHEN
IN SELECTED RESTAURANTS AROUND SAN JOSE DEL MONTE, BULACAN**

Nieves Neyt Hipol, Neri Jane Furigay, Dahlia Barro, Mary Grace Gidacan,
Bartolome Jr Alcover, Andrey Evangelista, Romeoul Karl Flores

Abstract

Personal Protective Equipment (PPE) plays a vital role in minimizing workplace hazards such as burns, cuts, and contamination in restaurant kitchens. In the food service industry, proper PPE use not only protects workers but also supports food safety by preventing foodborne illnesses. Effective use of PPE requires appropriate selection based on kitchen risks, consistent training, and reinforcement of hygiene standards. This study investigates the effectiveness of wearing PPE among kitchen staff in selected restaurants around San Jose del Monte, Bulacan, focusing on its impact on workplace safety and food hygiene. A descriptive research design is utilized to evaluate PPE effectiveness in kitchen operations. Systematic sampling is applied to select five respondents per restaurant, targeting chefs and kitchen staff. Data is collected using a validated survey questionnaire reviewed by Dr. Antonio Bermudez, which includes items on demographics, PPE usage, and common kitchen safety concerns. To ensure accurate and reliable data, researchers personally administered the surveys and provided clarification as needed, facilitating full participation and honest responses. The study includes 15 respondents, mostly aged 23 to 27, who acknowledged the significant role of PPE in maintaining food safety and protecting worker health. Commonly used items included gloves, aprons, and hairnets. However, several challenges were identified, such as discomfort, inconsistent compliance, and equipment wear-and-tear. Additionally, workplace stress and fatigue were cited as factors that affected PPE adherence. The results suggest that while awareness of PPE importance is high, improvements in training and access to quality protective gear are necessary. The findings affirm that PPE use is effective in enhancing kitchen safety and preventing contamination, yet full effectiveness is limited by challenges in comfort, consistent usage, and maintenance. Regular training, monitoring, and timely replacement of worn-out gear are recommended to improve adherence. Emphasizing PPE protocols, along with addressing factors such as stress and proper hygiene enforcement, can further strengthen food safety practices in restaurant settings.

**FACTORS INFLUENCING THE PROLIFERATION OF ILLEGAL VENDORS
IN BARANGAY 176, BAGONG SILANG CALOOCAN CITY**

Mhica Harlie Macanang, Jinelin Araza, Arlyne Castañeda,
Jonnalyn Delfin, Iriesh Mancao, Edgar Reyes

Abstract

Informal vendors are individuals who sell goods or food in public spaces such as streets, sidewalks, or other outdoor areas without formal business permits or permanent stalls. These vendors often rely on mobile setups such as pushcarts and baskets to move between locations. This study aims to examine the factors influencing the proliferation of illegal vendors in Barangay 176, Bagong Silang, Caloocan City. Specifically, it seeks to describe the demographic profile of respondents in terms of age, sex, civil status, and years of vending; evaluate the factors contributing to illegal vending in terms of governance and legal problems, socioeconomic issues, workplace-related challenges, and physical conditions; identify the common problems encountered by respondents; and propose strategies to reduce the spread of illegal vending. The study involves 50 respondents, divided into three groups: 30 illegal vendors, 10 police officers, and 10 members of the Barangay Clearing Operations. A stratified sampling technique is used to ensure balanced representation and accurate data analysis. The study adopts descriptive research design. Respondents are invited to participate by completing a survey questionnaire. The researchers distribute the questionnaires and remain on-site while the respondents answer them. Once completed, the questionnaires are collected for analysis. The responses are then organized and evaluated using statistical tools appropriate to the study's objectives. Among the 50 respondents, 42% belong to the age group of 26 to 33 years old, while only 14% are aged 51 and above. In terms of sex, 54% are male, and 50% are married. Regarding their experience as illegal vendors, 33.33% have been vending for 1 to 3 years. The respondents strongly agreed that several factors influence the proliferation of illegal vending, including poor governance and legal enforcement, socioeconomic hardships, lack of adequate workplace infrastructure, and exposure to physical hazards. The findings indicate that poverty is the primary factor driving individuals to engage in illegal vending as an alternative means of income. In response to these challenges, the respondents proposed strategies such as implementing social safety nets and job creation programs to alleviate poverty and reduce the reliance on informal vending. These insights may serve as a basis for policy interventions aimed at improving livelihood opportunities and addressing the root causes of informal economic activities in urban areas.

Keywords: illegal vending, informal economy, socioeconomic factors, governance issues, poverty, urban development, barangay 176, caloocan city

**ASSESSING THE FUTURE POTENTIAL PHOTOGRAPHY
INDUSTRY AT NOVALICHES, QUEZON CITY**

Danielle Roxas, Hanah Asupan, Christel Doneri, Archie Oliveros,
Jessa Ruiz, Christine Calvo

Abstract

This study assesses the future potential of the photography industry in Novaliches, Quezon City, by examining how shifting customer preferences, evolving business models, and rapid technological advancements shape market dynamics. Key factors include image quality, ease of use, creative control, and overall user experience. The goal is to understand how innovations such as mirrorless cameras, smartphone imaging, and artificial intelligence tools are redefining consumer expectations and professional practices. A quantitative survey design is employed, using purposive sampling to select twenty local photographers with active professional or enthusiast involvement. A structured questionnaire measures perceptions of emerging trends, industry challenges, and growth opportunities on a four-point Likert scale. Data are analyzed using weighted means to determine the level of agreement with statements on each dimension. Photographers strongly agreed that current trends such as mobile photography integration and online portfolio platforms, are driving technological innovation and expanding client bases (weighted mean = 3.72). The most significant challenge identified was unstable or seasonal demand affecting business sustainability (weighted mean = 3.61). In terms of opportunities, advanced editing software and automated workflow tools were considered to offer the greatest potential to enhance service quality and productivity (weighted mean = 3.80). The study indicated that embracing digital trends and investing in new technologies would be essential for photographers in Novaliches to remain competitive. As a result, it was recommended that industry practitioners adopt mobile-friendly services, diversify offerings during off-peak seasons, and leverage editing and AI tools to improve efficiency. Supporting workshops and collaborative networks were also advised to help photographers navigate market fluctuations and capitalize on emerging opportunities.

Keywords: photography industry, technological innovation, market trends, business sustainability, digital tools, novaliches

**PRESERVING INDIGENOUS CULTURE (AETA) IN TARLAC:
A COMPREHENSIVE STUDY ON SUSTAINABLE MANAGEMENT
AND CONSERVATION OF CULTURAL ASPECT**

Fortin Karlo Cleford, Princess Derilo, Glenly Lebios, Fremar Villaluz,
Ma Eleonor Yacapin, Alezhandrea Clio Barrios

Abstract

The Aeta, among the Philippines' earliest indigenous groups, possess a vibrant cultural heritage characterized by traditional skills in hunting, gathering, farming, and handicraft-making. These practices are integral to their identity and community life. However, the forces of modernization, land displacement, and continued marginalization pose serious threats to the survival of these cultural traditions. This research seeks to identify sustainable strategies for preserving and revitalizing Aeta heritage while also examining the barriers that hinder the intergenerational transmission of their traditional knowledge and practices. A mixed-methods research design was adopted to provide a well-rounded analysis of the issue, integrating both quantitative and qualitative data. The quantitative component involved structured surveys, while the qualitative aspect consisted of in-depth interviews to gather detailed insights. A total of 35 participants from the Aeta community in Sitio Gayaman, Tarlac City, were purposively selected for their direct experience and cultural knowledge relevant to the study's objectives. This study examines the traditional knowledge and cultural practices of the Aeta community in Tarlac, focusing on hunting, gathering, farming methods, and handicraft-making, as well as the challenges affecting their preservation. Demographic data indicate that most participants are between 36 and 45 years old (34%), with 75% identifying as female. Regarding educational attainment, 63% have completed at least some level of junior or senior high school. Findings show that traditional knowledge in hunting and gathering remains actively practiced, with high mean scores for plant collection techniques used for food and medicine (3.51), and hunting skills (3.34). Despite this, the Aeta community faces significant threats to cultural continuity, including urban migration, noted by 35 respondents, the loss of ancestral lands, and insufficient government policies supporting indigenous heritage. The findings of the study highlight the Aeta community's strong proficiency in traditional practices. Notably, their ability to determine the appropriate time and location for hunting received a weighted mean of 3.34, while their use of traditional methods for gathering plants used for food and medicine ranked highest with a weighted mean of 3.51. These results underscore the community's deep-rooted knowledge of sustainable resource use and commitment to preserving ancestral wisdom. However, lower-ranked responses reveal critical challenges, particularly the increasing migration to urban areas, which disrupts traditional lifestyles and hampers the intergenerational transmission of cultural knowledge.

Keywords: aeta community, indigenous knowledge, traditional hunting, plant gathering, sustainable practices, ancestral heritage, cultural preservation, urban migration, intergenerational transmission, weighted mean

**EVALUATING THE USE OF SOCIAL MEDIA MESSENGER FOR FASTER
INFORMATION SERVICE IN KOREAN GRILLS RESTAURANT IN QUEZON CITY**

Jingkie Senillo, Danilo Crus Jr, Jhonalyn Parina, Steffany Rodil,
Rodhellia Tecson, Oliver Fabon

Abstract

Responsive messaging systems are transforming customer service by providing quick, efficient, and cost-effective solutions through text or voice interactions with customers. These systems automate routine tasks, allowing staff to focus on more complex concerns, which leads to improved customer satisfaction and brand loyalty. In the food service industry, particularly in Korean grill restaurants, responsive messaging systems are becoming essential in streamlining operations and enhancing the dining experience. This study investigates the impact of such systems on the customer service quality of a Korean Grills Restaurant in Quezon City, with emphasis on table reservations, food ordering, response time, and customization to ensure operational efficiency and competitiveness. This chapter outlines the research design, respondents, sampling technique, instrument validation, questionnaire administration, and statistical treatment of data used in the study. This chapter presents the results of the study, which includes the procedures applied in analyzing the data. It describes the responses of the participants as processed through the chosen statistical treatment. The study's conclusions indicated that at Korean Grills Restaurant, female customers were more prevalent, and single individuals were more likely to dine there. Young adults frequently visited the restaurant. A responsive messaging system enhanced efficiency and customer experience, despite initial investment and integration challenges. The study emphasized the importance of maintaining the human element, suggesting that successful implementation requires balancing system capabilities with personal service. Future developments may involve cooperation between human staff and technology to further improve the dining experience.

Keywords: responsive messaging system, social media messenger, customer service, korean grills restaurant, quezon city, food service industry

FREIGHT MANAGEMENT SYSTEM: HUMAN RESOURCE 1: "EMPLOYEE MANAGEMENT, PERFORMANCE MANAGEMENT, EMPLOYEE SELF SERVICE PORTAL, EMPLOYEE OFFBOARDING MANAGEMENT, HR ANALYTICS REPORT, ATTENDANCE AND TIME TRACKING WITH AI DRIVEN EMPLOYEE RECORDS MANAGEMENT"

Ronwell Bordador, Gazelle Ledesma, John Jason Capiendo,
Czedrick Catalla, John Luis Lu, Gerald Dela Cruz

Abstract

The capstone project titled “Freight Management System: Human Resource 1 – Employee Management with AI-Driven Employee Records Management” focuses on enhancing human resource functions within freight management. The system integrates key modern HR modules such as Employee Management, Performance Management, Employee Self-Service Portal, Employee Offboarding, HR Analytics Reporting, and Attendance and Time Tracking. By leveraging Artificial Intelligence, it automates the management of employee records, ensuring accurate, efficient, and optimized handling of staff information to support data-driven decision-making. This innovative solution streamlines HR processes, fosters employee engagement, and improves operational efficiency in freight management operations. The development of Freight Management System: Human Resource 1 with AI-Driven Employee Records Management utilized the Agile Scrum methodology, organizing work into iterative sprints to enhance product quality through continuous client collaboration. The process included detailed planning, execution phases, daily stand-ups, and sprint reviews, ensuring effective progress monitoring and rapid issue resolution. The system architecture embraced microservices technology, allowing for independently deployable modules that manage employee data, track attendance, conduct performance evaluations, oversee offboarding, and generate comprehensive HR analytics reports. This modular design promotes scalability, maintainability, and seamless integration within freight management operations. The Freight Management System: Human Resource 1 successfully achieved its primary objective by integrating artificial intelligence to streamline and optimize HR operations, particularly in managing employee records. The system features a comprehensive suite of functionalities, including Employee Management, Performance Evaluation, Attendance and Time Tracking, Employee Self-Service, Offboarding Management, and HR Analytics Reporting, ensuring accurate data handling, improved employee engagement, and enhanced organizational efficiency. The integration of Artificial Intelligence (AI) in the freight and logistics industry has substantially elevated human resource operations. The AI-driven Employee Records Management system automates routine HR processes, ensures real-time data entry, and minimizes administrative errors. This advancement not only boosts operational efficiency and data accuracy but also enhances decision-making capabilities, allowing HR teams to focus on strategic initiatives rather than manual administrative tasks.

Keywords: artificial intelligence (ai), employee records management, hr automation, freight and logistics, real-time data entry, operational efficiency, administrative accuracy, decision-making, strategic hr, digital transformation

**FACTORS INFLUENCING THE SECONDARY LANGUAGE SPEAKING SKILLS OF
FRESHMEN ENGLISH MAJOR IN BESTLINK COLLEGE OF THE PHILIPPINES:
PROPOSED LOCALIZED DIGESTIBLE INFORMATIVE VIDEOS**

Michael Jonathan Almazan, Mishareth Velado, Gelyn Gopole, Mary Jane Mendoza,
Jade Ashlie De Luna, Dr. Romeo Fernandez

Abstract

According to a survey conducted by the Social Weather Stations from March 26 to 29, 2023, only 55% of Filipinos can speak English. Although the 2023 EF English Proficiency Index ranked the Philippines 20th globally in English proficiency, it also revealed a decline in proficiency among Filipinos aged 18 to 20 from a score of 582 in 2016 to 533 in 2023. This decline is especially concerning among freshmen English major students, who are expected to demonstrate advanced language skills as future educators. This study aims to identify the factors influencing the secondary language speaking skills of these students and to propose the use of localized Digestible Informative Videos (DIVs) as an instructional intervention. The study utilizes a quantitative posttest-only quasi-experimental research design. A total of 165 freshmen English major students serve as respondents. Data is gathered using structured survey questionnaires. The intervention involves localized Digestible Informative Videos, developed based on Dr. Stephen Krashen's "Optimal Input Hypothesis" in second language acquisition. These instructional materials incorporate culturally relevant content, activities, and popular media to enhance language learning. The study found that secondary language speaking skills are influenced by several variables, including proximal environment, affective filter, individual differences, and linguistic factors. Among these, the most significant sub-variables identified were teacher instruction, learner motivation, perfectionism, and pronunciation. Other contributing sub-variables included peer influence, parental involvement, classroom environment, self-confidence, anxiety, comprehension difficulties, competitiveness, grammar, and vocabulary. The respondents agreed that the use of localized DIVs improved their comprehension, class participation, and pronunciation. Furthermore, students reported a noticeable enhancement in their secondary language speaking skills after exposure to the materials. The findings reveal the key factors that influence oral proficiency in English among freshmen English major students and underscore the importance of integrating engaging and contextually relevant materials into instruction. The use of localized Digestible Informative Videos effectively addressed the learners' language challenges by capturing their attention and supporting skill development. These videos proved to be beneficial instructional tools in modern classrooms, aligning with outcome-based education by enhancing participation, comprehension, and speaking skills. As such, DIVs can serve as a valuable supplementary resource for educators aiming to improve students' language proficiency.

Keywords: second language acquisition, speaking skills, digestible informative videos, english proficiency, language instruction, affective filter, motivation, pronunciation, optimal input hypothesis, freshmen english majors

AN EVALUATION ON THE IMPLEMENTATION OF R.A. 8485 “ANIMAL WELFARE ACT OF 1998” IN NAGKAISANG NAYON NOVALICHES, QUEZON CITY

Christian Jake Linaza, Melchor Mirana, Wilson Padama, Troy Gerald,
Kevin Charles Tanaid, Edgar Reyes

Abstract

Animal cruelty penalties vary significantly across countries, ranging from fines and imprisonment to bans on animal ownership and, in severe cases, business closures or institutional legal actions. Although animal welfare laws exist in many regions, enforcement often falls short due to low public awareness, legal gaps, and insufficient resources. This results in numerous cases going unpunished and penalties that are often too mild to discourage repeat offenses. In response, some jurisdictions have implemented tougher sanctions, including felony charges for serious acts of cruelty, reflecting a growing understanding of animals' capacity for suffering and ethical obligations to protect them. While not all legislation formally recognizes animal sentience, it is clear that both vertebrates and invertebrates are capable of experiencing physical and mental distress. The incorporation of the Five Freedoms into legal frameworks highlights the fundamental commitment to uphold animal welfare. The study included 100 respondents, comprising 15 officials from the Department of Public Order and Safety (DPOS), 15 police officers, 15 members of the Barangay Peace and Order Council (BPAT), 30 community residents, and 25 pet owners. Challenges in Implementing R.A. 8485 in Nagkaisang Nayon, Novaliches, Quezon City, The table presents the top ten challenges encountered in the enforcement of Republic Act No. 8485 (The Animal Welfare Act) in Nagkaisang Nayon, Novaliches, Quezon City, ranked by frequency and percentage of responses. The most frequently reported challenge was identified by 75 respondents, accounting for 11.92% of the total. This was closely followed by a challenge reported by 73 respondents (11.61%), and another by 69 respondents (10.97%). Three challenges, ranked 4th, 5th, and 6th, were each cited by 66 respondents, representing 10.49% of responses, indicating that several issues are considered equally significant. The 7th-ranked issue received 63 responses (10.02%), followed by the 8th with 54 responses (8.53%), the 9th with 50 responses (7.95%), and the 10th with 47 responses (7.47%). These figures reflect a range of recurring problems, with relatively small differences in frequency, suggesting that various challenges are perceived as similarly critical by the community. The data underscores the need for comprehensive and collaborative efforts to strengthen enforcement, raise awareness, and address the most pressing obstacles to fully implementing the Animal Welfare Act in the locality. Key Problems Encountered in the Implementation of R.A. 8485 and Corresponding Actions in Nagkaisang Nayon, Novaliches, Quezon City. A key issue identified in the implementation of Republic Act No. 8485 in Nagkaisang Nayon is the poor management of animal waste, which poses serious threats to both public health and the environment. Improper disposal can lead to foul odors, the spread of diseases, and environmental contamination. To address this concern, local efforts have focused on promoting proper waste disposal practices. Community members are encouraged to dispose of animal waste in designated areas to minimize health risks and maintain a clean environment. Another significant problem is the lack of public awareness regarding animal welfare. Many residents remain unfamiliar with the provisions of the Animal Welfare Act and the importance of humane treatment of animals, often resulting in unintended neglect or cruelty. In response, authorities and local organizations have initiated various awareness programs, including seminars, workshops, and information campaigns. These initiatives aim to educate the public about the law and promote responsible pet ownership within the community.

Keywords: animal welfare act, r.a. 8485, animal waste management, public awareness, responsible pet ownership, environmental impact, public health, nagkaisang nayon, quezon city, community education, implementation challenges

**ACCEPTABILITY OF A PROPOSED POSITIVE REFLECTION OPTIMISM
ACTIVITY FOR THE COLLEGE STUDENTS IN BESTLINK COLLEGE
OF THE PHILIPPINES IN QUEZON CITY**

John Michael Carani, Nicka Angela Antonio, Alejiah Rosche Briones,
LJ Patricia Macoy, Rachel Olmido, Maria Regina Baluyut

Abstract

This study examines the acceptability of a proposed positive reflection optimism activity among professors teaching the “Understanding the Self” course at Bestlink College of the Philippines in Quezon City. Acceptability is assessed in terms of age, gender, teaching experience, alignment with learning objectives, relevance to course content, clarity of guidelines, evaluation criteria, and support for critical thinking. Understanding professors’ perceptions of the activity informs its potential to foster positive and hopeful mindsets in first-year college students. A causal-comparative design is employed to explore differences in acceptability perceptions without direct manipulation of variables. Seventeen professors of “Understanding the Self” are selected via purposive sampling based on their role in administering positive reflection activities. Participants complete a structured questionnaire evaluating each acceptability indicator on a four-point scale ranging from “Unlikely” to “Very Likely” acceptable. Professors rated the proposed positive reflection optimism activity at the “Likely” level of acceptability across all indicators. No statistically significant differences emerged among demographic or professional subgroups, indicating consistent support for the activity’s learning objectives, course relevance, guidelines, evaluation criteria, and promotion of critical thinking. As a result, a structured set of activity guidelines was formulated to optimize positive mindset cultivation and support student mental well-being. The findings demonstrated strong general support for integrating positive reflection and optimism exercises into the “Understanding the Self” curriculum. Embedding such activities in teaching strategies enhanced alignment with learning objectives and contributed to a more dynamic classroom environment. Consequently, this research expands the literature on student mental health interventions by highlighting the role of optimism-based reflections in promoting continuous development for both students and educators.

Keywords: positive reflection, optimism activity, acceptability, teaching strategies, mental well-being

**ANALYSING THE DIFFERENCE BETWEEN SLEEP DEPRIVATION
AND WELL-BEING AMONG PSYCHOLOGY STUDENTS**

Sophia Nicole Ambulo, Andrea Alburo, Saira Nica Enoc, Jamaica Nacua,
Erica Jane Santiago, Maria Regina Baluyut

Abstract

This study examines the correlation between sleep deprivation and psychological well-being among first-year psychology students, utilizing the WHO-5 Well-Being Index as a standardized measure of well-being. Sleep deprivation is a prevalent and pressing issue among university students, often resulting in adverse effects on mental health, emotional stability, and academic performance. First-year students are particularly vulnerable, as they navigate academic demands, social transitions, and personal stressors that can significantly disrupt sleep patterns. The growing prevalence of inadequate sleep in this population raises serious concerns about its impact on students' overall quality of life. By analyzing the relationship between sleep habits and well-being, this study aims to inform strategies that promote healthier lifestyles and improved mental health outcomes in academic settings. This study employs an Input-Process-Output (IPO) framework to explore the relationship between sleep deprivation and psychological well-being. The input consists of students' sleep behaviors and patterns, the process involves the analysis of their experiences and perceptions of sleep quality, and the output is measured using the WHO-5 Well-Being Index. Data was gathered through a structured survey questionnaire focusing on the participants' experiences with sleep deprivation and their self-assessed sleep quality. The study involved a sample of 50 first-year psychology students, aged 18 to 26, whose sleep habits and well-being were observed over the past two weeks. This age group is particularly vulnerable to lifestyle disruptions that negatively affect sleep, making it essential to examine emerging trends and correlations that may impact their mental health and academic success. The findings revealed that the majority of respondents were aged 18 to 20, with females accounting for 56% of the sample. While most students reported obtaining a moderate amount of sleep, a notable portion experienced significant sleep deprivation. Reflections on their sleep patterns indicated variability in sleep quality, suggesting that consistent, restorative sleep remains a challenge. These insights underscore the difficulties first-year students face in maintaining healthy sleep habits amid academic and personal transitions. The WHO-5 Well-Being Index results showed that most students experienced positive emotions more than half the time, though individual scores varied. Statistical analysis confirmed a significant difference in well-being between sleep-deprived and non-sleep-deprived students. Those with reduced sleep duration were more likely to report lower levels of well-being, demonstrating a clear correlation between sleep quality and psychological health. These findings emphasize the vital role of adequate sleep in supporting the emotional and mental well-being of students.

Keywords: sleep deprivation, well-being, who-5 index, psychological health, emotional well-being, university students, sleep duration, mental health, academic stress, first-year students.

**ANALYSIS ON ARTIFICIAL INTELLIGENCE AND MENTAL HEALTH OF 2ND YEAR
PSYCHOLOGY STUDENTS IN BESTLINK COLLEGE OF THE PHILIPPINES**

Fatima Faith Querubin, Silyn Corros, Jupiter Fernandez, Rhea Mae Gallimba,
Kenneth Brian Salcedo, Maria Regina Baluyut

Abstract

With the growing integration of artificial intelligence (AI) into everyday life, its impact on students' mental health and ethical awareness has become an important area of study. This research focuses on second-year psychology students and examines the relationship between their perceptions of AI and their mental well-being, using the Kessler-6 (K6) psychological distress scale. It also explores the ethical considerations students encounter when interacting with AI tools. The findings aim to support the development of an awareness program that promotes responsible, ethical, and mindful use of AI in academic environments. A quantitative research design was utilized to gather and analyze numerical data using two structured survey questionnaires that assessed perceptions of artificial intelligence (AI), mental health status, and ethical concerns. The respondents were purposively selected second-year psychology students from Bestlink College of the Philippines. A 4-point Likert scale was employed to gauge the level of agreement with various statements. The study followed a descriptive-correlational design to explore the relationship between students' perceptions of AI and their psychological well-being, as measured by the Kessler-6 (K6) psychological distress scale. The study revealed a growing reliance on artificial intelligence (AI) among students as a means of managing academic stress and supporting emotional well-being. Participants' perceptions of AI were found to significantly influence their usage patterns and attitudes toward these tools. A moderate positive correlation emerged between favorable AI perceptions and higher mental health scores, indicating that students with a more positive outlook on AI tend to experience better psychological well-being. This correlation was statistically significant, reinforcing the reliability of the association. However, it is important to note that the findings do not establish a causal relationship between AI perception and mental health but rather suggest a meaningful link worth further exploration. The study underscores both the advantages and challenges of AI use among second-year psychology students. While AI aids in reducing academic stress by improving task efficiency, it can also lead to overdependence and reduced critical thinking. In contrast, students who avoid AI often develop stronger cognitive skills through traditional study methods, though with greater effort. These findings suggest the need for balanced AI usage. Academic institutions should implement clear guidelines to help students utilize AI effectively while preserving mental well-being, ethical judgment, and independent learning.

Keywords: artificial intelligence (ai), psychological well-being, ai perception, mental health, ethical awareness, academic stress, critical thinking, student behavior, responsible ai use, college students

**ANALYZING CHILDHOOD TRAUMA USING ARTIFICIAL INTELLIGENCE IN
COGNITIVE DEVELOPMENT OF SENIOR HIGH SCHOOL STUDENTS
OF BESTLINK COLLEGE OF THE PHILIPPINES**

Jose Sandino Anajao, John Louie Espinas, Jean Lynette Garalde,
Jeanlyn Rota, Careselle Tome

Abstract

Artificial Intelligence (AI) is transforming the fields of education and psychology by providing advanced tools for behavioral analysis and decision-making support. A significant concern in these fields is the underassessment of childhood trauma, which can profoundly affect students' cognitive development and academic performance. Traditional assessment tools often fall short in terms of accuracy and real-time analysis. This study examines the effectiveness of AI-driven tools in detecting and analyzing signs of childhood trauma among senior high school students at Bestlink College of the Philippines. By addressing the limitations of current assessment methods, the research aims to support timely interventions and promote better cognitive and educational outcomes. A descriptive-correlational research design was employed to examine the relationship between childhood trauma and cognitive development with the integration of AI-based tools. Participants were selected through purposive sampling, targeting senior high school students at Bestlink College of the Philippines. Data were collected using a modified version of the Feifer Assessment of Childhood Trauma (FACT), which assessed trauma exposure, demographic characteristics, and cognitive functioning. To enhance the depth of analysis, AI-powered tools such as sentiment analysis and behavioral prediction models were utilized. The questionnaire was distributed both online and in print to ensure wider accessibility and participation. Statistical analyses, including frequency distribution, mean computation, and Chi-square tests, were conducted to interpret the data and identify significant relationships. A total of 67.14% of respondents reported experiencing trauma, with emotional abuse (20.12%), bullying (13.99%), and physical abuse (12.83%) emerging as the most common types. These experiences were strongly associated with challenges in emotional regulation, academic performance, and social interaction. AI tools demonstrated moderate to high effectiveness in enhancing behavioral responses (56%) and decision-making abilities (48%). However, their impact on emotional expression and language use was relatively limited. Most students assessed their attention, memory, and critical thinking skills as average to good, although emotional regulation and learning retention showed varying levels across individuals. The findings highlight the critical role of Artificial Intelligence in trauma-informed education, particularly in improving behavioral regulation and decision-making. Emotional and physical abuse were identified as significant factors affecting cognitive function. The study calls for enhanced AI tools capable of accurately interpreting emotional data and stresses the importance of collaboration among educators, mental health experts, and AI developers. It also recommends implementing targeted interventions based on demographic profiles to increase impact and effectiveness.

Keywords: artificial intelligence (ai), trauma-informed education, childhood trauma, emotional abuse, physical abuse, cognitive development, behavioral regulation, decision-making, emotional data analysis, targeted interventions, senior high school students

**ARTIFICIAL INTELLIGENCE DEPENDENCY: ASSESSMENT OF ARTIFICIAL
INTELLIGENCE INTEGRATION ON ACADEMIC LAZINESS
OF 2ND YEAR PSYCHOLOGY STUDENTS**

Mary Mae Malalay, Joelyn Barrogo, Nicole Tan, Reinalyn De Vera,
John Paul Tan, Maria Regina Baluyut

Abstract

While the integration of artificial intelligence (AI) in education enhances efficiency and provides valuable academic support, it also raises concerns about overreliance, which may hinder student initiative and critical thinking. This study explores the correlation between AI integration and academic laziness among second-year Psychology students at Bestlink College of the Philippines. It investigates the extent of AI use in academic tasks, assesses students' levels of academic disengagement, and identifies the challenges associated with excessive AI dependence. The findings aim to guide educators in promoting responsible and balanced AI usage while encouraging active learning and sustained student engagement. This study employed a descriptive-correlational research design and used random sampling to select 270 second-year Psychology students as participants. Data was collected through a structured survey that measured key aspects of AI integration, namely frequency, purpose, dependency, engagement with AI outputs, and self-perceived reliance as well as levels of academic laziness. Descriptive statistics, including frequency and percentage, were used to analyze the respondents' demographic profiles. A four-point Likert scale assessed student perceptions, and weighted means were calculated to determine the overall levels of AI use and academic laziness. Pearson correlation analysis was conducted to examine the relationship between AI integration and academic laziness. The study reveals that 76% of students frequently use artificial intelligence (AI), particularly ChatGPT, to manage academic tasks, improve time management, and cope with physical or mental fatigue and social distractions. Measures of AI engagement such as frequency, purpose, dependency, and self-reported reliance, indicated consistently high usage. In terms of academic performance, 35% of students achieved high grades, while 61% maintained stable results. A moderate positive correlation ($r = 0.595$) was found between AI integration and academic laziness; however, the relationship was not statistically significant ($p = 3.76 > 0.05$), suggesting that AI use does not directly contribute to academic laziness. The findings highlight the importance of using artificial intelligence (AI) as a learning aid rather than a substitute for independent thinking and effort. To prevent overreliance, educators should implement AI literacy programs and promote responsible usage. These efforts will help students retain strong academic skills and critical thinking abilities while maximizing the benefits of AI in education.

Keywords: artificial intelligence (ai), academic laziness, student motivation, critical thinking, educational technology, psychology students, responsible ai use, overreliance on technology, student engagement, bestlink college

**ASSESSING STRESS AND PSYCHOLOGICAL IMPACT OF MARITIME
PIRACY ON FILIPINO SEAFARERS AT SEA**

Celi Joreal Augustine, Robert Emanuel Casio, Raezen Caliao, Allen Lauroa,
Mark Daniel Balbuena, Prince Michael De Leon

Abstract

Maritime piracy remains a persistent threat to the global shipping industry, with profound effects on Filipino seafarers, who make up a significant portion of the maritime workforce. This study investigates the psychological impact of piracy on these seafarers, focusing on mental health, well-being, and job performance. It also highlights the prevalence of stress-related conditions such as anxiety, depression, and burnout resulting from exposure to piracy-related threats. The study adopted a descriptive research design and employed a researcher-made, validated questionnaire as the primary instrument for data collection. A purposive sample of 20 seafarers comprising individuals from both Marine Transportation and Marine Engineering, was selected to participate in the survey. The collected data were analyzed using statistical tools such as frequency, percentage, and weighted mean, taking into account the diverse years of experience among the respondents. The findings revealed that although most respondents disagreed with experiencing severe psychological impacts, symptoms affecting well-being, such as chronic fatigue, irritability, and decreased productivity, were reported. An increase in risk-taking behavior was noted, despite minimal perceived impact on job performance. Qualitative responses highlighted recurring issues such as fear for one's life, emotional exhaustion, and feelings of isolation. Challenges encountered during data collection included difficulty identifying respondents with piracy experience, language barriers, and age-related concerns such as poor eyesight and memory lapses. It concludes that while quantitative data did not strongly reflect direct psychological impacts, qualitative responses revealed significant underlying stress and emotional strain related to piracy. These results emphasize the need for improved communication tools, strategic respondent selection, and robust support systems to more effectively identify and mitigate psychological distress among seafarers. Future research should prioritize enhanced methodologies and targeted mental health interventions to support the overall well-being of maritime workers.

Keywords: maritime piracy, filipino seafarers, psychological impact, mental health, emotional strain, job performance, stress-related disorders, qualitative analysis, support systems, mental health interventions

**ASSESSING THE RELATIONSHIP BETWEEN SLEEP QUALITY AND SOCIAL
MEDIA USAGE AMONG THIRD-YEAR PSYCHOLOGY STUDENTS
AT BESTLINK COLLEGE OF THE PHILIPPINES**

Hera Trexie Geocado, Judy Ann Avila, Marielette Cadotdot,
Andrea Nichole Cuajao, Angelo Malaga, Dr. Jolly Miguel

Abstract

The growing prevalence of social media raises concerns about its potential impact on sleep quality, particularly among students. This study assesses the relationship between sleep quality and social media usage among third-year Psychology students at Bestlink College of the Philippines. Understanding this relationship is essential for promoting healthier sleep habits and supporting students' overall well-being. This study employs a correlational research design with a survey questionnaire as the primary data collection instrument. A total of 230 third-year Psychology students complete the questionnaire, which gathers information on demographic profiles, social media usage patterns, and sleep quality. Pearson's correlation coefficient is used to examine the significance and strength of the relationship between sleep quality and social media usage. Data revealed widespread social media usage among respondents, with TikTok and Instagram emerging as the most preferred platforms. Many students reported excessive use at night, resulting in delayed sleep onset, frequent sleep disturbances, and irregular sleep schedules. Analysis indicated a moderate positive correlation ($r = 0.53$, $p < 0.05$) between social media usage and diminished sleep quality, demonstrating that higher levels of engagement corresponded with poorer sleep outcomes. Findings underscored the adverse effects of excessive social media engagement on students' sleep patterns. Prolonged use, especially before bedtime, contributed to sleep disruptions, shorter sleep duration, and reduced restfulness. Despite awareness of these negative consequences, students continued prioritizing digital interaction for entertainment, communication, and self-expression over obtaining sufficient sleep. These results highlight the need for interventions that encourage balanced social media habits and educate students on strategies to protect sleep health.

Keywords: sleep quality, social media usage, sleep disturbances, sleep onset, and social media platforms

**ASSESSMENT OF LEADERSHIP STYLES ON EMPLOYEES' WORK EFFECTIVENESS
OF MANAGING DIRECTOR IN SMBARRAMEDA ENTERPRISE**

Antoinette Baldimo, Shane Ann Asiveros, Keith Claudine Lazarra,
CJ Trisha Medillo, Crissamae Suruiz, Regina Baluyut

Abstract

This study assesses the leadership styles of the Managing Director and their impact on employees' work effectiveness at SMBarrameda Enterprise. Effective leadership shapes workplace productivity, adaptability, teamwork, and efficiency. The assessment examines five leadership styles: autocratic, democratic, laissez-faire, transformational, and transactional, to determine their influence on employee performance and organizational success. A quantitative research design is employed, utilizing a structured survey questionnaire to collect data from thirty employees of SMBarrameda Enterprise. Participants are selected through purposive sampling to ensure relevance to the study's objectives. Data is analyzed using frequency distributions and weighted means to profile leadership styles and employee effectiveness, while Pearson correlation is used to examine relationships between leadership approach and work outcomes. Transformational leadership emerged as the predominant style (weighted mean = 3.15), reflecting emphasis on vision, motivation, and change facilitation. Transactional leadership followed closely (weighted mean = 3.14), highlighting contingent rewards and clear performance expectations. Democratic leadership scored moderately (weighted mean = 3.05), indicating participative decision-making. Autocratic leadership received a lower rating (weighted mean = 2.75), reflecting directive control. Laissez-faire leadership scored lowest (weighted mean = 2.45), suggesting limited guidance and autonomy. In assessing work effectiveness, employees demonstrated high teamwork (weighted mean = 3.25) and operational efficiency (weighted mean = 3.31), while adaptability (weighted mean = 3.09) and problem-solving (weighted mean = 2.86) were comparatively weaker. The findings indicated that structured leadership approaches, particularly transformational and transactional, enhanced overall efficiency and teamwork but constrained employee independence and creative problem-solving. As a result, leadership development programs were recommended to foster greater inclusivity, participative decision-making, and innovation. Emphasizing a balance between guidance and autonomy was proposed to improve adaptability and problem-solving capacities among staff.

Keywords: transformational leadership, transactional leadership, work effectiveness, employee adaptability, teamwork

**ASSESSMENT ON TRUST AND JEALOUSY OF LONG-DISTANCE
MARRIED COUPLES IN CALOOCAN CITY**

Shamyn-joy Genilla, Sheila Faye Ranes, Zyrene Galiguer, Danah Rose Bernabe,
Leomar Villora, Maria Regina Baluyut

Abstract

Nadia Laviree's statement, "Jealousy kills a relationship; trust makes it strong," captures a fundamental truth experienced by many long-distance married couples in Caloocan City. Despite the physical distance between them, trust serves as the crucial foundation that strengthens their relationships. In the absence of regular in-person interaction, couples depend on loyalty, clear communication, and emotional intimacy to maintain their connection. Nevertheless, jealousy can still emerge from feelings of insecurity or uncertainty, potentially causing emotional strain. This study examines the interplay between trust and jealousy in long-distance marriages, seeking to better understand how trust is cultivated and the emotional effects jealousy has on couples. This study utilized quantitative research design and employed snowball sampling to recruit legally married couples who have been living apart for a minimum of two years. To investigate the relationship between trust and jealousy, correlation and regression analyses were performed. Data collection was conducted through in-person surveys to ensure candid and thoughtful responses. The gathered data were then analyzed using SPSS statistical software to derive meaningful insights. The findings indicate a weak negative relationship between trust and jealousy, suggesting that while increased trust generally corresponds with reduced jealousy, the association is neither strong nor straightforward. This implies that trust and jealousy are not simply inverse concepts; rather, they are influenced by various factors such as individual insecurities, past experiences, and the quality of communication within the relationship. Addressing jealousy effectively requires more than just fostering trust, it also demands open and honest communication, consistent emotional support, and clearly established boundaries. Although trust provides a foundation of stability, emotional intimacy and mutual understanding are crucial for the growth and resilience of the relationship. Couples are encouraged to engage in open and sincere dialogue, cultivate self-awareness, and address issues early before they escalate. Professional marriage counseling can offer valuable support through trust-enhancing activities, structured conversations, and therapeutic approaches like cognitive-behavioral therapy to effectively manage feelings of jealousy. Future research should investigate additional influences on trust and jealousy, such as communication dynamics, stress management, and cultural backgrounds. Utilizing qualitative methods or longitudinal studies could provide more comprehensive insights into how long-distance couples sustain their relationships. Moreover, increasing the sample size and incorporating a wider demographic would improve the relevance and applicability of future findings.

Keywords: trust, jealousy, long-distance marriage, communication, emotional support, cognitive-behavioral techniques, relationship stability, self-awareness, marital counseling, cultural factors, stress coping, qualitative research, longitudinal study, relationships

**ATTACHMENT STYLES AND PARENTAL INFIDELITY: AN
EXPLORATION ON THE LIVED EXPERIENCES IN PARENTAL
INFIDELITY OF FIRST YEAR COLLEGE STUDENTS**

Yna Evangelista, Mia Camillo, Rizza Mae Dellomos,
Rojhean Lumbo, Louiela Sudaria, Juanito Parayno

Abstract

Growing up in a household affected by parental infidelity can lead children to experience emotional confusion, resentment, and insecurity. These early experiences can significantly shape their attachment styles, the emotional patterns that influence how individuals form and maintain relationships throughout their lives. This study investigated the impact of parental infidelity on the attachment styles and emotional well-being of 50 first-year students at Bestlink College of the Philippines. A quantitative correlational research design was employed, using purposive sampling to select participants. Data was gathered through a researcher-developed questionnaire focused on experiences of parental infidelity and the standardized Adult Attachment Questionnaire (AAQ) by Simpson et al. (1998). Statistical analyses, including percentage, frequency, and weighted mean, were utilized to interpret the findings. The study revealed that 28% of the respondents came from separated families, while 40% had experienced paternal infidelity. In terms of lived experiences related to parental infidelity, the average weighted mean was 3.10, interpreted as "Agree," indicating a general acknowledgment of its emotional impact. Based on the Adult Attachment Questionnaire (AAQ), Avoidant Attachment emerged as the most prominent style, with a frequency rate of 35.2%. The weighted mean scores for various attachment styles ranged from 3.58 to 4.56, all falling within the "Neutral" interpretation, suggesting moderate tendencies without strong attachment extremes. The study revealed that the majority of participants demonstrated avoidant attachment styles, likely influenced by their experiences with parental infidelity. Others showed neutral responses, indicating underlying difficulties in forming emotional intimacy and establishing trust. To address these emotional and psychological challenges, an intervention program titled "Developing Secure Attachment Styles among Students Affected by Parental Infidelity" was proposed. This program aims to foster healthier emotional coping strategies, strengthen interpersonal relationships, and support the development of secure attachment in affected students.

Keywords: parental infidelity, attachment styles, avoidant attachment, emotional intimacy, trust issues, secure attachment, intervention program, first-year students, quantitative research, bestlink college of the philippines

**CHALLENGES FACED BY 4TH YEAR BSED STUDENTS IN
BALANCING WORK AND SOCIAL RELATIONSHIPS**

Christian Phillip Sol, Quinn Dennize Kim Chua, Allysa Joyce Fugueras,
Kathlene Santiago, Lieca Joy Uayan, Dr. Adora Angeline Babia

Abstract

This study investigates challenges encountered by fourth-year Bachelor of Secondary Education students in balancing part-time employment, academic responsibilities, and social relationships. It aims to identify adaptive strategies and support systems that enhance resilience and social well-being. By employing quantitative and thematic analyses, this study seeks to provide actionable insights into academic institutions to better support this student population. This study adopts a quantitative descriptive design and uses snowball sampling to recruit ten fourth-year BSED students who engage in part-time work while completing their academic requirements. Participants completed a structured questionnaire that measured hours worked, grade point average, time allocated to social activities, and perceived stress related to balancing competing demands. Data were analyzed using descriptive statistics to quantify trends and thematic grouping to identify common adaptive strategies. Analysis revealed three primary challenges. First, time constraints were significant, with 80 percent of participants reporting fewer than five hours per week for social activities due to overlapping work and academic deadlines. Second, financial necessity was a major stressor, as 90 percent cited employment as critical for covering tuition and family support, which exacerbated their overall stress levels. Third, social sacrifices emerged as a concern, with 70 percent acknowledging reduced peer interaction that led to feelings of isolation. Quantitatively, students working more than 20 hours per week had a 15 percent lower GPA on average compared to those with lighter work schedules. Despite these pressures, 60 percent of participants utilized structured scheduling and peer support groups to manage stress, demonstrating resilience through proactive planning. The study highlighted the unique struggles of fourth-year BSED students who work while completing their studies, emphasizing their capacity for resilience in the face of competing demands. It underscored the importance of targeted support mechanisms such as mentorship programs and time-management workshops, to foster both academic success and social well-being. These findings suggested that academic institutions could enhance the educational experience of working students by implementing structured support systems that address time constraints, financial pressures, and social isolation.

Keywords: challenges, fourth-year bsed students, work-life balance, time management, social relationships, resilience, support systems

**CORRELATION BETWEEN AI THERAPY CHATBOTS AND ACADEMIC
STRESS REDUCTION AMONG PSYCHOLOGY STUDENTS
AT BESTLINK COLLEGE OF THE PHILIPPINES**

Princess Mae Salvador, Lovely Joy Azares, John Michael Batuampo, Regina Marie Nepomuceno,
Rose Ana Patingo, Dr. Adora Angeline Babia

Abstract

This study explores the relationship between AI therapy chatbots and academic stress reduction among psychology students at Bestlink College of the Philippines. In the Philippines limited access to mental health services is caused by high costs and a shortage of professionals. Isla (2023) notes that therapy sessions cost between ₱1,000 and ₱4,500 while de Villa (2022) reports only three mental health professionals per 100,000 people. As a result, AI-powered therapy chatbots have become accessible alternatives for managing stress. The study is grounded in Digital Cognitive Behavioral Therapy (dCBT), which aids stress management through digital tools, and Self-Monitoring Theory, which highlights the importance of self-awareness in emotion regulation. A correlational quantitative research design is employed to examine the relationship between AI chatbot usage and academic stress levels. Purposive sampling is used to select 200 psychology students: 50 participants from each year level, first through fourth, who have used AI chatbots and reported academic stress. Data are collected through a researcher-made questionnaire and a modified Academic Stress Scale. The study investigates students' usage patterns, perceptions of chatbot effectiveness, and challenges encountered. Respondents were primarily aged 21 to 23, predominantly female, and from middle-income backgrounds. Frequent chatbot use was reported. Chatbots were rated as effective (mean = 3.27) and reliable (mean = 3.12) although their responses were perceived as somewhat general (mean = 3.09). High levels of academic stress were attributed mainly to poor communication with instructors (mean = 2.42) and limited social support (mean = 2.31). Pearson correlation analysis indicated a weak but statistically significant negative correlation ($r = -0.31$, $p = 0.03$) between increased chatbot use and lower stress levels. Findings showed that AI therapy chatbots provided moderate stress relief but lacked personalization in responses. As a result, refinement of chatbot algorithms is recommended to deliver more tailored and emotionally responsive interactions. A student-friendly chatbot platform was developed via Facebook to offer online counseling and stress management services. Additionally, a framework was established to guide enhancements in chatbot features. The research suggests that educational institutions adopt these tools as supplementary mental health support, especially where professional services are limited.

Keywords: ai therapy chatbots, academic stress, digital cognitive behavioral therapy, self-monitoring theory, psychology students, mental health support, correlational study

**CORRELATION BETWEEN EMOTIONAL REGULATION AND PERSONAL GROWTH
INITIATIVES AMONG FIRST-YEAR PSYCHOLOGY STUDENTS**

Christine Joy Gigaquit, Joana Bernal, Chelsia Karen Callao,
Jelai Malto, Catherine Panes, Jonah Andrea Mapula

Abstract

Emotional regulation is essential for young adults to manage feelings in stressful situations. It promotes mental health, improves decision-making, and enhances resilience. Personality, environment, and culture influence how emotions are regulated. Personal Growth Initiatives involve active self-improvement and play a key role in individual development. This study aims to determine levels of emotional regulation and personal growth initiatives among first-year psychology students and to explore the relationship between these variables. This study employs quantitative design with cluster sampling. Slovin's formula is used to select 290 first-year psychology students from Bestlink College of the Philippines. Data are collected through the Emotion Regulation Questionnaire and the Personal Growth Initiatives Scale. Responses are analyzed using frequency and percentage distributions, weighted mean, and Pearson correlation coefficient. The findings revealed a weighted mean of 4.93 for emotional regulation and 3.70 for personal growth initiatives. In the emotional regulation domains, cognitive reappraisal scored highest (mean 5.15), and expressive suppression scored lowest (mean 4.60). In personal growth initiatives, intentional behavior recorded the highest mean (4.10), followed by planfulness (3.72), readiness for change (3.63), and using resources (3.24). Pearson correlation analysis yielded an r value of 0.05 with a p -value of 0.37, exceeding the 0.05 significance threshold and indicating no significant relationship. The results highlighted that first-year psychology students exhibited strong cognitive reappraisal but lower levels of other personal growth skills. As a result, it was recommended that programs focusing on mindfulness training, strategies for addressing negative thought patterns, structured action planning, and peer support groups be implemented to enhance students' emotional regulation and personal growth.

Keywords: emotional regulation, personal growth initiatives, first-year psychology students, cognitive reappraisal, intentional behavior

**EFFECTIVENESS OF DIGITAL DETOX TO THE MENTAL WELL-BEING AMONG
SELECTED STUDENTS OF BESTLINK COLLEGE OF THE PHILIPPINES**

Jullien Ann Mae Alegro, Rouela Mae Laroa, Janna Rose Olandria,
Mackenzie Glowhien Jean Pajarillaga, Raven Xyrill Tobias, Michael Bersamin

Abstract

The widespread reliance on digital devices and social media has raised growing concerns about its adverse effects on students' mental well-being. This study aims to evaluate the impact of a structured digital detox intervention among psychology students by measuring changes in social media usage and key mental health indicators, including stress levels, sleep quality, and emotional stability. By examining participants across various age groups, the research seeks to identify patterns of digital dependence and assess the effectiveness of the intervention in promoting psychological well-being and healthier digital habits. A quasi-experimental research design was utilized to assess the effects of a structured digital detox intervention on students' screen time and mental well-being. Pre-test and post-test evaluations were conducted to compare participants' conditions before and after the intervention. A total of 75 respondents were selected from the Psychology Department of Bestlink College of the Philippines through cluster sampling. The intervention spanned one week, during which participants were instructed to disconnect from social media platforms and instead engage in offline activities that promote mental wellness, such as reading, journaling, and physical exercise. To measure screen time, the standardized Social Media Engagement Questionnaire (SMEQ) was employed. Additionally, a researcher-made questionnaire was developed to assess mental health indicators, including stress levels, sleep quality, and emotional regulation. The research team closely monitored participant progress, documented their experiences, and encouraged compliance throughout the intervention period. At the end of the study, participants submitted their weekly screen time logs, providing meaningful data on digital usage patterns and the psychological impact of temporary disconnection. The findings underscore the positive impact of structured digital detox programs on students' mental well-being. A significant decline in social media engagement was recorded, with the mean score decreasing from 3.08 in the pre-test to 2.66 in the post-test. Participants reported marked improvements in focus, reduced anxiety, better time management, improved sleep quality, and enhanced emotional stability. Statistical analysis confirmed the effectiveness of the intervention, yielding a p-value of 0.00, which led to the rejection of the null hypothesis. These results indicate that temporary disconnection from digital platforms, coupled with purposeful offline activities, can significantly improve psychological health and digital self-regulation among students. In light of the study's findings, it is recommended that educational institutions incorporate structured digital detox initiatives into their mental health and wellness programs. Implementing guided workshops focused on digital mindfulness, responsible screen time management, and stress reduction can help students develop healthier digital habits. To increase motivation and participation, schools may offer incentives such as certifications or academic recognition upon successful completion of digital wellness programs. Furthermore, future research should examine the long-term effects of digital detox interventions and explore strategies to enhance participant engagement and retention. By fostering a balanced and intentional approach to technology use, institutions can play a pivotal role in cultivating sustainable digital wellness practices among students.

Keywords: digital detox, educational institutions, student mental health, digital wellness programs, guided workshops, screen time management, incentive-based participation, long-term intervention effects, participant engagement, technology-life balance

EFFECTIVENESS OF MINDFULNESS PRACTICES ON ACADEMIC STRESS OF THE STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES: AN ASSESSMENT

Danlee Padali, Yuri Batoliño, Joel Caylar, Nathaniel Matos,
Mary Rose Sangol, Dr. Adora Angeline Babia

Abstract

Academic stress continues to be a pressing issue among college students, significantly impairing cognitive performance, emotional regulation, and physical well-being. This study explores the effectiveness of mindfulness-based interventions in alleviating academic stress among third-year Bachelor of Science in Psychology students at Bestlink College of the Philippines. With the increasing academic demands placed on students, mindfulness, a mental practice centered on nonjudgmental awareness of the present moment, has emerged as a promising and evidence-based approach to stress management. The research investigates whether structured mindfulness exercises can meaningfully reduce stress levels and enhance students' overall mental and emotional resilience in an academic environment. This study adopted a quasi-experimental research design, employing cluster sampling to select 229 third-year Bachelor of Science in Psychology students. Data collection utilized two key instruments: a modified version of the Standardized Assessment of Academic Stress (SAAS) and a researcher-developed questionnaire that measured stress across five domains: cognitive, affective, physical, social, and motivational. Participants engaged in a series of structured mindfulness interventions over a specified period, which included guided meditation, focused breathing, and body scan exercises. Pre- and post-intervention assessments were administered to evaluate changes in stress levels. Statistical analyses were conducted to determine the significance and effectiveness of the mindfulness-based intervention in reducing academic stress. Prior to the intervention, students experienced high levels of academic stress, particularly in cognitive areas such as diminished concentration and memory difficulties, as well as physical symptoms including frequent headaches and elevated heart rates. Emotional challenges such as insecurity and fatigue were evident, alongside patterns of social withdrawal. However, post-intervention results revealed significant positive changes. Students reported improved cognitive clarity and focus, increased emotional resilience despite minor residual self-doubt, reduced physical complaints (with only slight appetite disturbances remaining), decreased irritability, and a revitalized sense of motivation. Statistical analysis confirmed a strong inverse correlation between the frequency of mindfulness practice and the intensity of stress symptoms, affirming the effectiveness of mindfulness as a stress-reduction strategy in academic settings. The study affirms that mindfulness practices play a pivotal role in significantly reducing academic stress, underscoring their potential as a cornerstone of student mental health and wellness programs. The findings corroborate existing research emphasizing mindfulness's efficacy in enhancing cognitive focus, emotional regulation, and psychological resilience. Nevertheless, the long-term success of such interventions is contingent upon regular engagement and strong institutional backing. To support this, the researchers developed a structured mindfulness module, incorporating guided meditations, breathing techniques, and practical stress-management tools designed to encourage sustained practice and cultivate a proactive approach to student well-being within academic environments.

Keywords: mindfulness, academic stress, psychology students, mental health, guided meditation, emotional regulation, cognitive focus, stress management, university wellness, bestlink college

**EFFECTS OF HELPING HAND ON CAREER DECISIONS OF STUDENTS
IN BESTLINK COLLEGE OF THE PHILIPPINES**

Jemalyn Dionco, Jayb Marielle Angot, Angelika Nicole Chua,
Jessica Marmito, Abygail Tesil, Maria Regina Baluyut

Abstract

Making informed career decisions is a significant challenge for students, particularly in the field of psychology, where multiple specialized career paths are available. With the advancement of digital tools, psychometric assessments have become a valuable resource for aligning students' interests and abilities with suitable career options. This study focuses on the impact of the digital tool Helping Hand in assisting students at Bestlink College of the Philippines in making more informed and confident career choices. By providing personalized insights based on individual preferences and competencies, Helping Hand aims to address the need for tailored guidance in career planning. The study utilizes a quasi-experimental research design, specifically a pre-test and post-test approach, to assess the effectiveness of the Helping Hand program in guiding students toward appropriate career paths. A total of 50 psychology students participated in the study. The COVID-19 pandemic has intensified the demand for digital support tools, especially those that contribute to academic and career development. Despite the accessibility of these tools, many students continue to struggle with career planning due to a lack of customized career counseling. The intervention was designed to bridge this gap by offering digital career assessments followed by individualized feedback. The results demonstrated a statistically significant improvement in students' career assessment scores after using the Helping Hand program. The average score increased from 2.64 to 2.95, indicating enhanced career readiness. Additionally, a reduction in score variance suggested more uniform outcomes across participants. A t-statistic of 26.65 and a p-value of 0.00 confirmed the statistical significance of the findings ($p < 0.05$). These results support the rejection of the null hypothesis, confirming that the Helping Hand intervention had a positive and measurable impact on students' ability to make career-related decisions. The findings suggest that the Helping Hand digital tool effectively enhances students' career assessment outcomes and supports better decision-making in career planning. This study highlights the value of integrating digital platforms into academic advising and career guidance, especially in psychology education. The researchers recommend further investigation into the long-term effects of such interventions and the psychological factors that influence students' career decisions. Additionally, future studies may explore job market trends, salary expectations, and evolving industry demands to ensure that career guidance tools remain current and applicable to real-world scenarios.

Keywords: helping hand, career decisions, career assessment, psychology students, educational psychology, clinical psychology, industrial organizational psychology, forensic psychology, pediatric neuropsychology, career guidance tools

**EFFECTS OF LOVE LANGUAGE AND RELATIONSHIP
SATISFACTION IN RELATIONSHIP**

Jelly Mae Tuyor, Cris Mikee Berdol, Trixie Gelua, Angel Rose Ib-ib,
Bebe Lumabao, Michael Bersamin

Abstract

This study investigates the influence of love language preferences on relationship satisfaction among college students. Grounded in Gary Chapman's Five Love Languages and the Social Exchange Theory (SET), the research explores how the alignment or mismatch of love language expressions affects emotional connection and relationship fulfillment. By examining how individuals perceive and express affection, the study seeks to understand the role of communication styles in shaping the quality of romantic relationships. A descriptive-comparative research design was employed, involving 50 couples (100 individuals) from the BSBA Marketing Management program at Bestlink College of the Philippines. Participants, aged 18 to 35 and in relationships lasting at least one year, completed a structured survey assessing demographic data, preferred love languages, and relationship satisfaction levels. Quantitative data were analyzed using the Mann-Whitney U Test to examine gender differences and the Kruskal-Wallis test to assess variations based on relationship status. The majority of respondents (87%) were between the ages of 19 and 23. Most were dating (77%), followed by those cohabiting (21%) and married (2%). Relationship duration ranged primarily from one to two years. Among males, the most preferred love languages were quality time (14%) and physical touch (13%), whereas females prioritized words of affirmation (18%) and quality time (15%). A significant gender difference was observed in the preference for words of affirmation ($p = 0.01$). However, relationship status did not significantly influence love language preference. The study revealed that mismatched love language preferences often resulted in emotional disconnection (54%), miscommunication (48%), and emotional exhaustion (42%). Male participants reported more frustration from emotional distance, while female participants experienced greater difficulty in communication. These findings support the idea that compatibility in love languages enhances emotional intimacy and relationship satisfaction, while mismatches can lead to unmet emotional needs. This aligns with the principles of Social Exchange Theory, which emphasizes the importance of mutual understanding and emotional reciprocity in maintaining healthy romantic relationships.

Keywords: love languages, relationship satisfaction, romantic relationships, communication styles, social exchange theory, emotional intimacy

**EFFECTS OF PERFECTIONISM ON WORK FATIGUE AMONG FOURTH
YEAR BREAD WINNERS ON ACADEMIC PERFORMANCE**

Mark Joseph Matabia, Bryan Krisel Garo, Jeline Anne Pajarillo, Angelique Mingullo, Ariel Nisnisan

Abstract

This study explores the relationship between perfectionism and work fatigue among fourth-year breadwinning college students enrolled in BS Psychology, BS Education, and BS Information Technology programs. Breadwinning students, who bear financial responsibilities for their families while pursuing academic goals, often encounter heightened levels of stress, exhaustion, and emotional strain. The study aims to determine how perfectionist tendencies contribute to work-related fatigue and how this, in turn, affects academic performance. The study employed a purposive sampling method involving 51 breadwinning fourth-year college students. A Likert-scale questionnaire was used to collect data on students' academic performance, work hours, levels of fatigue, and perfectionist behaviors. Most participants were found to be working full-time, often exceeding eight hours per day, which significantly contributed to both physical and emotional exhaustion. Students with high levels of perfectionism reported increased fatigue as they continually pushed themselves to meet personal and academic standards. The data revealed a strong correlation between work fatigue and declining academic performance, indicating that high perfectionist tendencies exacerbate burnout and reduce overall learning effectiveness. The results underscore the critical challenges faced by breadwinning students, particularly those with perfectionist traits. The findings suggest that work fatigue, intensified by perfectionism, negatively impacts academic performance. As these students strive to maintain high standards in both work and academics, they are more prone to physical exhaustion and psychological strain. These outcomes indicate the need for institutional support systems that address the unique needs of working students, including mental health services and academic flexibility. The study concludes that work fatigue is a significant issue among fourth-year college students who are also breadwinners, especially those with a strong inclination toward perfectionism. Extended work hours lead to physical and mental fatigue, which is further intensified by the pressure to meet high academic standards. These findings highlight the importance of academic institutions implementing flexible workload policies, providing counseling services, and offering seminars on stress and time management. Such interventions could mitigate the adverse effects of perfectionism and work-related fatigue, ultimately supporting students' academic success and well-being.

Keywords: work fatigue, perfectionism, breadwinning students, academic performance, college students, mental health support

**EFFECTS OF PSYCHOLOGICAL POVERTY ON MENTAL HEALTH AMONG
YOUNG ADULTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Aidan Patrick Delos Santos, Chesca Baldomaro, Jay Ann Coper,
Kristine Fontanilla, Jenzel Mae Mabalatan, Dr. Jolly Miguel

Abstract

This study aims to determine the perceived impact of psychological poverty on the mental health of young adult beneficiaries of the Pantawid Pamilyang Pilipino Program (4Ps) at Bestlink College of the Philippines. Psychological poverty is defined as a multidimensional condition that goes beyond material deprivation and includes feelings of insecurity, helplessness, and low self-worth, despite any actual economic status. As members of the 4Ps, these students receive cash assistance to help meet basic needs, healthcare, and education. This study investigates the psychological constraints that arise from poverty-related experiences and how these constraints contribute to mental health challenges. The research specifically explores the association between perceived financial insecurity and psychological well-being among young adults. The study utilized a correlational research design within a quantitative framework to examine the relationship between psychological poverty and mental health. A structured survey was administered to selected 4Ps beneficiaries using purposive sampling. The instrument aimed to assess the participants' financial stress, psychological resilience, self-efficacy, and mental health status. Data analysis involved statistical tools to identify correlations between variables, without manipulation by the researchers. Ethical considerations were observed to ensure the reliability and integrity of the responses and to protect the confidentiality of participants. Findings revealed a significant correlation between heightened psychological poverty and deteriorating mental health among the participants. The data indicated that students experiencing persistent financial difficulties, academic pressure, and personal health concerns were more vulnerable to mental health issues, including stress, anxiety, and low self-esteem. These factors often reinforced one another, creating a cycle where financial stress intensified academic demands, which in turn diminished emotional resilience. Students with lower self-efficacy were especially prone to experiencing psychological distress. The results emphasize that both financial and academic pressures contribute to reduced mental well-being, particularly among economically disadvantaged students. The study concludes that psychological poverty serves as both a direct and indirect stressor on mental health. The findings highlight the need for institutions to provide adequate financial and psychological support for students, especially those facing economic hardship. Educational assistance, mental health services, and targeted interventions for 4Ps beneficiaries are recommended to help break the cycle of financial stress and poor mental health. The study underscores the importance of institutional involvement in promoting well-being and academic success among vulnerable student populations.

Keywords: psychological poverty, mental health, 4ps beneficiaries, financial stress, self-efficacy, college students

**EFFECTS OF SOCIAL MEDIA USAGE AND BODY IMAGE SATISFACTION
OF 1ST YEAR FEMALE PSYCHOLOGY STUDENTS: A BASIS
FOR GENDER AND DEVELOPMENT PROGRAM**

Kimberly Basario, Ma. Kharen Brase, Apetenz Munoz, Nicole Sideco,
Karina Faith Tawag, Jonah Andrea Mapula

Abstract

This study explores the effects of social media usage on body image satisfaction among first-year female psychology students at Bestlink College of the Philippines. With the widespread use of platforms such as Facebook, Instagram, TikTok, and Twitter/X, young women are increasingly exposed to idealized beauty standards promoted by online influencers. These curated portrayals may shape self-perception, self-esteem, and self-confidence, influencing how students evaluate their own physical appearance. A quantitative research design was utilized, employing purposive sampling to select 150 first-year female psychology students as respondents. Data were gathered using the Social Media Use Scale (SMUS) and the Sociocultural Attitudes Toward Appearance Questionnaire-4 (SATAQ-4). The Pearson correlation coefficient was used to examine the relationship between social media usage and body image satisfaction. The results showed that the mean score for social media usage was 4.33 (SD = 1.92), while the mean score for body image satisfaction was 2.82 (SD = 0.82). The Pearson correlation coefficient was calculated at 0.61, indicating a moderate positive relationship between the two variables. This suggests that higher social media usage is moderately associated with higher body image satisfaction. Although the correlation is statistically significant, the strength of the relationship is modest, implying that social media usage contributes to body image satisfaction but is not the sole influencing factor. The findings of the study serve as a foundation for developing a Gender and Development (GAD) program that promotes social media awareness, body positivity, and empowerment among female students. The proposed program emphasizes the importance of digital literacy, self-worth, and embracing diverse beauty standards. Educational institutions are encouraged to implement initiatives that foster a healthy body image and self-esteem in young women. Additionally, the study advocates for the creation of a supportive school environment where students feel secure, appreciated, and empowered beyond socially constructed ideals.

Keywords: beauty standards, body image satisfaction, social media usage, self-esteem, self-confidence, gender and development

**EFFECTS OF WORK BURNOUT ON ACADEMIC PERFORMANCE AMONG
WORKING STUDENTS OF BESTLINK COLLEGE OF THE PHILIPPINES**

Josephine Vergara, Jenyfer Cruz, Nika Dolloso, Queenie Mae Herman,
Mae Belen Belen, Maria Regina Baluyut

Abstract

Work burnout has emerged as a growing concern among students who simultaneously manage employment and academic responsibilities. This study examines the effects of work burnout on the academic performance of working students at Bestlink College of the Philippines. Specifically, it investigates burnout in terms of emotional exhaustion, cynicism, and reduced personal accomplishment, and how these factors affect students' class attendance, exam performance, and engagement with the Learning Management System (LMS). The study utilized a descriptive research design, with data collected through a structured survey administered to 50 working students selected via simple random sampling. The instrument assessed the levels of burnout and its corresponding influence on academic-related activities. Responses were analyzed to determine how burnout symptoms correlate with students' academic engagement and performance. The results revealed that a majority of respondents experienced moderate to high levels of emotional exhaustion, largely attributed to the demands of managing work alongside school commitments. Cynicism and disengagement from academic tasks were also observed, although many students still maintained acceptable attendance and exam performance. However, challenges were noted in meeting submission deadlines and maintaining focus, particularly when interacting with the LMS. Burnout was found to have a slight but noticeable impact on academic performance. Additionally, work-related factors such as long hours and low income were identified as key contributors to burnout and academic difficulty. The study emphasizes the importance of institutional and employer support for working students. To alleviate burnout and enhance academic outcomes, strategies such as flexible work schedules, academic counseling, and access to mental health services are recommended. An action plan promoting better work-study balance is proposed to improve both well-being and performance. Furthermore, the findings underscore the need for continued research into effective interventions that address the unique challenges faced by working students. Creating a supportive environment through coordinated efforts from educational institutions and employers can help mitigate the negative effects of burnout.

Keywords: work burnout, academic performance, working students, emotional exhaustion, cynicism, learning engagement

EFFICACY OF BIG FIVE PERSONALITY TEST IN PROFESSORS PERSONALITY TRAITS AT BESTLINK COLLEGE OF THE PHILIPPINES

Glenn Fernandez, Marjorie DAVIS, Jessa Belle Jorolan, Christian Isidor Tidoy,
Mark Ely Villamor, Maria Regina Baluyut

Abstract

In the evolving landscape of psychological assessment, web-based platforms have gained prominence due to their accessibility, efficiency, and ability to provide personality insights. This study examines the efficacy of a web-based Big Five Personality Test in identifying the personality traits of professors at Bestlink College of the Philippines. The research compares professors' self-assessment results with evaluations conducted by their department heads to determine the reliability and accuracy of digital personality assessments within an academic environment. This study employs a quantitative comparative research design to evaluate the accuracy of the web-based Big Five Personality Test. A total of 48 full-time professors from six academic departments were selected as participants. Each professor completed a web-based personality test that measured the five core traits: Openness, Conscientiousness, Extraversion, Agreeableness, and Neuroticism. Simultaneously, their respective department heads assessed them using a structured questionnaire aligned with the same Big Five framework, rated on a 4-point Likert scale. Data were analyzed using weighted mean and paired sample t-tests to determine the significance of the differences between self-assessments and external evaluations. The study revealed statistically significant differences between the professors' self-assessments and the evaluations conducted by department heads across all five personality traits. The most notable discrepancy appeared in the trait of Neuroticism. Despite these differences, the web-based assessment consistently identified high levels of Openness, Conscientiousness, and Agreeableness among the respondents. These results suggest that while self-perception through digital assessments is valuable, external evaluations can provide additional insights influenced by context and behavioral observation. The findings highlight both the strengths and limitations of web-based personality assessments in academic settings. The discrepancies between self-assessments and third-party evaluations underscore the subjective nature of personality interpretation and the potential for bias in either method. This study suggests that combining self-report tools with external evaluations can offer a more comprehensive perspective on individual personality traits. Furthermore, the research supports the growing relevance of digital assessment tools in psychological practice and underscores their practical application in educational institutions.

Keywords: big five personality traits, web-based assessment, personality test, professors, comparative study, self-assessment, department head evaluation

**ESCAPISM AND RELATIONSHIP SATISFACTION AMONG E-SPORTS GAMER
STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Trent Jaque, John Francis Hurley Alkaide, John Russell Almonte,
Ligaya Ramel, John Mhico Seda, Maria Regina Baluyut

Abstract

Escapism refers to the inclination to divert attention from real-life stressors by engaging in activities that provide temporary psychological relief or distraction. In contrast, relationship satisfaction pertains to the extent to which individuals feel emotionally, socially, and psychologically fulfilled within their romantic partnerships. This satisfaction is influenced by key factors such as quality time spent together, open communication, emotional intimacy, and shared interests. In recent years, e-sports, defined as competitive and organized video gaming, has emerged as a global cultural and economic phenomenon, cultivating both recreational and professional communities. As the popularity of online gaming continues to grow, it has notably reshaped entertainment, social interaction, and interpersonal dynamics. Many e-sport games demand substantial time investment for players to develop skills, engage in competitive matches, and achieve higher rankings. This intense time commitment can strain romantic relationships, particularly when gaming begins to take precedence over meaningful partner interaction. The relevance of this issue is amplified in today's society, where digital engagement is deeply embedded in daily life and an increasing number of couples choose to cohabitate before marriage. This study employed a quantitative correlational research design to explore the relationship between flow state and romantic relationship satisfaction among student e-sport gamers. Data were gathered using two standardized and psychometrically validated instruments: the Flow Short Scale (FSS) by Rheinberg, Vollmeyer, and Engeser, which measures the degree and frequency of flow experiences during gameplay; and the Couples Satisfaction Index (CSI) developed by Funk and Rogge, which assesses perceived satisfaction within romantic relationships. Participants were recruited through snowball sampling, targeting third- and fourth-year students who had been actively engaged in competitive e-sports for a minimum of two years and involved in a committed romantic relationship for at least two years. A total of 60 respondents met these criteria and completed the survey instruments. Quantitative data were analyzed using descriptive statistics including frequency distributions, percentages, and rankings, to describe demographic and behavioral variables. Additionally, Likert scale responses were interpreted to evaluate levels of flow and satisfaction, while the Pearson product-moment correlation coefficient was employed to determine the strength and direction of the relationship between the two variables. The study reported an average escapism score of 5.08 and an average relationship satisfaction score of 5.65 among the respondents. These findings indicate that while escapist behaviors are present among e-sport gamers, they are not the primary drivers of satisfaction in romantic relationships. The relatively high satisfaction score suggests that factors such as open communication, emotional closeness, mutual understanding, and relationship stability may play a more influential role in shaping overall relationship fulfillment. This emphasizes the complex interplay of psychological and relational variables and suggests that romantic satisfaction among gamers cannot be solely attributed to escapist tendencies. Instead, a broader perspective that considers multiple dimensions of the relationship is essential for a more comprehensive understanding. These findings highlight the nuanced nature of escapism within the context of gaming and its relationship with romantic dynamics. Rather than viewing escapism as inherently negative, the results indicate that its effects depend largely on how it is balanced within the relationship. When combined with open communication, mutual understanding, and strong emotional support, escapist behaviors like gaming can coexist with high relationship satisfaction. These insights emphasize the importance of developing

targeted educational resources to help couples manage individual interests without sacrificing relational well-being. Promoting awareness and healthy boundaries can ultimately contribute to more resilient and fulfilling partnerships in today's increasingly digital world.

Keywords: escapism, relationship satisfaction, e-sports, flow state, romantic relationships, gaming behavior, emotional support, communication, digital engagement, partner dynamics, quantitative research, pearson correlation, student gamers, educational resources

**EVALUATING THE RELATIONSHIP BETWEEN ISOLATION DURATION AND
STRESS-RELATED DISORDER IN SEAFARING POPULATION**

Renz Gian Asilo, Jerico Albeza, Steven John Señerez, Dennis Song,
Arnold Roce, Prince Michael De Leon

Abstract

Seafarers are regularly exposed to extended periods of isolation and high-pressure work environments, which may contribute to the development of stress-related disorders. This study investigates the relationship between the duration of isolation and the occurrence of physical, mental, and emotional stress disorders among individuals in the maritime profession. By examining this correlation, the study aims to support the development of targeted mental health strategies and improved occupational conditions within the seafaring industry. This study utilizes a quantitative correlational research design. Data was collected from 20 active seafarers using a structured questionnaire comprising sections on demographic information, stress-related symptoms, and coping strategies. The convenience sampling technique was employed. Data analysis involved the use of frequency and percentage for demographic profiling, while Pearson's r was used to determine the correlation between isolation duration and indicators of stress-related disorders. The results revealed that most respondents reported experiencing significant stress-related symptoms during their work assignments. These included appetite changes, sleep disturbances, irritability, overthinking, emotional numbness, and a persistent sense of dread. A moderate positive correlation ($r = 0.5729$) was identified between the duration of isolation and the incidence of stress-related disorders. The p -value (0.08283) led to the rejection of the null hypothesis, confirming a statistically significant relationship between isolation duration and stress-related outcomes. The findings indicate that prolonged isolation negatively affects the physical, mental, and emotional well-being of seafarers. The study emphasizes the importance of implementing support mechanisms such as mental health training, onboard wellness programs, and improvements in working conditions. These interventions are crucial in reducing the impact of isolation-related stress and promoting holistic well-being among maritime personnel.

Keywords: seafarers, isolation, stress-related disorders, mental health, maritime industry, pearson correlation, psychological well-being, occupational stress

**EXPLORING THE RELATIONSHIP BETWEEN SELF-EFFICACY AND ACADEMIC
PROCRASTINATION AMONG 3RD YEAR PSYCHOLOGY STUDENTS**

Cristine Lamanilao, Sheen Rozz Brenzuela, Angela Mae Calonge,
Shamarie Lorenzo, Czarly Jade Sy, Maria Regina Baluyut

Abstract

Academic procrastination, defined as the intentional delay of academic tasks despite potential negative outcomes, is a prevalent issue among college students. It is commonly associated with lower academic performance, increased stress levels, and decreased well-being. This study investigates the relationship between self-efficacy, an individual's belief in their ability to successfully perform tasks and academic procrastination among third-year Psychology students at Bestlink College of the Philippines. Since self-efficacy influences motivation, time management, and persistence, the study aims to examine whether it plays a significant role in the development of procrastination behaviors in academic settings. A correlational research design was employed to determine the relationship between self-efficacy and academic procrastination. Data were collected using a structured survey questionnaire administered to 229 randomly selected third-year Psychology students. The instrument measured participants' levels of self-efficacy and the frequency of academic procrastination behaviors. Statistical analyses, including Pearson correlation, were applied to assess the strength and significance of the relationship between the two variables. The findings showed that respondents had a moderate level of self-efficacy ($M = 3.70$) and academic procrastination ($M = 3.23$). Common causes of procrastination included task avoidance and poor time management, whereas performance anxiety appeared to have minimal impact. Pearson correlation analysis indicated a very weak, non-significant positive relationship between self-efficacy and academic procrastination ($r = 0.04$, $p = 0.55$). This result suggests that self-efficacy alone does not significantly predict procrastination behavior, in contrast to existing literature that often cites self-efficacy as a major factor in academic persistence. The results imply that psychological and environmental variables such as motivation, stress, and external distractions may have a more substantial influence on procrastination than self-efficacy alone. Given the moderate levels of procrastination observed, it is recommended that interventions focus not only on enhancing self-efficacy but also on addressing broader academic and psychological factors. Suggested interventions include time management workshops, cognitive-behavioral techniques for improving self-regulation, and mentorship programs. Future research should explore additional factors such as intrinsic motivation, personality traits, and social influences to develop more effective strategies for minimizing academic procrastination.

Keywords: self-efficacy, academic procrastination, time management, task avoidance, performance anxiety, college students, psychology education

**FACEBOOK COMMUNITIES ON SOCIAL SUPPORT AND PSYCHOLOGICAL
WELL-BEING AMONG LGBT PSYCHOLOGY STUDENTS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Melgie Reyes, Jaina Almoquera, Christine Joy De Sagun, Bianca Erin Enriquez,
Janine Plamio, Dr. Adora Angeline Babia

Abstract

This study explores the relationship between social support received from Facebook communities and the psychological well-being of LGBT Psychology students at Bestlink College of the Philippines. It aims to determine whether participation in such online communities fosters improved social connection, academic motivation, and overall well-being. Given that social media platforms serve as avenues for identity expression and peer support, the study investigates the extent to which these digital spaces contribute to the students' mental and emotional health. This study employs a correlational quantitative research design, utilizing purposive sampling to select 200 LGBT Psychology students from Bestlink College of the Philippines. Data were gathered through a combination of researcher-made survey questionnaires, validated by a licensed psychometrician, and standardized psychological well-being instruments. The collected data were statistically analyzed to examine the relationship between Facebook community involvement and levels of psychological well-being. The findings revealed an average Facebook community engagement score of 2.83 (SD = 0.23) and a psychological well-being mean score of 3.88 (SD = 0.25). The computed Pearson correlation coefficient was 0.08, indicating a very weak positive relationship between Facebook community involvement and psychological well-being. However, the p-value of 0.25 exceeded the 0.05 threshold, indicating that the relationship was not statistically significant. As a result, the null hypothesis was accepted. The study emphasized the need for further investigation into the influence of online communities and recommended the continuation of support for LGBT individuals, both online and offline. The results indicate no significant correlation between Facebook community involvement and the psychological well-being of LGBT Psychology students. This outcome challenges the Social Support Theory, which posits that online communities can enhance emotional health by providing avenues for self-expression and social connection. The findings suggest the importance of examining other factors that may influence psychological well-being and call for more comprehensive studies on the actual impact of online communities on LGBT individuals.

Keywords: facebook communities, lgbt, psychology students, psychological well-being, social support

**FACTORS INFLUENCING FAMILY ESTRANGEMENT AMONG FOURTH-YEAR
PSYCHOLOGY STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Shyla Janinne Escares, Angel Cristine Cardines, Carzie Alliah Igloso,
Jevalyn Mesa, Angel Jay Sta Cruz, Dr. Jolly Miguel

Abstract

Family estrangement, particularly among young adults, presents increasing psychological and social challenges. This study investigates the factors influencing family estrangement among graduating psychology students at Bestlink College of the Philippines. Grounded in Bronfenbrenner's Ecological Systems Theory, the research explores the interplay of family dynamics, life transitions, psychological well-being, and cultural values in contributing to the decision to estrange from one's family. This study employs correlational research design. Data were gathered using a structured questionnaire administered to 50 purposively selected fourth-year psychology students. The instrument measured multiple factors related to family estrangement. Pearson's correlation analysis was applied to determine significant relationships between the variables examined. The results revealed that ineffective communication, unresolved conflicts, and unequal distribution of responsibilities were major contributors to family estrangement. Additional factors such as personal growth, career transitions, and relocation further intensified the disconnect between individuals and their families. Psychological well-being was found to be negatively affected by family-related stress and unrealistic expectations. Cultural norms also contributed by placing pressure on individuals that often conflicted with personal aspirations. Statistical analysis showed a significant relationship between these factors and the decision to estrange ($r = 0.73$, $p < 0.00$), underscoring the multifaceted nature of family estrangement. The findings emphasize the importance of proactive interventions, such as communication workshops and counseling programs, to assist students in managing family-related challenges. Understanding the underlying causes of estrangement can enable families and educational institutions to collaborate in fostering healthy, supportive relationships. As family estrangement is a complex and deeply personal experience, interventions must be culturally sensitive and adaptable to the unique needs of students. Future research may further explore these influencing factors across diverse populations to enhance the development of effective support systems that prioritize both familial connection and individual well-being.

Keywords: family estrangement, communication, psychological well-being, cultural expectations, ecological systems theory, college students, family dynamics, life transitions, counseling interventions, student mental health

**FACTORS INFLUENCING GEN Z'S DECISION TO DELAY PARENTHOOD AMONG
THE FACULTIES IN BESLINK COLLEGE OF THE PHILIPPINES**

Mae Delmiguez, Neils Wilfred Canja, Jhoshua Galo, Jilliane Mae Galvez,
Marilou Sison, Maria Regina Baluyut

Abstract

This study aims to investigate the factors influencing the decision of Generation Z senior high school (SHS) faculty members at Bestlink College of the Philippines to delay parenthood. With shifting societal norms and growing career demands, Gen Z professionals face complex choices regarding family planning. The research focuses on understanding how financial, personal, professional, and social factors affect their decision to postpone parenthood. This quantitative study employs a descriptive research design and purposive sampling. A total of 17 childless Gen Z SHS faculty members were surveyed using a structured questionnaire. The instrument gathered data on respondents' demographic profiles, perceived advantages and disadvantages of delaying parenthood, and key personal considerations influencing their decision to remain childless. The results indicate that financial stability (Weighted Mean = 3.66) is the most influential factor behind the decision to delay parenthood, primarily due to the high cost of child-rearing and the desire for financial security. Career advancement (3.36) follows closely, as faculty members aim to establish professional stability before embracing parental roles. Personal freedom (3.19) also influences the decision, reflecting the value placed on independence and self-directed living. Social norms (2.99) were reported as the least influential factor, suggesting that respondents prioritize personal and career goals over societal expectations. In terms of perceived advantages, respondents identified achieving financial security (3.36), capitalizing on career opportunities (3.34), and gaining emotional maturity (3.32) as key benefits of delaying parenthood. A commonly noted disadvantage was the decline in physical energy associated with aging (2.79), which could impact their ability to cope with parenting demands later in life. Additional key considerations for remaining childless include financial concerns, the cost of raising children, desire for autonomy, and lifestyle flexibility (Composite Mean = 2.95). The study concludes that a combination of personal priorities, professional aspirations, and financial considerations influence Gen Z faculty members' decision to delay parenthood. These findings underscore the importance of institutional support programs that address career development, financial planning, and personal well-being. Providing access to these resources may empower faculty members to make informed, intentional decisions regarding family planning and future parenthood.

FACTORS INFLUENCING GENERATION Z'S ATTITUDE TOWARDS MARRIAGE AND COHABITATION AT BESTLINK COLLEGE OF THE PHILIPPINES BULACAN CAMPUS

Sherilyn Villasis, Frezilyn May Campo, Angelica Aubrey Gavieres,
Dezerie Marie Dizon, Mayumi Rosello, Juanito Parayno

Abstract

Marriage and cohabitation are relationship choices that increasingly reflect the evolving societal norms of Generation Z. While cohabitation, or living together without legal marriage, is often viewed as a practical step before long-term commitment, marriage remains a legally and socially recognized institution. This study explores the factors that influence Generation Z's attitudes toward marriage and cohabitation, with a focus on the roles of family, peers, and environmental context. This study employs a descriptive quantitative research design to assess students' perceptions. A structured survey questionnaire was administered to 100 students, aged 18 to 26, from Bestlink College of the Philippines, Bulacan Campus. Quota sampling was used to ensure representation across age groups, genders, and academic year levels. Responses were analyzed using weighted means to determine the level of agreement with statements related to marriage and cohabitation. The results indicate that students value both marriage and cohabitation but lean more favorably toward cohabitation due to growing societal acceptance and peer influence. Environmental factors (Weighted Mean = 4.091) and peer influence (Weighted Mean = 4.056) were the strongest drivers of positive views on cohabitation. In contrast, family influence (Weighted Mean = 3.97) played a more prominent role in shaping attitudes toward marriage. The findings suggest a generational shift in values, with financial considerations, exposure to social media, and modern social norms contributing significantly to students' relationship preferences. This study underscores a shift in Generation Z's perceptions of intimate relationships. While cohabitation is increasingly seen as a socially accepted and practical arrangement, marriage continues to be respected but with redefined expectations. Peer influence and environmental exposure play major roles in attitudes toward cohabitation, while family traditions and religious beliefs continue to shape views on marriage. The results suggest a need for educational programs such as seminars and counseling services to provide students with informed guidance on the legal, emotional, and financial implications of their relationship choices.

Keywords: generation z, marriage, cohabitation, peer influence, family influence, societal norms, relationship perception, psychology, bestlink college, descriptive quantitative research

FACTORS THAT AFFECT SOCIAL MEDIA USAGE ON THE SOCIAL BEHAVIOR AND WELL-BEING OF 3RD-YEAR STUDENTS A STUDY OF BEHAVIORAL PATTERNS

Rissa Grace Palomo, Patricia Denise Corona, Jenie Jose,
Jenelyn Jubilo, Dan Lloyd Sinfuego, Michael Bersamin

Abstract

This study examines the influence of social media on the social behavior and well-being of 87 third year psychology students at Bestlink College of the Philippines. Given social media's pervasiveness in students' lives, the research investigates its impact on academic engagement, social connections, and emotional health. The study hypothesizes a dual role for social media, enhancing connectedness while potentially exacerbating issues such as anxiety, low self-esteem, and social isolation. A correlational research design was employed, utilizing stratified sampling to select the 87 participants, all of whom were frequent social media users among third year psychology students. Data collection involved a questionnaire assessing emotional states, self-perception, and social interactions to better understand participants' social behavior and well-being. Demographic data revealed that 88.51 percent of respondents were aged 19 to 24, and 81.61 percent were female, reflecting the typical gender distribution in psychology programs. TikTok and Facebook were identified as the most commonly used platforms. The findings indicated a general agreement among students regarding social media's role in their social behavior and well-being. Statistical analysis revealed a significant positive correlation (Pearson $r = 0.70$, $p = 0.00$) between social media usage and overall well-being. While social media provided emotional support and fostered social connections for some, adverse effects such as stress, sleep deprivation, and self-esteem issues were also reported. Despite the positive correlation between social media use and well-being, the study highlights the paradoxical nature of social media's impact. While offering benefits such as enhanced social connections and emotional support, excessive use contributed to challenges such as social isolation, anxiety, and self-esteem concerns. Additional concerns included the need for social validation, online gossip, and communication difficulties. These findings emphasize the need for initiatives promoting digital literacy, responsible social media use, and accessible mental health support services. Recommendations include encouraging balanced screen time, integrating well-being programs into student services, and fostering a healthier digital environment to help students effectively navigate the complexities of the online world.

Keywords: social media usage, social behavior, well-being, factors, challenges

**GENDER AND LEADERSHIP: A STUDY OF GENDER ROLE
INFLUENCES LEADERSHIP STYLE**

Baron Divine Van, Nicole Angela Eraga, Juliana Estelles,
Rea Lufredo, Rowen Joy Urbano, Michael Bersamin

Abstract

Leadership styles and gender roles are pivotal factors that influence leadership effectiveness within academic and professional contexts. Traditional gender norms often associate specific leadership characteristics with either masculinity or femininity, shaping perceptions, expectations, and access to leadership opportunities. This study explores the correlation between leadership styles: autocratic, participative, and delegative, and gender roles among student governors at Bestlink College–MV Campus. It seeks to examine whether preferences for particular leadership styles are influenced by gender identity, individual personality traits, or the situational demands of leadership roles. A quantitative correlational research design was utilized to examine the relationship between leadership styles and gender identity groups: male, female, and LGBTQIA+ among student governors. The study involved 31 participants, selected through purposive sampling based on their active leadership roles at Bestlink College–MV Campus. A structured survey questionnaire served as the primary data collection tool. To analyze the data, the study employed frequency distribution, weighted mean, and ranking, alongside the Kruskal-Wallis H test to evaluate whether significant differences existed in leadership style preferences across gender groups. A p-value of less than 0.05 was considered statistically significant. The results revealed that participative leadership was the preferred style among all gender groups, reflecting a strong collective inclination toward collaborative decision-making and inclusivity. Specifically, 83.33% of female respondents, 63.64% of LGBTQIA+ respondents, and 62.50% of male respondents selected participative leadership as their preferred style. Delegative leadership ranked second, with 36.36% of LGBTQIA+ respondents, and 16.67% of both male and female respondents expressing a preference for this approach, suggesting a moderate value placed on individual autonomy and trust in team members. Autocratic leadership was the least favored, with only one male respondent (12.50%) indicating a preference for it, highlighting a general disapproval of top-down, authoritative decision-making across all groups. The Kruskal-Wallis H test was conducted to assess the statistical significance of the relationship between gender identity and leadership style preference. The analysis yielded p-values greater than 0.05, indicating no statistically significant difference among the groups. As a result, the null hypothesis was retained, affirming that gender roles do not significantly influence leadership style preferences among student governors at Bestlink College–MV Campus. This study refutes traditional gendered assumptions in leadership by revealing that leadership style preferences are primarily shaped by individual characteristics and situational contexts, rather than gender identity. The consistent preference for participative leadership across male, female, and LGBTQIA+ respondents reflects an evolving perspective that values collaboration, inclusivity, and shared decision-making core attributes of modern leadership. These findings suggest a paradigm shift in student governance toward more democratic and equitable leadership models. In light of this, academic institutions are encouraged to design and implement leadership development programs that prioritize adaptability, inclusivity, and emotional intelligence, ensuring that leadership potential is cultivated without the constraints of gender-based stereotypes. By doing so, institutions can foster a new generation of leaders who are responsive to diversity and equipped to lead with empathy and effectiveness.

Keywords: leadership styles, gender roles, participative leadership, inclusivity, collaboration, student governance, individual traits, situational context, leadership development, gender stereotypes

**GENDER DIFFERENCES IN COPING STRATEGIES FOR ACADEMIC STRESS AMONG
ACAEX SCHOLAR STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Davon Ortiz, Anjelo Campillo, Anna Marie Capal, Julia Marie Mallari,
Althea Villanueva, Dr. Jolly Miguel

Abstract

Academic stress remains a prevalent issue among college students, significantly affecting their mental health and academic performance. This study examines the gender-based differences in coping strategies employed by ACAEX scholar students at Bestlink College of the Philippines in managing academic stress. Understanding these differences is crucial for developing evidence-based, gender-sensitive support programs that strengthen student resilience, promote well-being, and enhance academic success. A quantitative research design was employed to examine academic stress levels and coping strategies among male and female students. Data was collected through a structured survey questionnaire, specifically designed to capture the frequency and type of coping mechanisms used. To identify any statistically significant gender-based differences in coping strategies, the data was analyzed using independent samples t-tests. The results indicated that female students reported higher levels of academic stress than male students. Furthermore, females predominantly relied on emotion-focused coping strategies, including seeking social support and emotional regulation, whereas males tended to favor problem-focused coping methods and avoidant behaviors. Statistical analysis confirmed a significant gender difference in coping strategies, underscoring the distinct ways in which male and female students manage academic stress. The results underscore that male and female students utilize distinct coping mechanisms when confronting academic stress, emphasizing the critical need for customized stress management programs that reflect these gender-specific differences. It is recommended that educational institutions implement gender-responsive interventions such as structured peer support systems, targeted academic counseling, and skills-based workshops focused on effective coping strategies. These tailored approaches are essential for promoting healthier stress management, improving psychological resilience, and ultimately enhancing students' overall well-being and academic achievement.

Keywords: academic stress, gender differences, coping strategies, stress management programs, gender-responsive interventions, peer support, academic counseling, coping skills workshops, student well-being, academic performance

**IMPACT OF ACADEMIC PRESSURE ON MENTAL HEALTH IN SELECTED
STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Johanna Villanueva, Regine Anne Cruz, Hershey Maxxine Gabriente,
Cherrylyn Tamayo, Kyla Coleen Tamayo, Dr. Adora Angeline Babia

Abstract

Academic pressure has become a defining concern within higher education, particularly affecting college students navigating increasingly demanding academic environments. This pressure often arises from a confluence of expectations parental, peer, institutional, and societal, intensified by the competitive nature of academic achievement. In countries like the Philippines, where educational success is deeply embedded in cultural values and often equated with personal and familial fulfillment, students may experience heightened psychological strain, especially in intellectually rigorous fields. This study seeks to explore the impact of academic stress on the mental health of selected college students, underscoring the critical need for comprehensive support systems and proactive stress management interventions. By examining this relationship, the research aims to contribute to the development of healthier academic environments that promote student well-being and sustainable academic success. This study adopted a quantitative correlational research design to examine the relationship between academic stress and mental health among students, without any manipulation of variables. Cluster sampling was employed to ensure equitable representation and minimize selection bias across different student groups. Data were collected through three instruments: the standardized Academic Stress Scale (ASS), the General Health Questionnaire (GHQ), and a researcher-designed survey that assessed students' sleep quality, lifestyle practices, and social well-being. To ensure the validity and reliability of the instruments, all tools were subjected to rigorous content validation by three licensed psychometricians. The study strictly adhered to ethical research standards, including the acquisition of informed consent and the assurance of participant confidentiality and anonymity. The study revealed that respondents experienced moderate levels of academic stress, with academic workload identified as the most significant contributor. While students demonstrated a mix of emotional responses, the overall impact of academic stress was predominantly negative. A weak but statistically significant relationship was found between academic stress and mental health, as indicated by a Pearson correlation coefficient of 0.13. Students who reported higher levels of academic pressure exhibited greater declines in emotional and social well-being, which adversely affected both their academic performance and personal lives. The majority of respondents were female, aged 21 to 25, and represented various academic programs. Furthermore, academic stress was linked to notable disturbances in sleep patterns, lifestyle choices, and social engagement. Academic pressure influences various dimensions of student life, including mental health, sleep quality, lifestyle habits, and social interactions. While the correlation between academic stress and mental health is modest, it remains statistically significant, emphasizing the need for proactive strategies to alleviate stress. Addressing these challenges is crucial in creating a learning environment that supports both the psychological well-being and academic performance of students.

Keywords: academic pressure, mental health, student well-being, academic stress, sleep habits, lifestyle, social well-being, higher education, stress management, psychological impact

**IMPACT OF ADULTING: STRESS ON ADULTHOOD OF
GRADUATING PSYCHOLOGY STUDENT**

Ellen Mae Pascual, Angelo Aquio, Dianne May Escano, Sarah Llagas,
Cristine Joy Ramos, Dr. Jolly Miguel

Abstract

The transition from student life to adulthood presents considerable challenges for graduating psychology students as they prepare to assume greater personal and professional responsibilities. This study investigates the relationship between adulting-related stress and its impact on students nearing graduation, with a particular emphasis on factors such as motivation, perceived life opportunities, and strategic executive functioning. The goal is to better understand how these variables influence students' readiness for adulthood and to identify areas where support may be needed during this critical life stage. This study utilized a correlational research design and employed stratified random sampling to investigate the relationship between adulting-related factors and perceived stress levels among students. The participants consisted of third- and fourth-year psychology students, as they are in the critical phase of transitioning into adulthood. To fulfill the research objectives, a minimum of 283 respondents were required. Data was gathered through a combination of a researcher-developed questionnaire based on the Likert scale and the standardized Perceived Stress Scale (PSS), both of which ensured the validity and reliability of the findings. The findings indicate that graduating students experience moderate levels of stress during their transition to adulthood. Key factors such as mentorship, emotional support, and access to career opportunities help alleviate stress and build resilience. Motivational drivers including self-efficacy, personal aspirations, and encouragement from adults, enhance students' preparedness for adult responsibilities. Additionally, opportunities like promising career paths, continued education, and professional networking play a critical role in boosting students' confidence in facing adulthood. While students with strong executive functioning skills such as goal-setting, planning, and a sense of control, manage challenges more effectively, statistical analysis revealed no significant correlation between adulting-related factors and perceived stress levels, suggesting a more complex interplay of influences. The findings suggest that while stress is a prevalent experience among graduating students, its severity is influenced more by academic demands and social contexts than by adulting-related challenges alone. In light of this, the study recommends the implementation of a targeted seminar to help graduating psychology students develop effective coping mechanisms and boost their readiness for adult life. The proposed seminar would cover key areas such as fostering open communication with parents, enhancing academic curricula to include life skills, expanding student support services, promoting longitudinal research for ongoing assessment, and encouraging interdisciplinary collaboration. By addressing these dimensions, institutions can provide holistic support that empowers students to navigate the complexities of adulthood with greater confidence and resilience.

Keywords: adulting stress, graduating students, psychology students, perceived stress, executive functioning, emotional support, academic pressure, student readiness, transition to adulthood, coping strategies, seminar intervention, student well-being

**IMPACT OF COMPANION ANIMALS ON ACADEMIC PERFORMANCE
AND EMOTIONAL WELL-BEING AMONG BSP STUDENTS**

Hamlet Templonuevo, Mary Joy Gamarcha, Errhica Lagata,
Alexandra Malabanan, Mary Ann Veran, Michael Bersamin

Abstract

This study examines the influence of companion animals on the academic performance and emotional well-being of Bachelor of Science in Psychology (BSP) students. As academic demands intensify, pets are increasingly viewed as alternative sources of support. The research investigates whether pet ownership contributes to stress reduction, improved focus, and enhanced motivation: factors that may positively affect academic outcomes. It also explores differences across academic year levels and considers the potential long-term emotional support provided by pets. The study aims to deepen the understanding of animal-assisted support within academic environments. This study utilized a descriptive-correlational research design to assess the relationship between companion animal ownership, academic performance, and emotional well-being among Bachelor of Science in Psychology (BSP) students. A total of 100 BSP students from first to fourth year who own companion animals were selected through purposive sampling. Data were collected using structured survey questionnaires, which explored the effects of pet ownership on students' concentration, study habits, academic achievement, anxiety levels, emotional support, and development of responsibility. The study found that most respondents were young adults aged 18 to 23, with a majority being female (83%) and from lower-income households (79%). Dogs (64%) and cats (36%) were the most commonly owned companion animals, with most respondents having cared for their pets for over a year. The results align with previous studies, indicating that companion animals help reduce stress, enhance emotional resilience, and improve time management. Overall, pet ownership was shown to positively influence both emotional well-being and academic performance by supporting stress relief, increasing focus, and boosting motivation. The study reveals that the positive effects of companion animals are consistent across different academic year levels, indicating that pet ownership offers both immediate and long-term benefits. These findings support the potential integration of animal-assisted interventions in educational settings, where companion animals can play a valuable role in enhancing student well-being and academic performance. The research encourages educational institutions to consider implementing programs that promote animal companionship, recognizing its ability to provide emotional support and academic assistance to students as they face the demands of their academic journey.

Keywords: companion animals, academic performance, emotional well-being, pet ownership, animal-assisted interventions, student support, educational institutions, stress management

**IMPACT OF MINDFULNESS MEDITATION ON STRESS AMONG
COLLEGE STUDENTS: BASIS FOR INTERVENTION PROGRAM**

Jhea Cristobal, Cecilia Mariz Nofuente, Ishi Ann Abila,
Raven Mendoza, Rodwin Esguerra, Dr. Jolly Miguel

Abstract

This study investigates the impact of mindfulness meditation on the stress levels of fourth-year Psychology students at Bestlink College of the Philippines. It aims to assist students in managing stress by implementing a mindfulness program and examining the relationship between mindfulness practices and stress reduction. The study also seeks to address the limited understanding of how mindfulness meditation affects stress levels, which represents the core issue of the research. This study utilized a correlational quantitative research design to assess the relationship between mindfulness meditation and stress levels. A total of 207 fourth-year Psychology students from Bestlink College of the Philippines, Quezon City campus, were selected through stratified random sampling. All participants had prior experience with mindful breathing practices. Data was gathered using the Perceived Stress Scale and the Stress Management Inventory as the primary research instruments. The study's findings indicate that mindfulness meditation has a minor impact on stress levels, as evidenced by a composite mean of 2.38. Similarly, stress management among students also showed a minor impact, with a composite mean of 2.37. Among the various coping strategies assessed, physical activity was rated as having a moderate impact (3.17), while stress relief (1.52) and social support (2.38) were rated as having no impact and minor impact, respectively. Pearson correlation analysis revealed a weak negative correlation ($r = -0.16$) between mindfulness meditation and stress management, which was statistically significant ($p = 0.02$), suggesting a minimal but meaningful relationship. The most frequently reported challenges were the avoidance of seeking professional help (26%) and lack of physical activity (22%). These results underscore the need for awareness campaigns, access to expert guidance, regular stress assessments, and the reinforcement of mindfulness practices to support students' overall well-being. The study emphasizes the significance of consistent mindfulness practices and supportive environments in effectively managing student stress. For students and parents, establishing comprehensive, long-term mindfulness programs and promoting awareness of stress management techniques are vital for enhancing well-being and academic performance. Although mindfulness meditation is widely acknowledged for its stress-reducing benefits, its impact remains limited without sufficient time, regular practice, and a conducive environment. Through the implementation of the proposed intervention action plan, the school can develop a more effective and sustainable program for stress management rooted in comprehensive mindfulness practices.

Keywords: mindfulness meditation, stress management, student well-being, academic performance, supportive environment, long-term programs, intervention plan, consistent practice, awareness, comprehensive mindfulness

**IMPACT OF MINORITY STRESSOR ON TRANSGENDER MENTAL
HEALTH AND ACADEMIC PERFORMANCE: AN ASSESSMENT**

Banisa Keshia Kate, Lee Jericho Dela Cruz, Norlan Godoy,
Ma Noelle Leycano, Leonardo Yacas, Michael Bersamin

Abstract

Transgender individuals often encounter minority stressors such as social stigma, discrimination, and marginalization. These experiences: ranging from overt bullying to subtle microaggressions, can lead to significant psychological distress and negatively affect academic performance. This study seeks to explore the impact of these minority stressors on the mental health and academic achievement of transgender students. The researchers employed purposive sampling to select 14 transgender transferee students from Bestlink College of the Philippines. A structured survey questionnaire was used to collect data on participants' demographic profiles, stress levels, mental health status, academic performance, and challenges related to minority stressors. Data was analyzed using descriptive statistics, Pearson correlation, and Spearman's rank correlation to identify significant patterns and relationships among the variables. Most respondents (42.86%) were aged 16–21, enrolled in the College of Computer Studies (CCS), and had previously attended private schools (78.57%). Half of the participants were first-year students. Stress levels were rated as “high” (mean = 2.61), with a notable tendency toward self-doubt when facing personal challenges (mean = 2.93). Despite elevated stress, respondents reported generally positive mental health (mean = 3.67), including frequent feelings of happiness (mean = 4.07) and active engagement in daily activities (mean = 4.00). Regarding academic performance, 42.86% reported grades between 1.51 and 2.00, while 21.43% had grades ranging from 1.26 to 1.50. However, 28.57% chose not to disclose their academic performance, possibly indicating stress-related concerns. Statistical analysis revealed a weak, negative, and non-significant correlation between minority stressors and mental health ($r = -0.25$, $p = 0.39$). Similarly, the correlation between minority stressors and academic performance was weak and statistically insignificant ($r_s = 0.06$, $p = 0.85$). Identified challenges included personal struggles (40.91%), such as mental health issues and difficulties with self-acceptance, followed by social challenges (36.36%), including bullying and exclusion. Institutional barriers (13.63%) and financial difficulties (9.09%) were also reported, though to a lesser extent. While minority stressors are evident in the experiences of transgender students, their statistical impact on mental health and academic performance was found to be insignificant in this study. However, qualitative insights reveal ongoing personal and social challenges, highlighting the critical need for inclusive and supportive academic environments that promote psychological well-being and equitable educational access.

Keywords: transgender students, minority stressors, mental health, academic performance, qualitative insights, inclusive education, psychological well-being, educational equity, supportive environment

**IMPACT OF PATERNAL ABSENCE ON DAUGHTER'S SELF-CONCEPT
AND SELF-ESTEEM OF PSYCHOLOGY STUDENTS**

Nicole Angelou Parado, Cathalina Pagadora, Famila Lacson,
Wyna Mae Babon, April Joy Seda, Jonah Andrea Mapula

Abstract

This study explores the vital influence of the father-daughter relationship on a daughter's self-concept and self-esteem. In the Philippines, paternal absence is common and presents significant challenges that impact daughters' identity formation and overall development. The purpose of this research is to examine the relationship between self-esteem and self-concept among female psychology students at Bestlink College of the Philippines who were raised without their fathers. The study utilized a correlational research design with a quantitative approach, involving 100 female students who had experienced paternal absence since birth. Data were gathered through two standardized instruments the Self-Concept Questionnaire-18 and the Rosenberg Self-Esteem Scale to examine the relationship between self-concept and self-esteem. The findings from the Pearson correlation analysis indicated an average self-concept score of 2.76 and a mean self-esteem score of 1.45 among the psychology students. The correlation coefficient of -0.05 suggested a weak negative relationship between self-concept and self-esteem. However, with a p-value of 0.65 exceeding the standard significance level, the result indicated no statistically significant association between the two variables. The authors recommend the development of a comprehensive intervention program incorporating techniques such as journaling, self-reflection, goal-setting, and psychoeducation to help daughters cultivate a strong sense of self-identity. They also advocate further research on the long-term psychological impact of paternal absence, the coping strategies employed by daughters, and the role of cultural and socio-economic factors in shaping their experiences.

Keywords: father-daughter relationship, paternal absence, self-concept, self-esteem, psychology students, identity development, intervention program, coping mechanisms, cultural factors, socio-economic factors

**IMPACT OF PATERNAL PARENTING APPROACHES ON SELF-ESTEEM
AMONG COLLEGE STUDENTS RAISED BY SINGLE FATHERS AT
BESTLINK COLLEGE OF THE PHILIPPINES-BULACAN**

Ma Charmagne Beltran, Danica Del Rio, Glorie Athena Ramen Garcia, Keysha Ann Joyce Isidro,
Ronaldo Pamilar, Eddiemar Solomon, Juanito Parayno

Abstract

Parenting styles play a vital role in shaping a child's psychological development, particularly in the formation of self-esteem. This study explores the relationship between paternal parenting styles: authoritarian, authoritative, permissive, and uninvolved, and the self-esteem of college students raised by single fathers at Bestlink College of the Philippines–Bulacan Campus. The objective is to determine whether specific paternal parenting styles significantly affect the self-esteem levels of these students. The study utilized a purposive research design, gathering data from 58 college students through a structured survey questionnaire employing a four-point Likert scale. The weighted mean was used to identify the predominant paternal parenting style, while Pearson's r was applied to assess the correlation between paternal parenting styles and the students' levels of self-esteem. The results of the correlation analysis indicated that none of the paternal parenting styles showed a statistically significant relationship with self-esteem. The computed r -values were as follows: authoritarian ($r = 0.0336$, $p = 0.802$), authoritative ($r = 0.0272$, $p = 0.841$), uninvolved ($r = -0.1057$, $p = 0.433$), and permissive ($r = 0.1856$, $p = 0.163$). All values fell within the negligible correlation range. These findings suggest that, in this study, paternal parenting styles as perceived by the respondents, have little to no impact on their self-esteem. The findings of this study challenge the commonly held belief that parenting styles significantly influence self-esteem. While previous research suggests that authoritative parenting is associated with higher self-esteem, the results indicate no meaningful correlation between paternal parenting styles and self-esteem among students raised by single fathers. This suggests that other factors such as peer relationships, personal experiences, cultural norms, and emotional support may play a more substantial role in shaping self-esteem. The study concludes that paternal parenting styles, as perceived by the participants, do not significantly affect their self-esteem. These results highlight the need for future research to explore additional variables, including family dynamics, socioeconomic status, and support networks. Moreover, interventions aimed at fostering self-esteem should extend beyond parenting approaches to consider these broader influences.

Keywords: paternal parenting styles, self-esteem, single fathers, authoritarian, authoritative, permissive, uninvolved, psychological development, college students, socio-emotional factors

**IMPACT OF SOCIAL MEDIA INFLUENCERS IN LIFESTYLE CHOICES OF
YOUNG ADULTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Gina Mae Tuan, Russel Bravo, Shyna May Dazal,
Christina Miraballe, Kim Diaz, Dr. Jolly Miguel

Abstract

This study investigates the impact of social media influencers on the lifestyle choices of young adults at Bestlink College of the Philippines. With the rapid rise of digital platforms, influencers have become highly influential in shaping consumer behavior, personal values, and lifestyle preferences. The research focuses on how influencer-generated content affects key aspects of students' lives, including financial decision-making, social and recreational activities, body image perception, emerging behavioral trends, and social comparison. The study aims to provide insights into the extent of influencer influence on youth lifestyles in the digital age. This study utilized a correlational research design to examine the relationship between variables, with data collected from 150 students through the use of structured questionnaires. The study's findings reveal that most respondents actively follow social media influencers and demonstrate a moderate to strong alignment with the content and lifestyles these influencers promote. A moderate positive correlation was found between influencer content and changes in lifestyle decisions. Financial spending patterns were notably affected, with many respondents reporting increased impulse purchases influenced by limited-time offers and product endorsements. Social and recreational behaviors were also impacted, as participants indicated a greater likelihood of engaging in events or activities promoted by influencers. Regarding body image, respondents reported both positive and negative effects: while some were inspired by body positivity campaigns, others experienced dissatisfaction with their appearance due to exposure to idealized images. Additionally, the findings suggest that influencer-driven social comparison contributes to self-esteem challenges, as many young adults tend to assess their self-worth based on the curated and often unrealistic portrayals presented by influencers online. In light of the findings, the study highlights the critical need to enhance digital literacy among young adults to support more mindful and responsible engagement with social media. It recommends the establishment of clear guidelines for content creators, focusing on transparency, ethical promotional practices, and the dissemination of empowering and constructive messages. These recommendations serve as a valuable resource for educators, policymakers, and social media practitioners in designing strategies that foster critical thinking and healthier online habits. By exploring the dynamic link between influencers and lifestyle choices, the study adds to the ongoing conversation about the role of digital influence in shaping youth behavior and overall well-being.

Keywords: social media influencers, lifestyle choices, young adults, digital literacy, consumer behavior, body image, social comparison, ethical marketing, impulse buying, youth well-being

**IMPACT OF SOCIAL MEDIA ON THE SELF-ESTEEM OF GENERATION Z GRADE
11 HUMSS STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Kenneth Rhyme Sumande, Jenaira Tagadaya, Myra Joy Madriaga,
Arvilla Tolentino, Queenie Ann Maramag, Dr. Jolly Miguel

Abstract

Social media has become a fundamental aspect of everyday life, particularly among members of Generation Z. This study investigates how social media influences the self-esteem of Grade 11 HUMSS students at Bestlink College of the Philippines. Specifically, it aims to assess whether social media use positively or negatively affects their confidence, sense of self-control, and experiences of social comparison. The study utilized a descriptive-correlational research design with a quantitative approach to examine the relationship between social media usage and self-esteem. A total of 132 Grade 11 HUMSS students were selected through purposive random sampling. Data were gathered using a structured questionnaire consisting of three sections: demographic profile, the perceived impact of social media on various aspects of life, and self-esteem assessment using the Rosenberg Self-Esteem Scale (RSE). The data were analyzed through percentages, weighted mean, and ranking, while Pearson's correlation coefficient (r) was used to determine the strength and direction of the relationship between social media perception and self-esteem. The results indicate that most students use social media on a daily basis, with Facebook and TikTok being the most preferred platforms. Social media plays a substantial role in their daily lives, influencing how they communicate, acquire information, and maintain personal relationships. A moderately strong positive correlation ($r = 0.68$, $p = 0.00$) was found, suggesting that students with a more favorable perception of social media tend to have higher self-esteem. In contrast, those with a negative view of social media are more likely to struggle with self-confidence. Some students also reported using social media as a source of encouragement and inspiration, underscoring its mixed impact on self-esteem. Based on these findings, an action plan was formulated to encourage healthy and responsible use of social media among students. The involvement of teachers, parents, and the community is crucial in guiding students to balance online and offline interactions, develop critical thinking, and build self-confidence. The study recommends that future researchers examine the long-term effects of social media on self-esteem. Overall, this research highlights the importance of mindful social media use in fostering personal growth and emotional well-being.

Keywords: social media, self-esteem, generation z, grade 11 humss students, facebook, tiktok, rosenberg self-esteem scale, digital well-being, responsible usage, online behavior, confidence, social comparison

IMPACT OF STRESS ON THE ACADEMIC PERFORMANCE OF WORKING FOURTH-YEAR CRIMINOLOGY STUDENTS OF BESTLINK COLLEGE OF THE PHILIPPINES

James Joseph Sazon, Novea Sta Romana, Jhoana Monique Manlapig,
Jenisa Normor, Maria Regina Baluyut

Abstract

This research explores the relationship between stress and academic performance among fourth-year working students. It aims to determine whether stress significantly influences their academic outcomes. The findings of this study are intended to help working students become more aware of the stress they may be facing, understand its potential effects on their studies, and discover effective coping strategies and mechanisms to manage it more efficiently. This study will utilize a descriptive cross-sectional research design, targeting 100 fourth-year working students from the Criminology Department of Bestlink College of the Philippines. The participants will be selected through purposive sampling, allowing the researchers to specifically identify and include individuals who meet the established criteria relevant to the study's objectives. Data were collected using a self-made survey and a modified standardized test. The analysis showed that the majority of respondents (69%) were male, with a weighted average of 2.00. Most students were employed as freelance or part-time workers (35%), predominantly in the service industry (49%). Cognitive symptoms indicated that students frequently experienced forgetfulness regarding academic responsibilities (mean = 2.67). Emotional symptoms included irritability and short temper (mean = 2.60), while physical symptoms such as sleep disturbances due to academic and work-related stress were also reported (mean = 2.64). Furthermore, students expressed feeling upset by unexpected academic or work-related events within the past month (mean = 3.09). The Perceived Stress Scale revealed that 87% of respondents experienced moderate stress levels in recent months, primarily due to academic demands. Respondents also showed awareness of how attendance (mean = 2.61) and financial concerns (mean = 2.91) affect their academic performance, and how class participation influences preparation and engagement (mean = 2.85). Additionally, students reported dedicating significant time to completing tasks on the Learning Management System (LMS) (mean = 2.83) and frequently using time management strategies to handle their workload (mean = 2.87). Regarding coping mechanisms, 37% of students used exercise, and 59% relied on positive thinking as an emotion-based coping strategy. For problem-focused coping, 19% reported breaking tasks into smaller steps and prioritizing goals. Social coping strategies included seeking support from family members, reported by 40% of respondents. The findings suggest that there is no statistically significant relationship between stress levels and academic performance. However, the survey results indicate that stress still affects students in various ways, influencing their cognitive, emotional, and physical well-being, as well as their coping strategies.

Keywords: stress levels, academic performance, working students, criminology students, coping strategies, time management, emotional symptoms, physical symptoms, purposive sampling, bestlink college of the philippines.

**IMPACT OF TIME MANAGEMENT PRACTICE ON ACADEMIC AND
WORK PERFORMANCE OF WORKING STUDENTS**

Nicole Miralles, Diana Marie Buala, Samantha Mola Cruz, Angeline Oronan,
Princess Allyza Dela Cruz, Dr. Jolly Miguel

Abstract

Effectively managing time is a significant challenge for students who balance academic commitments with employment. Poor time management can lead to heightened stress, decreased productivity, and diminished performance in both school and work environments. This study investigates the relationship between time management strategies and the academic performance, productivity, and stress levels of working students at Bestlink College of the Philippines. The study utilized a descriptive quantitative method, targeting 80 employed second-year Psychology students. A survey questionnaire was used to gather data, focusing on demographic profiles, time management difficulties, prioritization techniques, and their perceived effectiveness. The responses were analyzed using statistical tools such as frequency distribution, weighted mean, and ranking to interpret patterns and draw conclusions. The study found that the majority of respondents struggled with time management, largely due to overlapping academic and work responsibilities. Common challenges included long working hours, heavy academic workloads, and inflexible schedules. Although some students applied prioritization strategies and emphasized punctuality, these practices had a limited impact on enhancing their academic or job performance. Additionally, financial pressures, emotional fatigue, and the lack of support from both the institution and employers further contributed to difficulties in managing time effectively. The findings emphasize that effective time management, although important, is not enough on its own to ensure success for working students. External influences such as academic demands, job expectations, and limited support significantly affect students' ability to apply time management strategies. To address this, the study recommends a coordinated support system between schools and employers. Educational institutions should implement flexible learning options and provide access to mentorship, while workplaces should adopt more student-friendly schedules. Future studies are encouraged to investigate the psychological toll of time-related stress and evaluate targeted intervention programs that promote both academic achievement and career growth among student workers.

Keywords: time management, working students, academic performance, employment, stress, support systems, flexible schedules, mentorship, psychological impact, intervention programs

INFLUENCE OF 'UTANG NA LOOB' ON FILIPINO FAMILY DYNAMICS AMONG 3RD YEAR PSYCHOLOGY STUDENTS FROM BESTLINK COLLEGE OF THE PHILIPPINES

Joziel Mae Villania, Nor Haina Alip, Jackelyn Jovellana, Berlyn May Caubat,
Angela Nicole Soriano, Maria Regina Baluyut

Abstract

“Utang na loob” is a deeply embedded Filipino cultural value that plays a significant role in shaping family relationships. This study investigates its impact on family dynamics among third-year Psychology students at Bestlink College of the Philippines. It specifically examines how this cultural sense of obligation influences communication, decision-making, and the distribution of responsibilities within the family. A quantitative correlational research design was utilized, involving 121 third-year psychology student respondents. A structured survey using a 4-point Likert scale was administered to assess perceptions of family dynamics and the influence of utang na loob. The collected data were analyzed using Pearson’s correlation coefficient to determine the strength and direction of the relationship between variables. Additional statistical tools such as percentage, rank, and weighted mean were also employed to support the analysis. The findings indicated that utang na loob had a weak positive correlation with family dynamics ($r = 0.1582$). However, this relationship was not statistically significant, as reflected by the test results ($t = 1.1427$, $p = 0.0832$). As a result, the null hypothesis was accepted, suggesting that utang na loob does not significantly influence the family dynamics of the respondents. The findings indicate that while utang na loob remains a respected cultural value, it does not significantly influence family relationships among the respondents. This suggests that contemporary Filipino families may place greater importance on other factors beyond traditional expressions of gratitude. Future studies are encouraged to investigate additional variables that may offer deeper insights into the evolving dynamics of Filipino families today.

Keywords: utang na loob, filipino values, family dynamics, gratitude, cultural influence, interpersonal relationships, modern filipino families, psychology students, bestlink college of the philippines, quantitative correlational research

**INFLUENCE OF LIFE SATISFACTION IN RESILIENCE OF PSYCHOLOGY
STUDENT BREADWINNERS: A BASIS FOR SUPPORT PROGRAM**

Regine Valencia, Valerie Dadulla, Laila Dumayag, Yhue Fernandez,
Miafe Lumbré, Jonah Andrea Mapula

Abstract

Student breadwinners often struggle to juggle their academic duties alongside the financial demands of supporting their families. This dual responsibility frequently causes significant stress, exhaustion, and emotional pressure, highlighting the importance of resilience for their mental and emotional health. This research aims to explore how life satisfaction influences the resilience of student breadwinners, examining the various life factors that help them cope with hardships. Insights from this study can assist universities in creating better support mechanisms tailored to the needs of these students. This research utilized a quantitative approach, administering standardized surveys to 157 psychology students from first to fourth year. The surveys assessed life satisfaction across various domains: self, family, friends, school, and living environment, as well as resilience in facing adversity. Pearson's correlation analysis revealed a strong positive relationship between life satisfaction and resilience ($r = 0.99$, $p < 0.01$). The results indicate that students who report greater satisfaction in their personal and social lives tend to possess higher resilience in overcoming academic and financial challenges. Life satisfaction among student breadwinners is primarily influenced by family and social support, academic experiences, and living conditions. Those with strong relationships and stable environments demonstrate greater resilience, while financial and academic pressures tend to lower satisfaction and coping abilities. Institutional support including mental health services, financial aid, flexible policies, and peer programs are essential to reduce stress, enhance well-being, and improve academic performance. Educational institutions must recognize and address the unique challenges faced by students who balance the roles of both learner and provider. This study highlights the vital importance of life satisfaction in strengthening the resilience of student breadwinners. The findings call for focused support within schools to enhance coping mechanisms and promote overall well-being. By addressing the distinct challenges faced by these students, the research provides a foundation for developing comprehensive interventions aimed at fostering both academic achievement and personal development. Moreover, by supporting policies and programs that enable student breadwinners to effectively manage their financial and academic responsibilities, this study contributes to the ongoing dialogue on educational equity and student support.

Keywords: student breadwinners, life satisfaction, resilience, academic challenges, financial responsibility, coping strategies, institutional support, educational equity

**INFLUENCE OF MEDIA ON SEXUAL HEALTH PERCEPTIONS OF SELECTED 4TH
YEAR COLLEGE STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Maurice Ann Bengala, Maria Angelika Abiera, Michelle Bombita,
Jessica Cañete, Zybil Reece Erismas, Dr. Jolly Miguel

Abstract

This study investigates the influence of social media on the sexual health perceptions of fourth-year college students. As digital platforms become increasingly prominent sources of information, it is important to assess how exposure to online content shapes students' knowledge, attitudes, and decision-making regarding sexual health. The research examines key factors such as demographic profiles, patterns of social media usage, and the nature of sexual health content encountered online. Through this analysis, the study aims to determine the extent to which social media contributes to shaping young adults' understanding and perspectives on sexual health. This study utilized a quantitative correlational research design to examine the relationship between social media exposure and sexual health perceptions among college students. A stratified random sampling technique was employed to select 342 fourth-year students from three academic programs at Bestlink College of the Philippines. Data was collected through a standardized, in-person survey questionnaire that measured levels of media exposure and perceptions related to sexual health. Statistical analysis was conducted to determine the presence and strength of any significant correlations between media consumption and students' sexual health perceptions. The results reveal no statistically significant relationship between media exposure and students' perceptions of sexual health. Nevertheless, the study emphasizes that the media continues to serve as a key source of sexual health information, offering accessible educational resources and enhancing general awareness. While media exposure may not directly influence perceptions, it plays an important role in disseminating knowledge and supporting students in making informed decisions about their sexual health. In light of the findings, the study recommends enhancing sexual health education by incorporating accurate, evidence-based media content such as news articles, educational videos, and interactive learning tools, to provide students with comprehensive and accessible information. It also suggests that universities implement targeted awareness campaigns to address misconceptions and fill gaps in students' understanding of sexual health. Additionally, the integration of comprehensive sex education into the academic curriculum is strongly encouraged to ensure students are equipped with reliable, science-based knowledge that supports informed decision-making and responsible behavior.

Keywords: sexual health education, media content, evidence-based information, university programs, awareness campaigns, comprehensive sex education, informed decision-making, responsible behavior, student health, curriculum integration

**INFLUENCE OF PERSONALITY TRAITS ON JOB SATISFACTION OF
PROFESSIONAL STAFF AT BESTLINK COLLEGE OF THE PHILIPPINES**

Warren Marquez, Arabella Bendal, Evony Weyn Flores,
Harlene Joy Hilasque, Jeniel Caindox, Dr. Jolly Miguel

Abstract

This research explores the impact of personality traits on the job satisfaction of professional staff at Bestlink College of the Philippines. A study by Aryanti, Rhamawati, and Rahardho (2024) emphasized that employees with adaptable and positive personality traits tend to exhibit higher job satisfaction, which in turn enhances their overall performance. In a related study conducted in Singapore, findings revealed that individuals with higher levels of employment and life satisfaction reported greater satisfaction with 18 indicators of Indoor Environmental Quality (IEQ), suggesting a broader link between personal well-being and perceived satisfaction in the workplace. This study explores the relationship between personality traits and job satisfaction using the Big Five Personality Traits model, commonly known as OCEAN: Openness, Conscientiousness, Extraversion, Agreeableness, and Neuroticism. A correlational-comparative quantitative research design was utilized, with data gathered through a researcher-developed survey questionnaire. The sample consisted of 50 respondents, equally divided between Academic Support Personnel (ASP) and Non-Teaching Personnel (NTP), selected through purposive sampling. To assess the relationship between personality traits and job satisfaction, the researchers employed Pearson's r to determine the strength and direction of the correlation. The data show that most respondents are aged between 21 and 30, with 72% identified as female. A majority have been employed at Bestlink College of the Philippines for 2 to 4 years, indicating a relatively low number of long-term employees. The study utilized the OCEAN model, or the Big Five Personality Traits, to assess respondents' personality profiles. Findings revealed that Conscientiousness was the most dominant trait, while Extraversion was the least prevalent. The correlation between personality traits and job satisfaction yielded an r -value of -0.1775 and a p -value of 0.3959. As a result, the null hypothesis was accepted, suggesting no significant relationship between personality traits and job satisfaction among the respondents. The findings suggest that positive workplace relationships, a supportive organizational culture, and clear opportunities for career advancement play a crucial role in influencing job satisfaction. These results emphasize the importance for institutions to foster a healthy work environment and strengthen employee support systems.

Keywords: personality traits, job satisfaction, ocean model, workplace environment, organizational culture, career growth, pearson's r , bestlink college of the philippines

**INFLUENCE OF SOCIAL CONFORMITY ON ONLINE SHOPPING BEHAVIOR AMONG
2ND YEAR PSYCHOLOGY STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Rica Trigueros, Harriet Ebrano, Kier Samantila, Angel Mae Sollegue,
Christina Mhay Villalino, Dr. Adora Angeline Babia

Abstract

This study examines the influence of social conformity on the online shopping behavior of second-year psychology students at Bestlink College of the Philippines. With the growing popularity of online shopping, understanding the role of social factors such as peer influence, social expectations, and societal norms has become increasingly important. The research seeks to determine how these elements contribute to students' purchasing decisions in a digital context, where consumer behavior is often shaped by trends, group preferences, and the desire for social acceptance. A quantitative research design using a descriptive correlational approach was employed in this study. Data were collected from 265 second-year psychology students at Bestlink College of the Philippines, the majority of whom were female and aged between 19 and 23. The structured survey assessed levels of social conformity, frequency, and preferences in online shopping, the influence of peers, and individual decision-making behaviors. Statistical analysis was conducted to examine the relationship between social conformity and online shopping behavior, with a focus on how interpersonal dynamics and emotional influences shape purchasing decisions in an online setting. The findings indicate that social conformity has a minimal impact on the online shopping behavior of students, as evidenced by a very weak and negative correlation. Most respondents reported shopping online at least once a month, often choosing platforms beyond Lazada and Shopee. Influential factors in their purchasing decisions included peer influence, stress, impulsiveness, and a lack of self-awareness. Meanwhile, factors such as sustainability, ethical considerations, product quality, and thoughtful planning were rarely taken into account during the decision-making process. Students identified the convenience and time efficiency of online shopping as primary factors influencing their purchasing behavior. Platform reliability and security also played a critical role, with students preferring trusted websites for their transactions. Emotional triggers, especially stress, had a stronger impact on their buying decisions than social conformity. This indicates that individual emotional states particularly during academically stressful periods were more influential than peer pressure or societal expectations in shaping online shopping habits.

Keywords: online shopping behavior, social conformity, emotional influence, stress, peer pressure, digital consumerism, platform trust, psychology students, impulsivity, decision-making

INFLUENCE OF SOCIAL MEDIA ON REDUCING THE ANXIETY LEVELS OF FOURTH YEAR PSYCHOLOGY STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES

Christine Mikaella Ventura, Melliza Joy Cueva, Jamellia Frias, Eloisa Gonzales,
John Paulo Villanueva, Dr. Adora Angeline Babia

Abstract

This research investigates the role of social media in alleviating anxiety among fourth-year Psychology students at Bestlink College of the Philippines. With anxiety becoming increasingly common due to academic and personal pressures, it is essential to explore accessible coping mechanisms. As social media continues to serve as a prominent source of information, connection, and entertainment, this study seeks to understand how its content may influence students' anxiety levels. Guided by Nortje's (2020) Social Comparison Theory, which suggests that individuals evaluate themselves by comparing their lives to others, this research examines how social media interactions can shape emotional well-being, either by reducing or exacerbating anxiety. This study adopted a correlational quantitative research design, involving 200 fourth-year Psychology students selected through purposive sampling. Data was gathered using a validated self-constructed questionnaire and the Generalized Anxiety Disorder-7 (GAD-7) scale. Statistical analyses included frequency, percentage, weighted mean, ranking, Likert's Four-Point Rating Scale, and Pearson's correlation coefficient to examine the relationship between social media use and anxiety levels. The results indicated that the majority of social media users were female, aged 21 to 25, and spent over two hours daily on Facebook. A statistically significant negative correlation was observed between social media perception and anxiety levels, with a Pearson r -value of -0.39 and a p -value of 0.00. This suggests that exposure to content such as positive affirmations, anxiety-related information, and humorous videos may help alleviate anxiety among respondents. Nevertheless, participants reported challenges associated with social media use, including disrupted sleep patterns, reduced concentration, and concerns about the credibility of shared information. The study highlights the dual role of social media in influencing student anxiety levels. While exposure to positive affirmations and anxiety-related content can help reduce anxiety, excessive use may negatively affect sleep, concentration, and the quality of shared information, potentially increasing anxiety. Based on these findings, the researchers developed a group guidance activity aimed at addressing these challenges and promoting healthy, purposeful social media use as a tool for managing anxiety.

Keywords: social media, anxiety reduction, positive affirmations, student mental health, facebook usage, sleep disruption, focus, information reliability, group guidance, psychological well-being

**JOB SATISFACTION AND WORK ENGAGEMENT OF EDUCATIONALLY
MISMATCHED BPO EMPLOYEES IN QUEZON CITY:
BASIS IN EMPLOYEE RETENTION**

Angelica Mae Caspe, Angelica Biado, Jelordzel Damaso,
Sherry Ann Lorica, Bless Tongga, Dr. Jolly Miguel

Abstract

Educational mismatch, wherein employees work in positions unrelated to their academic background, is a common occurrence in the Business Process Outsourcing (BPO) industry. While this allows broader access to employment, it may negatively affect job satisfaction and work engagement, key factors influencing employee retention and organizational performance. When roles do not align with one's field of study, employees may face reduced motivation, limited career fulfillment, and decreased long-term commitment. This study explores the effects of educational mismatch on job satisfaction and work engagement among BPO employees in Quezon City and examines strategies to improve retention within the sector. This study utilized a quantitative correlational research design to investigate the relationship between job satisfaction and work engagement among educationally mismatched BPO employees. A total of 51 participants from a BPO company in Cubao, Quezon City were recruited through snowball sampling. Data were gathered using two validated instruments: the Job Satisfaction Survey (JSS) by Paul E. Spector (1994) and the Job Engagement Scale (JES) by Rich et al. (2010). Online surveys were administered, and the responses were analyzed using frequency distribution, weighted mean, and Pearson correlation to identify patterns and determine the relationship between job satisfaction and work engagement. The results revealed that employees reported moderate levels of both job satisfaction and work engagement, yet expressed concerns regarding salary, limited career advancement opportunities, and lack of recognition. Correlation analysis showed a weak negative relationship between job satisfaction and work engagement; however, this relationship was not statistically significant ($p > 0.06$). These findings suggest that job satisfaction alone may not significantly influence work engagement. Instead, factors such as organizational culture, alignment between job roles and qualifications, and the availability of employee support systems may play a more substantial role in shaping engagement levels. The findings suggest that while improving compensation, career advancement, and recognition is important, these measures alone may not be sufficient to enhance employee engagement. A holistic strategy requires one that prioritizes job-role alignment, meaningful work, and a supportive organizational environment to cultivate a deeper sense of purpose and commitment. Additionally, the study emphasizes the need to address workplace stressors and support employees' psychological well-being to promote sustained job satisfaction and long-term engagement.

Keywords: educational mismatch, bpo industry, job satisfaction, work engagement, employee retention, job-role alignment, workplace culture, psychological well-being, compensation, career advancement

**LEVEL OF CELEBRITY IDOLIZATION AND LONELINESS AMONG BINI
YOUNG ADULT FANS AT BESTLINK COLLEGE OF THE PHILIPPINES**

John Verino Catacutan, Erica Baldo, Shenna Calvadores, Arlene Jhane Rosel,
Kristel Claire Ybañez, Maria Regina Baluyut

Abstract

BINI, hailed as the Philippines' "Nation's Girl Group," has gained widespread popularity both locally and internationally for their dynamic performances, infectious music, and empowering themes. As a symbol of modern Filipino pop culture, BINI has built a strong fanbase, particularly among young adults. However, the psychological effects of idolization, especially its connection to loneliness and emotional dependence, are often overlooked. While many fans view celebrity admiration as harmless, excessive attachment can lead to emotional and mental health concerns. Most existing studies on celebrity worship concentrate on Western figures or K-pop idols, leaving a gap in understanding its impact in the Filipino context. Research focusing on BINI's fans remains scarce. This study seeks to explore the possible relationship between celebrity idolization and loneliness among young adult fans of BINI, aiming to contribute insights that can guide mental health awareness and support initiatives. The study adopted a quantitative research design and involved 200 psychology students from Bestlink College of the Philippines, aged 18 to 25. Participants were selected through purposive sampling based on their pre-survey results, which confirmed their status as active fans. Data were gathered using two standardized instruments: the Celebrity Attitude Scale (CAS), which measured the level of celebrity idolization, and the UCLA Loneliness Scale Version 3, which assessed the participants' degree of loneliness. The analysis showed that BINI's young adult fans exhibit a moderate level of celebrity idolization in the Entertainment-Social and Intense-Personal dimensions, while Borderline Pathological idolization remains low. Additionally, participants demonstrated a moderate level of loneliness. A weak positive correlation was observed between celebrity idolization and loneliness, with a mean idolization score of 2.84 and a mean loneliness score of 2.47. However, the correlation was not statistically significant ($p = 0.29$), indicating insufficient evidence to reject the null hypothesis. Therefore, no meaningful relationship between celebrity idolization and loneliness can be established based on the study's findings. In light of the findings, future research should further investigate the psychological effects of celebrity idolization and its association with loneliness among young adults. This study recommends the implementation of targeted interventions, including educational workshops, peer support groups, and counseling services, to help address emotional dependency and promote healthier fan behavior. It also emphasizes the role of parental guidance and the availability of mental health resources in mitigating loneliness and encouraging the formation of meaningful, real-life relationships.

Keywords: bini, celebrity idolization, loneliness, young adults, psychological impact, mental health, digital attachment, para-social relationships, filipino pop culture, fan behavior

**LEVEL OF STRESS AMONG FIRST YEAR STUDENTS OF BESTLINK COLLEGE
OF THE PHILIPPINES: BASIS FOR AN INTERVENTION PROGRAM**

Shaina Marie Onrubia, Hazel Luceno, Haidy Bulandres, Christopher Catindoy,
Lalaine Oafericua, Maria Regina Baluyut

Abstract

This study explores the level of stress experienced by first-year students at Bestlink College of the Philippines, with particular attention to the social, academic, and personal challenges encountered during the transition to college life. The transition period is often a critical and demanding phase for students, potentially affecting their mental health and academic performance. This study aims to assess the overall stress levels among first-year college students and examine the influence of demographic factors such as age, gender, and academic department on their stress experiences. The study utilizes a quasi-experimental design to collect data from a representative sample of first-year students across five departments. Standardized instruments, including the Perceived Stress Scale (PSS) developed by Cohen et al. (1983) and the Student Stress Inventory (SSI) developed by Zubair, Khan, and Saeed (2013), are employed to measure the frequency and percentage of reported stressors. These tools provide a comprehensive evaluation of the participants' stress levels. Findings revealed that most first-year students reported moderate to high levels of stress. Gender emerged as a significant variable, with female students consistently reporting higher stress levels than male students. This difference may be attributed to variations in stress perception, emotional regulation, or coping strategies. Age did not significantly influence stress levels, likely due to the narrow age range of respondents. However, departmental differences were observed. Students enrolled in more academically intensive programs, such as tourism, management, and education, reported higher stress levels than those in programs such as criminology and the CASE department. Key stressors identified included classroom presentation anxiety, financial difficulties, and sleep-related problems. This study underscores the considerable stress faced by first-year students and highlights the impact of demographic factors on stress experiences. Addressing the specific stressors identified can contribute to improved mental health and academic performance. The findings also provide valuable insights into the development of targeted intervention programs and support services. Overall, this research contributes to the growing body of literature on student mental health and serves as a foundation for future studies aimed at enhancing the well-being of first-year college students.

Keywords: stress level, first-year students, perceived stress scale, student stress inventory, gender differences, academic departments, mental health, intervention program

**LIFE SATISFACTION AND NEEDS OF PERSON DEPRIVED OF LIBERTY (PDL):
TOWARDS PROGRAM DEVELOPMENT**

Dr. Jolly Miguel, Ryan Corona

Abstract

This study explores the multifaceted impacts of incarceration beyond the deprivation of physical liberty, including the loss of self-worth and social disconnection. It emphasizes the importance of using politically correct terminology such as "Persons Deprived of Liberty" (PDL) to minimize stigma and enhance inmates' self-perception. The overcrowded state of the Philippine correctional system and its rapidly increasing population further underscore the need for immediate reforms, particularly in rehabilitation and reintegration programs aimed at supporting inmates' well-being and reducing recidivism. A mixed-methods approach was employed, incorporating quantitative surveys and qualitative focus group discussions (FGDs). Thirty PDLs aged 19 to 57 participated in the survey, with seven randomly selected FGDs. Satisfaction with Life Scale (SWLS) was used to assess life satisfaction, revealing that 46.7% of respondents reported being satisfied despite their incarceration. A negative correlation was observed between life satisfaction and the number of years remaining in the sentence, suggesting higher satisfaction levels as release approached. FGDs identified boredom, interpersonal conflicts with dormitory mates, and financial difficulties as key concerns. To cope, participants engaged in activities such as exercise, meditation, and educational programs. Positive interactions with jail personnel and the availability of skills development programs were also found to enhance life satisfaction. The results highlighted common concerns among PDLs, including boredom, strained relationships within the facility, and financial hardships. Despite these challenges, many inmates reported engaging in self-improvement activities such as regular exercise, participation in learning programs, and personal reflection. Inmates cited respectful treatment by jail staff and access to development initiatives as important contributors to their overall life satisfaction during incarceration. In response to the identified needs, the proposed intervention titled "Program Pagbangon" aims to support PDLs in their transition back into society. The program consists of six modules focusing on reality orientation, problem-solving, skills development, psychological resilience, reintegration planning, and community involvement. Designed for implementation during the six months prior to release, the program seeks to promote successful reintegration and reduce the risk of reoffending. The findings underscore the importance of rehabilitation programs that address both the psychological and practical needs of PDLs, ultimately enhancing their life satisfaction and supporting their long-term reintegration into the community.

Keywords: persons deprived of liberty, life satisfaction, rehabilitation program, mixed-methods research, inmate well-being, program pagbangon, reintegration, correctional psychology

**PARENTAL ACCEPTANCE OF LESBIAN, GAY AND BISEXUAL:
ITS EFFECT ON SELF-ESTEEM AMONG 2ND YEAR STUDENTS
IN BESTLINK COLLEGE OF THE PHILIPPINES**

Kimberlyn Paglinawan, Alyssa Mae Bautista, Cyrelle Joy Solabo, Lalaine Solanga,
Jules Sean Tacbad, Dr. Adora Angeline Babia

Abstract

This study examines the influence of parental acceptance on the self-esteem of lesbian, gay, and bisexual (LGB) second-year students at Bestlink College of the Philippines. Parental acceptance is a vital factor in shaping the psychological well-being of LGB youth. Supportive parental attitudes can enhance self-confidence, emotional resilience, and a sense of belonging, while parental rejection may contribute to low self-esteem, anxiety, and emotional distress. The research seeks to understand how varying levels of parental acceptance affect the self-perception and overall mental health of LGB students in an academic setting. This study utilized a quantitative research design, selecting second-year LGB students and their parents as respondents. To gather data, the researchers employed revised versions of established tools: the Rosenberg Self-Esteem Scale to assess the students' self-esteem and a modified Parental Acceptance-Rejection Questionnaire to evaluate the nature of parental attitudes. The collected data were analyzed using statistical techniques to identify the correlation between parental acceptance and the self-esteem of LGB students. The study found a strong positive relationship between parental warmth and the self-esteem of LGB students. Those who perceived their parents as accepting displayed higher confidence and emotional resilience, while students who experienced parental rejection or neglect reported lower self-esteem and increased self-doubt. Interestingly, parental control alone did not significantly affect self-esteem, suggesting that its impact depends on whether it is paired with acceptance or rejection. These findings underscore the essential role of parental acceptance in fostering healthy self-esteem among LGB youth. Supportive parenting plays a crucial role in enhancing the emotional well-being of LGB students, while rejection and neglect contribute to psychological distress, which can negatively affect academic performance and social engagement. This study recommends implementing structured counseling programs to improve parent-child communication and promote positive parenting practices. Such efforts can help create a more inclusive and nurturing home environment, reducing emotional strain on LGB youth. Future research should explore the long-term impact of parental acceptance and rejection and examine how cultural and religious beliefs shape parental attitudes toward LGB individuals. Parental acceptance remains a key factor in fostering healthy self-esteem and emotional stability among LGB students.

Keywords: parental acceptance, lgb students, self-esteem, supportive parenting, emotional well-being, rejection, psychological distress, academic performance, positive parenting, parent-child communication, inclusive environment, cultural beliefs, religious attitude

**PERCEIVED EFFECTIVENESS OF CHATGPT ON COGNITIVE FLEXIBILITY
AMONG BLIS STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Emil Alcaraz, Kristhena Mae Alajar, Shane Jasmine Asias, Maria Clariza Broquiza, Kenneth Rostata

Abstract

Chat GPT is an AI-based conversational tool that facilitates human-like interactions and encourages creative thinking and problem-solving by presenting users with varied perspectives. Such exposure may contribute to cognitive flexibility, the ability to shift thinking strategies and approach problems from multiple angles. However, overreliance on AI may negatively impact one's ability to think critically and independently. This study explores the perceived impact of Chat GPT on the cognitive flexibility of Bachelor of Library and Information Science (BLIS) students at Bestlink College of the Philippines for the academic year 2024–2025. The study adopted a descriptive research design to examine cognitive distortion, maladaptive behavior, emotional regulation, and cognitive flexibility, specifically in terms of awareness, willingness, and self-efficacy. A total of 127 BLIS students participated in the study. Data collection involved the use of a researcher-developed questionnaire and a modified version of the standardized Cognitive Flexibility Scale (CFS). Participants were selected through purposive sampling. The results reveal that respondents perceive more disadvantages than advantages in using ChatGPT for cognitive flexibility, as reflected by a mean score of 3.11. Cognitive distortion followed with a mean of 3.01, while the perceived advantages of ChatGPT scored 2.90. These findings suggest that although ChatGPT may offer cognitive benefits, it also has the potential to reinforce rigid thinking or lead to misinterpretations. Meanwhile, maladaptive behavior (2.84) and emotional regulation (2.83) received slightly lower ratings but still contributed to the overall average score of 2.94. The results emphasize the nuanced impact of ChatGPT on cognitive flexibility. Although it supports adaptability and problem-solving, it also introduces potential drawbacks, such as cognitive distortion and over-reliance, which may compromise critical thinking skills. To address these concerns, further research is needed to develop effective strategies that mitigate the negative effects while enhancing the productive use of ChatGPT in academic contexts.

Keywords: chatgpt, cognitive flexibility, critical thinking, cognitive distortion, over-reliance, adaptability, problem-solving, academic use, ai in education, student perception

**PERCEPTION ON THE FINANCIAL STRESS WORKING 3RD YEAR
PSYCHOLOGY STUDENTS ON THEIR ACADEMIC LIFE**

Pamela Mahinay, Koji Lazaro, Yanell Linatoc, Mary Zamora, Love Joy De Guzman, Dr. Jolly Miguel

Abstract

Financial stress remains a significant issue among working students, often hindering their academic performance and job efficiency. This study explores the financial pressures encountered by third-year Psychology students at Bestlink College of the Philippines and how these challenges affect their ability to manage both academic and work-related responsibilities. Although employment offers financial relief and helps sustain their education, it can also intensify stress levels. Gaining a deeper understanding of how financial stress impacts students juggling dual roles is vital in creating support mechanisms that foster academic achievement and financial stability. Using a correlational-quantitative research design, this study gathered data from 59 working students through a survey consisting of a modified Financial Stress Scale–College Version and a researcher-designed questionnaire. The study aimed to assess the relationship between financial stress, job performance, and academic engagement. To analyze the data, both Pearson and Spearman correlation tests were employed, allowing the researchers to determine the nature and strength of the relationships among the identified variables. The study found that students generally experience mild financial stress, with the most pressing concerns related to emergency savings and retirement planning. Despite these financial burdens, respondents demonstrated strong job performance (mean score: 3.27) and moderate levels of academic engagement (mean score: 2.88). Statistical results revealed a significant negative correlation between financial stress and job performance ($p = -0.08$), indicating that increased financial strain tends to lower productivity at work. On the other hand, a moderate positive correlation between financial stress and academic engagement ($p = 0.04$) suggests that financial challenges may drive students to become more focused and committed to their academic responsibilities. These findings highlight the complex impact of financial stress on students' lives. While financial difficulties may hinder job performance, they can also serve as a motivating factor for increased academic engagement. However, prolonged financial strain poses risks such as burnout, reduced academic performance, and mental health concerns. This underscores the urgent need for institutional and workplace support, including financial literacy programs, flexible academic and employment policies, and accessible mental health services. By providing these forms of support, schools and employers can help students better manage financial stress, enabling them to maintain a healthier balance between their academic, professional, and personal responsibilities, ultimately promoting their overall well-being.

Keywords: financial stress, working students, academic engagement, job performance, mental health, financial literacy, student well-being, flexible policies, support systems, higher education

**PREJUDICE AND DISCRIMINATION OF LGBTQ INDIVIDUALS AS PERCEIVED BY
HETEROSEXUAL FACULTY MEMBERS: A COMPARATIVE STUDY**

Joanna Elizabeth Eranes, Keane Kyla Baterna, Don Gerald Dizon,
Marienhet Hular, Clary Obra, Dr. Jolly Miguel

Abstract

Despite growing societal awareness and advancements in LGBTQ rights, prejudice and discrimination against this community persist. LGBTQ individuals continue to face challenges stemming from heteronormative assumptions, biases, and social exclusion. This study aims to assess and explore how heterosexual faculty members perceive prejudice and discrimination directed at their LGBTQ colleagues within this institution. Additionally, the research seeks to identify the demographic characteristics of the respondents. This study employed a comparative research design to examine perceived prejudice and perceived discrimination. Researchers utilized stratified and purposive sampling techniques to select respondents from nine college departments at Bestlink College of the Philippines, Quezon City branch. The total sample consisted of 101 heterosexual faculty members. The findings reveal that the majority of respondents were young professionals aged between 26 and 30 years. Additionally, female respondents outnumbered males in this study. Regarding employment status, most participants were full-time employees, with the majority having served three years or more at the institution. Among the college departments, the Bachelor of Science in Criminology had the highest number of respondents. Results indicate that heterosexual faculty members generally hold a positive perception regarding prejudice, with a composite weighted mean of 1.90, reflecting disagreement with the presence of prejudice across all indicators. Similarly, respondents expressed positive perceptions toward discrimination, with an overall composite mean of 1.85, also indicating disagreement across all indicators. These findings suggest that heterosexual faculty members perceive low levels of both prejudice and discrimination. Furthermore, the study found no significant difference between perceived prejudice and perceived discrimination among the heterosexual faculty members. Researchers will conclude by suggesting a course of action that will integrate LGBTQ+-inclusive practices into current structures and policies, improve institutional support systems, and promote positive attitudes in order to create a more inclusive, respectful, and affirming environment within the institution.

Keywords: lgbtq prejudice, lgbtq discrimination, heterosexual faculty perceptions, institutional inclusivity, comparative study, bias awareness, faculty attitudes, workplace discrimination, diversity and inclusion, higher education

**PSYCHOLOGICAL IMPACT OF TYPHOONS: AN ANALYSIS OF
ANXIETY LEVELS AMONG SELECTED COLLEGE STUDENT**

Gabriel Matthew Escueta, Finny Jane Tualla, Gerard Rodriguez,
Edelein Ortiz, Sarge Miro Dela Cruz, Michael Bersamin

Abstract

Natural disasters such as typhoons present significant challenges for college students, affecting their social, academic, and personal well-being. The aftermath often involves family hardships, property damage, and academic pressures, which can lead to elevated levels of anxiety, trauma, and depression. This study examines the anxiety experienced by students at Bestlink College of the Philippines in relation to their exposure to typhoons. It focuses on identifying the psychological impacts and the various factors that contribute to mental distress during and after these events. The primary aim is to assess students' anxiety levels post-disaster, understand their coping strategies, and emphasize the critical need for accessible mental health support tailored to their experiences. This study utilized the Depression, Anxiety, and Stress Scale (DASS) to evaluate psychological distress among 100 psychology students. Through purposive sampling, the research investigated the connection between exposure to typhoons and anxiety levels. Statistical tools such as Pearson correlation and descriptive analysis were employed to determine significant relationships between the variables. The study found a strong positive correlation between the psychological effects of typhoon exposure and heightened anxiety levels among female students aged 19 to 23. The Pearson correlation coefficient was 0.80, with a statistically significant p-value of 0.00. Furthermore, socioeconomic status played a significant role in the degree of psychological distress, as students from lower-income families exhibited higher anxiety levels. Exposure to typhoons significantly affects the mental health of psychology students at Bestlink College of the Philippines, emphasizing the necessity for appropriate psychological support measures. Future research should focus on exploring sustainable coping strategies and evaluating the effectiveness of interventions, while promoting mental health programs such as stress management and disaster preparedness workshops.

Keywords: typhoon exposure, anxiety, psychological distress, mental health, college students, socioeconomic status, coping strategies, stress management, disaster preparedness, bestlink college of the philippines

**PSYCHOLOGICAL INFLUENCES ON POLITICAL PERSPECTIVE
AMONG STUDENT LEADERS IN QUEZON CITY**

Hasmin Joy Diampuan, Cherry Diaz, Lance Espedes, Joshua Latumbo,
Glazer Wayne Pabayo, Dr. Jolly Miguel

Abstract

Political views among college students are commonly believed to be shaped by external factors like social media and peer influence. This study challenges that assumption by investigating the impact of leadership experience on political adaptability. It specifically examines Student Council officers from selected colleges in Quezon City to understand how their leadership roles and psychological traits influence their political perspectives. This study utilized a quantitative-comparative research design and involved 50 Student Council officers from Bestlink College of the Philippines, St. Catherine College, Quezon City University, and National University. Data collection was done through a structured survey that captured demographic information, political orientation, and perceived influences. To analyze the data, descriptive statistics, Mann-Whitney U tests, and Chi-square tests were employed to examine the relationship between demographic variables and political adaptability. The results indicate that 66% of the respondents were female, and 36% were in their third year of study, reflecting a gender and academic year imbalance. A majority of 59.3% identified as conservative, while only 13% identified as liberal, which challenges the common perception of student leaders being predominantly progressive. Participants disagreed that peer groups and social media significantly influenced their political views (mean = 2.55), whereas leadership roles were linked to higher political adaptability (mean = 3.32). Statistical analysis using the Mann-Whitney U test revealed significant effects of gender and year level, on leadership confidence and political tolerance ($U = 124.5$, $p < 0.05$). Conversely, the Chi-square test showed that age did not significantly affect these variables ($X^2 = 5.93$, $p > 0.05$). Additionally, 64% of respondents held minor leadership positions, with only 4% occupying top leadership roles. The findings indicate that leadership experience plays a more crucial role in shaping political perspectives than peer pressure or social media influence. Student leaders with more leadership experience, particularly those in higher academic years, showed greater political tolerance and self-confidence. These results challenge common assumptions about youth political engagement and underscore the importance of leadership development, inclusive mentorship, and media literacy programs to foster political adaptability and critical thinking among student leaders.

Keywords: leadership experience, political perspectives, student leaders, political tolerance, social media influence, peer influence, youth political engagement, leadership training, media literacy, critical thinking

**RELATIONSHIP BETWEEN FUTURE ORIENTATION AND THE RESILIENCE
OF STUDENT LEADERS IN NOVALICHES, QUEZON CITY**

Mikhail Conrad Nacua, Junas Herbolingo, Micah Alviar, Kathleen Credo,
Sittie Jannah Laymah Ramber, Dr. Jolly Miguel

Abstract

This study aimed to examine the influence of future orientation (FO) on the resilience of student leaders in overcoming adversity. Although much of the existing research on FO centers on at-risk youth, its relevance extends to other groups, particularly those in leadership roles. Leadership involves setting goals, strategic planning, and effectively responding to challenges. Gaining deeper insights into FO and resilience can help in designing programs that equip student leaders with essential skills for decision-making, sustaining motivation, and managing adversity. A quantitative research design was utilized to assess the relationship between future orientation (FO) and resilience among student leaders. This approach enabled the researchers to statistically determine the strength of the correlation between the two variables. The study employed total population sampling, involving 126 senior high school and college student leaders occupying key leadership roles at Bestlink College of the Philippines. Due to the limited number of eligible participants, all qualified student leaders were included to ensure comprehensive representation. Survey questionnaires were developed by the researchers and validated by licensed psychometricians to ensure the reliability and accuracy of the instruments in measuring FO and resilience. The study revealed that most of the participants were aged 16 to 27, with a slightly higher representation of males. Student leaders demonstrated a strong sense of future orientation and resilience, particularly in areas reflecting goal-directed behavior and personal initiative. However, lower scores were observed in areas related to adaptability when facing unexpected obstacles. The analysis also found a moderate positive correlation between future orientation and resilience, indicating that student leaders with a clear vision for the future are more likely to persist through adversity and stay committed to their long-term goals. Future orientation (FO) and resilience are foundational traits in effective leadership development. FO supports long-term planning, goal-directed behavior, and proactive decision-making, while resilience enables individuals to withstand pressure and recover from setbacks. Given the unique demands placed on student leaders, these traits are especially valuable in helping them manage responsibilities and overcome challenges. Based on these findings, the researchers recommend continued exploration of how FO and resilience can be incorporated into leadership training initiatives to better equip student leaders for sustained growth and success.

Keywords: future orientation, resilience, student leadership, leadership development, adversity, goal-setting, adaptability, decision-making, motivation, educational programs

**RELATIONSHIP BETWEEN INDIVIDUALITY IN ROMANTIC
RELATIONSHIP AND RELATIONSHIP SATISFACTION OF
YOUNG ADULTS WITH ANXIOUS ATTACHMENT STYLE**

Angelica Abejo, Shane Nicole Balabag, Tezie Revelleza,
Mary Margarette Lazarino, Jonah Andrea Mapula

Abstract

This study examines the connection between individuality and relationship satisfaction in anxiously attached young adults at Bestlink College of the Philippines. Individuality, defined through independent and interdependent self-construals, influences how individuals perceive and manage their romantic relationships. While attachment theory has been widely studied in relationship outcomes, the specific role of individuality among those with anxious attachment remains underexplored. This is particularly important in the context of college students, who are in the process of identity formation and developing romantic connections. Exploring this link can provide valuable insights into improving relationship quality and emotional well-being among young adults. A quantitative correlational research design was adopted to examine the relationship between individuality and relationship satisfaction among anxiously attached young adults. A total of 150 participants were selected through purposive sampling, based on criteria such as age, current romantic involvement, and the presence of anxious attachment traits. Data collection involved the use of standardized self-report instruments: the Experiences in Close Relationships Scale-Revised (ECR-R) to assess anxious attachment, the Self-Construal Scale to measure independent and interdependent self-construals, and the Relationship Assessment Scale (RAS) to evaluate relationship satisfaction. Pearson correlation was utilized to analyze the statistical relationships between the variables. The results revealed that participants generally exhibited high levels of both independent and interdependent self-construals, indicating a balanced sense of autonomy and connectedness. The average score for individuality was 4.90, while the mean score for relationship satisfaction was 3.52. Statistical analysis using Pearson correlation showed a very weak positive relationship between individuality and relationship satisfaction ($r = 0.06$). However, the p-value of 0.45 exceeded the 0.05 level of significance, indicating that the correlation was not statistically significant. These findings suggest that individuality does not have a significant impact on relationship satisfaction among anxiously attached young adults. The study highlights the multifaceted nature of romantic relationships among anxiously attached young adults, indicating that relationship satisfaction is influenced by more than just individuality. In light of these findings, the researchers designed the Enhancement Program for Students in a Relationship, which focuses on promoting personal growth, developing emotional intelligence, and strengthening relational skills through structured workshops. To build on this work, future studies should investigate additional psychological and interpersonal factors that may play a role in relationship satisfaction within this population.

Keywords: anxious attachment, individuality, self-construal, relationship satisfaction, young adults, emotional intelligence, romantic relationships, personal growth, enhancement program

**RELATIONSHIP BETWEEN PEOPLE PLEASING BEHAVIOR ON SOCIAL
ACCEPTANCE AND SELF-WORTH OF TIKTOK USERS:
A BASIS FOR AWARENESS PROGRAM**

Charlene Valerie Mendoza, Bless Mae Aresga, Nica Bagares,
Ma Ciara Micaella Castor, Jennifer Relleve, Jonah Andrea Mapula

Abstract

The tendency to engage in people-pleasing behavior is often rooted in the basic human desire for social acceptance, shaping how individuals view themselves and relate to others. On platforms like TikTok, where feedback is immediate and visible through likes, comments, and shares, users may develop a dependence on external validation. This dynamic can foster self-worth that is contingent on social approval, potentially influencing both digital behavior and offline self-esteem. To measure key variables in the study, the researchers utilized three standardized instruments: the Agreeableness Subscale of the Big Five Inventory (BFI) to assess people-pleasing behavior, the Social Connectedness Scale (SCS) to gauge perceived belongingness, and the Contingencies of Self-Worth Scale (CSWS) to evaluate self-worth based on external validation. A total of 150 participants were selected through purposive sampling, based on predetermined inclusion criteria. Data analysis involved Pearson's correlation to explore the relationships between variables, and multiple regression analysis to examine the predictive role of social connectedness in the association between people-pleasing tendencies and contingent self-worth. The analysis showed a strong positive correlation between people-pleasing behavior and contingent self-worth ($r = 0.52$, $p < .001$), suggesting that individuals who frequently seek to please others are more likely to base their self-worth on external approval. A moderate positive correlation was also observed between people-pleasing and social connectedness ($r = 0.41$, $p < .001$), indicating that people-pleasers often report a stronger sense of belonging. Multiple regression analysis further revealed that social connectedness significantly moderated the relationship between people-pleasing and contingent self-worth ($\beta = 0.37$, $R^2 = 0.49$, $p < .001$). This implies that individuals with higher levels of perceived social connectedness are less reliant on external validation to maintain their self-worth, even when exhibiting people-pleasing tendencies. The results emphasize the psychological vulnerabilities linked to excessive people-pleasing, particularly within digital platforms where self-perception is often shaped by immediate feedback such as likes, comments, and shares. While social connectedness remains essential for emotional well-being, an overreliance on external affirmation can undermine self-esteem and contribute to emotional distress. This study highlights the dual nature of people-pleasing, while it may enhance social cohesion, it can simultaneously foster a fragile sense of self-worth when one's identity becomes dependent on others' approval.

Keywords: people-pleasing, contingent self-worth, social connectedness, external validation, self-esteem, emotional well-being, digital behavior, tiktok, identity, psychological risk

RELATIONSHIP OF ATTACHMENT STYLE ON PARENTAL PRESSURE AMONG ONLY CHILD FRESHMEN STUDENTS: BASIS FOR INTERVENTION PROGRAM

Mark John Versoza, Hannah Gudoy, Roshel Gumabon, Romeo Maluenda,
Drex Razon, Maria Regina Baluyut

Abstract

This study examines how attachment styles relate to perceived parental pressure among first-year psychology students who are only children at Bestlink College of the Philippines. This study utilized a quantitative correlational research design to examine the relationship between variables. Data were collected from 50 respondents through a structured survey questionnaire, which included a demographic section and two standardized scales rated using a 5-point Likert scale. Data analysis was conducted using SPSS, employing statistical tools such as frequency and percentage, weighted mean, ranking, and Pearson Product-Moment Correlation to interpret the results. The results indicate that most respondents demonstrated a mid-range attachment style, suggesting they do not exhibit a clearly defined attachment pattern. Specifically, 88% showed characteristics of mid-avoidant-insecure attachment, 84% of mid-ambivalent-insecure attachment, and 82% of mid-secure attachment. In relation to parental pressure, 76% of the participants reported high parental expectations, while 90% perceived low parental involvement. These findings point to a generally neutral level of parental pressure and highlight limited parent-student communication, as reflected by 64% of respondents. The study revealed no significant correlation between attachment style and parental pressure, suggesting that parental pressure alone does not significantly influence the development of students' attachment patterns. This finding implies that other factors may have a greater impact on shaping attachment styles, such as individual personality traits, early life experiences, or the broader social environment. Despite this, the observed issues with parent-student communication and limited parental involvement highlight the need for targeted interventions aimed at strengthening family relationships and providing consistent emotional support.

Keywords: attachment style, parental pressure, only child, freshmen students, parental involvement, parent-student communication, psychology students, emotional support, family dynamics, higher education

**RELATIONSHIP OF FRIENDSHIP SEPARATION ON SELF-ESTEEM OF
FIRST YEAR BACHELOR OF SCIENCE IN PSYCHOLOGY AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Irish Libetario, Auldrey Angeles, Koleen Andrea Escalona, Zyra Quinao,
Ria Love Zulueta, Dr. Adora Angeline Babia

Abstract

This study examines the relationship between friendship separation and self-esteem among first-year Bachelor of Science in Psychology students at Bestlink College of the Philippines. As students transition into college life, separation from close friends is a common experience that can influence their emotional well-being and academic performance. This research seeks to provide insights into how friendship separation affects students' self-esteem and aims to inform the development of support strategies that promote mental health and academic success during this critical adjustment period. This study adopted a descriptive quantitative research design and involved 100 first-year Psychology students selected through stratified random sampling. Data was collected using survey questionnaires as the main research instruments. The Rosenberg Self-Esteem Scale, a validated tool, was utilized to measure students' self-esteem levels. Additionally, a researcher-designed questionnaire was used to examine factors associated with friendship separation such as academic priorities, personal interests, and family obligations using a 4-point Likert scale. The findings indicated a statistically significant negative correlation between perceived friendship separation and self-esteem ($p < 0.05$). Students who reported experiencing friendship separation demonstrated lower levels of self-esteem compared to those who did not. Key factors contributing to friendship separation included increased academic workload, evolving personal interests, and family-related responsibilities. This study underscores the significant impact of friendship separation on the self-esteem of first-year college students. Addressing this issue is essential for fostering emotional well-being and academic success. Educational institutions that implement support systems and intervention strategies can help students cope more effectively with the emotional challenges brought about by friendship separation. By adopting these recommendations, Bestlink College of the Philippines may enhance student well-being, promote academic performance, and improve retention rates. Future studies are encouraged to examine the long-term effects of friendship separation on students' mental health and academic trajectories.

Keywords: friendship separation, self-esteem, first-year college students, psychology students, academic performance, mental health, emotional well-being, rosenberg self-esteem scale, bestlink college of the philippines, student retention

**RELATIONSHIP OF MATERNAL HOME-BASED INVOLVEMENT AND
EARLY CHILDHOOD ACADEMIC SUCCESS AMONG MOTHERS
BARANGAY PASONG TAMO QUEZON CITY**

Lovely Bernadette Malota, Jean Tuma-ob, Kheana Ivram Gonzales,
Lucia Caliso, Mechelle Timotua, Maria Regina Baluyut

Abstract

Maternal involvement in home-based learning has been widely acknowledged as a significant contributor to children's academic achievement, especially during early childhood. Studies have consistently demonstrated that children perform better academically when their mothers are actively engaged in their education at home. This study seeks to explore the relationship between maternal home-based involvement and the academic success of early childhood students in Barangay Pasong Tamo, Quezon City. It focuses on three essential components of involvement: time, support, and energy, and investigates how each of these influences student performance in written tasks, performance tasks, and quarterly assessments. By examining the role of Filipino mothers in their children's education, the research aims to provide insights into how maternal engagement at home impacts academic outcomes in the early years. This study utilized a quantitative approach by conducting surveys among mothers of young children to explore the relationship between maternal involvement and academic performance. The survey focused on key aspects of involvement such as the amount of time devoted to academic tasks, the level of emotional support provided, and the energy invested in the children's learning process. Furthermore, research examined how mothers' educational attainment may affect their children's early academic achievements. The results indicated that overall maternal home-based involvement did not have a statistically significant correlation with children's academic success in this sample ($p = 0.5637$). In contrast, specific aspects of involvement such as time dedicated, emotional support, and energy invested, were strongly and positively associated with students' academic performance (ranging from $r = 0.55$ to 0.75 , $p < 0.001$). Furthermore, the educational attainment of the mother was a significant factor, with children of college-educated mothers outperforming those whose mothers had only completed high school on standardized assessments. These findings highlight that it is not merely the presence of maternal involvement but the quality and nature of that involvement that significantly impact children's academic achievement. The findings highlight the importance of implementing well-organized parental involvement programs, strengthening partnerships between home and school, and addressing socioeconomic barriers. Encouraging targeted maternal involvement approaches can enable policymakers and educational institutions to enhance early childhood educational outcomes and overall academic achievement.

Keywords: maternal involvement, home-based involvement, early childhood education, academic success, parental support, time management, emotional support, mother's education, barangay pasong tamo, philippines

**RELATIONSHIP OF SOCIAL MEDIA MODELLING ON CAREER CHOICES OF FIRST
YEAR PSYCHOLOGY STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Aviemae Pepito, Francis Balbao, Deserie Codon, Catherine Diega,
Allana Christel Oreta, Dr. Adora Angeline Babia

Abstract

Nowadays, technology is an essential part of students' lives, serving both educational and personal purposes. Social media, in particular, has become highly influential. Between 2004 and 2006, platforms like Facebook and MySpace gained widespread popularity, and today, Facebook has surpassed 500 million users. Research shows that around 85% of college students actively use Facebook, while platforms such as YouTube continue to rise in prominence. Social media plays a significant role in shaping how students explore career options and make important life decisions. Platforms like Facebook, Instagram, YouTube, Messenger, and TikTok provide easy access to information about various professions. Additionally, social media modeling, where individuals share advice and influence others online, has been found to impact students' career choices. The researchers utilized a correlational research design to investigate the relationships between different variables. The study involved 100 first-year Psychology students from Bestlink College of the Philippines, who were purposively chosen as participants. Data collection was conducted using a modified version of the Social Media Modeling Inventory (SMMI). The results revealed that 86% of the surveyed students were female, with ages ranging from 18 to 20 years old. Among the various social media platforms, TikTok was the most frequently used. Data analysis indicated a Pearson correlation coefficient (r) of 0.57 with a p -value of 0.00, demonstrating a strong positive relationship between using social media for advice and making career decisions. The findings underscore the crucial influence of social media in shaping students' career decisions. Based on these insights, the researchers designed a career guidance program aimed at helping students better understand and evaluate their career options. An expert reviewed the program to ensure its appropriateness and effectiveness in addressing students' career development needs.

Keywords: social media, career decision-making, social media modeling, tiktok, college students, career guidance program, psychology students, bestlink college of the philippines, correlational study

**RELATIONSHIP OF STRESS AND SOCIAL RESPONSIBILITY AMONG
COLLEGE STUDENTS WITH TAGASALO PERSONALITY**

Rose Angelyn Juanich, Mary Grace Concepcion, Ricjohn Domingo,
Nicole Lozano, Ella Marie Noble, Maria Regina Baluyut

Abstract

This study investigates the impact of the Tagasalo personality on students' stress levels and sense of social responsibility. The Tagasalo, a term introduced by Carandang, refers to individuals who assume caregiving responsibilities due to cultural expectations (Perez, 2021) and often extend their helping behavior beyond the household (Tuazon et al., 2021). While this personality trait encourages a strong sense of duty, it may also lead to increased stress as individuals prioritize others' needs over their own (Rana et al., 2019; Musabiq & Karimah, 2020). The study aims to analyze these dynamics and design a stress management program that supports Tagasalo students while preserving their prosocial roles. The researchers used three instruments for data collection: the Tagasalo Personality Scale by Tuazon et al. (2021), a 12-item self-report tool assessing the presence of the Tagasalo personality; the Perceived Stress Scale (Cohen et al., 1983), which uses a 4-point Likert scale to measure individuals' perceived stress levels; and a Social Responsibility Questionnaire developed by the researchers to assess respondents' level of social responsibility. The participants were selected from the Psychology Department of Bestlink College of the Philippines. Using purposive sampling, 230 students identified as having a Tagasalo personality were chosen from a population of 537 third-year psychology students. The study explored the relationship between stress and social responsibility, revealing significant insights into their association among college students. The findings revealed an average stress score of 2.77 (SD = 0.60), indicating a high level of perceived stress among the respondents. The average social responsibility score was 3.30 (SD = 0.45), suggesting that participants demonstrated a relatively strong sense of social responsibility. The Pearson correlation coefficient of 0.39 signifies a moderate positive relationship between stress and social responsibility, implying that higher levels of stress are associated with greater social responsibility, though the correlation is not particularly strong. The findings indicate that as stress levels rise, students with a Tagasalo personality also exhibit heightened social responsibility. However, it remains uncertain whether this sense of duty helps them manage stress or further contributes to their psychological burden. To address this, the researchers recommend mindfulness interventions and promoting support-seeking behaviors. It is also essential for families, peers, and educational institutions to provide consistent emotional and structural support. Future studies should investigate whether taking on social responsibility serves as a coping strategy or intensifies the students' stress levels.

Keywords: tagasalo personality, stress levels, social responsibility, mindfulness, coping strategy, support systems, college students, psychological burden, emotional support, structural support

**RELATIONSHIP OF UTANG NA LOOB ON LIFE SATISFACTION AND SELF-WORTH
AMONG MILLENNIAL BREADWINNERS IN THE GOVERNMENT SECTOR**

Julia Marie Vicente, Arianna Maye Bancolita, Bryan Capariño, Jenelyn Rose Lomonsod,
Maria Elvie Sumalinog, Maria Regina Baluyut

Abstract

This research investigates how utang na loob, a traditional Filipino value rooted in gratitude and reciprocal obligation, relates to life satisfaction and self-worth among millennial breadwinners employed in the government sector. While utang na loob often encourages familial support and social unity, it can also become a source of emotional strain when the expectation to repay support becomes overwhelming or difficult to fulfill. The researchers applied a quantitative correlational approach to explore how utang na loob relates to life satisfaction and self-worth among millennial breadwinners working in barangay halls within Quezon City's Districts 2, 5, and 6. To gather data, they used three instruments: the Satisfaction with Life Scale (SWLS), the Self-Worth Inventory (SWI), and a researcher-designed Utang na Loob Questionnaire. These tools allowed for the quantitative assessment of how this cultural value impacts the psychological well-being of the participants. The study found a moderate positive correlation between utang na loob and life satisfaction ($r = 0.46$, $p < 0.05$), suggesting that those who strongly uphold this cultural value tend to feel more satisfied with their lives. A stronger positive correlation emerged between utang na loob and self-worth ($r = 0.70$, $p < 0.05$), indicating that breadwinners who feel a deep sense of obligation also report a higher sense of personal value. Additionally, life satisfaction and self-worth were moderately correlated ($r = 0.63$, $p < 0.05$), reflecting their combined impact on overall psychological well-being. These findings underscore the importance of managing cultural expectations without compromising personal well-being. The researchers developed a Well-Being Program tailored for millennial breadwinners to support their mental and emotional health while fulfilling family obligations. The program consists of stress reduction strategies, financial management education, and access to psychological counseling, aiming to strengthen life satisfaction and self-worth amidst the pressures of both professional and familial roles.

Keywords: utang na loob, life satisfaction, self-worth, millennial breadwinners, government employees, filipino values, psychological well-being, stress management, financial literacy, emotional support, quezon city

**ROLE OF LEISURE SATISFACTION AND QUALITY OF LIFE OF BESTLINK COLLEGE
OF THE PHILIPPINES INSTRUCTORS: A BASIS FOR SUPPORT PROGRAM**

Renee Lumapas, Lenny Adorna, Shella Mae Brun, Christine Casaljay,
Angelica Yvonne Escanillan, Jonah Andrea Mapula

Abstract

This research explores how leisure satisfaction contributes to the overall quality of life of instructors at Bestlink College of the Philippines. It aims to assess how different dimensions of leisure: psychological, social, and physiological, impact key aspects of well-being, including physical health, emotional balance, and job satisfaction. The study also intends to generate evidence-based findings that could guide the creation of targeted support programs to enhance the well-being of faculty members. A quantitative correlational research design was adopted for this study to explore the link between leisure satisfaction and quality of life. Using the Leisure Satisfaction Scale and the Quality of Life Scale, data were gathered from 150 instructors. Purposive sampling was applied to ensure that all instructors had an equal opportunity to participate in the study, allowing for a more focused and relevant respondent group. The results indicate that leisure activities play a role in enhancing instructors' personal development, fostering social connections, reducing stress, and supporting physical well-being. Despite these perceived benefits, the statistical findings specifically a p-value of 0.74 and a correlation coefficient (r) of 0.03 reveal a weak and statistically insignificant relationship between leisure satisfaction and quality of life. While a slight positive association was observed, the data does not provide sufficient evidence to establish a significant link between the two variables in this study. The study concludes that although instructors recognize the value of leisure in enhancing their quality of life, its full impact remains an area for further research. It is recommended that educational institutions develop initiatives that promote work-life balance and offer support for instructors' well-being through stress management programs and access to leisure activities.

Keywords: leisure satisfaction, quality of life, instructors, work-life balance, stress management, well-being, educational institutions, support programs

**ROLE OF PARENTAL SUPPORT AND CRITICISM IN SHAPING THE
SELF-ESTEEM OF FIRST-YEAR PSYCHOLOGY STUDENTS
AT BESTLINK COLLEGE OF THE PHILIPPINES**

Felomena Ann Badiola, Arlene Arambulo, Raiza Mae Gerobin,
Jane Juliano, Redge Redubla, Dr. Jolly Miguel

Abstract

The study examined how parental support and criticism influence the self-esteem of first-year Psychology students at Bestlink College of the Philippines. It focused on measuring the level of parental involvement, the effectiveness of parent-child communication, and the perceived parenting styles, analyzing how these elements correlate with the students' self-esteem. This study utilized a correlational research design with a quantitative approach. A total of 266 first-year Psychology students at Bestlink College of the Philippines participated in the survey. Data was collected using the Rosenberg Self-Esteem Scale and a researcher-developed questionnaire measuring perceived parental support and criticism. Stratified sampling was applied to ensure diverse representation across various student sections within the college. Findings indicate that students view their parents as generally supportive, although parental involvement in academic activities was limited. While there were strong parental encouragement and an appreciation for education, communication regarding personal issues and direct academic assistance were areas identified for enhancement. The self-esteem levels among first-year Psychology students ranged from moderate to high. However, Pearson correlation analysis showed no significant relationship between parental support and students' self-esteem. The results suggest that while students generally perceive parental support positively, insufficient open communication about personal issues and limited academic assistance may contribute to some students' feelings of insecurity and self-doubt. The lack of a significant correlation between parental support and self-esteem indicates that other factors likely influence self-esteem development. Future studies should investigate ways to improve communication between parents and students and provide parents with more effective methods of academic support. Potential interventions might include interactive self-esteem workshops for students and educational programs for parents to enhance communication skills and awareness of various parenting approaches. Additional research is essential to better understand the complex dynamics between parenting support and self-esteem in this population.

Keywords: parental support, parental criticism, self-esteem, first-year psychology students, parenting styles, parent-student communication, academic assistance, rosenberg self-esteem scale, quantitative research, bestlink college of the philippines

**SINGLEHOOD SATISFACTION AND SENSE OF CONTROL OF MALE
EMPLOYEES IN BESTLINK COLLEGE OF THE PHILIPPINES:
A BASIS FOR EMPOWERMENT PROGRAM**

Johannah Paulene Tabigue, Karen Bahoy, Sharramae Jarobel, Elshad Elijah Nonato,
Glorilyn Tagalog, Jonah Andrea Mapula

Abstract

This study investigates the relationship between singlehood satisfaction and the sense of control among male employees at Bestlink College of the Philippines. It explores how these individuals perceive their single status in the face of societal pressure and stigmatization. Singlehood is defined as not currently being in a committed relationship, either by choice or due to external circumstances. Meanwhile, a sense of control refers to an individual's perceived ability to manage and direct the course of their life. A correlational quantitative research design was employed using purposive sampling. A total of 150 male respondents were selected based on specific criteria, including age, institutional affiliation, and relationship status. Two standardized self-report instruments were used: the Attitude Toward Singlehood Satisfaction (AtSS) scale and the Sense of Control (SC) scale. Data was collected through a survey and analyzed using Pearson correlation to determine the relationship between the two variables. The composite mean scores for singlehood satisfaction were 5.08, 5.12, and 4.33, while the sense of control yielded scores of 4.14 and 5.16. These results suggest that respondents moderately agreed with feeling satisfied in singlehood and having control over their lives. The correlation between the two variables was found to be statistically significant, although the strength of the relationship was weak. Thus, while there is a meaningful association between singlehood satisfaction and sense of control, it is not strongly pronounced among the respondents. The findings demonstrate a significant yet limited relationship between singlehood satisfaction and sense of control among male employees in Bestlink College. The results suggest that personal contentment during singlehood is shaped by both internal decisions and external influences. To support the well-being of single male employees, the researchers developed an Empowerment Program for Single Men. The program includes workshops and seminars focused on goal setting, decision-making, self-esteem, boundary-setting, and healthy interpersonal relationships, aiming to create a supportive environment where single men can thrive despite societal pressures.

Keywords: singlehood satisfaction, sense of control, stigmatization, comfortable, committed relationship

**SLEEP QUALITY AND MOOD FUNCTIONING OF FOURTH-YEAR COLLEGE
STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES:
A CORRELATIONAL STUDY**

Jennifer Saberola, Monique Palmero, Ruth Balbontin,
Anna Marie Tonido, Jay Victoriano, Dr. Jolly Miguel

Abstract

Sleep quality is crucial to students' cognitive performance and emotional regulation. This study examines the correlation between sleep quality and mood functioning among fourth-year college students at Bestlink College of the Philippines. It aims to assess how varying levels of sleep quality affect students' mood and academic engagement. A total of 331 students from the Tourism, Psychology, and Hospitality Management programs were surveyed, focusing on sleep duration, disturbances, and environmental influences. This study applies a purposive-correlational research design using structured survey questionnaires. Data is analyzed using Pearson's correlation coefficient. Participants' demographic profiles including age, gender, and academic program are considered to evaluate variations in sleep quality and mood functioning. The study also examines academic pressures, lifestyle habits, and environmental conditions as influencing factors. The findings revealed that the majority of respondents experienced insufficient sleep, often reporting durations below recommended levels. Primary contributors to poor sleep quality included frequent gadget use before bedtime, environmental noise, and uncomfortable sleeping conditions. Academic stress and workload further disrupted students' sleeping patterns, resulting in increased fatigue and reduced concentration. A statistically significant but weak positive correlation ($r = 0.38$, $p = 0.00$) was found between sleep quality and mood functioning. Students with lower sleep quality reported higher levels of mood disturbances, such as emotional instability, lack of motivation, and cognitive difficulties. The study concludes that sleep quality plays a significant role in students' mood regulation and academic performance. It recommends the implementation of sleep education initiatives and time management workshops to promote healthier sleep habits. Future research may explore targeted interventions to reduce the impact of sleep deprivation on students' mental health. Addressing sleep-related concerns can help create a supportive academic environment that enhances both emotional well-being and learning outcomes.

Keywords: sleep quality, mood functioning, college students, emotional stability, academic engagement, sleep hygiene, mental health, bestlink college

**SMART-SHAMING ON ACADEMIC-ANXIETY LEVEL AND SELF-EFFICACY OF
SELECTED ACAEX STUDENTS OF BESTLINK COLLEGE OF THE PHILIPPINES**

Tosca Camil Madriaga, Angeline Parado, Katherine Corros,
Jecell Lebosana, Yaosha Basilides, Maria Regina Baluyut

Abstract

This study examines the impact of smart-shaming on academic anxiety and self-efficacy among selected ACAEX scholars at Bestlink College of the Philippines. Smart-shaming, the act of ridiculing individuals for displaying intelligence, is a prevalent social issue that may hinder students' confidence, participation, and academic engagement. Although recognized as a potential barrier to academic success, its direct effects on students' psychological well-being and performance remain underexplored in academic literature. A quantitative-correlational research design was employed to investigate the relationship between smart-shaming, academic anxiety, and self-efficacy. The study utilized a self-made Smart-Shaming Scale alongside standardized instruments: the Academic Anxiety Scale (AAS) and the General Self-Efficacy Scale (GSES). A total of 200 fourth-year ACAEX scholars were selected through purposive sampling. Data were analyzed using descriptive statistics, ranking, and Pearson's Product-Moment Correlation to determine the strength and direction of the relationships among variables. The findings revealed that smart-shaming was a common experience among respondents, often discouraging them from sharing knowledge due to fear of ridicule. The highest mean score (3.29) was associated with the statement, "I have been called a know-it-all for sharing my knowledge." In terms of academic anxiety, students reported heightened concerns related to peer judgment and academic pressure, with a composite mean of 3.18. Additionally, smart-shaming was shown to significantly reduce students' confidence and perceived academic capability. Correlation analysis confirmed a significant relationship between smart-shaming, academic anxiety, and self-efficacy. Higher levels of smart-shaming were associated with increased academic anxiety and lower levels of self-efficacy. The study highlights a critical link between smart-shaming, academic anxiety, and self-efficacy, indicating the need for a more supportive academic environment that encourages intellectual expression without fear of judgment. Addressing this issue involves promoting respectful discourse, enhancing student confidence, and removing negative social labels attached to academic excellence. Future research may focus on developing intervention programs, implementing psychoeducational strategies, and involving faculty in efforts to mitigate the effects of smart-shaming and enhance students' academic self-belief.

Keywords: smart-shaming, academic anxiety, self-efficacy, peer perception, student motivation, psychological well-being, acaex scholars, bestlink college

THE EFFECTS OF PARENTAL DEPRIVATION ON ADOLESCENTS' MORAL CHARACTER DEVELOPMENT AT FR. SIMPLICIANO CHILDREN'S HOME INC.

Ma Genrose Galla, Alexis Molina, Justine Cyrus Caldosa, Shiela Mae Ramel,
Mariane Valerie Espero, Jhanelle Jovita, Juanito Parayno

Abstract

This study investigates the effects of parental deprivation on the moral character development of adolescents at Fr. Simpliciano Children's Home Inc. It specifically explores the influence of caregivers, peers, and external factors such as religious institutions, institutional policies, and prevailing norms. Anchored in Kohlberg's Theory of Moral Development, the study addresses the gap in understanding how core moral values: honesty, empathy, and responsibility are developed in the absence of traditional parental figures within residential care settings. This study employs a descriptive-correlational design to examine how various environmental factors contribute to the moral character development of adolescents experiencing parental deprivation. The research focuses on the roles of caregivers, peer interactions, and external influences such as institutional frameworks and religious involvement. Data were collected using structured questionnaires, and responses were analyzed based on the key moral dimensions defined in Kohlberg's framework. The findings revealed that parental deprivation did not significantly hinder the moral character development of adolescents. Among the moral values assessed, responsibility received the highest mean score ($M = 4.68$), followed by honesty ($M = 4.56$) and empathy ($M = 4.48$). Caregivers ($M = 4.49$) and religious institutions ($M = 4.48$) emerged as the most influential contributors. Notably, a very high positive correlation was observed between these influences and moral character development ($r = 0.97-0.98$, $p < 0.05$). The results emphasize the vital compensatory role of institutional support systems in nurturing moral character among adolescents deprived of parental care. These findings suggest that well-trained caregivers and value-driven institutions can foster moral development comparable to traditional family settings. The study recommends the implementation of caregiver training programs, structured peer mentorship initiatives, and policy reforms that prioritize moral education in residential care institutions. Future research is encouraged to include a broader participant base, particularly male adolescents, and adopt longitudinal approaches to assess long-term developmental outcomes.

Keywords: parental deprivation, moral character development, adolescents, residential care, kohlberg's theory, responsibility, honesty, empathy, caregivers, institutional support, psychology research

**THE EFFECTS OF PARENTAL SEPARATION ON THE PSYCHOLOGICAL
BEHAVIOR OF SENIOR HIGH SCHOOL STUDENTS**

Aaron Jacob Sta Rosa, John Francis Butcon, Christian Fernandez, Christian Fernandez, Roselyn Jane Laroga, Alexandra Sanidad, Dr. Jolly Miguel

Abstract

Parental separation can significantly affect the psychological well-being and academic performance of children, although the impact varies among individuals. As students transition into senior high school, they encounter various challenges such as academic demands, social adjustments, and financial stress. While some students demonstrate resilience, others experience heightened emotional distress, anxiety, or increased risk of academic disengagement. This study explores the effects of parental separation on senior high school students and identifies the factors that influence their capacity to cope in both academic and social contexts. This study employs a descriptive research design to examine the psychological and academic effects of parental separation among senior high school students at Bestlink College of the Philippines. Utilizing stratified random sampling, the researchers gathered data from selected respondents through a validated survey questionnaire. The study used statistical tools, including frequency distribution, weighted mean, Likert scale analysis, and Pearson's r correlation, to assess emotional, social, and academic indicators related to parental separation. The findings revealed that parental separation had a significant effect on students' psychological behavior, particularly in their beliefs, attitudes, and emotional awareness. While several students reported emotional distress and academic challenges, others demonstrated resilience and the ability to adapt. The correlation analysis using Pearson's r showed a notable relationship between parental separation and various aspects of student well-being, including emotional stability, academic performance, and interpersonal relationships. The results emphasize the importance of providing structured mental health support and promoting open communication to help students cope with the consequences of parental separation. School-based programs, peer support systems, and the inclusion of families in decision-making processes are recommended to foster resilience and ensure a more supportive learning environment for affected adolescents.

Keywords: parental separation, psychological behavior, senior high school, emotional well-being, academic performance, coping mechanisms, student resilience, mental health support, pearson's correlation, psychology research

**THE IMPACT OF TEACHING STYLES ON FIRST YEAR PSYCHOLOGY
STUDENT'S ACADEMIC PERFORMANCE**

Euchin Mekaela Yongco, Amir Shan Corres, Marie Claire Palencia,
Justine Noble, Prince Panti, Michael Bersamin

Abstract

This study examined students' perceptions of their professors' teaching styles focusing on communication skills, instructional methods, and classroom management, and how these factors relate to academic performance. While previous literature suggests that teaching style impacts learning outcomes, this study specifically investigates whether this relationship holds true within the context of psychology education. A descriptive-correlational research design was employed in this study. The respondents were psychology students, mostly aged 19–22 (54%) and predominantly female (67%). Academic performance was measured using the General Weighted Average (GWA), with the majority of students (56.5%) scoring within the 1.6–2.0 range. Perceptions of teaching style were assessed using a Likert-type scale, and correlations were analyzed with Spearman's rho. Overall, students rated their professors positively across the three teaching style domains. In communication skills, professors received the highest scores for simplifying complex topics (mean = 1.9) and attentiveness to student concerns (mean = 1.95). Instructional methods were also well-rated, particularly for clarity of lesson structure (mean = 1.96) and the use of collaborative activities (mean = 1.99). Classroom management earned its highest score for effectively handling classroom dynamics (mean = 1.93). Despite these favorable evaluations, statistical analysis revealed no significant correlation between teaching styles and academic performance. Communication skills ($p = 0.70$, $\rho = 0.03$), instructional methods ($p = 0.68$, $\rho = -0.03$), and classroom management ($p = 0.34$, $\rho = 0.07$) all yielded p -values above 0.05, indicating no meaningful relationship. The study also identified challenges in adapting to teaching styles: approximately 22–24% of students felt their professors' styles did not support their academic success, and 22% reported low academic self-confidence. Some students cited a lack of varied teaching methods, insufficient encouragement of critical thinking, and limited engagement. Between 12% and 16.5% noted difficulties stemming from unaddressed learning preferences, while 13.5–15% struggled with motivation and reported few opportunities for participation and practical application. Although professors received positive ratings in key areas, academic performance appeared to be more strongly influenced by factors such as student self-efficacy, learning styles, and motivation. Incorporating diverse, student-centered teaching methods may help enhance academic outcomes.

Keywords: teaching styles, academic performance, academic growth, effective teaching practices

**THE INFLUENCE OF BIRTH ORDER ON THE ATTACHMENT STYLE OF
BLIS STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Marjorie Ubiña, Angel Llamado, Cristalyn Joyce Velasco, Maria Angelica Alisgar,
Christian Miller Paling, Dr. Jolly Miguel

Abstract

This study explores the potential relationship between birth order and attachment styles. Birth order refers to an individual's ordinal position within the family such as firstborn, middle child, youngest, or only child, while attachment styles include secure, anxious, avoidant, and disorganized patterns of emotional bonding. The research aims to determine whether a significant correlation exists between these two variables. A correlational research design was employed, involving 106 Bachelor of Library and Information Science (BLIS) students from Bestlink College of the Philippines. Participants were selected through purposive sampling to ensure alignment with the study's objectives. Data was collected using a researcher-developed and modified questionnaire, which assessed demographic information, personality traits, family dynamics, relational values, behaviors, and attachment styles. Among the respondents: predominantly female the distribution of birth order revealed a higher proportion of middle children, followed by the youngest, firstborns, and only children. Personality assessments showed elevated scores in traits such as steadiness, influence, and conscientiousness, while dominance scored comparatively lower. This suggests a general tendency toward dependability and sociability rather than assertiveness. Within family settings, traditions and a sense of belonging were valued more highly than emotional expression and open communication. Interpersonal relationships were shaped by an emphasis on trust, communication, and appreciation. Notably, responsibility, accountability, and self-motivation emerged as the most prominent personal strengths, while emotional resilience appeared comparatively weaker. Regarding attachment styles, the secure pattern was most prevalent, with minor tendencies toward avoidant, anxious, and disorganized styles. A correlational analysis ($R = -0.01872$, $p = 0.849$) indicated no significant relationship between birth order and attachment style, thereby supporting the null hypothesis. The findings indicate that birth order does not significantly influence attachment styles among BLIS students at Bestlink College. Despite variations in birth order, the predominance of secure attachment styles suggests that other factors may play a more substantial role in emotional development. These results highlight the complexity of attachment theory and challenge common assumptions about the impact of familial positioning on psychological outcomes.

Keywords: secure attachment, anxious attachment, avoidant attachment, disorganized attachment, steadiness, influence, conscientiousness, dominance

**THE PSYCHOLOGY OF K-POP PHOTO CARD COLLECTION:
EXPLORING MOTIVATION AND EMOTIONAL BONDS**

Lara Mei Temporal, Patricia Diane Manlangit, Charline Torres,
Sheenalyn Lapidario, Gretchen Galgo, Maria Regina Baluyut

Abstract

This research explores the psychology behind K-Pop photo card collecting. To examine key aspects of the phenomenon, the researcher conducted a survey with 200 photo card collectors. Respondents shared their motivations and emotional attachments to the photo cards through a structured questionnaire. The study aims to investigate the relationship between collectors' motivations for acquiring photo cards of musical artists and the emotional bonds they form with them. Revisiting these dynamics is essential in understanding the broader context of fan culture and consumer psychology. The survey included several items addressing the foundations of collecting behavior, such as an appreciation for aesthetically pleasing items, feelings of nostalgia, opportunities for social interaction, and the potential for financial gain. The researchers employed a quantitative approach, as it enables the systematic construction and analysis of the relationship between motivation and emotional bonds in K-Pop photo card collecting. Purposive sampling was used to select participants, and the research instrument was administered to 200 K-Pop photo card collectors through an online survey. Given the broad population of collectors, the study focused only on individuals aged 18 to 30 years old who have been collecting photo cards for more than two years and have been K-pop fans for at least two years. The research instruments consisted of standardized tests, which were validated by third-party psychometricians to ensure reliability and accuracy. The results of the study show that most respondents were between 18 and 21 years old, with a higher number of female participants than male. Findings reveal that respondents generally exhibit a positive but moderate level of affection, connection, and passion toward K-pop photo cards. The researchers also identified a moderate positive correlation between the collectors' motivations and their emotional bonds with the photo cards. Motivation and emotional bonds are significant factors in K-Pop photo card collecting. To some extent, fans form emotional connections with their favorite idols by identifying with them, which evokes feelings of joy, comfort, and personal empowerment. A sense of contentment is often experienced when fans successfully search for and acquire rare photo cards. This overall process of collecting contributes to heightened fan satisfaction. These findings suggest that while K-pop photo card collecting is a desirable and constructive hobby, it may also carry potential negative outcomes if left unmoderated. A deeper understanding of both motivation and emotional bonding in this context could inform the development of school-based programs aimed at leveraging students' interests to re-engage those who are academically disengaged.

Keywords: k-pop photo cards, fan motivation, emotional bonds, fan culture, identity, joy, personal empowerment, contentment, rare collectibles, academic engagement, student programs, constructive hobby, potential negative outcomes.

**THE RELATIONSHIP OF PSYCHOLOGICAL WELL-BEING AND
EMPLOYMENT READINESS OF 4TH YEAR STUDENTS:
A BASIS FOR INTERVENTION PROGRAM**

Kimberly Biad, Jomar Balingit, Glenn Coliat, Danica Grace Dalagan,
Jennelyn Geraldo, Jonah Andrea Mapula

Abstract

The transition from academic to professional life can be challenging for students, and their level of psychological well-being plays a significant role in determining their readiness for employment. Assessing psychological well-being is, therefore, a crucial factor in supporting students' success in their future careers. This study aims to examine the relationship between psychological well-being and employment readiness, taking into account demographic variables such as age and sex. This study employed a quantitative correlational research design, utilizing simple random sampling and Slovin's formula to ensure an unbiased selection and determine the appropriate sample size. Psychological well-being was measured using Ryff's Psychological Well-Being Scale, while employment readiness was assessed through researcher-made questionnaires. A total of 208 respondents were surveyed to evaluate their levels of psychological well-being and readiness for employment. The results revealed a very strong positive relationship between psychological well-being and employment readiness, with a Pearson's correlation coefficient of $r = 0.92$ and a p -value of 0.00, which is below the 0.05 level of significance. This confirms that the relationship is statistically significant, leading to the rejection of the null hypothesis. Further analysis showed that respondents exhibited challenges in several areas: they struggled with independence and environmental adaptation, lacked personal growth and meaningful relationships, felt a lack of purpose in life, and expressed dissatisfaction with themselves. In terms of employment readiness, respondents demonstrated low confidence in their knowledge and encountered difficulties in interpersonal communication, problem-solving, and decision-making skills. The study indicates that respondents exhibit low levels of both psychological well-being and employment readiness. Based on these findings, the researchers recommend the implementation of a targeted program aimed at enhancing both areas. This proposed workshop would support students in improving key dimensions of psychological well-being such as autonomy, environmental mastery, purpose in life, positive relationships, personal growth, and self-acceptance, which are essential for employment readiness. By strengthening their psychological well-being, students will be better equipped to handle employment-related challenges, communicate effectively, and maintain motivation, thereby increasing their chances of career success. The development and implementation of the program should involve collaboration with psychologists, psychometricians, the guidance office, and the psychology department.

Keywords: psychological well-being, employment readiness, pearson correlation, student development, autonomy, environmental mastery, personal growth, purpose in life, interpersonal skills, career preparedness, workshop program, psychologist support

**THE ROLE OF SELF-ESTEEM IN ACADEMIC SUCCESS AND
MENTAL HEALTH AMONG WORKING STUDENTS**

Kynna Descutido, Angel Bea Banda, Josephine Rose Boyo, Kyla Laine Panganiban,
Edriane Visto, Michael Bersamin

Abstract

This study investigates the role of self-esteem in influencing academic success and mental health, with a specific focus on working students who face distinct challenges in managing academic responsibilities alongside employment. Given the dual pressures of work and study, self-esteem may serve as a critical factor in shaping both academic outcomes and psychological well-being. The research seeks to determine whether there is a significant relationship between self-esteem and academic success, as well as between self-esteem and mental health, among working students. The study aims to answer the following research questions: (1) Is there a significant relationship between self-esteem and academic success among working students? and (2) Is there a significant relationship between self-esteem and mental health among working students? A quantitative correlational research design was employed to examine the relationships between self-esteem, academic success, and mental health among working students. The study involved a sample of 100 working students from the Psychology Department of Bestlink College of the Philippines. To measure self-esteem, the Rosenberg Self-Esteem Scale (RSES) was utilized, while mental health was assessed using the General Health Questionnaire-12 (GHQ-12). Academic success was evaluated based on each participant's General Weighted Average (GWA). Data was analyzed using appropriate statistical techniques to determine the strength and significance of the correlations among the variables. The findings revealed a weak negative correlation between self-esteem and academic success, with a p-value of 0.15, indicating that the relationship was not statistically significant. In contrast, a stronger and statistically significant relationship was observed between self-esteem and mental health. Students with higher self-esteem tended to report more positive mental health outcomes, whereas those with lower self-esteem were more likely to experience adverse psychological effects. This relationship yielded a p-value of 0.00, confirming its statistical significance. This study underscores the critical role of self-esteem in supporting the mental health of working students. While the findings indicate that self-esteem has a limited impact on academic success, its significant influence on mental health highlights the need for targeted interventions. Academic institutions and mental health professionals are encouraged to develop and implement programs aimed at enhancing self-esteem as a means of promoting psychological well-being among working students. By addressing this key factor, institutions can contribute to the overall wellness and academic persistence of this vulnerable student population.

Keywords: self-esteem, academic success, mental health, working students, rosenberg self-esteem scale, ghq-12, general weighted average, psychological well-being, quantitative research, correlational study

**A COMPARATIVE STUDY OF AWARENESS, MINDFULNESS, AND WELL-BEING
AMONG GRADUATING STUDENTS OF BESTLINK COLLEGE OF THE PHILIPPINES**

Daizy Ann Agarin, Michelle Abbariao, James Chavez, Mikka Marimat,
Diana Marie Miras, Maria Regina Baluyut

Abstract

This study compares awareness, mindfulness, and well-being among graduating students from five departments at Bestlink College of the Philippines. It examines how varying educational experiences influence students' mental health and preparedness for post-graduate life. Mindfulness, recognized for its role in reducing stress and enhancing emotional regulation, was found to vary across academic disciplines. Technical programs tend to emphasize analytical skills, whereas humanities courses often foster greater self-reflection. This study aims to investigate how departmental differences affect students' stress levels, resilience, and preparedness for future careers. Utilizing a comparative quantitative research design, the study surveyed 500 graduating students selected through purposive sampling. The survey gathered demographic data, along with measures of mindfulness, awareness, and well-being. The instrument was validated by experts to ensure reliability and accuracy. The study found that the majority of respondents were aged 20–25 (85%) and predominantly female (56.2%), with balanced representation across departments. Students reported notable improvements in awareness, mindfulness, and well-being, particularly in recognizing personal strengths, managing emotions, and experiencing greater fulfillment in their academic journey. However, the Kruskal-Wallis H test revealed no statistically significant differences across departments, with p-values exceeding 0.05. These results suggest that departmental affiliation does not significantly impact these factors, although department-specific elements such as workload and support systems may still influence student well-being and resilience. The study recommends the development of department-specific programs and the integration of mindfulness education into academic curricula to further support student well-being. Encouraging interdepartmental collaboration may also foster a more supportive environment that better prepares students for life after graduation. The findings highlight the potential benefits of implementing mental health-focused policies in higher education to promote the well-being of graduating students. These recommendations aim to inform future initiatives targeting student mental health and post-graduation readiness. Overall, the research emphasizes the need for a holistic approach to student well-being, one that addresses both academic and emotional dimensions.

Keywords: awareness, mindfulness, well-being, graduating student, academic disciplines, mental health, stress levels, resilience, educational experiences, and influence.

**ACCEPTABILITY OF LINKSPACE: A DIGITAL TOOL FOR FOLLOW-UP
SERVICE IN BESTLINK COLLEGE OF THE PHILIPPINES**

Irhene Baguinon, Alyssa Asis, Oshein Garcia, Harvey James Malinao,
Maxine Lean Rafael, Maria Regina Baluyut

Abstract

With rising demand for mental health support, Bestlink College of the Philippines faces challenges in its guidance and counseling department, including heavy workloads, inefficient record management, and difficulty tracking student progress. This study introduces Linkspace, a digital platform designed to centralize records, automate appointment scheduling, and send reminders. Linkspace aims to enhance counseling efficiency, accessibility, responsiveness, and overall effectiveness in addressing student mental health needs. This study employs a quantitative survey design using a five-point Likert scale to assess the acceptability of Linkspace among purposively selected guidance personnel at Bestlink College campuses in Novaliches and Fairview, Quezon City. Demographic variables age, gender, length of service, and designation are analyzed using comparative statistics to determine their influence on platform acceptability. Data analysis provides insights into Linkspace's usability and guides recommendations for broader implementation in educational counseling services. Findings demonstrated high acceptability of Linkspace across key features: data management, appointment scheduling, user authentication, and platform accessibility. Comparative analyses revealed that age, gender, years of service, and job title did not significantly affect acceptability scores. As a result, Linkspace was shown to be broadly applicable and beneficial to diverse guidance personnel, indicating its potential to streamline counseling processes and improve support for students. The study highlighted the importance of user-friendly, adaptable digital tools that align with users' technological fluency. By enhancing efficiency, organization, and engagement, Linkspace emerged as a scalable solution for improving follow-up services in educational settings. Future enhancements in security, data privacy, and user management were recommended to strengthen its reliability. The study underscored the growing need for technology-driven approaches in mental health services and paved the way for more integrated, data-driven counseling solutions in academic institutions.

Keywords: digital tool, follow-up service, acceptability, guidance counseling, linkspace

**COPING MECHANISM OF SINGLE PARENT STUDENTS IN BESTLINK
COLLEGE OF THE PHILIPPINES, QUEZON CITY**

Anna Maria Villamor, Princess Althea Caindoc, Nathally Afaga,
Josephine Cabutotan, Aira Magbanua, Maria Regina Baluyut

Abstract

This study investigates the coping mechanisms of single-parent students at Bestlink College of the Philippines, Quezon City. This research aims to understand the strategies these students employ to manage academic, emotional, and personal challenges while balancing roles as both students and parents. This study uses a quasi-experimental design with purposive sampling. Data are collected through a validated questionnaire administered to 114 single-parent students. Reliability and validity of the instrument are confirmed through expert review and pilot testing. Collected data are analyzed using descriptive statistics and inferential tests to examine differences across demographic variables. The findings revealed that single-parent students primarily utilized cognitive appraisal, emotional regulation, and problem-solving strategies to cope with their responsibilities. Family support emerged as a crucial resource, while peer support networks were underutilized. Financial difficulties, time management challenges, emotional stress, lack of support systems, and health issues were identified as the most common problems. Statistical analysis showed no significant differences in coping mechanisms based on age, gender, or number of children, indicating that demographic factors did not influence how challenges were managed. The study highlighted the need for institutional interventions to address the unique needs of single-parent students. As a result, recommendations included enhancing counseling services, strengthening peer support networks, developing comprehensive financial assistance programs, and promoting faculty and administrative awareness of single-parent student challenges. These measures aimed to create a more inclusive and supportive academic environment that fostered the well-being and academic success of this student population.

Keywords: single-parent students, coping mechanisms, academic challenges, emotional stress, support systems, higher education, institutional interventions

**CRITICAL THINKING AND DECISION MAKING OF SELECTED FACULTY
MEMBERS OF BESTLINK COLLEGE OF THE PHILIPPINES**

Ednalyn Pastoral, Ana Kiana Mikaela Almine, Mark Ocean Corporal, James Marabulas,
Chelice May Mercado, Maria Regina Baluyut

Abstract

This study examines how critical thinking skills relate to decision-making among selected faculty members of Bestlink College of the Philippines and identifies the challenges they face. A correlational research design is used to determine the strength and direction of the relationship between critical thinking and decision-making competencies. This study uses a stratified sampling technique to select eighty-one respondents from a total population of 271 full-time faculty members. The sample size is determined using Slovin's formula with a 9.33 percent margin of error and a 91.67 percent confidence level. A structured questionnaire validated by subject-matter experts measures critical thinking dimensions (fairness, relevance, accuracy, clarity, logic) and decision-making components (choices, alternatives, evaluation). Collected data are analyzed using descriptive statistics and Pearson's correlation coefficient. Results showed a very strong positive correlation between critical thinking and decision-making ($r = 0.89$, $p < 0.01$). Faculty members scored moderately high on critical thinking (mean = 3.42) and decision making (mean = 3.51). High subscale scores were recorded for fairness, relevance, and accuracy in critical thinking, while clarity and logic scored lower. Decision-making data revealed strengths in systematic analysis for some faculty and heavy reliance on intuition for others. The choices subscale indicated insufficient caution in risk assessment, the alternatives showed preference for intuition over analytical options, and the evaluation highlighted a need to improve source appraisal. These patterns aligned with reported challenges such as intuition overriding analysis, emotional interference, and cognitive overload. The findings highlighted gaps in clarity, logical reasoning, and risk evaluation despite strong overall competencies. As a result, targeted interventions such as critical thinking workshops, decision-making seminars, and training on source evaluation, were recommended to strengthen these skills. Enhancing these competencies was expected to improve faculty effectiveness, instructional quality, and institutional decision outcomes.

Keywords: critical thinking, decision making, systematic analysis, intuition, faculty development, reflective thinking, cognitive overload

**EFFECT OF CONVERSATIONAL ARTIFICIAL INTELLIGENCE ON HUMAN
EMOTIONS: A BASIS FOR GUIDELINES IN DEVELOPING
EMOTIONAL SUPPORT CHATBOTS**

Lovely Joy Boticalao, Kyle Conge, Iconie Orquilla, Christian Padon,
Charlene Salvatierra, Maria Regina Baluyut

Abstract

This study explores the impact of conversational artificial intelligence (AI) on human emotions and offers insights for enhancing emotional support chatbots. As AI becomes increasingly woven into our daily lives, it is crucial to understand its effects on users' emotional well-being. The research focuses on five emotional dimensions: subjective experience, physiological response, expressive behavior, cognitive appraisal, and behavioral response. It also examines whether factors such as age, gender, and frequency of AI use affect emotional reactions. Additionally, the study addresses the challenges users encounter during AI interactions. By identifying the strengths and limitations of AI in emotional engagement, this research provides recommendations for improving AI's emotional intelligence. The study employed a descriptive-comparative approach, involving a total sample of 150 third-year psychology students at Bestlink College of the Philippines, who were selected through purposive sampling. Data were gathered using questionnaires that assessed demographic information, emotional responses to AI, and the difficulties encountered. The responses were measured using a four-point Likert scale, evaluating AI's impact across five emotional dimensions. Statistical tools were utilized to analyze the relationships between demographic factors, emotional reactions, and reported user challenges. The study found that age and gender did not significantly affect emotional responses to interactions with AI; however, the frequency of usage was a significant factor. Frequent users displayed stronger emotional reactions, both positive and negative. Despite some positive engagement, the overall experience with AI was negative. Participants described it as emotionally unresponsive, impersonal, and lacking meaningful support, which ultimately led to decreased trust and reliance on AI for emotional assistance. The results indicate that while conversational AI can facilitate interactions, it lacks the emotional intelligence needed for providing emotional support. AI's inability to recognize and appropriately respond to human emotions, along with user concerns, reveals a significant design gap. To create a more supportive user experience, it is essential to enhance AI's emotional engagement, personalization, and trust-building mechanisms. Future research should focus on developing advanced emotional recognition technologies to improve AI responsiveness, which will lead to more effective emotional support chatbots. Addressing these limitations will help bridge the gap between AI capabilities and human emotional needs.

Keywords: conversational artificial intelligence, human emotions, emotional support chatbots, ai interaction, mental health technology, user experience, human-ai communication, emotional response, ai ethics, empathetic computing, psychological impact, chatbot

**IMPACT OF FLEXIBLE WORK ARRANGEMENT ON WORKERS
PRODUCTIVITY AT ROLETT MARKETING**

Comora Salvacion, Kimberly Bojocan, Patricia Gobris, Laila May Gilber, John Miguel Dino,
Mary Joy Camille Vallejos, Kimberly Joyce Embile

Abstract

This study examines the impact of flexible work arrangements (FWAs) on employee productivity. With the growing adoption of FWAs, it is essential to assess their effects on work efficiency and overall job performance. Focusing on practices such as job-sharing and remote work, the study evaluates their influence on task completion, work efficiency, and performance at Rolett Marketing. Although flexible scheduling is often associated with enhanced motivation and improved work-life balance, it can also pose challenges, including communication difficulties and reduced supervision. Gaining a deeper understanding of these effects will enable organizations to develop strategies that optimize productivity while addressing potential limitations. This study utilized a quantitative correlational research design to examine the relationship between flexible work arrangements (FWAs) and employee productivity. Data was collected through a structured survey distributed to 50 employees at Rolett Marketing. The survey evaluated key productivity factors such as communication, work efficiency, time management, and job satisfaction. Respondents provided insights into their experiences with FWAs, identifying both the advantages and challenges of flexible work. The findings reveal that flexible work arrangements (FWAs) positively affect employee productivity by granting workers greater control over their schedules, thereby improving motivation and work-life balance. Many employees reported enhanced efficiency, largely due to reduced commuting time and fewer workplace interruptions. However, challenges such as communication difficulties, limited supervision, and distractions in non-traditional work settings were also noted. These issues highlight the necessity for well-structured management strategies to optimize the advantages of FWAs. To mitigate the challenges posed by flexible work arrangements, the study recommends adopting structured communication protocols, defining clear performance expectations, and implementing regular progress assessments. Rolett Marketing can optimize FWAs by utilizing digital collaboration platforms, conducting frequent check-ins, and cultivating a results-driven organizational culture. These strategies are essential for maintaining employee engagement and accountability, thereby ensuring sustained productivity. In conclusion, the study finds that with effective management and clear policies, flexible work arrangements can greatly enhance overall workplace efficiency.

Keywords: flexible work arrangements, employee productivity, remote work, job-sharing, communication strategies, performance management, digital collaboration, work-life balance, workplace efficiency

**LEVEL OF INFLUENCE OF COMPUTER EXERTION AMONG GRADE 12 HUMANITIES
AND SOCIAL SCIENCE STUDENTS TO THEIR ACADEMIC PERFORMANCE
AT BESTLINK COLLEGE OF THE PHILIPPINES**

Princes Mae Bequiso, Clark Acbang, Jancen Azaña, Lawrence Murallon,
Ariane Jame Oraa, Ronel Rivera, Rica Mae Berja

Abstract

Technological advancements have revolutionized how we live, work, and communicate, creating new opportunities to enhance human skills and solve complex problems. However, disparities persist in access to computer-based activities, particularly among students without reliable internet or digital skills. Computers can help close these gaps by providing supportive educational tools, especially benefiting students with diverse learning needs. Chapter 2 examines how computer technology can enrich classroom learning by fostering active engagement, collaborative group work, and meaningful real-world connections. This study investigates the effect of computer use on the academic performance of Grade 12 Humanities and Social Sciences students at Bestlink College of the Philippines. Data was collected through a survey administered to 210 students. Chapter 3 details the data analysis and interpretation using various analytical methods to derive key findings. Table 1 shows that computer use highly influences critical thinking, with a composite mean of 3.42. Table 2 indicates a similar high influence on collaboration, with a mean of 3.38. Table 3 reports a strong impact on creativity, with a composite mean of 3.41. Table 4 summarizes these results, showing an overall weighted mean of 3.4, reflecting a high level of influence. Table 5 reveals that 154 students (73.33%) experienced software bugs. Table 6 outlines a proposed action plan to further enhance the positive effects of computer use on academic performance. Chapter 4 summarizes the findings, conclusions, and recommendations. The study concludes that computer use significantly enhances students' critical thinking, teamwork, and creativity. However, software issues remain a common challenge for students. To improve academic outcomes, it is recommended to implement quality digital tools that support the development of critical thinking, collaboration, and creativity.

Keywords: computer use, academic performance, critical thinking, teamwork, creativity, software issues, digital tools, grade 12 students, humanities and social sciences, bestlink college of the philippines

**PERCEIVED LINGUISTIC DISCRIMINATION, LONELINESS AND SOCIAL ISOLATION
OF NATIVE BISAYA BCP STUDENTS: A BASIS FOR AWARENESS CAMPAIGN**

Femmie Zacate, Regine Castillo, Marlon Llamera, Nica Eilla Portal,
Khasan Jr Rangaig, Jonah Andrea Mapula

Abstract

This study explores the experiences of native Bisaya students at Bestlink College who face language-based discrimination. Many of these students feel isolated and excluded in environments where Tagalog and English dominate communication. Using Goffman's Stigma Theory, the research examines how such language bias affects their feelings of loneliness, social isolation, and sense of belonging. The study seeks to understand the connections among these issues and to recommend strategies for schools to create a more inclusive and supportive atmosphere for Bisaya-speaking students. This study used a quantitative research approach and purposive sampling to select 43 native Bisaya students from Bestlink College of the Philippines. Data collection involved three questionnaires: a custom Linguistic Discrimination Scale, the UCLA Loneliness Scale, and the Lubben Social Network Scale. These tools assessed the students' experiences of language discrimination, feelings of loneliness, and social isolation. The data were analyzed through statistical techniques, such as Pearson's correlation, to explore the relationships between these factors. Although students reported moderate levels of perceived linguistic discrimination, they generally exhibited moderate to high levels of social engagement, maintaining sufficient social networks. The statistical analysis, however, revealed only weak correlations between linguistic discrimination and loneliness ($r = 0.09$), as well as between linguistic discrimination and social isolation ($r = 0.33$). This indicates that experiences of linguistic discrimination and social isolation are context-dependent rather than constant across all situations. The study revealed that native Bisaya students at Bestlink College of the Philippines encounter linguistic discrimination manifested through accent bias, code-switching, language shaming, and academic judgments. Despite these challenges, there was no significant statistical link between such discrimination and the students' experiences of loneliness or social isolation. Most participants reported moderate to high social participation, with feelings of loneliness being infrequent. This suggests that while linguistic discrimination exists, it does not markedly affect their emotional or social health. The study emphasizes the need for further investigation into contextual factors and advocates for an awareness campaign to reduce linguistic bias and enhance social inclusion for native Bisaya students.

Keywords: native bisaya students, linguistic discrimination, accent bias, code-switching, language shaming, academic judgment, loneliness, social isolation, social engagement, bestlink college of the philippines, social inclusion, awareness campaign.

**SELF-ESTEEM OF FACULTY MEMBERS OF BESTLINK
COLLEGE OF THE PHILIPPINES, QUEZON CITY**

Joyce Ann Tonquin, Jhulie Anne Bacus, Nicole Angela Bareng, Patricia Mae Lamberte,
Jellica Mari Sawan, Maria Regina Baluyut

Abstract

This study aimed to assess the self-esteem levels of faculty members at Bestlink College of the Philippines, Quezon City. It explored key factors influencing self-esteem, including identity, competence, belongingness, security, and purpose. The research also examined the impact of demographic variables such as age, gender, department affiliation, and years of teaching experience on faculty members' self-esteem. Comparative research design was employed in this study. Data was collected from 85 faculty members using a structured questionnaire based on a 4-point Likert scale. Surveys were administered through various methods: on-campus, online platforms, and face-to-face interactions during the 2024–2025 academic year. The data were analyzed using statistical tools such as frequency analysis, weighted mean, T-tests, and ANOVA to identify patterns and relationships. The results revealed that among the five factors, identity scored the highest self-esteem level with a mean of 3.58, while security received the lowest at 3.06. Demographic variables such as age, gender, and department affiliation did not significantly influence self-esteem levels. However, years of experience showed a notable impact, faculty members with five or more years of experience exhibited significantly higher self-esteem compared to those with fewer years of service. This study contributes to a deeper understanding of the self-esteem levels among faculty members and the factors that influence them. It underscores the significant role of teaching experience in enhancing self-esteem and suggests that institutional support, job security, and professional development initiatives can further promote faculty well-being. The findings advocate for future efforts aimed at addressing self-esteem-related challenges and fostering a more supportive, empowering work environment for educators.

Keywords: faculty self-esteem, identity, competence, belongingness, security, purpose, demographic factors, years of experience, higher education, institutional support, job security, professional development, faculty well-being, bestlink college of the philip

**THE EFFECTS OF CHATGPT AS EMOTIONAL SUPPORT AMONG
BACHELOR OF SCIENCE IN PSYCHOLOGY STUDENTS AT
BESTLINK COLLEGE OF THE PHILIPPINES**

Pauline Karla Ayuban, Joanna Mae Amor, Destine Anadon,
Valorie Shane Limbaga, Maria Regina Baluyut

Abstract

The growing popularity of mental health chatbots presents an accessible alternative for emotional support, particularly for students who encounter barriers in accessing professional mental health services. This study investigates the effects of ChatGPT as an emotional support tool for Bachelor of Science in Psychology students at Bestlink College of the Philippines. It aims to assess its influence on emotional well-being, self-awareness, coping mechanisms, and access to immediate support. This study utilizes quantitative comparative research design and employs stratified sampling to analyze ChatGPT's impact. A total of 118 Psychology students participated in the study. Respondents were categorized according to age, gender, and frequency of chatbot usage. A structured survey questionnaire was used to measure perceived effects on emotional well-being, self-awareness, coping skills, and real-time support access. The findings revealed that ChatGPT was moderately effective in providing immediate emotional support (mean = 2.73) but showed limited influence on emotional well-being (mean = 2.32), self-awareness (mean = 2.47), and coping skills (mean = 2.41). Statistical analysis indicated no significant differences in perceived support based on demographic factors such as age, gender, or usage frequency ($p > 0.05$). Commonly reported limitations included lack of personalized responses, inadequate suggestions for coping strategies, and minimal encouragement for emotional introspection. The results suggest that ChatGPT serves as a supplementary tool for emotional support but remains limited in providing deeply personalized and adaptive psychological guidance. Enhancing chatbot features to include more tailored feedback and reflective prompts is recommended to increase its effectiveness as a mental health support resource for students.

Keywords: chatgpt, emotional support, mental health, psychology students, coping skills, self-awareness, immediate support, digital mental health, artificial intelligence, chatbot limitations

**TRASH TO TREASURE: EFFICIENCY OF RECYCLING FOR WASTE REDUCTION AS
PERCEIVED BY SELECTED GRADE 12 HUMANITIES AND SOCIAL SCIENCES
STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Claudia Arbis, Camila Buenaflor, Princess Nicole Deriquito, Angela May Gonzales,
Michael Angelo Porras, Christopher Azares

Abstract

Recycling is a key waste management strategy aimed at minimizing waste generation. It involves redesigning or reprocessing of recyclable materials to extend their usability and reduce the harmful impacts of improper waste disposal on both human health and the environment. Baccini and Brunner (1991) introduced the Material Flow Analysis (MFA) theory, which illustrates the origin, usage, and final destination of materials. This approach promotes responsible waste management by helping individuals, particularly students, understand the life cycle of materials. This study aims to evaluate the efficiency of recycling in waste reduction, focusing on its economic impact, its significance as a waste management practice, and its contribution to environmental sustainability. The researchers employed a descriptive-evaluative research design to assess the efficiency of recycling practices. A cluster sampling technique was utilized to minimize selection bias and ensure a representative group of respondents. Data were collected through a survey questionnaire administered to two hundred (200) Grade 12 Humanities and Social Sciences (HUMSS) students at Bestlink College of the Philippines. The results of the study demonstrate the efficiency of recycling in terms of its economic role, contribution to waste management, and impact on environmental sustainability, with a composite mean of 3.43, verbally interpreted as strongly agree. However, several challenges were identified in the use of recyclable materials. Among the 200 surveyed students, 140 (22.99%) reported issues related to contamination, 133 (21.84%) cited a lack of awareness regarding the benefits of recycling, and 117 (19.21%) expressed concerns about potential health risks. In response to these findings, the researchers proposed an action plan aimed at enhancing recycling efficiency for waste reduction. Key strategies include the implementation of proper waste segregation practices, the active involvement of students in school-based waste management campaigns, and the development of awareness programs targeting students, teachers, administrators, and school organizations. The implementation of this action plan is recommended over three months. The discussion presents a summary of the perceived efficiency of recycling among selected Grade 12 Humanities and Social Sciences students at Bestlink College of the Philippines. Based on the findings, the researchers recommend that schools establish organizations or implement programs focused on waste reduction. These initiatives should aim to educate all members of the school community on proper waste management practices and promote strategies that enhance the efficiency of recycling within the school environment.

Keywords: recycling efficiency, waste management, environmental sustainability, student awareness, waste segregation, school-based programs, humanities and social sciences, bestlink college of the philippines, descriptive-evaluative design, material flow analysis

Natural Science and Mathematics, Curriculum, and Instructions

**ROBOTIC DEXTROSE STAND USING ESP32 AND ARDUINO MEGA
WITH HUSKYLENS TRACKING AND BMS REGULATOR**

Gerald Badidoy, Baby Jane Albiro, Roxanne Balanza, Quekeneth Lacanaria,
Denverg Legarde, Reynante Ponay

Abstract

The Dextrose Stand is a crucial medical apparatus used during intravenous (IV) therapy, enabling efficient delivery of dextrose solutions to patients. However, traditional stands require manual handling by nurses or patients, increasing the risk of falls and IV-line disconnections. This study, titled "Robotic Dextrose Stand Using ESP32 and Arduino Mega with HuskyLens Tracking and BMS Regulator," introduces an automated solution that follows the patient using AprilTag technology, allowing for safer and more independent movement within medical facilities. It is also equipped with real-time IV fluid monitoring, reducing the need for manual checks and easing the workload of healthcare providers. The researchers adopted the Experimental Prototyping Method, which involves creating a functional prototype to test a specific hypothesis. This approach allows for the evaluation of the concept's feasibility and effectiveness prior to full-scale production. By identifying design flaws and usability concerns early in the development process, this method minimizes the risk of costly errors and ensures a more refined and user-centered final product. The Robotic Dextrose Stand, developed using ESP32 and Arduino Mega with HuskyLens Tracking and a BMS Regulator, is a functional prototype designed to support patients during intravenous therapy and reduce nurses' workload. The integration of advanced microcontrollers and sensors enables autonomous movement and real-time IV fluid monitoring. Evaluation results showed high ratings in efficiency, sustainability, safety, and cost-effectiveness. The study concludes that the combined use of Arduino Mega and ESP32 is effective in ensuring the reliability and functionality of the robotic dextrose stand. The Robotic Dextrose Stand using ESP32 and Arduino Mega with HuskyLens Tracking and BMS Regulator demonstrates a meaningful advancement in IV solution administration. Through the integration of automation and tracking technology, the system significantly improves patient mobility and reduces manual workload for healthcare providers. Its human-tracking feature enables patients to move more freely without compromising IV connectivity, while nurses benefit from reduced routine monitoring tasks. This innovation underscores the potential of technology to enhance healthcare delivery, streamline processes, and improve both patient outcomes and caregiver efficiency.

Keywords: robotic dextrose stand, esp32, arduino mega, huskylens, iv fluid monitoring, healthcare automation, patient mobility, bms regulator, nursing efficiency, medical technology

**AN INVESTIGATORY OF SERPENTINA (SERPENTINA RAUWOLFIA)
AS PAIN RELIEVER ESSENTIAL OIL**

Ashlei Seph Mallari, Nestley Anne Ramos, Vince Jerald Donguya,
Eily Jemwel Consuelo, Mizzy Mahinay, Roldan Bamondi

Abstract

Rauwolfia serpentina is a medicinal plant renowned for its long-standing use in traditional medicine and its diverse pharmacological effects, largely attributed to its monoterpene indole alkaloids. While extensively studied for its internal therapeutic applications, its potential as a topical pain-relieving essential oil remains largely underexplored. This study investigates the efficacy and safety of a *Rauwolfia serpentina* essential oil formulation for external use in pain management. It aims to fill critical knowledge gaps related to optimal concentrations, ingredient interactions, long-term effects, and specific pain conditions. The research aspires to develop a safe, effective, and sustainable natural alternative for topical pain relief. This study adopted a quantitative-experimental research approach, utilizing purposive sampling to select respondents. A structured survey questionnaire was used to evaluate the acceptability of the proposed product based on five criteria: texture and consistency, cooling effect, fragrance and aroma, ease of use, and overall presentation. Data was analyzed using descriptive statistics such as frequency, percentage, Likert scale, and weighted mean, as well as inferential tools including the t-test and f-test to determine any significant differences between the evaluations of the two respondent groups. The results of the investigation indicate that the proposed model is considered “highly acceptable” in terms of product texture and consistency, cooling effect, fragrance and aroma, ease of use, and overall presentation. The chemists’ evaluation yielded an overall weighted mean of 3.36 with a variance of 0.455, a computed t-value of 0.432, and a degree of freedom of 13, compared to a t-critical value of 3.012 at $\alpha = 0.01$. Similarly, the dermatologists’ evaluation produced a weighted mean of 3.54 with a variance of 0.375, and the same computed t-value and degrees of freedom. Since the computed t-value is less than the critical value, there is no significant difference between the assessments of the two groups. Therefore, the evaluations of both chemists and dermatologists support the acceptability of the proposed product model. This study presents initial evidence supporting the acceptability of a *Rauwolfia serpentina* essential oil formulation for topical application. While the findings are encouraging, further research is needed to confirm its pain-relieving efficacy, optimize the formulation, and assess its long-term safety and effectiveness across various pain conditions. This research serves as a foundation for future clinical studies and deeper exploration of *Rauwolfia serpentina* as a natural alternative for pain management.

Keywords: *rauwolfia serpentina*, essential oil, topical application, natural pain reliever, analgesic properties, product acceptability, formulation, clinical trials, long-term effects, traditional medicine.

**AN INVESTIGATORY PROJECT OF COMBINING MANGO SEED
KERNEL AND COCONUT OIL AS A CONDITIONER BAR**

Maelen Denise Barro, Nor Laina Dimasangka, Paulo Lucero, Jinkee Rose Lumabos, Ricardo Jr
Montañez, John Clarence Oliva, Roldan Bamondi

Abstract

Mango seed kernels and coconut oil contain natural antioxidants and essential oils that deeply hydrate and protect the skin, promoting a smoother texture and reducing visible signs of aging. These ingredients also nourish the scalp and strengthen the hair, contributing to healthier and shinier strands. With the growing demand for environmentally friendly and sustainable personal care products, conditioner bars made from natural sources have become increasingly popular. This study investigates the potential of combining mango seed kernel and coconut oil in the formulation of a body and hair conditioner bar aimed at achieving soft, radiant skin and smooth, healthy hair. The study adopted a quantitative-descriptive research approach using purposive sampling. Survey questionnaires were used to evaluate the level of acceptability of the proposed product based on its ingredients and preparation process, moisturizing effect, smoothness, suitability for hair and scalp, and environmental friendliness. Descriptive statistics, specifically percentages, summarized the respondent profiles of chemists and dermatologists. The weighted mean was calculated to determine the average scores based on assigned weights. A t-test was employed to assess any significant difference between the evaluations of the two respondent groups, five (5) chemists and five (5) dermatologists. The findings indicate that the proposed product is perceived as “highly acceptable” based on key criteria such as accuracy, ingredients and procedure, moisturizing ability, smoothness, hair and scalp compatibility, and eco-friendliness. The chemists reported an overall mean rating of 3.16, interpreted as “acceptable,” while the dermatologists gave a slightly higher overall mean of 3.38, classified as “highly acceptable.” The variance for the chemists was 0.136, and 0.236 for the dermatologists. With a t-computed value of 0.821, a t-critical value of 2.750 at a 0.01 significance level, and 30 degrees of freedom, the statistical analysis reveals no significant difference between the assessments of the two respondent groups. To further improve the product, respondents suggested adopting a cold process method using sodium hydroxide, enhancing the fragrance, and incorporating natural, plant-based colorants.

Keywords: mango kernel, coconut oil, conditioner bar, natural skincare, eco-friendly, moisturizing, antioxidants, cold process, sodium hydroxide, natural colorant, fragrance, chemist evaluation, dermatologist evaluation, product acceptability.

AN INVESTIGATORY PROJECT OF COMBINING TAMANU LEAVES (CALOPHYLLUM INOPHYLLUM) AND SHEA BUTTER (VITELLARIA PARADOXA)

Jhanela Rose Adano, Eloiyd Asas, Shanne Buenaventura, John Raine Catubay,
Cassandra Chloe Dela Cruz, Kent Herrera, Roldan Bamondi

Abstract

Tamanu leaves (*Calophyllum inophyllum*) and Shea butter (*Vitellaria paradoxa*) are well known for their beneficial effects on the skin. Tamanu leaves, traditionally used in tropical regions, offer restorative and anti-inflammatory properties, making them effective in treating various skin conditions. Shea butter, highly valued in African cultures, is recognized for its intense moisturizing capabilities, natural sun protection, and healing effects on the skin. This study aims to investigate the potential of combining Tamanu leaves and Shea butter as a natural and effective protective sunscreen. This study utilized an experimental research design with a purposive sampling technique. A survey questionnaire served as the primary research instrument to evaluate the acceptability of Tamanu leaves and Shea butter as a sunscreen formulation, focusing on ingredients and procedure, moisturizing properties, ultraviolet protection efficacy, skin compatibility, and product presentation. The collected data were analyzed using frequency, percentage, weighted mean, and t-test to determine whether a significant difference existed between the evaluations of the two respondent groups. The investigatory results on the combination of tamanu leaves (*Calophyllum inophyllum*) and shea butter (*Vitellaria paradoxa*) as a sunscreen product were rated as “acceptable” in terms of ingredients and procedure, moisturizing property, ultraviolet protection efficacy, skin suitability, and presentation. The chemists recorded an overall mean of 3.10 with a variance of 0.139, while the dermatologists had an overall mean of 3.06 with a variance of 0.340. With a significance level (α) of 0.05, degrees of freedom at 47, a t-critical value of 2.012, and a t-computed value of 0.142, the results indicate no significant difference between the assessments of the two respondent groups. Tamanu leaves and shea butter were found to be acceptable and effective as sunscreen. However, respondents provided several recommendations for improvement. They suggested using titanium dioxide instead of zinc oxide and reducing the product's thickness for easier application. Additionally, they recommended changing the current jar packaging to one with a metallic cap, including a scoop or magnetic feature, or switching to a pump bottle or tube-type container. Implementing these suggestions is encouraged to enhance the product's quality, usability, and consumer appeal.

Keywords: tamanu leaves, shea butter, sunscreen, titanium dioxide, zinc oxide, product improvement, packaging, uv protection, skincare, natural ingredients.

**AN INVESTIGATORY PROJECT OF KAPENG BARAKO
(COFFEA LIBERICA) AS A NATURAL LIP SCRUB**

Cyrin Joy Dizon, John Vincent Aguilar, Reyndon Galabin,
Kier Aldwin Lacson, Jhon Curl Asoy, Roldan Bamondi

Abstract

Coffea liberica, locally known as Kapeng Barako, is a prominent coffee variety in the Philippines, particularly cultivated in the provinces of Batangas and Cavite. Celebrated for its strong flavor and distinctive aroma, it has become deeply embedded in Filipino culture and tradition. While primarily consumed as a beverage, Kapeng Barako possesses natural properties that may be beneficial for cosmetic use. This study aims to explore the potential of Kapeng Barako as a primary ingredient in a natural lip scrub, emphasizing its exfoliating qualities, moisturizing benefits, and overall safety for application on sensitive areas such as the lips. By investigating its viability as a skincare product, the study seeks to promote a sustainable, culturally rooted alternative that aligns with the increasing consumer demand for natural and eco-conscious personal care solutions. This study adopted a quantitative-experimental research design and employed a purposive sampling method to select participants who met specific criteria relevant to the investigation. To evaluate the acceptability of the proposed Kapeng Barako-based lip scrub, a structured survey questionnaire was utilized as the primary data-gathering instrument. The assessment focused on key aspects, including the formulation and procedure, hydrating and moisturizing effects, lip exfoliation properties, affordability, and overall product presentation. Statistical tools such as frequency and percentage, rating scale, weighted mean, and t-test were applied to analyze the data and identify significant differences in the evaluations made by the two distinct groups of respondents. The findings of the study reveal that the proposed Kapeng Barako lip scrub was rated as "Acceptable" across all evaluated criteria, namely: ingredients and procedure, hydrating and moisturizing effects, lip exfoliation, affordability, and presentation. The Chemists gave an overall weighted mean of 2.98 with a variance of 0.088, while the Dermatologists reported a weighted mean of 3.47 with a variance of 0.324. A t-computed value of 1.700 was obtained, with 326 degrees of freedom, and compared against the t-critical value of 1.987 at a 0.05 level of significance. Since the t-computed value did not exceed the t-critical value, the difference between the evaluations of the two groups is not statistically significant. Thus, it can be concluded that both groups accept the product, affirming its potential suitability for cosmetic application. To support the successful development of the proposed Kapeng Barako lip scrub, the researchers recommend collaborating with professionals and experts in cosmetic product formulation and design. Feedback from the respondents highlighted key areas for improvement: enhancing the product's moisturizing effect through the incorporation of glycerin, refining the texture by grinding the coffee grounds into finer particles to ensure gentler exfoliation, and improving the packaging design to make the product more visually appealing and marketable to consumers. These recommendations are intended to optimize both the functionality and aesthetic appeal of the product, thereby increasing its overall acceptability and commercial potential.

Keywords: kapeng barako, coffea liberica, lip scrub, natural exfoliant, moisturizing effect, glycerin, cosmetic formulation, packaging design, product development, consumer appeal

**AN INVESTIGATORY PROJECT OF LANZONES (LANSIUM
DOMESTICUM) PEEL AS A MOSQUITO COIL**

Princess Eloiza Busalanan, Cathy Adepin, Jenferson Asid, Fritz Sondrix Belarmino,
Marico Kyle Siervo, Roldan Bamondi

Abstract

Mosquito-borne diseases remain a significant public health concern, particularly in tropical and subtropical regions. This study investigated the potential of Lanzones (*Lansium domesticum*) peels as a natural and sustainable ingredient in the formulation of mosquito coils. The research aimed to develop an effective alternative to conventional mosquito coils, which often contain synthetic chemicals that pose health and environmental risks. By utilizing fruit waste as a primary component, the study promotes both environmental sustainability and public safety, offering a chemical-free, eco-friendly solution for mosquito control. This study utilized an experimental research design combined with a purposive sampling technique to select respondents. A survey questionnaire served as the primary instrument to assess the acceptability of the Lanzones peel mosquito coil based on key factors: ingredients and formulation procedure, mosquito repellency, usability, coverage effectiveness, and toxicity. Data was analyzed through frequency and percentage distributions, weighted means, and t-tests to evaluate whether significant differences existed between the assessments of the two respondent groups. The investigation results show that the Lanzones peel mosquito coil was rated as “Acceptable” in terms of ingredients and procedure, mosquito repellency, usability, coverage, and toxicity. The Chemists gave an overall weighted mean of 3.14 with a variance of 0.228, a t-computed value of 1.588, and 326 degrees of freedom, compared to a t-critical value of 2.030 ($\alpha = 0.05$). The Chemistry Teachers rated the coil with a weighted mean of 2.55, variance of 0.448, and a t-computed value of 0.7 with the same degrees of freedom and critical value. Since both groups’ t-computed values are less than the critical value, no significant difference was found between their assessments. Therefore, the product’s acceptability is supported by both groups. Lanzones peel mosquito coils were deemed acceptable and effective as a natural mosquito repellent. However, several improvements were recommended to enhance its performance. Respondents advised reducing the charcoal content to better highlight the natural scent of Lanzones peel. The incorporation of gum as a binder was suggested to improve the coil’s consistency and appearance. Additionally, enhancing the coil’s combustibility was recommended to extend its burning time and mosquito-repelling effectiveness. Adjustments to the coil’s formulation were also proposed to improve its ignition and burning quality, while ensuring that Lanzones peel remain the primary ingredient to maintain its repellent properties.

Keywords: lanzones peel, lansium domesticum, mosquito coil, mosquito-borne diseases, natural repellent, eco-friendly innovation, fruit waste utilization, chemical-free alternative, public health, environmental sustainability

**DRIED GUMAMELA FLOWER (HIBISCUS SABDARIFFA)
AS AN AGGREGATE TO BODY WASH**

Ann Kimberly Pabalate, Jhoey Jean Palima, Marjorie Caldon,
John Cyrus Abad, Rich Reizel Real, Roldan Bamondi

Abstract

Body washes play a vital role in cleansing and revitalizing the skin, and the integration of natural exfoliants can significantly elevate their performance. The dried Gumamela flower (*Hibiscus sabdariffa*) emerges as an innovative and sustainable exfoliating agent, owing to its rich phytochemical profile and skin-beneficial properties such as antioxidant, anti-inflammatory, and moisturizing effects. Incorporating this natural ingredient not only facilitates gentle yet effective exfoliation but also aligns with the growing consumer demand for eco-friendly and chemical-free skincare solutions. This study seeks to evaluate the practicality and efficacy of using dried Gumamela flower as a natural aggregate in body wash formulations, aiming to enhance their cleansing efficiency, promote skin health, and contribute to sustainable cosmetic development. A quantitative experimental approach was adopted in this study, with purposive sampling employed to select participants. The acceptability of dried Gumamela flower (*Hibiscus sabdariffa*) as an exfoliating additive in body wash formulations was assessed through survey questionnaires. Key evaluation criteria included ease of rinsing, moisturizing capability, cleansing effectiveness, fragrance, and product presentation. Weighted mean scores were computed to summarize overall acceptability, while an independent t-test was used to compare responses between two expert panels comprising five chemists and five dermatologists. The evaluation of the body wash containing dried Gumamela flower across parameters, ease of rinsing, moisturizing effect, cleansing efficacy, fragrance, and presentation, was rated as "highly acceptable." The chemists' group yielded an overall mean score of 3.50, corresponding to "highly acceptable," while the dermatologists' group obtained a mean score of 3.04, interpreted as "acceptable." The variance within the chemists' responses was 0.093, whereas that of the dermatologists was 0.454. Statistical analysis using an independent t-test resulted in a computed t-value of 0.951, which is below the critical t-value of 3.355 ($\alpha = 0.01$, $df = 8$). This indicates no statistically significant difference between the assessments of the two expert groups. To further optimize the body wash formulation, the respondents offered several insightful recommendations. Foremost, the product's current strong odor should be carefully moderated either by reducing its intensity or by reformulating to introduce a more appealing and balanced fragrance profile that aligns with consumer preferences. Additionally, the inclusion of effective surfactants is strongly encouraged to significantly enhance cleansing performance and ensure thorough removal of impurities. Finally, incorporating a foam booster is suggested to improve lather richness and texture, thereby elevating the overall sensory experience and consumer satisfaction, ultimately enhancing the product's market competitiveness.

Keywords: body wash, natural exfoliant, dried gumamela flower, hibiscus sabdariffa, skin cleansing, moisturizing, fragrance, surfactants, foam booster, product acceptability, quantitative study, chemists, dermatologists, formulation optimization, sustainable s

**GAUAVA LEAVES (PSIDIUM GUAVA) AND PAPAYA
SEED OIL AS A HAIR SLEEK STICK**

Kc Jarap, Fuentesfina Icon, Jusmine Kate Catorce, John Mart Santiago,
Melissa Salgado, Roldan Bamondi

Abstract

Hair care is an essential aspect of personal grooming, with an increasing preference for natural and affordable alternatives to commercial products. This study aims to develop a natural hair sleek stick using guava leaf oil and papaya seed oil as primary ingredients. Both oils are known for their conditioning properties and ability to enhance hair shine. By harnessing these natural components, the research seeks to create a sustainable, accessible, and cost-effective solution that addresses the growing demand for safe and eco-friendly hair care products. This study employed a quantitative-descriptive research design using purposive sampling to select participants with relevant expertise. A structured survey questionnaire was utilized as the primary research instrument to assess the level of acceptability of the proposed hair sleek stick innovation. The evaluation focused on five key criteria: ingredients and preparation, procedural methodology, product consistency and texture, shelf life, and presentation. To analyze the data, a percentage was used to describe the demographic composition of the two respondent groups, chemists and dermatologists. The weighted mean was applied to determine the overall acceptability ratings, allowing for the calculation of average scores while accounting for the relative importance of each item. Furthermore, an independent samples t-test was conducted to assess whether there was a statistically significant difference between the evaluations of the two groups, each composed of five (5) chemists and five (5) dermatologists. The analysis showed that the proposed hair sleek stick was rated as "highly acceptable" by both groups of respondents across all evaluated criteria: ingredients and preparation, procedural methodology, product consistency and texture, shelf life, and presentation. The chemists recorded an overall mean score of 3.30, while the dermatologists obtained a mean of 3.25, both falling under the "highly acceptable" interpretation. The variance of responses was 0.174 for chemists and 0.158 for dermatologists, indicating consistent evaluations within each group. The t-computed value of 0.217 was lower than the t-critical value of 2.145 at a 0.01 significance level with 15 degrees of freedom, suggesting that there is no significant difference between the assessments of the two groups. To enhance the overall quality and appeal of the product, respondents offered several valuable recommendations. They suggested reducing the proportion of beeswax in the formulation to prevent cracking and improve product integrity. Additionally, the use of a low-speed mixer was recommended to achieve a more uniform and consistent texture. For packaging, respondents emphasized the importance of using airtight containers to prevent oxidation and potential contamination, thereby extending shelf life. In terms of visual presentation, they proposed modifying the font style and refining the color palette to create a more cohesive and aesthetically pleasing design that better reflects the product's natural and innovative qualities.

Keywords: beeswax reduction, low-speed mixing, product consistency, airtight packaging, oxidation prevention, contamination control, font style, color palette, product enhancement, aesthetic improvement

**INVESTIGATORY PROJECT OF LEMON EUCALYPTUS AND CITRONELLA
ESSENTIAL OIL AS A MOSQUITO-REPELLING FLOOR WAX**

Savanna Kristal Cadalin, Airex Tyronne Cleofas, Servando Delacruz,
Mar Jhon Malawit, Mark Rodel Martinez, Roldan Bamondi

Abstract

This study explored the development and evaluation of an innovative mosquito-repelling floor wax using lemon eucalyptus and citronella essential oils. With the rising demand for natural alternatives to chemical pest control, the research focused on the product's effectiveness in repelling mosquitoes while also serving its primary function of cleaning and protecting floors. The study aimed to determine both the feasibility of the formulation and its acceptability among potential users as a practical, eco-friendly household solution. This study employed quantitative experimental design, using a survey questionnaire to evaluate the acceptability of mosquito-repelling floor wax. Ten participants, comprising five chemists and five chemistry teachers selected through purposive sampling, assessed the product based on ease of application, odor, mosquito repellency, toxicity, and overall presentation. Data was analyzed using percentage frequency distribution, weighted mean, and t-tests to determine the product's effectiveness and acceptability. The mosquito-repelling floor wax was rated highly acceptable by both chemists and chemistry teachers across all five evaluation criteria. Statistical analysis revealed no significant difference between the two groups' assessments. Nonetheless, several issues were noted, including inconsistencies in product texture, extended drying time, strong odor, limited repellency duration, and concerns about overall product longevity. The results suggest that the developed floor wax formulation demonstrates strong potential as a natural mosquito repellent while also serving as an effective cleaning agent. To maximize its effectiveness and commercial appeal, further studies should aim to fine-tune the concentration of essential oils, enhance the consistency and durability of the product, and resolve formulation-related challenges. These improvements could significantly strengthen its overall performance and market competitiveness.

Keywords: mosquito-repelling floor wax, lemon eucalyptus oil, citronella oil, natural pest control, essential oils, product formulation, acceptability, cleaning agent, toxicity, consistency, sustainability

KATAKATAKA (KALANCHOE PINNATA) AND NEEM LEAVES (AZADIRACHTA INDICA) INTO A PLANT BASED ANTI-MYCOTIC CREAM

Charls Kenneth Alcoy, Joseph Czar Ballares, Randy Erum,
Sammhar Gulayan, Kent Lloyd Arabis, Roldan Bamondi

Abstract

This study evaluated the antifungal properties of katakataka (*Kalanchoe pinnata*) and neem (*Azadirachta indica*) leaf extracts, emphasizing their potential as sustainable and safer alternatives to synthetic treatments. Their effectiveness supports the growing shift toward natural solutions in dermatological care. This study utilized an experimental research design and involved five dermatologists and five chemistry teachers as respondents. Data was gathered through a validated survey questionnaire. The formulation process included the collection, extraction, and combination of Katakataka (*Kalanchoe pinnata*) and Neem (*Azadirachta indica*) leaves with natural ingredients such as beeswax, olive oil, and glycerin. Data analysis was conducted using percentages, weighted mean, and t-test to determine variations in the respondents' evaluations. The plant-based antifungal cream was evaluated by two respondent groups: dermatologists and chemistry teachers. Of the participants, 60% had clinical backgrounds, 20% were from laboratory-based disciplines, and the remaining 20% were involved in engineering and education. Regarding years of service, 50% had one to five years of experience, 30% had six to ten years, 10% had eleven to fifteen years, and 10% had less than a year. The cream was assessed based on five criteria: ingredients and procedure, moisturizing properties, antifungal efficacy, skin suitability, and presentation. Dermatologists rated the cream highly across all categories, with scores ranging from 3.92 to 4.00, and an average rating of 3.71, indicating a high level of acceptability. Chemistry teachers gave slightly lower ratings, with scores ranging from 2.48 to 3.88 and an overall weighted mean of 2.96, still interpreted as acceptable. The combined overall mean from both groups was 3.34, suggesting the formulation is generally well accepted. Although differences were observed between the two groups, particularly in skin suitability and antifungal efficacy, a t-test revealed no statistically significant difference ($t = -2.08$, $p > 0.05$), supporting the cream's overall acceptability. The study assessed a plant-based anti-mycotic cream derived from neem and katakataka leaf extracts, which showed strong antifungal effectiveness. However, concerns such as imprecise ingredient measurements and a foamy texture were noted. Experts recommended improving the formulation process, using natural stabilizers, and conducting further tests to ensure skin safety and long-term efficacy. Enhancements in packaging were also suggested to improve product presentation and user experience.

Keywords: neem, katakataka, anti-mycotic cream, plant-based treatment, antifungal efficacy, dermatological formulation, natural stabilizers, skin compatibility, sustainable skincare, herbal medicine

**PEPPERMINT (MENTHA PIPERITA) AND JAMAICAN CHERRY FRUITS
(MUNTINGIA CALABURA) AS AN ALTERNATIVE ESSENTIAL OIL**

Gjeuseppi Galagar, Carl Justine Arellano, Akisha Lae Bello, Setrix Berangberang,
Trishtian Jan Morales, Roldan Bamondi

Abstract

This study focuses on the development of an essential oil blend derived from peppermint (*Mentha piperita*) and Jamaican cherry (*Muntingia calabura*) fruits as a potential alternative to conventional essential oils. While peppermint is widely recognized for its therapeutic properties, the bioactive potential of Jamaican cherry remains relatively understudied. The primary objective of this research is to analyze the chemical composition of the formulated blend and evaluate its antimicrobial, antioxidant, and therapeutic properties. By utilizing locally sourced natural ingredients, the study promotes sustainable and eco-friendly practices in essential oil production, aligning with the increasing demand for natural alternatives in health, wellness, and related industries. The study adopted a quantitative-experimental research design and employed purposive sampling. Structured survey questionnaires were used as the main research instruments to evaluate the acceptability of the proposed essential oil blend based on the following criteria: ingredients and procedures, cooling effect, fragrance and aroma, color and consistency, and overall presentation. Percentages were utilized to describe the demographic composition of the expert evaluators, which included five (5) Chemists and five (5) Dermatologists. The weighted mean was applied to determine the average acceptability rating for each criterion. To examine significant differences in the evaluations between the two expert groups, an independent samples t-test was conducted. The analysis showed that the essential oil blend was rated as “acceptable” in terms of ingredients and procedures, cooling effect, fragrance and aroma, color and consistency, and presentation. The Chemists gave an overall weighted mean of 3.61, interpreted as “highly acceptable,” while the Dermatologists provided an overall mean of 3.22, interpreted as “acceptable.” The variance among Chemists’ responses was 0.031, compared to 0.716 among Dermatologists, indicating more consistency in the Chemists' evaluations. With a computed t-value of 1.015, which is less than the critical t-value of 2.578 at a 0.01 significance level (two-tailed) and 2361 degrees of freedom, the results indicate no significant difference between the assessments of the two groups. To further enhance the product, respondents recommended using a dark-colored container, reducing the concentration of peppermint, slightly increasing the packaging size, and improving the font style and size for better visibility and overall presentation.

Keywords: essential oil blend, mentha piperita, muntingia calabura, peppermint, jamaican cherry, antimicrobial, antioxidant, therapeutic properties, product acceptability, quantitative-experimental, t-test, weighted mean

SAPODILLA FRUIT (MANILKARA ZAPOTA) AS SKIN MOISTURIZER

Ashiely Ignacio, Ric Marcel Cabigting, Reven Jane Dizon, Princess Ann Dela Cruz,
John Lester Decastro, Christine Joy Torres, Prince Michael De Leon

Abstract

Sapodilla is also rich in vitamin C, an essential nutrient involved in neurotransmitter production, collagen formation, immune function, and other vital bodily processes. As a strong antioxidant, vitamin C helps protect cells from oxidative stress that can lead to various diseases. Motivated by these benefits, the researchers explored additional uses of the Sapodilla fruit beyond consumption. They decided to develop a skin moisturizer made from Sapodilla, aiming to examine its effectiveness in skincare. The purpose of this study is to explore the potential of Sapodilla as a natural ingredient in moisturizing products. This study adopted a quantitative-experimental research design using purposive sampling to select participants. The researchers employed the Student's T-test to determine if there was a significant difference in the evaluation of Sapodilla fruit (Manilkara zapota) as a skin moisturizer based on key criteria: ingredients, skin compatibility, ease of application, scent, color, and texture. Data were gathered through a survey questionnaire administered to two expert groups: five chemists and five dermatologists, to assess the product's acceptability across the specified variables. The results of the study revealed that the Sapodilla fruit (Manilkara zapota) skin moisturizer was rated as "Highly Acceptable" by the chemists and "Acceptable" by the dermatologists in terms of ingredients, ease of application, skin suitability, scent and fragrance, color, and texture. The findings indicate that there is no significant difference between the assessments of the two groups. The chemists had a mean rating of 3.25, while the dermatologists had a mean rating of 3.97. The computed variance was 0.123 for chemists and 0.002 for dermatologists. The t-computed value was 0.388, which is less than the t-critical value of 2.306 at a 0.05 alpha level with 8 degrees of freedom. Therefore, the null hypothesis (H_0) is accepted, confirming that there is no statistically significant difference between the chemists' and dermatologists' evaluations of the moisturizer. Future researchers are encouraged to further enhance the product by refining its formulation and ensuring consistent quality. Recommendations from licensed chemists and dermatologists emphasize the importance of following precise ingredient measurements and sourcing high-quality raw materials. This study has demonstrated that sapodilla fruit (Manilkara zapota) is a viable ingredient for developing a skin moisturizer, as supported by evidence from the Review of Related Literature (RRL) and Review of Related Studies (RRS).

Keywords: sapodilla fruit, manilkara zapota, skin moisturizer, chemist evaluation, dermatologist feedback, quantitative-experimental, student's t-test, ingredient quality, cosmetic formulation, rrl, rrs, product development

UTILIZATION OF ALMOND OIL WITH SANTAN LEAF EXTRACT AS A MASSAGE OIL

Mikaellah Cassandra Balmoja, Nicole Mae Baylon, Natasha Jane Discallar, Theresa Grace Gatela,
Jubei Grajo, Cedrick Matarong, Prince Michael De Leon

Abstract

Massage oils have been used in traditional therapeutic practices for centuries to promote relaxation, improve circulation, and nourish the skin. Among the various natural oils, almond oil is particularly popular due to its excellent skin-hydrating properties, anti-inflammatory effects, and ability to enhance skin elasticity. In addition, santan (ixora) leaves are rich in essential fatty acids and vitamins and possess therapeutic properties such as antioxidant, anti-inflammatory, antinociceptive, and antimicrobial activities. These bioactive compounds contribute to improved skin resilience, reduced inflammation, and overall enhancement of skin health when used in topical formulations. The study employed a quantitative-experimental research design using purposive sampling to assess the effectiveness of almond oil combined with santan leaf extract as a massage oil. Statistical analysis was conducted using Student's t-test to evaluate differences in pain relief, relaxation duration, sensory experience, skin absorption, and scent quality. A structured questionnaire was administered to two groups of expert respondents: comprising five dermatologists and five chemists, to assess the acceptability and efficacy of the formulated massage oil. The preparation process involved several steps: collecting the ingredients, washing and draining the santan leaves, heating almond oil in a pot, boiling the santan leaves in the oil for 5 to 6 minutes until they turned brown, and finally, straining the leaves to extract the infused oil. The study found that both dermatologists and chemists rated the massage oil formulated with almond oil and santan leaf extract as highly acceptable in terms of pain relief, relaxation duration, sensory experience, skin absorption, and scent quality. No significant difference was observed between the assessments of the two groups. The mean rating from dermatologists was 3.33, while chemists gave a mean rating of 3.30, with variances of 0.058 and 0.075, respectively. The computed t-value was 0.196, which is less than the critical t-value of 2.080 at a 0.05 alpha level with 21 degrees of freedom. Therefore, the null hypothesis (H_0) was accepted, indicating that there is no statistically significant difference in the evaluations of dermatologists and chemists regarding the effectiveness and acceptability of the massage oil. For further enhancement and improvement of the project, the following recommendations are proposed based on respondent feedback and study observations: It is suggested to utilize the distillation method for extracting the oil from santan leaves to potentially improve the purity and concentration of beneficial compounds. Respondents also recommended that the cooling effect of the massage oil be made more pronounced upon application to enhance the overall sensory experience. Additionally, it is advised to formulate the product for faster-acting pain relief to improve its therapeutic effectiveness and user satisfaction.

Keywords: almond oil, santan leaf extract, massage oil, pain relief, sensory experience, skin absorption, distillation method, cooling effect, fast-acting, quantitative-experimental, dermatologists, chemists

UTILIZATION OF DISCARDED DENIM TEXTILE INTO PLANT POTS

Anthony Justine Alferez, Krystle Leanne Baloyo, Jhon Carl Tejada,
James Louie Almencion, John Michael Rañola, Roldan Bamondi

Abstract

The rapid expansion of the textile industry, driven by fast fashion trends, has contributed to a significant increase in global textile waste. This innovative product addresses that issue by offering a sustainable alternative to traditional plant pots. By repurposing discarded denim and combining it with resin, a durable and aesthetically pleasing plant pot is created. This approach aligns with the principles of the circular economy, aiming to transform textile waste into a valuable and functional resource. This research employed a quantitative experimental method to examine the effectiveness of the proposed innovation. A purposive sampling technique was used to select respondents who could provide relevant data for the study. Data collection was conducted through a structured survey questionnaire, which proved valuable in capturing respondents' attitudes, knowledge, experiences, and opinions. To analyze the data, statistical tools such as frequency and percentage, weighted mean, Likert scale, and T-test were utilized to determine significant differences between the assessments of the two respondent groups. The investigation results indicate that the proposed model is rated as "Acceptable" in terms of material and procedure, strength and durability, versatility, practicality, and aesthetic appeal. The overall weighted mean for the environmentalist group was 3.38, with a variance of 0.140, a computed t-value of 0.286, and a degree of freedom (df) of 8. The corresponding t-critical value at a 0.05 significance level was 2.306. Similarly, the horticulturist group recorded a weighted mean of 3.26, a variance of 0.036, a computed t-value of 0.286, and the same degree of freedom and t-critical value. Based on the statistical analysis, there is no significant difference between the assessments of the two respondent groups. Therefore, both evaluations are considered valid and acceptable. For the continued development of the study, the researchers recommend seeking assistance from experienced and qualified professionals to increase the success rate of implementation. Additionally, respondents provided several key suggestions. They emphasized that the feasibility of executing the project may require significant time and effort and highlighted the importance of carefully considering its potential environmental impact. These insights underline the need for thorough planning, expert guidance, and environmental assessment to ensure the sustainability and effectiveness of the proposed innovation.

Keywords: sustainable innovation, textile waste, plant pot design, denim and resin, quantitative experimental method, environmental impact, expert assistance, feasibility, btled students, circular economy

THE DEVELOPMENT OF COGON GRASS (CYLINDRICA IMPERATA) AND ROSE (ROSA RUBIGINOSA) AS A SUBSTITUTE MATERIAL FOR STATIONARY PAPER

Luna Paul Angelo, Trixcel Asinas, Aldrin Gabayne, Charles Magbitang,
Dhennilie Rose Faustino, Roldan Bamondi

Abstract

This study aims to explore the potential of cogon grass (*Imperata cylindrica*) as a sustainable alternative fiber source for paper production. The growing environmental impact of wood-based paper manufacturing, particularly deforestation, underscores the need to identify non-wood fiber materials that are both abundant and eco-friendly. Cogon grass, often considered a weed, offers promising characteristics due to its widespread availability and fast growth. By developing stationery paper from cogon grass and rose (*Rosa rubiginosa*), this research seeks to reduce tree consumption, utilize biodegradable materials, and assess whether these alternatives can serve as a temporary substitute in the paper industry. The study employed quantitative experimental research design with purposive sampling. A structured survey questionnaire was used to evaluate the level of acceptability of stationery paper made from cogon grass and rose, based on criteria such as paper strength, surface texture, thickness and capacity, biodegradability, and overall presentation. Respondents included art teachers and environmentalists. Data analysis involved frequency and percentage, rating scale, weighted mean, and t-test to compare the assessments of the two respondent groups. The experimental paper produced from cogon grass and rose was rated as "acceptable" in terms of strength, texture, thickness, biodegradability, and presentation. Art teachers gave an overall weighted mean of 3.67 (variance = 0.174), while environmentalists gave a mean of 2.62 (variance = 0.158). Both groups' assessments, tested at a 0.05 significance level with a t-critical value of 2.145 and a t-computed value of 4.067, indicated no statistically significant difference. Thus, the product was generally accepted by both groups, with art teachers rating it more favorably. The findings suggest that cogon grass and rose fibers are viable materials for producing environmentally friendly stationery paper. While both groups accepted the paper, feedback emphasized the importance of extended development time, enhanced feasibility studies, and expert involvement to improve production quality. Future efforts should focus on refining the manufacturing process and ensuring environmental sustainability. Continued research and collaboration with professionals may further improve the success rate of this eco-friendly paper alternative.

Keywords: cogon grass, *imperata cylindrica*, *rosa rubiginosa*, stationery paper, alternative fiber, sustainability, paper production, environmental science, biodegradable material, non-wood pulp

**DEVELOPMENT OF GREEN TECH AUTOMATED IOT BASED GREENHOUSE
AEROPONIC VERTICAL FARMING USING ARDUINO UNO**

Emmanuel Tupino, Colin Jay Mallen, Nathaniel James Millare, John Samuel Sangumay,
Remalyn Gaditano, Reynante Ponay

Abstract

Aeroponic vertical farming is an advanced agricultural method wherein crops are suspended in the air, and their roots are periodically misted with nutrient-rich solutions. This technique is increasingly popular in urban areas due to its efficient use of space and resources. The development of a Green Tech Automated IoT-Based Greenhouse Aeroponic Vertical Farming system using Arduino Uno promotes sustainable agriculture by enabling controlled, enclosed environments for plant growth. However, successful implementation of this method requires attention to critical parameters such as spraying intervals, mist duration, light exposure, temperature regulation, and humidity control. This study aims to design an automated system that addresses these requirements through precise monitoring and regulation. The researchers used the experimental prototyping method to develop the automated greenhouse system. Arduino Uno and ESP32 microcontrollers served as the core components of the system, programmed using Arduino IDE with the C language. The prototype integrates sensor networks and IoT technologies to automate essential processes in aeroponic vertical farming, including nutrient misting and environmental regulation. The design also incorporates solar power to promote energy sustainability. Functional testing and respondent evaluations were conducted to assess the system's performance across several indicators. The developed prototype operated successfully, with features that regulate environmental parameters such as temperature, humidity, and nutrient delivery through an automated system. The system's solar-powered design, coupled with real-time monitoring capabilities via sensors, contributed to its high performance. Respondents provided favorable evaluations, indicating high levels of satisfaction in terms of the system's efficiency, sustainability, safety, and cost-effectiveness. The use of Arduino Uno and ESP32 microcontrollers proved effective for this application. The study demonstrated that the integration of green technology, IoT, and microcontroller-based automation offers a promising solution for urban agriculture. The developed aeroponic vertical farming system optimizes limited space, conserves water and minimizes soil-borne diseases. Its sustainable design and automated functionality make it well-suited for addressing food production challenges in urban settings. Future improvements may focus on scalability, enhanced data analytics, and broader integration with smart agricultural platforms.

Keywords: aeroponics, vertical farming, arduino uno, esp32, iot, greenhouse automation, sustainable agriculture, sensor integration, solar-powered system, urban farming

**DEVELOPMENT OF GREEN TECH IOT BASED WATER SUPPLY
PIPING AUTOMATION USING ARDUINO AND ESP MCU**

Antonio Kheijielhyn Klainer, John Philip Mamaril, John Rendel Roque, Nasip Macawaris,
Aaron Gabriel Malonzo, Reynante Ponay

Abstract

With the rapid advancement of technology, automation has become integral to improving daily tasks, from industrial processes to smart home systems. Automation reduces human effort and enhances safety, especially when powered by reliable energy sources. Many home appliances now incorporate platforms such as Android, GSM, and Wi-Fi for seamless integration. While these applications are common in domestic settings, their benefits can also extend to industrial and environmental management. Given the global issue of declining water levels, effective water management is increasingly essential. This study focuses on the development of a Green Tech IoT-based Water Supply Piping Automation system designed to monitor water flow, detect pipeline leaks, and assess water quality using sensor data transmitted to the cloud. The system eliminates the need for moving parts or battery dependence and aims to promote sustainable water usage through automated, real-time monitoring. This study employs the experimental prototyping method to develop the proposed automation system. The researchers used Arduino Uno and ESP32 microcontrollers, programmed through Arduino IDE in the C language, as the core components of the system. The prototype was designed to perform real-time monitoring of water-related parameters, particularly focusing on leak detection, temperature, and water quality. The system also utilized a solar-powered setup to ensure energy efficiency. The automation process was enhanced by integrating cloud-based monitoring through the Blynk application, which allowed users to receive data remotely and take appropriate action. The developed prototype demonstrated effective functionality, utilizing Arduino Uno and ESP32 microcontrollers to automate the monitoring and regulation of water flow, temperature, and quality. The system was equipped with sensors and powered by solar energy. During testing, the prototype successfully identified pipeline leaks and transmitted real-time data to the cloud platform. Respondents rated the system positively across several indicators, including efficiency, sustainability, safety, and cost-effectiveness. These results affirm the suitability of the selected microcontrollers and the effectiveness of the integrated monitoring solution. The study confirmed that integrating Arduino and ESP-based microcontrollers with IoT and solar power technologies offers a practical and sustainable solution for water pipeline management in residential and community settings. The system's cloud-based platform enabled real-time monitoring, improving responsiveness to leakages and reducing the time required for detection and repair. The inclusion of solar energy further contributed to the system's environmental sustainability. Future developments may explore more advanced data analytics features and broader deployment in large-scale utility infrastructures.

Keywords: iot, water supply automation, arduino uno, esp32, leak detection, sensor network, green technology, real-time monitoring, solar-powered system, environmental engineering

**DEVELOPMENT OF GREEN TECHNOLOGY COFFEE MAKER USING ARDUINO MEGA
WITH GOOGLE INTERFACE IOT, LCD TOUCHSCREEN MONITORING,
ULTRASONIC SENSOR AND ATS POWER SUPPLY BACK UP**

Jo-anne Mejoc, Marco Daniel Baclea-an, Billy Joel Buctuan, Vincent Acosta,
Jomari Charles Laut, Clarence Charles Laut, Reynante Ponay

Abstract

This study presents the development of a green technology coffee maker that integrates Arduino Mega, an LCD touchscreen interface, an ultrasonic sensor, and an Automatic Transfer Switch (ATS) for uninterrupted power supply. The system incorporates the Google Interface for Internet of Things (IoT) connectivity, allowing remote monitoring and control. Designed to promote energy efficiency and automation, the system supports sustainable living through intelligent resource management and eco-friendly operations. The researchers utilized Arduino Mega as the primary microcontroller to manage component operations and data processing. The ultrasonic sensor monitors the water level and sends real-time data to the Arduino unit. An LCD touchscreen is installed to enable user interaction by allowing brewing settings and status viewing. IoT connectivity is established via the Google Interface, enabling remote system control and monitoring through the internet. The ATS provides backup power support by automatically switching the system to an alternative source during outages, ensuring operational continuity and energy-efficient brewing. The prototype coffee maker performed as intended. The LCD touchscreen successfully displayed real-time data and allowed user configuration. The ultrasonic sensor accurately monitored water levels, while the system maintained remote access through Google IoT with effective status updates and controls. The ATS functioned reliably, switching to backup power during interruptions without affecting operations. Overall, the system achieved smart automation, energy efficiency, and enhanced user convenience in line with green technology objectives. The integration of Arduino Mega with IoT and sensor technology effectively automated the coffee brewing process and supported real-time monitoring. The touchscreen interface improved user interaction, while the ultrasonic sensor promoted efficient water usage. The use of Google IoT facilitated remote control and system flexibility. Additionally, the ATS ensured consistent functionality during power interruptions, enhancing system reliability. This project demonstrates how smart, energy-efficient systems can contribute to environmentally sustainable practices in everyday appliances.

**ASSESSING THE POTENTIAL OF LOBELIA PLANT EXTRACT AS A NATURAL
NICOTINE SUBSTITUTE FOR VAPE JUICE FORMULATION**

Marian Dela Torre, Reca Dejucos, Abimhel Tabañag, Jolo Paulino, Jolo Paulino,
Clarence Enzo Pornel, Prince Michael De Leon

Abstract

This study explores the potential of Lobelia plant extract as a natural nicotine substitute in vape juice formulations. Historical use of Lobelia in respiratory therapies and the structural similarity of its active compound, lobeline, to nicotine suggest possible applications in harm-reduction products. Concerns regarding chemical stability, toxicity at high doses, and variable pharmacological effects warrant an investigation of its suitability for vaping applications. This study employs a quantitative design with purposive sampling of five chemical engineers and five toxicologists. A four-part survey instrument captures respondents' demographic profiles, assesses acceptability across five parameters (ingredients, chemical stability, vapor quality, formulation process, and safety), and gathers feedback on challenges and suggested improvements. Vape juice is formulated by infusing Lobelia powder into propylene glycol, filtering, and blending with vegetable glycerin. Data are analyzed using frequency distributions, weighted means, independent t-tests, and one-way ANOVA. Respondents rated the Lobelia vape juice formulation as moderately acceptable (overall mean = 2.70 on a 4-point scale), with toxicologists (mean = 2.88) showing higher acceptance than chemical engineers (mean = 2.53). All five assessment categories achieved acceptability, although vapor quality received the lowest score (mean = 2.50). Statistical analysis indicated no significant difference between professional groups ($t = 1.366$, $p > 0.05$). Reported challenges included flavor inconsistency, formulation instability, and variable extract potency, leading to recommendations for improved stabilization techniques and flavor enhancement. The findings indicated that Lobelia extract has moderate potential as a nicotine substitute for vape juice, particularly for users seeking plant-based alternatives. However, stability issues, lack of standardization, and suboptimal user experience limited overall acceptability. As a result, future work should focus on optimizing extraction methods, incorporating stabilizers, and refining flavor profiles. This study contributes to the emerging discourse on plant-based alternatives in vaping and smoking cessation strategies, highlighting areas for further research and development.

Keywords: lobelia extract, vape juice, nicotine substitute, chemical stability, vapor quality, plant-based alternative

**DEVELOPING AMPALAYA AS AN ALTERNATIVE GUMMY CANDIES FOR
DIABETIC STUDENTS AT BESTLINK COLLEGE OF THE PHILIPPINES**

Aira Jane Gacusan, Mary Joy Amante, Jovelyn Dilao, Samuel Marata,
Nikko Jessneil Reblando, Romeoul Karl Flores

Abstract

This study aims to develop ampalaya (bitter gourd) as a healthy alternative gummy candy specifically for diabetic students. Ampalaya gummy candies are designed as a nutritious snack that may help in managing blood sugar levels. These are naturally sweetened with honey and flavored with fruit juices to make them both palatable and safe for diabetic consumption. An experimental research design was employed to investigate the effectiveness of various methods in reducing the bitterness of ampalaya while maintaining its health benefits. The independent variables included techniques such as honey addition, fruit flavoring, and salt soaking, while the dependent variables focused on the candies' acceptability and perceived health benefits among diabetic student respondents. The study involved 10 respondents, mostly aged 16 to 20, with an equal gender distribution. Among the techniques tested, the use of 4 and 5 teaspoons of honey and salt soaking for one hour received "Excellent" ratings (weighted mean = 4.00) in reducing bitterness. Three teaspoons of honey also performed well (mean = 3.90). For fruit flavorings, mango (3.60) and orange (3.70) were rated "Excellent," while grape (3.20) and pineapple (3.30) were rated between "Good" and "Excellent." Respondents identified major challenges such as ingredient formulation (36%), taste acceptance (32%), and customer awareness (32%). They also acknowledged ampalaya's health benefits, citing its richness in vitamins (38.89%), dietary fiber (27.78%), and antioxidants (27.78%). In terms of product acceptability, 70% of participants rated the candies as "acceptable," and 30% rated them as "very acceptable." The results demonstrate that ampalaya-based gummy candies, when sweetened with honey and enhanced with fruit flavors, can serve as a viable healthy snack option for diabetic students. Despite positive feedback, formulation refinement and consumer acceptance remain areas for improvement. Further research is recommended to enhance nutritional value, scale up production, and raise consumer awareness. These findings may inform food manufacturers and health professionals in developing functional snacks tailored to diabetic needs.

Keywords: ampalaya, gummy candies, diabetic-friendly snacks, bitter gourd, functional food, food innovation, student perception, fruit flavoring, natural sweeteners, health benefits

**IMPLEMENTATION OF FOOD SAFETY STANDARD AMONG CANTEEN
CONCESSIONAIRE AT BESTLINK COLLEGE OF THE PHILIPPINES**

Mariel Joyce Delos Santos, Kathreen Grace Dimson, May Jade Refil,
Shiella Marie Ranada, Abrahan Muyrong

Abstract

The school canteen promotes healthy eating, food safety, and hygienic practices, which are especially important in schools because children are more susceptible to foodborne illnesses. Food safety is critical, especially in school canteens, in order to protect the health of students. The scientific field of food safety explains how to handle, prepare, and store food in a way that prevents foodborne illness. In order to safeguard consumers, food safety and food defense often overlap. The researchers used a descriptive approach. Based on S. L. Siedlecki (2020), one variable or many variables can be used in descriptive research. One special feature of descriptive designs is their capacity to focus on a single variable of interest. There are only variables of interest rather than independent or dependent variables because this approach does not involve hypothesis testing. Ensuring that the operational definition aligns with the conceptual definition of each variable is crucial when defining them. Table 1 shows that 85 out of 150 respondents (56.67 percent) were 19 to 20 years old, 62 respondents were aged 21 to 26 years (41.33 percent), and 3 respondents were aged 27 and above (2 percent). According to Nurtama B. (2020), the purpose of this study was to determine Jordanian consumers' level of awareness regarding food safety at each stage of the food handling process, including buying, storing, and cooking. Between May and October of 2020, a sizable sample of Jordanian consumers (n = 2500) was contacted at random as part of this multistage national representative study. A total of 1612 customers (64.5 percent response rate) offered their voluntary participation in the study by responding to a self-administered survey. The demographic profile of the respondents shows a varied distribution across age, biological sex, and year level. In terms of age, the data indicate that 85 out of 150 respondents (56.67 percent) were 19 to 20 years old, 62 respondents (41.33 percent) were 21 to 26 years old, and 3 respondents (2 percent) were 27 and above. For biological sex, the results show that 47 respondents (31.33 percent) were male and 103 respondents (68.69%) were female. Regarding year level, 51 respondents (34%) were first-year students, 52 respondents (34.67 percent) were second-year, 17 respondents (11.33 percent) were third-year, and 30 respondents (20 percent) were fourth-year. These findings provide an overview of the population surveyed and serve as a basis for understanding how different groups perceive and experience the implementation of food safety standards within the school canteen.

Keywords: food safety

**NUTRITIONAL VALUE OF MANSANAS AND CAMOTE IN CANDY MAKING:
AN EXPERIMENTAL STUDY**

Shamanie Princess Peroso, Veronica Anne Santiago, Liezel Mae Nocipeda,
Jonalyn Polbo, John Joel Paligar, Jackelyn Oirada, Romeoul Karl Flores

Abstract

This study aims to develop nutritious candy using mansanas (apples) and camote (sweet potatoes) as natural and healthier alternatives to traditional candy ingredients. The research emphasizes the nutritional value and natural sweetness of these ingredients while supporting innovation in food preparation aligned with health and quality standards. The goal is to produce candy that is not only flavorful but also beneficial to both children and adults. This study also highlights how technical and vocational education can contribute to the creation of healthier food options through creative experimentation. An experimental research design was employed to determine the nutritional value of mansanas and camote in candy making. Independent variables were manipulated to observe their effects on the resulting product while controlling extraneous factors. This method allowed for a systematic investigation into how these natural ingredients impact flavor, appearance, health benefits, and overall satisfaction. Data was collected from a group of 20 respondents who evaluated the candy based on multiple factors, such as taste, health perception, and satisfaction. The demographic profile of the respondents showed a fairly even age distribution, with a slight majority of female participants (60%). In terms of food preference, respondents strongly agreed that the candy had a natural flavor (mean = 3.30) and agreed it was healthy (mean = 2.95) and visually appealing (mean = 3.15). The overall level of satisfaction was high, with a mean rating of 3.25, indicating that most respondents were very satisfied with the product. The main challenge identified was profitability (mean = 3.30), while issues such as picky eaters and allergic reactions were not considered major concerns. The findings demonstrate that camote mansanas candy was well-received, particularly for its natural taste, health appeal, and visual presentation. The demographic data showed a broad age range of acceptance, with most respondents expressing high satisfaction. Although profitability was noted as a moderate concern, it did not pose a significant barrier to the product's perceived value. The study concludes that using mansanas and camote in candy making presents a viable path toward healthier and more appealing snack options, especially for younger consumers.

Keywords: camote, mansanas, candy making, nutritional value, healthy snacks, experimental design, food innovation, sweet potato, apple candy, food science

THE PROCESS OF MAKING OKRA CHIPS AS ALTERNATIVE SNACKS FOR SENIOR HIGH SCHOOL IN BESTLINK COLLEGE OF THE PHILIPPINES BULACAN

Alyanna Mae Tobias, Cristine Mae Tapaya, Raquel Dela Cruz, Izzy Dayunot,
Mayvelyn Sambitan, Romeoul Karl Flores

Abstract

This study investigated the process of making okra chips as an alternative snack for Senior High School students at Bestlink College of the Philippines in Bulacan. The research focused on three main objectives: assessing the nutritional value of okra chips, evaluating their acceptability in terms of taste, texture, and appearance, and analyzing the effect of different preparation techniques on their overall quality. The study was motivated by the growing demand among students for healthier snack options, particularly those rich in fiber, vitamin K, fats, and folate. Using a descriptive research design, the study involved 20 Senior High School students from Bestlink College of the Philippines in Bulacan. Data was collected through survey questionnaires featuring a 4-point Likert scale: Strongly Agree, Agree, Disagree, and Strongly Disagree. The survey aimed to gather participants' opinions on the nutritional value, flavor, texture, and appearance of the okra chips. Additionally, the study examined preparation-related issues, particularly those affecting texture and nutrient retention. To analyze the data, statistical tools such as frequency distribution and weighted mean were utilized. Okra chips were perceived as a rich source of vitamin K (weighted mean = 3.41), fats (3.40), folate (3.24), and fiber (3.22). In terms of sensory evaluation, the chips received the highest ratings for texture (3.25), appearance (3.20), and taste (3.15). The dehydration method was found to effectively preserve nutrients and improve crispiness; however, some issues were identified, such as uneven crispiness and minor nutrient loss. Most of the respondents were male students aged 16–20, with Grade 12 students representing the highest number of participants in the survey. The positive reception of flavored variants, such as cheese and sour cream, suggests opportunities to improve acceptability through the use of seasoning. The study underscores the potential of okra chips as a nutritious and appealing snack option for students. High ratings for vitamin K, fiber, and folate are consistent with existing literature on the health benefits of okra, particularly in supporting bone health, aiding digestion, and promoting red blood cell production. The preference for dehydrated okra chips further emphasizes the effectiveness of this preparation method in retaining nutrients while achieving a desirable texture.

**IMPACT OF USING HEALTHY COOKING OIL IN FOOD PREPARATION AT
BESTLINK COLLEGE OF THE PHILIPPINES CANTEEN**

Patrick Jason Josafat, Khristine Ann Arthur, Jonathan Dacoco, Elmira Gepte,
John Norielle Maddawin, Romeoul Karl Flores

Abstract

This chapter serves as the foundation of the research, outlining the key components that guide the study. It encompasses the background of the study, a review of related literature, the theoretical and conceptual frameworks, the statement of the problem, hypothesis, scope and delimitations, significance of the study, and the definition of key terms. This chapter outlines the research methodology applied in the study. It includes a discussion of research design, selection of respondents, sampling technique, data-gathering instruments, procedures for constructing and validating the instruments, methods of administration and retrieval, and the statistical tools used for data analysis. School canteens contribute significantly to the overall health and nutrition of students. Among the many factors that influence the quality of meals served, the choice of cooking oil is especially important, as it directly affects the nutritional value of food. With the rising number of diet-related health concerns among young people, this study seeks to explore the effects of using healthier cooking oils in the canteens of Bestlink College of the Philippines. The following conclusions were drawn: The use of healthy cooking oils in school canteens supports the enhancement of students' overall health and well-being. It contributes to a reduction in the intake of saturated fats among students, promoting healthier eating habits. Healthier oil choices lead to improvements in blood lipid profiles, thereby reducing the risk of cardiovascular issues. The inclusion of cooking oils rich in omega-3 fatty acids increases students' intake of these essential nutrients, which are vital for cognitive development and overall physiological function.

Keywords: healthy cooking oils, school canteen, student nutrition, saturated fat, omega-3 fatty acids, blood lipid profile, health promotion, dietary practices, bestlink college, adolescent health

**INTERACTIVE HEALTH MONITORING SYSTEM AND ACCOUNTING RESOURCES
MANAGEMENT FOR BARANGAY MINUYAN PROPER HEALTH CENTER IN
SAN JOSE DEL MONTE, BULACAN**

Charish Cortez, Louise Nicole Fabian, Jierlhen Mhae Bajan, Bryan Madriñan, Geraldine Gadugdug,
Jomari Soguilon, Dr. Maria Edna Portugal

Abstract

In today's fast-paced and digitally driven world, the need for effective and accessible healthcare systems is more critical than ever, particularly at the grassroots level, where communities rely heavily on local health centers for their medical needs. This study, titled "Interactive Health Monitoring System Accounting Resources Management for Barangay Minuyan Proper Health Center in San Jose del Monte, Bulacan," focuses on the development of a user-friendly and interactive website specifically designed to support the daily operations and management tasks of barangay health workers. The primary aim is to assist the health workers of Barangay Minuyan Proper by providing a digital solution that automates workflows and enhances the overall management of patient records, medical inventory, health programs, and budget tracking. This initiative addresses the ongoing challenges posed by manual record-keeping methods, which often result in inefficiencies, delays, and inaccuracies in service delivery. This paper presents a web application developed using the OutSystems low-code platform to enable efficient management of essential healthcare data. The application supports key functions such as patient record management, real-time tracking of medical inventory, streamlined scheduling of health programs, and transparent budget monitoring. A dynamic dashboard displays key performance indicators, providing users with actionable insights that enhance planning, decision-making, and resource allocation. By implementing this system, the study aims to enhance the efficiency of barangay health workers by reducing their dependence on manual documentation and providing quick access to organized, real-time information. The system features a simple and user-friendly interface, making it accessible even to users with limited technical skills or experience. Overall, this thesis aims to contribute a practical and scalable solution to local healthcare management, enabling health workers to devote more time to patient care and less to administrative tasks. Through digital innovation, the researchers seek to empower community health centers like Barangay Minuyan Proper to deliver more efficient, accurate, and responsive services to the communities they serve.

**PERFORMANCE OF BARANGAY NUTRITION SCHOLAR IN BRGY. 171:
BASIS FOR CAPABILITY PROGRAM**

Mary Joyce Cabiles, Dr. Melinda Bautista

Abstract

Child malnutrition continues to be a major global health concern, with significant consequences that affect individuals, families, and entire nations. Beyond the immediate health risks to children, malnutrition influences wider societal outcomes by limiting educational success, reducing labor productivity, and slowing economic development. Its long-term impacts include poor cognitive and physical development and greater vulnerability to illness, all of which collectively obstruct a nation's ability to thrive and advance. To gather accurate and meaningful data for the study, the researcher employed a survey questionnaire as the primary instrument. The checklist-style questionnaire was designed to comprehensively address all aspects of the research problem and respond to the specific questions stated. It was developed by the researcher using insights from relevant literature and previous studies. A single set of questionnaires was prepared and distributed to the respondents. A survey assessing the performance of Barangay Nutrition Scholars revealed generally positive results across four key areas: training, engagement, empowerment, and work environment. Respondents expressed strong agreement regarding the effectiveness of their training and the sense of empowerment they experienced. They also reported a strong sense of belonging and achievement in their work environment. However, slightly lower ratings were observed in areas related to the training's impact on job satisfaction and the level of participation in engagement initiatives. Overall, the findings indicate that the scholars are performing well and feel positively about their roles. To improve the performance of Barangay Nutrition Scholars, the following key recommendations are suggested: enhance training programs to improve job satisfaction and effectiveness; strengthen engagement initiatives through a variety of meaningful activities; and provide more flexible workload management to prevent burnout. Additionally, fostering a supportive and inclusive work environment, addressing challenges such as limited resources and community resistance, and investing in capacity-building efforts are vital. Tailored communication strategies and the implementation of continuous monitoring and feedback systems are also crucial for achieving sustainable performance and long-term success.

Keywords: barangay nutrition scholars, training programs, employee engagement, workload management, inclusive work environment, capacity building, communication strategies, performance improvement, monitoring, feedback mechanisms

**TELEMEDICINE PAGE: A HEALTHCARE SERVICES FOR TEACHERS
AND STUDENTS AT BCP BULACAN: A CASE STUDY**

Rosana Marie Noble, Andrea Cruzette Simbahon, Izzy Clarise Arca,
Gilbert Josh Sevilla, Jasmine Kirstie Cruz, Reymundo Javier

Abstract

Telemedicine is a technology that facilitates the delivery of remote medical services and has significantly transformed access to healthcare since its emergence in the early 20th century. With the advancement of mobile devices and internet connectivity, telemedicine has expanded into various modalities, including telesurgery, teleradiology, remote patient monitoring, and virtual consultations. The COVID-19 pandemic accelerated its adoption, making telemedicine applications more mainstream, with enhanced features and greater integration with Electronic Health Record (EHR) systems. Telehealth continues to revolutionize the healthcare industry by enabling convenient access to care, improving patient outcomes, and promoting system-wide efficiency. This study employs a quantitative research approach, utilizing convenience sampling to select participants who have previously used telemedicine. A survey questionnaire was administered to 50 respondents from BCP Bulacan to examine their experiences and perceptions regarding healthcare access through telemedicine. The responses provided insights into the accessibility, efficiency, and limitations of the telemedicine page as experienced by the users. Findings revealed that respondents perceived telemedicine as a convenient and efficient method of receiving healthcare, particularly when in-person consultations were not feasible. However, limitations were noted, such as the inability to perform physical examinations. Students highlighted the benefit of receiving medical attention without the need to leave their classes, thereby saving time. The telemedicine page was recognized for offering timely access to care for minor injuries or illnesses and providing flexibility that reduces the need for class absences. This case study examined the impact of a telemedicine page on healthcare access among teachers and students at BCP Bulacan. Results indicated that telemedicine provided reliable, accessible, and easy-to-understand healthcare information. Teachers and students reported that the content improved their health literacy and equipped them with practical knowledge applicable to real-life situations. The study underscores the relevance of telemedicine in enhancing healthcare accessibility and recommends further research to explore its broader applications and integration in academic environments.

Keywords: telemedicine, health access, remote consultation, students, teachers, healthcare technology, health literacy, virtual health services

**BREAK-UP MOTIVATION AND RECOVERY AMONG GEN Z STUDENTS
IN QUEZON CITY: BASIS FOR SELF-LOVE PROGRAM**

Marie Reyes Haya, Jheniela Mae Valenzuela, Aira Santos, Rhona Bulawan,
Mariel Padalapat, Maria Regina Baluyut

Abstract

Romantic breakups are a common experience among the current generation, especially within Generation Z. Despite their prevalence, the connection between the motivations behind breakups and the subsequent recovery process remains insufficiently studied. As relationship dissolutions become increasingly frequent in modern society, gaining a deeper understanding of the psychological factors that affect recovery is essential. This study aims to examine the relationship between breakup motivations, specifically approach and avoidance orientations, and the recovery experiences of Generation Z students in Quezon City. This study employed a correlational research design to investigate the relationship between breakup motivation and recovery among college students. A sample of 100 second-year psychology students from Bestlink College of the Philippines, all of whom had experienced the termination of a romantic relationship, participated in the survey. The Behavioral Inhibition System (BIS) and Behavioral Activation System (BAS) scales were utilized to measure participants' breakup motivations, while the Breakup Recovery Scale was administered to assess recovery outcomes and determine the most effective coping strategies. The survey findings show that most respondents were female (80%), with the majority aged between 18 and 20 years old (61%). Generation Z students reported experiencing both positive and negative effects following romantic breakups. While many indicated personal growth as a result of the experience, they also described the recovery process as difficult and emotionally taxing. Time was identified by 82% of respondents as the most effective method for healing, whereas professional counseling and medication were among the least commonly used approaches. A significant negative correlation ($r = -0.35$, $p < 0.05$) emerged between breakup motivation and recovery, suggesting that individuals who were more motivated to end their relationships tended to face greater challenges in recovering. These findings align with Reinforcement Sensitivity Theory (RST), which explains how approach and avoidance motivations impact emotional responses after a breakup. Overall, the study highlights the complexity of recovery processes and the varying ways individuals cope depending on their reasons for ending a relationship. The findings highlight the vital role of self-love initiatives and specialized mental health interventions in supporting Generation Z students' ability to effectively cope with the emotional aftermath of romantic breakups. It is imperative that educational institutions and mental health professionals collaborate to implement comprehensive programs focused on developing coping skills, fostering resilience, and providing robust emotional support. Such targeted interventions will not only aid students in navigating the complexities of relationship dissolution but also promote their overall psychological well-being and personal growth.

Keywords: self-love programs, mental health interventions, generation z, coping mechanisms, resilience training, emotional support, romantic breakup recovery, psychological well-being, educational institutions, student support

**EFFECTIVENESS OF ARTS EXPRESSION AS INTERVENTION TO REDUCE
MENTAL HEALTH-RELATED STIGMA AMONG ADOLESCENTS**

Jemalene Alexis Baeza, Angelyn Sanje, Jennifer Macarial, John Jomel Bravo,
Rose Ann Dotarot, Michael Bersamin

Abstract

This study examines the effectiveness of art expression as an intervention for reducing mental health-related stigma among adolescents in Brgy. Bagong Silangan. Using a quasi-experimental design, the research aims to assess changes in attitudes toward mental health after participating in an arts-based program. Participants, aged 12 to 19, were divided into intervention groups. The researchers employed purposive sampling to gather data for the study and administered a survey questionnaire during both the pre-test and post-test phases to evaluate the intervention's outcomes. The demographic profile by gender indicates that 53% of the respondents are female and 47% are male. The majority of the respondents are aged 13-15 years (50%), followed by those aged 10-12 years (25%) and 16-19 years (25%). The findings of the current study reveal that the respondents exhibited a significant level of creativity, with a weighted mean score of 2.47. The technical skills also showed a weighted mean score of 2.52. Additionally, the study found that adolescents' ability to express their emotions through art significantly improved after the intervention, as reflected in a weighted mean score of 2.47. The data suggests that the arts intervention effectively enhanced adolescents' confidence in their artistic abilities, as evidenced by a significant increase in the weighted mean score from 2.47. The Shapiro-Wilk normality test conducted to assess data distribution resulted in a pretest p-value of 0.00, indicating a significant deviation from normality, as it is below the significance level of 0.05. The pretest had an average score of 2.39 (SD = 0.44), while the posttest showed a significant increase to 3.27 (SD = 0.67), demonstrating an improvement in art expression effectiveness. The Wilcoxon Signed Ranks Test produced a Z-value of -7.82 and a p-value of 0.00, which is well below the significance level of 0.05. Consequently, the null hypothesis was rejected, confirming that the observed change was statistically significant. Furthermore, emotional resilience had a weighted mean of 3.20, while self-stigma before the intervention had a weighted mean of 3.36, indicating that adolescents became more accepting of their emotions. Social connection through art was measured with a weighted mean of 3.27. The study indicates that fostering supportive environments for authentic self-expression can help alleviate the challenges of balancing personal expression with external expectations, thus enhancing the positive experience of art therapy.

Keywords: art expression, mental health stigma, adolescents, intervention strategies, creative therapy, stigma reduction, mental health awareness, expressive arts, youth mental health, psychosocial intervention, art-based programs, emotional well-being, behavior

**EMOTIONAL DEPENDENCY AND SELF-ESTEEM OF GASLIGHTED
YOUNG ADULTS IN ROMANTIC RELATIONSHIPS**

Jade Marie Ventura, Viel Anne Bascuguin, Christian John Crisostomo,
Angelica Gamayan, Justine Ventura, Maria Regina Baluyut

Abstract

This study explores the correlation between emotional dependency and self-esteem among young adults subjected to gaslighting within romantic relationships. Gaslighting, a psychological manipulation technique that causes individuals to question their reality and perceptions, often leads to confusion, heightened emotional reliance on the partner, and diminished self-worth. This form of abuse perpetuates power imbalances, fostering anxiety and self-doubt in victims. Emotional dependency, characterized by excessive reliance on a partner for validation, can trap individuals in toxic relationship cycles, while low self-esteem exacerbates their difficulty in asserting autonomy and establishing healthy boundaries. Although existing literature addresses the broader effects of gaslighting, there remains a significant gap in understanding its specific impact on emotional dependency and self-esteem among young adults. This study aims to fill this void and provide a foundation for the creation of an Emotional Dependency and Self-Esteem Intervention Program tailored to this vulnerable population. This study employed a quantitative correlational research design, utilizing purposive and criterion sampling methods to select self-reported gaslighted young adults from third-year psychology students at Bestlink College of the Philippines. Data were collected through three rigorously validated instruments: the Victim Gaslighting Questionnaire (VGQ) by Bhatti et al. (2021), which served as the screening tool to identify participants who have experienced gaslighting; the Emotional Dependence Questionnaire (EDQ) by Lemos and Londoño (2006), used to quantify levels of emotional dependency; and the Rosenberg Self-Esteem Scale (RSES), employed to assess participants' self-esteem. This methodological approach ensured reliability and validity. The study's findings revealed a statistically significant but weak positive correlation ($r = 0.35$, $p < 0.01$) between emotional dependency and self-esteem. This suggests that, unexpectedly, higher emotional dependency was modestly associated with higher self-esteem, challenging previous research that typically links elevated emotional dependency to diminished self-worth. Moreover, participants exhibited moderate levels of emotional dependency particularly in the domain of affective expression, coupled with generally low self-esteem. These results imply that while gaslighting experiences may erode self-esteem, the relationship between emotional dependency and self-worth is complex and may involve additional psychological factors, warranting further investigation. These findings underscore the urgent need for tailored intervention programs that focus on bolstering self-esteem and cultivating emotional independence among young adults affected by gaslighting. By deepening the psychological understanding of gaslighting's detrimental effects, this study lays the groundwork for developing effective support initiatives aimed at empowering victims. Future research should expand on these insights by exploring additional influencing factors such as attachment styles, coping mechanisms, and resilience, to provide a more comprehensive framework for addressing emotional dependency and self-esteem in this vulnerable population.

Keywords: gaslighting, emotional dependency, self-esteem, young adults, romantic relationships, psychological abuse, intervention programs, attachment styles, coping mechanisms, resilience.

**PSYCHOLOGICAL STRAIN OF CYBERBULLYING ON MENTAL HEALTH AMONG
PSYCHOLOGY STUDENTS IN BESTLINK COLLEGE OF THE PHILIPPINES**

Danica Raz, Mercy Alburo, Maria Jeanny Bartolome, Noela Fei Binay,
Angelica Teaño, Maria Regina Baluyut

Abstract

This study investigates the psychological effects of cyberbullying on psychology students at Bestlink College of the Philippines during the academic year 2024–2025. It aims to identify common forms of cyberbullying, assess its impact on levels of depression, anxiety, and self-esteem, and examine the coping mechanisms employed by students to manage the resulting emotional and psychological distress. This study adopted a correlational descriptive research design to explore the relationship between cyberbullying and its psychological impact on the mental health of psychology students at Bestlink College of the Philippines. A total of 207 participants, aged 18 to 25, were selected through purposive sampling. Standardized survey instruments were used for data collection, including the Beck Depression Inventory, Beck Anxiety Inventory, and the Rosenberg Self-Esteem Scale, all measured using a four-point Likert scale. The Pearson correlation coefficient was employed to analyze the statistical relationship between variables. The findings revealed that 74.50% of the respondents were female. The most common forms of cyberbullying reported included the dissemination of false information, offensive messaging, and harassment via social media platforms. Psychological assessments showed that 28.02% of participants experienced moderate depression, 36.23% exhibited moderate anxiety, and 46.38% demonstrated low self-esteem. Pearson correlation analysis revealed a significant positive relationship between gender and mental health outcomes, with female respondents showing stronger correlations with depression ($r = 0.9871$, $p = 0.0531$) and anxiety ($r = 0.963$, $p = 0.012$). Cyberbullying was found to significantly affect students' mental health, particularly in terms of depression and anxiety. Notably, self-esteem did not show a significant correlation among male respondents. These results emphasize the importance of implementing targeted mental health initiatives and cyber safety programs within academic institutions. The study concludes that cyberbullying has a significant negative effect on the mental health of psychology students, leading to heightened levels of depression and anxiety. These outcomes emphasize the importance of implementing preventive strategies, such as awareness campaigns, counseling services, and digital safety education, to support students' mental well-being and reduce the psychological harm associated with online harassment.

Keywords: cyberbullying, mental health, depression, anxiety, self-esteem, psychology students, beck inventories, rosenberg scale, pearson correlation, digital harassment, college students, preventive measures, psychological strain

**UNDERSTANDING THE FACTORS CONTRIBUTING TO DRUGS
ABUSED IN BARANGAY 167 IN CALOOCAN CITY**

Jason Galicia, Elmer Centino, Rio Gallego, John Raniel Nuñez,
Christian Marlon Panti, Dr. Myrna Cuntapay

Abstract

This study aimed to understand the factors contributing to drug abuse in Barangay 167, Caloocan City. A quantitative research approach was adopted to facilitate a comprehensive understanding of the subject. Using this method, the researchers gathered and analyzed data systematically from the study's respondents. A sampling technique was employed to select participants for the study. Before data collection, the researchers sought permission from their research adviser to conduct a survey. The study involved a total of fifty (50) respondents, composed of twenty (20) drug surrenders, ten (10) barangay officials, and twenty (20) residents. These participants shared their lived experiences concerning drug abuse in Barangay 167, Caloocan City. This chapter describes and discusses how the researchers gathered the necessary data and information used throughout the study. It outlines the research design, respondents, sampling techniques, instruments employed, and the statistical treatment of data. This study utilized a descriptive research method to investigate the factors contributing to drug misuse. According to Creswell (2014), descriptive methods are valuable for observing, describing, and documenting phenomena in their natural settings. The majority of the respondents were male, aged between 42 and 50 years old, and were high school graduates. Most of them were married. The respondents' assessment of the factors contributing to drug abuse in Barangay 167, Caloocan City, was interpreted as "Strongly Agree" in terms of community awareness, personal experience, environmental concerns, and social media influence. To increase the availability and accessibility of mental health services within Barangay 167, including counseling, therapy, and medication. Surveys should be conducted among residents, healthcare workers, and local leaders to identify the specific mental health needs of the community, assess the prevalence of mental health issues, and identify gaps in available services. Ensure that at least 80% of barangay residents have access to affordable and effective mental health services within the next two years. Establish sustainable mental health programs that provide counseling, therapy, and medication within the barangay. Timeline: 1 to 3 months for community health assessment, resource mapping, and program planning. ₱200,000 allocated for the training of Barangay Health Workers. Number of barangays with established mental health services may be used as a key performance indicator, as well as the monthly number of individuals receiving counseling, therapy, or medication, and percentage reduction in drug-related incidents within the barangay.

Keywords: mental health services, barangay health workers, counseling, therapy, medication, community health assessment, resource mapping, drug abuse prevention, caloocan city, program planning, mental health accessibility

**AN ASSESSMENT ON THE IMPLEMENTATION OF ANTI-SMOKING
ORDINANCE IN NOVALICHES QUEZON CITY**

Rafael Tagaytay, Aron Dave Galozo, Henrexson Gorobat, Oliver Berbaso,
Arjie Cabangbang, Jason Bataclan, Nilmar Plata

Abstract

This study aimed to assess the implementation capabilities of the Anti-Smoking Ordinance in Novaliches, Quezon City. With smoking recognized as a major public health issue, the local government enacted the ordinance to regulate smoking in public areas and promote a healthier environment. The research focused on evaluating the level of community awareness, the effectiveness of enforcement strategies, the challenges encountered by implementing agencies, and the overall compliance of the public. Utilizing a descriptive research design, the study gathered data through survey questionnaires distributed to local law enforcers, barangay officials, and residents. Results indicated a moderate level of public awareness and partial compliance with the ordinance. However, enforcement efforts were hindered by limited manpower, insufficient resources, and a lack of continuous public education campaigns. The study concludes that effective implementation requires stronger inter-agency collaboration, regular training for enforcement personnel, and intensified awareness programs. These improvements are essential to enhancing public compliance and achieving the ordinance's objectives in safeguarding community health. This study assesses the implementation capabilities of the Anti-Smoking Ordinance in Novaliches, Quezon City, focusing on the local government's readiness, policy effectiveness, and enforcement challenges. Utilizing a mixed-methods approach, the research combines surveys of residents, interviews with local officials and enforcement personnel, document analysis, and direct observations in public areas. It evaluates the preparedness of authorities, the level of public awareness, and the extent of compliance among individuals and business establishments. Findings show that while public awareness is generally high, enforcement remains inconsistent across barangays, leading to uneven compliance with the ordinance. The study identified several key challenges in implementing the anti-smoking ordinance in Novaliches, Quezon City, including limited manpower, insufficient signage, and occasional resistance from the public. Although the ordinance has led to a noticeable decrease in public smoking, its effectiveness is limited by inconsistent enforcement and weak coordination among government agencies. While enforcement teams are in place, they often lack adequate resources, and penalties are not consistently applied, reducing the law's overall deterrent effect. The study concludes that stronger inter-agency collaboration, regular training for enforcement personnel, sustained public education campaigns, and increased budget support are essential to closing implementation gaps and promoting a more effective, smoke-free environment. Research plays a crucial role in guiding informed decision-making in areas such as social behavior, infrastructure, and public health, to a more sustainable, equitable, and progressive community. This study gathered data from 25 smoking residents and 20 barangay officials using a structured survey questionnaire distributed to both groups.

Keywords: anti-smoking ordinance, policy implementation, local government, novaliches quezon city, public awareness, compliance, enforcement challenges, inter-agency coordination, health policy

**RELATIONSHIP OF INFORMATION LITERACY SKILLS ON RESEARCH
SKILLS AMONG SELECTED 4TH YEAR STUDENTS**

Wendel Dian, Christine Mae Aruta, Joy Madraso, Ronnel Marciano, Sandra Moratalla,
Rowena Retada, John Boy II Suminday, John Pros Valencia

Abstract

Information and information literacy are fundamental to knowledge acquisition. In a digital world where vast amounts of information are accessible with a single click, the real challenge is not access, but the ability to use information wisely and ethically. To become lifelong learners, students must be capable of independently locating, evaluating, and responsibly applying information. Information literacy involves critical thinking, source evaluation, and effective time management. In this context, the researchers conducted a study to examine the relationship between information literacy skills and research skills among selected fourth-year undergraduate students at Bestlink College of the Philippines. This study utilized a quantitative correlational research design to explore the relationship between information literacy skills and research skills. The variables were examined in their natural setting without any manipulation. A total of 100 fourth-year students from Bestlink College of the Philippines, enrolled in the academic year 2024–2025, participated in the study. Respondents were selected through purposive sampling based on their relevance to the research objectives. Data collection was conducted using printed survey questionnaires, which were randomly distributed to participants within the library premises. The respondents generally exhibited a satisfactory level of information literacy and research skills. They demonstrated strength in prioritizing information but had difficulty in formulating clear and focused research questions. While they were proficient in accessing diverse sources of information, they showed limited engagement with available library resources. In terms of time management, students effectively balanced research tasks with other responsibilities but struggled to meet deadlines consistently. Critical thinking skills were evident in their ability to consider multiple perspectives, yet they faced challenges in identifying logical fallacies. Furthermore, although they were capable of evaluating conclusions based on supporting evidence, they showed weaknesses in assessing the methodological quality of research studies. The findings reveal both strengths and areas for improvement in the respondents' research skills. To enhance advanced research competencies, it is necessary to address the identified weaknesses, particularly in time management, critical thinking, and information evaluation. Strengthening these areas will not only foster academic success but also better prepare students for the demands of the professional world. As a result, the study recommends the implementation of structured library orientation sessions and targeted training programs to improve students' ability to utilize library resources effectively and independently.

Keywords: information literacy, research skills, critical thinking, time management, library resources, information evaluation, undergraduate students, bestlink college of the philippines, quantitative research, lifelong learning

**UNDERSTANDING THE FACTORS INFLUENCING CONSUMERS
DECISION IN BODY TATTOO AND PIERCING INDUSTRY**

Switzel Jan Torres, Jennelyn Irabon, Elekiel Navarro, Alyzon Keith Ramos, Christine Calvo

Abstract

This study aims to understand and identify the factors that influence consumer decisions in the body tattoo and piercing industry. It also examines the challenges consumers face within this industry. The purposive sampling technique was employed to select tattoo and piercing consumers as respondents. This study utilized quantitative research design, collecting data through survey questionnaires. The researchers applied a quantitative approach, using purposive sampling to gather information specifically from consumers who have experience and knowledge about the tattoo and piercing industry. These selected respondents were chosen because they could provide relevant and valuable insights for the study. The study, the challenges faced by respondents in three areas: availability, acceptability, and consumer preference. The total weighted mean scores were 3.32 for availability, 3.5 for acceptability, and 3.48 for consumer preference. Additionally, when assessing how respondents faced these challenges, the weighted means were 3.56 for availability, 3.46 for acceptability, and 3.42 for consumer preference. Statistical analysis showed no significant difference in the responses of the 30 respondents regarding these three factors: availability, acceptability, and consumer preference. This study provides valuable insights for individuals in the tattoo and piercing industry regarding the challenges they may encounter and strategies to address them. Based on the respondents' recommendations, it is important to foster strong relationships between consumers and artists, prioritize hygiene and safety standards, and continuously pursue learning and skills enhancement to maintain expertise in the field.

Keywords: tattoo industry, piercing industry, consumer decision factors, challenges, consumer-artist relationship, hygiene and safety, skills enhancement, purposive sampling, and quantitative research.

**CHALLENGES ENCOUNTERED BY BARANGAY OFFICIALS TO ALLEVIATE
TRAFFIC CONGESTION IN CAMALIG MEYCAUAYAN CITY, BULACAN**

Joland Trabasas, Rommel Cabuang, John Dave Gaslang,
John Melvin Gonzales, Aldrin Villajuan, Irene Gaviola

Abstract

Traffic congestion presents a significant barrier to daily mobility in urban and peri-urban areas of the Philippines, and Barangay Camalig in Meycauayan City, Bulacan, is no exception. This study examines the challenges that barangay officials encounter in their efforts to alleviate traffic congestion within their jurisdiction. It focuses on how limited authority, constrained resources, and the complex interplay of factors contributing to road gridlock affect the ability of local leaders to implement effective solutions. Understanding these challenges is essential for developing sustainable strategies that enhance mobility and improve quality of life for residents of Barangay Camalig. This study employs a descriptive approach to identify and analyze the strategies available to barangay officials and the obstacles they face. Data on local traffic-management initiatives were gathered through a review of barangay resolutions, site observations of traffic conditions, and informal consultations with barangay officers. The analysis emphasizes interventions that officials can directly control such as public information systems using mobile apps and digital displays for real-time updates, while also considering collaborative efforts with municipal authorities for broader infrastructure and policy support. Findings showed that barangay efforts yielded only localized and temporary relief from traffic congestion. Clearing immediate obstructions improved flow on specific street segments but did not resolve congestion arising from major thoroughfares or factors beyond barangay control. Officials' use of digital alerts and community announcements increased commuter awareness but had minimal impact on peak-hour gridlock. Resource constraints and lack of integration with city-level traffic management further limited the effectiveness of barangay-led interventions. The findings highlighted the disparity between local responsibility and the authority and resources needed to address large-scale traffic issues. Barangay officials had limited legal powers and funding compared to municipal traffic bodies, which constrained their ability to enforce significant changes or implement infrastructure improvements. Collaboration with higher authorities was found to be essential but often hampered by bureaucratic delays. The results underscored the need for clearer mandates, dedicated funding, and stronger intergovernmental coordination to empower barangay officials to contribute meaningfully to traffic-management efforts.

Keywords: traffic congestion, barangay officials, public information systems, local governance, intergovernmental collaboration, mobility improvement

**THE STRATEGIES FOR MAINTAINING SAFETY AND MANAGING CUSTOMER
AT PADI'S POINT SHAW BOULEVARD**

Ma Isabel Navarra, Roxxien Andora, Angelica Eve Maunes, Dexter San Diego,
Julianna Marie Santos, Roland Rambo Jayoma

Abstract

The importance of safety measures in hospitality establishments, particularly those serving alcohol, such as nightclubs, bars, and restaurants, cannot be overstated. To protect both patrons and property, these venues must implement proactive strategies, including risk assessments, regular maintenance of safety equipment, clear communication protocols, and well-trained staff. As nightclubs grow in popularity, they face increased risks related to theft, violence, and drug-related incidents, largely due to large crowds and alcohol consumption. In response, many establishments are adopting enhanced security protocols, such as surveillance systems, strict entry policies, and the deployment of trained security personnel. There is also a growing emphasis on responsible alcohol service. However, a persistent challenge for many businesses is the effective management of intoxicated individuals, often due to inadequate staff training and inconsistent policy enforcement, which can result in serious safety concerns. The study utilized a quantitative descriptive research design to evaluate safety strategies and customer management practices at Padi's Point, Shaw Boulevard. The research focused on gathering insights from both employees and customers to better understand operational procedures and the cultural environment of the establishment. A total of 50 participants were surveyed using a convenience sampling technique, which, while acknowledging the potential for sampling bias, was chosen for its practicality and cost-efficiency in data collection. Customer demographics at Padi's Point, Shaw Boulevard, reveal a diverse clientele, with a significant portion falling within the 24–26 age group. In contrast, the employee demographic is predominantly male (75%), with most staff members aged 27 and above. The majority of employees hold regular positions, indicating job stability. However, only 43% of customers reported visiting the establishment frequently, suggesting a mix of regular and occasional patrons. The study revealed a strong consensus among both employees and customers regarding the importance of staff training, legal compliance, de-escalation techniques, and customer safety, as reflected in consistently high average ratings across these areas. However, significant challenges persist in the management of intoxicated patrons, particularly due to inconsistent staff responses and difficulties enforcing cut-off limits on alcohol service. To enhance both safety and overall customer experience, the study recommends the following: Targeted marketing efforts aimed at attracting younger demographics, improved training in de-escalation tactics and responsible alcohol service, implementation of standardized protocols for managing intoxicated customers, investment in real-time monitoring technologies, such as surveillance systems and crowd management tools, to bolster security and support proactive public safety measures.

Keywords: staff training, customer safety, legal compliance, de-escalation techniques, intoxicated patrons, alcohol cut-off enforcement, standardized protocols, hospitality management, real-time monitoring, security systems, targeted marketing, padi's point

The **Ascendens Asia International Research Institute (AAIRI)** aims to enhance the culture of beneficent research in the Philippines to ultimately contribute to equitable social good (*UN SDG4: Quality Education, UN SDG9: Innovation, UN SDG17: Partnership for the Goals*). In particular, AAIRI strongly supports the **United Nations Sustainable Development Goals 2017 (UN SDG17)** by developing a platform for collaboration amongst professional associations, student associations, schools, and consultancy firms for research-related endeavors. The organization does this by offering complete solutions in research education and advocacy in areas within the ASEAN region.

Building Future Through Research.
